To all to whom theſe preſents ſhall come, greeting, Thomas earl of P. lord high admiral of England, &c. or we A. B. C. D. E. F. &c. Eſqrs, lords commiſſioners for executing the office of lord high-admiral. Or we the commiſſioners, or principal officer of the cuſtoms in the city or port of, &c. do teſtify and make known, That G. H. maſter or commander of the ſhip called the Prince Frederic, hath appeared before us, and hath declared by ſolemn oath, That the ſaid ſhip or veſſel, containing about two hundred tons, of which he is at preſent maſter, as aforeſaid, doth belong to the inhabitants of &c. within the dominions of the king of England: and in regard that it would be more acceptable to us, that the ſaid maſter or commander be aſſiſted in his juſt and lawful affairs, and we hereby requeſt you, and every of you, whereſoever the ſaid maſter or commander ſhall arrive with his ſhip, and the goods laden on board and carried in her, that you will pleaſe to receive him courteouſly, and uſe him kindly; and admit him, upon paying the lawful and uſual cuſtoms, and other duties, to enter into, remain in, and paſs from, your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he ſhall think fit, without any interruption; which we ſhall moſt willingly and readily acknowlege, upon all occaſions: in teſtimony and confirmation whereof, we have, with our hands, ſigned theſe preſents, and cauſed them to be ſealed with our ſeal. Day the day of, &c. in the year, &c.

And the like form of paſſport (mutatis mutandis) ſhall be uſed by the moſt Chriſtian king of France.

The form of a Dutch paſſport or certificate, for ſhips that go from the United Provinces.

To the moſt ſerene, moſt illuſtrious, moſt mighty, moſt honourable, and prudent lords, emperors, kings, commonwealths, princes, dukes, counts, barons, lords, burgomaſters, ſheriffs, counſellors, judges, officers, juſtices, and regents of all cities and places, as well eccleſiaſtical as ſecular, who ſhall ſee or read theſe preſents. We burgo-maſters and governors, of the city of &c. do certify, that A. B. ſhip-maſter, appearing before us, hath declared by ſolemn oath, that the ſhip called, &c. containing about, &c. laſts, of which he is the preſent maſter, belongeth to inhabitants of the ſaid United Provinces, ſo help him God. And as we would willingly ſee the ſaid ſhip-maſter aſſiſted in his juſt affairs, we do requeſt you and every of you, where the above ſaid maſter ſhall arrive with his ſhip and goods, that you will pleaſe to receive him courteouſly, and uſe him kindly; admitting him upon paying the uſual dues, tolls, and other cuſtoms, to enter into, remain in, and paſs from your ports, rivers, and territories, and there to trade, deal, and negociate in any port or place, in ſuch fort and manner as he ſhall deſire, which we ſhall moſt readily acknowlege on the like occaſion. In witneſs whereof, we have cauſed the ſeal of our city to be hereunto put.

A general maritime paſſport for a Swediſh or other ſhip to paſs the Sound of Denmark.

The conſuls and ſenators of the town of, &c. certify, That the ſhip, &c. commanded by, &c. belongs to our ſaid town (or ſome other town) in Sweden, and is laden only with goods belonging to Swedes, and bound for the ocean, as the maſter and the owners thereof have declared before us in our court, deſiring this certificate as a proof of the ſame; the ſhip and goods being thereby to be exempted from all taxes and vexations in the paſſage of the Sound and the Belt, according to the treaties between the two kingdoms. In teſtimony whereof, we have cauſed the ſeal of the town to be put to theſe preſents, which we have likewiſe cauſed to be ſigned by the clerk. Given, &c.

PATENTS. Letters patent are writings of the king, ſealed with the great ſeal of England, whereby a perſon is enabled to do or enjoy that, which otherwiſe he could not do; and ſo called, becauſe they are open with the ſeal affixed, and ready to be ſhewn for confirmation of the authority thereby given: and we read of letters patent to make denizens, &c.

The chief LAWS of ENGLAND relating to PATENTS.

A monopoly is an allowance of the king by his grant, commiſſion, or otherwiſe, to any perſon or perſons, for the ſole buying, ſelling, making, working, or uſing of any thing, by which other perſons are reſtrained of any freedom or liberty that they had before, or hindered in their lawful trade. Though a monopoly may be more truly defined to be, a kind of commerce in buying, ſelling, exchanging, or bartering, uſurped by a few, and ſometimes but by one perſon, and foreſtalled from all others, to his or their private gain, and to the hurt and detriment of other men; whereby of courſe, or by authority, the liberty of trade is reſtrained, and the monopoliſt enabled to ſet what price hepleaſes on commodities.

Theſe monopolies uſed in this kingdom, have been diſtinguiſhed into three parts: firſt, reaſonable, of things and trifles for pleaſure, ſuch as cards, luteſtrings, tobacco, or the like; ſecondly, unreaſonable, as of fleſh, fiſh, butter, cheeſe, or other needful things for the ſuſtenance of man, without which he can hardly live: thirdly, indifferent, as of velvets, ſilks, ſpices, and other delicacies and curioſities, which are indifferent to be uſed or not. But all monopolies are contrary to the ancient and fundamental laws of this realm, and are againſt the freedom of trade, &c. Upon this ground it hath been held, that the king's grant to any corporation of the ſole importation of any merchandize by our common law, is void.

Some men are ſatisfied, if a prohibition of a commodity be made by act of parliament, and they will not call it a monopoly, though it be ſo in effect; as when a ſociety of private merchants have a privilege to themſelves only, to ſell certain commodities, or to import them, and all other ſubjects are excluded, although they were neither the diſcoverers or firſt inventors thereof: but if it be done by the king's prerogative, then they take it to be a monopoly. There are others who would have all things at large in the courſe of traffic, and that there ſhould be no ſocieties or corporations of merchants for any places of trade: for by way of partnerſhip merchants might aſſociate themſelves, to make or enterprize any voyages, or in ſending any goods or merchandize abroad, without having regard to our companies for carrying on trade, ſome whereof are of great antiquity. And other perſons make a difference between companies or aſſociations, dealing in a joint-ſtock or a-part, affirming the management of a joint-ſtock to be within the compaſs of a monopoly; nevertheleſs, they would be contented to tolerate the ſame for the employment outward, but for returns homeward, they would have a particuiar diviſion of the commodities which they receive.

The learned judge Vaughan ſays, that if the exportation or importation of a commodity, or the exerciſe of a trade be prohibited generally by parliament, and no cauſe expreſſed of the prohibition, a licence may be granted by the king to one or more perſons without limitation to export or import, or to exerciſe the trade: for by ſuch general reſtraint, the end of the law is no more than to limit the over-numerous exporters, importers, or traders in that kind, by putting them to the difficulty of procuring licences, and therefore ſuch general licences ſhall not be accounted monopolies. In theſe caſes, the law implies that the king may licenſe, as well as if the prohibitory law had been, that no ſuch exportation, &c. ſhould be without the king's expreſs licence. Vaugh. Rep. 345.

Here we have given the various opinions of different men, concerning what is a monopoly, or not ſo; and now we ſhall take particular notice of the great caſe of monopolies in the reign of queen Elizabeth, as tranſmitted down to us by that excellent lawyer Sir Edward Coke. Queen Elizabeth intending that her ſubjects being able men fit for huſbandry, ſhould be exerciſed therein and not employ themſelves in making playing cards, which had not been any ancient manual occupation within this realm; and conſidering that by making a multitude of cards, card-playing was become more frequent, and eſpecially among ſervants and apprentices, and poor artificers; aud to the end her ſubjects might apply themſelves to more laudable and neceſſary trades, by her letters patents under the great ſeal, dated the 13th of June, in the thirtieth year of her reign, granted to R. R. Eſq; full power, licence, and authority, by himſelf, his ſervants, factors, and deputies, to provide and buy in any parts beyond the ſea, all ſuch playing cards as he thought good, and to import them into this kingdom, and to ſell them within the ſame; and that he, his ſervants, factors, and deputies, ſhould have and enjoy the whole trade, traffic, and merchandize, of all playing cards, to have and to hold for twelve years: and by the ſame letters patent, the queen charged and commanded, that no perſon or perſons beſide the ſaid R. R. &c. ſhould import or bring any cards into this realm, during the ſaid time, nor make buy, or ſell, any ſuch playing cards, &c. upon pain of the queen's higheſt diſpleaſure, and of ſuch fine and puniſhment as offenders deſerve in caſe of voluntary contempt.

On an action of the caſe brought by the patentee againſt one for importing and making cards contrary to theſe letters patent,

tent, notwithſtanding the glorious preamble and pretence thereof, it was reſolved that this grant was void: for it is a monopoly, and againſt the common law, and likewiſe divers acts of parliament; for all trades, as well mechanical as others, which prevent idleneſs (the bane of the commonwealth) and exerciſe men and youth, for the maintenance of themſelves and their families, and for increaſe of their ſubſtance, to ſerve the queen when occaſion ſhall require, are profitable to the realm. And the ſole trade of any mechanic art, or any other monopoly, is not only a damage and prejudice to thoſe who exercife the ſame trade, but alſo to all other ſubjects, for the end of theſe monopolies is for the private gain of the patentees: and there are three inſeparable incidents to every monopoly, againſt the commonwealth, i. e. the price of the ſame commodity will be raiſed; after the monopoly granted, the commodity is not ſo good and merchantable as it was before, and it tends to the impoveriſhment of divers artificers and others, who before, by the labour of their hands in their art or trade, had ſupported themſelves, but now will be idle and in beggary.

And it is evident by the act of 3 Edw. IV. cap. 4. that the importation of foreign cards was prohibited, at the grievous complaint of the poor artificers card-makers, who were not able to live at their trades, if ſuch cards ſhould be imported; and the ſaid act provides remedy for maintaining of the trade of making cards, forafmuch as it maintained many families by their labour and induſtry; and the like proviſion is made 1 Rich. III. cap. 12. and perſons may not be reſtrained from exerciſing any trade, but by parliament. Now when the wiſdom of the parliament has made a ſtatute to reſtrain, for the good of the public, the importation of foreign manufactures, to the intent that the ſubjects of the realm might be employed in making of the ſaid manufactures, &c. and thereby maintain themſelves and their families; to grant the ſole importation of them to one for private gain, or to divers without limitation, notwithſtanding the ſaid ſtatute, is a monopoly againſt the common law: and therefore the diſpenſation or licence to have the ſole importation and merchandizing of cards (without any limitation or ſtint) notwithſtanding the act 3 Edw. IV. is utterly againſt law. Adjudged Trin. 44. Eliz. 11 Co. Rep. 84, 85.

King Edward III. by his letters patents, granted to one John Peche, the ſole importation of ſweet wines into London, and at a parliament held 50 Edw. III. this grant was declared void. And queen Elizabeth having granted unto certain patentees, the ſole coinage and tranſportation of all the tin in Cornwall and Devonſhire for 21 years, under a large yearly rent to be paid at the Exchequer. Adjudged, that this patent was a monopoly, anno 13 Jac. I.

In an action the plantiff ſet forth, that in the reign of Hen. IV. there was a ſociety of merchant-adventures in England, and queen Elizabeth did incorporate them by that name, with privilege to trade to Holland, Brabant, Flanders, &c. prohibiting all others not free of that company from trading thither; and that the defendant not being free of that company, did trade there without their leave, and imported goods to their damage, &c. To which the defendant pleaded the ſtatute 15 Edw. III. That the ſeas ſhall be open to all merchants to paſs with their merchandize whither they pleaſe: the queſtion was here, whether the king had power to reſtrain his ſubjects from trading to particular places? This caſe was not determined; but the better opinion was, that ſuch a grant was void, it agreeing with lord Coke's definition of a monopoly: it is againſt the ſtatute of Edw. III. which gives liberty to merchants to buy and ſell without diſturbance; and it is expreſsly againſt the ſtatute 21 Jac. I. The caſe of the Eaſt-India compeny is not like this, becauſe that patent reſtrained the ſubject from trading with infidels, without leave; if it had been to reſtrain them from trading with Chriſtians, it had been void. 3 Mod. Rep. 126.

By the ſtat. 21 Jac. I. cap. 1. it is enacted and ordained, that all monopolies, commiſſions, grants, letters patents, and licences, for the ſole buying, ſelling, and making of goods and manufactures within the king's dominions; and all warrants, proclamations, and reſtraints, &c. for the erecting, ſtrengthening, or countenancing thereof, againſt the tenor of any law or ſtatute, ſhall be void: any perſons grieved by the putting them in uſe, ſhall recover in the courts at Weſtminſter treble damages and double coſts, by action on the ſtatute; and if any perſon ſhall cauſe ſuch action to be ſtayed or delayed before judgement, by any order, warrant, &c. except only of the court where it is depending; or ſhall, after judgment had, cauſe or procure the execution to be ſtayed by colour or means of any ſuch order, or warrant, power, or authority, ſave only by a writ of error or attaint, he or they ſo offending, ſhall incur a premunire.

But this act doth not extend to any grants allowed or confirmed by act of parliament, nor to any grant or charter to any corporation, company, or fellowſhip of any art, trade or myſtery, nor to any company or ſociety of merchants for enlargement of trade; nor to grants of new manufactures, made to the inventors thereof by patent for fourteen years, being not contrary to law, or prejudicial to the commonwealth; nor to any grant of privilege for printing, or making or compounding of ſalt-petre for gunpowder; or for caſting or making ordnance, &c. and certain patents granted to divers perſons, are excepted out of the ſtatute.

And letters patent and grants of privilege heretofore made for 21 years, or under, to the inventors of any new manufactures, where they are not contrary to law or miſchievous, by raiſing the price of commodities at home, or hurt of trade, or generally inconvenient, are ſaved; ſo alſo ſuch patents granted heretofore for more than 21 years from the date thereof, notwithſtanding this act.

All matters relating to monopolies, grants, licences, &c. ſhall be examined, heard, and determined, by and according to the common laws of this realm, and not otherwiſe; and the making uſe of or procuring any unlawful monopoly, is puniſhable by fine and impriſonment at common law. 3 Co. Inſt. 181.

It is held, that a new invention to do as much work in a day by an engine, as formerly uſed to employ many hands, is contrary to the ſtatute; by reaſon it is inconvenient, in turning ſo many men to idleneſs. And concerning inventors of new manufactures, &c. it hath been determined on this ſtatute, that the manufacture in ſuch caſe muſt be ſubſtantially new, and not barely an improvement of any old one, by any addition, &c. thereto, to be within the ſtatute: it muſt be ſuch, as no other perſons uſed at the time of granting the letters patent; and no old manufacture in uſe before can be prohibited in any grant for any new invention. 3 Inſt. 184.

A grant of a monopoly may be to the firſt inventor, by the 21ſt of Jac. I. and if the invention be new in England, a patent may be granted, though the thing was practiſed beyond ſea before; for the ſtatute mentions new inventions within the realm; ſo that if they be new here, it is within the act, which intended to incourage new devices uſeful to the kingdom; and it is the ſame thing, whether acquired by experience or travel abroad, and ſo brought hither, or by ſtudy at home. 2 Salk. 447.

A perſon had a grant by letters patent from king Charles II. for the ſole printing of blank writs and bonds, &c. for the term of 30 years; and one Dorrel a ſtationer having printed five hundred blank bonds, action of the caſe was thereupon brought againſt him; who pleaded, that the company of ſtationers for the ſpace of 40 years then laſt paſt, before the granting of theſe letters patents, had conſtantly printed blank bonds, and ſo made a general concluſion. It was here argued, that the king hath a prerogative in printing, and may grant it excluſive to others; and that ſuch grants have been made by the kings of England ever ſince printing was invented, of which ſeveral inſtances were given. Now the ſtatute againſt monopolies doth not reach to this caſe, becauſe of the proviſo therein to exempt all grants of ſole printing; and there being an inherent prerogative in the king, in theſe caſes, whenever he exerts it, all other perſons are bound up, who were at liberty before.

To this it was anſwered and confeſſed, that the kiug hath a prerogative to grant the ſole printing to a particular perſon; but then it muſt be in ſuch caſes, where no other perſons whatſoever can claim a property in it: on conſidering printing as an art excluſive from the thing printed, this patent is not ſo good; for if a man invents a new art, and another learns it before the inventor can obtain a patent, if afterwards granted it is void: and then if this be conſidered in relation to the blank bonds printed, it is not a new invention, which might have made the grant good, becauſe the ſtationers company have printed ſuch ſo long time; and for that reaſon this patent is void, for where the invention is not new, their trade ſhall not be reſtrained. And ſole printing is a manufacture, it is an art and ſkill, which the king cannot reſtrain; but when it is of publick concern, then the prerogative may interpoſe.

The court of King's-Bench made a difference in this caſe, between things of a public uſe, and thoſe which are public in their nature; and the court inclined, that the patent was not good. 3 Mod. 75. 76. 78. 2 Nelſ. Abr. 899.

It is agreeable to our common law, and the fundamental laws of all nations, to grant projectors or inventors of uſeful things, privileges for twenty-one, fourteen, eleven, or ſeven years; and as to the time granted, the thing itſelf ought to make the difference, upon good conſideration, and ſo as not to meaſure all things alike. But the general intention of all grants by letters patent for manufactures, hath or ought to have relation to ſet the people on work, to recompenſe the inventor of the art or ſcience, and that things may, in ſome reſpect, be better and cheaper to the ſubjects.

There may be letters patents granted to reward a projector and the ſame be not any monopoly, although the public liberty may ſeem thereby to be reſtrained; and it may be rather a common diſtribution than reſtraint, whenever it brings a general good to the nation. The ſtatutes of the kingdom, reſtraining from exerciſing divers crafts, all ſuch as have not ſerved an apprenticeſhip unto the art which they would exerciſe, do it to no other end but that thoſe arts might be

brought to better perfection, and the things be good and ſerviceable for theſe that buy and uſe them.

Remarks in another Light.

When private perſons improve an old art, or invent or introduce from abroad a new one, they generally lay claim to the aſſiſtance of the public, either by bounty or a patent. A diſtinction ſhould ever be made in the manner of encouraging a ſingle invention or improvement, and an art capable of being carried into an extenſive trade or manufacture. In the frequency of patents this has not always been attended to. No manufacture can be managed with ſecrecy. If one perſon only is at liberty to practiſe it publickly at home, ſome of the workmen or other perſon poſſeſſed of the ſecret, will find means to eſcape and carry it abroad, if it is a new invention. Whenever a new trade ariſes, the inventor or introducer deſerves the honour and reward ſuitable to his merit; his art ſhould be purchaſed by the public, and laid open, ſo that a number of rivals in the country where it is invented or introduced, may carry it expeditiouſly to a neceſſary height, and be ready to ſtock foreign markets as faſt as poſſible. This would prove more nationally advantageous, than any perſon making a temporary monopoly of his art, and ſecreting the ſame to himſelf. It would be a great injury to the public, that the new-invented cotton-ſhag, or any of the variety of the new articles daily produced in the weaving counties, ſhould be confined to the inventor; and yet where the Fabric is quite new, he certainly merits due regard from the public; for want of which, the growth of our manufactures was ever very ſlow, compared to that of France.

Whenever an ingenious art is introduced from foreign parts, and advances ſucceſsfully, no encouragement is ſo effectual as to check the importation of the ſame manufacture from abroad, not by high duties, which either promotes ſmuggling, or renders it more deſirable, becauſe the more dear and foreign, but by people of diſtinction, eſpecially thoſe in the legiſlative capacity, who ſhould effectually prohibit and damn it, by diſcountenancing the wear at once, and making it unfaſhionable amongſt us.—If this be done too ſoon, our own artiſts may not be obliged to exert their talents to excel, and the nation may leave the uſe of it from it's dearneſs; and if ſo, we ſhall ſtand no chance to come in for a ſhare of the ſupply of other nations: and if this be delayed too long, the patience and fortune of the ingenious undertakers may be exhauſted, and the deſign given over. Next to knowing the principles of a manufacture, certain compendious methods are neceſſary to perform it with expedition. It is not enough to execute one piece, as well or better than the imported one; the more important point is to execute them in quantities, and this requires length of time and practice; and 'till this can be brought to bear, ſome public encouragement ſhould not be refuſed to the firſt of our own undertakers.

Among ſingle inventions or ſecrets, the boaſted remedies of the faculties are commonly rewarded by patent. Whether this is for the public intereſts, ſee the article Quacks

However right it may be, that the inventors ſhould keep their ſecrets to themſelves, yet is there not an apparent abſurdity in ſolliciting an excluſive privilege for the ſole making of what they ſay no one can make but themſelves; is it not deſiring a permiſſion from the king to keep their own ſecret?

The common argument runs for the preventing counterfeits. And in this light, the general good requires they ſhould be indulged with a patent, that all ſimilar ways of injuring the health of his Majeſty's ſubjects ſhould be reſtrained to one, which is paid for.

Sometimes the diſcovery is adjudged to have real merit, and to be uſeful to the public health. In which caſe, the parliament, in lieu of a monopoly, has thought proper to honour the inventor with a bounty, and ſo make a preſent of the remedy to the public: as we have ſeen done with relation to Mrs Stephens's cure for the ſtone, the univerſal medicine of Dr Ward, and formerly to the inventor of a ſpecific for the gout.

Patents are frequent for books, which often promotes the pirating and printing them abroad, or in Scotland. In works of more expence than invention, and where the printer rather than the author applies to the public, perhaps this is the only practicable method of ſecuring his property. But when the author has done a work evidently uſeful to the public, and an honour to the nation, it were to be wiſhed he might at leaſt be conſidered as the inventor of a new manufacture, and that rewards for good books were as common as for medicines. Burnet was honoured with the thanks of both houſes of parliament for the Hiſtory of the Reformation, and Mr Locke with a bounty for his Treatiſe on Intereſt and Coin.

But nothing is more inſecure in this nation than literary property, which we have ſhewn in our Remarks under the article Book, and alſo in our Remaks under the article Book-Trade, and under the article Copies of Authors. Nor can any thing be a greater diſcouragement to men of genius and application, to devote themſelves this way to the pablic ſervice, nor does any thing call for greater attention from the legiſlature.

In relation to the laborious work wherein I am at preſent engaged, I have not applied for any patent, although I may preſume to ſay, it is a work new of it's kind in this nation, nor did any thing of that comprehenſive nature ever before appear in any other ſtate or country. My reaſons for it are, that I thought it my duty firſt to experience the judgment of the public; thinking it ſomething extraordinary, however common, for his Majeſty's name to be annexed to a book, before the public or any body elſe, had ever ſeen one ſingle ſheet of it. However meritorious ſome books may be that have been thus printed, I cannot but think, in the general, ſuch practices are highly impoſitious and deceitful upon the maſs of the people, who are weak enough to imagine, that a book with a patent to it has the ſanction and authority of his Majeſty, or thoſe officers of ſtate, who are delegated to grant ſuch powers and privileges; when the truth is, that neither the attorney or ſollicitor-general, any more than the ſecretaries of ſtate, or the public, have ever ſeen a ſingle ſheet of ſuch book; and the king knows no more of the merits thereof, than the emperor of China; nay, it is frequent, if I am rightly informed, to obtain patents for books, before any part of them has been begun to be written. And what is ſtill more extraordinary, there are numbers of books publiſhed in this nation, with theſe words annexed to them, Printed and Published according to Act of Parliament, or by the King's Authority: and numbers are made to believe, that the parliament have really made an act to encourage and propagate theſe works throughout the nation, which are generally in the greateſt contempt, and only in eſteem by the ignorant and deluded multitude. Do not abuſes of this kind require redreſs? Is the ſacred name of Majesty itſelf, and that of the Parliament of Great-Britain alſo, to be thus proſtituted, for the ſake of the fees of a common patent?

When a work is finiſhed and approved of in general by men of ſenſe, candour, and impartiality, as a performance of ſolid and permanent utility to the kingdom, the author has a right not only to a patent, but to ſome other reward and protection than that will give him, and may with a good grace properly apply for them. But to obtain a patent for a book before any one knows any thing of it's contents, and which turns out nothing but a barefaced piracy upon others of allowed merit, is raiſing a moſt impoſitious and arbitrary tax upon the public; and, what is ſtill more intolerable, under the ſanction and authority of the king and parliament, when neither of them know any thing of the matter.

The ingenious improvers of the engine for extinguiſhing fires, the ſolar and pocket microſcopes, the air-pump, the reflecting teleſcope, and of other machines of curious ſtructure, were properly indulged with patents. The contrivers of the fire-engine, the importer of the Italian throwing-mill, [ſee the Remarks on the article Derbyshire, and the infinite numbers daily inventing machines for ſhortening buſineſs, have generally been recompenſed with a patent; and ſome few, if the machine was highly curious and uſeful, with a bounty and honours alſo.

The public can ſuffer nothing from a temporary monopoly of ſuch machines, ſince one or two perſons may eaſily ſupply as many as the nation will require of each, and they are things in their own nature durable, and of uſe only in particular places. Perhaps there are not more than two or three throwing mills in the kingdom, nor above an hundred fire-engines, or a thouſand water-engines (for theſe are rare, except in towns) and in general the higher machines, like the moſt perfect animals, are feweſt in number; ſome of them, perhaps, for the ſame reaſon as beaſts of prey are obſerved to be ſo.

Manufactures of moderate expence and quick growth, may, in the general, ſafely be left to private adventurers, and run the common chance for ſuccefs; the finer arts will never flouriſh but under public protection and noble patronage; no encouragements in the hands of private perſons are adequate rewards to the man of genius, who ſtudies the univerſal promotion of theſe more uſeful commercial arts, which give daily bread to millions of the human ſpecies, ſupport the dignity of crowns, and the magnificence of the great and the wealthy. A noble profuſion of honours and bounty raiſed the Gobelines to it's preſent height; the united influence of theſe two being generally ſufficient to call forth whatever heman induſtry can attain to.

The houſe was the reſidence of two brothers, who firſt brought to Paris the ſecret of dyeing a curious ſcarlet, and failed in ſetting it on foot. The buildings went under the popular name of the folly of the Gobelines for many years, 'till the obloquy was taken off by a Royal Edict, and the name changed by public authority to the more honourable one of the Royal Mansion of the Gobelines. The ſcarlet colour was ordered to be called after the name of the inventors, and the little river Bievre, which runs by the building, receives the ſame diſtinction.

Theſe in appearance were trifling matters, but will be ſenſibly felt by the man of genius. The ſame year the houſe was purchaſed by the king, and intitled the Royal Manufacture of the Crown Furniture; and proviſion was made by a Royal Charter, to render the place a

Per-

PERPETUAL SCHOOL and SEMINARY of the curious arts. Here the famous Colbert collected together from all parts of the world, the moſt able maſters and deſigners, as well as inferior artiſts in the fine manufactures. Salaries were appointed for the directors, and penſions for life for the workmen; theſe were tapeſtry-weavers, engravers in etching and metzotintoes, goldſmiths, jewellers, carvers, and workers in ebony.

In this place was wrought all the magnificent furniture for fourteen ROYAL PALACES, which has ſince been deſervedly the admiration of the world. Particular care was taken that no part ſhould be furniſhed elſewhere, much leſs from abroad. All HONORARY PRESENTS to foreign princes and noblemen abroad, and to the ornament of TEMPLES and public buildings at home, were made in the beſt performances, inſtead of jewels or money. Many of the ſuperior artiſts invited from foreign countries were made noble, and all of them had various honorary PRIVILEGES and ROYAL PENSIONS: the whole number, ſuperior and inferior, were comprehended amongſt the natives of France, and made free of Paris, with full liberty to practiſe there reſpective trades where they pleaſed, after working for a certain term in the Gobelines. This indulgence extends to all who ſhall at any time hereafter practiſe the limited time in this foundation. The whole quarter of the Gobelines was exempted from TAXES and IMPORTS, and had a court of judicature peculiar to itſelf, under the title of the COURT OF THE ROYAL ARTISTS. See the articles FRANCE, ARTIFICERS, MANUFACTURERS.

Beſides theſe, there are three other academies in Paris for the POLITE ARTS, with various privileges, honours, and penſions to the members, forming the governing part of each ſociety: as the academy of PAINTING and SCULPTURE, that of ARCHITECTURE and the MILITARY one, of late foundation. Precedents inviting our attention and imitation, if the latter may not be ſaid to command it. The two former and the academy of ſciences are copied in Spain, and are equally liberal endowments.

In England, the ſtream of public favour and liberality has turned wholly to the advance of ſciences; we have few or no inſtitutions in favour of ARTS, no place of reſidence but for ſpeculation. The ROYAL SOCIETY are indebted to the public only for their name. The academies for inſtructing youth in the rudiments of NAVIGATION and ENGINEERING, are mean in their endowments and trifling in their effects.

Amongſt the many noble inſtitutions of our times, it ſeems worthy of the glory of the nation, to make proviſion for the embelliſhment, ſplendor, and ornament of that country, for whoſe ſecurity, ſtrength, and grandeur, they have ſo amply provided. Whoever recollects the eſtabliſhment of NOVA SCOTIA, the HERRING FISHERY, the CAMBRIC ACT, the encouraging the manufacture of IRON in the PLANTATIONS, and the endowment of the FOUNDLING-HOSPITAL, may hope for any rational proviſion in this age.

An academy for the fine arts above-mentioned, under a ROYAL CHARTER, with diſtinguiſhing honours and privileges for the higher members, and ſmall penſions for the lower, might give us a proſpect of ſome perfection in the branches of TAPESTRY-WEAVING [ſee TAPESTRY-WEAVING], PAINTING [ſee PAINTING], SCULPTURE [ſee SCULPTURE], &c. and all the lower trades of elegance depending on fine deſign. Without ſome ſuch public inſtitution, they never yet were carried to an height in any country; no private fortune can ſtand out the time neceſſary to train up hands enough to extend the ART into TRADE: but when once a ſufficient number were made perfect in this ſeminary, private adventurers would be found ready enough to take up the buſineſs; for no people ever wanted a trade, that abounded with working hands well inſtructed therein, and who could ſell as cheap as other nations.

However uſeful upon particular occaſions the granting of patents may prove, in the promotion of commercial arts, yet this practice ſhould not abſolutely preclude all other meaſures that may be prudential in the public to take for the like great and wiſe purpoſe. What theſe are, may be gathered from what we have ſuggeſted under the articles ARTIFICER, MANUFACTURER, ROYAL SOCIETY.

PEARLS, are little ſtones almoſt round, oval, or ſhaped like pears, compact, hard, ſmooth, white, ſhining, and of different ſizes, which are formed in certain oyſters, whoſe ſhells are of different bigneſs: but there are ſome of them met with that are three or four times as big as Rouen oyſters. They fiſh for theſe pearl-oyſters in the Eaſtern and Weſtern Oceans, according to Tavernier. The ancients called theſe pearls uniones, becauſe they believed there never was but one in an oyſter; but they were deceived, for we ſometimes find ſeven in a ſhell. They are bred from a viſcous, or ſaline glutinous, humour, that is condenſed and petrified in ſeveral parts of the fiſh.

Inſtead of a particular part being aſſigned for the generation of pearl, they breed indifferently in all the parts of the oyſter, but are moſt commonly found in the largeſt and beſt ſhaped oyſters, rather than in others. Sometimes we meet with pearl in muſcles, and other ſhell-fiſh, as well as in oyſters. All pearl is eſteemed cordial, proper againſt infection, to recruit and reſtore loſt ſpirits; but it's chief virtue is to deſtroy acids, as other alkilies do, and likewiſe to correct the acrimony of the ſtomach. Pearl is likewiſe good againſt a canine appetite, a flux of the belly, the hemorrhage, &c. the doſe from ſix or ten grains to a drachm.

Some pearls are very white, ſome inclining to yellow, and others upon the black, which are as it were, of a leaden colour. As to theſe laſt, they are met with no where but in America, and their colour comes from the nature of the ſoil, which is fuller of mud than that of the eaſtern parts.

In the return of the cargo, ſays Pomet, which the Sieur du Jardin, the famous Jeweller, had in the Spaniſh galleons, there were ſix pearls, perfectly round, but as black as jet, and which, one with another, weighed twelve carats each. He gave me theſe, among other things, to carry to the Eaſt-Indies, and ſee if I could diſpoſe of them; but I brought them back again, and could meet with nobody that would look upon them. As for the pearls which are inclined to yellow, it proceeds from hence, that the fiſhermen ſelling the oyſters in heaps, and the merchants ſtaying ſometimes fourteen or fifteen days before they open to take out the pearl, ſome of theſe oyſters during this time loſe their liquor, which waſtes and ſtinks, and the pearl becomes yellow from the infection; which is ſo true, that in all the oyſters that keep their liquor or water in them, the pearls are always white; but they wait 'till the oyſters open of themſelves, becauſe if they ſhould open them by force, as we do ours here, they would endanger the damaging and ſplitting the pearl. The oyſters of the ſtraights of Manar, open naturally five or ſix days ſooner than thoſe of the gulph of Perſia; becauſe the heat is much greater there, which is in the tenth degree of northern latude, than in the iſle of Bahren, which is in the twenty-ſeventh; and therefore among the pearls that come from Manar, there are but few yellow ones. In ſhort, the people of all the eaſtern countries are much of our minds, in relation to whiteneſs; for I have always made it my obſervation, that they love the whiteſt pearl, the whiteſt diamonds, the whiteſt bread, and the faireſt women.

And though I have never been in America, yet as well for the reader's ſatisfaction, as that nothing may be omitted, I ſhall relate all the parts where the pearl-fiſhings are, beginning with thoſe of the eaſt. Firſt of all, there is pearl-fiſhing about the iſle of Bahren in the gulph of Perſia. This belongs to the king of Perſia, and therein is a good fortreſs that entertains a garriſon of three hundred men. The water which they drink in this iſland, and that of the coaſt of Perſia, is like ſalt water, and of an ill taſte, and what none but thoſe of the country are able to drink. As for ſtrangers, if they will have freſh water, they muſt pay for it; being only to be had a league or two off, by putting to ſea five or ſix perſons in a little veſſel, and drawing water with a bottle from the bottom of the ſea, where for about two or three feet at the bottom, the water is ſweet, and pleaſant to drink. When they that dive to the bottom of the ſea to draw up this water have filled the veſſel and ſtopped it cloſe, they give a pull to a ſmall cord, which is tied to one of thoſe in the boat, which is the ſignal to his comrades to pull him up.

During the time that the Portugueze were poſſeſſed of Ormus and Maſcati, every veſſel that went out to fiſh, was obliged to take from them a paſſport, that coſt fifteen abiſſis, and they kept always ſeveral brigantines to ſink ſuch as refuſed. But ſince that, the Arabs have retaken Maſcati, and the Portugueze have no forces upon the gulph, every man that fiſhes, pays only to the king of Perſia five abiſſis, whether he has ſucceſs in his fiſhery, or catches nothing at all. The merchant alſo gives ſome ſmall matter to the king out of every thouſand oyſters. See ABISSIS.

The ſecond fiſhery of pearls is oppoſite to Bahren, on the coaſt of Arabia Fœlix, near the city of Catiſa, which belongs to a prince of the Arabs, with all the country thereabouts. All the pearls taken in thoſe parts are moſtly ſold in the Indies, becauſe the Indians are not ſo difficult to be pleaſed as we, and will take the rough as well as the round.

They likewiſe carry ſome to Balſora. Thoſe that go into Perſia and Muſcovy are ſold at Bander Congo, two days journey from Ormus. In all the places I have named, and other places of Aſia, they admire the pearl that is upon the yellow water, more than the white; becauſe they ſay the pearl with that water, retains it's livelineſs, and will not fade: but that the white will not laſt above thirty years, without loſing it's lively colour; and not only the heat of the country, but the ſweat of the perſon that wears them, will diſcolour them with an ugly yellow.

Before we leave the gulph of Ormus, I muſt beg leave to give an account of that admirable pearl, which the prince of the Arabs had, who took Maſcati from the Portugueze, who took then the name of Imencet, prince of Maſcati, but was called before that, Auph Aen Ali, prince of Norenvaé. This prince had

had the fineſt pearl that was in the world, not for it's ſize, for it weighed not above twelve carats, or it's perfect roundneſs, but becauſe it was ſo clear and tranſparent, that you might almoſt ſee clearly through it.

The moſt perfect pearls have in all ages been allowed to have been brought from the Eaſt-Indies. It is true. they do not at this day fetch ſo high a price in Europe as they did formerly; but ſtill the Oriential pearls are of conſiderable value, and are like to continue ſo, inaſmuch as they have all all the properties that are requiſite to render them fit to be reckoned amongſt the moſt beautiful jewels that can be; neither is their any counterfeits, that at all approach them in their luſtre: though people have attained in that art to a degree of perfection, ſcarce to be expected.

The fiſh that produces the pearl is a kind of oyſter, but much larger than the common ſort, or indeed than any that are found in our ſeas; they are common on the coaſt of Perſia, near Ormus, about Cape Comorin, and on the coaſt of the iſlan of Ceylon *. The ſhell-fiſh which produces them, is called the mothher of pearl. The ancients have an opinion that thunder and ſtorms had ſome effect in producing them, for which we ſhall be able to give a tolerable account, without admitting of any thing wonderful in the fact. The fiſhing of pearl was a thing always attended with great hazard and danger, ſuch as were employed in it being often obliged to dive in places 30 fathom deep, where they were expoſed to many ravenous monſters, peculiarly thirſting after human blood. They were let down out of the veſſel to which they belonged with a weight of ſtone, fixed either to their ſide or to their feet, that they might deſcend the quicker and remain the more ſteady under water. In their right-hand they had a ſharp iron, which they uſed for removing the oyſters from their beds; and on their left arm hung a baſket, in which they put the fiſh when they were caught, and about this arm alſo a cord was tied, by which they gave notice to thoſe in the ſhip, when to pull them up by another cord that was about their middle †.

† Ælian. de Animal lib. x. cap. 13. lib. xv. cap. 8. Ammian. Marcel. lib. xxviii. cap. 12.

The largeſt ſort of fiſh were found far in the ſea, and if they were at any time driven upon the coaſt, it was by tempeſtuous weather. And hence the opinion aroſe, that great thunders and ſtorms contributed to ſwell and to increaſe the pearl. The fact therefore was true, that after tempeſts the largeſt pearls were found: but the opinion grounded upon this, that the thunder was the cauſe of the pearl's increaſe, ſeems to have no foundation in reaſon. So eaſy a thing it is to miſtake effects for cauſes, and to introduce errors in Natural Philoſophy, by reaſoning wrong upon facts. When the divers touched the oyſters, eſpecially thoſe of the largeſt ſize, they clung ſo ſtrongly to the rock, that, very often, there was no removing them, even with the help of their iron inſtrument. In the oyſters they brought up, when opened, the pearls appeared like little drops of fair water or dew, which hardened by being expoſed to the air, and were then carefully taken off the ſhell. In one oyſter there was commonly ten or twelve, in ſome more, in ſome leſs; but the more they were, the ſmaller; and if there was but one, it was generally of a very conſiderable ſize, and of greater value than many ſmall ones, ſo that theſe ſhells were eſteemed the richeſt of all *. The ſhell itſelf is alſo of ſome value, as having a prodigious luſtre, and being extremely fit for in-laying and other uſes.

* Plin. Nat. Hiſt. lib. ix. cap. 35.

Philoſtratus has a very curious paſſage in relation to this ſubject, if his accounts could be abſolutely depended upon; but whether they be or be not, what he relates is very remarkable, it deſerves at leaſt to be noticed, and then let the reader think for himſelf: the ſtory, as he tells it, is this: ſome of the Indian pearl-fiſhers have a method of obtaining that valuable commodity, without bringing up the oyſters at all. In order to this, the divers carry down with them a certain kind of rich perfume, which they hold before the mother of pearl; and while the fiſh ſucks it, which it will do very greedily, they gently open the ſhell, from whence a liquor diſtils drop by drop, that preſently harden into pearls *. It might be alledged, in ſupport of this ſtory, that both Athenæus and Pliny ſeem inclined to believe, that pearls are at firſt liquid; which is, indeed, agreeable enough to their form and to their luſtre †.

* Philoſt. in vit. Apollon. Tyan. lib. iii. cap. 57, Tom. IV. lib, ii. cap. 20, 21.
† Athen. Deipn. lib. iii. p, 93. Plin. lib. ix. cap. 35.

At this day, there are four conſiderable pearl-fiſheries in the eaſt. The firſt, as obſerved, is on the coaſt of the iſland of Bahren, in the Perſian Gulph, of which the Portugueze were formerly maſters, but now this fiſhery belongs to the Perſians. The ſecond is near Catiſa, on the coaſt of Arabia the Happy, over-againſt Bahren. The pearls taken at theſe fiſheries are moſt eſteemed in the Indies, though of a yellowiſh caſt. A great part of them are carried to Baſora, from whence they are diſtributed all over the Indies. They fiſh twice a year; firſt in the months of March and April, and again in the months of Auguſt and September. The depth wherein they fiſh, is from four to twelve fathoms; and the deeper the oyſter is found, the pearls are the brighter, becauſe the water is not ſo hot there, the ſun not being able to penetrate ſo deep.

The third fiſhery is on the coaſt of the iſland of Ceylon. The pearls found there are of a good water, but ſmall, and the greateſt do not ſurpaſs two carats; nay, it is ſeldom that they are found of that weight: but, in recompence of this, there is great quantity of ſeed-pearl fit to powder. The fourth and laſt fiſhing is at Japan; the pearls there are of a water white enough, and heavy, but ill ſhaped, moſt of which fall into the hands of the Dutch Eaſt-India company, becauſe the Japoneſe themſelves have no eſteem for jewels of any kind *. The poor people employed in theſe fiſheries live very meanly, and ſcarce get a ſubſiſtence by them; even thoſe who deal in pearls are far enough from being rich, through the oppreſſion of their princes on one ſide, and the art of the Dutch on the other; who finding that the bright pearls taken on the coaſt of Ceylon are moſt eſteemed, and go off on the greateſt rate in Europe, employ a brachman to buy them up as they are caught, which he does at a very low rate:

* Tavernier Voyages aux Indes.

The perſons concernd in this tradc, launching out into greater expencces than they can afford, and thereby ſubject themſelves to the dreadful neceſſity of parting with the fruits of their induſtry to ſuch as are poſſeſſed of money.

* This tempts ſome of them to a very baſe practice, which is throwing a poiſonous drug into the ſea, near the banks where the beſt fiſh lie; upon which they immediately remove to another coaſt, where ſuch as are in the ſecret, fiſh for them, and become rich before their roguery is found out †.

* Voyages de la Blun, p, 330.
† Voyage de Thevenot, Tom. III. liv. ii. cap. 11.

There are now ſeveral pearl-fiſheries eſtabliſhed in the Weſt-Indies, and in other parts of the world, as we ſhall ſhew in their proper places. But, as the value of thoſe pearls ariſe from their approaching in their colour and water to the Oriental pearl, this ſufficiently ſhews, that the excellence attributed to them by ancient writers, is not at all prejudiced by the diſcoveries made in later times, to which the policy of the Indian princes contributes not a little; for, by purchaſing the fineſt pearls at high rates, they keep up their price to the Europeans, ſo that there never came ſuch numbers into this part of the world as to ſink them much in their value: hence it is, that whatever becomes of the pearls of other countries, thoſe of the eaſt ſtill keep up their credit, and a pearl of the weight of four carats, is worth ten or twelve pounds, and of a larger ſize, and well-ſhaped, much more *.

* Tavernier, ubi ſup. Vide etiam Hiſt. Nat. des Indes de Joſeph Acoſta, lib. vi. Hiſt. Gem. des Indes de Lopez Gomara, lib. vi.

Of Artificial Pearls.

The Chineſe, according to Monſieur Lambet, pretend to have found the art of making pearls, which are in ſome ſenſe almoſt natural. The Chineſe ladies of quality ſet a great value upon true pearls, which they generally uſe, as ornaments in their dreſs. The rivers of the eaſtern Tartary furniſh them with pearls, which, however, are leſs beautiful than thoſe brought from the Indies, but the value of the artificial pearls bears a proportion to their reſemblance to ſuch as are natural.

The ſmall eſteem the Chineſe have for the counterfeit pearls of Europe, ſufficiently ſhews, that they think them inferior to ſuch as they themſelves make, and the advantage they find in this method is, that theſe pearls are formed, augmented, and perfected under their inſpection, and that they catch them in the boſom of the fiſh, where this ſubſtance is formed in the ſame manner as the true mother of pearl. The ſecret is as follows:

Take, ſay they, one of the largeſt oyſters you can find in pure water, put it into a baſon half full of limpid water; place this baſon in a retired place, in ſuch a manner however, as that it may eaſily receive the dew of heaven; take care that no woman approach it, nor let the barking of dogs, the crowing of cocks, nor the cackling of hens be heard in the place; (all which means only to take extraordinary care) then take ſome of the ſeed of pearls, called yotchus,

chus, uſed in medicine, and reduce it to an impalpable powder; then after gathering ſome of the leaves of the tree called che-ta-kong-las (a kind of holy oak) waſh them well, expreſs their juice, and with it unite the ſeed of the pearls.

Of this maſs, form ſmall balls, as large as a pea, which you muſt cover entirely with a fine powder of the ſhining pelliculæ, which is found in the inſide of the mother of pearl. In order to make theſe balls intirely round, roll them on a varniſhed plate, 'till there remain no more inequalities in them, and 'till they are dry enough not to ſtick to the fingers; after which, dry them altogether, in a moderate heat of the ſun.

When your matter is thus prepared, open the mouth of your oyſter, and put the new formed pearl into it, and feed the oyſter for an hundred days, in the manner I am about to deſcribe, but take care to give it it's food every day, at the ſame time preciſely, without varying even in a few minutes, and when the hundred days are expired, you will find a pearl of a beautiful water, which you may bore when you pleaſe.

The author does not forget to ſpecify the materials of which this food is compoſed, and particularizes the gin-ſeng, the China, or white eſquine, and the peki, which is a root more glutinous than the moth-glue, and the pecho, another medicinal root. We muſt, according to him, take of each of theſe, a drachm; and reduce them to a very fine powder, of which, with honey purified over the fire, we form long paſtils, and divide the whole into a hundred portions for the hundred days.

This receipt is not ſeemingly without difficulties, which require illuſtration from the author, if he could be conſulted; for how ſhall we open the oyſter without hurting it? or muſt we wait 'till the oyſter opens itſelf? How muſt we open the mouth of the oyſter to put the prepared pearl into it, or is it ſufficient to put it into the ſhell? In like manner, with reſpect to the diſtribution of the food, is it only to be put into the water, whence the oyſter will not fail to draw it into it's mouth? All theſe points ſeem to require illuſtration.

It is certain that in China, there are people employed in making theſe pearls, who certainly would not uſe the ſeed of pearls, ſo much eſteemed in medicine, if they were not certain to reap a conſiderable profit from it. Perhaps alſo, the Chineſe have found from experience, that by the nouriſhment they give the oyſter, there are ſeveral ſmall pearls formed, which indemnify them for the expences they have been at, in producing the principle one.

Be this as it will, it is certain that the Chineſe have had a good deal of knowledge of the origin of true pearls. The choice they make of the mother of pearl, of a retired place, diſtant from noiſe, and harſh peircing ſounds, accompanied with a pure air, and expoſed to the dew, they long time they require for the formation of the pearl, the aliments they furniſh, and whereby they ſuſtain the juices drawn from plants, which the rains, after having enlarged the rivers, carry into the pearl fiſheries, and which, as they aſſure us, render them all fertile, are circumſtances that evince, that the Chineſe have endeavoured to imitate nature in her operations.

To the ſecret of forming pearls, in ſome meaſure natural, the ſame author adds ſome other ſecrets for reſtoring their primitive beauty when loſt.

When pearls loſe their beauty, there is a method of removing the impurities adhering to them, and reſtoring them to their primitive ſplendor. For this purpoſe, let them ſteep a night in woman's milk, then take the herb y-mont-ſao, reduced to aſhes, make a lee of it, and receive the water which drops from it through a coarſe linen cloth; add a little fine wheat flour; put your pearls into a ſilken bag, tied at the mouth, and after having plunged the pearls into this liquor, rub them gently with your hand.

If pearls are tarniſhed, or ſpoiled with any unctuous matter, take geeſe and duck's dung, dried in the ſun, and reduced to aſhes; make a decoction of theſe, and when the water is ſettled, put the pearls in a ſilken bag, and waſh them in the manner above directed in this decoction.

The approach of the fire ſometimes renders pearls reddiſh: in this caſe, take the ſkin of the hoan-naw-tſe, (a foreign fruit of which the bonzes make their beads) boil it in water, into which put the pearls and waſh them; or beat turnips or radiſhes, and after having expreſſed the juice of them, put the pearls a whole night into it, and they will come out very white.

If the pearls become red of themſelves, waſh them in the juice expreſſed from the root of the Indian banana tree; leave them in that juice for a night, and the next morning they will have their firſt ſplendor and natural whiteneſs.

Pearls are ſometimes damaged when without reflection they are brought near a dead body. In this caſe, they are reſtored to their primitive luſtre, by waſhing and rubbing them in the lee of the plant y-mont-ſao, with which a little meal and lime are to be mixed.

The author alſo adviſes us not to leave pearls ſcented with muſk, by which means they are ſo tarniſhed, as to loſe a conſiderable part of their value.

Further obſervations on the methods ſuggeſted for the making artificial pearls.

The ancients, who wrote on the ſeveral ſorts of precious ſtones, ranged pearls among jewels of the firſt claſs.

The oriental pearls, as obſerved, are the fineſt, on account of their largeneſs, colour, and beauty, being of a ſilver white; whereas the occidental or weſtern pearls, ſeldom exceed the colour of milk.

To imitate fine orintal pearls.

Take of thrice diſtilled vinegar two pounds, Venice turpentine one pound; mix them together into a maſs, and put them into a cucurbit; fit a head and receiver to it, and after you have luted the joints, ſet it, when dry, on a ſand furnace, to diſtil the vinegar from it; don't give it too much heat, leſt the ſtuff ſwell up.

After this, put the vinegar into another glaſs cucurbit, in which there is a quantity of ſeed pearl, wrapped in a piece of thin ſilk, but ſo as not to touch the vinegar; put a cover or head upon the cucurbit, lute it well, and put it in bal. mariæ, where you may let it remain a fortnight. The heat of the balnæum will raiſe the fumes of the vinegar, and they will ſoften the pearls in the ſilk, and bring them to the conſiſtence of a paſte; which being done, take them out, and mould them to what bigneſs, form, and ſhape, you pleaſe.

Your mould muſt be of fine ſilver, the inſide gilt; you muſt alſo refrain from touching the paſte with your fingers, but uſe ſilver gilt utenſils, with which fill your moulds: when you have moulded them, bore them through with a hog's briſtle, or gold wire, and let them dry a little; then thread them again on gold wire, and put them into a glaſs; cloſe it up, and ſet them in the ſun to dry; after they are thoroughly dry, put them in a glaſs matraſs into a ſtream of running water, and leave them there 20 days; by that time they will contract the natural hardneſs and ſolidity of pearls. Then take them out of the matraſs and hand them in mercurial water *, where they will moiſten, ſwell, and aſſume their oriental beauty; after which ſhift them into a matraſs, hermetically cloſed up, to prevent any water coming to them, and let it down into a well, to continue there about eight days; then draw the matraſs up, and in opening it, you will find pearls exactly reſembling oriental ones.

This method is very excellent, and well worth the trouble, ſince by experimenting ſo fine a ſecret, one will have the ſatisfaction of ſeeing the performance anſwer the direction above expectation.

* Mercurial water is thus prepared. Take plate-tin of Cornwall, calcine it, and let the calx be pure and fine; then with one ounce of the calx, and two ounces of prepared mercury, make an amalgama; waſh it with fair water, 'till the water remains inſipid and clear; then dry the amalgama thoroughly, put it into a matraſs over the furnace, giving it ſuch a heat as is requiſite for ſublimation. When the matter is well ſublimated, take of the matraſs and let it cool. Take out that ſublimate, add one ounce of Venice ſublimate to it, and grind it together on a marble; put this into another matraſs, cloſe it well, and ſet it upſide-down in a pail of water, and the whole maſs will diſſolve itſelf in a little time into mercurial water: this done, filtre it into a glaſs receiver, ſet it on a gentle aſh fire to coagulate, and it will turn into a chriſtalline ſubſtance: this beat in a glaſs mortar, with a glaſs peſtle, to a fine powder, ſtrain it through a fine ſieve, and put it into a matraſs, ſtop it cloſe up, and place it in bal. mariæ; there let it remain, 'till it reſolves again into water; which is the mercurial water, fit for the abovementioned uſe.

To form large pearls out of ſmall ones, as directed by Korndorffer.

Take of mercurial-water 14 ounces; put two ounces of ſulphur ſolis into a low matraſs, pour the mercurial-water upon it, and let it diſſolve and extract. Then take of the whiteſt ſmall pearls 20 ounces, put them into a proper matraſs, and pour the ſaid water upon it. The pearls will by degrees diſſolve, and at laſt turn to a clear calx, much like diſſolved ſilver calx. Pour off the mercurial-water; boil the calx well out, and dry it; then put it into a clean crucible by itſelf, and caſt it into what form you pleaſe. When cold, poliſh it in the ſame manner as you do gems or cryſtals, and you will have your work of the conſiſtence and beauty of the fineſt and cleareſt oriental pearl.

To blanch and cleanſe pearls.

Firſt ſoak and cleanſe them in bran-water, then in milk-warm water, and laſt of all ſteep them in mercurial water; then ſtring and hang them in a glaſs; cloſe it well, and ſet them in the ſun to dry.

The bran-water is made thus: boil two good handfuls of wheaten bran in a quart of water, 'till all the ſtrength of the bran is drawn out, which uſe thus: take a new glazed earthen pan in which put your pearls on a ſtring, and pour the third part of the bran-water upon it; when they have ſoaked, and the water is juſt warm, rub your pearls gently with your hands, to clean them the better, and continue this 'till the water is cold; throw off that, and pour on another third part of the bran-water that is boiling; proceed with this as you did before, and when cold, throw it away, and pour on the remainder of the water, ſtill proceeding as before; after this, heat fair water, and pour it on your pearls, to refreſh them, and to waſh away the remains of the bran, by ſhifting them, and pouring on freſh warm water: this do thrice, without handling your pearls; then lay them on a ſheet of clean white paper, and dry them in a ſhade; after which, dip them into mercurial water, to bring them to perfection.

PEDLAR, a travelling foot-trader. See HAWKER.

REMARKS.

Almoſt all the commodities of Europe are diſtributed through Spaniſh America, by a ſort of pedlars, or merchants on foot, who come from Panama to Paita by ſea, and in their road from the laſt mentioned port, make Piura their firſt ſtage to Lima, diſpoſing of their goods, and leſſening their burthens, as they go along. Some take the Road through Caxamarca, others through Tauxillo, along ſhore from Lima: they take their paſſage back to Panama by ſea, and perhaps carry a little cargo of brandy with them: at Panama they again ſtock themſelves with European goods, returning by ſea to Paita, where they are put on ſhore; there they hire mules, and load them, the Indians going with them, in order to bring them back; and ſo theſe traders keep in a continual round, 'till they have got enough to live on.

Their travelling expences are next to nothing; for the Indians are brought under ſuch ſubjection, that they find lodging for them, and provender for their mules: this every white face may command, being an homage the poor Indians are long accuſtomed to pay; and ſome think they have an honour done into the bargain, except, out of generoſity, they now and then meet with a ſmall recompence. In the Britiſh and French nations, a pedlar is deſpiſed, and his employment looked upon as a mean ſhift to get a living; but it is otherwiſe here, where the quick return of money is a ſufficient excuſe for the manner of getting it; and there are many gentlemen in Old Spain, who, when their circumſtances in life are declining, ſend their ſons to the Indies to retrieve their fortune this way.

REMARKS on our article PEDLAR.

In Poland are very few or no manufactures among themſelves: their gentry, who are all called nobility, are infinitely above it, and the commonalty are far below it, the one too proud, the other too ſlothful. So that there is hardly a ſuit of cloaths made in the country; but all is either made abroad, or the materials brought from abroad; even the taylors are called merchants, for they travel from one nobleman's houſe to another to make their cloaths; and even the ladies buy their jewels of the pedlars, who carry them about.

The towns of Dantzic and Elbing, in Polond, being the only ſea ports belonging to the kingdom of Poland, that want of ſea coaſt, and the exceeding length of the kingdom of Poland ſouth, occaſions that the remoteſt parts of the kingdom are ſupplied with their fineſt goods, not by the warehouſe keepers and ſhop keepers vending their goods from hand to hand, and from the ports to the cities, and from the cities to the market towns, and from thoſe towns to the ſhopkeepers in the villages by wholeſale, and theſe again to the inhabitants by retail, as in England; but the whole trade is carried on by the travelling merchants, that is, in Engliſh, by pedlars and petty chapmen.

They travel from town to town, and from one gentleman's ſeat to another: and by theſe the ladies are ſupplied with fine linen, laces, ribbands, ſilks, and with all ſorts of haberdaſhery, mercery, and drapery goods; ſuch as come to Dantzic from England, Holland, France, and Italy.

The pedlars travel, ſome with a horſe, ſome without; ſome with three, four, or five Horſes, and 'tis ordinary with them, when they come to a nobleman or gentleman's houſe, to have a chamber or two aſſigned them, by the lord or lady of the houſe, and to ſtay there three or four days, 'till not only the family have fitted themſelves, and are furniſhed with all they want, but 'till they have ſent notice to ſuch of the gentry who live near them, who come, the ladies eſpecially, in their chairs and chariots, to ſee the wares, and pleaſe themſelves: all which time the pedlars, who are generally Scotſmen, are entertained freely, and both they and their horſes well taken care of, by command of the perſon whoſe houſe it is, and always fully paid for whatever they ſell, the Poliſh ladies making it a point of honour to pay immediately for what they buy; and as the Poles, both men and women, affect to be extremely gay in their cloaths, they lay out a great deal of money that way. This makes the trade of Dantzic and Elbing very conſiderable, the pedlars always having recourſe thither for their ſupply of goods, when they have ſold off their ſtocks. Theſe pedlars, who go with many horſes, are ſome of them men of conſiderable wealth, and carry with them goods to a great value; and yet that is the abſolute government of the nobility, and the common people are ſo entirely ſubjected to them, even for life, as well as ſervitude, that the pedlars trade with the utmoſt ſafety, never meeting with the leaſt injury from the common people: and if at any time they are apprehenſive of danger, the gentlemen will cauſe the country people to guard them from place to place, and forbid them taking any thing of them for it.

The number of theſe pedlars is ſo great in Poland, that if we may believe the ſtory of Sir John Denham and Mr Killigrew, who were ſent from England to take the number of them in the reign of king Charles II. there were then reckoned 53,000 of them; and thoſe gentlemen having the king's commiſſion, and the king of Poland's licence to tax them by the poll, brought home 10,000l. ſterling, beſides the expence of the journey, which muſt be very conſiderable.

There is a diſtinct ſort of theſe pedlars, who are called goldſmiths; they call themſelves ſo, and theſe generally travel with but one horſe; they carry all ſorts of ſmall goldſmith's wares, as gold rings, ſeals cut in gold and ſilver, and ſteel, ſnuff-boxes, and in a word, toys of all kinds, as well in ſilver and gold, as in ſteel, iron, and braſs, with all that we call cutlery-ware, knives, forks, buckles, buttons, &c. diamond buckles for the hat or cap, which the Poliſh nobility are never without, and value themſelves much upon; but counterfeit jewels too are very much uſed amongſt them.

Theſe chapmen or pedlars buy old plate, and exchange it for new: they buy alſo jewels and rings, and every thing of that kind, as occaſion preſents; and being pretty cunning in their trade, they generally gain more in proportion by buying than by ſelling.

PEGU, a kingdom ſituate on the eaſt ſide of the bay of Bengal, [ſee BENGAL] in the Eaſt-Indies, in Aſia, bounded by the kingdom of Ava [ſee AVA] on the north; by the mountains, which ſeparate it from Laos, on the eaſt; by the kingdom of Siam [ſee SIAM] and the bay of Bengal on the ſouth; and by another part of the bay of Bengal on the weſt.

Captain Hamilton ſays the country is very fruitful in corn, fruits, roots, and excellent pulſe of ſeveral ſorts, and produces timber for buildings, elephant's teeth, bees-wax, ſticklack, iron, ſaid to be of ſo hard a quality, that it is almoſt a natural ſteel; tin, oil of earth, wood-oil, the beſt rubies in the world, ſmall diamonds, ſapphires, amethyſts, and other precious ſtones. They have abundance of ſalt-petre, but it is death to export it; and plenty of lead, which paſſes all over Pegu dominions for money. About 20 ſail of ſhips find their account in trade for the limited commodities, but the Armenians have got the monopoly of the rubies, which turns to a good account in their trade. Here is abundance of wild game, both quadrupedes and winged; and in September, and October, wild deer are ſo plentiful, that the captain ſays he bought one for a goat; but though they are very fleſhy, they are not fat. They have many ſorts of good fiſh and ſwine's fleſh, and plenty of good poultry.

They wear little of our European manufacture, except hats and ribbonds; ſo that the gentry will give extravagant prices for fine beaver hats and rich ribbands, flowered with ſilver and gold; and be the hats never ſo broad, they are ſtretched up the crown as far as poſſible, but without any ſort of cock.

Cotton-cloths from Bengal and Coromandel, with ſome ſtriped ſilks, are beſt for their market; and ſilver of any ſort is welcome to them. It pays the king 8 ½ per cent. cuſtom; but in lieu thereof, he indulges the merchants to melt it down, and put what alloy they pleaſe in it, and then to paſs it off in payments, as high as they can. Rupee ſilver, without alloy, will bear 28 per cent. of copper alloy, and keep the Pegu touch, which they call flowered ſilver; and if it flowers, it paſſes current. They make flowered ſilver thus: when the ſilver and copper are mixed and melted together, they put it, while liquid into a ſhallow mould, and blow on it through a ſmall wooden pipe, which makes the part blown upon appear with the figures of flowers or ſtars; but if there is too great a mixture of alloy, no figures will appear. The king generally adds 10 per cent. on all ſilver that comes into his treaſury, beſides what was put on at firſt; and though it be not flowered, it muſt go off in all his payments; but from any body elſe, it may be refuſed if it is not flowered.

The chief towns are Syram, or Syrian, whoſe bar is the only port now open for trade in all Pegu dominions. Some Geographers place it near the mouth of the river Acenam, or Liva; others near the mouth of the river Pegu, and the conflux of thoſe two rivers, almoſt over againſt Martaban. It drives a good trade with Armenians, Portugueze, Moors, Gentaws, and ſome Engliſh. Their import is ſeveral ſorts of Indian goods, as betellas, mulmuls, tanjebs, &c. European hats, and ſilver; and the cuſtoms here, which are about 82 per cent. amount, with other charges, to about 12 in the hundred. The Engliſh from fort St George, traffic pretty much with

with this country ; and, beſides furs and ſkins, import from thence rubies, ſapphires, and other precious ſtones.

As ſoon as foreign ſhips arrive here. the number of people on board, with their age and ſex, is ſent to the king, to acquaint him that ſo many of his ſlaves are arrived to partake of the glory and happineſs of his reign and ſavour.

PEGU city, Capt. Hamilton ſays, is about 40 miles to the eaſt of it; and that the ditches round it, which are now dry, and bear good corn, ſhew that few cities in the world formerly exceeded it in magnitude, but now is laid in duſt, not one twentieth part of it being inhabited, and that only by the lower claſs of people.—Moll ſays it lies 20 miles up the river of the ſame name, which divides it into two towns, the Old and the New. The latter was the ſeat of it's kings; the former is ſtill the reſidence of it's merchants and artificers.

REMARKS.

Under the articles EAST-INDIA TRADE, ENGLISH EAST-INDIA COMPANY, DUTCH EAST-INDIA COMPANY, FRENCH EAST-INDIA COMPANY, and OSTEND EAST-INDIA COMPANY, we have ſo ſtated the nature of this commerce in it's ſeveral lights, that a good judgment may be made, upon the whole, in what manner this trade may be beſt preſerved, and improved to the general advantage of the kingdom; for the making of extraordinary innovations in the commerce of a nation, may poſſibly be attended with conſequences no leſs prejudicial to a ſtate, than innovations in it's fundemental conſtitution. The reader, who has candidly attended to what I have already ſaid in relation to this branch of ou r commerce, and others, will do me the juſtice to obſerve that I am no monopoliſt, though I have endeavoured to ſhew how extremely circumſpect we ought to be before the Eaſt-India company is abſolutely annihilated; which, it ſeems, is a a matter very ſanguinely talked of by ſome people.

Since we have treated of this ſubject, under the preceding heads, and others, that may be conſulted from the Index, there have appeared ſome objections againſt the company which well deſerve attention, in order to their being duly canvaſſed. And as this is the firſt article in the Eaſt-Indies that has given me a natural occaſion to touch upon this matter again, I might be judged wanting in impartiality to paſs it over in ſilence, for which I would by no means give the leaſt reaſon; and, therefore, I ſhall ſubmit to conſideration what the gentleman has ſaid in his own words; for if it ſhall appear to bear the teſt, it cannot be made too public; and, if it will not, a refutation will be expected.

'The charter of the Eaſt-India company, ſays our author *, obtained at firſt for miniſterial emoluments, cheriſhed and ſupported ever ſince, probably on little better motives, has ſurmounted and baffled all oppoſition, though many times attempted: nor has this enormous error in trading policy ever yet been canvaſſed ſo far as to have had one ſolemn hearing and debate, in that auguſt aſſembly; from whence this injured, this almoſt exhauſted, nation (of it's real wealth in ſpecie) can only hope for redreſs.

* Some Thoughts on the Preſent State of our trade to India. By a Merchant of London, p. 5, &. ſeq.

'To declaim on ſuch an intereſting ſubject, and to paſs ſuch ſevere reflections, without producing ſome probable facts in ſupport of them, would be preſuming too far on the candour of the reader; the greateſt meaſure of which, by making large allowances for inaccuracy of ſtyle and method, is here needful; nor without it can the author entertain the leaſt hope of being attended to.

'The plan, therefore, propoſed for the ſetting forth this truth, is to draw up a plain account, according to MERCANTILE RULES; and as arithmetical proofs are the moſt concluſive of all other incommercial affairs, ſo upon theſe, and only theſe, let the equitable deciſion of this queſtion ſtand or fall.

'In the courſe of the evidence you will find a ſet of managers buying conſiderable quantities of our woollen and other manufactures, hiring of private merchants ſeventeen ſail of fine capital ſhips, each of five hundred tons burden, and having thirty guns, and one hundred ſailors; employing thereby great numbers of tradeſmen of all ſorts, and, meeting once or twice a week, do, in their ſeveral committees, juſtly diſcharge their duty to their conſtituents; and whoſe characters, in point of integrity, are, and will remain, unimpeached.

'You will alſo find theſe gentlemen following, inadvertently, the blind rotation of public office, gradually working deſtruction to their country, by purchaſing immenſe quantities of gold and ſilver bullion, near treble the value of their exports in manufactures: all which together compoſe the cargoes of the ſeveral ſhips outward-bound to India.

'Theſe ſhips are, in this account, admitted and ſuppoſed to be arrived at the reſpective ports and places of their deſtination, and to return full freighted, with the commodities of that country, to their moorings in the river of Thames: which is done to evince the fair dealing of the accomptant. who will not take hold of the loſs of a ſhip or two, to throw an idea of diſadvantage on the trade; but then, whatever ſuch impartial conduct produces, he hopes will be looked upon as an equitable average, or a true picture of the real circumſtances of it, even for any length of time.

'Every one knows, that the commodities returned for this deſtructive export of uſeful products, and the yet more neceſſary ingredient of national ſafety, it's real and intrinſic wealth, bullion, conſiſts in the following; the cotton manufactures of India, the ſilks of China, with their tea, chinaware, and ſome drugs: whatever other European nations take of us, in the articles, may be reckoned as profitable, becauſe our ſhips and men were employed in the importation hither.

'On the other hand, whatever of theſe returns cannot be deemed uſeful materials of manufactures, &c. or are conſumed merely by ourſelves, colonies included, may undoubtedly be as juſtly accounted unprofitable; and, conſidering what is ſent out for it, to wit, the nerves of war, abſolutely worthy of ſtrict enquiry.

'The accountant in order to illuſtrate what follows, more fully to the candid and unprejudiced reader, thinks it not amiſs to lay before him his plan of operation, ſhewing from whence he draws his materials to work upon.

'It will be looked upon as an attempt extremely ridiculous, eſpecially among accountants, to pretend to form an account of profit and loſs on a branch of trade, ſtate a national account thereof, and, what is more, to give a ſhrewd gueſs at the identity of a large ſuppoſed capital ſtock, without ever having ſeen their books, or being in the leaſt matter aſſiſted by any of their clerks; the public judgment, however, may be ſuſpended, when this particular is remarked: the extracts of their books, that is to ſay, the ſeveral entries at the cuſtom-houſe, and amount of their cargoes, and declarations for ſales, are all printed and publiſhed; to collect from whence, though it be, and really has been, a very laborious and arduous taſk, yet it is done; and, according to my motto, the motive makes

Labor ipſe voluptas.

'Firſt, on the debit ſide of the account, he collects his ſeveral charges from the bills of entry, printed and publiſhed at the cuſtom-houſe London, which if erroneous, the fault cannot be imputed to him.

'He makes a valuation of the coſt of the ſeveral articles therein enumerated, ſuch as woollen goods, wrought iron, braſs, copper, &c. from the uſual market prices, as near as may be, and the articles of gold and ſilver are ſpecified to a ſingle ounce, and the ſilver caſt up under the preſent value near 4 per cent. and it muſt be obſerved, that nothing can prejudice the juſtneſs of this ballance, but an over-rating of the ſeveral chgrges on this ſide of the queſtion.

'So, on the contrary, nothing can prejudice the ſame on the credit ſide, but the under valuation of the returns made on the voyage here to be ſcrutinized.

'Secondly, On the credit, this accountant takes his ſeveral materials of diſcharge from the printed declarations of each ſhip's cargo, compared with their ſales; wherein he admits their whole amount, as put up and ſold at the candle, that the truth may not be diſputed by the non-arrival of one or more cargoes, due to the credit thereof.

'Thirdly, he is directed in the true prices of the ſeveral ſpecies of callicoes, prohibited goods, &c. from the printed accounts publiſhed by the moſt eminent brokers, who conſtantly attend the ſales; and for the weighable goods, from the ſale books, thrown into an average, of which the public are the beſt judges, whether right or not.

By national loſs for bullion exported, without one valuable return	660,000	—	—
	l. 1,593,344	15	9

'I have thus ſtated, continues this gentleman, the ſeveral accounts: firſt, that of a given number of ſhips, fully laden, ſailing a long and hazardous voyage to India, arriving, however, in ſafety, diſpoſing of their cargoes, and returning home the ſame tedious paſſage, full freighted with the manufactures and worthleſs products of that country; ſhips ſhattered with frequent ſtorms, their crews one-third dead, many of them ſickly, all fatigued, and looking on one another with an evil, inſtead of a friendly, eye; weary of each other's company in ſo confined a ſituation, wiſhing, as the greateſt bleſſing, for that delightful proſpect from the maſt-head, their native land, and at length arriving at the deſired port in ſafety: their cargoes printed and publiſhed, the goods are landed, expoſed, by fair and juſt ſamples, to the inſpection of the ſeveral buyers, who afterwards meet, according to public notice given, and either by themſelves, or agents, the brokers, purchaſe what they have occaſion for, in the fair method of a public auction.

The whole being finiſhed, the goods are paid for before they are delivered to the owners, and theſe allowed a diſcount of 6½ per cent. for ſuch prompt payment; the ſeveral clerks become then employed in caſting up the full amount of theſe ſales, according to the groſs prices given at the candle, to which they are more immediately obliged, as the cuſtoms are calculated and paid thereon ad valorem.

This being compleated and ſettled, I mean the duties for

Nullum tempus aut cauſa occurret regi,

it is ſuppoſed they diſcharge the ſeveral freights agreed on for the hire of ſhips employed in their ſervice, to the reſpective owners of them, and all other incidental charges.

A careful and judicious merchant would then proceed to examine and form a ballance on the profit or loſs accruing from this adventure or voyage to and from India: this he is well enabled to do, by having his ſeveral books of account laid before him; and it would be impoſſible for any other, without the ſame guides, to have the leaſt idea of it: wherefore, in the ſeveral matters here before us, it is not alledged that they are drawn up with the accuracy which books could furniſh materials for; but that from thoſe which are, and muſt neceſſarily be made known in the carrying on this public truſt, the accountant has, with the utmoſt care, from theſe rambling papers, extracted an impartial and juſt ballance (equitably conſidered) of the real ſtate of this branch of trade, both in regard to the nation, their ſtock, and bond creditors; but yet not giving up the claim and right of mercantile accounts, that of errors being excepted always.

To detect wilful or malicious charges, or unintended errors, he has alſo the particularized articles; and although the account be at length reduced to one debit and one credit, yet each are anatomized in the pages (10 to 15) and their truth expoſed, to be allowed or diſallowed by the reader.

By this a profit appears of the ſum of 65,655 l. 4 s. 3 d. after paying intereſt for the money borrowed on bonds. Trade, the Hollanders call, a ſick bride, often out of order, but never dies; it will, in general, produce ſatisfaction, when attended by œconomy, and ſoothed by prudence: on the other hand, our expences being large, either through neceſſity or vanity, do in no wiſe contribute to the increaſe of the profits of trade; here our expences are dividends of 8 per cent. per annum; theſe muſt be paid; proprietors coming open-mouthed muſt be ſatisfied; indulged for years paſt with a plentiful income, they know not how to retrench: ergo, on 3,200,000 l. at 8 per cent. for two years, is 16 per cent.

	l.	s.	d.
Or the ſum for two years to be paid is	512,000	—	—
The aſſets are the profits on the voyage at - - - -	65,655	4	3
Three per cent. due from the government - - - -	192,000	—	—
	257,655	4	3
Deficient - - - -	l. 254,344	15	9

This deficiency muſt be either taken from former profits (which, I believe, were as fully employed as theſe) or from thoſe which are to come: a happy thought! But put 200 yoke of oxen to draw this load up the hill of gain, it will not avail; the carriage is weak, and the road almoſt impracticable.

In regard to the account of national gain or loſs, may this be attended to, may this be ſcrutinized, the reſult amazing, unthought-of, and unexpected! until evinced by this accidental enquiry. However erroneous the others may be, this will ſtand the teſt: no gloſs, no fallacious arguments of occult myſterious trading, imports of diamonds, gold, and what not? by private traders ſuppoſed effects in India (mines of Potoſi!) can be admitted, until confronted with more bullion carried out (manufactures none permitted) few or no diamonds on the company's account, no gold, but many ſuppoſed debts owing, at large intereſt in India, and many more on bonds at home.

O proceres, cenſore opus eſt, an haruſpice nobis?

The whole of the debit is formed from the ſame materials as the voyage-account; but, on the credit, may be ſeen the total amount of what is re-exported of theſe Indian commodities to other European nations, the true value of the raw ſilk, ſalt-petre, red-wood, and drugs imported; and, though moſt conſumed at home, yet are here called valuable returns, as being materials uſed in our manufactures.

The true and undoubted loſs to the nation of it's bullion, to the amount of 660,000 l. yearly, being hereby proved to demonſtration (a prodigious ſum in ſpecie!) well may we tremble at every flurry in our paper circulation, ſince the baſis, the rock, the ſtrongeſt foundation of it's credit, is thus ſapped, thus undermined, perhaps through inadvertency, yet equally fatal to our welfare and ſafety.

Tea, mean dirty drug, eſtabliſhed by luxury, is become a neceſſary of life. Ridiculed by the Chineſe, our hardy ſeamen brave all climates, difficulties, and hazards, to bring them gold and ſilver, to take in return a few dried herbs and baked earthen wares. Infatuation!

Arguments are vain, tea muſt be had; but ſurely not at this rate. Had this fair eſtate the Indies (more valuable than the reſt of our trade) never been granted in mortmain to this monaſtery of voluptuous ſecular prieſts, but the private Engliſh merchant preſerved in the rights of his birth, tobacco, or ſome other product of ours, would have been the ſole purchaſe of tea; weed for weed; not a dollar exported, but for gold in return: which was the trade at firſt; but the Chineſe now hold both for tea. Or, in caſe this trade be laid open, by compounding for their charter, the government taking the protection of the traders into rheir own hands, what a fund of wealth, what increaſe of revenue! equal to the whole of the preſent: what a new world for trade! The rich, the populous, the luxurious nations of Interior Aſia, all hiſtories tell us their extent from Turkey to Japan; theſe are now ſhut up from the Engliſh merchant, for the ſake of this monopoly, admitted by all to be bad, maintained by unjuſtly obliging a people to buy their goods at one houſe, and no where elſe, whereby the ſame tea is ſold at Gottenburg 100 per cent. cheaper than at home; alone is a ſufficient profit for the ſmugglers: nay, it is ſuppoſed that the revenue does not ſuffer a leſs ſum yearly by that article than 200,000 l.

Supported by inflicting oaths on their wretched agents, has this bane of our peace and ſafety reigned a long courſe of years, bringing poverty upon us by regular gradations: without ſkill, without induſtry, and without wealth, have they proceeded in the diſcouragement of the former, and diſſipation of the latter: nor, in 30 years trading, has one ſhip been added for the benefit of our navigation; no increaſe but of perjuries.

Hac fonte derivata clades
In patriam populumque fluxit.

But that others may diſcover clearer evidence of this pernicious trade, the injury done to our public credit already, and likely ſtill to do, by the carrying it on in the manner beforementioned (for no leſs than the value of 350,000 l. in gold and ſilver bullion, has been ſhipped for India ſince the 1ſt of January * laſt) and be convinced of the abſolute neceſſity of putting an immediate ſtop thereto; or that, at leaſt, it may be limited for a term of three years, and, after that, to be intirely prohibited, and the exportation confined to our manufactures and products only.

* From the 1ſt of January to the 25th of March 1754.

That theſe, under the judicious management of the regular-bred merchant, will undoubtedly procure us a conſtant and more reaſonable ſupply, to ſay at one half the preſent monopolized price, though more difficult now than at firſt, by the taſte the Chineſe have had of our wiſe policy.

To appeal to the underſtanding of the unprejudiced, whether, if the trade be made free and open, according to the juſt rights of Engliſh-born ſubjects, our private merchants, by whoſe hands alone is the profit now produced to the nation (or rather the loſs mitigated) by Indian commodities re-exported to European countries, could not very ſhortly employ from 2 to 300 fine capital ſhips, take off three millions yearly of woollen, linen, and other manufactures, give real buſineſs thereby to more than 200,000 families, now preying upon each other, doubling the revenue, or more; the fears of leſſening which laſt, at this neceſſitous juncture, are weakly urged, in defence of a manifeſt ſcourge of providence, almoſt evincing, that

Quos Deus vult perdere, prius dementat:

To ſhew that the great products and ingenious manufacturers we are bleſſed with, the extenſive credit now diffuſed throughout the whole kingdom, joined by the ſkill and induſtry of our merchants (confeſſedly ſuperior to all others) may be made ſubſervient to this great and good end: that every other European company, particularly the newly-elected ones, Swediſh, Daniſh, and Pruſſian, muſt (though now ſupported chiefly with Engliſh ſubſcriptions, yearly made) undoubtedly ſink by theſe means.'

Upon what has been ſaid by this gentleman, we ſhall make ſome remarks hereafter, as occaſion may offer.

PEMBROKESHIRE, in Wales, is more of a maritime county than any other there, it being encompaſſed with the Iriſh ſea, except on the eaſt, where it joins to Carmarthenſhire, and on the north-eaſt to Cardiganſhire. It is the extreme weſt part of Wales, and lies neareſt to Ireland of any of it's counties.

It is 33 miles in length, and 28 in breadth, according to Templeman, who gives it an area of 520 ſquare miles. Others compute the area at 420,000 acres; but make it no more than 26 miles in length, from Cardigan in the north, to St. Gowen's on the ſouth; 20 in breadth, from Lhanbeder Velfray in the eaſt, to St David's in the weſt, and but 93 in compaſs.

The air of this county is better than is common to parts that are ſo much expoſed to the ſea, and the ſoil is fruitful; it's few mountains, which are chiefly in the north-eaſt part, have indifferent good paſture for cattle and ſheep; but the parts

near

near the ſea abound with rich meadows, and good corn. It's other commodities are goats, fiſh, fowl, falcons particularly excellent, called peregrins, marle, pit-coal, and culm. It affords plenty of wheat, and is well ſerved with ſea-fiſh and foreign wines.

HAVERFORDWEST, ſtands on the ſide of a hill, but is a very neat, well-built, populous, and trading town, having a commodious key for ſhips of burthen and a cuſtom-houſe.

PEMBROKE, the county town, ſtands in the moſt pleaſant part of all Wales, at the innermoſt and eaſtern creek of Milford-haven.

ST DAVID'S, ſtands on the moſt weſtern promontory of all, which extends itſelf conſiderably into the Iriſh ſea, commonly called St. David's Head.

TENBY, on the ſouth coaſt of this ſhire, has a good key, which was formerly much frequented by fiſhermen; enjoyed a great trade, and it's inhabitants were wealthy: it's markets, at preſent, are well ſtored with corn, fiſh, and other proviſions; the road for ſhipping is very good. It has a great fiſhery for herrings in the ſeaſon, and a large colliery, from whence great quantities of coals are exported to Ireland.

PENSYLVANIA, a Britiſh colony in America. This province is bounded on the eaſt by Delaware bay and river, and the Atlantic Ocean; on the north and weſt by Canada, on the ſouth by Maryland. It extends from Cape Hinlopen, in latitude 39. 30. above 200 miles northwards, but it is very narrow in the ſouthern parts, up to the 40th degree of latitude, being ſo pent in on the eaſt by Delaware river, and on the weſt by the province of Maryland, that in thoſe parts it is not much above 15 miles broad, and in ſome places leſs ſtill; but beyond the latitude it is much broader, though we cannot aſcertain how far it ſtretches towards Canada.

As to the climate, Penſylvania is, by it's latitude, at a like diſtance from the ſun with Naples in Italy, and Montpellier in France; but it muſt be acknowleged that the climates on the continent of America differ much from thoſe of the ſame latitude in Europe: it muſt, however, be owned that the air of Penſylvania is ſweet and clear: the fall, or autumn, begins about the 20th of October, and laſts 'till the beginning of December, when the winter ſets in, which continues 'till March. Froſty weather, and extreme cold ſeaſons, are frequently known here; but as in moſt countries where there are ſuch ſeaſons, the air is then dry and healthy. From March to June the ſpring laſts, but the weather then is more inconſtant than in the other ſeaſons. The heats are extraordinary in the ſummer months, July, Auguſt, and September, but mitigated by cool breezes, which make them very tolerable. The wind is ſouth-weſt during the ſummer, but generally north-weſterly ſpring, fall, and winter, which blowing from the froſty and ſnowy mountains and lakes of Canada, is doubtleſs the main reaſon of the exceſſive cold here in winter.

The ſoil of this province is in ſome places a yellow or black ſand, in others a loamy gravel, in others a fat mould, like the vales in England, eſpecially by inland brooks and rivers, where the lands are moſtly three to one richer than thoſe that lie by navigable rivers. There is alſo found a black hazel mould on a ſtoney bottom. The earth is fruitful, fat, and eaſy to be cleared, becauſe the roots of the trees lie almoſt on the ſurface of the ground.

Here are trees of all ſorts; oak; red, white, and black aſh, beech, Spaniſh cheſnut, cypreſs; the moſt durable of all are poplar, gum wood, hickery, ſaſſafras; and, as for ſhrubs, ſnake-root, ſarſaparilla, ſalop, ſpruce, and cranberries.

Wheat, barley, oats, rye, peaſe, beans, water-melons, muſk-melons, apples, pears, cherries, apricots, quinces, carrots, turnips, onions, parſnips, cucumbers, &c. are here in great plenty, as alſo Indian corn, hemp, flax, &c. It is common for one buſhel of corn ſowed here to yield 40, often 50, and ſometimes 60 buſhels. Of living creatures, here are for food and trade, deer, the elk, as big as a ſmall ox, rabbets, racoons, beavers, plenty of oxen, cows, and ſheep; of the latter it is common for farmers to have 4 or 500 in a flock. They have alſo horſes, ſome very good, and handſome enough. Of birds, here are very fine buſtards, 40 or 50 pounds weight, pheaſants, heath-birds, ſwans, geeſe, braindes, duck, teal, and ſnipe. The fiſh here are ſturgeon, herrings, eels, ſmelts, perch, oyſters, crabs, cockles, and muſſels.

As to the trade of Penſylvania, with reſpect to Europe and America, the caſe ſtands thus: their merchandizes conſiſt of horſes, pipe-ſtaves, pork, beef, and fiſh, ſalted and barrelled up, ſkins and furs, all ſorts of grain, viz. wheat, rye, peaſe, oats, barley, buck-wheat, Indian corn, Indian peaſe and beans, pot-aſhes, wax, &c. and, in return for theſe, they import from the Caribbee Iſlands, and other places, rum, ſugar, molaſſes, ſilver, negroes, ſalt, and wine; and, from Great-Britain, houſhold goods, and cloathing of all kinds, hard-ware, tools, and toys.

They have alſo ſome rice, but no great quantities, and a little tobacco of the worſt ſort. Their trade with the Indians conſiſts but in few articles: they receive of the natives chiefly ſkins, and furs of their wild beaſts, for which they give them cloathing, arms, ammunition, rum, and other ſpirits, in return. This, as well as other northern colonies, are ſaid to have alſo a clandeſtine trade with the Spaniards upon the coaſts of Terra Firma, &c. furniſhing them with European goods and merchandizes, for which they receive chiefly dollars in return [ſee SPANISH AMERICA]; and they alſo trade to the bay of Honduras and Campeachy, for logwood [ſee the article LOGWOOD]. But after all, it muſt be admitted that Pedſylvania has no ſtaple commodity, nor have the inhabitants yet ſet up any capital manufacture of their own for exportation.

This province is divided into ſix counties, viz. Buckingham, Philadelphia, Cheſter, Newcaſtle, Kent, and Suſſex.

There were here a few Engliſh, Dutch, and Swedes, before Mr Penn ſent over the firſt adventurers, under his patent, but they all ſubmitted to the governor he placed over them. Thoſe who went over from England were generally Diſſenters, and eſpecially Quakers, whoſe relioion * is eſtabliſhed by law in this country.

* Among many good things, in relation to the conſtitution, and good government of this province, Mr Penn eſtabliſhed courts of juſtice in every county, with proper officers; and, to prevent law-ſuits and contentions among his paſſive people, there were three PEACE-MAKERS choſen by every county-court, in the nature of common arbitrators, to hear and determine differences between man and man, In king William's reign, when there were no proſecutions in England, this province began to be ſettled with people, who came thither to mend their fortunes, and not to enjoy the liberty of conſcience, for the toleration gave them that at home. Theſe men being of the church of England, Preſbyterians, and Baptiſts, would have had a militia, but the Quakers, being the majority, were againſt it, their principles not allowing them the uſe of arms; but not long after Mt Penn's ſecond voyage, they readily fell in with an armed force: for a ſhip of theirs being taken by pirates, they hired men, and ſupplied them with ammunition and fire-arms, to recover her. And, in reſpect to the militia, ſuch as were of another opinion were allowed to train themſelves, and take ſuch military care for their defence as conſiſted with the peace of the country. However, they have yet had no great occaſion for a militia; for it is very remarkable, that this province, ever ſince it's firſt eſtabliſhment, never had any war with their neighbours, Chriſtians or Indians, but have always lived in peace and amity with them all; and how they behaved in the late rebellion is recent in every one's memory. Let who will laugh at their religion and polity, we find, from the apparent effects of them, as his grace the late duke of Argyle juſtly ſaid in the houſe of lords, upon a peculiar occaſion, that they beat all other ſects of people for ſound morals, œconomy, and human prudence: and, as I have had the ſatisfaction to converſe with many of the more ſenſible men among them, I can ſpeak from experience, that they are as little enthuſiaſts as the freeſt thinkers of the age, notwithſtanding the whimſies of ſome of their green-apron old women; and perhaps there are old women and fools, as well as knaves, of all ſectaries and perſuaſions, but fewer, I believe, among theſe people than among any other, on account of their religious principles; nor do any deſerve more protection under a free-conſtituted government: the reaſons of which are obvious to all who know any thing of their ſyſtem of polity among themſelves.

It has been above obſerved, that this province was divided into counties, of which there are ſix; three upper, and three lower: the former are Buckingham, Philadelphia, and Cheſter, and make the Penſylvania ſo called in king Charles's grant; the latter counties of Newcaſtle, Kent, and Suſſex (called Eſſex in ſome maps) are taken out of Nova Belgia, or rather were thus called before the duke of York, afterwards king James II. granted them to Mr Penn.

I. BUCKINGHAM county, is the moſt northerly of all

BRISTOL is reckoned the chief town in this county; it ſtands 20 miles from Philadelphia, to the north, on the river Delaware, over-againſt Bridlington, in Weſt New Jerſey, and conſiſts of about 70 or 80 houſes: it is noted for it's mills of ſeveral ſorts.

II. PHILADELPHIA county; the firſt town in it is

FRANKFORT, as big as Briſtol before-mentioned, and as well built.

PHILADELPHIA, the capital city of this province, is eſteemed to be one of the beſt laid-out cities in the world; and were it full of houſes and inhabitants, according to the proprietor's plan, it would be a capital fit for a great empire. It is a large city conſidering it's late foundation, moſt commodiouſly ſituated between two navigable rivers, Delaware and Schuylkill, in north latitude 40. 10. and longitude 75. 8. weſt from London. Mr Penn deſigned the town in the form of an oblong ſquare, extending two miles in length, from one river to the other. The long ſtreets, eight in number and two miles in length, he cut at right angles, others a mile in length, and 16 in number, all ſtraight and ſpacious. He left proper ſpaces for markets, parades, keys, meeting-houſes, ſchools, hoſpitals, and other public buildings: and it increaſes every day in edifices of divers kinds, which are carried on according to the firſt plan.

The city has two fronts on the water, one on the eaſt ſide, facing the Schuylkill, and the other on the weſt, facing the Delaware, which is near two miles broad here. The eaſtern part is the moſt populous, on account of the Schuylkill,

Schuylkill, which is navigable 100 miles above Falls. We have obſerved, that each front of the ſtreet was to be two miles from river to river, as it was at firſt laid out, but we cannot ſuppoſe that it is yet finiſhed in that manner. The ſtreet that runs along the Schuylkill is three quarters of a mile in length; the houſes are ſtately, the wharfs and warehouſes numerous and convenient.

The city flouriſhed ſo much at firſt, that there were near 100 houſes great and ſmall in it, within leſs than a year's time; and it has made anſwerable progreſs ſince, the number of houſes at this time being above 2000, and, generally ſpeaking, better edifices than in the cities of England, a few excepted, and in thoſe only a few ſtreets. The houſes here have large orchards and gardens; the land on which the city ſtands is high and firm, and the convenicncy of docks, and ſprings, very much contribute to the commerce of this place, where many rich merchants now reſide; ſome of whom are ſo wealthy, that they keep their coaches.

Ships may ride here in ſix or ſeven fathom water, with very good anchorage. The land about it is a dry wholeſome level. All owners of 1000 acres and upwards, had their houſes in the two fronts facing the river, and in the High-ſtreet, running from the middle of one front to the middle of the other. Every owner of 1000 acres had alſo about an acre in front, and the ſmaller purchaſers half an acre in the back ſtreets, by which means the leaſt had room enough for a houſe, garden, and ſmall orchard. High-ſtreet is one hundred feet broad; ſo is Broad-ſtreet, which is in the middle of the city, removing from north to ſouth. In the center is a ſquare of ten acres for the ſtate-houſe, market-houſe, and ſchool-houſe. Several houſes on the key are worth four and five thouſand pounds, and fifteen ſhips have been on the ſtocks at a time, and ſome hundreds have been built there. The cellars and warehouſes on the key are made towards the river three ſtories high. Here are two fairs a year, and two markets a week. The city ſends two members to the aſſembly.

The inhabitants being at firſt moſtly Quakers, as they ſtill continue, it was ſome time before there was a church after the manner of England; but as ſoon as one was built, it was called Chriſt Church. It had in a few years a very numerous congregation, and king William ordered an allowance of 50l. a year to the miniſter, which, with voluntary contributions, make a handſome proviſion for him. There are above twelve thouſand of the inhabitants that are of this congregation. Here are, beſides this, ſeveral meeting-houſes for the Quakers, who are properly the church as by law eſtabliſhed, being the original numerous ſettlers.

According to the plan, there is in each quaater of the city a ſquare of eight acres, intended for the ſame uſes as was Moorfields in London, walks and exerciſes for the citizens. The great dock is formed by an inlet of the river Delaware, at the ſouth corner of the front of the wharfs, and has a bridge over it at the entrance. Several creeks run into the city out of the two rivers; and there is no city in Holland that is more naturally accommodated with fine and commodious canals, than this might be very eaſily. The key is beautiful, above 200 feet ſquare, to which a ſhip of 500 tons may lay her broadſide. And, as theſe advantages have already rendered this one of the beſt trading towns in the Britiſh empire out of Europe, ſo, in all probability, it will continue to increaſe in commerce, riches, and buildings, 'till for number and magnificence it will have no equal in America. Here are almoſt all ſorts of traders and mechanics, as well as merchants and planters. Here the aſſemblies and courts of judicature are held, and the buſineſs of the province is chiefly managed, as in all capital cities.

At a little diſtance from Philadelphia, is a pleaſant hill, well wooded, on the banks of the Schuylkill, called Fair Mount. Wico, half a mile from the town, is a Swediſh ſettlement, where the people of that nation have a meeting for religion. They have another meeting-houſe at Tenecum.

ABINGTON and DUELIN are two pretty towns in Philadelphia county. But the moſt conſiderable, next to the city, is German Town, a corporation of High and Low Dutch: there are between two and three hundred houſes in it; peach-trees are planted all along before the doors. The town is very pleaſant, and well cleared from trees. Within land lies Radnor, finely ſituated, and well built, containing about fifty families. In this place is a congregation of church of England men. It was at firſt called Amſtel by the Dutch, who began building here, from the name of the river at Amſterdam.

There are ſeveral creeks in theſe two counties, as Derby creek, &c. Amerſland lies between that and another nameleſs creek, from whence paſſing by Redloyer, we come to

III. CHESTER county, ſo called, becauſe the people who firſt ſettled here came from Cheſhire. It lies to the ſouth of Philadelphia county.

NEWTON is the firſt town in it, conſiſting of between thirty and forty houſes.

CHESTER town, the capital of the county, is about 13 miles diſtant from Philadelphia towards the ſouth-weſt, in latitude 40, and longitude 75. 17. weſt from London. It contains about an hundred houſes, and here is a very good road for ſhipping, the Delaware, on which it ſtands, being here three miles over. This place was alſo called Upland, and has a church dedicated to St Paul, with a numerous congregation of church of England people.

There is another town called CHICHESTER, as is alſo the creek on which it ſtands, which is navigable. It has above an hundred houſes. The little town Concord has not ſo many. The other townſhips in this county are ſmall, but the land is well planted. Marcus Hook, four miles from Cheſter, is the boundary of the three upper counties, properly called Penſylvania. Cheſter county ſends ſix members to the aſſembly.

IV. NEWCASTLE county lies to the ſouth of it. In this county below Chicheſter, is a great creek, where there is room enough to lay up the whole navy royal of England, there being from four to eight fathom water. Below it is Chriſtiana creek, where the Swedes had a town and plantations. They inhabited this and the other ſide of Delaware river, called La Nouvelle Swede, or New Sweden, by Robbe the French Geographer. It included part of this province and part of Jerſey. The creek is large, but the village inconſiderable, though the Swedes had a church here not long ago. Between this and the next creek is Newcaſtle town, from whence this county takes it's name. It is inhabited by Engliſh and Dutch, and is the next place for bigneſs and trade to Philadelphia, containing now between five and ſix hundred houſes well built. Here live and thrive many merchants and tradeſmen. The church has a large congregation, moſtly Welſh. The Dutch alſo have a church here.

The lands hereabout are called the Welſh Track, and there are near forty thouſand acres planted and laid out by and for Welſhmen. It is thick of little towns, as Haverford-weſt, Merioneth, and others. It is populous, and the inhabitants are very induſtrious, by which means this part of the country is beſt cleared. They have many large plantations of corn, and abundance of cattle, ſo that they are looked upon to be in as thriving a condition as any in the province.

MOUNTJOY is a manor that belonged to a daughter of Mr Penn, and here the firſt lime-ſtone was dug, that was ever found in America. This whole county is remarkable for it's excellent gravel, very rare to be met with on the continent of America. Ten miles below Newcaſtle is St George, a pretty village, New Blackbird creek, and over-gainſt it is a little iſland called Rhode Iſland, in the Delaware, where there is ten fathom water. This county ſends ſix members to the aſſembly.

V. KENT county lies to the ſouth-eaſt of Newcaſtle county. Here are Cranebrook, Dover, Murden, and Miſpelliven creeks and plantations. Dover was formerly called St John's Town, and conſiſts now of about fifty families. It is looked upon as the capital of the county, which is ſettled like Virginia, not in townſhips, but ſcattered plantations. In this county is a church of England congregation. The land is good, and the county is repreſented by ſix member in the aſſembly.

VI. SUSSEX county lies to the ſouth-eaſt of Kent. The chief town is Lewes, on a creek ſo called: it is handſome and lorge, ſtanding on the beautiful banks of a river, between the town and the ſea, which makes the harbour. Theſe two laſt counties lie about Delaware-bay, which is there about ſeven leagues over. Before Lewes is Cape Hinlopen, otherwiſe called Cape William, and twenty miles below that is Cape James, the furthermoſt bound of the province of Penſylvania. Suſſex county, like Kent, is inhabited by planters, whoſe plantations lie ſcattering, as ſuited beſt to their conveniency.

REMARKS on PENSYLVANIA before the laſt war.

It is a point out of diſpute, that no country in the world is more proper than Penſylvania for producing hemp and flax; and with reſpect to theſe, we ought ſeriouſly to conſider, as we have occaſionally obſerved on other of our colonies, that there is nothing plainer than that hemp and flax are ſo uſeful in navigation and trade, that we cannot do without them; the firſt for cordage of all ſorts, the latter for making ſail-cloth, as well as for the linen manufactures carried on in this kingdom. The neceſſity we are under for theſe commodities, ought to put us upon all imaginable care how to provide them, that we may not fall under the ſame neceſſity for them that we did in the year 1703 for pitch and tar, [ſee the article NANAL STORES] when the government of Sweden abſolutely refuſed to let us have them for our ready money, otherwiſe than in their ſhipping, from their tar monopoly, at their own price, and only in ſuch quantities as they thought fit.

Upon that diſappointment, the government, by allowing a conſiderable encouragement for carrying on the manufactures of pitch and tar, had ſufficient quantities from our own plantations, and it is greatly to be wiſhed the like encouragement was given for raiſing hemp and flax; and as all ſorts of naval ſtores may be raiſed with ſo many advantages to this kingdom, it would be unaccountable to leave us dependent, and

at

at an uncertainty for them. It is very well known, that our land is too dear for hemp and flax, and what does grow here (though it is tough and makes ſtrong linen) neither dreſſes ſo kindly, nor whitens ſo well as that which grows in hotter climates. In Ruſſia, the beſt hemp and flax grow in the ſouthermoſt parts of the empire, where the ſummer is hot and the air clear, and yet the flax is not accounted ſo good as that which grows in Egypt or Italy. Egypt has always been eſteemed for it's linen, and even now ſupplies Leghorn with large quantities: and the coaſts of Syria, Aſia Minor, Smyrna, Conſtantinople, and other great cities, have a ſupply of hemp and flax from thence.

All our colonies (which run twelve or fourteen hundred miles in length in North America, all the way bordering upon the ſea) have very hot ſummers; the ſouthermoſt parts of them lie near the ſame latitude with Egypt, and the north part much about the ſame with Ancona or Bologna in Italy, where hemp and flax grow; therefore we have the greateſt proſpect to receive mighty ſupplies of hemp and flax from them.

Part of the land in the colonies is very rich, and of ſo ſmall value, there will be opportunity of breaking up freſh as often as there is occaſion to change the ground, which if laid down will recover itſelf again without the charge of manuring, as we do here, to the very great damage of our ploughing lands. Nothing impoveriſhes land more than hemp and flax; and though it is manured, that alone will not do ſo well, for the land ought to be changed after three or four crops, and generally the fineſt and fatteſt pieces are converted to that uſe. Thoſe great conveniences of having land ſo very cheap and ſo fine a climate, which we know produces excellent hemp and flax, ſo commodiouſly ſituated along the ſea-coaſts, with ſuch numbers of large rivers running up the country to the moſt inland ſettlements, where proviſions may be raiſed at ſo ſmall a charge, and where work may be done by the labour of ſlaves, almoſt as cheap in India, gives ground to hope, that we may manufacture linens here cheaper, than any part of Europe can import them upon us, and the colonies be as profitable to us, by raiſing rough materials to enable us to carry on the linen manufacture, as the Suſſex and other downs are, for ſupplying wool for that manufacture; the profits of which we have valued ourſelves ſo much upon, that we have ſet the reſt of Europe upon being our competitors therein.

And as the woollen manufacture, eſpecially the coarſe part, has ſpread itſelf of late into ſeveral parts of the kingdom, which has exceeded the demand, and cauſed great ſtocks to remain on hand, if thoſe rough materials of hemp and flax were prepared in our plantations, the people in North Britain, &c. would ſoon find the advantage of advancing in that manufacture; the laborious and coarſe part being performed abroad, the reſt would invite, not only the poor and neceſſitous, but people of better circumſtances to employ their time in it.

If theſe propoſitions are ſufficiently conſidered and heartily put in practice, we may hope, that by providing the aforeſaid rough materials, we ſhall have the delightful proſpect of ſeeing trade flouriſh; for as the ſilk and linen manufactures brought to perfection, are altogether as profitable to thoſe nations as the woollen is to us; and as we increaſe in our linen manufactures thoſe of Sileſia, and all the hereditary countries of the houſe of Auſtria, whence we take ſuch quantities, muſt abate of courſe; their people alſo will reſort to us, and help to carry them on; for it has always been obſerved, where new manufactures are ſet up, the manufacturers will likewiſe remove. This was the caſe with the Flemings, when queen Elizabeth gave ſuch great encouragement to have the woollen manufacture remove thither; and ours when we had that inundation of China and India wrought ſilks, for our weavers went away to Holland, Flanders, France, &c. ſo that ſeveral ſtreets in Spital-fields were left almoſt deſolate; but when theſe ſilks were prohibited, the manufacturers returned again.

It is ſuppoſed the Ruſſians export to England and all other parts, in hemp and flax, above the value of a million a year. If hemp and flax be ſo valuable a product for merchandize with them, there ſeems to be a much greater proſpect of it's being ſo to ourſelves, by raiſing them in our plantations, becauſe they will not be ſubject to any land-carriage, but ſhipped immediately from the place of growth, becauſe land is much cheaper in our plantations, than in the ſouth parts of Ruſſia. The climate being equal with that in Egypt and Italy, is ſuppoſed to produce hemp and flax preferable to theirs.

We have ſhewn, under other articles which we ſhall refer to at the concluſion of this, that in the caſes of ſugar and tobacco, every white man employs four at home; that is to ſay, finds them work to ſupply him with utenſils requiſite for his. If ſugar and tobacco employ ſuch a number of hands at home, certainly every perſon employed in the plantations, in raiſing and dreſſing hemp and flax, muſt by his labour there, return more than twice the advantage that can be produced by ſugar and tobacco, for they are manufactured in the plantations: the refining the ſugar and cutting the tobacco, with the little quantity that is rolled excepted. Whereas flax and hemp, are materials for employing all idle hands; and of conſequence the poors rate will ſoon be abated, and the nation will find in a little time what they ſave yearly thereby, will be more than ſufficient to encourage the people to purſue that employment with indefatigable vigour. And if once we come to be employed with hemp and flax by methods here ſuggeſted, every place will be filled with flax-dreſſers, and the overſeers of the poor of every pariſh where the wool ſpinning trade is not carried on, may very eaſily come at hemp and flax, which they will find as profitable to them, as the woollen is to the other; and the more diſtant the employment is, the better, for many inconveniences have attended one manufacture interfering with another; beſides, there will be an intercourſe of trade created, by one part of the kingdom ſupplying the other with their diſtinct manufactures. This will give full employment to the whole kingdom, and an univerſal chearfulneſs to every body: for the poor are never happier, nor their minds eaſier, than when they have full employment; and when they are employed, riches are diffuſed throughout the whole nation.

It is a common opinion, that we have above a million of people in the three nations deſtitute of work, but if thoſe rough materials (ſo often mentioned in this work) ſhould come to be raiſed in our plantations, there need not be one idle perſon: now ſuppoſe one million of people were put upon manufacturing thoſe rough materials, and each perſon earned but one penny a day, and allowing but three hundred working days in the year, it would amount to 1,250,000 l. A prodigious advantage to the nation, which is ſtill greatly heightened by conſidering, that theſe people would be then employed, at leaſt in part, and ſo far as they were employed, would be the better ſubjects.

That all this might be brought about with leſs trouble than has been given the nation by one Baltic or Mediterranean expedition, and the tenth part of the expence of a campaign in Flanders, is a thing will be acknowledged by all who are capable of judging of this ſubject; and therefore that it ought to be done, is a point that cannot be diſputed. We would not miſlead our readers by the compariſon, into a bad opinion of ſuch expeditions or campaigns that have heretofore been made, that is not our buſineſs or our intention; the juſtice of the compariſon turns upon this, that the motives to ſuch expeditions and campaigns have been, comparatively ſpeaking, near and at hand; whereas we are leſs acquainted, or at leaſt, leſs affected, by the connection between our intereſts and thoſe of the plantations: though, from what has been ſaid here, and throughout this work, we think it will plainly appear, that they concern us as much, and as nearly, as any intereſts can do without the limits of our own iſland.

That the reader may the more ſatisfactorily diſcern the neceſſity of encouraging our plantations, in the raiſing of ſuch rough materials as may reciprocally advance the trade of Great Britain, as well as that of the plantations, and keep the latter from interfering with the manufactures of their mother country, we refer him to the following articles, viz. COLONIES, FLAX, HEMP, LINEN, FRENCH AMERICA, FRANCE, SPANISH AMERICA.

REMARKS on this province in another light, before the laſt war.

The wiſe conduct of Mr Penn at the firſt eſtabliſhment of this province, had ſo good an effect upon the Indians, that they had him always in the higheſt veneration; and they ſtill retain the ſame to his memory, of which the reader will find an exemplary proof in the following ſpeech made to Sir William Keith, governor of this country in 1722; only it may not be amiſs to obſerve, that Onas ſignifies in the Indian language a pen; and therefore this is the name the Indians have given to our proprietor and all his ſucceſſors, or repreſentatives.

'Brother Onas, you told us how William Penn, that good man did, on the firſt ſettlement of the province of Penſylvania, make leagues of friendſhip with the Indians, and treated them like brethren; and that, like the ſame good man, he left it in charge to all his governors who ſhould ſucceed him, and to all the people in Penſylvania, that they ſhould always keep the covenant and treaties he had made with the five nations, and treat them with love and kindneſs. We acknowlege, that his governors and people have always kept the ſame honeſtly and truly to this day. So we, on our part, always have kept, and for ever ſhall keep, peace and frindſhip with a good heart, to all the people of Penſylvania. We thankfully receive and approve of all the articles in your propoſition to us, and acknowlege them to be good and full of love: we receive and approve of the ſame with our whole hearts; becauſe they are not only made one people by the covenant chain, but are alſo people united in one head, one body, and one heart, by the ſtrongeſt ties of love and friendſhip. Brother Onas, you deſire there may be a perpetual friendſhip between you and the five nations, and between your children and our children; and that the ſame may be kept as long as the mountains and rivers endure. All which we like well, and on our parts deſire, that the covenant and union made with a true and clean heart between you and us, may

laſt as long as the ſun and moon ſhall continue to give light. And we will deliver this in charge to our children, that it may be kept in remembrance with their children and childrens children, to the laſt ages: and we deſire, that the peace and tranquility that is now eſtabliſhed between us, may be as clear as the ſun ſhining in it's luſtre, without any cloud or darkneſs, and that the ſame may continue for ever.

Brother Onas, we have well conſidered all you have ſpoken, and like it well, becauſe it is only the renewing former leagues and treaties, made between the government of Penſylvania, and us of the five nations, which we always believed we were obliged to keep. And, as to the accident of one of our friends being killed by ſome of your people, which has happened by misfortune, and againſt our will; we ſay, that as we are all in peace, we think it hard that the perſon who killed our friend and brother ſhould ſuffer, and we do in the name of all the five nations forgive it; and that the man who did it may be releaſed from priſon, and ſet at liberty to go whither he pleaſes; and we ſhall eſteem that as a mark of regard and friendſhip for the five nations, and as a farther confirmation of this treaty.'

Upon theſe principles, which are more likely to be obſerved in this than in moſt of our colonies, the friendſhip of the Indians may be preſerved as long as they remain a people; which ſhews how poſſible it might have been to have maintained a like correſpondence with them in other places, which would not only have ſaved a great deal of bloodſhed, and have contributed to the quick growth of the colonies ſettled in the countries, inhabited by ſuch Indians, but would have been very uſeful in many other reſpects: ſince it is allowed, where the Indians are treated, as in Penſylvania, with ſtrict juſtice and humanity, they are as firm allies as any in the world; and in that quality more capable of doing ſervice, than if reduced to be either ſlaves or ſubjects; becauſe, living as they do, they preſerve their ſtrength and activity, and enjoy all the liberty they can deſire, and are very willing to fight for thoſe under whoſe protection they enjoy it.

That our readers may be made thoroughly ſenſible of the abſolute and indiſpenſable neceſſity, under which this nation labours to preſerve and maintain an inviolable friendſhip with the Indian nations in this part of America; he is deſired to turn to the following articles, viz. BRITISH AMERICA, CANADA, COLONIES, FLORIDA, LOGWOOD, LOUISIANA, MAP, MEDAL, NAVAL STORES, PLANTATIONS, NORTH CAROLINA.

Philadelphia, May 2, 1754.

As the following extract of a letter, from a gentleman reſiding in one of the colonies to the northward, contains a more full and exact account of the armament ſent by the French laſt ſummer from Canada, and of the pernicious conſequences that may attend the French ſettling on Ohio, than any I have as yet ſeen publiſhed, it may be of uſe to be recorded in this work.

SIR,

—— 'I am extremnly ſorry to hear that the governments of Penſylvania, and Maryland, have not viewed the encroachments of the French in their proper light; or, if they have, that they won't exert themſelves at this time of imminent danger. Should the French once gain a ſettlement at Ohio, they will then have great advantages over the ſouthern colonies, as muſt be obvious to every perſon the leaſt acquainted with their ſituation. In time of peace between the two crowns, they will continually be ſpiriting on the Indians in their alliance, to murder and ſcalp the inhabitants of your back counties, in order to prevent the extenſion of your ſettlements; and, in time of war, how eaſy it will be for a number of troops, collected from their ſeveral forts, or perhaps ſent from Old France for that purpoſe, to make a deſcent upon ſome one or other of the colonies. What then muſt be the conſequence!—Unarmed, and diſunited as you are, will you be able to repel the invaders, or prevent their ravaging and laying waſte your country, or hinder them from committing their too well known barbarities on ſuch of your inhabitants as may fall within their power? The evil day may a while be put off, but ſooner or later it will ſurely come unleſs you rouſe from the lethargy you ſeem at preſent in, and make uſe of thoſe means to protect yourſelves which the Almighty has put in your power; the moſt proper way of doing which is, to obſtruct thoſe incendiaries, the French and their Indians, from ſettling on your frontiers. By a hearty union of the colonies, and proper management, we might, with little aſſiſtance from our mother-country, not only diſlodge the French from Ohio, but from Quebeck itſelf. But to ſend three or four hundred men againſt five times their number, can anſwer no other end, than to expoſe us to the contempt of our Indian allies, who will think themſelves obliged to quit the intereſt of thoſe that ſeem unable to protect them. You deſire me to acquaint you with what I hear that may be depended on, concerning the deſigns of the French, in ſending ſo large a number of troops from Canada as they did the laſt ſummer. In anſwer to which I can inform you, that I have lately ſeen Mr B——r, who was at Oſwego at the time their forces paſſed by that fort; who ſays, he learnt by ſundry deſerters, and others, that Monſieur Duquiſne, the new governor general of Canada, a young gentleman formerly a captain of a man of war, declares he will have a French fort on each of the waters that empty themſelves into St Lawrence, or Miſſiſſippi; that he believes the late governors of Canada have been all aſleep, but that he will make every officer under him know his duty, and do it.—The four or five detachments were, during the laſt ſummer, ſent from Canada to the Ohio, making in the whole about 2000, beſides Indians, under the command of Monſieur Morin (or Morang, as ſome call him) whoſe knowlege of the Indians recommended him to the new governor for that office. The detachment that accompanied Morin, conſiſted of about 40 or 50 large battoes and canoes, many of them ſuppoſed to carry more than 30 men; they ſailed within muſquet-ſhot of Oſwego, without ever ſtriking their colours, and had their trumpets blowing, drums beating, &c. This was in ſight of many of the ſix nations, and foreign Indians, who could not ſufficiently expreſs their ſurprize at ſuch an armament, and aſked whether the Engliſh and French were not at peace.—Some of theſe troops returned to Canada to quarters during the winter, but great part of them were left, as is ſuppoſed, at the forts on and near the lakes, to be ready to go down the Ohio early in the ſpring: thoſe that returned had with them the Penſylvania Indian traders, ſo often mentioned to be taken by the French on Ohio; thoſe poor wretches were in irons, and lodged a night within a few miles of Oſwego. One of the famous chiefs of the Cahuga nation propoſed to ſome of the traders to attack the French, and recover the priſoners, but they could not muſter a ſufficient party to do this.—Monſieur Morin built two or three forts, but many diſputes ariſing between him and his officers, together with a ſevere fit of the gout, made him deſire to quit his command; for which purpoſe, an expreſs was laſt September ſent to Canada, and I ſuppoſe the gentleman who writes to governor Dinwiddie was made his ſucceſſor, who, if he exceeds Morin as much in humanity as he does in politeneſs and good ſenſe, may be of ſervice to thoſe who have the misfortune of being priſoners in that country.—I ſaw Morin and his ſon ſome years ago in Canada; they have all the vain airs of the French, joined with the ſavageneſs of the Indians, without the leaſt of the politeneſs of the former, or native ſimplicity and grandeur of the latter. The father commanded when the brave Donahew, captain of one of the Boſton ſloops, was decoyed aſhore and killed; the ſon was one of his party: as trophies of their victory, the old man ſhewed me a tobacco-pouch, which he, and the young brute, let me know was made of the ſkin of poor Donahew's arm: the father had alſo Donahew's ring, which the ſon acquainted me he cut the finger off to get, as it would not come off eaſily. After this, I ſaw ſome of Donahew's men who were priſoners, they not only confirmed the above, but aſſured me the brutiſh father did himſelf cut off ſeveral pieces of their dead captain's fleſh, and threw them into the fire, and encouraged the Indians to do the like; and when they were roaſted, the cannibal ſon, and ſundry Indians, tore them with their teeth.—This may ſerve as a ſpecimen of the neighbours you are like to have.

Your's, &c.'

Further REMARKS before the laſt War.

Thus we find that the French are determined to raiſe their intereſt in America to the higheſt pitch of power, upon the ruins of that of Great-Britain.—This is a freſh confirmation, of what we have urged in this work, under the preceeding, and various other heads, to which we have referred, in relation to the meaſures taken by France to aggrandize their power in the new world.

Our accounts alſo from Philadelphia, July 2, 1754, ſay, 'That the French have taken the Block-houſe and Truck-houſe, erected by the Viginians; cut off all our traders but two, and have taken in goods, furs, and ſkins, to the amount of 20,000l. at leaſt. A ſad ſtroke to many here: this from the river Ohio, at a place called Log's-Town, about 190 miles from hence due weſt. How they will be diſlodged, time will ſhew; but the ſkin-trade is intirely put a ſtop to, by this enterprize of the French. This account you may rely on, as ſtrictly matter of fact.'

And alſo our accounts from New-York, of May 16, laſt, ſay, that 'We hear from Auguſtine, by the way of South Carolina, that a veſſel of war, belonging to his catholic Majeſty, was arrived there from the Havannah, the captain of which reported, the ſeveral armed veſſels, with men, ammunition, &c. were ſailed from thence for Campeachy, to join a fleet that was fitting out there, with a deſign to attack the Muſquetto ſhore. The above news may be depended upon, as we have it from good authority.'.

☞ Theſe things we have foreſeen and foretold, for near theſe three years paſt, throughout the courſe of this work; and this any man of plain common ſenſe might eaſily do, without any pretenſions to the gift of prophecy, if he attended

tended to thoſe facts, which we have laid before him in various parts of this performance.

REMARKS on PENSYLVANIA, ſince the laſt War, and DEFINTIVE TREATY, of 1763.

On peruſal of what we have obſerved under this article of Penſylvania, before the laſt war, the reader will perceive from thence, as well as the whole tenour and ſpirit of this work, interſperſed in variety of proper places throughout, that all that we prejudged relative to the laſt war with France and Spain has come to paſs: and as the aſſembly of this province, upon a diſpute with Mr Penn, their preſent governor, on the 24th of laſt March, came to twenty-ſix reſolutions, the laſt whereof is as follows:

'Reſolved, that this houſe will adjoin, in order to conſult their conſtituents, whether an humble addreſs ſhould be drawn up, and tranſmitted to his majeſty, praying that he would be graciouſly pleaſed to take the people of this province under his immediate protection and government, by compleating the agreement heretofore made with the firſt proprietor for the ſtate of the government to the crown, or otherwiſe to his wiſdom and goodneſs ſhall ſeem meet': and as it is further ſaid and believed, that now at this time of writing, all public buſineſs is at a ſtand, and neither men nor money are raiſed for the protection of their frontiers, ſtill miſerably harraſed by the Indians—See our article INDIANS, FLORIDA, MISSISSIPPI.

The foregoing being the preſent ſtate of this province, the following obſervations may not be unacceptable, reſpecting what is urged by thoſe who are for obtaining a ROYAL GOVERNMENT in exchange for this of the proprietaries.

'Tis unneceſſary for us to enter into the merits of the diſputes between the proprietaries and the people: 'tis our buſineſs only to obſerve, that in the preſent conjuncture a perfect union and harmony is abſolutely needful as well in this province, as among the whole of our NORTH AMERICAN PROVINCES, for the mutual protection of their common trade and ſafety againſt the Indians; who, we experience, at preſent, give us no leſs uneaſineſs here, than the junction of France and Spain in the laſt war.

At preſent, Penſylvania is in a wretched ſituation. The government that ought to preſerve all in order, is itſelf weak, and has ſcarce authority enough to keep the common-peace. Mobs aſſemble and kill numbers of innocent people in cold blood, who were under the protection of the government. Proclamations are iſſued to bring the rioters to juſtice. Thoſe proclamations are treated with the utmoſt indignation and contempt. Not a magiſtrate dares ſtir towards diſcovering or apprehending the delinquents. They aſſemble again, and with arms in their hands, approach the capital.—The government truckles, condeſcends to cajole them, and drops all proſecutions of their crimes; whilſt honeſt citizens, threatned in their lives and fortunes, fly the province, as having no confidence in the public protection. They are daily threatned with more of theſe tumults; and the government, which in it's diſtreſs called aloud on the ſober inhabitants to come with arms to it's aſſiſtance, ſees thoſe who afforded that aſſiſtance daily libelled, and menaced by its partizans for doing ſo; whence it has little reaſon to expect ſuch aſſiſtance on another occaſion.

If the charge thought of may have the happy effect ſo indiſpenſably requiſite at this time, the ſooner it takes place, the better. It does not appear that a change of government can poſſibly hurt the province; and there may many advantages ariſe from it. It is only a change of governor, that is, inſtead of ſelf-intereſted proprietaries, a gracious king! His majeſty, who has no views but the good of his people, will thenceforth appoint governors, who, unſhackled with proprietory inſtructions, will be at liberty to join with the aſſembly in enacting wholſome laws. At preſent, when the king requires ſupplies of his faithful ſubjects, and they are willing and deſirous to grant them, the proprietaries intervene and ſay, 'unleſs our private intereſt on certain particulars are ſerved, nothing ſhall be done'. This inſolent tribunal VETO, has long, too long incumbered all public affairs, and been porductive of many miſchiefs. By the crown taking the government into it's hands, not even the proprietaries can juſtly complain of any injury. The being obliged to fulfil a fair contract is no injuſtice. The crown will be under no difficulty in compleating the old contract made with their father, as there needs no application to parliament for the neceſſary ſum, ſince it ſeems half the quittents of the lower counties belong to the king, and the many years arrears in the proprietaries hands, who are the collectors, muſt vaſtly exceed what they have a right to demand, or any reaſon to expect.

If ſtability in the government of every province does not take immediate place, and a perfect harmony and union is not effectually promoted amongſt them all; it is not poſſible that the good intentions of the Britiſh government can ever be anſwered, relative to our North American intereſt, purſuant to the DEFINITIVE TREATY; the Savages will ruin our whole commerce, and render the lives and properties of our coloniſts ever precarious, and ſubject this nation to immenſe expences to keep them in ſubjection, provided the ſeveral colonies do not act powerful in concert for that purpoſe: and if they do, they may ſoon ſecure themſelves forever, and rear their commerce and navigation to an amazing height, by raiſing ſuch materials for the manufactures of their mother-country; ſuch as FLAX, HEMP, SILK, POTASH, IRON, TIMBER, great variety of other eſtimable products that will equally enrich and aggrandize the plantations with theſe kingdoms in general. See our articles AMERICA, FLORIDA, MISSISSIPPI, MEXICO, PERU, CANADA, FISHERIES, NORWAY.

PEOPLE. Under the article MONEY, we have ſhewn, that it is the meaſure of commerce, but that the ſpring and original thereof, in all nations, is the natural or artificial product of the country; that is to ſay, what their land, and what the labour and induſtry of the people produce.

There is no man that can reaſonably diſpute this poſition; and, if granted, it follows from thence, that to know rightly how the ballance of trade ſtands with any nation, a due inſpection muſt be made into their natural or artificial product; and the courſes of foreign exchange muſt likewiſe be conſtantly examined. See the articles BALLANCE OF TRADE, and EXCHANGE.

But this natural or artificial product being moſt of it in the reſult of the people's labour and induſtry, we ſhall be ſtill in the dark, as to all enquiries of this kind, without maturely conſidering the numbers of the people.

In theſe ſort of ſpeculations, not only the quantity but quality of the inhabitants muſt be duly pondered; they muſt be divided into their ſeveral ranks and claſſes: it muſt be diſtinguiſhed, who, by arts, labour, or induſtry, are increaſing; and who, by their expence, poverty, or ſloth, are decreaſing the kingdom's wealth. Theſe ſub-diviſions are likewiſe to be made, of what numbers are employed in the church, in the wars, in the fleets, mercantile and warlike, in the law, in offices, in merchandize, in ſhop-keeping and traders, in handicrafts; and who, both of the higher and lower degree, are perſons living upon their eſtates, who are freeholders, farmers, labouring people, ſervants, cottagers, alms-people, and vagrants.

Various have been the conjectures, in relation to the number of people in this and other countries; which being a matter of uſe in commercial, as well as other political diſquiſitions, the following obſervations, which I have lately received from ------, a gentleman of honour in a public character abroad, who is turned for ſtudies of this kind, may not be unacceptable, though his ſentiments differ from ſome others, in regard to the number of people in this kingdom.

'Mr King, ſays this honourable gentleman, obſerves, that people alone do not make a government rich; for a multitude of beggars or ſlothful people renders it poor and weak.'

Wealth alone does not make a government rich; for people may be wanted to manage and propogate a great ſtock.

To which may be added, that people, and wealth, and induſtry, will not make a government rich and powerful, unleſs the ruling miniſters of ſtate take pains to give them a proper direction and application, which is extremely difficult to do, without ſome knowlege of the quantity of each of theſe ingredients, and how they are employed.

One of the firſt enquiries then of a patriot miniſter, will be after the numbers and qualities of thoſe from whom the public revenue is drawn. In which (unleſs a law was made for ſome regiſter of the people, or the method hereafter mentioned was taken) one can only be guided by conjectures and calculations.

From ſuch lights as we have at preſent, it may be reaſonably ſuppoſed, that the number of people in England was, at the beginning of this century, according to the obſervations of the famous Mr King, 5,500,000. See Davenant's Eſſay on Probable Methods, &c. p. 24.

The ratio of increaſe has been found, by a great variety of good obſervations, to be, that 100,000 people augment annually, one year with another, to 100,175.

The logarithm of the ratio of increaſe being multiplied by 50, and added to the logarithm of 5,500,000, will produce a number upwards of 5,995,000, which is near enough to 6 millions to be found any general obſervations upon, but far enough from the uſually ſuppoſed number of 8 millions: ſo that, until it can be ſhewn us, either that Mr King was wrong, or that the foregoing method of computation, recommended by Mr Kerſeboom, is falſe, we have reaſon to reject all concluſions drawn from a principle ſo erroneous. See Aanmerkinges, p. 12, notes. Quarto edition.

The 6 millions are ſuppoſed to be divided in the following manner:

In London - - - - -	747,985
In the market-towns, and others of above 150 houſes	951,091
In the countries - - - -	4,300,924
	6,000,000

Sir

Sir William Petty would have us believe the number of people to be 30 times the number of deaths. The writer of this paper believes it to be about 28 in London, but the ſafeſt of all appears to be the adopting Mr Kerſeboom's opinion, founded upon very many accurate obſervations, and agreeing very nearly with Dr Halley, viz. that the number of children born alive in one year, being multiplied by 35, will give us the ſum of the inhabitants. See Meenigte Des Volks*.

* I do not agree with Mr Kerſeboom in his calculation of the number of people in London, but I uſe his method to ſhew that Mr Maitland was nearer the truth than he.

Thus London may be eſtimated as follows:

The medium of regiſtered births for 14 years -	17,639
Ditto of unregiſtered births, ſuppoſing diſſenters of all kinds, as 13, 33 to 86, 66 - -	2,715
Ditto of illegitimates, ſhould be about 65 in 100, but is here rated only at 5 per cent. -	1,017
Total - -	21,371

Which total, multiplied by 35, produces - 747,985 for the number of inhabitants within the bills of mortality.

If theſe premiſſes be allowed to be right, it will be very eaſy for any common arithmetician to form a-new for theſe times, from Mr King's ſchemes A. B. and C. as reported by Dr Davenant; but the many alterations that have happened ſince his time, in the ſcheme D. make it a work of ſome difficulty: 'till a better can be formed, the following plan for it is propoſed.

SCHEME D.

1750. Number of Families in England. N°.		Heads per family.	Number of perſons.
1. Temporal lords -	200	40	8,000
2. Spiritual ditto -	26	20	520
3. Baronets, knights, eſquires	4,275	20	85,500
4. Gentlemen - -	13,073	8	104,584
5. Perſons in greater offices	5,500	8	44,000
6. Ditto in leſſer offices -	8,500	6	51,000
7. Eminent merchants and traders by ſea, and ſome monied perſons -	2,900	9	26,100
8. Leſſer ditto - -	11,100	6	66,600
9. Law and dependants -	15,000	7	105,000
10. Eminent clergymen -	2,000	7	14,000
11. Leſſer ditto - -	8,000	5	40,000

Total decreaſing families	908,813		2,947,917
Families increaſing as above	564,426		3,052,083
Total together families	1,472,239		6,000,000

If the numbers here ſet down ſhould be thought any way near the truth, this ſcheme may be eaſily compleated with the incomes and expences, according to Mr King: No. 1. ſhould be 800,000l. per. ann. No. 2. 46,462. No. 3. 3,826,125. There are ſeveral variations in this ſcheme, from Mr King's proportions; the reaſons of moſt of them will be obvious: No. 12, 13, and 14, as they are of the greateſt importance towards judging of the political ſtate of the nation, ſo the moſt pains has been taken to make them right.

It has been imagined, by all thoſe who have turned their thoughts to theſe matters, that the number of better ſort of freeholders is much leſſened within theſe few years; if it ſhould be thought that I have diminiſhed them too much, let the objector take the number of freeholders in any county where he is well acquainted, and compare them, according to the ſize of his county, with thoſe that ſhould be in the whole kingdom, and I am perſuaded he will find, eſpecially if his county be large, that the proportion here ſet down is great enough; but he muſt remember to deduct thoſe freeholders, viz. clergy, lawyers, merchants, &c. &c. that are here included in other articles: thoſe that will take this pains muſt, I believe, agree, that we have loſt within theſe 50 years, 13,000 of thoſe valuable families, the ancient yeomen of this kingdom.

As to the great augmentation of No. 17, thoſe who conſider the preſent ſtate of luxury amongſt us, will not wonder at a double proportion of increaſe being given to this claſs. Hoc genus omne, having propagated very faſt of late years in England.

'The people being the firſt matter of power and wealth, ſays Dr Davenant, by whoſe labour and induſtry a nation muſt be gainers in the ballance of trade, their increaſe or decreaſe muſt be carefully obſerved by any government that deſigns to thrive; that is, their increaſe muſt be promoted by good conduct and wholſome laws; and if they have been decreaſed by war, or any other accident, the breach is to be made up as ſoon as poſſible, for it is a maim in the body politic, affecting all it's parts. Almoſt all countries in the world have been more or leſs populous, as liberty and property have been there well or ill ſecured. The firſt conſtitution of Rome was no ill-founded government, a kingly power limited by laws; and the people increaſed ſo faſt, that from a ſmall beginning, in the reign of their ſixth king, they were able to ſend out an army of 80,000 men. And, in the time of the commonwealth, in that invaſion which the Gauls made upon Italy, not long before Hannibal came thither, they were grown ſo numerous, as that their troops conſiſted of 700,000 foot, and 70,000 horſe: it is true, their allies were comprehended in this number, but the ordinary people fit to bear arms, being muſtered in Rome and Campania, amounted to 250,000 foot, and 23,000 horſe.

Nothing, therefore, can more contribute to the rendering England populous and ſtrong, than to have liberty upon a right footing, and our legal conſtitution firmly preſerved. A nation may be as well called free under a limited kingſhip, as in a commonwealth; and it is to this good form of our government, that we partly owe that doubling of the people, which has probably happened here in the 435 years laſt paſt, according to Davenant.

And if the ambition of ſome, and the mercenary temper of others, ſhould bring us at any time to alter our conſtitution, and to give up our antient rights, we ſhall find our number diminiſh viſibly and faſt. For liberty encourages procreation, and not only keeps our inhabitants among us, but invites ſtrangers to come and live under the ſhelter of our laws.

The Romans, indeed, made uſe of an advantitious help to enlarge the city, which was by incorporating foreign cities and nations into their commonwealth; but this way is not without it's miſchiefs. For the ſtrangers in Rome, by degrees, had grown ſo numerous, and to have ſo great a vote in the councils, that the whole government began to totter, and decline from it's old to it's new inhabitants; which Fabius, the cenſor, obſerving, he applied a remedy in time, by reducing all the new citizens into four tribes, that being contracted into ſo narrow a ſpace, they might not have ſo malignant an influence upon the city.

An act of general naturalization, would likewiſe probably increaſe our numbers very faſt, and repair what loſs we may have ſuffered in our people by the late war: it is a matter that has been very warmly contended for by many good patriots; but peradventure it carries alſo it's danger with it, which perhaps would have the leſs influence by this expedient, namely, if an act of parliament were made, that no heads of families hereafter to be naturalized, for the firſt generation ſhould have votes in any of our elections. But as the caſe ſtands, it ſeems againſt the nature of right government, that ſtrangers (who may be ſpies, and who may have an intereſt oppoſite to that of England, and who, at beſt, ever join in one link of obſequiouſneſs to the miniſters) ſhould be ſuffered to intermeddle in that important buſineſs of ſending members to parliament. From their ſons, indeed, there is leſs to fear, who by birth and nature may come to have the ſame intereſt and inclinations as the natives.

And though the expedient of Fabius Maximus, to contract the ſtrangers into four tribes, might be reaſonable, where the affairs of a whole empire were tranſacted by magiſtrates choſen in one city, yet the ſame policy may not hold good in England; foreigners cannot influence elections here, by being diſperſed about in the ſeveral counties of the kingdom, where they can never come to have any conſiderable ſtrength. But ſome time or other, they may endanger the government, by being ſuffered to remain ſuch vaſt numbers of them here in London, where they inhabit, all together, at leaſt 30,000 perſons in two quarters of the town, without intermarrying with the Engliſh, or learning our language; by which means, for ſeveral years to come, they are in a way ſtill to continue foreigners, and, perhaps, may have a foreign intereſt and foreign inclinations. To permit this, cannot be adviſeable or ſafe; it may, therefore, be proper to limit any new acts of naturalization, with ſuch reſtrictions, as may make the acceſſion of ſtrangers not dangerous to the public.

An acceſſion of ſtrangers, well regulated, may add to our ſtrength and numbers; but then it muſt be compoſed of labouring men, artificers, merchants, and other rich men, and not of foreign ſoldiers, ſince ſuch fright, and drive away from a nation more people than their troops can well conſiſt of: for if it has been ever ſeen, that men abound moſt where there is moſt freedom: (China excepted, whoſe climate excels all others, and where the exerciſe of tyranny is mild and eaſy) it muſt follow, that people will in time deſert theſe countries, whoſe beſt flower is their liberties, if theſe liberties are thought precarious or in danger. That foreign ſoldiers are dangerous to liberty, we may produce examples from all countries and all ages.

The danger of admitting foreign and mercenary troops into the nation, is too well underſtood to need any animadverſion. Indeed, all armies whatſoever, if they are over large, tend to the diſpeopling of a country, of which our neighbour nation is a ſufficient proof; where, in one of the beſt climates in Europe men are wanting to till the ground. For children do not proceed from the intemperate pleaſures taken looſly and at random, but from a regular way of living, where the father of the family deſires to rear up, and provide for the offſpring he ſhall beget.

Securing the liberties of a nation, may be laid down as a fundamental for increaſing the numbers of it's people; but there are other polities thereunto conducing, which no wiſe ſtate has ever neglected.

No race of men did multiply ſo faſt as the Jews, which may be attributed chiefly to the wiſdom of Moſes, their law-giver, in contriving to promote the ſtate of marriage.

The Romans had the ſame care, paying no reſpect to a man childleſs by his own fault, and giving great immunities and privileges, both in the city and provinces, to thoſe who had ſuch and ſuch a number of children. Encouragements of the like kind are alſo given in France, to ſuch as enrich the Commonwealth by a large iſſue.

But we in England have taken another courſe, laying a fine upon the marriage bed, which ſeems ſmall to thoſe who only contemplate the pomp and wealth round about them, and in their view; but they who look into all the different ranks of men, are well ſatisfied that this duty on marriages and births, is a very grievous burthen upon the poorer ſort, whoſe numbers compoſe the ſtrength and wealth of any nation. This tax was introduced by the neceſſity of affairs. It is difficult to ſay what may be the event of a new thing; but if we are to take meaſures from paſt wiſdom, which exempted prolific families from public duties, we ſhould not lay impoſitions upon thoſe who find it hard enough to maintain themſelves. If this tax be ſuch a weight upon the poor, as to diſcourage marriage, and hinder propagation, which ſeems the truth, no doubt it ought to be aboliſhed; and, at a convenient time, we ought to change it for ſome other duty, if there was only this ſingle reaſon, that it is ſo directly oppoſite to the polity of all ages and all countries.

In order to have hands to carry on labour and manufactures, which muſt make us gainers in the ballance of trade, we ought not to deter, but rather invite men to marry, which is to be done by privileges and exemptions, for ſuch a number of children, and by denying certain offices of truſt and dignities to all unmarried perſons; and where it is once made a faſhion among thoſe of the better ſort, it will quickly obtain with the lower degree.

Mr King, in his ſcheme (for which he has as authentic grounds as perhaps the matter is capable of) lays down, that the annual marriages of England are about 41,000, which is one marriage out of every 134 perſons: upon which we obſerve, that this is not a due proportion, conſidering how few of our adult males (in compariſon with other countries) periſh by war, or any other accident; from whence may be inferred, that our polity is ſome way or other defective, or the marriages would bear a nearer proportion with the groſs number of our people; for which defect, if a remedy can be found, there willl be ſo much more ſtrength added to the kingdom.

From the books of aſſeſſment on births, marriages, (when this was the caſe) by the neareſt view he can make, he divides the 5,500,000 people into 2,700,000 males, and 2,800,000 females; from whence, (conſidering the females exceed the males in number, and conſidering that the men marry later than the women, and that many of the males are of neceſſity abſent in the wars, at ſea, and upon other buſineſs) it follows, that a large proportion of the females remain unmarried, though at an adult age, which is a dead loſs to the nation, every birth being as ſo much certain treaſure; upon which account, ſuch laws muſt be for the public good, as induce all men to marry, whoſe circumſtances permit it.

From this diviſion of the people, it may be likewiſe obſerved, that the near proportion there is between the males and females (which is ſaid to hold alſo in other places) is an argument (and the ſtrongeſt that can be produced) againſt polygamy, and the increaſe of mankind, which ſome think might be from thence expected; for if nature had intended to one man a plurality of wives, ſhe would have ordered a great many more female births than males, her deſignments being always right and wiſe.

The ſecuring the pariſh for baſtard children, is become ſo ſmall a puniſhment, and ſo eaſily compounded, that it very much hinders marriage. The Dutch compel men of all ranks, to marry the woman whom they have got with child; and, perhaps, it would tend to the further peopling of England, if the common people here, under ſuch a certain degree, were condemned by ſome new law to ſuffer the ſame penalty.

A country that makes proviſion to increaſe in inhabitants, whoſe ſituation is good, and whoſe people have a genius adapted to trade, will never fail to be gainers in the ballance, provided the labour and induſtry of their people be well managed and carefully directed.

The more any man contemplates theſe matters, the more he will come to be of opinion, that England is capable of being rendered one of the ſtrongeſt nations, and the richeſt ſpot of ground in Europe.

It is not extent of territory that makes a country powerful, but numbers of men well employed, conveniant ports, a good navy, and ſoil producing all ſorts of commodities. The materials for all this we have, and ſo improveable, that if we did but ſecond the gifts of nature with our own induſtry, we ſhould arrive to a pitch of greatneſs that would put us at leaſt upon an equal footing with any of our neighbours.

If we had the complement of men, our land can maintain and nouriſh; if we had as much trade as our ſtock and knowlege in ſea affairs is capable of embracing; if we had ſuch a naval ſtrength, as a trade ſo extended would eaſily produce; and, if we had thoſe ſtores and that wealth, which is the certain reſult of a large and well governed traffic, what human ſtrength could hurt or invade us? On the contrary, ſhould we not be in a poſture not only to reſiſt, but to give law to others? See the article MANURE.

Our neighbouring Commonwealth has not in territory above eight millions of acres, and, perhaps, not much above two millions, two hundred thouſand people; and yet, what a figure have they made in Europe for theſe laſt hundred years? What wars have they maintained? What forces have they reſiſted? And to what a height of power are they now come, and all by good order and wiſe government?

They are liable to frequent invaſions; they labour under the inconvenience and danger of bad ports; they conſume immenſe ſums every year to defend their land againſt the ſea, all which difficulties they have ſubdued by an unwearied induſtry.

We are formed by nature againſt foreign enemies; our ports are ſafe; we fear no irruptions of the ſea; our land territory at home, is at leaſt 39 millions of acres; we have, in all likelihood, not leſs than ſix millions of people; what a nation might we then become, if all theſe advantages were thoroughly improved, and if a right application were made of all this ſtrength, and of theſe numbers?

They apprehend the moderate growth of any prince or ſtate, may, perhaps, ſucceed by beginning firſt, and by attempting to pull down ſuch a dangerous neighbour; but very often their good deſigns are diſappointed.

In all appearance they proceed more ſafely, who under ſuch a fear make themſelves ſtrong and powerful at home. And this was the courſe which Philip, king of Macedon, the father of Perſeus, took, when he thought to be invaded by the Romans.

In all appearance the beſt way for a nation, that apprehends the growing power of any neighbour, is to fortify itſelf within; we do not mean by land-armies, which rather debilitate than ſtrengthen a country, but by potent natives, by thriſt in the public treaſure, by multiplying the people, and augmenting their trade, and all the other honeſt and uſeful arts of peace.

By ſuch an improvement of our native ſtrength, agreeable to the laws, and to the temper of a free nation, England without doubt may be brought to ſo good a poſture and condition of defending itſelf, as not to apprehend any neighbour, jealous of it's ſtrength, or envious of it's greatneſs.

And to this end we open theſe ſchemes, that a wiſe government, under which we live, not having any deſigns to become arbitrary, may ſee what materials they have to work upon, and how far our native wealth is able to ſecond their good intentions of preſerving us a rich and a free people.

Having ſaid ſomething of the number of our inhabitants, we ſhall proceed to diſcourſe of their different degrees and ranks, and to examine who are a burthen, and who a profit to the public; for by how much every part and member of the Commonwealth can be made uſeful to the whole, by ſo much a nation will be more and more a gainer in this ballance of trade.

In regard to the ranks, degrees, titles, and qualifications of the people before diſtinguiſhed, it may be obſerved:

Firſt, that we may thereby detect their error, who, in the calculations they frame, contemplate nothing but the wealth

and plenty they ſee in rich cities and great towns, and from thence make a judgment of the kingdom's remaining part; and from this view conclude, that taxes and payments to the public, do moſtly ariſe from the gentry and better ſort; by which meaſures they neither contrive their impoſition aright, nor are they able to give a true eſtimate what it ſhall produce; but when we have divided the inhabitants of England into their proper claſſes, it will appear, that the nobility and gentry are but a ſmall part of the whole body of the people.

Believing that taxes fall chiefly upon the better ſort, they care not what they lay, as thinking they will not be felt; but when they come to be levied, they either fall ſhort, and ſo run the public into an immenſe debt, or they light ſo heavily upon the poorer ſort, as to occaſion inſufferable clamours; and they whoſe proper buſineſs it was to contrive theſe matters better, have been ſo unſkilful, that the legiſlative power has been more than once compelled, for the people's eaſe, to give new funds, inſtead of others that had been ill projected.

This may be generally ſaid, that all duties whatſoever, upon the conſumption of a large produce, fall with the greateſt weight upon the common ſort: ſo that ſuch as think in new duties that they chiefly tax the rich, will find themſelves quite miſtaken; for either their ſund muſt yield little, or it muſt ariſe from the whole body of the people, of which the richer ſort are but a ſmall proportion.

And though war, and national debts, and engagements, might heretofore very rationally plead for an exciſe upon our home conſumption; yet, in the time of peace, it is the concern of every man that loves his country, to proceed warily in laying new ones, and to get off thoſe which are already laid, as faſt as ever he can.

High cuſtoms and high exciſes both together are incompatible; either of them alone are ſcarce to be endured, but to have them co-exiſt is ſuffered in no well governed nation. If materials of foreign growth were at an eaſy rate, a high price might be better borne in things of our own product; but to have both dear at once (and by reaſon of the duties laid upon them) is ruinous to the inferior rank of men [ſee the article DUTIES]: and this ought to weigh more with us, when we conſider, that even of the common people, a ſub-diviſion is to be made, of which one part ſubſiſts from their own ſlavings, arts, labour, and induſtry; and the other part ſubſiſts, a little from their own labour, but chiefly from the help and charity of the rank that is above them.

For, according to Mr. King's ſcheme,

	Heads.
The nobility and gentry, with their families and retainers, the perſons in offices, merchants, perſons in the law, the clergy, freeholders, farmers, perſons in ſciences and liberal arts, ſhop-keepers and tradeſmen, handicraſts-men, naval-officers, with the families and dependants upon all thoſe, all together, make up the number of -	2,675,520
The common ſeamen, common ſoldiers, labouring people, and out-ſervants, cottagers, paupers and their families, with the vagrants, make up the number of - - - -	2,825,000
In all	5,500,520

So that here ſeems a majority of the people, whoſe chief dependance and ſubſiſtence is from the other part, which majority is much greater, in reſpect of the number of families, becauſe 500,000 families contribute to the ſupport of 800,500 families.

In contemplation of which, great care ſhould be taken not to lay new duties upon home-conſumptions, unleſs upon the extreameſt neceſſities of the ſtate; for though ſuch impoſitions cannot be ſaid to fall directly upon the lower rank, whoſe poverty hinders them from conſuming ſuch materials, (though there are few exciſes to which the meaneſt perſon does not pay ſomething) yet indirectly, and by uuavoidable conſequences, they are rather more affected by high duties upon our home conſumption, than the wealthier degree of people; and ſo we ſhall find the caſe to be, if we look carefully into all the diſtinct ranks of men enumerated.

Firſt, As to the nobility and gentry, they muſt of neceſſity retrench their families and expences, if exceſſive impoſitions are laid upon all ſorts of materials for conſumption; from whence follows that the degree below them of merchants, ſhopkeepers, tradeſmen, and artizans, muſt want employment.

Secondly, As to the manuſactures, high exciſes in time of peace, are utterly deſtructive to that principal part of England's wealth; for if malt, coals, ſalt, leather, and other things, bear a great price, the wages of ſervants, workmen, and artificers, will conſequently riſe, for the income muſt bear ſome proportion with the expence; and if ſuch as ſet the poor to work, find wages for labour, or manufactures advance upon them, they muſt raiſe in the price of their commodity, or they cannot live; all which would ſignify a little, if nothing but our own dealings among one another were thereby affected; but it has a conſequence far more pernicious, in relation to our foreign trade, for it is the exportation of our own product that muſt make England rich: to be gainers in the ballance of trade, we muſt carry out of our own product, what will purchaſe the things of foreign growth that are needful for our own conſumption, with ſome overplus, either in bullion or goods, to be ſold in other countries; which overplus is the profit a nation makes by trade, and it is more or leſs, according to the natural frugality of the people that export; or, as from the low price of labour and manufacture they can afford the commodity cheap, and at a rate not to be underſold in foreign markets.

The Dutch, whoſe labour and manufactures are dear, by reaſon of home exciſe, can, notwithſtanding, ſell cheap abroad, becauſe this diſadvantage they labour under, is ballanced by the parſimonious temper of their people: but in England, where this frugality is hardly to be introduced, if the duties upon our home conſumption are ſo large as to raiſe conſiderably the price of labour and manufacture, all our commodities for exportation muſt by degrees ſo advance in the prime value, that they cannot be ſold at a rate which will give them vent in foreign markets; and we muſt be every where under-ſold by our wiſe neighbours. The conſequence of ſuch duties in times of peace, will fall moſt heavily upon our woollen manufactures, of which moſt have more value from the workmanſhip than the materials; and if the price of this workmanſhip be inhanced, it will in a ſhort courſe of time, put a neceſſity upon thoſe we deal with, of ſetting up manufactures of their own, ſuch as they can, or of buying goods of the like kind and uſe, from nations that can afford them cheaper.

And in this point we are to conſider, that the bulk of our woollen exports does not conſiſt in draperies made of the fine wool, peculiar to our ſoil, but it is compoſed of coarſe broad cloths, ſuch as Yorkſhire cloths, kerſies, &c. which make a great part of our exports, and may be, and are, made of a coarſer wool, which is to be had in other countries; ſo that we are not ſingly to value ourſelves upon the material, but alſo upon the manufacture, which we ſhould make as eaſy as we can, by not laying over-heavy burthens upon the manufacture: and our woollen goods being two thirds of our foreign exports, it ought to be the chief object of the public care, if we expect to be gainers in the ballance of trade.

Thirdly, as to the lower rank of all, which we compute at 2,825,000 heads, a majority of the whole people, their principal ſubſiſtence is upon the degrees above them; and if thoſe are rendered uneaſy, theſe muſt ſhare in the calamity; but even of this inferior ſort, no ſmall proportion contribute largely to exciſes, as labourers and out-ſervants; which likewiſe affect the common ſeamen, who muſt thereupon raiſe their wages, or they will not have wherewithal to keep their families left at home; and the high wages of ſeamen is another burthen upon our foreign traffic.

As to the cottagers, who are above a fifth part of the whole people, ſome duties reach even them, as thoſe upon malt, leather, and ſalt, but not much, becauſe of their ſlender conſumption; but if the gentry, upon whoſe woods and gleanings they live, and who employ them in day-labour, and if the manufacturers, for whom they card and ſpin, are over-burthened with duties, they cannot afford to give them ſo much for their labour and handy-work, nor to yield them thoſe other reliefs which are their principal ſubſiſtence; for want of which, theſe miſerable wretches muſt periſh with cold and hunger.

Thus we ſee exciſes, either directly or indirectly, fall upon the whole body of the people; and conſequently upon our trade and manufactures.

Our ſtudy, therefore, now ought to be how thoſe debts may be ſpeedily cleared off, for which theſe revenues are the funds, that trade may again move freely, as it did heretofore, without ſuch a heavy clog.

Mr King divides the whole body of the people into two principal claſſes, viz.

	Heads.
Increaſing the wealth of the kingdom -	2,675,520
Decreaſing the wealth of the kingdom - -	2,825,000

By which he means, that the firſt claſs of the people, from land, arts, and induſtry, maintain themſelves, and add every year ſomething to the nation's general ſtock; and beſides this, out of their ſuperfluity, contribute every year ſo much to the maintenance of others.

That of the ſecond claſs, ſome partly maintain themſelves by labour (as the heads of the cottage families); but that the reſt, as moſt of the wives and children of theſe, ſick and impotent people, idle beggars and vagrants, are nouriſhed at the coſt of others, and are a yearly burthen to the public, conſuming annually ſo much as would be otherwiſe added to the nation's general ſtock.

The bodies of men are, without doubt, the moſt valuable treaſure of a country; and, in their ſphere, the ordinary people are as ſerviceable to the Commonwealth as the rich, if they are employed in honeſt labour, and uſeful arts: and

ſuch being more in number, do more contribute to increaſe the nation's wealth, than the higher rank.

But a country may be populous, and yet poor (as were the antient Gauls and Scythians); ſo that numbers, unleſs they are well employed, make the body politic big, but unwieldly, ſtrong but unactive, as to any uſes of good government.

Their's is a wrong opinion, who think all mouths profit a country that conſume it's product. And it may be more truly affirmed, that he that does not ſome way ſerve the Commonwealth, either by being employed, or by employing others, is not only an uſeleſs, but a hurtful member to it.

As it is charity, and what we indeed owe to human kind, to make proviſion for the aged, the lame, the ſick, blind, and impotent: ſo it is a juſtice we owe to the Commonwealth, not to ſuffer ſuch as have health, and who might maintain themſelves, to be drones, and live upon the labour of others. The bulk of ſuch as are a burthen to the public, conſiſts in the cottagers and paupers, beggars in great cities and towns, and vagrants.

Upon a ſurvey of the Hearth Book, made at Michaelmas, 1685, it was found, that of the 1,300,000 houſes in the whole kingdom, thoſe of one chimney amounted to 554,631; but ſome of thoſe having land about them, let them be computed 500,000 families. But of theſe, a large number may get their own livelihood, and are no charge to the pariſh; for which reaſon Mr King very judiciouſly computes his cottagers and paupers, decreaſing the wealth of the nation, but at 400,000 families; in which account he includes the poor houſes in cities, towns, and villages, beſides which he reckons 30,000 vagrants, and all theſe together, to make up 1,330,000 heads.

This is a very great proportion of the people to be a burthen upon the other part, and is a weight upon the land-intereſt; of which the landed gentlemen muſt certainly be very ſenſible.

If this vaſt body of men, inſtead of being expenſive, could be rendered beneficial to the Commonwealth, it were a work no doubt highly to be promoted by all who love their country.

It ſeems evident to ſuch as have conſidered theſe matters, and who have obſerved how they are ordered in nations under a good polity, that the number of ſuch, who through age or impotency, ſtand in real need of RELIEF, is but SMALL, and might be maintained for very little; and that the POOR RATES are ſwelled to the EXTRAVAGANT DEGREE we now ſee them at, by two ſorts of people; one of which, by reaſon of our ſlack adminiſtration, is ſuffered to remain in ſloth; the other, through a defect in our conſtitution, continue in wretched poverty, for want of employment, though willing enough to undertake it.

All this ſeems capable of a remedy: the laws may be armed againſt VOLUNTARY IDLENESS, ſo as to prevent it; and a way may probably be found out to ſet thoſe to work, who are deſirous to ſupport themſelves by their OWN LABOUR: and if this could be brought about, it would not only put a ſtop to the courſe of that vice, which is the conſequence of an idle life, but it would greatly tend to enrich the commonwealth; for, if the induſtry of not one half of the people maintains in ſome degree the other part: and beſides, in times of peace, did add every year near two millions and a half to the general ſtock of England; to what pitch of wealth and greatneſs might we not be brought, if one limb were not ſuffered to draw away the nouriſhment of the other; and if all the members of the body politic were rendered uſeful to it?

Nature, in her contrivances, has made every part of a living creature, either for ornament or uſe; the ſame ſhould be in a politic inſtitution rightly governed.

It may be laid down for an undeniable truth, that where all WORK, NO BODY WILL WANT, and to promote this, would be a GREATER CHARITY, AND MORE MERITORIOUS, THAN TO BUILD HOSPITALS, which very often are but ſo many monuments of ILL-GOTTEN RICHES, ATTENDED WITH LATE REPENTANCE.

To make as many as poſſible of theſe 1,330,000 perſons (whereof not above 330,000 are children too young to work) who now live chiefly upon others, get themſelves a large ſhare of their maintenance, would be the opening a NEW VEIN OF TREASURE, OF SOME MILLIONS STERLING PER ANNUM; it would be a preſent eaſe to every particular man of ſubſtance, and a laſting benefit to the whole body of the kingdom: for it would not only nouriſh, but INCREASE THE NUMBER OF THE PEOPLE, of which many thouſands periſh every year, by thoſe diſeaſes conttacted under a SLOTHFUL POVERTY.

Our laws relating to the POOR are very numerous, and this matter has employed the care of every age for a long time, though but with little ſucceſs, partly through the ill execution, and partly through ſome defect in the VERY LAWS.

The corruptions of mankind are grown ſo great, that, now a-days, laws are not much obſerved which do not in a manner execute themſelves; of this nature are thoſe laws which relate to bringing in the prince's revenue, which never fail to be put in execution, becauſe the people muſt pay, and the prince will be paid; but wherein only one part of the conſtitution, the people are immediately concerned, as in laws relating to the poor, the highways, aſſizes, and other civil œconomy, and good order in the ſtate, thoſe are but ſlenderly regarded.

The public good being, therefore, very often not a motive ſtrong enough to engage the magiſtrate to perform his duty, law-givers have many times fortified their laws with penalties, wherein private perſons may have a profit, thereby to ſtir up the people to put the laws in execution.

In countries depraved, nothing proceeds well wherein particular men do not one way or other find their account; and, rather than a public good ſhould not go on at all, without doubt it is better to give private men ſome intereſt to ſet it forward.

For which reaſon, it may be worth the conſideration of ſuch as ſtudy the proſperity and welfare of England, whether this great engine of MAINTAINING THE POOR, AND FINDING THEM WORK AND EMPLOYMENT, may not be put in motion by giving ſome body of undertakers a reaſonable gain to put the machine upon it's wheels. See the article POOR.

PERSIA is bounded on the north by part of Ruſſia, by the Caſpian Sea, and by the country of the Uſbeck and independent Tartars; on the eaſt by the Mogul empire, from which a ridge of mountains and the river Indus divide it; on the ſouth it has the Arabian Sea, which is part of the ocean, and the Perſian gulph; and on the weſt it has Georgia and Aran, or ancient Armenia, from which the rivers Kar and Aros part it, and alſo the rivers Tigris and Euphrates, which ſeparate it from the Turkiſh empire in Aſia. It's greateſt extent, from ſouth to north, is about 19 degrees, from 25. 40. to 44. 40. that is to ſay, 1140 Engliſh miles; and it's greateſt extent, from eaſt to weſt, is about 1280 miles, though in many parts it is much narrower, eſpecially towards the north, where, on the weſt, it contains but a ſmall track of land between Turkey and the Caſpian Sea, and, on the eaſt, it is alſo pent in between the ſame ſea and the country of the Tartars. It is ſeated under the fourth, fifth, and ſixth climates; ſo that the longeſt day, in the north part, is 15 hours and ſome minutes, and in the ſouth part 13 hours and 45 minutes: and, therefore, the temperature of the air is various, according to the different provinces.

Generally ſpeaking, the ſoil in Perſia cannot be much praiſed: for though ſome parts be fruitful, and produce excellent fruits, yet other parts are perfectly barren, being mountainous and ſandy; and, as there are here but few rivers, they have only rain, and the diſſolved ſnow, to water the land, which falling from the mountains in ſmall brooks and rivulets, render the vallies fertile.

Some travellers tell us, that their corn ripens expeditiouſly, and that, in ſome parts, they have three-fold crops in a year. They have almoſt all kinds of fruits that are in France, but fairer and better, and, by reaſon of the dryneſs of the air, they keep a whole year. They have nine or ten ſorts of very good grapes; but they have not the muſcadine, ſays Mr Thevenot. Their wines are white, and made of grapes which they call kiſmich: they make alſo wine with other ſorts of grapes, but it is neither ſo good, nor keeps ſo well. They have alſo ſome red wine, but little, and to make it they only put ſome black grapes into white wine, to give it a colour: for, if it were made all of black grapes, it would not keep. We muſt except the wine of Shiras, which is red, and very good, and ſtomachical, but is only brought in bottles, and in little quantity.

They have few trees but what grow in their gardens, and of theſe the palm-tree is the moſt carefully cultivated; when it is young, and before it bears fruit, they dig at the foot eight or ten fathom deep in the earth, more or leſs, until they have found water; they only dig on one ſide, and then fill up the hole with pigeon's dung, whereof they have always great proviſion for that purpoſe, as well as for manuring lands, and to make hot-beds for raiſing melons.

Mr Thevenot ſays, he was told by the people of the country, that, if they did not take that courſe with the palm-trees, they would not bear good fruit. But there is a very curious thing beſides to be obſerved in the cultivating of this tree, which is, that every year, when the palm-trees are in bloſſom, they take the bloſſoms of the male palm-tree, and put two or three bunches of them into the matrix of each female palm-tree, when they begin to blow, otherwiſe they would produce dates without any pulp, and only with ſkin and ſtone. The matrix is that bud which contains the flowers, from which, in proceſs of time, the dates ſpring; the time of making that impregnation is about the end of November; not but that the male palm-trees alſo bear fruit, but it is good for nothing, and therefore they take all their bloſſoms to impregnate the female with. As to dates, it is worth obſerving, that the uſe of them is very dangerous during the heats in hot countries, becauſe they make the whole body break out in blotches and boils, and ſpoil the ſight.

Perſia produces alſo every ſort of carrots, beet-roots, parſnips, horſe-radiſh, radiſhes, turnips, potatoes, muſhrooms, cauliflowers of an extraordinary ſize, aſparagus, and moſt ſorts of our ſmall ſallad herbs, with cabbage, lettuce, and Roman lettuce with a long leaf, which is ſweet, and very pleaſant to

the taſte. They have alſo ſmall red and white beans, peaſe, white and grey, ſmall black beans for horſes, and green peaſe of the growth of Europe.

Perſia is alſo productive of all neceſſaries of life, and abounds particularly with poultry and game. They have plenty of ſnipes and woodcocks, many ſorts of wild ducks, teals, cranes, wood-pidgeons, turtles, larks, thruſhes, and partridges with red heads: however every ſort of deer is here ſcarce enough; but cattle, eſpecially oxen, abound.

The Perſian bread is generally very thin, ſays Sir John Chardin, and there are ſeveral ſorts of it; it is generally white and good, and alſo cheap enough, according to Mr Le Bruyn, who tells us, that they generally give but eight or ten pence for twelve pounds of bread.

A great many Perſians uſe opium; but it is a drug that ſo enſlaves thoſe who are addicted to it, that if a man has once made it cuſtomary to himſelf, and ſhould afterwards forbear to take it, no leſs than his life would be in danger: if he ſhould go but 10 leagues out of town, and forget to take his opium with him, and find none in the place he comes to, though he ſhould immediately return back again, and make all poſſible haſte, yet he would not get to the town ſoon enough to ſafe his life, ſays Mr Thevenot.

The horſes in Perſia are the fineſt in all the Eaſt: they are higher than the Engliſh ſaddle-horſes, ſtraight before, a little head, and legs that are wonderfully thin and fine, exactly proportioned, mighty gentle, good travellers, and very light and ſprightly: they are gentle and manageable, eaſy to feed, and do good ſervice 'till they are 18 or 20 years old.

Horſes are very dear in Perſia; the fine ones are valued from 90 to 450 pound ſterling: the great exportation of them into Turkey and the Indies is what makes them ſo dear, though they cannot carry any out of the kingdom without a ſpecial permiſſion from the king.

The beſt and moſt common way of riding there, after the horſe, is the mule; they have very good ones in Perſia, that pace well, never fall, and are ſeldom tired; the higheſt price of a mule is about 45 pounds. The other beaſts of uſe, after theſe, are aſſes, of which they have two kinds in Perſia, namely, the aſſes of the country, which are like ours, ſlow and heavy; theſe they employ for nothing but to bear burthens; but they have alſo a breed of Arabian aſſes, that are mighty fine beaſts, and the beſt aſſes in the world; they have ſmooth ſhining hair, they carry their heads lofty, their feet are light, and they move them gracefully: theſe are kept for riding, and their maſters love them for their lightneſs and eaſy going: ſome of them are valued at 20 pounds.

The camel is a beaſt much prized by the eaſtern people, of which there are two ſorts, the northern and ſouthern, as the Perſians call them. The latter, which travel from the Perſian gulph to Iſpahan, and no further, are much ſmaller than the other, and carry but 700 weight, the other 1300 weight; yet they bring their maſters as much profit, becauſe they coſt little or nothing to keep: they lead them without halter or reins, grazing on the road as they go along, notwithſtanding their load. They ſhed their hair ſo clean in the ſpring, that they look like ſcalded pigs, and then they pitch them all over, to keep the flies from ſtinging them. The camel's-hair is the moſt profitable fleece of all the tame beaſts; they make very fine ſtuffs of it; and in Europe they make hats of it, with a little beaver mixed with it. They take notice when the camel is in love, that they may increaſe his load, otherwiſe he would be ungovernable.

As Perſia is very mountainous, it is full of metals and minerals, which they have begun to draw out in the laſt century much more than in the preceding ages. Sir John Chardin aſſerts, that their diligence was owing to the great Scha Abas, and that it was the vaſt quantity of mineral waters, which are here and there to be met with in all parts of the kingdom, that induced him to cauſe the working of the mines to be proſecuted with vigour.

The metals moſt uſually to be met with in Perſia are iron, ſteel, braſs, and lead. They have not as yet found any gold or ſilver there, though they are well aſſured there muſt be ſome in the mines, it being impoſſible that ſo many mountains, which produce all ſorts of metals, and ſulphur and ſalt-petre, ſhould not likewiſe produce thoſe the more precious metals, ſays Sir John; but, adds he, the Perſians are too ſlothful to make any diſcoveries. Minerals abound through all Perſia: ſulphur and ſalt-petre are extracted out of the mountain of Damavend, which ſeparates Tabriſtan from Irax.

With regard to the mechanic arts and trades of the Perſians, Sir John Chardin gives us the following account: firſt he obſerves, that the eaſtern people are naturally ſoft and lazy: they work for and only deſire neceſſary things. All thoſe beautiful pieces of painting, carving, turning, and ſo many others, whoſe beauty conſiſts in an exact and plain imitation of nature, are not valued among thoſe Aſiatics: they think that becauſe thoſe pieces are of no uſe for the occaſions of the body, they do not therefore deſerve our notice. In a word, they make no account of the working of good pieces, they take only notice of the matter, which is the reaſon that their arts are ſo little improved: for, as to the reſt, they are men of good parts, have a penetraring wit, are patient, and would make very ſkilful workmen, were they paid liberally.

He obſerves, likewiſe, that they are not deſirous of new inventions and diſcoveries; they think they enjoy all the neceſſaries and conveniencies of life, and reſt contented, chuſing rather to buy goods from ſtrangers, than to learn the art of making them. It is well known how much the Turks and Perſians lay out in watch-work, yet they do not ſet about to learn that trade, which they ſee ſo profitable; nor paper-making, though abſolutely neceſſary; nor many other ſuch-like trades.

Neither is there in Perſia one ſingle native that knows well how to mend a watch. They have deſired a hundred times to have printing-houſes; they acknowlege their uſefulneſs, and neceſſity, and yet no body undertakes to ſet one up.

Sir John's next obſervation is, that the hot climates enervate the mind as well as the body, and lay the quickneſs of the fancy neceſſary for the invention and improvement of arts. In thoſe climates, men are not capable of night-watchings, and of a cloſe application, which brings forth the valuable works of the liberal and of the mechanic arts. It is for the ſame reaſon, alſo, that the knowlege of the Aſiatics is ſo reſtrained, that it conſiſts only in learning and repeating what is contained in the books of the Ancients, and their induſtry lies fallow and uncultivated.

Our traveller obſerves further, concerning the method of the eaſtern artificers, that they need but few tools about their works. It is certainly an incredible thing in our country to hear how eaſily and conveniently thoſe workmen ſet themſelves up, and work at their trade. Moſt of them have neither ſhop nor ſhop-bench; they go and work whereever they are ſent for; they ſet on the bare ground, or on an old carpet, in the corner of a room, and in a moment you ſee the board up, and the workmen at work, ſitting on his breech, holding his work with his feet, and working with his hands.

The gold and ſilverſmiths, as well as the reſt, go likewiſe and work at people's houſes. The reaſon why the Perſians have their work done at home, is becauſe they will not truſt the workmen, and will ſee whether things be done according to their mind.

As to the polity of the Perſian tradeſmen, Sir John informs us, that the trades have every one a head to the company, elected out of their body, who is approved by the king; and that is all their government: yet, ſtrictly ſpeaking, they do not form a regular body, for they never aſſemble together. They have ſome few cuſtoms only, which the head of the trade cauſes to be obſerved; as for inſtance, that there be always a due diſtance between the ſhops and tradeſmen of the ſame trade, except in the places which are particularly deſigned for one ſort of work: whoever is about to ſet up a ſhop in any trade, goes to the head of the trade, gives his name and place of abode, to be ſet down in the regiſter, and pays ſome ſmall fine for it.

The head never inquires of what country the tradeſman is, nor who was his maſter, nor whether he underſtands his trade. The trades have likewiſe no reſtrictions to hinder one from incroaching upon another: a tinker makes ſilver baſons, if they are beſpoke; every one undertakes what he pleaſes, and they never ſue one another upon that account. There is, likewiſe, no binding of apprentices among them, and they learn their trades for nothing; far from paying any money, the boys that are put out apprentices with a maſter have wages the very firſt day they go to him: the parents make an agreemeut between the maſter and the apprentice, for ſo much per-day the firſt year, a half-penny or a penny a day, according to the age of the apprentice, and the hardſhip of the trade; and the wages increaſe now and then, according to the apprentice's improvement; but this is ſtill without any mutual confinement with reſpect to time, the maſter having always the liberty to turn away his apprentice, and the apprentice to leave his maſter.

There it is, indeed, that knowlege muſt be ſtolen; for the maſter thinking on the profit he may reap by his apprentice, more than on teaching him his trade, does not trouble himſelf with him in that reſpect, but employs him only in thoſe things that relate to his advantage. Moſt trades are bound to the king's average, that is, to do the king's work when they are ordered; and the trades which are not employed in that work, as the ſhoe-makers, the cap-makers, the drawer makers, pay a tax to the place called Cargh Padeha, i. e. the King's Expence.

The Perſians have but indifferent carpenters; the reaſon of it is, becauſe of the little timber there is in Perſia, and the little wood they commonly uſe in building. It is not ſo with the joiners, they are very ſkilful and ingenious in compoſing all ſorts of inlaid and moſaic work, and they make noble cielings in that kind: they fit them all on the ground, and, when they are done, they raiſe them up over the top of the building, on the columns that are to bear them up. The joiners ſit on the ground at their work; their planes are not like ours, for they thruſt the ſhavings out of the ſides, which ſeems to be a more expeditious way. Their ordinary

wood

wood is a white wood, very ſoft, and without knots, and therefore very eaſily to be wrought. They have excellent wood, that comes from Hircania (now Tabriſtan) in long boards, like the Norway deal-boards.

Embroidery is one of the mechanic arts which the Perſians are beſt verſed in; they do all ſorts of embroidery very well, eſpecially the gold and ſilver, either in cloth, ſilk, or leather: they exceed us in that art, and the Turks, likewiſe, whoſe ſtitching and embroidery leather we ſo much admire. Their leather-ſeams, and thoſe of horſe-trappings among the reſt, are ſo ſmooth and ſo neat, that you would take them for embroidery. The gold and ſilver thread they uſe is ſo well twiſted, that one would take it for wire when it is wrought, the ſilk not appearing in the leaſt.

The enamel ware, or China ware, as they call it, is likewiſe one of the moſt curious manufactures which they make all over Perſia. The earth of which that ware is made, is pure enamel, both within and without, like the China ware. The grain of it is as fine and tranſparent, as that is, whereby it happens, that one is often deceived in that earthen ware, and cannot diſtinguiſh it from China ware. Nay, you meet ſometimes with Perſian ware, that exceeds the China ware, ſo beautiful and lively is the varniſh of it; but this muſt be underſtood of the new China ware, and not of the old. The ſkilful workmen in enamel ware, aſcribe to the water the gloſs of the colour, and ſay, that there are ſome waters that diſſolve the colours and make them ſpread, whereas there are others that contract and fix them.

The pieces which the Perſians make beſt, are the enamel tiles painted and cut out in imitation of moſaic work. Indeed nothing can be ſeen livelier and brighter in that kind, or drawn finer, or more regular.

This Perſian earthen ware is fire proof, ſo that they not only boil water in it without breaking, but they even make pillow-pots thereof; it is hard enough alſo to make mortars to grind colours, and other materials in.

The matter of that fine enamel is glaſs, and little river pebbles pounded very ſmall, together with a little mould mixed with them. There are ſome tradeſmen in Perſia, whoſe employment is to mend earthen ware and glaſs; they join the pieces together, and ſew them with very ſmall iron wire, and rub the ſeam over with a kind of Chalk or ſmall lime. A diſh ſo mended holds water as before.

The gold wire-drawers and thread-twiners are very dextrous workmen: they draw an ingot, weighing a muſcal or drachm, nine hundred guezes or Perſian ells long, each gueze being thirty-five inches long. Their thread is the beſt and ſmootheſt that can be imagined. All the art they uſe to give it that lively and laſting colour it has, is to gild the wire very fine and very thick.

The next trade in which the Perſians excel, is that of tanning hides, and eſpecially of working ſhagreen, and all ſorts of Turkey leather: abundance of theſe are made in Perſia, and exported to the Indies, to Turkey, and to the other neighbouring kingdoms. Shagreen is made of an aſs's rump, and of a ſeed called the ſeed of caſbin: it is black, hard, and bigger than the muſtard-ſeed, which they uſe for want of the caſbin ſeed. The tanners dreſs coarſe hides with lime; they uſe no bark, but chiefly ſalt and gall inſtead of it, and that is enough in their country, the air being hot and dry.

The turner's trade is alſo one of the mechanic arts, which the Perſians underſtand very well. They have no frame for turning as we have; their way conſiſts only in a treddle, to which they faſten whatever they intend to turn; a thong that goes twice round the treddle, and which a boy holds with both his hands, and pulling now one end, then the other, turns the piece about. But when they have but ſmall pieces to turn, the workman needs no help, for with one hand he moves the axis with a bow, and with the other hand he holds the piece of wood. They uſe no wimbles as we do, but they uſe gimblets of ſeveral ſizes, which are inſtead of them, and which they turn with the ſame inſtrument as they do wood: it is a piece of iron flat and ſharp at the end, ſhaped like a rib, that it may cut the better, haſted in a round handle filled with lead, to make it weighty, about which they put a ſtrap that goes quite round it; they hold faſt the gimblet with the left-hand on the piece of wood they intend to bore, and turn it with the right hand; ſuch is their mechanic way of turning and boring.

They lay on lacquer very neatly, the violent motion of the turning inſtrument melting it without the help of fire; they ſpread it with a palm-tree ſtick, becauſe that wood is porous; and then with a piece of coarſe cloth and a little oil, they give to their work a wonderful luſtre, which never goes off; that lacquer, likewiſe, is never ſubject to ſcaling.

They turn metals as well as wood, but they are very far from attaining in that reſpect, to the ſkill of our workmen; they are likewiſe unſkilful in the turning of an oval; it is a figure,, the working of which they are utterly unacquainted with.

The armourers make very good weapons, eſpecially bows and ſwords. The Perſian bows are the moſt valued of all thoſe in the eaſt. The matter whereof they are made is wood and horn laid over one another, and covered with ſinews, and over that with the bark of a tree very ſlick and ſmooth; they paint them afterwards, and varniſh them ſo admirably well, that one may ſee one's face in thoſe bows, and the colour of them is as bright as poſſible. The bow-ſtrings are of twiſted ſilk, the bigneſs of a large quill. The quivers are made of leather embroidered with gold and ſilk. Their ſcymitars or ſabres, are very well damaſked, and exceed all that the Europeans can do; which is, becauſe our ſteel is not ſo full of veins as the indian ſteel, which they uſe moſt commonly. They forge their blades cold, and before they dip them, they rub them with tallow, oil, or butter, to hinder them from breaking. Then they temper them with vinegar and copperas, which being of a corroding nature, ſhew thoſe ſtreaks or veins, which they call damaſk-works. This is likewiſe what they call damaſk ſteel, becauſe the town of Damaſcus was the moſt celebrated place for the manufacture of thoſe curious ſcymitar-blades.

The Perſians make alſo very well the barrels of fire-arms, and damaſk them as they do the blades; but they make them very heavy, and cannot avoid it; they bore and ſcower them with a wheel as we do, and forge and bore them ſo even that they ſcarce ever burſt. They make them alike ſtrong and thick all along, ſaying that the mouth of the gun being weak the report ſhakes it, and communicates the wavering motion to the bullet; which is the reaſon that if their guns be thicker, they therefore carry the ſhot farther and ſtraiter. They underſtand very well how to make locks or ſprings, thoſe they put to their fire-arms, being very unlike to ours.

The workmen in iron and ſteel are very well verſed in their trade; they hammer both iron and ſteel cold, and ſucceed very well in it with reſpect to ſeveral ſorts of tools and inſtruments: for inſtance, country ovens, which are ſhaped like two ſemi-cones, or ſemi-ſpheres, cut through the top, and faſtened together with iron hooks. The diameter of them is two feet and a half, and the height from three to four feet. There ſtick out in the inſide of theſe cones large pins about four inches long, and as big, with flat heads, and as broad as half a crown. When they have occaſion to warm thoſe ovens, they overcaſt the inſide and outſide of them with clay, which ſticks to the nail's head, and makes, as it were, a wall of it, to which they ſtick the bread. The iron and ſteel tools they make beſt alſo, are, among others, ſaws, which are made of ſteel, as ſmooth and as bright as a looking-glaſs; razors which are but half as big as the handles, yet are as broad at the end, and ſhave very well; ſciſſars which they make hollow in the inſide, like gutters, ſaying that being ſo ſhaped, the edges of the two blades join cloſer and cut better. Almoſt all their ſteel looking-glaſſes are convex, ſome few are concave like the burning-glaſſes. The air being very dry in Perſia, the brightneſs of the looking-glaſſes does not grow dull, and they never ruſt. The eaſtern people uſe likewiſe glaſs looking glaſſes, and even abundance of them, though not near ſo many as metal ones, and that they do upon two accounts; the firſt is, becauſe thoſe metal looking-glaſſes are more laſting, and do not break with falling; the ſecond reaſon is, when the glaſs looking-glaſſes are once unſilvered, they become uſeleſs, the method of ſilvering glaſs, being unknown in all the eaſtern parts; and the quickſilver that is on the back of the looking-glaſſes coming off eaſier there than in Europe, by reaſon of the dryneſs of the air. They poliſh their metal glaſſes with emeril, pounded to powder as fine as duſt, they having little or no Venetian tripoly.

The art of dyeing ſeems to have been more improved in Perſia than in Europe. Their colours are much more ſolid and bright, and do not fade ſo ſoon; but the honour of it is not ſo much to be aſcribed to their art, as to their air and climate; which being dry and clear, cauſes the livelineſs of the colours; as alſo to the ſtrength of the dyeing ingredients, which growing moſt of them in the country, are uſed when they are green and full of ſap. Their dyeing and painting colours are the bole or red earth, the rounat or opponax, which are two common ingredients in Perſia; the Brazil wood, which is imported among them from Europe; the Japan wood, and the Indigo, which they fetch from the Indies. They uſe, moreover, in dyeing, ſeveral herbs and ſimples, of their own growth, and gums, and bark of trees, and the rinds of fruits, as of wallnuts and pomegranates, and the juice of lemon. The lapis lazuli, which they call lagſverd, is got in their neighbourhood, in the country of the Uſbecks, but Perſia is the general ſtorehouſe for it.

There are glaſs-houſes all over Perſia, but they do not well underſtand the art of making glaſs; moſt of theirs is full of flaws and bladders, and is greyiſh: upon the account, doubtleſs, ſays Sir John Chardin, that their fire laſts but three or four days, and that their deremne, as they call it, which is a ſort of broom that they uſe to make it, does not bear heat ſo well as our fewel.

Paper-making is performed very rudely in Perſia, becauſe they uſe nothing but callico, either dyed or painted, therefore their paper is browniſh, foul, ragged, and over limber. They uſe a great deal of European paper, after they have prepared it, but they fetch ſome from Little Tartary, which they prefer before it. They prepare their paper with a little ſoap, which they rub over it, then they ſmooth it with a ſleek-

ſtone, that their ink may run more freely. Theſe are the chief mechanic arts and trades practiſed in Perſia.

We come now to give an account of their manufactures. They have very good manufactures in cotton, in goats and camels hair, in yarn, and eſpecially in ſilk, that being a plentiful and common commodity in Perſia. The natives have addicted themſelves particularly to the well working of it; and it is the thing they are beſt ſkilled in, and in which they have the moſt conſiderable manufactures.

They keep their raw and unwrought ſilk in damp places, which they water ſometimes, to continue the weight of them, becauſe they ſell it by the weight, and for the ſame reaſon, they keep that which is wound up in leathern bags. We ſhall paſs by ſeveral ſorts of ſtuffs of all ſilk, ſuch as taffeties, tabbies, ſattins, &c. and alſo ſtuffs mixed with ſilk and cotton thread, or with camel's or goat's hair, which are made all over Perſia: we ſhall only ſpeak of their brocade.

There is the ſingle brocade, whereof there are a hundred ſorts; and the double brocade, which is called douroye, i. e. with two faces, becauſe it hath no wrong ſide, and the machmely zerbafe, or gold velvet. They make gold brocades which coſt fifty tomans the gæze or ell, which being two feet and half a quarter long, French meaſure, comes to about thirty crowns the inch, or eleven hundred crowns the ell. No part of the world affords ſo dear a ſilk. They employ ſix men together about the loom to make it, who uſe about thirty ſhuttles to weave it. Notwithſtanding the extraordinary rate of that precious brocade, the workmen employed in it do not earn above fifteen or ſixteen pence a day, for they can make but the thickneſs of a half-crown piece of it. Thoſe dear brocades are bought for curtains, door-hangings, and cuſhions, which are the moſt common furniture of a houſe.

The gold velvet, which is wrought in Perſia, is very charming, eſpecially the curled velvet: all thoſe rich ſtuffs have ſuch admirable property, that they laſt or ever, as it were, and the gold and ſilver does not wear off whilſt the work laſts, and keeps ſtill it's colour and brightneſs. The fineſt looms for theſe ſtuffs are at Yeſd, at Caſhan, and likewiſe at Iſpahan; thoſe for carpets are in the province of Kherman: theſe are the carpets we commonly call in Europe Turkey carpets, becauſe the merchants brought them through Turkey, before they traded with the Perſians by the ocean.

Trading, ſays Sir John Chardin, is a very honourable profeſſion in the Eaſt, as being the beſt for thoſe that have any ſtability, and are not ſo liable to change: nor is it to be wondered at, for it cannot be otherwiſe in kingdoms, where, on the one hand, there is no title of nobility, and therefore little authority annexed to birth; and, on the other hand, the form of government being altogether deſpotic and arbitrary, the authority annexed to places and employments cannot laſt longer than the employments themſelves, which are likewiſe precarious; for which reaſon trading is much ſet by in that part of the world, as a laſting and independent ſtation.

Another reaſon why it is valued, is becauſe the noblemen and even the king profeſs it: they have their deputies or factors, as merchants have, and under the ſame denomination. They have moſt of them their trading ſhips, and their ſtorehouſes. The king of Perſia for inſtance, ſells and ſends into the neighbouring kingdoms, ſilks, brocades, and other rich goods, carpets, and precious ſtones. The name of merchant is a name highly reſpected in the Eaſt, and it is not allowed to ſhopkeepers, or dealers in trifling goods, nor to thoſe who trade not in foreigh countries; it is permitted only to ſuch as employ deputies or factors in the remoteſt countries: and thoſe men are ſometimes raiſed to the higheſt rank, and are uſually employed in embaſſies.

There are merchants in Perſia, who have deputies in moſt parts of the world; and when thoſe deputies are returned home, they wait on their maſters under no better denomination than that of a ſervant, ſtanding up always before them, and waiting at table, though ſome of thoſe deputies are worth above threeſcore thouſand crowns.

In the Indies the laws are ſtill more favourable to traders; for though they are more numerous than in Perſia, they are nevertheleſs more valued. The reaſon of this additional reſpect is, becauſe in the Indies, traders are ſacred perſons, who are never moleſted, even in time of war, and allowed a free paſſage, they and their effects, through the middle of armies. It is upon their account eſpecially, that the roads are ſo ſafe all over Aſia, and eſpecially in Perſia. The eaſtern merchants affect grandeur in trading, notwithſtanding they ſend their deputies into all parts, and ſtay at home themſelves, as in the centre of their chief concern. They make no bargains themſelves directly; there is no place of exchange in their towns, the trade is carried on by brokers, who are the ſubtleſt, the moſt cunning, the ſlieſt, the moſt complaiſant, moſt patient, and intriguing men of the whole ſociety, having a ſmooth and inſinuating tongue beyond expreſſion

The Mahometans are not the greateſt traders in Aſia, though they are diſperſed almoſt in every part of it. Some of them are too effeminate, and ſome too ſevere, to apply themſelves to trade, eſpecially foreign trade. Wherefore, in Turkey, the Chriſtians and Jews carry on the main foreign trade; and in Perſia, the Chriſtians and the Indian Gentiles.

As to the Perſians they trade with their countrymen, one province with another, and moſt of them trade with the Indians. The Armenians manage alone the whole European trade; the reaſon of which is, becauſe the Mahometans cannot ſtrictly obſerve their religion among the Chriſtians, with relation to the outward purity it requires of them; for inſtance, their law forbids them to eat fleſh either killed or dreſſed by a man of a different religion, and likewiſe to drink out of the ſame cup with ſuch a one. It forbids them to call upon God, in a place adorned with figures. It even forbids, in ſome caſes, the touching of perſons of a different opinion, all which laws it is almoſt impoſſible to keep among the Chriſtians.

Another hindrance there is to the Mahometan improvement of trade, namely, the forbidding uſury and intereſt without any diſtinction. Mahomet broached his religion in a country, whereof the whole riches and trade conſiſted in cattle and breeds of horſes, where little money was ſeen, and where the trade was managed by way of barter, as in former times; and it appears from a thouſand paſſages in the Koran, that he did not foreſee his religion would be propagated throughout the world, ſo that he perceived no inconveniency in forbidding to lend money upon intereſt.

The old commentators of his inſtitution have not explained that prohibition, ſo that it has remained in force to this day. Thus their law allows no intereſt, but it allows changes, eſpecially maritime changes, upon any advantage whatſoever, as thirty and forty per cent. profit, or more. As for intereſt, the parties have their way of evading the law juſt as they pleaſe.

Silk is the ſtaple commodity of Perſia. They get ſome in the provinces of Georgia, of Choraſſan, and of Kherman, but eſpecially in Ghilan and Mazanderan. They compute that Perſia produces yearly twenty-two thouſand bales of ſilk, each bale weighing two hundred threeſcore and ſixteen pounds weight; and that account increaſes every year, becauſe ſilk improves continually.

There are four ſorts of ſilk; the firſt and the worſt is called Chirvani, becauſe it comes from Chirvan, a province near the Caſpian Sea; it is a thick and rough ſilk, and the coarſeſt thread of the ſhell, it is that they call ardaſhe in Europe. The ſecond, which is a ſize better, is called carvari, i. e. an aſs-load, to denote that ſort of ſilk which the unſkilful buy; they call it legia in France, probably from the word Legian, the name of a ſmall town in Ghilan on the ſea, where none but ſuch a ſort of ſilk is made. The third is called ketkodapeſend, as though one ſhould ſay, the citizen ſort; which name the Perſians give to all things of a middling character. The fourth is called ſharbaffee, i. e. the brocade ſilk, becauſe the beſt ſilk is uſed for thoſe rich goods. The abundance of Perſian ſilk exported is well enough known. The Dutch import of it into Europe to the value of near ſixty thouſand pounds ſterling yearly, by the Indian Sea; and all the Europeans who trade in Turkey, import nothing more valuable than the Perſian ſilks, which they buy of the Armenians. The Muſcovites import it likewiſe.

Some foreigners trade with the Perſians for camel's hair, and ſome Europeans for kid's wool; they uſe it in Europe for making of hats. The beſt wool of that ſort, comes from Kherman and from Caſbin, a famous city of Parthia, or Perſian Irack. Perſia exports into the Eaſt-Indies abundance of tobacco, all ſorts of fruit dried, pickled in vinegar and preſerved, eſpecially dates, marmelades, wines, diſtilled waters, horſes, Perſian ware, feathers, Turkey leather of all ſorts and colours, a great deal whereof is alſo exported to Muſcovy, and other European countries. They export into Turkey tobacco, galls, thread, coarſe goat's hair, ſtuffs, and all ſorts of box-work, with many other things. The exportation of ſteel and iron is prohibited, but it is exported notwithſtanding.

It is not be ſuppoſed, however, that the Perſians manage trade with the ſame method and rule as we do, or with the ſkill of the Europeans; for inſtance, trading by commiſſion and the uſe of bills of exchange, are little known, but every one goes to ſell his own goods himſelf, or ſeeds his deputies or his children to do it. Neither have they any letter-poſts in the eaſt, becauſe their trade is not ſpread far enough, and is not managed with ſo much activity as in Europe; and alſo becauſe the towns are at too great a diſtance from one another, and meſſengers are hired at a very eaſy rate; they ſend an expreſs a thirty days journey for about thirty ſhillings, and he performs that journey, which amounts to nine hundred Engliſh miles, in eighteen or twenty days time, and ſometimes in fifteen. When thoſe expreſſes are hired to go a journey, they run preſently from place to place, and give notice of their intended journey, in order to get ſome letters to carry, which they carry for as little as you pleaſe; they will carry a packet of letters of three ounces weight for fifteen pence.

It muſt be alſo obſerved, that in Perſia they ſubſcribe no bills, bonds, and other writings, but inſtead thereof, they write at the top of the paper their own name, and their ſirname, which is always their father's proper name; and they

ſeal

ſeal the paper at the bottom, in the preſence of witneſſes, who atteſt it alſo with their ſeals: in that manner do the merchants make their writings; and although in moſt caſes the contracts made, without due FORM OF LAW, be void, yet amongſt merchants they remain in FULL FORCE, and the ſecular power ratifies them. The uſe of ſurities or bails, is alſo very common amongſt them.

The moſt current money in Perſia, as Tavernier, Thevenot, and others inform us, are the abaſſi's, mahmoudi's, ſhai's, and caſbeghio's; the abaſſi's are of the fineſt ſilver, and the officers of the mint dare not coin any ſingle piece, until they have firſt refined the piaſtres, and other pieces of ſilver, that are appointed for the making of abaſſi's. And abaſſi was in Thevenot's time, about eighten pence French money; and conſidering there was no great difference then in the value of French and Engliſh coin, we may well ſuppoſe an abaſſi to be ſtill worth about ſixteen pence of our money. The abaſſi's, as all the reſt of the Perſian coin, are ſtamped with the hammer, and not milled, and there is ſo great an inequality in their weight, that in great payments they are weighed after this manner: they put twenty-five abaſſi's in one ſcale of the ballance, and as many in the other; and if the one weigh more or leſs than the other, they conclude for certain, that there are ſome falſe abaſſi's among them, and fail not to examine them, in which they are never out, for each ſcale ought moſt exactly to weigh alike. An abaſſi is worth two mahmoudi's, a mahmoudi two ſhai's, and a ſhai ten ſingle or five double caſbeghi's. Theſe laſt pieces are of braſs, the three other ſorts are all of ſilver, for gold is not current in trade. They have one braſs coin called biſti, worth four caſbeghi's, but the biſti's are now very ſcarce. They do not ſtamp their coin with the king's effigy, nor with his coat of arms; they only ſtamp on one ſide of the ſilver pieces the king's name, in whoſe name it was coined, and on the other, the name of the town and the year of the hegira.

The braſs pieces have on one ſide a lion, with a riſing ſun on his back, the emblem of Perſia, and on the other the name of the place where it was ſtruck. There is a coin all along the Perſian Gulph, called larins, which is the moſt common in trade. Larin, ſays Sir John Chardin, ſignifies coin of Lar, which is the capital of Caramania Deſerta (now Lariſtan). This was a diſtinct kingdom, before Atlas the Great king of Perſia, who conquered it, joined it to his kingdom. that piece of money is of good ſilver, and is worth about ten pence Engliſh. The make of it is very extraordinary, being a round wire, of the bigneſs of a quill, folded in two, and an inch long, with a ſmall mark on it, which is the prince's ſtamp. None having been coined ſince the conqueſt above-mentioned, is the reaſon they are now very ſcarce. They do nevertheleſs reckon by that coin all along the Perſian Gulph, and in the Indies, along the gulph of Cambay, and in the neighbouring ports; they ſay that formerly it was current throughout all the eaſt. Sir John Chardin does not give us the ſame account with Tavernier, of the ſtamp of the money; for he tells us that the ſtamp of the money, like that of the great ſeal of the kingdom, repreſents in the middle of one of the ſides the Perſian belief in theſe words, There is no God but God; Mahomet is God's prophet; Aly is God's vicegerent, and the names of the twelve imans, and on the other the name of the king of the place, and of the year of the higera. Sir John adds, that the charge of coining is greater in Perſia than in any other parts of the world, for it amounts to ſeven and a half per cent. The or is not a real coin, but only a nominal value of money, as a pound ſterling is with us, and is uſed among merchants when they ſpeak only of ſmall ſums; an or is worth five abiſſi's. A toman alſo is but a certain ſum of money, and no coin; it is worth fifty abaſſi's, and in Perſia they generally reckon by tomans.

They have no gold money in Perſia, for the pieces of gold ſtamped with the king's effigy, and coined at his acceſſion to the throne, and on new year's day, which are of the ſame weight as the German ducats, are not current among the people, any more than counters are in France; beſides thoſe pieces of gold have no proper name; the Perſians call them commonly tela, i. e. gold pieces; they are called alſo chervaſi's, i. e. nobles, by reaſon of their value. Tavernier tells us, that the merchants who travel into Perſia, carry with them ducats of Germany, the Low Countries, and Venice, but they muſt carry them to the mint as ſoon as they enter the kingdom; yet if they can ſecretly ſell them to private perſons, they make a greater profit of them. And when they go out of the kingdom, they muſt declare all the gold coin they take with them, and pay four pence duty to the king's officers for every ducat, if they ſhould endeavour to conceal their gold, and chance to be diſcovered, they would loſe it all.

The common weight in Perſia is of two ſorts, the civil weight, and the legal or religious weight. The legal weight, which they call cheray, and which is like the weight of the ſanctuary, according to the uſe of the ancient Hebrews, weighs commonly double the civil weight. They have, like us, different weights for medicines and precious ſtones, from the common weights. The civil weight is alſo of two ſorts, the king's weight, and the tauris weight as they call it. The king's weight, or the great weight, weighs exactly as much more as the other, they call their common weight man, and alſo batman. The ſmall weight man comes to five pounds fourteen ounces of Paris weight. Their way of dividing it is as follows: the ratel is the ſixth part of a man, and comes near to a pound with us; the derham, or drachm, is the fiftieth part of a pound; muſcal is half a derham; the dung is the ſixth part of a muſcal, and comes to about eight grains of carat weight, and the barley-corn, which is the fourth part of a dung. The eaſtern weights are all reduced to the barley-corn.

There are two ſorts of ells, the royal ell, which is three feet long wanting an inch, and the ſhort ell, or guezemoukeſſer, as they call it, which is but two thirds of the other. The geometrical meaſure is called girib; the land is meaſured by no other meaſure, and the girib contains a thouſand and ſixty-ſix ſquare ells, each ell containing thirty-five royal inches. The carpets that are ſold by the ell, are meaſured alſo by the ſquare ell, multiplying the length by the breadth, which the Perſians call ell by ell. For inſtance, if a floor carpet is twelve ells long and three broad, they ſay, three times twelve is thirty-ſix, for it contains as many ſquare ells. The Perſians have no meaſure for dry goods, as a buſhel, &c. becauſe they ſell every thing by weight, even liquors. They have no meaſure for time, neither clocks nor dials, They divide the day into eight parts, moſt of which the Mahometan prieſts give notice of in towns, by calling people to prayer.

A ſummary of the commerce of Perſia, according to the judicious Mr Hanway *.

'If we may judge, ſays this ingenious gentleman, from the duties paid in RESHD, the trade began to flouriſh on our arrival there; for in 1742 the cuſtoms amounted only to 20,000 crowns, but in 1743 they aroſe to 50,000, and made about the ſame ſum in 1744. The annual produce of GHILAN in good times, I compute to be 30,000 batmans † of raw ſilk, of which about 6000 are conſumed in Perſia, 4000 ſent to Babylon, and the remainder over the Caſpian Sea. SHIRVAN formerly produced a large quantity, but that province is now in a much worſe condition than GHILAN. This commodity is brought to market all the year round. They have ſeveral kinds of it, the firſt is called ſherbaff, or weaver's ſilk, they being ſuppoſed, particularly in RESHD and CASHAN, to uſe the beſt they can procure; but what generally goes for the PERSIAN fabric at CASHAN, is the fineſt ſort, the threads of which are more ſplit; this is uſually all white, whereas the other is white and yellow; nor is it wound off ſo ſhort, ſo that though finer we do not eſteem it ſo much as ſherbaff. There is alſo a ſort called Arabs, from being bought up for the moſt part by Arabians, who ſend it into Turkey, where it is afterwards manufactured.

* See an Hiſtorical Account of the Britiſh Trade over the Caſpian Sea.—By Jonas Hanway, merchant.

† 240,000 great pounds.

GHILAN produces the beſt and greateſt quantities of ſilk; next to this comes SHIRVAN and ERIVAN, then MAZANDERAN, and laſtly ASTRABAD; but the latter is vaſtly inferior, ſerving only for a manufacture mixed with cotton, of which they make their ſhirts and drawers. Ghilan ſilk is ſent into Ruſſia and Turkey, and part of it is kept for the Perſian manufactures, but that of Mazanderan and Aſtrabad is ſeldom or ever exported. From Shirvan they formerly ſent all their ſilk to Turkey and Ruſſia. The peaſants of Ghilan perceiving that the Engliſh required the ſherbaff to be ſhort wound, prepared it in that manner, and the ſilk proved good, and was much eſteemed by our manufacturers. The peaſants gave this reaſon for chuſing to have their ſilk long wound: in moiſt weather, the ſilk wound on a large wheel is not ſo apt to ſtick or be gummed together, in thoſe parts where it lays on the bars, or diviſions of the wheel, where it is often rendered black, and ſo hard, that it cannot without great difficulty be ſeparated; beſides, with a large wheel they make more diſpatch; but all this time they did not conſider the inconveniency of winding it off to be manufactured. Theſe peaſants are extremely tenacious with regard to the price of their ſilk: their buſineſs is uſually done by brokers, but the buyer attends to pay the money. They ſell it in ſmall quantities, ſo that a cargo cannot always be collected. Beſides this inconvenience, there is that of bad money, for they are often obliged to cut it through, in order to ſee that it is not copper ſilvered over. Their jealouſy ran ſo high, that the governor of Ghilan once publiſhed an order, that whoever refuſed any kind of money, except it was manifeſtly bad, his ears and noſe ſhould be cut off, and his eſtate confiſcated: but I never heard that this order was carried into execution.

The ſilk-worm, as is well known, takes it's birth from an egg no bigger than a ſmall pin's head. In the month of March, when the ſun is already very warm, I obſerved the peaſants in Ghilan prepare to give life to the eggs, which they had preſerved during the winter, carrying them for the moſt part about them, in the warmeſt part of their bodies, and particularly

cularly under their arms. In ten or more days, according to the heat it receives, it becomes a maggot and begins to feed: the ſhrub mulberry-trees which are annually pruned, produce the moſt tender and proper leaves for their food. In about forty days, the worm arrives to it's maturity, and winds itſelf by daily gradations into a pod of ſilk as big as a pigeon's egg. When this egg is completely formed, which is uſually known by the ſilence of the worm within, they ſuffocate it by covering it with blankets, or by the heat of the ſun; unleſs they wind off the ſilk immediately, for then warm water anſwers the ſame purpoſe. Some of them, however, muſt be permitted to live and perforate the pod, for when it breaks from it's incloſure, it caſts it's ſeed or eggs, by means of which the generation is preſerved. From the pods thus perforated, the ſilk cannot be wound off as from the others, but being prepared by pounding, it is ſpun off like cotton yarn. This ſilk we call kedge, the remains or refuſe of which is ſo inferior, as to admit only of being milled and made into ſilk wadding.

The cleanneſs and clearneſs of raw ſilk conſtitute a great part of it's goodneſs; inferior ſilk has many knits and coarſe ſtuff ſticking to the threads. The moſs, or head of ſilk, often appears fair to the eye, when much coarſeneſs is concealed under it; for it is a trick of the peaſants of Ghilan, to hide the defects as they wind it off from the pod. The beſt ſilk has conſtantly a gloſs or brightneſs: the white or ſilver coloured is moſt eſteemed, but in Ghilan the greateſt part comes yellow from the worm. White ſilk that is ſoiled, is generally found to have lain in a moiſt place, which hurts it's ſtrength as well as beauty. Silk ſhould be equal, ſtrong, and round as wire, and alſo clean; the greateſt part of it ſhould be in a medium with regard to fineneſs, for the fineſt is not the eaſieſt to manufacture to advantage. The threads of ſilk being thus even, that is, as near as poſſible of one ſize, and not coarſe and fine intermixed, can be moſt eaſily ſeparated in the winding; but otherwiſe the coarſe is apt to tear the fine, and make waſte in manufacturing it. The ſize which we uſually moſt eſteem, is wound off 16 or 18 pods or cocoons. A moſs, which is about 60 inches in the round, can be moſt conveniently reeled off; longer is not approved of, and if ſhorter it is apt to break by the quick revolutions of the reel, being glued together with it's own gum. It is alſo to be obſerved, that there is a vaſt difference between ſilk cleaned by combing, and that which remains juſt as it came from the pod. The former, to an unſkilful perſon, who does not obſerve the broken threads and the ends of the combings, ſhall look better than the latter, though it be conſiderably worſe.

When the Armenians and Ruſſians pack up their ſilk, they generally comb the heads of the moſſes, to deceive the buyer, but this makes it really worſe, becauſe it hurts in the winding off. Theſe people, who were never famed for probity, have long practiſed the art of falſe package: hence, at Smyrna and Aleppo, where the Armenians ſell their ſilk to the factors of our Turkey company, as likewiſe in Ruſſia, it has often been rejected upon that account, eſpecially as they hold it a conſtant maxim, not to ſuffer their bales to be broken up except at the heads. The price of ſilk and Ghilan generally riſes in proportion to the advance on foreign goods, except in a very great ſcarcity, as of late: during the courſe of the Britiſh Caſpian trade, we found it vary from 12 to 18 crowns the batman; it was generally about 15, but within theſe two or three laſt years the Ruſſians and Armenians have paid from 30 to 40 crowns.

The kinds of European goods which the Ruſſians and Armenians vend in the northern provinces of Perſia, with a ſuccinct account of the Perſian weights, meaſures, and coins.

I ſhall finiſh this ſhort view of the trade of Perſia, by giving a general idea of the different kinds of European goods, which the Ruſſians and Armenians now vend in the northern provinces of that kingdom, with an account of the coins, weights, and meaſures, according to the beſt informations I could procure; but I muſt obſerve, that there ſeems to be a great diſcordance among writers in this particular. The chief demands of European goods, next to Dutch cloth, is for Britiſh woollens, ſuch as hair-liſt drabs, of 12 to 19l. per piece of 37 yards in white, which the Perſians call bergreſt: of theſe they uſually conſume nine bales in 30.

Gloſter cloths, of about 9l. 10s. to 11l. 10s. per piece of 42 yards in white, which the Perſians call maghoot, and conſume thereof 10 bales in 30.

Ordinary Yorkſhire cloths, of about 3s. 6d. per yard dyed, which the Perſians call Londora, and conſume thereof 11 bales in 30.

Five bales of ſhalloon, of a middling quality, are ordinarily required in 100 bales of cloth.

From Holland they reckon one bale of maghoot, one of ſhalloons, and one of long ells, to 10 bales of bergreſt.

Engliſh emboſſed cloth is alſo demanded; likewiſe indigo, cochineal, and, in good times, ſome rich ſilks, gold and ſilver lace, velvets, and other rich manufactures.

The Perſians had long been accuſtomed to Dutch cloths, which were thicker, and, for the moſt part, better ſhorn, and of a ſofter and finer wooll, the crimſon and ſcarlet of a finer dye; but they were dearer than ours: however, after two or three years, we improved ſome of our drabs, ſo as to be almoſt equal to the Dutch cloths in ſubſtance, and, in my judgment, ſuperior in ſoftneſs and beauty.

The tranſit duty in Ruſſia is 3 per cent. on the value, with an agio of 150 per cent. which, with other petty charges, makes it about 8 per cent. only in the cuſtom-houſe. In Perſia the duty on European goods is 5 per cent. on the value.

An Account of the Money of Persia.

The toman, biſtic, and denaer, are imaginary, but the other denominations are real; the valuation and currency of ſilver money, are, viz.

	Value in denaers.	Weight in muſcals.
A toman is ten hazardenaers -	10,000	50
It muſt be obſerved, that the hazardenaer (which the Engliſh call mildenaer, and the Ruſſians a ruble) is computed by Europeans, and accounts kept in hundreds	100	
Conſequently, the ſame in lower denominations, viz. peng ſid denaer, or rupie, or nadire - -	50	2½
Siſid denaer, or ſhis ſhahie -	30	1½
Abaſſie - - -	20	1
Sid denaer, or mahmudie -	10	
Shahie, or ſahie - - -	5	
Biſtie - - -	2	
Kaſbekie - - -	½	

An engliſh crown melted down in Reſhd, produced, at 17 denaers * per muſcal, only 95 denaers; but we always computed the mildenaer, or 100 denaers; equal to an Engliſh crown of 5s.

* The common price of ſilver.

The Gold Coins current are,

	Value	Wt. in muſcals and nackoot, or karrats. 24 = 1 muſcal.
Muhraſhreffie, or treble ducat of 6 mildenaers - -	6 —	2 9
Aſhreffi, or old ducat .	1 80	0 18*
Ditto Shan Nadir, or new ducat -	1 80	0 18
Ditto of Meſched - -	1 80	0 18
Ditto Bokhara, current at 2 10 -	2 20	1
And Fonduckli, Turkiſh ducat, about	1 80	0 18
Venetian Ducat - -	1 80	0 17¾
The comman abaſſie ſhould be	2 ---	1
Ditto Shah ſultan Huſſein -		1 4
Dttto Shah Suliman -		1 14
Ditto Shah Seffie -		1 16

N. B. 80 $\frac{9116}{10000}$ muſcals = 1 lb. Troy

* Equal in fineneſs to a Holland ducat.

Weights.

1200 muſcals, or 1 butman, are avoirdupois lb. ordinarily computed 12 ⅕ lb. Engliſh -	12	20343
98 ⅓ ditto - - -	1	
1 ditto I have found to be 3 dwts. ½ grain, but nicer calculators call it grains -	71	1888
1 dunk, or donk - - -	11	8648
1 karrat - - .. -	2	9662
1 hæbbie - - -	0	9887⅓

107 muſcals are 1 lb. Hollands.

The old batman, or manſhah, is 1200 muſcals, or 200 drams, by which ſilk, cocheneal, indigo, kedge, &c. are weighed.

The new batman ſhah is 1280 muſcals, or 213⅔ drams, by which heavy goods are weighed.

At Tavris the batman, called tavizie, contains 640 muſcals; likewiſe chiefly uſed at Meſched and Herat, as it is alſo, more or leſs through the whole country, for ſeveral ſpecies of goods.

The antient batman of Tavris weighed 600 muſcals.

At Iſpahan, at Shamakie, and all through Shirvan, the ſilk batman contains 48 ſtills, or 1600 muſcals, and 3 ſtills are called a ſhadah, and weigh 100 muſcals; but the batman, by which indigo is weighed, contains only 800 muſcals.

At Tæhiran the batman is called re, and contains 1600 muſcals; rice, wheat, liquors, and proviſions, are ſold by the batman.

A chærvar, or load of a camel, is 50 batmans.

A load of a mule, 25 batmans, according to the king's computation, but carriers uſually load from 30 to 34.

A chærvar of a horſe is 20 batmans, but carriers uſually load 25. The ſame load of an aſs, according to the common rule of carriers is 15 batmans.

Kæbbie, a handful.

Dizz, or gerib,, 1000 rice.

Four batman of Shahi rice, make one kuttie.

Corn and grain, and even liquids, are ſold by the batman, but rice, when winnowed, is ſold per meaſure, or jar.
The muſcal through oll Perſia is the ſame: the ſilverſmiths commonly make uſe of pieces of money inſtead of weights, eſpecially ſiſid denaers of 1 ½ muſcal in weight.
One karrat is three hæbbie.
Four karrats, or nockoot are one dunk.
Six dunk one muſcal.
Six muſcals one dram.

The MEASURE of RESHD.

Seven horſe-hair breadths are one barley-corn.
Seven barley-corns are one finger.
24 fingers are half a gæze, or gaz = one cubit.
4000 cubits are one mile.
Three miles are one farſang.
But the meaſure in common uſe is the gæze zerræ, divided into 16 parts, and called gierrie.
The foreign and Perſian merchants, in buying of woollens, compute the gæze at 40 inches Engliſh, but it is only 39 ⅔.
One ditto is computed to 10 Ruſſian archeens of 28 inches.
105 Smyrna pikes are reckoned equal to 70 Perſian gæze.
The Mokæſar gæze is $\frac{1}{10}$ leſs than the Shah gæze, and by the Mokæſar, Perſian manufactures, and moſt part of retale goods are meaſured.
The Tavris gæze is one per cent. longer than the Shah gæze.
The account which Mr Van Meirop gave of the import and conſumption of Meſched, extracted from the cuſtom-houſe regiſter of that city, made the quantities very inconſiderable, and the whole was ſent by Armenians, Ruſſians, and Greeks, from Reſhd, viz.

	Pieces of bergreſt.	Pieces of Londora.	Pieces of maghoot.
Meſched, and it's neighbourhood	305	100	700
For the conſumption of Bokhara	20	50	10
Orange	15	30	5
Balkh	15	15	5
Anthuy	10	15	5

Beſides theſe not diſtinguiſhed with regard to the place of their conſumption, were imported.
1000 Shalloons, } the moſt part from Kherman, by the way
1500 Long ells, } of the gulph of Perſia.
250 batmans of Lahori indigo, brought by the indians, of whom there are a conſiderable number, who alſo trade in cloth from Reſhd.
500 Batmans of American indico from Reſhd, by Armenians; formerly it came from Turkey, where they bought of the French.
300 Batmans of cocheneal from Reſhd, brought by Armenians and others.
Though Meſched was under the particular protection of Nadir Shah, it was with difficulty that this gentleman ſold to the value of 22000 crowns, during the ſpace of 27 months which he reſided there; and great part of this ſum was in exchange for Perſian manufactures, which no reaſon but the abſolute impoſſibility of obtaining money induced him to accept; ſuch was the diſtreſs of that country.
For my own part, I had the utmoſt reaſon to conſider this as a military trade, and myſelf as having made a campaign. The journey, had, however, afforded me an opportunity of ſeeing Perſia, and of enquiring into many circumſtances relating to the oriental commerce. The confuſion ariſing from inteſtine broils muſt ever give a deep wound to trade, the ſecurity of which is founded in the arts of peace, and the execution of civil laws; but the government of Perſia was now rendered precarious to a degree that threatened the ſubverſion of that monarchy. The Turks, the Leſgees, the Indians, the Turkumans, and other frontier nations, either favoured theſe inteſtine factions, or endeavoured to recover ſome limb which had been torn from them; ſo that every imaginable exceſs was committed, upon no better principle than the power of doing it.
In this ſituation it was the ill fortune of the Ruſſia company [ſee RUSSIA TRADE and RUSSIA COMPANY] to find Perſia governed by an uſurper and a tyrant, whoſe cruelty had no bounds: and the proſpect at this time, in a more particular manner, was overſhadowed with a dark cloud, which threatened a ſtorm: the Ruſſia company had already felt ſome of the difficulties in which they were involved, others they foreſaw, but knew not how to provide againſt them.
The rebellions in Shirvan in 1743, of Shiraſs, Aſhabad, Hazerjereb in 1744, were ſuppreſſed by the ſlaughter of many thouſands, and the almoſt total ruin of thoſe provinces. It is true that Nadir had enriched his treaſures with the plunder of India, yet the heavy taxes he had impoſed on his people to ſupport ſuch a continued ſeries of foreign and domeſtick wars, having reduced them to poverty, and driving them to deſpair, obliged thouſands to ſeek a voluntary baniſhment.
I have already obſerved that Nadir's army had been ſupported for upwards of four years, by the taxes drawn from his Perſian ſubjects, and that his Indian treaſure remained in a great meaſure untouched; this was one principle cauſe of their diſtreſs; by endeavouring to deprive them of the inſtruments of rebellion, he provoked them to rebel, and chaſtiſing them he compleated their ruin. Could any trade be carried on under theſe circumſtances?
It was computed that Nadir had near 200,000 men in pay, the charge of whom, officers included, was computed at 100 crowns * a year, and, conſequently, the expence of maintaining his army was 20 millions of crowns †, excluſive of the contingent expence.

* Twenty-five pounds.
† Five millions ſterling.

In good times, the provinces are ſuppoſed to bring into the exchequer the following ſums:

	Mildenaers.	£.
The conquered provinces in India were ſaid to produce, in 1743, 25 crore*, which make, Perſian money	12,500,000	3,125,000
Kandahar and Hærat	1,000,000	250,000
Khorazan	2,000,000	500,000
Aſtabad	50,000	12,500
Mazanderan	400,000	100,000
Ghilan, of which a million was once demanded, but is now ſet at	500,000	125000
Shirvan, including Georgia and ſome other parts of Dageſtan	1,500,000	375,000
Erivan, and the parts of Armenia ſubject to Perſia	2,000,000	500,000
Irac, including Caſbin, Iſpahan, and the country extending to the gulph, being the ancient Parthia	1,500,000	375,000
Aderbeitzan, in which Ardevill and Tauris are included †	1,500,000	375,000
	22,950,000	5,737,500

* One crore, or 10 laks, are 500,000 crowns.
† Aderbeitzan is the ancient Media.

The reader will naturally obſerve. how great a part of the Perſian revenue was produced by Nadir's conqueſt in India: it will alſo be obvious to him, that the charge of an army is certain, but the revenues to ſupport that army are uncertain, eſpecially if they commit the leaſt violence; and here the whole was a ſcene of rapine: the conſequence was, that, except the conquered provinces in India, and thoſe of Ghilan and Khoraſan, the reſt of the kingdom was ſo impoveriſhed, as to be diſabled from paying, perhaps, a quarter part of the uſual tax. Next to the above-mentioned, Kandahar, Hærat, and Erivan, were ſaid to be the leaſt diſtreſſed, but miſery reigned in every quarter.
Of theſe 200,000 men, 60,000 were quartered in Cabul and the adjacent provinces on the weſtern ſide of the Sind *, which had been conquered and kept by Nadir; and the revenues appear to have much exceeded the expence of ſupporting that part of the army. If one conſiders this number of troops, and large revenue, it was not unreaſonable to expect a large demand for cloth and other European goods; but we were not then acquainted with the nature of cloathing a Perſian army; for indeed not a third part of it wears European cloth,

* Ancient Indus.

With regard to the quantity of goods imported by the Perſians over the Caſpian Sea, whilſt the port of Gambroon was open to the ſeveral nations of Europe, the Caſpian traders could but ill form an idea of the general conſumption in that kingdom. The Ruſſia company were more ſanguine in their expectations, from a knowlege that, in the beginning of this century, the factors of the Eaſt-India company had extended their trade as far as Tavris, on the weſtern coaſt of the Caſpian, where they ſold great quantities of the woollen manufactures of Great-Britain: but when the Britiſh factors in Ghilan, whoſe ſituation was now ſo much more advantageous, would have made an experiment of the like nature, they diſcovered that city and it's confines to be in ſo ruinous a ſtate, as blaſted their hopes of doing any buſineſs in thoſe quarters.
When Perſia enjoyed repoſe, the agent of the Eaſt-India company of England lived in ſplendor; the regal government being held in great veneration in that empire, he acted as immediately under the crown of England, and from thence derived an influence which he could not otherwiſe have poſſeſſed: his pompous manner of living had ſome good effects, but the expence was too conſiderable to be long grateful to the company.
With regard to the advantages the Ruſſians enjoyed, it muſt be obſerved, that beſides the Ruſſian miniſter who attends at the Perſian court, generally under the title of reſident, the conſul of that empire, who is fixed in Ghilan, is conſidered, in ſome meaſure, in a miniſterial light, and allowed a company of Ruſſian ſoldiers as a guard, at the expence of the empreſs their ſovereign.
Hence it was that Mr Elton recommended ſo ſtrongly, that a commiſſion ſhould be given to one of the Britiſh ſubjects in Ghilan, by which I preſume he meant himſelf, to act as conſul;

ful; but the ſtate of things was now changed, and every ſtep that could be taken to eſtabliſh the intereſt of the Ruſſia company in Perſia, in effect blocked up our paſſage through Ruſſia into Perſia. See RUSSIA COMPANY.

The advantages which the Eaſt-India company of England enjoyed beyond the Ruſſia company, were ſuch as will hardly admit of a compariſon, nor indeed is it material to my preſent purpoſe; I ſhall paſs over in ſilence the trade from Great-Britain to the gulph of Perſia, as alſo that between Perſia and India; obſerving only, that, after the Portugueze had ſettled themſelves in Eaſt-India, they took the iſland of Ormus, and being maſters of the ſea, carried on the trade between thoſe countries. That great prince Shah Abaſs thought it his intereſt to diſlodge them from his neighbourhood: for which purpoſe he entered into a treaty, in 1622, with the agent of the Eaſt-India Company, and, by means of their ſhips, he took Ormus, and demoliſhed the town, bringing the commerce of that iſland to the continent. This induced that prince to build the town of Bender-Abaſſi, now called Gambroon, which is reputed the greateſt place of trade in all Perſia. For theſe good ſervices Abaſs made the company a grant of half the cuſtoms of the new town, in perpetuity; but his ſucceſſors have not religiouſly obſerved the engagement.

The invaſions of the Afghans, in 1722, ruined the company's ſettlement at Iſpahan, in no leſs a degree than the death of Nadir occaſioned the pillage of the Ruſſia company's factors in Reſhd, as was the caſe. Their loſs, though very conſiderable, was not, I believe, ſuperior to that of the Caſpian traders, except the long interruption of their trade: in both caſes, extortion and plunder were carried to an extreme. The Armenians ſuffered alſo *; the Dutch likewiſe met the common fortune of the times, and being obliged to withdraw the greateſt part of their factory from Iſpahan, they ſettled in Gambroon, where they ſecured themſelves, in a great meaſure, by very ſtrong fortifications: they did not come into Perſia 'till ten years after us, but as they are the only traders in ſpice, ſo much in uſe over all Aſia, they have been encouraged to continue their commerce, though with leſs advantage than in paſt times.

* See Mr Hanway's Hiſtory of Revolutions, in vol. iii.

The French firſt appeared in Perſia in 1665, and concluded a treaty with the ſhah of Perſia in 1674; but the miſeries of that country, in conſequence of the invaſion of the Afghans in 1722, compelled them alſo to retire from Iſpahan.

A very pompous propoſal was made by a French projector, in relation to a trade over the Caſpian, in the beginning of this century, upon the occaſion of an ambaſſy * from Shah Sultan Huſſein to Lewis XIV. This perſon imagined that caravans could not be conducted ſafely through Ruſſia, and, therefore, he propoſed to carry merchandize in veſſels, by the lakes and rivers with which that country abounds; but, in regard to robbers, he ſeemed ignorant that this would not mend the matter in the leaſt. He mentioned alſo ſeveral commodities which he propoſed to return to France, particularly rhubarb: but this article is monopolized by the Ruſſian government: this ſcheme never was, and I believe never will be, carried into execution.

* It has been ſaid that this was entirely counterfeit, to amuſe Lewis XIV. in his old age; but it appears from ſeveral circumſtance, as well as the nature of the thing, that this opinion was very ill grounded, if not ridiculous.

But of all the nations who have endeavoured to eſtabliſh a trade with the north of Perſia, the Ruſſians are the moſt advantageouſly ſituated: the inteſtine broils of that country have not put a ſtop to their commerce; on the contrary, they have ſometimes turned to their advantage; for, beſides the ordinary courſe of their trade to and from Perſia, they reap conſiderable profit by their trading voyages on the Caſpian Sea, carrying rice from Ghilan to Baku, Derbends, and ſometimes to the ſouthern coaſt, as I have already mentioned. And as this export of proviſion ſometimes creates a ſcarcity in Ghilan, it occaſions a demand for Ruſſian meal, from which again new benefits are derived. Beſides cloth, and other European goods, the Ruſſians alſo export red leather, furrs and linnen, for the northern provinces of Perſia, and make their returns in raw ſilk. Hence aroſe their jealouſy of the Britiſh traders; for the Ruſſian merchants, particularly thoſe of Moſcow, and the trading towns on the Volga, no ſooner obſerved that the perſian markets were glutted with European goods, by the Ruſſia company of England, than they began to murmur, reſolving to make remonſtrances to court on the ſubject.

The Armenians, indeed, have for ſome years extended their trade to the north of Perſia, much beyond the Ruſſians; for, by means of their credit in Holland, joined to their own capitals, they employed in this branch of commerce about 100,000 l. This ſtock, however, was now inſufficient to ſupport them; for the exceſſive glut of the market in Ghilan, and the terrible oppreſſion of the Perſian government, ſtopped the circulation of their trade, and, conſequently, ſunk their credit in Holland. At length they were alſo conſtrained to abandon Perſia, and, in 1745, they retired to Aſtracan, to wait with their effects 'till there ſhould be a fair opportunity of returning thither.

Whilſt the Ruſſia company were in ſecurity, they could not be inſenſible of the benefits of buying raw ſilk immediately of the peaſants of Ghilan; but advantages may be over-rated, and indeed ceaſe to be ſuch, when attended with vexations and inconveniences, like thoſe which the Caſpian traders experienced. It was not, however, the leſs ungrateful to obſerve the Armenians, a people in themſelves deſpicable, and of no conſequence to Ruſſia in competition with the Britiſh nation, ſupported and protected in this trade, when meaſures were ſo apparently taken to wreſt it from us.

The Ruſſians do indeed alledge, that many of theſe Armenians are ſubjects of their country; and it is true, in general, that ſuch of them as are engaged in the Caſpian trade do put themſelves under the protection of that empire; theſe people are likewiſe educated in all the ſervilities of Aſia, and underſtanding how to accommodate themſelves to indignities, which the genius of a free nation will hardly ſubmit to, are in ſome meaſure the better qualified to carry on a commerce through foreign dominions.

The ſhare which the Ruſſia company enjoyed in this commerce made an eclat, but it was not yet puſhed to near the height which the Armenians had carried it; of what conſequence it was to the latter, may be eaſily deduced from hence, that not many years ago they imported into Ruſſia near 1000 bales of raw ſilk *. Of this the greateſt part was ſent to Amſterdam; part of the ſilk was alſo ſent to the German markets, and about 100 bales remained in the city of Moſcow, for the uſe of the Ruſſian manufactures.

* Of 25 batmans, is 300,000 lb. of 16 ounces; whereas all the Britiſh trade never amounted to half that quantity.

PERU. This country is bounded on the north by Popayan, which is part of Terra Firma; on the eaſt by the country of the Amazons; on the ſouth by Chili; and on the weſt it has the South-Sea, or Pacific Ocean. It extends from the 1ſt degree and about 30 minutes north latitude, to the 25th degree 10 minutes of ſouth latitude: ſo that it contains 28 degrees from north to ſouth; that is, 560 leagues, or 1680 Engliſh miles; but, conſidering the windings of the coaſt, and that it does not lie directly north and ſouth, but rather north-weſt and ſouth-eaſt, we may very well agree with thoſe geographers who make it about 600 leagues, or 1800 miles long. It's greateſt breadth is not much above 100, and in ſome places 130 leagues, from weſt to eaſt.

Beſides the fruit-trees which have been tranſported hither from Europe, as pears, apples, figs, grapes, olives, &c. there are thoſe of the Caribbee Iſlands, as ananas, guayvas, patatas, bananas, melons, water-melons, beſides other peculiar to Peru; the moſt valued of the laſt ſort are the chirimbolas, reſembling in ſmell the anana, and pine-apple, buing full of a white ſolid ſubſtance, mixed with ſeeds as big as kidney-beans; the leaf is ſomewhat like that of the mulberry-tree, and the wood reſembles that of the hazel.

In relation to commerce, the Creolians are as ſharp and underſtanding as the Europeans; but being dainty and ſlothful, and not vouchſafing to deal unleſs there be a conſiderable profit, the Biſcayners, and other European Spaniards, who are moſt laborious, grow rich ſooner.

This country is divided into three audiences, or juriſdictions, which are, going from ſouth to north, Los Charcas, or La Plata, Lima, or Los Reyes, and Quito.

LOS CHARCAS. This province has Chili and Tucuman on the ſouth; part of Paraguay, and of the country of the Amazons, on the eaſt; the audience of Lima on the north; and the South-Sea on the weſt. It extends along the ſea-coaſt, from the 25th degree of ſouth latitude, to Rio Tamma, in latitude 17. 10. ſo that it's length is 7 degrees and 50 minutes, that is 570 miles, in a ſtrait line: but, conſidering the windings of the coaſt, we may very well reckon it above 600 miles. It's greateſt extent, from weſt to eaſt, as much as we can judge from the beſt maps, is about 400 miles, though in ſome places much leſs.

The climate of this country is but indifferent: on the ſhore ir is exceſſive hot, and the inland parts of the country partake ſo much of the other extreme, that it is ſaid the Spaniſh ladies, when pregnant, are compelled to remove to a warmer climate, before they can be delivered. The ſoil however is, generally ſpeaking, fruitful; on the coaſt it is made ſo by art; but the vallies among the mountains in the inland parts, are from nature luxuriouſly fertile, being every where ſufficiently watered; whereas there are no rivers at all upon the coaſt. As to the commodities of this country, though it may juſtly be ſtiled one of the richeſt in the world, yet they may be reduced to three, namely, pimento, which grows upon the coaſt, and is a kind of pepper, little different from what we call Jamaica pepper, and produces to the inhabitants 600,000 pieces of eight per annum.

The other commodities are ſilver and gold, of which we ſhall give ſome account when we come to deſcribe the places where or near which the mines are found.

LA PLATA, otherwiſe called CHAQUI, or CHAQUICACA, the capital, lies in ſouth latitude 19. 33. and in longitude

65. 30. weſt from London; it is about 250 miles diſtant from the neareſt ſea-coaſt to the eaſt, and about 780 from Lima, towards the ſouth-eaſt. It was formerly very conſiderable on account of the rich mines in it's neighbourhood, many of which are now neglected.

POTOSI, a moſt famous place on account of the rich ſilver mines in it's neighbourhood, is about 60 miles diſtant from La Plata to the ſouth eaſt. It ſtands at the bottom of a hill called the Silver Hill, which is round like a ſugar-loaf. The king obliges the neighbouring pariſhes to ſend thither a certain number of Indians yearly, to work at the mines. Captain Rogers obſerves, that there are 1500 or 2000 of them conſtantly employed in that work; they have two reals a day, and are paid every Sunday. The corregidores, or chief magiſtrates, cauſe them to ſet out on the feaſt of Corpus Chriſti; moſt of them go to that ſervitude with tears in their eyes, and with the greateſt reluctancy: however, after a year's duty, there are many who forget their habitations, and continue ſettled at Potoſi, which is the reaſon why that town is ſo populous.

This place is ſaid to be very cold: they have great froſts and ſnows here in May, June, and July. Proviſions are very ſcarce in the town, and they have no firing but charcoal, which is brought from 30 to 50 leagues diſtance. Knivet in his remarks ſays, that, in his time, they were well ſupplied with every thing from the South-Sea, and that the natives of the adjoining country trafficked in gold and precious ſtones. The mines here were diſcovered by mere chance, 12 years after the Spaniards had entered the country. In 1545, Villaroele, who was a Spaniard, and an Indian, named Guanea, began with opening two mines: they called one Rica, and the other Diego Centeno. The former was raiſed above the ſurface of the earth, in the form of a cock's-comb, about the heighth of a lance, and was 300 feet in length, by 13 in breadth: this mine was ſo rich, that almoſt half of the ore was pure and fine ſilver, to the depth of 50 or 60 fathoms, where it began to change a little. The third mine, which was called Del Eſtauno, becauſe of the hardneſs of the flints, was begun ſoon after the former two, and the fourth, called Mendieta, was opened in Auguſt 1545. Nothing can come up to the riches of thoſe mines: it appears from the royal regiſters, that, ſeveral years after they were diſcovered, there were brought every Saturday to the licentiate Pol, who was preſident at Potoſi, 150, and ſometimes 200,000 peſos, that he might take the fifth part for the king of Spain: and it appears from the accounts of perſons who were very well informed, that the king's fifth part amounted to 76 millions. The excellency of theſe mines will further appear from this particular, that, though they had dug 200 fathoms deep, yet they were not incommoded with any water.

Theſe mines are much decayed in their value, and the mint does not coin one quarter of what they did formerly. There were once 120 mills; and at this time there are only 40, and, for the moſt part of the year, there is no employment for half of them.

PORCO is about 20 miles to the weſt of Potoſi: it was alſo famous formerly, for it's ſilver mines, before thoſe of Potoſi were diſcovered, which being richer, and not incommoded by water, drew all the undertakers and workmen from Porco; but ſince the mines of Potoſi are decayed, it is probable thoſe of Porco may be opened again.

LA PAZ is ſeated near the ſpring-head of a river called Choqueaſſo, from which this town is alſo called by that name. It is about 210 miles diſtant from La Plata to the north-weſt, and 125 from the ſea-coaſt to the eaſt. It is a ſmall town, but pleaſantly ſituated in a fine plain, full of ſprings, fruit-trees and fields of maiz, with mountains on each ſide. It has many rich gold mines, and good ſalt-pits.

ARICA lies in ſouth latitude 18. 27. and in longitude 70. 20. weſt from London, and above 245 miles from Potoſi to the north-weſt.

A league up is the village of ST MICHAEL DE SAPA, where they begin to cultivate the agi, that is, Guinea pepper, which is ſown throughout all the reſt of the vale of Arica. In that little ſpace of the vale, which is very narrow, and not above ſix leagues long, they ſell yearly of it to the value of above 80,000 crowns.

LOS REYES. This province has on the north the audience of Quito, on the eaſt the Cordillera mountains, on the ſouth the audience of Los Charcos, and on the weſt the South Sea. It's extent from north to ſouth, is about ſeven hundred miles; but it's breadth is very unequal, both on account of the bending of the coaſt, and becauſe it is in many places pent in by the mountains.

This country abounds with mines of gold, ſilver, quickſilver, vermillion, and ſalt. They have plenty of cattle, fowl, and fiſh, and all proviſions common to us, except butter, inſtead of which they uſe lard.

They have oil, wine, and brandy enough though not ſo good as in Europe. They drink much of the jeſuits herb camini brought from Paraguay by land, whence it is alſo called the herb of Paraguay [ſee PARAGUAY]; for all Eaſt-India tea is prohibited. The Spaniſh writers in general ſay, that for five hundred leagues in length, from Tumbez to Chili, it never thunders, lightens, nor rains, but the want of this is ſupplied by great dews; ſo that they have as good fruit and corn, particularly wheat, as any in Europe. In the valleys near the ſea, the climate is hot, but tempered with breezes from the ſea and mountains. In the hilly parts, far into the country, it is winter, and very rainy, when it is ſummer, in the plains, though in the ſame latitude. The product, beaſts and birds, are much the ſame with other parts of the South-Sea coaſt. (Rogers.) Zuratte, the Spaniſh hiſtorian, has given us the natural cauſe of the perpetual drought there is in this country. He obſerves, that the ſouth-weſt winds blow upon the Peruvian coaſt all the year round, and the ocean here is therefore called Pacific, becauſe theſe winds never diſturb the waters. Theſe eaſy gales always bear away the vapours from the plains, before they can riſe, and form a body ſufficient to deſcend in a ſhower: but when they are carried farther and higher, they grow more compact, and at length fall by their own weight into rain. (Betagh.)

LIMA, the capital of all this province, and of all Peru, is ſeated in 12 degrees, 6 minutes, and 28 ſeconds of ſouth latitude, and in the 77th, 15 minutes of longitude weſt from London, and five miles eaſt from the port of Callao, which is it's harbour. This city is in ſome ſort the repoſitory of all the treaſures of Peru. It was computed ſome years ago, that above ſix millions of crowns (or 1,200,000 pounds ſterling) were expended there, but it muſt be much abated at preſent.

For the regulation of trade, there is a conſulſhip, where a prior or chief, and two conſuls preſide, who are choſen from among the merchants who beſt underſtand trade.

CALLAO is the harbour of Lima, from which it is two leagues or ſix miles diſtant to the weſtward: it extends along the ſea-coaſt, ſo that it is much longer than it is broad.

The town is built on a low, flat point of land on the ſea-ſhore. It's trade is conſiderable. From Chili they bring cordage, leather, tallow, dried fiſh, and corn; from Chiloe, cedar planks, woollen manufactures, and particularly carpets, like thoſe of Turkey; from Peru, ſugars of Andaguaylas, Guayaquil, and other places; wine and brandy from Lanaſco and Piſco; maſts, cordage, timber for ſhipping, cacao of Guayaquil, and the country about it, tobacco, and ſome little honey of ſugar. The cacao is afterwards tranſported to Mexico: from Mexico, as from Sonſonate, Realejo, and Guatimata, they bring hither pitch and tar, which is only fit for wood, becauſe it burns the cordage; woods for dyeing, ſulphur, and balſam, which bears the name of balſam of Peru, but in reality comes from Guatamala. There are two ſorts of it, white and brown; the latter is moſt valued; they put it into cacao-ſhells, when it is of the conſiſtence of tar, but generally it comes liquid in earthen pots, and then it is liable to be falſified, and mixed with oil to increaſe the quantity. From the ſame places they bring fine works, which they call caray, and commodities of China, by the way of Acapulco, though contraband goods. The French had formerly a conſiderable trade here.

CUSCO lies in the 13th degree, and 15 minutes of ſouth latitude, and 71, 30, of longitude weſt from London. It is above 326 miles diſtant from Lima, towards the eaſt. It ſtands in an uneven country, ſurrounded with mountains on every ſide, near the river Yucay and Apurina.

The gold and ſilver of Peru was brought in great plenty to Cuſco, in the neighbourhood of which there are very rich mines, which have been in ſome manner neglected, becauſe thoſe of Potoſi afford much more ſilver, and with leſs danger. The mines of Lampa, and thoſe of Cordillera de Cuſco, are very conſiderable, though there be others much richer towards the Moxos, where the Indians have plenty of gold, but they are of a ſavage and fierce temper. The Spaniards have ſome little trade with the nations that dwell beyond the mountains of Cuſco.

There are in this city, manufactures of bays and cotton cloth, which are ſome ſmall prejudice to the trade of Europe. They alſo make ſome ſorts of work in leather, as well for the uſe of men, as for the furniture of horſes and mules. This city is alſo famous for the vaſt number of pictures the Indians make there, and wherewith, wretched as they are, they ſupply the whole kingdom. (Frezier.)

GUAMANCA is 180 miles from Lima towards the eaſt. It's principal trade conſiſts in leather, and boxes of confectionary, paſtes, marmelades, jellies, preſerved quinces, and other ſweetmeats, which are moſt eſteemed in the kingdom, where there is a conſiderable conſumption of them. They alſo make here pavilions, which ſerve inſtead of bed-curtains, whereof there is a famous manufacture here, as there is of ſeveral ſorts of painted and gilt leather. The town is ſeated at the foot of a high mountain, in a very healthy country, fruitful in all ſorts of proviſions. The province abounds with mines of gold, ſilver, quickſilver, copper, iron, ſulphur, and load-ſtones. About 9 leagues to the north-weſt of Guamanca, are the famous mines of Guancavelica, from which they take great quantities of quickſilver. The mines of Palcas, in the territory of Guamanca, being diſcovered, the Spaniards flocked thither to get the quickſilver, which is of great uſe to extract the ſilver. They get every year from the mines of Guancavelica, quickſilver to the amount of a million of livres. (De Laet.)

GUAN-

GUANCAVELICA is a ſmall town, but rich, and famous for the vaſt quantity of quickſilver taken there from a mine, which is forty Spaniſh yards in front, and alone furniſhes all the gold and ſilver mills in that kingdom, ſays Frezier; but this muſt be a miſtake, ſince there are other rich mines of quickſilver, which are worked as well as this. Private perſons, adds he, work there at their own expence, and are obliged to deliver up to the king all they get, upon pain of forfeiture of their eſtates, baniſhment, and perpetual ſervitude at Baldivia. His Majeſty pays a ſet price for the ſame, which is ſixty pieces of eight the quintal, or hundred weight, upon the ſpot, and he ſells it for eighty, at the remote mines.

When a ſufficient quantity has been taken out, the king cauſes the mouth of the mine to be ſtopped up, and no man can have any, but what comes from the king's ſtores. The earth or mineral which contains the quickſilver, is of a whitiſh red, like ill burnt brick; they pound it, and put it into an earthen furnace, the head or top of which is a vault, like the top of an oven, a little ſpheroid. They lay it on an iron grate covered with earth, under which they keep a ſmall fire, made of the ſhrub they call jeho, which is more proper for that purpoſe, than any other combuſtible matter; for which reaſon there is a prohibition to cut it within twenty leagues round. The heat paſſes through that earth, and ſo fires the pounded mineral, that the quickſilver flies out volatile in ſmoak; but the top or covering being cloſe ſtopped, it finds no way out, but only through a little hole, which conveys it to a ſucceſſion of earthen veſſels like gourds, round, and joined by the necks; there the ſmoke circulates and condenſes, by means of a little water there is at the bottom of each gourd, into which the quickſilver falls condenſed, and in a well formed liquid.

It is leſs formed in the firſt gourds than in the laſt; and becauſe they grow ſo hot that they break, care is taken to cool the outſides of them with water. In this town there is another thing peculiar, which is a ſpring, whoſe water petrifies ſo eaſily, and ſo quick, that moſt of the houſes in the town are built with it.

TRUXILLO is 250 miles diſtant from Lima, towards the north-weſt. It ſtands near the ſea-ſhore, on the banks of a little river, near ſome rocky hillocks. There is a great deal of ſugar grows in the valley of Chacama, or Chicama, near this town.

It has a great trade for flour, braudy, ſugar, wine, and marmelade, of which they export three or four ſhips-loads every year, with which they ſupply the city of Panama.

QUITO. This province is bounded on the eaſt by part of the Amazon's country, on the ſouth by the audience of Los Reyes, on the weſt it hath the South-Sea, and on the north the country called Popayan. It's extent along the ſea-coaſt is from Punta de l'Aguja, or the Needle-Point, in the ſixth degree of ſouth latitude, to the river of Emeralds in the fifth degree of north latitude, which is ſeven degrees, or four hundred and twenty miles. It's breadth, in ſome places, is three hundred and ſixty miles eaſtward, in others more, and in others leſs. The Spaniards divide it into three diſtricts, which they call Quito Proper, Los Quixos, and Los Pacafnores. The climate here, ſays De Laet, is rather cold than hot. The winter continues from October 'till March, during which time they have heavy rains, but without any ſnow, except in the mountains of Andes. They have abundance of cows and ſheep, which multiply wonderfully here. They have a great deal of ſaltpetre in many places where the ſoil is marſhy, and make very good gunpowder of it. They have alſo excellent ſulphur or brimſtone, which is as clear as the ſaltpetre, and of a gold colour. They gather it out of the veins that are near the gold mines, of which there are ſeveral in this country, as well as of ſilver, quickſilver, and copper. They have alſo emeralds, and medicinal drugs, ſays captain Rogers.

QUITO, the capital city of this province, ſtands in 20 minutes of ſouth latitude, and in the 76th degree, 50 minutes of longitude weſt from London; about ſeven hundred and twenty miles diſtant from Lima, to the north. It is ſeated in a valley, that is bounded on the north and weſt by a ridge of very ſteep mountains, which extend from Porto Vejo, on the South-Sea, to Cartagena on the North-Sea. The ſoil about the city is very dry and ſandy, and a-croſs the city there is in the ground a large opening, over which there are ſeveral bridges. Wine, oil, ſpices, and other European merchandizes, are brought hither from the South-Sea, firſt by the river of Guayaquil, and then by land-carriage. The Indians alſo have here their fairs and markets, and ſell their wares, not by any certain weight or meaſure, but by way of barter or exchange. They bring hither fruit, cattle, cheeſe, of ſheep, cows, and goats milk; cloaths made of cotton, all ſorts of cloths, caps, cables, wool, flax, and leather. (De Laet.)

TACUNGA is about twenty miles diſtant from Quito, to the ſouth. It is a very populous town; the inhabitants weave woollen-cloth, in which they drive a great trade.

ZAMORA is about two hundred and ten miles diſtant from Quito to the ſouth, and a hundred and twenty from the neareſt coaſt of the South-Sea to the eaſt. In the neighbourhood of the town of Zamora, there are gold mines, from which they have taken grains of a prodigious bigneſs. There are alſo ſeveral ſprings, ſome of ſalt water, of which they make very good ſalt in great plenty.

GUAYAQUIL is about 185 miles diſtant from Quito to the ſouth-weſt, and 565 from Lima towards the ſouth. The town is well ſeated for trade, and the building of ſhips, for which they have ſheds to cover the workmen from the ſun. It may be reckoned one of the chiefeſt ſea-ports in the South-Seas. The commodities that are exported from thence are cacao, hides, tallow, ſarſaparilla, and other drugs, with woollen cloth, commonly called cloth of Quito, becauſe it is made in that city. This and all other commodities which come from Quito, are ſhipped off at Guayaquil for other parts, and all imported goods for the city of Quito paſs by Guayaquil; by which it may appear, that this is a place of no mean trade. (Dampier.)

General REMARKS on PERU.

There are two ſorts of ſilver mines at Peru, the one where ſilver is found ſcattered about in ſmall quantities, the other where it runs in a vein between two rocks; the one exceſſively hard, and the other much ſofter; and it is theſe laſt which beſt deſerve, and are generally diſtinguiſhed by the name of the ſilver mines.

This metal, which is in other countries the ſtandard or meaſure of riches, is in Peru the riches of the country conſidered in another light; we mean that of a natural commodity; for, throughout the whole of that vaſt country, there are almoſt every where ſilver mines to be met with of more or leſs value, according as the ore produces more or leſs ſilver, and can be wrought at a greater or leſs expence.

There are ſome, but not a great many mines, to the northward of Lima; but to the ſouth they are very numurous. On the back of the Andes there lies a nation of Indians, called Los Plateros, or the Platemen, from the vaſt quantities they poſſeſs of ſilver; but the Spaniards have very little communication with them. The beſt part of the mine-countries are to the ſouth of Cuſco, from thence to Potoſi, and ſo to the frontiers of Chili; and where for the ſpace of three hundred miles, there is a continued ſucceſſion of mines; ſome being diſcovered, and others deſerted every day. It is a common thing for the people here, as well as elſewhere, to complain of the preſent times, and commend the paſt, as if heretofore there were infinitely greater quantities of ſilver dug out of the mines, than at preſent, and, perhaps, with regard to particular mines, it may be ſo; but, upon the whole, doubtleſs the quantities of ſilver that are annually obtained in the Spaniſh Weſt-Indies, abundantly exceed what was formerly exported from thence. As to the names of thoſe which have been moſt remarkable, or are ſo at preſent in the country of Peru, they are theſe, viz. the mines of Loxa and Camora, Cuenca, Puerto Vejo, St Juan del Oro; theſe are wrought at preſent: thoſe of Oruro and Titiri are neglected; thoſe of Porco and Plata are filled up.

At Potoſi there is a great number of mines, and thoſe of Tomina, Chocaia, Atacuma, Xuxui, the Chalchaques, Guaſco, Iquique, &c. are all wrought with more or leſs profit; and this according to the ſkill of their proprietors, or of ſuch as have the direction of theſe works.

It is generally believed, and there ſeems to be ſome reaſon for it, that experience has taught the people here a perfect acquaintance with minerals, and the art of treating them, ſo as to obtain the largeſt profit. But, however, when one conſiders their ignorance in other arts, their going on conſtantly in the ſame beaten track in this, together with their vaſt waſte of quickſilver, we are tempted to believe, that our European miners might manage their works to ſtill greater advantage.

This ſeems the more probable, when we reflect, that this knowlege of theirs is not at all founded upon principles; but is, properly ſpeaking, an art built upon accidental diſcoveries, in which there is little of accuracy, and abundance of uncertainty; which will be more evident to the reader, when he has peruſed and conſidered the following account of the manner in which the ſilver is extracted from the ore at the mines.

The moſt perfect ſilver that comes from thence, is that which the Spaniards call pinnas; that is a lump of ſilver extremely porous, becauſe it is the remainder of a part made up of ſilver duſt and mercury, and the latter being exhaled, leaves this remainder of the maſs ſpongy and light. It is this kind of ſilver that is put into different forms by the merchants, in order to cheat the king of his duty; and therefore all ſilver in this condition, if found any where on the road, or on board any ſhip, is looked upon as contraband goods, and is liable to ſeizure.

In regard to the art of refining therefore, we ſhall ſhew the progreſs of the ore, from the mine to this kind of maſs or cake. After having broken the ſtone, taken out of the vein of ore, they grind it in their mills with grindſtones, or in the ingenios reales, or royal engines, which conſiſt of hammers, or pounders, like the French plaiſter mills. They have generally a wheel about twenty-five or thirty feet diameter, whoſe

whoſe long axletree is ſet with ſmooth triangles, which, as they turn, hook or lay hold of the iron hammers, lift them up to a certain height, and from whence they drop at once at every turn; they generally weigh about two hundred weight, and fall ſo violently, that they reduce the hardeſt ſtones to powder. They afterwards ſift that powder through iron or copper ſieves, to take away the fineſt, and return the reſt to the mill.

When the ore happens to be mixed with ſome metals, which obſtruct it's falling to powder, as copper, &c. they calcine it in an oven, and pound it over again. In the little mines, where they uſe none but mills with grindſtones, they, for the moſt part grind the ore with water, which makes a liquid mud that runs into a receiver: whereas, when it is ground dry, it muſt be afterwards ſteeped, and well moulded together with the feet, for a long time. To this purpoſe they make a floor, where they diſpoſe that mud in ſquare parcels, about a foot thick, each of them containing half a caxon or cheſt, that is twenty-five quintals, or hundred weight of ore, and theſe they call cuerpos, that is, bodies.

On each of them they throw about two hundred weight of ſea or common ſalt, more or leſs, according to the nature of the ore, which they mould and incorporate with the earth, for two or three days. Then they add to it a certain quantity of quickſilver, ſqueezing a purſe made of a ſkin, wherein they put it to make it fall in drops, with which they ſprinkle the maſs equally, according to the nature and quality of the ore. They allow to each maſs, ten, fifteen, or twenty pounds; for the richer it is, the more mercury it requires to draw to it the ſilver contained: ſo that they know not the quantity, but by long experience.

An Indian is employed to mould one of theſe ſquare parcels eight times a day, to the end that the mercury may incorporate with the ſilver. To that effect, they often mix lime with it, when the ore happens to be greaſy, where caution is to be uſed: for, they ſay, it ſometimes grows ſo hot, that they neither find mercury or ſilver in it, which ſeems incredible.

Sometimes they alſo ſtrew among it ſome lead or tin ore, to facilitate the operation of the mercury, which is ſlower in very cold weather, than when it is very temperate; for which reaſon, at Potoſi and Lipes they are often obliged to mould the ore during a whole month or ſix weeks; but in more moderate climates, the amalgama is made in eight or ten days.

To facilitate the operation of the mercury, they in ſome places, as at Puno, aud elſewhere, make their buiterons, or floors, on arches, under which they keep fire to heat the powder of the ore for twenty-four hours, on a pavement of bricks.

When it is thought that the mercury has attracted all the ſilver, the aſſayer takes a little ore from each parcel a-part, which he waſhes in a ſmall earthen plate, or wooden bowl, and by the colour of the mercury found at the bottom of the bowl, knows whether it has had it's effect; for when it is blackiſh, the ore is too much heated, and then they add more ſalt or ſome other drug. They ſay that then the mercury diſpara, that is, ſhoots, or flies away. If the mercury is white, they put a drop under the thumb, and preſſing it haſtily, the ſilver there is amongſt it, remains ſticking to the thumb, and the mercury ſlips away in little drops.

In concluſion, when they perceive that all the ſilver is gathered, they carry the ore to a baſon, into which a little ſtream of water runs to waſh it. Much in the ſame nature as we ſhall ſhew they waſh gold, excepting that this being only a mud without ſtones, inſtead of an hook to ſtir it, an Indian ſtirs it with his feet to diſſolve it.

From the firſt baſon it falls into a ſecond, where another Indian is, who ſtirs it again to diſſolve it thoroughly and looſen the ſilver. From the ſecond it paſſes into a third, where the ſame is repeated; to the end, that what has not ſunk to the bottom of the firſt and ſecond, may not eſcape the third.

When all has been waſhed, and the water runs clear, they find at the bottom of the baſons, which are lined with leather, the mercury incorporated with the ſilver, which they call lapella. It is put into a woollen bag, hanging up for ſome of the quickſilver to drain through. They bind, beat, and preſs it, laying a weight upon it with flat pieces of wood; and when they have got out as much as they can, they put the paſte into a mould of wooden planks, which being bound together, generally form the figure of an octagon pyramid cut ſhort, at the bottom whereof is a copper plate full of little holes. There they ſtir, in order to faſten it; and when they deſign to make many pinnas, as they call them, that is, lumps of various weights; they divide them with little beds, or layers of earth, which hinder their coming together. To that end, the pella, or maſs, muſt be weighed, deducting two thirds for the mercury that is in it, and they know within a ſmall matter what net ſilver there is.

They then take off the mould, and place the pinna with it's copper baſe on a trivet, or ſuch like inſtrument, ſtanding over a great earthen veſſel full of water, and cover it with an earthen cap, which they again cover with lighted coals, and they feed the fire for ſome hours, that the maſs may grow violently hot, and the mercury that is in it evaporate in ſmoke; but that ſmoke having no paſſage out, it circulates in the hollow, that is, between the maſs and cap, 'till coming down to the water that is underneath, it condenſes to the bottom again, converted into quickſilver.

Thus little of it is loſt, and the ſame ſerves ſeveral times; but the quantity muſt be increaſed, becauſe it grows weak. However, they formerly conſumed at Potoſi ſix or ſeven thouſand quintals, or hundred weight, of quickſilver every year, as Acoſta writes, by which a judgment may be made of the ſilver they got. When the mercury is evaporated, there remains nothing but a ſpongy lump of contiguous grains of ſilver, very light and almoſt mouldering, which the Spaniards call la pinna, and is obſerved as a contraband commodity from the mines; becauſe, by the laws of the kingdom, they are obliged to carry it to the king's receipt, or to the mint, to pay the fifth to his majeſty there.

Thoſe maſſes are caſt into ingots, on which the arms of the crown are ſtamped, as alſo that of the place where they were caſt, their weight and quality, with the fineneſs of the ſilver. It is always certain, that the ingots which have paid the fifth have no fraud in them; but it is not ſo with the pinnas or maſſes not caſt: thoſe who make them, often convey into the middle of them, iron, ſand, and other things, to increaſe the weight; ſo that, in prudence, they ought to be opened, and made red hot at the fire, for the more certainty; for if falſified, the fire will either turn it black or yellow, or melt it more eaſily.

This trial is alſo to extract a moiſture they contract in places where they are laid, on purpoſe to make them the heavier. In ſhort, their weight may be increaſed one third, by dipping them in water when they are red hot, as alſo by ſeparating the mercury, with which the bottom of the maſs is always more impregnated than the top. It alſo ſometimes happens, that this ſame maſs is of different fineneſs.

The ſtones taken from the mines, the ore, or, to ſpeak in the language of Peru, the mineray, from which the ſilver is extracted, is not always of the ſame nature, conſiſtence, or colour.

There are ſome white and grey, mixed with red or blueiſh ſpots, which is called plata blanca, or white ſilver. The mines of Lipes are moſt of them of this ſort. For the moſt part there appear ſome little grains of ſilver, and very often ſmall branches, extending along the layers of the ſtone. There are ſome, on the other hand, as black as the droſs of iron, in which the ſilver does not appear, called oregrillo, that is blackiſh: ſometimes it is black with lead, for which reaſon it is called plomo ronco, that is, coarſe lead, in which the ſilver appears as if ſcratched with ſomething that is harſh, and it is generally the richeſt, and got with leaſt charge; becauſe, inſtead of moulding it with quickſilver, it is melted in furnaces, where the lead evaporates by dint of fire, and leaves the ſilver pure and clean.

From that ſort of mines, the Indians drew their ſilver; becauſe, having no uſe of mercury, as the Europeans have, they only wrought thoſe whoſe ore would melt; and, having but little wood, they heated their furnaces with ylo, and the dung of lamas or ſheep, or other beaſts, expoſing them on the mountains, that the wind might keep the fire fierce. This is all the ſecret the hiſtorians of Peru ſpeak of, as of ſomething wonderful. There is another ſort of ore like this, as black, and in which the ſilver does not appear at all; on the contrary, if it be wetted and rubbed againſt iron, it turns red; for which reaſon it is called roſicler, ſignifying the ruddineſs of the dawn of the day: this is very rich, and affords the fineſt ſilver.

There is ſome that glitters like talck or iſinglaſs; this yields little ſilver; the name of it is zoroche: the peel, which is of a yellowiſh red, is very ſoft and broken in bits, but ſeldom rich; and the mines of it are wrought on account of the eaſineſs of getting the ore: there is ſome green not much harder than the laſt, called cobriſſo, or copperiſh; it is very rare: however, though the ſilver generally appears in it, and it is almoſt mouldering, it is the hardeſt to be managed, that is, to have the ſilver extracted from it; ſometimes, after being ground, it muſt be burnt in the fire, and ſeveral other methods uſed to ſeparate it, doubtleſs becauſe it is mixed with copper.

Laſtly, There is another ſort of very rare ore, which has been found at Potoſi only, in the mine Cotamiſo, being threads of pure ſilver, intangled together like burnt lace, ſo fine that they called it Arana, ſpider, from it's reſemblance to a cobweb.

The veins of mines, of what ſort ſoever they be, are generally richer in the middle, than towards the edges; and when two veins happen to croſs one another, the place where they meet, is always rich: it is alſo obſerved, that thoſe which lie north and ſouth, are richer than thoſe which lie any other way. Thoſe which are new places, where mills can be erected, and that are more commodiouſly wrought, are often preferable to the richer, that require more expence, which is the reaſon that at Lipes and Potoſi, a cheſt of ore muſt yield ten marks, of eight ounces each mark of ſilver, to pay the charges, and at thoſe of the province of Tarama, five pay them.

When they are rich and ſink downwards, they are ſubject to be flooded, and then they muſt have recourſe to pumps and machines, or elſe drain them by thoſe they call cocabones,

being paſſages made in the ſide of the mountain for the water to run out at, which often ruin the owners by the exceſſive expence they inſenſibly draw them into.

There are other ways of ſeparating the ſilver from the ſtones that confine it, and from the other metals that are mixed with it, by fire or ſtrong ſeparating water, made uſe of at ſome mines, where other means fail, and where they make a ſort of ingots, which they call bollas; but the moſt general and uſeful method is to make pinnas or maſſes, abovementioned, which are preferred to other forms, on account of their eaſineſs in making, and that they ſave ſome ingredients, which is a thing of conſequence in works of this nature, where to ſave in the expence, has the ſame effect as finding the mine.

It is very natural to ſuppoſe, that in mines, as well as other things, there happens great variation in their product, and in the value of the product. The mines which very lately yielded moſt ſilver, are thoſe of Orura, a little town eighty leagues from Arica: in the year 1712, one ſo rich was diſcovered at Ollachea, near Cuſco, that it yielded two thouſand five hundred marks, of eight ounces each, out of every cheſt, that is, almoſt one fifth part of the ore; but it has declined much, and is now reckoned among the ordinary ſort.

Next to theſe are thoſe at Lipes, which have had the ſame fate.

Laſtly, Thoſe at Potoſi yield but little, and cauſe a vaſt expence, by reaſon of their great depth. But notwithſtanding the mines here are far diminiſhed in their product, yet the quantity of ore that has been already wrought, and laid many years upon the ſurface, is thought capable to yield a ſecond crop; which is a proof that theſe minerals generate in the earth, like all other inanimate things; and it is likewiſe certain, from all accounts of the Spaniards, that gold and ſilver, as well as other metals, are continually growing and forming themſelves in the bowels of their natural earths.

This opinion is verified by experience, in the mountain of Potoſi, where ſeveral mines have fallen in, and buried the workmen with their tools; after ſome years they have dug the ſame place, and diſcovered many bones and pieces of wood, with veins of ſilver actually running through them.

Theſe mines belong to him who firſt diſcovers them: he immediately preſents a petition to the magiſtrates, to have ſuch a piece of earth for his own, which is no ſooner done than granted. They meaſure eighty Spaniſh yards in length, and forty over, which is about twelve hundred feet in length, and one hundred in breadth, and yield it to the diſcoverer, who chuſes what ſpace he thinks fit, and does what he pleaſes with it. Then they meaſure juſt the ſame quantity for the king, which is ſold to the beſt bidder, there being many who are willing to purchaſe a treaſure which may prove ineſtimable. If any other perſon has a mind to work part of the mine himſelf, he bargains with the proprietor for a particular vein; all that ſuch a one digs out is his own, paying the king's duty, which is, for gold a twentieth part, and for ſilver a fifth; and ſome landlords find ſuch an account in letting out their ground and their mills, that they live upon the profit, without any hazard.

At Copiapo there are gold mines juſt beyond the town, and all about the country likewiſe, which have brought many purchaſers and workmen thither, to the great damage of the Indians; for the Spaniſh magiſtrates take away not only their lands but their horſes, which they ſell to the new proprietors, under pretence of ſerving the king, and improving their ſettlements. There is alſo a great deal of magnet and lapis lazuli, which the Indians know not the value of. And ſome leagues in the country, there is plenty of ſalt and ſaltpetre, which often lies an inch thick on the ground. About an hundred miles eaſt upon the Cordelier mountains, there is a vein of ſulphur two feet wide, ſo fine and pure, that it needs no cleaning.

This part of the country is full of all ſorts of mines, but in other reſpects is ſo barren, that the natives fetch all their ſubſiſtence from Coquimbo; and that way being a mere deſart for three hundred miles together, and the earth abounding ſo much with ſalt and ſulphur, that the mules often periſh for want of graſs and ſweet water. There is but one river in two hundred miles, which the Indians call ancalalue, or hypocrite, becauſe it runs only from ſun riſe to ſun ſet; this is occaſioned from the great quantity of ſnow melted from the Cordeliers in the day time, which freezes again at night, where the cold is often ſo great, that the peoples features are quite diſtorted.

Hence Chili takes it's name, the word ſignifying cold in the Indian language; and we are certainly informed by the Spaniſh hiſtorians, that ſome of their countrymen and others, who firſt traded this way, died ſtiff with cold upon their mules; for which reaſon, the road is now always lower towards the coaſt.

We come now to the ſecond point, which is the regular commerce carried on between the inhabitants of the dominions of the crown of Spain in Europe, with thoſe of America.

The method in which this trade is carried on, is well enough known in general, but few enter far enough into it's particulars. In order to give as diſtinct an account of this matter as poſſible, we ſhall ſpeak of the galleons, the flota, and the flotilla, regiſter ſhips, and guarda coſtas, though we have occaſionally touched upon theſe points under ſeveral other heads; and when we have done this, the reader will perfectly comprehend the myſtery of the Spaniſh policy in this point.

A galleon is, properly ſpeaking, a very large man of war, of three or four decks, built in a manner now altogether out of faſhion, except in Spain; and the reaſon why it is ſtill uſed there is, that it affords a great deal of room for merchandize, with which the king's ſhips are generally ſo much crowded, as to be in no condition of defending themſelves.

That fleet which we call the galleons, conſiſts of eight ſuch men of war; of theſe there are three very large ones, ſtiled la Capitana, la Admirante, and il Governo, two others which are leſs, la Patacha, and la Margarita, each of 50 guns, and and an advice frigate of forty. The merchantmen which ſail with this fleet, and purchaſe their licences at a very high rate, are in number from twelve to ſixteen, and in burthen at leaſt a third part bigger, than is expreſſed in their reſpective ſchedules. Theſe ſhips are intended to carry all that is neceſſary, either of warlike ſtores or merchandize for Peru, and this is the ſpecific difference between this fleet and the flota, which is intended for Mexico. See GALLEONS.

In time of peace ('till ſince that of Aix la Chapelle) the galleons ſail regularly once a year from Cadiz, at no ſet time, but according to the king's pleaſure, and the convenience of the merchants. From Cadiz the galleons ſteer directly for the Canaries, where, if the flota fails with them as it ſometimes does, they anchor together in the haven at Gomera: thence they bear away for the Antilles, and when they arrive at that height, the flota ſeparates, and the galleons bear away for Carthegena. As ſoon as they double the Cape de la Vela, and appear before the mouth of Rio de la Hacha, advice is ſent to all parts, that every thing may be got ready for their reception.

In the harbour of Carthagena they remain a month, and land there all the goods deſigned for the audience of the Terra Firma; then they ſail to Porto Bello, where they continue during the fairs, which laſt five or ſix weeks; and having landed the merchandize intended for Peru, and received the treaſure and rich commodities ſent from thence on board, they ſail again to Carthagena, where they remain 'till they return to Spain, which is uſually within the ſpace of two years. When they have orders to return, they ſail firſt to the Havannah, and having there joined the flota, and what other ſhips are returning to Europe, they ſteer through the gulph of Florida, and ſo to the ſtraight of Carolina, where meeting with the weſtern winds, they ſhape their courſe then for the Azores: they take in freſh water and proviſions at Tercera, and thence continue their voyage to Cadiz. The flota conſiſts, as well as the galleons, of a certain number of men of war, and of a certain number of merchant ſhips: the former are ſeldom more than three; la Capitana, la Admirante, and la Patacha: the latter are uſually about ſixteen, in burthen between five hundred and a thouſand tons.

This fleet ſails about the month of Anguſt, that by the favour of the winds, which prevail about November, they may the more eaſily purſue the voyage to La Vera Cruz. In their paſſage they call at Puerto Rico to take in freſh water and proviſions, then paſs in ſight of Hiſpaniola, Jamaica, and Cuba; and according to the ſeaſon of the year, and the nature of the winds, paſs either by the coaſt of Jucatan, or higher, through the gulph of La Vera Cruz, which lies at the bottom of it. See FLOTA and MEXICO.

The run of this fleet, according to the courſe we have mentioned, hath been thus computed: from Cadiz to the Canaries, two hundred and fifty leagnes, in about ten days: to the Antilles, eight hundred leagues in twenty days; to the moſt weſtern point of the iſle of Cuba, five hundred leagues in twenty days; to Vera Cruz, two hundred and ſixty leagues in twelve days or thereabouts; in all, eighteen hundred and ten leagues, in about ſixty-two days.

As the flota is deſigned to furniſh not only Mexico, but the Philippine Iſlands alſo, in order to ſupply the trade of Acapulco with European goods, they are obliged to remain there for a conſiderable ſpace, and, when it is neceſſary, they winter in that part. The cargo with which they return, is not ſo rich as that of the gallions; but 'till this method was laid aſide, it increaſed annually in it's value; which muſt be owing to the progreſs made in ſettling what the Spaniards call the kingdom of New Mexico.

It is uſually in the month of May that the flota leaves La Vera Cruz, though ſometimes it is detained in that harbour 'till Auguſt. Then the ſhips that compoſe it ſail for the Havannah, for though the galleons and the flota ſeldom leave Spain at the ſame time, yet they generally return together. As ſoon as they are ſafely arrived at the Havanna, they detach a few of the lighteſt and cleaneſt ſhips to Europe, who, beſides money and merchandize, carry alſo an exact account of the contents both of the galleons and flota. Theſe ſhips are called by the Spaniards with propriety enough the flotilla, i. e. the little fleet. The principal reaſon of ſending them in this manner into Spain, is to give the court of Madrid an opportunity of judging what convoy may be neceſſary, in caſe of

any

any alteration of affairs, to be ſent to eſcort the grand fleet, as alſo to regulate the indulto [ſee INDULTO], which may be levied on the merchants, in proprtion to their intereſt in the galleons and flota: but the reader may poſſibly incline to enquire, what obliges this great fleet to remain ſo long at the Havannah? To which two cauſes may be aſſigned, viz. waiting for a wind, or for the regiſter ſhips which they are to convoy home.

A regiſter ſhip is ſo called, from it's being regiſtered with all the effects embarked in Spain, in the books kept for that purpoſe in the chamber of Seville. As this general account will not probably appear ſatisfactory, we ſhall endeavour to ſtate the matter more fully.

A company of merchants having, as they conceive, juſt grounds to imagine, that European goods are greatly wanted at ſome particular ports in the Weſt-Indies, they draw up a memorial or petition, containing theſe reaſons in the cleareſt and conciſeſt terms, and lay it before the council of the Indies [ſee INDIA-HOUSE of Spain]. The prayer of this petition is, that they may have leave to ſend a ſhip of three hundred tons burthen, or under, to the port they mention. When leave is obtained, they pay a certain ſum to the crown which is generally between thirty and fifty thouſand piece of eight, beſides preſents, and thoſe no ſmall ones, to the king's officers, from the greateſt to the leaſt.

That this, however, may not induce any ſuſpicion of fraud, they regiſter their ſhip and cargo, that it may appear conſiſtent with their petition and licence; and yet (ſuch a fatality attends on all cuſtom-houſe cautions) this ſhip of under three hundred tons, generally carries upwards of ſix hundred ton of goods, and affords accommodation for paſſengers beſides.

Copies from the regiſter are tranſmitted to the governor and royal officers at the port, to which the regiſter ſhip is bound; and ſuch is their diligence, ſuch their integrity, that when the ſhip comes to an anchor in the port, they make a very narrow enquiry, and yet there is ſeldom or never any fraud diſcovered; but, on the contrary, this ſhip of ſix or ſeven hundred ton, returns into Europe with an authentic certificate from all the king of Spain's officers, that ſhe does not carry quite three hundred, together with a bill of lading, in the ſame ſtrain of computation.

By theſe regiſter ſhips there is ſometimes a gain of two or three hundred per cent. which enables the owners to pay ſo bountifully for cheating the king, having firſt got the money by robbing his ſubjects.

Theſe regiſter ſhips go to Buenos-Ayres, St Martha, Porto Cavallo, and other places, to which neither the galleons nor flota come; yet, generally ſpeaking, they return with thoſe fleets as they ſometimes go out with them, and ſo leave them in a certain latitude. The Spaniſh grandees often intereſt themſelves in procuring ſuch licences; and ſome people do not ſtick to ſay, that they find their account in it.

The profits accruing by this ſort of commerce, making thoſe concerned therein extravagantly rich in a ſhort ſpace of time, the Engliſh and Dutch in the Weſt-Indies, have heretofore had a ſtrong deſire to be dealing this way, without the ceremony of a licence; and for many years they ſucceeded to their wiſh, partly by the connivance of the Spaniſh governors, and partly by employing force.

At length this evil grew ſo flagrant, that the court of Spain determined to put an end to it; and in order thereto, ſent new governors into America with very preciſe orders on this head, declaring at the ſame time, that they ſhould be carried fully into execution.

Theſe inſtructions gave riſe to the guarda coſtas, or guard ſhips, which have ſince made ſo much noiſe in the world, and of which I think it neceſſary to ſpeak more particularly: it cannot be denied, that there was originally good grounds for equipping them, ſince the Engliſh in ſome meaſure, and the Dutch more openly, began to carry on an illicit trade by force.

The Dutch veſſels were from twenty to thirty-ſix guns, and therefore valued nothing the governor of Carthagena could do to prevent their trading on his coaſt; but when the guard ſhips were ſtationed here, they for ſome time put an end to the evil, for falling in with ſome of theſe interlopers, they ſunk one and took two, the cargoes of which were worth upwards of an hundred thouſand pounds; nay, finding on board them ſixteen Spaniſh merchants, who on a ſignal given were come off to trade, they hanged them all without mercy. So far all was right; for without queſtion theſe ſmugglers, not only prejudiced the king of Spain, but even the fair traders of their own nation, by the clandeſtine commerce they carried on.

The captains of the guard ſhips, however, ſoon altered their conduct, and inſtead of taking contraband traders, infeſted the Engliſh commerce, and took, without diſtinction, all they were able, at firſt under very frivolous pretences, and at laſt without any pretence at all.

As the Spaniſh governors reaped a conſiderable profit from the prizes of theſe privateers, or rather pirates, brought into their ports, they were ready to ſend deceitful accounts to the court of Madrid, which produced that ſpirit of obſtinacy, which brought on, all the world knows, the laſt war, and may very poſſibly ſoon bring on another, unleſs this matter is very ſoon happily adjuſted between the two crowns. See the article LOGWOOD, where I have done myſelf the honour to propoſe an expedient for this good purpoſe.

To return, however, to the point before us, and to collect what by theſe different methods comes into Spain from her colonies. This account has been with great induſtry, and, perhaps, without any ſenſible error ſtated thus: in gold, of which the galleons bring home between two and three millions, and the flota generally about one; in ſilver, by the galleons from eighteen to twenty millions, by the flota from ten to twelve: in precious ſtones by the galleons, in pearls two hundred thouſand, in emeralds three hundred thouſand, in bezoares, turquoiſes, amethyſts, &c. thirty thouſand; and of late by the flota ſome turquoiſes, to the amount in the whole of ſix hundred thouſand pieces of eight. In Vigonia wool, by the galleons, fifty thouſand pieces of eight, by the floata none.

Quinquina, by the galleons twenty thouſand pieces of eight, by the flota as much: in raw hides by the galleons, twenty thouſand pieces of eight, by the flota as much. By hides from Buenos-Ayres, in a regiſter ſhip two hundred thouſand pieces of eight; in logwood, by the galleons ſixty thouſand pieces of eight, by the flota none. In cocheneal, by the flota and regiſter ſhips, one million of pieces of eight; in indigo, about two hundred thouſand pieces of eight; in ſugar, tobacco, and other drugs, about two millions of pieces of eight. So that the whole may be computed at thirty-eight millions two hundred and ninety thouſand pieces of eight.

We are now arrived at the laſt point, which is that of diſcoveries. The Spaniards, beyond doubt, have been long pretty much at a ſtand; which how ſtrange ſoever it may appear to us, who ſee what prodigious advantages have attended all diſcoveries, and more eſpecially thoſe made by the anceſtors of theſe Spaniards in the two laſt centuries; yet when we come to reflect coolly upon this matter, we ſhall find that the great impediment of farther diſcoveries, has been the vaſt extent of what is already diſcovered.

However, not to do the Spaniards wrong, we ought in juſtice to obſerve, that they have not been altogether ſo indolent, careleſs, or inactive, as is commonly reported. The kingdom of New Mexico lies without the ſphere of our preſent enquiry, [ſee MEXICO] and therefore we ſhall only ſay here, that they have not only made great diſcoveries, but great conqueſts on this ſide, even in modern times; inſomuch, that thoſe who have been in theſe parts, have aſſured us, THAT THE COMMUNICATION IS OPEN BY THE LAKES, FROM THE NORTH-EAST SPANISH SETTLEMENTS QUITE TO CANADA. See BRITISH AMERICA, CANADA, COLONIES, MEXICO, FLORIDA.

To keep, however, to the province of Peru. All the diſcoveries that can be made from thence, muſt be either by land towards the eaſt, or by the ocean towards the weſt; we will ſpeak of each of theſe ſccciſtly.

The countries which are already in the hands of the Spaniards, are of ſo great compaſs, and afford ſuch vaſt riches, that they have no very ſtrong temptation to make either conqueſts or diſcoveries; and as the ſame thing may be ſaid of the Portugueze ſettlements in Brazil, ſo from thence we gather with certainty, that there is a very large country in South America, altogether UNDISCOVERED, or at leaſt UNPOSSESSED BY ANY EUROPEAN NATION.

If any one deſires to be more particularly informed concerning this point, let him examine the beſt maps of South America, which hitherto have been publiſhed, and all the credible relations that have come from thoſe parts, and he will find that this undiſcovered country of which we ſpeak, muſt be in length near two thouſand miles from eaſt to weſt, and near a thouſand broad from north to ſouth.

The people poſſeſſed of theſe parts, are not only the deſcendants from their original inhabitants, but alſo vaſt numbers of Indians who have fled hither from the cruelties of the Spaniards, and if we conſider their multitudes, and the vaſt advantages they have from the ſituation of the countries in which they dwell, we ſhall ſee no juſt reaſon to ſuppoſe they ever will be conquered, unleſs it be by the miſſionaries, in the manner by which they have ſubdued the people of Paraguay. [See the article PARAGUAY.]

However it be, this unknown country contains a great deal more land, as well as many more people, than all the provinces of the Spaniſh empire; and there is good reaſon to believe that it is infinitely more RICH IN SILVER, GOLD, AND JEWELS, as well as in CATTLE, CORN, SUGAR, RICH DRUGS, AND FINE FRUITS.

Of this we can ſcarce doubt, if we reflect on what the beſt Spaniſh writers themſelves affirm, that at the time Pizarro made his firſt eruption into this country of Peru, he found the kitchen utenſils in the meaneſt houſes of GOLD, and their roofs covered WITH TILES OF THE SAME METAL; but there are no ſuch great quantities of gold now to be had, whence we ought to conclude, that this immenſe plenty of that precious metal, came from the INLAND PARTS, of which we have been ſpeaking.

But

But this is ſtill farther demonſtrated, by what has happened to the Creole Spaniards, who inhabit the frontier provinces, by which we mean, thoſe that lie next to that vaſt track of unconquered country. As for inſtance, in the province of POPAYAN, which is ſo called from a city of the ſame name, large, populous, and rich, the biſhop and his clergy have done more for the crown of Spain, than could have been done by a large garriſon, for they have converted many Indians, and by bringing them into the city, and matching them with Creole families, they have introduced a commerce with the free inhabitants of the mountains, which is of infinite ſervice, and may be a means of reducing the whole country.

It is remarked, that the inhabitants of this province are much more active and induſtrious, as well as much braver, than any of the reſt of the natives of New Spain: which is attributed to their continual wars with the free Indians, and their being obliged to make long and hazardous journeys, for the managing their own affairs.

There are in Popayan abundance of large towns, well built, and tolerably fortified; but the open country is much expoſed to the inroads of the Indians, who, whenever they have an advantage, uſe it cruelly enough againſt the Spaniards, towards whom their hate, with juſt reaſon, is implacable. As the northern frontier of this country joins the weſtern iſthmus, which is alſo inhabited by free Indians, the Spaniards are extremely apprehenſive of the ENGLISH MAKING SOME ATTEMPT THIS WAY, AND THEREBY SECURING TO THEMSELVES A SETTLEMENT ON BOTH SEAS: and although there may be ſome difficulties attending an enterprize of this kind, yet it is not impoſſible, but ſucceſs may one day attend an attempt of this kind, if the SPANIARDS CONTINUE TO MALTREAT THIS KINGDOM.—But there is a far eaſier, leſs hazardous, and leſs expenſive, way, to humble Spain than this, if their conduct towards Great-Britain ſhould make it neceſſary, which does not ſeem at all unlikely.

In the like manner there is a very beneficial trade carried on by the inhabitants of the city of Conception, with the Indians behind them, who though they are not ſubjects of the crown of Spain, nor have ever negociated a peace with the Spaniards, yet trade with them, and this in a very particular manner.

Theſe Indians are ſtiled Peulches, and inhabit the Cordillera, or great chain of mountains at the back of Chili, for a ſpace not certainly known, and who retain exactly the ſame manners and cuſtoms they had before the Spaniards arrived here. When a perſon goes to trade with them, he addreſſes himſelf to the cacique, or chief: no ſooner this little prince ſees a ſtranger, than he cries out, What! are ye come? The Spaniard anſwers, Yes, I am come. The cacique's next queſtion is, Well, what have ye brought me? The merchant anſwers, a preſent: to which the prince replies, Then you are welcome. A lodging is inſtantly provided him, near that of the cacique's, whither all his family go to viſit the ſtranger, in hopes he will make them ſome preſents.

In the mean time a horn is ſounded, to give notice to the Indians who are abroad, that the merchant is arrived: upon this they all run to the place where the ſtranger exhibits his treaſure, conſiſting of knives, ſciſſars, pins, needles, ribbands, ſmall looking-glaſſes, &c.

All theſe the Indians carry away without giving any thing for them, only the price is ſettled, and thus the merchant credits folks he never ſaw, and whom, for ought he knows, he may never ſee again.

After a certain time is elapſed, the horn, by the direction of the cacique, is ſounded a ſecond time, when immediately the ſavages return, and exactly perform their reſpective promiſes. The goods they deal in are cattle, ſkins of wild beaſts, and ſome gold, but this they bring only in very ſmall quantities, knowing well how dear the poſſeſſion of that metal hath coſt their neighbours and their anceſtors. As for the other Indians, who were formerly ſubdued, and have now recovered their freedom, they have little or no intercourſe with the Spaniards.

In reſpect to the diſcoveries that have been made of iſlands or countries at any diſtance in the Pacific Ocean, between the continent of Peru and the Philippine Iſlands, they are not much to be boaſted of. The iſlands of Solomon, indeed, are reported to have been worth the ſeeking and poſſeſſing, as being large and pleaſant, having excellent ports, and immenſe treaſures of ſilver; yet in the ſpace of almoſt two hundred years, theſe valuable countries have ſcarce been ſeen, and never ſettled or conquered; nay, ſome who are deſirous of paſſing for men of ſuperior ſenſe, and not to be led away by flying reports, are inclined to think theſe iſlands imaginary; yet if this ſort of wiſdom had prevailed, in Portugal or Spain, when the firſt propoſals for diſcovery were made, we might have known as little of the Eaſt-Indies and of the Weſt, as we now do of theſe iſlands; ſince the reaſons and rumours upon which theſe diſcoveries were undertaken, were certainly leſs clear and cogent, than what has been, or may be offered in reſpect to the iſlands of Solomon; and as this is a ſubject ſomething new, and which has never been treated, at leaſt in a ſatisfactory manner, the giving the reader a ſhort and methodical account of it, may be eſteemed curious and entertaining; nor is it impoſſible that it may fall into the hands of ſome, who may alſo think it uſeful.

The iſlands of Solomon were originally diſcovered by Alvaro de Mendoça, under the orders of the licentiate Lopez Garcia de Caſtro, in 1567, and looked upon as a very great thing. But as the Spaniards were always pretty ſlow in their motions, and, beſides, were under a neceſſity of waiting for orders from Europe, it was ten years before they made any farther progreſs; but when they were about to have undertaken ſuch an expedition, as they flattered themſelves would have put them in poſſeſſion of a new Indies, they received directions from Spain, not only to lay aſide the deſign for the preſent, but to ſuppreſs, with the utmoſt care and diligence, all papers, charts, letters, and whatever elſe might give the leaſt light into the ſituation of theſe iſlands, on account of Sir Francis Drake's expedition, who actually paid a viſit to the South-Seas in 1578. As ſoon as they were recovered from this fright, and were in a condition of thinking of ſuch matters again, the project of diſcovering the iſlands of Solomon was revived; but was again defeated before it could be put into execution, by the arrival of commodore Cavendiſh in the South-Seas, in 1586. However, having taken about nine years time to breathe, Don Alvaro de Miranda was ſent with a ſquadron of four ſail of ſhips upon this diſcovery. They did not find the iſlands of Solomon, but they found other iſlands very near them, of equal, if not of greater value; but they behaved ſo very ill, that they compelled the natives to have recourſe to arms, by whom they were driven out, and obliged to fly for ſhelter to the Philippines.

In their paſſage thither, three of their ſhips were loſt, and the only one that eſcaped, arrived in a ſhattered condition. This affair, however, had been then proſecuted, if Capt. Richard Hawkins had not arrived in this critical juncture in thoſe ſeas, as he himſelf tells us in his curious and excellent account of his Voyage thither.

It is a very mutulated and dark account of this expedition of Don Alvaro de Miranda's, that we have in the fourth volume of Churchill's Collection of Voyages, under the title of a Fragment of the Diſcovery of the iſlands of Solomon; and there is a very ſtrange blunder in the date, of 1695 for 1595, which renders the whole account almoſt unintelligible.

That this is the true ſtate of the matter appears from hence, that in this voyage the Spaniards picked up one of Cavendiſh's men, in which there is nothing ſtrange, if it was undertaken nine years after, but would be very extraordinary indeed, at the diſtance of one hundred and nine.

There was one Ferdinand de Guiros who laboured hard to get this project reſumed; and ſome memorials of his are ſtill extant, which were printed at Seville in the year 1610, from which time this affair ſlept for any thing we know, for near one hundred years.

However, in 1709, when Capt. Woods Rogers was in the South-Seas, there was a veſſel fitted out by a Spaniſh gentleman from Lima, in ſearch of theſe iſlands, but having the misfortune to be taken by the Engliſh, almoſt as ſoon as he had ſailed, the buſineſs was once more dropped. About ten years after this, while ſome of the perſons who were with Capt. Shelvock, in his expedition, were priſoners at Lima, there came in two ſhips at a ſmall diſtance of time from each other, the crews of which reported, that being driven by ſtroms out of their courſe, they had fallen in with theſe iſlands, which they deſcribed very circumſtantially, with ſuch manifeſt correſpondence in their accounts, that one Mr Thaylet, a Frenchman, was ſent by the viceroy in a ſmall ſloop in ſearch of them; but having only two months proviſion, he returned without doing any thing: it may be, that Providence has reſerved the diſcovery of theſe iſlands, and the ſouthern unknown continent, for ſome other nation.

PERUVIAN BARK. The quinquina, Peruvian bark, or the bark againſt fevers, is the external bark of the trunk and branches of a tree, that grows plentifully in Peru, from whence this is brought us by the way of Cadiz.

According to the judicious Mr Bernard, the tree of which the quinquina is the bark, grows in the province of Quito in Peru, upon the mountains near the city of Loxa. This tree is almoſt the ſize of a cherry-tree; the leaves are round and indented: it bears a long reddiſh flower, from whence ariſes a kind of huſk, in which is found a kernel like an almond, flat and white, cloathed with a thin rind; that bark which comes from the trees at the bottom of the mountains, is thicker, becauſe it receives more nouriſhment from the earth: it is ſmooth, of a whitiſh yellow without, and of a pale brown within. That which comes from trees on the tops of mountains, is much thinner; it is uneven, browner without, and of a higher colour within; but the trees which grow on the middle of the mountains, have a bark yet browner than the other, and more rugged. All theſe barks are bitter, but that from the trees at the bottom of the mountains, leſs than the others.

It follows from hence, that the bark of the leaſt virtue, is that which grows in the loweſt places, becauſe it abounds more with earthy and watery parts, than that which grows high, which, for the contrary reaſon, is better; but the beſt of all, is that which grows in the middle of the mountains, becauſe it has not too much or too little nouriſhment. There is another kind of quinquina, which comes from the mountains of Potoſi, and is browner, more aromatic, and more bitter, than the former, but abundantly ſcarcer than any of the reſt.

Beſide the qualities remarked in this bark, it ought to be heavy, of a firm ſubſtance, ſound and dry. Beware of ſuch as is rotten, or hurt by wet, and ſuch as flies into duſt in breaking, or is dirty and unclean, as it happens to be ſometimes: but make choice of ſuch as is in little thin pieces, dark and blackiſh without, with a little white moſs, or ſome ſmall fern-leaves ſticking to it, reddiſh within, of a bitter and diſagreeable taſte, and refuſe that which is full of threads when broke, and of a ruſſet colour; and take care that there be not ſeveral pieces of wood mixed with it, which you have ſometimes ſticking to the bark. This was brought firſt into France in the year 1650, by the cardinal Lago a jeſuit, who having brought it from Peru, it was had in ſuch vogue in France, as to be ſold weight for weight for gold, but the quantities of it ſoon afterwards brought over, quickly leſſened the price.

The uſe of this bark is for the cure of fevers, eſpecially intermitting, for which purpoſe it is given in ſubſtance, tincture, or infuſion; but as it is a medicine ſome people have an utter averſion to, and as the uſe of it is of ill effect, unleſs properly applied, we would adviſe no body to make uſe of it without the direction of an able Phyſician.

To prevent the return of the ague, this method ought to be continued for eight days, three times a day; firſt, early in the morning, then an hour before dinner; and at night, an hour before ſupper; but if the ague ſhould return again, as it does, if you purge after it, the uſe of the bark muſt be repeated after the ſame manner as before, and it will not fail to produce the deſired effect, which is abſolutely to cure the ague. But though the ague ſeems to be perfectly gone, for ſeveral revolutions of fits, yet it is neceſſary to continue the uſe of the remedy for twelve days, by which means you will ſecure the patient againſt any freſh aſſault.

It is at the end of the fit that the doſe is to be given, and it muſt be continued 'till the cure is perfected; which in a ſingle and double tertian, commonly happens at the ſecond fit, or at moſt at the third: the ſame is to be uneerſtood in a ſingle and double quartan, wherein you have two whole days to give the medicine in, without interruption; in which, as in the tertian, the ague is maſtered at the third and fourth fit, if not at the very firſt, which often happens; and to prevent it's return, the uſe of the bark is to be the longer continued after the cure; for it is the too haſty diſcontinuance of it which cauſes the relapſe, and puts the patient to a new trouble of running over the ſame courſe again.

This medicine ought not to be given at the coming on of the fit, nor yet during the time of it; becauſe then, inſtead of alleviating the force and violence of the ague, it would be apt, by reaſon of the febrific ferment, to excite a fiercer conflict, and make the paroxyſm the more violent. This method being obſerved, the medicine will interrupt the courſe of the diſeaſe in it's progreſs; and being conveyed into the maſs of blood by a gentle motion, it purifies it, and deſtroys the feveriſh ferment, which would produce a new fit. It ought likewiſe, to be given at ſeveral times, to produce gradually, the wiſhed for effect; and but a ſmall ſpace of time ought to be allowed between each doſe, that the ſecond doſe may begin it's operation, when the force of the firſt is over; and the third may begin to act, when the ſtrength of the ſecond is loſt. It is given, in like manner, two or three hours after, that thereby it's virtue may the better unite itſelf with the chyle in the ſtomach, in order to it's entrance into the maſs of blood, to correct, depurate, and renew it. If this courſe is purſued, the cure is in a manner certain and infallible, and it will hardly be poſſible for the fit to return again. When the paroxyſm is gentle, in a good habit, and a good ſeaſon of the year, there is no need of giving it above five or ſix days together, once or twice a day in the intermiſſion; but when the paroxyſms ore ſtrong, oftner, as before directed.

The uſe of this bark, the Spaniards ſay, was diſcovered by accident: an Indian in a fever accidentally drinking the water of a pond, into which ſeveral of theſe trees were fallen, was cured by it; which made people ſearch into the occaſion, and ſo diſcover this ineſtimable medicine.

PETTY CUSTOM, or ALIEN's DUTY. This duty is payable by * merchant-ſtrangers, that is, aliens born, or denizens, on all goods imported liable to the ſubſidy of poundage (unleſs where the original old ſubſidy has been entirely taken away) but not on thoſe liable to the ſubſidy of tonnage, becauſe an equivalent is included in the old ſubſidy.

* 12th rule of certain rules, orders, directions, and allowances, for the advancement of trade. See the end of letter A, and our concluſive REMARKS there, relating to the BUSINESS OF THE CUSTOMS.

† And it is alſo payable by Britiſh, upon the following goods, though of Britiſh property, when imported in foreign ſhips, viz.

Aqua vitæ,
Boards,
Brandy,
Corn, or grain of all ſorts, when the old ſubſidy is taken at the original rate,
Figs, Prunes,
Flax ‖, Raiſins,
Hemp, Roſin,
Maſts, Salt,
Olive-oil, Sugar,
Pitch, Tar,
Pot-aſhes, Timber,
All goods of the growth, production, or manufacture of Muſcovy or Ruſſia,

} Imported in ſhips not belonging to the people of Great-Britain or Ireland, and whereof the maſters and at leaſt three-fourth, of the mariners, are not Britiſh; or in foreign-built ſhips, altho' owned or manned by Britiſh, unleſs ſuch as are taken as prize.

† 12 Car. II. cap 18. §. 9. 13 and 14 Car. II. cap 11. §. 6.
‖ By 4 Geo. II. cap. 27. §. 1. rough or undreſſed flax may be imported free.

Currants, Turkey commodities, } Imported in ſhips not Britiſh-built, and whereof the maſter, and at leaſt three-fourths of the mariners are not Britiſh.

It is to be levied according to the reſpective rates or values of the goods, as affixed or aſcertained for the old ſubſidy, after the following rates, viz.

		The duty l. s. d.
* Fiſh, dried or ſalted, and cod fiſh or herring (unleſs prohibited) not caught in Britiſh or Iriſh veſſels, and cured by Britiſh or Iriſh	2 ½ per cent. of the rate, or double petty cuſtom, being ½ part of ſuch rate, or for every 20 s. thereof	— — 6
† All other goods chargeable with ſubſidy of poundage. - -	1 ¼ per cent of the rate or value, being ¼ part thereof, or for every 20 s.	— — 3

* 12 Car. II. cap. 18. §. 5.
† 12th rule, &c. in Vol. I. page 178.

To be paid in ready money, without diſcount, upon due exportation, as directed for the old ſubſidy, &c. drawback, or repayment of this duty, muſt be allowed, as follows, viz.

	The drawback l. — —
* Currants, the hundred weight, all but	4 ½

All other goods, nothing.

* 6th rule. See the Buſineſs of the CUSTOM-HOUSE at the End of every Letter.

PEWTER, a factitious metal, uſed in the making domeſtic utenſils. The common ſort is a compoſition of tin, regulus of antimony, and tin-glaſs, in ſeveral proportions, ſuitable to the quality of the metal intended to be made. There are other ways of making it, with tin, lead, and copper; but that with any degree of copper is eſteemed unwholſome.

To make PEWTER hard.

Take one pound, or what quantity you pleaſe, of pewter, and let it melt in an iron pan; add to it ſome ſallad oil, let it evaporate well, and ſtir it continually, keeping the flame from it; add to this ſome fine wheat-flour, and ſtir it well about; then take all the burnt matter off the top, and to each pound of tin add three or four ounces of plate braſs, cut in ſmall pieces, mixed with oil, and a few ounces of pulverized biſmuth, or regulus of antimony; ſtir it all the while, and, when all is melted and incorporated, you will not only have a pewter that is harder and whiter, but alſo different in it's ſound from common pewter. Or,

Melt tin in an iron pan, ſtrew colophony or roſin, with fine wheat flower mixed together, into it, and ſtir it gently about; this takes off the blackneſs, and makes it of a fine white colour. If you would have it hard, add to each pound of tin one or two ounces of pulverized regulus of antimony and veneris; this makes it white, hard, and gives it a clear ſound.

PHARMACY, that branch of phyſic which teaches the preparation of medicines. It is ordinarily divided into Galenical and Chemical; the former is called ſimply pharmacy, and conſiſts in the knowlege and management of the materia medica, in an unchemical way, as it were, and without the torture of bodies, as the art of chemiſtry inſtructs.

Pharmaceutical chemiſtry defines the art of directing and performing the ſeveral proceſſes or methods of manual operation, whereby natural ſubſtances are reducible to artful medicines.

Thus the whole art conſiſts of the theory and practice: the former is claimed by the Phyſician, and the latter is aſſigned to the Apothecary.

A SUCCINCT ACCOUNT OF THE ART OF PHARMACY.

Moſt of the natural bodies being ſome way or other employed as ſubjects of pharmacy, the materia medica is extremely large, and it's operations various. It's materials, in the earlieſt ages, indeed, were few, and the ways of managing them

were ſimple: ſubjects afterwards multiplied, operations increaſed, and, at preſent, we ſeem abundantly ſtocked with both ſimple and compound medicines.

But the hiſtory of pharmacy may deſerve to be more particularly treated, in order to ſee by what means it arrived at it's preſent ſtate, and how it may be further advanced.

Diſeaſes muſt have been early, if the firſt inhabitants of the world experienced the ſame changes of ſeaſons, breathed the ſame kind of air, and uſed a like diet and regimen of life with ourſelves. But ſoon after a diſeaſe afflicts, the patient ſeeks a remedy: whence we may reaſonably ſuppoſe, that this was the foundation of pharmacy in various parts of the world.

Expdriments being thus multiplied, and the event gradually introducing better methods of preparing the ſimples, pharmacy would begin to appear in the form of an art: yet, when Hippocrates came to compile a kind of a ſyſtem of phyſic, from the obſervations of antiquity, he deſcribed but few, and thoſe were generally ſimple.

Succeding phyſicians enlarged the materia medica: Galen conſiderably ſwelled the catalogue, which received many additions from the Arabians.

And, when learning began to revive in Europe, the materia medica was again enlarged, and great changes wrought upon it by chemiſtry: whence chemiſtry at length was generally received, and acknowledged of uſe in pharmacy.

Both the galenic and chemical parts of this art are now extremely copious. Neceſſity gave the occaſion, nature ſupplied the materials, and art and obſervation diſcovered their preparations, virtues, and uſes.

Thus we at preſent ſeem provided of a competency of ſtanding medicines; and phyſicians have, by degrees, acquired a method of preſcribing in extemporaneous forms.

The art of pharmacy may be conſidered under the management of phyſicians, apothecaries, trading chemiſts, and druggiſts.

It is the office of the phyſician to direct the medicines, or give the rules of extracting, compounding, and managing the ſimples. If the phyſician, therefore, ſhould be defective in this part, let the apothecary, the trading chemiſt, and the druggiſt, be ever ſo juſt, or ever ſo knowing, the art of pharmacy muſt fall ſhort of perfection.

To the apothecary belongs the reduction of the materia medica into certain forms of medicines, according to the direction of the phyſician.

But there are two kinds of apothecaries, vulgarly known by the names of wholeſale and retale apothecaries. It is the latter alone we are here concerned with: theſe act by rule, generally follow their ſtandard, and compound with art and care; though they will ſometimes ſubſtitute quid pro quo, and now and then venture to reverſe an order. According to their ſkill and care, they are more or leſs liable to be impoſed on by the druggiſt, and the trading chemiſt, all of them uſually ſelling what they buy; but if the apothecary be here often deceived, how ſtands it with the patient and phyſician, or what is the ſtate of pharmacy?

The retale apothecaries, however, deal more in ſubſtitution than in ſophiſtication. The prudent phyſician, therefore, preſcribes what is uſually kept, and proper to keep, in the ſhops, or what is otherwiſe eaſily obtainable. If there are other abuſes committed in this part of pharmacy, they may, perhaps, be chiefly attributed to ſome want of ſkill or conduct in the phyſician.

The deſign of the trading chemiſts and druggiſts is to furniſh medicinal matters to the apothecary, who cannot always detect an artificial counterfeit, or a dextrous ſophiſtication: and perhaps many remedies well deſigned by the phyſician, have failed or had miſchievous effects upon this account.

This is propoſed as a ſhort intimation of the preſent ſtate of pharmacy in England. If the art be found more perfect in other nations, it may, perhaps, be chiefly owing to this, that their phyſicians are well acquainted not only with the theory, but alſo the practice thereof; two things which ſhould never be ſeparated, as being, in reality, but one effective thing, conſiſting of two parts, viz. previous notion, and execution.

What uſeful addition or reformation the materia medica is capable of receiving, no one at preſent can ſay. If a ſtrict enquiry were made, perhaps it might be found proper to throw out of our preſent collection a conſiderable number of materials to make room for others of greater efficacy. But this is no work for private perſons: our preſent buſineſs is to ſee whether any improvements may be made in the ways of preparing the common medicines of the ſhops.

For the better regulating of our enquiry, it may be of ſome ſervice to lay down two larger obſervations, viz. 1. That the deſign of pharmacy is to ſeparate from bodies the more medicinal parts with which they are naturally endowed, and, upon occaſion, to mix ſuch of them together as will beſt anſwer the curative intentions. All in the power of art is only to ſeparate and mix, or differently modify, it is nature alone that is able to produce. Pharmacy, therefore, conſiſts in analyſis and ſyntheſis.

As it is the perfection of art to copy nature juſtly; ſo, by reſolving bodies into their principles, we obtain a general rule for compoſition, and ſee the ſeveral ſteps we ought to take in it. Nature ſhews us, that, in all mixed bodies, there is a baſis, or ſubſtratum, ſomething to ſupport and envelope the other ingredients. The natural ſalts are thus diluted with water, the oils with both, and altogether compoſe one uniform and elegant whole. To preſcribe juſtly, therefore, the phyſician ſhould imitate nature; but, if we compound without regard to this rule, the ingredients will appear huddled together, as if it were by chance; and, inſtead of preſerving and aſſiſting, they will often clog, incumber and deſtroy each other.

We now proceed to our experiments, whereby may be illuſtrated and improved, (1.) The common method of diſtilling ſimple waters. (2.) The common method of preparing tinctures. (3.) The method of preparing ſyrups. (4.) The method of making electuaries; and, (5.) The method of making compound oils, unguents: thus propoſing to touch upon the chief articles of the preſent Galenical pharmacy, as it is vulgarly called, though, in reality, it is ſomething chemical alſo.

Experiment I.

The beſt way of diſtilling ſimple waters.

Take as much dried mint, cut ſmall, as will fill two-thirds of a ſtill; then adding a ſufficient quantity of rain water to make the plant float commodiouſly, yet leaving a fourth of the ſtill empty, digeſted a while with a gentle heat; then work the ſtill, drawing off only ſo long as the water appears thick or milky, and taſtes rich and grateful; whereby you will obtain a ſimple mint-water, in tolerable perfection.

Observation.

This experiment, with a few occaſional alterations, may ſhew a general method of obtaining ſimple waters in their greateſt perfection. The ſubjects beſt fitted for it are thoſe of the odorous, aromatic, and oily kind; though ſome others alſo may, perhaps, communicate particular virtues to the water: among the fitteſt may, however, be reckoned angelica, aniſeed, baulm, camomile, cinnamon, cloves, fennel, hyſſop, roſemary, tanſey, wormwood, &c. but particularly pepper-mint, which affords an extremely aromatic, pungent, and agreeable water, good againſt the cholic, and many other diſorders of the ſtomach and bowels; whence it's uſe, perhaps, is too little known.

It is a principal caution in this operation, to remove the receivers before the more pellucid, acid, faint, and dead water comes over, as it ſoon will do, and, if ſuffered to mix among the reſt, is apt to ſpoil the whole, by giving it a vapid or faint taſte, and ſometimes a degree of acidity, or vitriolic ſtypticity, and an emetic virtue: for part of the eſſential ſalt of the plant, now riſing, uſually corrodes the copper head of the ſtill, and carries over with it ſome particles of the metal: whence thoſe waters ſhould either be diſtilled with a glaſs head, or one of pewter, or tinned copper, or elſe the operation ſhould be carefully watched, that the ſecond running may not mix with the firſt. The greater care ſhould here be taken, becauſe ſome patients, more particularly children, and thoſe of a tender habit, have ſuffered through a neglect herein; by being vomited, purged, and griped by the uſe of a ſimple water, contrary to the intention.

The ſimple waters diſtilled after the manner of the preſent experiment, may, in many caſes, prove too ſtrong to be uſed alone; but then it is eaſy to lower them with common diſtilled water, to the proper ſtrength: and this is, beyond all compariſon, better than to mix ſuch waters with their own faints, or liquor of the ſecond running.

There are two improvements that might be made in this method of obtaining ſimple waters: the firſt is, by means of cohobation and digeſtion; the other, by means of the previous fermentation of the plant. With regard to the firſt, if the liquor remaining in the ſtill be expreſſed from the herb, and returned along with all the water that came over upon a freſh quantity of the ſame ſubject, and they be digeſted together, in a gentle heat, for two days, then diſtilled as before, the water thus obtained will be much richer, and more efficacious than the former: and, if the ſame proceſs be repeated two or three times, thoſe who have not tried would ſcarce imagine how rich a ſimple water may be thus procured. And this method we would particularly recommend for making the ſimple water of baulm, elder-flowers, roſes, camomile, and the like ſubjects, but ſparingly furniſhed with eſſential oils, for they otherwiſe make but indifferent waters.

The other way of improving ſimple waters, is uſing by a previous imperfect fermentation: this is performed by adding to the plant and water put together, as in the foregoing experiment, a tenth or twelfth part of ſugar, or honey, or elſe a fortieth part of yeaſt; then ſetting the whole in a warm place, to ferment for two or three days only, ſo that the herb may not fall to the bottom, nor the fermentation be above half finiſhed; then the whole being committed to the ſtill, a water may, at one operation, be obtained extremely rich, or impregnated with the full virtue of the plant. And thus may ſimple waters be made fit for long keeping without ſpoiling;

the

the ſmall proportion of inflammable ſpirit generated in the fermentation, ſerving excellently to preſerve them. And theſe two methods ſeem applicable to the improvement of all thoſe ſimple waters commonly found in the ſhops.

We ſhould next proceed to ſhew the method of perfecting or improving compound waters, if we had not already endeavoured to do it under the article DISTILLATION, Vol. I.

EXPERIMENT II.

The beſt way of making light tinctures and infuſions.

Take half an ounce of the rind of Seville orange, ſhaved thin; half a drachm of gentian-root, thin ſliced; a ſcruple of the tops of Roman wormwood, half a drachm of cardamums, and half a drachm of cocheneal, each of them ſlightly bruiſed: theſe ingredients put to ſteep, for a night, in a pint of French brandy, and filter the liquor next morning.

OBSERVATION.

This experiment is general, and not propoſed for it's own ſake, but to ſhew the method of making all kinds of the lighter and finer tinctures and infuſions without fire, which would here prove prejudicial: the preparation itſelf is, however, a good ſtomachic bitter, of the ſame general nature with thoſe commonly ſold under the name of Stoughton's elixir.

The excellence of theſe preparations depends not more upon the choice and goodneſs of the ingredients, than upon the manner of their being infuſed: for, if ſuffered to remain too long in the menſtruum, or if heat be uſed in extracting the tincture, the groſs, terreſtrial, and nauſeous parts of the ingredients will be fetched out, and the tincture thus be loaded with a heavy indolent matter, of little virtue. But if the infuſion be made in the cold, and the liquor ſtrained off ſoon, only the finer and more ſpirituous parts of the ingredients will be imbibed by the menſtruum; whence the preparation will not only taſte and ſmell more briſk and agreeable, but alſo have a much greater virtue and efficacy. But if, through the ſhortneſs of their continuance in infuſion, the ingredients ſhould not have ſufficiently impregnated the liquor, the method is to pour the liquor again upon ſuch freſh ingredients, and again to ſtrain it off, without letting it ſtay too long upon them, or feeling the heat of the fire. Thus, by repeated effuſions of the ſame impregnated menſtruum, upon freſh ingredients, an infuſion, or tincture, may be obtained, of almoſt any degree of ſtrength or richneſs, without containing the groſſer or more concretive parts of the ingedients, but only what may be called the finer ſpirit, or quinteſſence: and this is no inconſiderable ſecret, both in chemiſtry and pharmacy, and may deſerve the regard of thoſe who deſire to procure the full virtues of the ſimples, unaltered in their nature, yet exalted, or concentrated to ſuch a degree, that a few ſpoonfuls of the liquor ſhall contain the ſpirit, or quinteſſence of a pound of a plant.

And this is an effect not to be expected from the fire, which almoſt conſtantly alters the nature of things committed to it; nor could a valuable eſſence of violets, jaſmin, lilies, borrage-flowers, and any flower or plant of an extremely fine odoriferous ſpirit, be procured by heat, as it readily may by ſteeping theſe flowers in cold water, cold vinegar, cold wine, or the like, and frequently pouring the tincture upon freſh flowers, 'till the liquor becomes ſtrongly impregnated.

Apothecaries uſually commit the ſame error in preparing the finer tinctures, that they do in working their cordial waters, and in both caſes ſaturate the liquor with the groſſer, more uſeleſs, and leſs ſpirituous parts of the ingredients; whence the cordial waters of the ſhops too often abound with a groſs, heavy, diſagreeable oil; and the tinctures of the ſhops with a groſs heavy earth, or kind of bituminous matter, inſtead of a briſk, lively, and invigorating ſpirit, which alone is the thing required in both caſes.

This doctrine of tinctures and infuſions ſhould be reduced to rule, for the improvement of chemiſtry; which will never be perfected 'till it can extract, ſeparate, and concentrate the virtues of things unimpaired, or unaltered in their nature. And doubtleſs it would prove a very ſerviceable thing in chemiſtry, medicine, and natural philoſophy, to know the beſt and eaſieſt ways of concentrating the virtues of bodies unaltered: and this may, in ſome meaſure, be effected by the preſent method, and practiſed with well-adapted menſtruums: for, in general, (1.) A quick and cold infuſion extracts the ſpirit of vegetables; but a hot and long one confounds, impairs, or deſtroys it. (2.) To repute the infuſion of a freſh ſubject quick and cold, in the ſame impregnated menſtruum, ſeems greatly to collect and concentrate the ſpirit, that is, the finer and more eſſential part of bodies. (3.) The proper menſtruums for this purpoſe ſeem to be ſuch as pure rain-water, vinegar, wine, water mixed with a little fine alcohol, water and a little ſugar; and, for certain uſes, the common atmoſpherical air, which is an excellent menſtruum to extract the ſpirit or effluvia of plants, as we remarkably find in ſpicy groves and gardens, and may, in ſome caſes, be uſed with good effect.

But, to obtain the ſaturated tinctures of hard, reſinous, or gummy bodies, requires a different treatment, as in the following

EXPERIMENT.

Take two ounces of that hard Indian roſin called gum-lacque, and reduce it into a fine powder, make it into a kind of ſtiff paſte, with oil of tartar per deliquium; ſet this paſte into an open glaſs to dry, by a gentle heat; then remove it to the open air, that it may relent or grow ſoft; and after this dry it again, as before: and, by repeating the proceſs once or twice, the hard body of the roſin will at length diſſolve into a purple-coloured liquor; which being now gently dried, and reduced to powder, will afford an excellent tincture, by being boiled for two or three hours in a tall glaſs, with alcohol.

OBSERVATION.

This proceſs is almoſt general, or may be advantageouſly uſed for making the tinctures of myrrh, gum-juniper, dragon's blood, amber, and other hard gummy ſubſtances, which will ſcarce otherwiſe yield a tincture in ſpirit of wine. Any improvement in the extracting tinctures with alcohol, may tend conſiderably to improve the art of pharmacy, becauſe ſuch tinctures are generally found powerful medicines; the ſpirit of wine appearing greatly to increaſe the virtue of the ſubjects. Thus, though the tincture of amber, prepared in this manner, appears to be only a bare ſolution of the ſubſtance of the amber, yet it is found to have ſuch effects as are no way equalled by any fine powder of amber: and, what ſeems remarkable, though ſo large a quantity of fixed alkali be uſed in the preparation of theſe tinctures, yet they give no manifeſt ſigns of containing an alkali; which is therefore changed in the operation, whether by the acid naturally contained in theſe reſinous and gummy bodies, or by being expoſed to the air, or both.

There are more methods of extracting the tinctures of theſe hard gummy bodies; but that delivered appears to be beſt, though it might, perhaps, be ſhortened, by uſing ſome proper intermediate ſubſtance to divide the particles of the ſubject, ſo as that the alkaline ſalt, the air, and the ſpiritous menſtruum, might all come into fuller conſent therewith, and act more forcibly thereon. And for this purpoſe pure virgin earth is recommended, ſuch as is commonly uſed for the making of teſts or cupels; by means whereof ſpirit of wine will extract a tolerable tincture from myrrh, without the addition of any fixed alkali.

But when tinctures not ſpirituous, or only aqueous ſolutions of theſe hard gummy bodies, are required, the uſe of the ſoluble tartar, or tartarum tartarizatum, is proper; for a ſolution of this ſalt will readily diſſolve myrrh, even in the cold, as water diſſolves gum arabic.

EXPERIMENT III.

The beſt method of making ſyrups.

Take three ounces of the yellow external rind of freſh oranges, and infuſe them in a cloſe veſſel, with a gentle heat in balneo mariæ, for ſix hours, along with a pint and a half of pure water; then ſuffer the infuſion to cool; filter the liquor, and add to it twice it's own weight of hard double-refined ſugar, made into a ſyrup, in a cioſe veſſel ſet in balneo mariæ.

OBSERVATION.

We would not contrive a general example to fit all ſyrups, becauſe they differ greatly in the liquors of which they are made; or according as thoſe liquors are infuſions, decoctions, natural juices, wines, or vinegars. We choſe to give an inſtance in a ſyrup made of a liquor by the infuſion of an aromatic ſubſtance, whoſe virtue would be almoſt entirely loſt if the ſyrup were to be prepared by long boiling, as it is ſometimes directed, with leſs than an equal weight of ſugar. Diſpenſatory writers have, perhaps, no where erred more remarkably, than in directing the making of ſyrups, which ſeems the more ſtrange, becauſe this part of pharmacy is extremely facile: the misfortune ſeems to have lain, that great men cannot ſubmit to conſider common and ordinary things; whence, however, the credit of a phyſician may ſink in the eſteem of thoſe who, by their employ, are led to a knowlege of theſe ordinary things.

It is judged, that the whole of this buſineſs may be reduced to a few eaſy rules, which we ſhall here endeavour to lay down, for improving this branch of pharmacy. And, (1.) It is matter of experience, that aqueous infuſions, decoctions, or other aqueous liquors, require twice their own weight of dry ſugar-candy, to make them into a ſyrup of a juſt conſiſtence for keeping, without candying or fermenting.

This rule, by directing the uſe of ſugar-candy, ſeems to fix the conſiſtence of ſyrups with exactneſs; becauſe all ſalts acquire a determinate proportion of water in chryſtallizing; ſo that ſugar, in the form of candy, conſiſts of one certain proportion of water, whilſt different kinds may hold more or leſs aqueous matter, according to their manner of refining, the accidents of the weather, &c. Hence, therefore, all ſuch infuſions for ſyrups as are of delicate or deſtructible colour, which

which is impared by boiling (for example, violets, clove-july-flowers, &c.) and all ſuch infuſions as contain any volatile parts, which would evaporate by a boiling heat (for example, thoſe of nutmeg, cinnamon, orange-peel, citron-peel, &c.) ſhould have twice their own weight of ſugar added to them, and be kept cloſe covered, in the gentle heat of a balneum mariæ, 'till the ſugar is diſſolved; and, to haſten the ſolution, the ſugar ſhould be firſt reduced to fine powder.

(2.) The decoctions of ſuch vegitable ſubſtances as loſe no valuable parts by boiling, may be boiled down to the form of a ſyrup, along with their own weight of ſugar, the two being firſt clarified together, with whites of eggs, in the ordinary way; but, if the ingredients here contain any unctuous or balſamic parts, whereon their medicinal virtues depend, let the ſugar be added from the firſt, and boiled along with the ingredients, afterwards ſtraining and clarifying the decoction, before it is boiled to near the full conſiſtence of a ſyrup.

This rule is founded upon that remarkable property which ſugar has to diſſolve oils, or the finer reſinous ſubſtances, ſo as to make them intimately mix with water: whence it may deſerve to be conſidered, whether the ſyrup of myrtles, comfrey, and diacodium, ſhould not be thus prepared. It muſt alſo be obſerved, that, by boiling the ſugar ſo long with the decoction, the aqueous part exhales and leaves the ſyrup much ſtronger than it could have been made without this boiling.

(3.) All vegitable juices are to be thoroughly purified before they are made into ſyrups. Thus the juices of citrons, lemons, and oranges, are to paſs the filter, and then be made into ſyrups, without boiling, according to the firſt rule, obſerving to uſe no metalline veſſel about them. But the juices of fruits, as particularly mulberries, raſberries, &c. will not clarify without beginning fermentation; but, by ſtanding for a day or two, they will begin to ferment and liquiſy, and may then be commodiouſly ſtrained through flannel; after which, theſe alſo are to be made into ſyrups, with about an eighth part leſs than twice their own quantity of ſugar, or with two pounds and twelve ounces of ſugar to a pint of juice, on account of their being ſomewhat ſaccharine themſelves.

And this holds alſo of wines and vinegars, when they come to be made into ſyrups; for wine contains an inflammable ſpirit, which does not incorporate with ſugar, and alſo a thick ſyrupy ſubſtance, which is alſo found in vinegar. And, by a due application of theſe rules, we apprehend the buſineſs of making ſyrups may be reduced to tolerable perfection.

The beſt method of making electuaries, by an example in the ſaſſafras electuary.

Take two ounces of the beſt ſaſſafras, newly raſped, and half an ounce of cinnamon, finely powdered; boil them together in a tall glaſs, in a ſand-heat, with 10 ounces of water, and 14 ounces of ſugar, ſo as that nothing might evaporate, for two hours; then ſtraining and preſſing out the ſyrup, add to it an ounce of freſh-raſped ſaſſafraſs, a drachm of cinnamon, and 10 grains of nutmeg, all reduced to fine powder, and make the whole into an electuary.

Observation.

In the common method of making this electuary, the ſaſſafras and cinnamon are boiled in the water, whereby a great part of their virtue is loſt, or not extracted, whence the medicine comes to be deſrauded of it's due: but here, by boiling the ingredients in a tall glaſs, with a due proportion of ſugar and water, to make a ſyrup (allowing an extraordinay proportion of water for what the ſaſſafras will drink up) we obtain the fine aromatic virtues of the ingredients to advantage, without any conſiderable loſs.

To make electuaries in perfection, where a ſyrup is employed as their baſis, (1.) The ſyrup ſhould be prepared in the manner above delivered, ſo as that the virtues of the ingredients may be preſerved. (2.) The powders, or ſpecies employed, ſhould be freſh, and fine ground. (3.) The gums, where any are uſed, muſt be be well cleanſed, and diſſolved in their proper menſtruums; and, (4.) The whole muſt be mixed, or thoroughly united into a ſmooth uniform ſubſtance, of a due conſiſtence for keeping, without either candying or running into fermentation.

Where ſyrups are uſed in the making of electuaries, care is not only required, that the virtues of the ingredients of the ſyrups be preſerved, as much as the form will allow of, but alſo that it's conſiſtence be not too high, for this would diſpoſe it to candy in the electuary, and render the medicine unduly mixed, or knotty, the ſugar thus concreting together in lumps, or ſhooting away from the ſpecies.

If the ſyrup be made too thin or aqueous, ſo as not to ſuſpend and hold the powder together, by a binding conſiſtence, the ſyrup will of neceſſity ferment in hot weather, and become ſomewhat vinous, afterwards ſour, and at length corruptive, [ſee the articles Brewing, Distillation, and Vinegar-Making] ſo as to change, invert, or deſtroy the nature of the medicine; for purgative ingredients, by fermenting, loſe their purgative virtues: and all other ingredients, by corrupting, are reduced to an indolent kind of fæces, or caput mortuum, very different from the thing intended.—See the article Wines. Hence electuaries that have thus fermented, or changed their nature, may ſometimes prove pernicious, inſtead of ſalutary.

The electuaries made with the pulp of fruita are leſs diſpoſed to keep for any conſiderable time perfect, on account of the greater tendency which ſuch pulpy ſubſtances have to fermentation and putrefaction: thus, though the lenitive electuary were made ever ſo artificially, it will ſcarce keep many months without altering it's nature, and eſpecially if the conſiſtence was originally too thin: whence ſuch electuaries ſhould be made in ſmall quantities, or freſh as they could be wanted.

But this does not hold of the capital electuaries, ſuch as Venice-treacle, or mithridate, which require to lie for ſome time, that the ingredients may digeſt or ripen, as it were, and grow mellow together; for the gums and ſpices that enter their compoſitions preſerve the medicines from alterations for the worſe, and the mixture becomes more perfect by time, provided the honey uſed in their compoſition does not candy, or the whole become too dry. To keep the honey from candying, ſome artiſts mix the ſpices and gums with it unclarified, taking care only to ſeparate the foul parts that lodge either at the top or bottom. And, if the medicine prove too dry, it is uſual at any time to ſoften, or beat them up in a mortar, with canary: thus theſe capitals of the ſhops are ſuppoſed to improve by keeping. But diacodium having few of the warm gums in it's compoſition, is more apt to alter, and loſe of it's aſtringent quality by keeping: for which reaſon it ſeems an alteration here for the better, to uſe a quantity of ſaccharum roſatum inſtead of honey, or diacodium, as this not only gives a greater compactneſs to the medicine, but alſo contributes to preſerve it's colour and virtues.

The powder, or ſpecies, that enter into the compoſition of electuaries, ſhould be freſh, becauſe they loſe of their virtues by keeping, and they ſhould alſo be fine ground, becauſe they would not otherwiſe intimately mix with honey or ſyrup, nor ſo readily part with their virtues in the ſtomach, nor render the medicine ſo agreeable to the eye. The common method of reducing theſe powders to a ſufficient degree of fineneſs, by the mortar and ſearce, is faulty; becauſe this method expoſes them too long to the action of the open air, whereby their more volatile and grateful parts are carried off, whilſt only the groſſer are left behind: whence it might be proper to have a cloſe engine contrived for the purpoſe, ſo as to prevent this ill effect.

Some artiſts grind their powders for electuaries by means of a horſe-mill; but the mill-ſtones here wear off, and communicate a ſtony matter to the ingredients, ſo as to prove diſagreeable in the mouth, increaſe the bulk of the medicine, without adding to it's virtues.—Nor is this method of the mill free from the inconveniencies of the latter; for the finer or more ſpirituous parts of the ingredients alſo fly off, as is ſenſibly found by the whole neighbourhood where any large quantity of the ingredients for Venice-treacle, &c. is ground by the common horſe-mill.

The better way doubtleſs is, by the means of iron rollers, moving oppoſite to each other in a cloſe box, to grind all the ingredients, viz. the purified gums, the roots, herbs, flowers, &c. along with the honey, and wine, after the manner of the chocolate engine: for thus the fine, volatile, and aromatic parts of the ingredients may, as well as the groſſer, be entangled with the honey and gums, and all at once be mixed uniformly together, into a ſmooth maſs of a due conſiſtence.

But perhaps a much better, though more troubleſome method would be in the form of extracts, eſſential oils, &c. to get out the full virtues of the ingredients, without any of their groſſer parts, and mix theſe oils, extracts, gums, roſins, &c. together with a ſuitable proportion of honey, &c. ſo as at once to concentrate the medicine, which might, therefore, be given in doſes of an agreeable ſmallneſs, with all the advantages that can be expected. The ſame method ſeems alſo applicable to the making of pills and troches.

Observations.

1. We learn from the preceeding enquiry, that ſome part of the ſalts of plants, as well as their oils, will riſe by diſtillation with water, and give an acid or alkaline nature to the ſimple waters thus propoſed, according to the nature of the plant.

2. That no ſimple waters ſhould be diſtilled ſo low as to bring over any remarkable acid or alkaline liquor from the plant, for fear of miſchievous effects, or making ſuch waters prove emetic or purgative, contrary to the intention.

3. That the virtues of ſimple waters chiefly depend upon their containing the eſſential oil of the plant.

4. That there are two methods of perfecting ſimple waters, viz. cohobation and fermentation.

5. That all tinctures and infuſions of ingredients, whoſe principal virtues depend upon their lighter, or more ſubtile and ſpirituous parts, ſhould not be made with heat, but in the cold.

6. That

6. That if ſuch tinctures or infuſions be required rich and ſtrong, they are to be made ſo, not by ſuffering the menſtruum to remain long upon the ingredients, or by the uſe of heat, but by adding freſh ingredients ſeveral times to the ſame liquor, infuſing them quick, and each time keeping out the ingredients that have once been uſed.

7. That the fire is apt to exhale, alter, or conſume the more ſubtile and ſpirituous parts of vegetables, and, therefore, unfit to be uſed where theſe more delicate parts are required.

8. That the buſineſs of infuſions and tinctures may be greatly improved, by extracting the efficacious, or more ſpirituous parts of vegetables, unaltered in their nature, yet concentrated, or brought into a moderate compaſs.

9. That rich tinctures may be extracted, with ſpirit of wine, from the hardeſt reſinous and gummy bodies hitherto known, by means of fixed alkali's, properly applied.

10. That even aqueous ſolutions may be made of the ſame kind of bodies, by means of the tartarum tartarizatum, or ſoluble tartar.

11. That the ways in common uſe for the making of ſyrups and electuaries are improveable, by the obſervance of a few eaſy rules.

12. That, therefore, there are grounds to expect ſome improvement of the common pharmacy, upon the footing it now ſtands, or by barely perfecting the methods of preparing the ſhop-medicines in uſe, without either retrenching their number, introducing new ones, or reducing the art to a greater ſimplicity. See CHEMISTRY, and PHILOSOPHY EXPERIMENTAL.

PHILIPPINE ISLANDS. The Philippine Iſlands, ſituate in the Pacific Ocean in Aſia, are computed at 1200 in number, and extend from North latitude 6 to near 20, and from eaſt longitude 114 to 126, of which 5 or 600 are pretty conſiderable: they are about 400 leagues to the weſt of the Ladrones, 120 ſouth of China, and 200 eaſt of Cochin-China. The air here is very hot, with little difference of ſeaſons, but the rains begin generally in May, and laſt three months. Their chief product is gold, rice, the uſual Indian fruits, beaſts, fowl, and fiſh, with good large nutmegs, which they do not cultivate, however, leſt it ſhould tempt the Dutch to attack them. The natives neither allow the Engliſh nor Dutch to trade hither, leſt they ſhould diſcover their riches and weakneſs.

Their chief iſlands are, 1. MINDANAO, which lies ſartheſt, both to the eaſt and ſouth of them, all extending from north latitude 6, to 9 ¾, and from eaſt longitude 121, to 126, 30. It is the biggeſt of them all, next to Luconia, being, as Dampier ſays, 60 miles in length, and 40 or 50 in breadth; but Captain Hamilton makes it, 140 leagues in length, and other 76 in breadth; though, after all, the latter is very unequal, by reaſon of many harbours for ſhipping, and abounding, as well as it's navigable rivers, with variety of fiſh. The ſoil is fat, the valleys well watered, and abound with rice and other proviſions; evergreens, nutmegs, cloves, and good caſſia lignum, or baſtard cinnamon.

It's chief trade is with the iſland of Manilla, but partly with Borneo. The Dutch come hither in ſloops from Ternate and Tidor, two of the Molucca Iſlands, and purchaſe rice, bees-wax, and tobacco, the laſt of which grows more plentifully in this iſland, than in any other of theſe ſeas, except Manilla, and is an excellent ſort; but the people do not manage it to that advantage as the Spaniards do at Manilla. The common rate of the Mindanao gold, is 14 Spaniſh dollars the Engliſh ounce, and 18 dollars the Mindanao ounce; which is the rather obſerved, becauſe theſe Spaniſh dollars are the current coin in all theſe iſlands.

It is divided into ſeveral principalities of different religions and languages. Thoſe who live in the inland country, among the woods and mountains, are called Stilannoons, and have rich mines of gold ore, and great plenty of bees-wax and tobacco, which they exchange with the coaſters for cloathing, callicoes, muſlins, china-ware, ſilk, and other neceſſaries.

BEHOL, north of the former, towards Mindanao, is but 40 leagues in compaſs. The ſoil of it produces no rice, but yields cocoa and divers roots, much cattle and fiſh, and is rich and gold mines.

MINDORA, which extends from north latitude 12, to 13, and from eaſt longitude 119, to 120; is about 20 leagues long, and 12 broad, and 70 in compaſs, and lies on the weſt ſide of the Philippines, and particularly of Maſbate. It produces pepper, has mines of gold, and a town of the ſame name. It is divided by the ſtraights of Mindora from Manilla.

PHILIPPINA, which being firſt diſcovered, gave name to the reſt, is alſo called Tandaya and Samar, lies, betwixt north latitude 12 and 14 ½, and is the pleaſanteſt of them all, fruitful and rich. It is about 130 leagues in compaſs, and is divided from Manilla, on the north weſt, by the ſtraights of that name.

XOLO lies to the ſouth-weſt of the Philippines. All the ſhips of Borneo touch here, and it may be called the mart of all the mooriſh kingdoms in the eaſt. It abounds with rice, and is the only iſland of the Philippines that breeds elephants. The ſea throws up abundance of ambergris on it's ſhore, and yields pearls; and the ſoil, pepper and other fruits.

MASBATE, to the weſt of Tandaya, is 30 leagues in compaſs, and yields wax, ſalt, civet, and gold, of which here are rich mines, and the ore riſes 22 carats fine, but they are not wrought.

We conclude with the biggeſt, the richeſt, and the moſt northern of all the Philippine Iſlands, viz.

LUCONIA, which the Portugueze call Manilla, after the name of it's chief town, and the Spaniards New Caſtille. It extends from north latitude 14, to almoſt 19, and from eaſt longitude 120, to 124, and is ſaid to be 160 Spaniſh leagues in length, but unequal in breadth, being in ſome places twenty, in ſome thirty, and in others forty leagues over. It affords corn, fruit, and roots in great plenty, as well as wild game and fowl. It produces gold of low touch, and is able to furniſh good materials for carrying on a conſiderable commerce.

MANILLA, lies on a point of land made by a river, which iſſues from the lake of Bahia, and falls into the ſea a little lower, at the town of Cavite; where is a ſpacious harbour, but of difficult entrance, becauſe of rocks and ſhoals at the mouth of the bay.

This iſland has the liberty of ſending two ſhips every year to New Spain; but being limitted to that number, they therefore build them vaſtly large. Theſe carry the ſpices and rich commodities of India to Acapulco, a port in the South-Sea, in the kingdom of Mexico, or New Spain, and bring back the valuable commodities of America and Europe, by which trade the gain is ſaid to he four hundred per cent. See ACAPULCO.

PHŒNICE. This province lies along the Mediterranean coaſt, being bounded by it on the weſt, by Syria propria on the north, by Syria Cava, or Cælo Syria, and Batanea on the eaſt, and Paleſtine on the ſouth, and is at preſent part of the Beglebergate of Tripoly. It is but a narrow ſlip of land from eaſt to weſt.

TRIPOLIS of SYRIA, to diſtinguiſh it from that of Barbary, is pleaſantly and commodiouſly ſituated, at the foot of Mount Libanus. It's diſtance from the ſea is but about a mile and a half, and hath a commodious haven, which comes up within leſs than half a mile of the weſt ſide of it. As to the port, it is rather an open ſea than an incloſed harbour, except that it is in part defended by two ſmall iſlands, which lie about two leagues from ſt. (Maundrel.)

The people here ſpend moſt of the ſummer-time in their gardens, where they buſy themſelves with their ſilk-worms, which is the greateſt manufacture they have.

The air is extremely clear and healthy, and the country round about very rich and fruitful; ſo that the town is ſupplied with every thing it wants or can wiſh for.

BERYTUS is ſituate on the ſame coaſt, about 40 miles ſouth of Tripoly, and about 18 ſouth of Sidon. It's chief commerce, which is very conſiderable, conſiſts in fine tapeſtry, ſilks, camblets, cinnamon, nutmegs, ginger, pepper, caſſia, rhubarb, and cochencal. The ſea banks abound with mulberry, pine, lime, and other trees; and with gourds and prodigious quantities of colocynth: ſome add, that in the neighbouring hills are found a ſort of ſtones, of which ſome reſemble olives. (Moncony & Thevenot.)

SIDON, the antienteſt city of Phœnicia, is ſeated in a fertile and delightful ſoil, between the ſea on the weſt, and Libanus on the eaſt, and about 30 miles ſouth of Berytus.

It is at preſent but a little town, though formerly the metropolis of Phœnicia, and a place of great trade: one of the chief commodities of the place is that of raiſins, which the Baſha lets to proper farmers, who are obliged to be moderate in their prices, leſt they ſhould ſtick in hand. Other merchandizes are oil, aſhes, Egyptian ſoap, rice, blue ſilks, Turkey-leather, cotton, ſenna, piſtaches, buffaloes ſkins, &c. Thoſe they import from Europe, are ſattins, damaſks of Genoa and Lucca, ſcarlet and light coloured cloth, paper, and ſome other of leſs value. Proviſions of all ſorts are here in great plenty, and very cheap. The ſilk-worms are kept in little hutts under the mulberries, and thrive very well, unleſs diſturbed by violent claps of thunder.

Leaving the ſea-coaſts, and turning towards the eaſt, at about 82 miles north-eaſt of Aera, ſtands the famed city of Damaſcus, ſituate on a fertile plain, encompaſſed with hills, and upon the river Barady, which enriches that city and country with all kind of plenty and pleaſure.

The city has ſeparate wards for every trade and calling, and theſe are ſhut up every night by gates, and by a ſtout iron chain by day, to keep off beaſts of burthen. It hath, in particular, above 20,000 inhabitants imployed in making ſcymitars, ſword-blades, and other cutlery work; bridles, and a world of other things in iron and ſteel; all which are in great requeſt through Turkey, and beyond, on account of the fine temper which their water or art here gives to thoſe metals. Other commodities are wines, raiſins, prunes, raw and wrought ſilk, and all other merchandizes of Turkey, Arabia, and India, moſt of which are brought hither by caravans, which go and come from Conſtantinople, Egypt, India, Alleppo, Bagdad, Mecca, &c. As for thoſe which come from Europe, they are moſtly brought hither by the Venetians.

DAMASCUS ſtands about 43 miles diſtent from the ſea, being parted from it by a long chain of mountains, and about 45 almoſt eaſt from Sidon, and 65 ſouth-eaſt from Tripoly. In latitude 33 degrees, 37 minutes eaſt, longitude 37 degrees, 4 minutes.

PHILOSOPHY EXPERIMENTAL. By philoſophy, we underſtand, the ſcience or knowledge of the nature, cauſes, properties, and effect of all created beings, ſo far as they are capable of being known by reaſon, diſcovered by art, or any ways adapted to the human comprehenſion.—By experimental philoſophy, we mean, the art or method of making ſuch experiments upon all material things, as will tend to lead and conduct the human underſtanding into the true and certain knowlege thereof, and their application to all the uſeful purpoſes of life.

REMARKS of general utility to lucrative arts, manufactures, and commerce.

In order to acquire this art of philoſophizing, it's ſcientifical elements muſt be well underſtood; and it's operation perſonally viewed, and manually performed: whence it's two parts of theory and practice.

It's theory, in general, is acquired not only by information, axiomatically and demonſtratively delivered in the ſynthetical manner, à priori; but analytically, and à poſteriori, in particular. It's practice is acquired by a careful inſtruction in the proper manual operations; which, in general, are limited by place, time, the ſubject and ſuitable means; and, in particular, by the manner of performing. Whence are derived numerous arts, trades, and mechanical employments, and their daily improvement; which has induced us to take notice of an article of this kind. How far this knowlege may be advanced by the means of mathematics, ſee the article MATHEMATICS. How greatly alſo the knowlege of chemiſtry may tend to the advancement of philoſophy, grounded on indubitable experiments, and conſequently of various arts and trades, ſee the articles CHEMISTRY, AQUA FORTIS, AQUA REGIA, ASSAY, BLACK [Dyer's Black], BLEACHING, BLUE, BOLE, BRANDY, BREWING, CALLICO-PRINTING, CLAYS, COPPER-MINES, DISTILLATION, DYEING, EMERALD, ENAMEL, FARMING, FLUX [in metalliurgy], GLASS, and abundance of other articles, which the reader will find in the indexes to both the volumes.

I come now to ſhew, how Natural Philoſophy contributes to afford us the neceſſaries and conveniencies of life; whereby our empire is extended abroad, as a knowlege in phyſic, ſecures us at home. And experimentaliſts in philoſophy may greatly reform trade, or improve it; and this equally, if not more, perhaps, than thoſe who are engaged in it, which chiefly lies in the hands of the illiterate. Thus, for inſtance, the huſbandman's ſkill conſiſts in the knowlege of a few plants and animals, their relation to particular ſoils, and management, with the influence of the celeſtial bodies and meteors thereon; all which ſubjects fall properly under the cognizance of a natural and experimental philoſopher.

For he who has attentively conſidered the nature of generation, nutrition, and accretion, both in plants and animals, and knows how to vary an uſeful experiment, ſo as to remedy the inconveniencies, or ſupply the defects thereof; and can dextrouſly apply his own, and others obſervations, may cultivate huſbandry to as much advantage, as the ordinary farmer tills his land.

An attentive conſideration of the parts that conſtitute each particular trade, would ſhew how they all depend upon philoſophy, and might be farther improved. Thus, the principal parts of refining are a knowlege of the preparation of aqua fortis, and it's operation, upon ſilver, copper, and gold, with the means to purge it, that neither gold may be diſſolved, nor ſilver precipitated, when diſſolved, thereby; to know what proportion is diſſolvable therein, and the quantity of water neceſſary to weaken the ſolution; how long copper-plates ſhould lie, to precipitate the ſilver it contains; how lead is colliquated with, and what proportion thereof is requiſite to carry off the baſer metals upon the teſt; how cupels are made; and, with theſe, to draw off lead or antimony from ſilver or gold; to diſcern when the metal is ſufficiently refined; and, laſtly, to know the proper proportion of gold and ſilver, to make water-gold. This trade, indeed, is underſtood by few, and not ſo diffuſive and complicated as hundreds of others; yet, if they were all judiciouſly reſolved into their component parts, it would doubtleſs appear, that moſt of them are only corollaries, deduced from particular obſervations in philoſophy, or the bare application thereof, to the uſes of human life. And if ſo, it is very probable, that farther diſcoveries, in the nature of the materials, the ſubjects of trade, and a knowlege of the laws they obſerve, may reform or meliorate ſeveral of it's branches.

This too is performable, by odd and unſuſpected means; ſo that, perhaps, the chemiſt's charcoal, may prove an excellent equivalent for manure, if a vegitable ſalt, as probably it is, be the cauſe of the land's fertility. For chemical experiments may diſcover the nature hereof, and thereby afford uſeful directions towards the melioration of arable, paſture, and woodland. From the experiments which have been made upon earths, dungs, and ſeeds, whereby it hath been found that ſalts abounded in the liquors they yielded; we ſee reaſon to wiſh this enquiry were farther proſecuted, towards the improvement of huſbandry. Whoever has obſerved thoſe many particulars in this art, which cauſed Sir Francis Bacon to pronounce nitre to be the life of vegetables; and conſiders how land is improved by pigeon's dung, which impregnates it with ſaltpetre; and, laſtly, knows, that moſt fat earths, defended from the ſun and rain, and left to themſelves, will ſoon abound in nitrous ſalts; whoever conſiders theſe things, will, perhaps, believe a philoſophic enquiry into the nature of ſaltpetre, may be of great uſe in farming.

I once cauſed ſome earth, ſays Mr Boyle, to be dug up, from under a pigeon-houſe, and diſtilling it in a retort, little or no oil, but a conſiderable quantity of reddiſh liquor came over, ſo far unlike ſpirit of nitre, that it greatly reſembled volatile ſalts; for, without being rectified, it not only turned ſyrup of violets green, and precipitated a ſolution of ſublimate into a milky ſubſtance; but there alſo came over therewith, into the lower part of the receiver, a dry ſalt, in taſte like the volatile kind, and ſo far an alkali, that it readily hiſſed, and cauſed an ebullition in an acid menſtruum. From hence it ſeems, which is highly remarkable, that a ſalt, very different from acid, may, by the operation of the earth and air, be ſo altered, as afterwards, by a ſlight management, to afford ſaltpetre, whoſe ſpirit is ſtrongly acid. And dropping aqua fortis upon pot-aſhes, diſſolved in a little fair water, 'till the ebullition and hiſſing were perfectly ceaſed; and, having filtered this liquor, and ſet it in an open veſſel to evaporate with a gentle heat, being in two or three days time removed to a cold place, it afforded very pure cryſtals of ſaltpetre.

I might add, that the knowlege of the nature and diſtinctions of ſaline bodies, may greatly aſſiſt to ſhew the differences of the various ſaltneſs that is found in ſoils; and with what ſort each plant or ſeed is moſt delighted. By this means many tracks of land, now thought barren, for want of a knowlege hereof, might be rendered uſeful. A ground may be made to yield much better crops than uſual, by being ſucceſſively ſown with a proper variety of ſeed, agreeable to the nature of the particular ſalt, at preſent inherent in the earth; for, by the abſence of one kind of ſalt, it is better prepared to feed thoſe plants that delight in another. And of this the huſbandmen have, in ſome meaſure, already taken notice, as appears by their ſowing turneps in grounds too remote for the convenient carriage of compoſt, to ſerve for manure, and fit them for wheat. And I am of opinion, that any land, except mere ſand, might, without much culture, be made fertile, were we but well acquainted with the ſoil, and provided of the various ſorts of grain that nature affords in different countries.

There are various ſoils, both in England and elſewhere, left quite uncultivated, wherein ſome foreign vegetables might thrive and proſper. Many large tracks of ſteep and craggy land, expoſed to ſouthern ſun, lie waſte in ſeveral hot countries, where grapes are not planted; though in France, Italy, and even on the Alps, ſuch lands are turned into excellent vineyards.

An experienced way of cauſing wheat to grow and proſper, even in clay, where no grain had thriven, was communicated to me by a perſon who had uſed it; and the art conſiſted in ſteeping the ſeed, for a determined time, in a certain expreſſed oil that is not dear: whence it is probable, that without altering the ſoil, a ſlight change, properly made in the ſeed alone, may ſo fit them for each other, as to yield a large increaſe. I have alſo ſeen in a collection of rarities, an ear or two of corn, not much unlike our common wheat, one grain whereof, in a warm country, from whence this was brought, would afford ſo vaſt an increaſe, that the poſſeſſor was almoſt aſhamed to declare, and I am more afraid to repeat it.

An Engliſh gentleman, however, aſſured me, that having ſown ſome of this corn, in land of his own, he found a ſingle grain to produce ſeveral hundreds; though that came nothing near what it was ſaid to do, in a more ſuitable ſoil and climate.

The learned Acoſta affirms, that in ſeveral parts of America, where the European wheat will not proſper, the Indian, or Virginia ſort, called alſo maiz, ſucceeds ſo well, that though the grain be large and more than one cluſter often found upon one ſtalk, yet, in a ſingle cluſter he has counted ſeven hundred grains. He adds, it is not unuſual in that country, to reap three hundred times the quantity ſown. This, indeed, ſeems a little incredible; but I myſelf have found, even in England, ſuch a multitude of grains, in one of the vaſt number of ears produced from a ſingle grain, that I am inclined to abſolve Acoſta.

In ſome eaſtern countries, a ſort of rice, the chief food of the natives, thrives excellently upon land ſo watery, that the perſon is there obliged to wade who ſows it. Yet this is leſs ſtrange than what Martinius tells us, as a practice in ſome parts of China; where many places, that lie all the year under water, have ſeed ſo well appropriated to them, that though thrown in the water, as baits for fiſh, it ſhoots up in it's proper ſeaſon, appears on the ſurface like a verdant field, and affords a plentiful crop.

To proceed: chemiſtry and hydroſtatics may help to diſcover the kinds and degrees of ſaltneſs, reſiding in ſeveral other bodies,

dies, the husbandman employs. I myself have made surprizing discoveries, in working upon some sorts of earth, by chemistry. And as, in particular, the fertility of manure seems to depend upon it's salino-sulphureous parts, a practical enquiry into the differences and various operations of salts, may probably assist to discover various kinds of compost, with the proper manner wherein to multiply, compound, and apply them. See MANURE.

And thus, not only fire, but water, by means of the engines, and contrivances to be learnt from hydrostatics, may be made more serviceable to husbandry than ordinary. Martinius assures us, that in one province of China, they water their rice-fields by means of movcable mills, placed as occasion requires, upon any part of the banks of a river. The wheels here, raise the water in buckets to a great height, above the surface of the river; whence it is afterwards convcyed to the destined places in proper channels. But the art of levelling, or conducting water upon the ground, may be farther serviceable in this case. For soils, suited to this way of culture, are thereby greatly improveable; though it be almost entirely neglected, both in England and elsewhere. Some ground, by being skilfully overflowed, has doubled it's increase. And wild boggish places, have been turned into a good dry and compact soil, by barely trenching and overflowing it equally, six or seven times in a year, between the beginning of October, and the middle of April, with water from a neighbouring spring, that is enriched by no land floods, and rose in a barren and uncultivated place; so that this ground afforded hay, in such plenty, as to become worthy twenty times it's former purchase. Other instances of the like improvement have been made, from skilfully overflowing grounds with common water.

I must here observe, that the more comprehensive any trade is, the more improvements it will admit of from philosophy; because, depending upon many natural productions and operations, there must arise many particulars to be meliorated or reformed, either in the manufacture or profession. Thus corn, in husbandry, renders a knowlege of the whole art of tillage convenient, with the ways to order cattle, the dairy, or orchard; a kitchen garden, wood, flax, hemp, hops, bees, &c. and the particular productions of some of these, as honey, cyder, &c. are capable of improvement, and require skill to manage. In the variety of particulars, therefore, wherewith the husbandman deals, there must be some, wherein the superior knowlege and experience of the philosophers will be serviceable. And, as one of the principal parts of husbandry depends upon preserving cattle from diseases, and the fruits of the earth from putrefaction; natural philosophy, founded on experiments, may conduce to both these ends. He who can accelerate, and delay putrefaction in bodies, may shew the husbandman how to prepare variety of manures; to enrich his ground with the peculiar kind of salt it wants; and also, how to preserve several seeds, flowers, and fruits, beyond their natural duration. Thus many have continued fruits, as quinces, for instance, good almost all the year round, by a pickle made only of water, and the refuse of quinces, or what is easily obtained from them; but cherries have been preserved fresh and juicy for more than a year; and that without salt or sugar, only by a proper spirit of wine, well impregnated with the tincture it drew from the skins of the same kind of fruit.

The great advantage accruing to the Dutch, from the best way of pickling herrings; and to others, from so ordering the flesh of animals as to keep sweet, in passing from Europe to the West-Indies, and sometimes, even 'till it comes back again from thence, may shew what benefit husbandry might receive from discovering means to preserve the production of the earth; but especially if it could be extended to small wines, cyder, perry, &c. that are commonly made in large quantities, but soon decayed at home, and are unfit to be transported to very distant countries. The virtue of sugar, to strengthen vinous liquors, and render them durable; and the method of preserving great variety of fruits, and the juices of plants, without the help of salt, or any thing sharp, give some reason to expect, that very different ways may be found to make substances outlast their natural term of duration *.

* To preserve fruit and flowers for a whole year, take saltpetre one pound, bole-armoniac two pounds, common clean sand three pounds; mix them together, and, in dry weather, take fruit or flowers of any sort, not fully ripe, each with it's stalk, and put them singly into an open glass, 'till it be full; cover it close with oil-cloth, and in a dry cellar, put each of these glasses four fingers deep under ground, so that quite round above, as well as below, there may remain two fingers thick of the mixture. See Philosophical Transactions, No. 237. p. 44.

Again, that great damage the husbandman often sustains, by stubborn and contagious diseases in his cattle, might, in good measure, be prevented by the instructions of the philosopher, especially if skilled in physic. For, as many diseases, so many cures also are analogous in men and brutes; though remedies, for several reasons, usually succeed best in the latter. A gentleman has, for several years, preserved his numerous flocks in a moist country, when most of his neighbours lost theirs, by the use of Spanish salt. After having bled them a little under the eye, he obliged them to take down a small handful of it, two or three times in a few days, without permitting them to drink any thing for some hours after it. This remedy he employed at that season when there is a suspicion the sheep will begin to be bloched. I might here alledge the virtue of crude antimony, against the foulness of the blood, and leprosy in swine; of quicksilver against the worms in horses; of the remedy of Palmarius, which, he asserts, is infallible against the bite of a mad dog in cattle; of a more probable one also, that serves no less in men, the effect whereof has been experienced of the antimonial cup, for several diseases in horses and sheep; and lastly, of another antimonial medicine, very successfully used to fatten horses after sickness; all these, and many more receipts of medicines, highly esteemed for their efficacy in several distempers, both in men and brutes, might here be set down, were it needful.

Moreover, there are many reasons assignable, why husbandry, with the assistance of philosophy, may be improved by the addition of a therapeutic part, with regard, not only to the animal and vegitable productions it consists in, but also to the various distempers of the ground itself.

For, were the causes of barrenness therein, with it's respective indisposition to nourish particular plants or animals, discovered, many of those defects may doubtless be removed by rational applications, and proper means of cure; as we see in other inanimate bodies, and even metalline ones. And, from a knowlege of the particular cause of a barren soil, fertility may perhaps be procured to it, without much cost.

Some ingenious husbandmen have lately declared themselves satisfied with a way of meliorating two of the most fruitful kinds of land, clay, and sand, that consists only in skilfully mixing them, in a due proportion, according to the use for which it is designed. [See MANURE.] And an ingenious gentleman, to satisfy some curious persons, purposely sowed some corn, near a place which prospered so strangely, that one root yielded sixty odd ears: and, what is more surprizing, this wonderful increase depended only upon a philosophical observation, without any thing extraordinary having been done, either to the ground or the seed.

To proceed: not only the necessary trades, but also the pleasurable ones, are improvable by philosophy; for they chiefly consist in the knowlege and application, of some natural productions and operations. And the things, by this means acquired, will, without changing their nature, serve us in different capacities; thus wine quenches thirst, recovers a fainting person, and intoxicates: the same spirit of wine, wherewith the physician draws his tinctures and prepares his extracts for medicinal purposes, will dissolve benjamin for the ladies; which, mixed with water, makes an excellent cosmetic; and the same spirit, when applied to the proper ingredients, produces several kinds of fine varnish; the tincture of benjamin, likewise, is applicable to the same uses, and is, itself, a pretty odoriferous varnish, and good against tetters, they being bathed therewith.

That knowlege and skill may make happy applications, even of unpromising things, to the delight of mankind, appears evidently from musical instruments; for, who would imagine, did he not know it, that a few pieces of wood, joined together, and the guts of cats or lambs, twisted into strings, should, when artificially struck, afford the most ravishing pleasure? We might here go on to instance, in the art of colouring, perfuming, confectionary, and of preparing cosmetics, &c. did we not chuse to recommend philosophy, from the pleasure it affords the reason, rather than from the charm wherewith it bribes the senses. Though what has hitherto been delivered about the usefulness of philosophy to trades, belongs chiefly to those wherein nature herself seems more concerned than the artificer; yet such are not here exempted, wherein art has the greatest share. These, indeed, rather depend upon the manual dexterity of men, than a skilful management of nature's productions, by operating on each other; yet, even here the naturalist may be serviceable.

Many manual trades, especially as exercised in large towns, consist of several parts, and require other trades to prepare and dispose their materials before they can be finished and fitted for sale. And although the finisher performs his part, by means of his hands and tools, yet the subordinate workmen usually stand in need of some observations on the conditions of the body they deal with, or must else employ some physical operation; and herein they may be greatly assisted, by an intelligent philosopher. Thus, stone-cutting, though it seems wholly to consist in shaping it's materials, contains many particulars, wherein might easily be shewn, that experimental philosophy would be beneficial. For unusual methods might be discovered to examine the nature and goodness of marble, alabaster, or other stones. A competent knowlege of the sap found in stones, to be employed in building, is so necessary, that experienced master workmen assure us, that stone dug at one season, will soon moulder away; when the same sort, taken out of the same quarry, at another, will endure the weather for many years, if not ages. The cements

also,

alſo, and ſtoppings, as they call them, which are of great uſe in this trade, may be improved by one who is verſed in ſuch kinds of mixtures. I remember I once taught an inquiſitive artiſt a fine cement for rejoining broken ſtatues; who, by the like means, in other caſes, could counterfeit marble ſo well, that though large cavaties were filled up with cement, the work would paſs for entire, thoſe parts being undiſtinguiſhed from natural marble. Want of curioſity keeps our ſtone-cutters, in England, unacquainted with the ways of working upon porphire; for none of them will undertake, either to cut or poliſh it. Other countries alſo, are ignorant herein, though it was in great uſe among the Romans; and, even now, at Rome, there are few who make a very great advantage of this art. I am not certain what they employ for that purpoſe, but believe it to be powder of emery; for I have, in England, cauſed a porphire to be cut by means of that, ſteel ſaws, and water. Not here to mention, that I have an art to ſtain white marble with durable ſpots, ſmall or large, and of red or brown colour.

But the art of ſtone-cutting depending greatly upon the goodneſs of the ſteel tools, which they muſt have from the ſmith, and the dealers in iron; if theſe trades were improved, it would tend to the perfection of the other. And that the ſmith's craft, however manual it appears, may be meliorated by a knowlege of nature, is not difficult to manifeſt.

The ways of making iron and ſteel, are not only improveable before they come to the ſmith's hands, but better expedients may likewiſe be deviſed for ordering them, when they come to be faſhioned into weapons and tools.

The ſword-blades, and other weapons made at Damaſcus, are every where famed (and that juſtly, as far as appears from ſome trials made) for cutting aſunder even iron itſelf; yet it ſeems to be only the ſkill of the artificer that gives them this pre-eminence. Their goodneſs, indeed, might be preſumed to proceed from ſomething peculiar in the materials of that place, did not Bellonius inform us, they have no mines of their own, but receive all their iron and ſteel from other countries, the artiſts giving them this temper and perfection.

In tempering of ſteel, it is reaſonable to ſuppoſe, that beſides the goodneſs of the metal, and the particular degree of heat, which is all the workmen regard, the nature of the fluid, or other body, wherein the hot metal is plunged, and other proper methods of ordering it, may greatly contribute to bring it to great perfection. I have met with a graver of ſo ſurprizing a temper, that all the known means, both I and others uſed, could not let it down; though no graver made in England, could have withſtood us. This was afterwards affirmed to have been tempered at Damaſcus. I am acquainted with a way to harden gravers, without quenching them in any liquor, tallow, or unctuous body; and having recommended to another, an uncommon method of tempering them, he brought me one, which, being plunged into a certain cheap mixture, had been hardened and tempered at once. And, what may ſeem more ſtrange, though ignition and extinction in cold water be the common way to harden ſteel, yet, by obſerving one certain moment of time, ſteel may, by this means, be made ſurprizingly ſoft. But farther, a curious maker of ſteel tools, told me, he obſerved a difference between pump and river water, in giving their temper, each being fit for it's reſpective ſort. Beſides theſe, there are many other particulars, wherein iron and ſteel are improveable by the naturaliſt. And firſt, the metal may be rendered ſo ſoft, as by means of ſtrong moulds to receive variety of figures. This an eminent artificer aſſured me, he has ſeen done in iron, with conſiderable profit. Secondly, it may be rendered fuſible, and I myſelf with a charcoal fire, and a flux powder compoſed of tartar, ſulphur, and arſenic, have run it into an exceeding hard, and very poliſhable maſs. Thirdly, it may be ſo ordered, as to continue long free from ruſt; and an ancient virtuoſo, who purchaſed the ſecret for a great prince, uſed to ſhew ſteel ſo prepared by tempering it in water, impregnated with the bark of a certain tree. In a word, there are various other means, whereby iron and ſteel, or the trades that uſe them, may be meliorated; for the naturaliſt may advance an art or profeſſion, in abundance of reſpects; as either by diſcovering variety of materials, or rendering thoſe already in uſe better conditioned; by detecting and reforming unheeded errors or miſtakes, by deviſing more eaſy and compendious methods of operation, by improving the auxiliary branches; by inſtructing the artificer to chuſe, examine, and preſerve his tools and materials; for laſtly, by ſhewing how to make the ultimate productions ſooner, cheaper, eaſier, and better, applicable to more uſes, or more durable than uſual, with other ſervices, too numerous here to relate.

But farther, a naturaliſt may likewiſe introduce new trades, as well as improve the old ones; and that, either by inventing them originally, or bringing them into requeſt, where they were unknown before: for neither nature nor human invention, is ſo far exhauſted, as not to afford them, were philoſophy employed in the ſearch. We may here obſerve, that a trade in many caſes, differs from an experiment, not ſo much in the nature of the thing, as it's having been accidentally applied to human uſes, or made a buſineſs by a company of artificers, in order to their own profit, which are things extrinſical and accidental to the experiment itſelf. Thus, for example, the exploſion occaſioned by a mixture of nitre, ſulphur, and charcoal, whilſt it paſſed no farther than the laboratory of the monk, the reputed inventor of gunpowder, was only an experiment; but, when once the great uſe to be made hereof became more generally known, and people reſolved to make a buſineſs of improving and applying it, this ſingle experiment at once, gave riſe to founders of ordnance, gunſmiths, engineers, and abundance of other trades.

The diſcovery of the polar virtue in the loadſtone, has occaſioned a diſtinct trade, the art of compaſs-making: and many other inſtances of the like kind might be produced, eſpecially where mechanical tools and contrivances conſpire with the diſcovery of natural productions; ſo that frequently, a very few mathematical theorems, or phyſical obſervations, reduced to practice by the manual operator, become trades. Thus, two or three dioptrical propoſitions, falling into mechanical hands, have introduced ſpectacles, teleſcopes, and microſcopes. Quickſilver being obſerved to amalgamate with gold, and to be again ſeparable therefrom without diminution, produced the art of gilding; which principally conſiſts in mixing, by means of a proper heat, pure gold with five, ſix, or ſeven times it's weight of quickſilver, 'till it become of a conſiſtence fit to ſpread upon the ſilver or copper deſigned. For the gold being by this means evenly overlaid, they can eaſily by fire force away the mercury; and with a liquor, by workmen called colouriſh, wherein nitre, verdigreaſe, ſal armoniac, and other ſaline bodies are diſſolved, reſtore it's luſtre to the remaining gold, which they afterwards make bright by poliſhing.

The ſlight and obvious remark that a ſpring, phyſically conſidereded, was a continual and durable force, with it's corollary, that this force, properly applied, might ballance the weight required to move the wheels of a clock, joined to a ſuitable mechanical contrivance, produced thoſe uſeful machines called watches, which now afford a handſome ſubſiſtence to many dextrous artificers; and which, though cuſtom has rendered them familiar to us, were unknown to the Ancients, and highly prized and admired even in China, when firſt carried thither.

The diſcovery that aqua fortis diſſolved ſilver and copper, but would not work upon gold, added to the obſervation, that lead, melted with either of the noble metals, and then forced from them by fire, will carry off with it any of the baſer ſort, has, in later ages, produced the art of refining.

The operations of ſome lixivia, clays, and other common things, upon the juice of the ſugar-cane, has not only added to the ancient huſbandry the cultivation of theſe canes, but given birth to the ſeveral trades of ſugar-boilers, ſugar-bakers, refiners of ſugar, and confectioners, not to mention the advantage it brings to the apothecary.

But even a very ſlight contrivance or manual operation, if it prove fortunate, may ſupply men with a trade, as we ſee in the art of printing. And the lucky trial made to bore very ſmall holes through broken China cups, with the uſe of ſlender wire, inſtead of thread or ſilk, to faſten the pieces together, has given being to the exerciſe hereof, as a vulgar trade in the eaſtern countries. Their art alſo of varniſhing or japanning as we call it, which depending on a knowlege of ſome gums and liquors in their country, employs multitudes of tradeſmen among them, is, as I am credibly informed, now practiſed at Paris. And finding from Linchoten, that in China and Japan they made this excellent varniſh of gum-lacca, I imitated one of the beſt ſorts of it, by diſſolving that gum in highly rectified ſpirits of wine, giving it a colour, and laying it on in a particular manner. I might farther alledge, the art of cultivating and gathering ſugar-canes, with the manner of ordering their juice, as a recent inſtance of the tranſplantation of arts and manufactures; for, as I am very credibly informed, a foreigner accidentally bringing ſome ſugar-canes as rarities, from Brazil into Europe, touched at Barbadoes, where an Engliſh planter obtained a few of him, with ſome hints as to their cultivation and uſe; which, by the curioſity and induſtry of the Engliſh colony there, were ſoon ſo well improved, that the iſland became, and ſtill continues, able to ſupply great quantities of ſugar. I am the more particular in this inſtance, becauſe it is very remarkable, and ſhews, how many hands the introduction of a phyſico-mechanical art may employ: for the negroes, who live as ſlaves there and at Jamaica, and are almoſt wholly employed in the ſugar-trade, amount to between ſixty-five and ſeventy thouſand, according to the Rev. Mr Hughes.

Thus then, it appears probable, that experimental philoſophy may multiply trades, as well as improve them. Nor do I deſpair, that among the means of increaſing trades, one may be the retrieving of ſome that were anciently practiſed, but ſince loſt, of which the learned Pancirollus gives us a catalogue. For, as the ſkilful diver brings up, not only pearls and coral, but alſo ſhipwrecked merchandize, ſo the experimental philoſopher dives into the deep receſſes of nature, to recover inventions ſwallowed up by the injuries of time, as well as to bring to light her hidden riches.

But,

But, ſtill farther, I am inclined to think, there is no profeſſion, condition, or, perhaps, individual perſon of the ſpecies, that may not, one way or other be advantaged or accommodated, were all the truths diſcovered by natural philoſophy, known and applied. So that beſides thoſe inventions, which are formed into trades, there may be a multitude of looſe particulars, whereby the naturaliſt might highly gratify and aſſiſt mankind. The nature of the thing will ſcarce permit me to illuſtrate this aſſertion, without deſcending to inſtances trifling in themſelves, if not contemptible; for which, reaſon, I ſhall here content myſelf with a few.

A great lady, lately complaining that ſhe could not write in the common way, without blacking her fingers, I deſired her to prepare her paper with a fine powder, made of about three parts of calcined copperas, two of galls, and one of gum arabic; which being freſh mixed and rubbed with a hare's foot into the pores of the paper, when that came to be wrote on with fair water, it would immediately diſcover black legible letters. Having ſeveral times, occaſion to make a word or two lately written, appear as if written long before, I lightly moiſtened them with oil of tartar per deliquium, more or leſs diluted with fair water, as I deſired the ink to appear more or leſs decayed. Another cleanly way of writing without ink, is by rubbing the fine powder of exquiſitely calcined harts-horn, clean tobacco-pipes, or rather mutton-bones, burnt to a perfect whiteneſs, upon the paper, and then uſing a ſilver bodkin or the like, as a pen. A very ſimple and eaſy method of making white table books, is a temper pulverized ceruſe, with a ſtrong ſolution of gum arabic in water, which being brought to a thick conſiſtence, muſt be rubbed over the paper, and ſuffered to dry. A very ingenious artificer, having contrived an uſeful engine, a neceſſary part whereof was a glaſs filled with fair water and ſtopped, complaining that froſty weather by freezing the water broke his glaſs; I adviſed him to uſe good ſpirits of wine, inſtead of the water, or to ſave the expence of that, ſea-water ſtrengthened with a little ſalt; or laſtly, common ſpring-water, with a twentieth or tenth part of ſalt diſſolved therein; for I have found none of theſe, though clear, to freeze in the ſharpeſt of our winters in England. A confection made up with the pulp of ſloes, accidentally ſtaining a large quantity of new damaſk from the top to the bottom, by ſteeping it for ſome hours in new milk, and afterwards cauſing it to be carefully waſhed in more of the ſame, the damaſk came out unſtained and white. Urine will uſually take ſtains, even thoſe made by ink, out of linnen; and with ſtrong ſpirit of ſalt I have done the ſame; firſt wetting the ſpotted places with fair water, whence after waſhing, no iron-mole has remained. Some ingenious perſons who deal much in lixivia and brines, complaining of inconveniencies that attend the trial of the ſtrength of ſaline liquors by means of an egg; for to mention no others, the ſame egg will, by being kept, grow lighter, and therefore, when ſtale, they have uſually a large cavity at the bigger end; I recommended to them the uſe of a piece of amber for that purpoſe, of what magnitude beſt ſuited their occaſions. Being once in a place where I could not procure ſome Dantzic vitriol that I wanted, and obtaining therefore ſome liquor which the rain had waſhed from green vitriol, or copperas-ſtones, and adding thereto a proper quantity of copper, I made it ſerve as a menſtruum to work upon the metal; and by exhaling the ſolution, obtained the blue vitriol I wanted. And the likee, I doubt not, may be done with all thoſe common green vitriols made of iron, wherein the ſaline part is not too much ſatiated with the ferruginous.

A great dealer in cyder, expreſſing a deſire to be able to make that liquor ſtronger, ſo as to keep longer than ordinary, I told him to infuſe, for twenty-four hours, in ten or twelve gallons of the juice of apples, about two buſhels of the ſame kind of fruit, groſsly bruiſed; then gently preſſing them, to repeat the infuſion, obſerving not to make it too thick: and this ſucceeded excellently.

Searching accidentally in a dark place, where ſtood ſome chemical glaſſes I knew nothing of, negligently ſtopped, and not wrote upon, one happened to fall, and grievouſly ſtain a new ſuit I had on; but judging, from the nature of the ſtain, that it proceeded from ſome acid ſpirit, by ſearching about, and ſmelling to the remaining bottles, I found one that I gueſſed by it's ſcent, to abound with volatile ſalt, and with this liquor I bathed the ſtained parts, which immediately reſtored them to their former colour. By the like means alſo, I have preſently remedied the diſcolourations made in garments, by fretting liquors, which would otherwiſe have been thereby rendered unfit for wearing.

A virtuoſo having made a ſolution of gold, ſuſpected the metal alloyed with copper, and therefore unfit for his purpoſe; I adviſed him to precipitate the gold by an urinous ſpirit, which it did, into a fine calx, while the fluid, remaining highly tinged with blue, betrayed the copper that had been uſed for alloy.

Theſe trifling inſtances being more pertinent to my deſign, than others in themſelves of greater value, is the reaſon I have choſe them; nor ſhall I repent the mention of them, if they ſerve to ſhew, that the meaneſt experiments may ſometimes be uſeful, and better adapted to convince ſtrangers to philoſophy of it's numerous uſes, than thoſe of a higher and obſtruſer nature. As to know the uſe of a bladder of air, may be more ſerviceable to a pilot in a ſhipwreck, than the moſt hidden properties of the magnet; ſo in ſome caſes, obvious and ſlight experiments prove vaſtly more welcome and uſeful, than more conſiderable ones would at another time: ſo true it is, that 'every thing is beautiful in it's ſeaſon.' For my part, I cannot but hope, that natural philoſophy will prove daily more ſerviceable both to particular perſons, and trades themſelves; eſpecially if a farther enquiry be made, and thereby new qualities detected, and unheeded uſes of natural and artificial philoſophy diſcovered. For whoever narrowly conſiders it, will find, that trades at preſent, deal with but very few of nature's productions, in compariſon of thoſe they leave unemployed; and that what they do make uſe of therein, are their obvious qualities, bating ſome few more ſecret properties which chance, or a lucky ſagacity, rather than ſkill and enquiry, have diſcovered; and, therefore, I ſcruple not to aſſert, that if men were thoroughly ſenſible of their own intereſt, and would carefully keep their eyes open upon the properties of things, and the application that might be made thereof in human life; they might not only diſcover new qualities thereby, and ſo produce NEW TRADES, but even convert them to ſuch uſes as the inventor little imagined: and of this I might produce various inſtances. To theſe general conſiderations I muſt add, with regard to the following, that the reader is not to expect a methodical enumeration of all the grounds and motives I have to expect greater advantages from a future progreſs in the knowlege of nature, for I chuſe to confine myſelf to what I can render probable by examples, and inſtances of that which is already acquired, or very likely ſoon will be. It muſt not, therefore, be imagined, that I have overlooked all the particulars pertinent to my ſubjects; nor that I propoſed to ſet down all the inducements that might be brought, to ſhew the uſefulneſs of experimental philoſophy. My deſign is only to render the expectations of advantages to be received from it probable; to do which, is taking a good ſtep towards the attainment of the things themſelves, as Sir Francis Bacon well obſerves. And I the rather endeavour to heighten mens expectations herein, becauſe many there are, who, being bred up in the vulgar barren philoſophy, judge of all philoſophy by that; and becauſe ſome moroſe authors and deſpondent perſons, who have unſucceſsfully attempted to perform things delivered by unfaithful writers, fancy, and would perſuade others, that nothing conſiderable is performable by natural philoſophy; our foreſathers having, if we credit theſe perſons, had the good luck to hit upon all the profitable inventions which philoſophy can afford mankind. It may here alſo, poſſibly be expected that I ſhould treat particularly of the principal means whereby a naturaliſt might advance trades, and aſſiſt mankind to recover part of his loſt empire over the works of nature. And I confeſs I have had thoughts of a project to advance experimental philoſophy, conſiſting of ſuch heads as theſe. A proſpect of what may probably be attained to by philoſophy, both in theory and practice. A brief account of what is already obtained thereby. The imperfection of our preſent attainments. What helps we now enjoy. The inſufficiency of our preſent helps. The hinderances and cauſes of them. And laſtly, the means and helps that may be applied. See ROYAL SOCIETY.

PHILOSOPHICAL CHEMISTRY conſiſts of three parts, viz. invention, rationale, and experiment. Whence it might be defined, the particular exerciſe of the inventive and rational faculties of the mind upon chemical ſubjects, operations, and effects, leading up to experiments and back again; ſo as to draw concluſions, account for phænomena, ſtart problems, and attempt their ſolution in this circle ſucceſſively *.

* Nec manus nuda, nec intellectus ſibi permiſſus, multum valet: inſtrumentis & auxiliis res perficitur; quibus opus eſt non minus ad intellectum quam ad manum. BACON.

Philoſophical chemiſtry, therefore, is the ſource and ſoul of the whole art; as by inventing, reaſoning, comparing, and adjuſting of things, directing experiments, and concluding from the reſult, it forms new doctrines, and makes new diſcoveries, for itſelf, and all the other branches, to improve and apply.

In the way of invention, this part of chemiſtry is more particularly applicable: (1.) To the imitation of natural and artificial things: (2.) To the production of new artificial bodies: (3.) To the ſtarting of new arts and trades: and, (4.) To the ſupplying of deſiderata, or defects in the old ones. (1.) As natural bodies may be ſo diſſolved or taken to pieces, as in many caſes to diſcover their conſtituent parts or ingredients; philoſophical chemiſtry hence forms rules for imitating various productions of nature; which, in ſome particulars, is done to great exactneſs; as in the making of cinnabar, vitriol, &c. where the reſolution has been found eaſy; in others leſs exactly, where, by the common methods, the reſolution has hitherto proved more difficult, as in the buſineſs of artificial gums and metals, though ſome well meant attempts have appeared in this way too.

The like alſo is to be underſtood of artificial bodies, made in one country and imitated in another; whence the imitataion of Venice glaſs in England, the imitation of porcellain, the Japan varniſh, various refinements of foreign drugs, ſugar, &c. in Europe: all which were not caſual, are of pure chemical extraction: and the proper enquiries into things of this kind, fall under the inventive part of philoſophical chemiſtry.

(2.) New artificial bodies are chemically producible ab origine, either in the act of ſeparation or combination.

In the way of ſeparation, chemiſtry has invented and produced fermented potable liquors, inflammable ſpirits, ſalts, ſugar, pot-aſh; thoſe vulgarly called chemical preparations, as oils, extracts, ſpirits, &c. various pigments, and all the pure and unmixed metals: and in the way of combination, it has produced ſoap, glaſs, vitriol, gunpowder, all the mixed or artificial metals, &c.

(3.) Arts and trades are the genuine fruits or conſequences of the preceeding diſcoveries, in which view inventive chemiſtry is the purveyor to all the other branches, and has thus ſtruck out a very large number of hints, which are frequently formed in trades. Thus the invention of aqua fortis, for example, has given riſe to the ſcarlet dye, the buſineſs of etching, the art of refining, &c.

(4.) And, as inventive chemiſtry ſtrikes out new arts and new trades, it is no leſs capable of diſcovering means to promote them, or ſupply the defect, which may appear in their firſt eſtabliſhment, or retard their farther advancement. Inſtances of this kind are every where to be met with; particlarly in the arts of ſugar-baking, ſoap-boiling, fermenting, diſtilling, &c. wherein many ſhorter and better methods of working have been ſeverally diſcovered.

(5.) In the way of rationale, philoſophical chemiſtry is particularly applicable: (1.) To the accounting for natural and artificial phænomena and effects: (2.) To the explanation of the general and particular properties, or forms and qualities of bodies: (3.) To the diſcovery of the chemiſtry of nature: (4.) To the conſideration of natural and artificial tranſmutations: and (5.) To the giving a rational theory of medical matters.

(1.) Philoſophical chemiſtry accounts for many natural and artificial phænomena and effects, as it is often in the power of this art to imitate the ſame; whence reaſoning by juſt analogy, it may be allowed to give fair and ſatisfactory ſolutions. After this manner it endeavours to account for lightening and thunder, with their ſtrange effects; the aurora borealis, earthquakes, volcano's, &c. And much in the ſame way it ſolves the phænomena of gunpowder, the phoſphori, and various other ſurprizing productions of chemiſtry itſelf.

(2.) As this part of philoſophical chemiſtry is uſed to explain the general and particular properties, or forms and qualities of bodies, it conſiders heat, cold, light, moiſture, dryneſs, volatility and fixedneſs, fluidity and firmneſs, continuity and contiguity, colours, taſtes, odours, congelation and conglaciation, efferveſcenſces, fermentations, putrefaction, ſolution, precipitation, and the various operations of chemiſtry, with numerous other phænomena; ſo as to ſhew how they are produced, effected, altered, or changed in bodies, and thence to make out their general and particular hiſtories.

(3.) Philoſophical chemiſtry finds many reaſons for allowing a chemical agency in the production of natural bodies, and their manner of acting upon one another, whence they bring about a kind of true chemical effects. And upon this foundation, the original compoſition and ſtructure of natural bodies, is rationally accounted for, with the operations and effects of the elements upon each other. Thus water and air may be chemically conſidered, as two grand menſtruums of nature; which, by means of the ſun's heat, and the ſubterraneal warmth, are continually at work upon all ſublunary bodies, in order to bring forward various changes, regenerations, and tranſmutations, &c. Whence the origin and appearance of meteors, the generation of hall, ſnow, rain, metals, minerals, &c. And thus all vegetation, anomalization, and mineralization (if theſe words are allowable) may be conſidered and accounted for, as operations or effects of natural chemiſtry.

(4.) The buſineſs of natural and artificial tranſmutations falls the more particularly under the rationale of chemiſtry, as little elſe but conſideration and reaſoning is required to underſtand and apply it. Theſe tranſmutations may be entirely natural, or entirely artificial, or partly natural and partly artificial. Under the entirely natural, come ſuch as thoſe produced by putrefaction, long ſtanding or digeſting in the air, water, or any natural fluid: whence animal ſubſtances are converted into vegetables, wood into ſtone, metals into one another, bodies into air, water, fire, &c. and theſe are again into bodies.

The tranſmutations effected by the joint concurrence of nature and art, are ſuch as thoſe made by fermentation; where art puts the ſubjects together, and rightly diſpoſes them, but nature performs the buſineſs: ſo in the making of paper, art ſtamps the rags, but nature half putrifies the matter, and thus contributes to change it.

The tranſmutations purely artificial, are ſuch as thoſe made by triture, mixture, long digeſtion, and other chemical operations; as in extracting the mercuries of metals, and ſeveral other inſtances in the ſublimer metallurgy.

Whether theſe artificial tranſmutations be real or only apparent, is not ſo much the queſtion; thoſe who will not allow them for tranſmutations, may call them alterations or changes of one form into another: and, perhaps, they may be no more at the bottom; for, if the changed body be not always artificially reducible to it's priſtine ſtate again (which is ſuppoſed the criterion of an artificial tranſmutation) this may be owing not to any impoſſibility in the thing, but to the want of a ſuitable method for doing it.

(5.) A juſt theory of many medical matters will naturally flow from the foregoing conſiderations, or from a particular application of the rationale of philoſophical chemiſtry to the human body; with a view to obſerve it's natural ſtate, it's diſorders, and the effects of remedies. Thus, in particular, it helps to clear up the diſputes about animal digeſtion, chylification, ſanguification, nutrition, &c. ſhews how the blood and humours are altered by heat, cold, motion, attrition, &c. Whence the origin, nature, duration, and phænomena of diſtempers, and their manner of cure.

(6.) In the way of experiment, philoſophical chemiſtry is univerſally applicable, and many times abſolutely neceſſary to the farther examination, illuſtration, and confirmation, of the preceding parts, or the whole theory of the art, which indeed cannot ſubſiſt without it. For though ſome kind of theory might be formed of philoſophical matters independent of experiments, yet ſuch theories have uſually been found barren, unſound, or uſeleſs, ſo as in no reſpect to be ſafely truſted *.

* Omnem philoſophiam ab experientiæ radicibus, ex quibus primum pullulavit, & incrementum cepit, avulſam rem mortuam eſſe. BACON.

(7.) It is the peculiar province of this part of philoſophical chemiſtry to bring new inventions and theories to the touch-ſtone; diſcover their validity or their inſufficiency; and when found juſt and ſolid, to confirm or ſtamp them with a character that makes them univerſally current, and fit to be employed for farther uſes.

(8.) Thus, when any hint is ſtarted for a new trade, or chemical method invented for the improvement of an old one, before the leaſt attempt is made to apply it in real buſineſs, the proper eſſay or experiment muſt be performed in miniature; which proving ſucceſsful upon repeated examination, with due variation of circumſtances, may now encourage the application, or advancement of this diſcovery into an art.

(9.) And thus philoſophical chemiſtry works in miniature to try the truth, and find out the practicability of things; an example or model of which procedure is preſerved and particularly retained in the buſineſs of aſſaying [ſee ASSAY], which before-hand determines the yield of an ore, and ſometimes the beſt way of working it in large, by previous experiments made in miniature.

(10) By thus confining itſelf to work in ſmall, or in the way of trial, enquiry or ſpecimen only, philoſophical chemiſtry has the opportunity of fully commanding it's ſubject; which it chuſes of a proper ſize for the external ſenſes to view, and examine on all ſides, and obſerve the phænomena, effects, and relations, without being oppreſſed with too unweildy a bulk, or having the mind diſtracted with too many conſiderations; which might attend a large work, and retard it's advancement to a regular and ſtated perfection.

(11.) But when thus the experimental part of philoſophical chemiſtry has perfected any diſcovery in ſmall, with relation to arts or trades, and clearly and ſolidly ſhewn how it may be wrought to advantage in large, it has now performed it's office; and here leaves the thing, or turns it over to the other branches of chemiſtry, whoſe end is advantage, to be carried on in the form of a buſineſs. So Cornelius Drebble, when he had fairly aſſayed and proved the invention of the ſcarlet dye, gave it up to thoſe, who afterwards ererciſed it as a trade. And this appears to have been the general way wherein arts and trades were originally invented, or firſt brought into uſe, for it cannot be ſuppoſed, that large expenſive works ſhould have been ſet up, before any trial had appeared to encourage them.

(12.) It is a particular happineſs in this buſineſs of experiments, that when an enquiry is made by their means, a proper ſet or competent number of them, gone through in due order, will uſually give the diſcovery, or as it were a ſpontaneous ſolution of the problem. But to practiſe this method to advantage, requires a judicious head and a dextrous hand, with a due obſervance of the rules laid down by the lord Verulam, in his noble work De Augmentis Scientiarum, and Novum Organum.

(13.) As the ſeveral parts of the philoſophical chemiſtry are thus ſeparately applicable to ſuch good purpoſes, much greater advantage may be reaſonably expected from the joint uſe and mutual aſſiſtance which they are capable of affording each other, eſpecially by a precedent management and application. A great deal has been already done in this way, but more remains to be done. The lord Bacon ſeems to have gone as far as mortal could, without the aſſiſtance of new ſetts of

experiments

experiments in all the parts of philoſophy, but principally in chemiſtry, up to which experiments his attatchment to nature led him: but at the fiat experimentum he judiciouſly choſe to ſtop, rather than to advance farther by the help of conjecture, or ſuppoſing the event of experiments, which it would require ſome ages to make. As if the fiat experimentum had been directed to Mr Boyle, he took up philoſophical chemiſtry where the lord Bacon left it; and to what lengths he carried it, the preſent ſtate thereof may witneſs.

(14.) But the Engliſh philoſophers ſeem, at preſent, to be got a little out of this chemical vein; and applying cloſer to other ſtudies, leave the cultivation of chemiſtry to the philoſophers of other nations. We have had our Bacons, our Digby, and our Boyle; men as eminent in chemiſtry, as in other parts of uſeful knowlege: but Germany ſeems more diſpoſed to encourage this art, where every court has it's laboratory, and every mountain it's mine: whence it has been uſually well ſupplied with a competent ſett of original chemiſts, ſuch as Agricola, Ercken, Kunckel, Becher, Homberg, and Stahl.

(15.) Hence alſo their contiguous neighbours the Dutch have derived ſo much of this art as ſuits their purpoſe, and fits them to ſupply all Europe with commodities of greateſt conſumption, new fabricated and refined by their induſtrious hands. Nor has leſs induſtry been uſed of late, to promote the knowlege of this art in their univerſities: and though it has been there taught with a view to medicine only, yet ſome have hence took occaſion to launch into the ocean of philoſophical chemiſtry; particularly Boerhaave, that late learned and aſſiduous profeſſor of Leyden.

(16.) But not to leave this buſineſs of philoſophical chemiſtry too looſe, it may be neceſſary to reſtrain it within it's own bounds. It ſeems ſufficiently diſtinguiſhed from the exerciſe of arts by that obſervation already made, as to it's confining itſelf to work in miniature, by way of trial and ſpecimen only; whereas arts and trades, produce in large, upon a ſetled diſcovery, to ſupply the demands of commerce.

(17.) Though we diſtinguiſh this general head by philoſophy experimental (under which we comprehend all kinds of experiments that may be of uſe in arts and trades), yet there is a diſtinction between philoſophical chemiſtry, and the common experimental philoſophy, which lies here; philoſophical chemiſtry, is the buſineſs of experimentally examining into the internal ſtructure and compoſition, not only of natural, but alſo of artificial bodies; ſeparating their conſtituent parts, differently combining theſe again, and thus producing new concretes, and new modifying both the internal or external form of the old ones: whereas the common experimental philoſophy is employed in the diſcovering the more obvious properties, and external uſes of natural bodies; the groſs integrant parts, or entire aggregates, whereof it experimentally orders, diſpoſes, and applies in their natural form and ſubſtance, to the promotion of knowlege, and the uſes of life: but this produces no new bodies, nor enters into the ſubſtance, ſtructure, and compoſition of the old ones; nor changes their external and internal forms; nor ſeparates their conſtituent parts; nor variouſly combines theſe afreſh; nor regards bodies at all as they are reſolvable and combinable, or as they are ſimples, mixts, compounds, aggregates, or de-compounds: all which is the peculiar buſineſs and office of philoſophical chemiſtry.

(18.) Thus again; it is conceived that natural philoſophy cannot, with propriety, be ſaid to extract and purify metals, analyze vegetables, animal and mineral ſubſtances, tan leather, brew beer, dye cloth, make glaſs, produce oils, ſpirits, ſoaps, &c. but theſe and all ſuch, are the direct and proper operations of chemiſtry.—See TANNING, BREWING, DYEING, GLASS, OILS, SPIRITS, SOAP, &c.

So likewiſe, natural philoſophy diſcovers the obvious, external properties of the air, fire, water, heat, cold, moiſture, wind, &c. by means of various experiments, made with the air-pump, and other ſuitable contrivances; but it is philoſophical chemiſtry, which more eſſentially examines into the internal nature, compoſition, relations, and uſes of the elements, and other phænomena, and thence finds ways of applying them as engines and inſtruments of actual buſineſs: and thus in a more particular manner, it applies thoſe two grand inſtruments, heat and cold.

(19.) In ſhort, there ſeems to be nearly the ſame difference betwixt chemiſtry and the preſent natural philoſophy, as there is betwixt art and nature; ſo that, perhaps, it might not be amiſs, if, by way of diſtinction, UNIVERSAL CHEMISTRY were allowed to paſs under the name of ARTIFICIAL PHILOSOPHY.

(20.) This diſtinction might not only ſerve to reſtrain chemiſtry to it's proper province, and ſettle it's real extent and immediate buſineſs, but contribute alſo in ſome meaſure, to remove the prejudice too commonly affixed to the name, when chemiſtry is mentioned.

(21.) The immoral practices of many who have aſſumed the name of chemiſt, have greatly contributed to bring a diſrepute upon the art; whereto the abandoned and diſſolute have uſually made their pretenſions with no more knowlege of it, than would ſerve them to cheat dextrouſly under it's appearance. So odious has chemiſtry been rendered by this means; as to deter many from the due ſtudy and exerciſe thereof, whence it has been too much left in bad hands. But the damage from this quarter is more ſenſibly perceived in the ſublimer metallurgy; whence GOLDEN MOUNTAINS having been too often ſeriouſly expected, the indigent and the knaviſh pretenders to art, have hence been furniſhed with a fine handle to practiſe upon the unwary, or ſuch as they found blinded by an immoderate paſſion for gain. See CHEMISTRY.

(22.) Theſe and the like abuſes, are no way juſtly chargeable upon the art itſelf, but entirely upon the artiſt; yet ſuch is the fate of human affairs, that the faults of men are often laid at the door of the arts they profeſs, as thoſe arts may prove occaſional cauſes of the ill: whence philoſophic chemiſtry, perhaps, gives more occaſion of public and private abuſes than other arts, as being leſs generally underſtood, and attended with the proſpect of greater advantages.

(23.) But, as the beſt things are capable of the greater abuſe, this miſapplication of chemiſtry could hardly of itſelf, have removed it from the care and patronage of the Engliſh philoſophers, if more tempting ſtudies had not come in the way; particularly the higher geometry, and ſpeculative philoſophy, which have employed moſt of our greater geniuſes. But if upon full examination, theſe more ſublime ſtudies ſhall be found of narrow uſe, philoſophic chemiſtry may again chance to be cultivated, as an art whoſe eſſence is action, and whoſe end is uſefulneſs in life.

(24.) And, if the genius of the Britiſh philoſopher ſhould in earneſt turn this way, the art itſelf might thus be nobly reſcued from the hands of ſuch as diſhonour it; and be ſet in it's true light, unſullied by chicane or deluſion: new improvements would be daily made therein, many valuable ſecrets diſcovered, new trades advanced, commerce in general enlarged, and uſeful knowlege increaſed. And though our philoſophers were to be thus employed for ages yet to come, there is no fear of exhauſting this rich mine of philoſophy and arts: which may be now dug to greater ſatisfaction and advantage, as there is no want of mechanical hands in England to execute in large, or bring into works, ſuch diſcoveries as ſhall give the encouragement. For as much as the Engliſh pliloſophers excel in contrivance, invention, and accuracy of experiment, ſo much are our mechanical people allowed to excel in adroitneſs and truth of work. And ſince the new opening, draining, and working of mines among us, we ſeem to be called upon afreſh to the exerciſe and improvement of this art; whence it may in time come to meet with that eſteem and application it deſerves, in a country ſo juſtly famous as ours for it's philoſophy and it's trade, and thence one day appear in a due body and form of ARTIFICIAL PHILOSOPHY.

(25.) But ſuch a fabric cannot be erected without a number of hands, ſet to work upon the ſeveral parts; and, indeed, all the aſſiſtance that can any way be procured, is little enough for the purpoſe.

(26.) When a general knowlege is gained in the theory and practice of this art, of experimenting philoſophically in all reſpects, ſo that it's uſes and manner of applying to the purpoſes of life, are become ready and familiar; it ſeems principally neceſſary to it's farther advancement, that there ſhould be a free communication of ſtudies, experiments, and trials, among a ſelect number of perſons thus qualified: for as it is naturally impoſſible that any ſingle man ſhould have a competent knowlege in all arts and ſciences, ſo is it expedient, that as much thereof as can be acquired ſhould be lodged in ſome few, who may freely draw out of each other as occaſion requires. Whence they might be enabled to furniſh out not jejune repetitions of things already currently known and practiſed, but reſults of new enquiries, real improvements, and methods of ſupplying the defects of particular arts; or eſſays well fraught with experimental FACTS and uſeful diſcoveries, after the manner of Bacon, of Boyle, of Homberg, and of Stahl and Shaw. Nor will ſuch a ſelect body of men fail of procuring all the aſſiſtance that can be had from uncommon books, papers, and accounts of particular facts and experiments. And in this manner philoſophical chemiſtry ſhould be kept coutinually open, or in a ſtate of improvement; permitting as it advances, that arts and trades be ſupplied, detached, or drawn from it occaſionally. See the articles CHEMISTRY, MUSÆUM, and ROYAL SOCIETY of LONDON.

PICARDY, in France, is bounded on the eaſt by Champagne; on the ſouth by the iſle of France; on the weſt by Normandy and the Britiſh Channel; by which alſo, with the provinces of Artois, Hainalt, and Cambreſis, it is bounded on the north. The ſoil is extremely fertile in corn, and ſeveral ſorts of fruits, but it affords little or no wine. It is uſually divided into three parts, viz. Upper, Middle, and Lower Picardy.

UPPER PICARDY has Hainalt and Cambreſis on the north; Champagne on the eaſt, Laonnois on the ſouth, and Vermandois on the weſt.

At LA FERE is a powder-mill, in which they make about 120,000 pounds of powder yearly; and at Vermins, a ſmall city on the rivulet Serre, they have a great trade in corn.

MONCORNET,

MONCORNET, near the ſame river, has a manufactory of coarſe ſerges.

MIDDLE PICARDY comprehends Vermandois, tha country of Santerre, and Amienois.

ST QUINTIN, in Vermandois, near the Somme, is a very populous place, and has divers ſorts of manufactures, eſpecially of linnen cloth.

PERONNE, in the diſtrict of Santerre, on the ſame river, is alſo very populous, and they make a vaſt quantity of linnen cloth in the neighbourhood, of which they ſell yearly at Peronne for above 150,000 livres.

AMIENS, the capital of Amienois, ſtands alſo on the Somme, which runs through it in three different channels, which unite again below it.

There are here, and in the neighbouring villages, manufactures of ferrets, or woollen ribbands; they alſo make here a great quantity of black and green ſoap.

LOWER PICARDY comprehends Ponthieu, Boulenois, and the Pais Reconquis, or the Recovered Country.

ABBEVILLE, in the diviſion of Ponthieu, is ſituated on the river Somme, and is the moſt populous town of all Picardy, next to Amiens. In the year 1665, Mr Van Roberts, a Dutchman, ſet up here a manufactory of woollen, the ſucceſs of which has been extraordinary. Lewis XIV. granted him and his people ſeveral priveleges, and, in particular, the liberty of importing all neceſſaries for his manufactory, without paying any duty. Thoſe cloths are ſaid to be almoſt as fine as thoſe made in England or Holland. Some years ago one Turner, an Engliſhman, went thither, and gave Mr Van Roberts all the inſight he could; after which he went into Holland, and found a very good reception amongſt the manufacturers of Leyden. There is alſo at Abbeville a manufactory of mocades, and ſtriped ſtuffs called tripes, the warp of which is thread, and the woof wool, of ſeveral colours, for the figures that are to be traced in weaving. They alſo make here ſail and other coarſe cloth, and linens, which being dyed, ſerve for linings. They have, beſides, a conſiderable manufactory of black and green ſoap, of which they ſell for above 100,000 livres yearly. The muſquets and piſtols made here are very much eſteemed. This city has a good trade, by means of the veſſels that come up the river Somme, with all ſorts of merchandize, which they exchange for the cloths, linens, and ſtuffs made here. See FRANCE.

ST VALERY is a populous ſea-port town, at the mouth of the Somme. The entrance is very dangerous, becauſe of the ſhelves and quick-ſands, that ſhift from place to place; however there is a very great trade here, becauſe all merchandizes are eaſily carried from hence to Amiens, and from thence into Artois, Champagne, and to Paris. They import here ſpices from Holland, as alſo pot-aſhes for making ſoap, cod-fiſh, herrings, cheeſe, and a great many other different commodities from ſeveral countries, and even from America; and they export into Spain and Portugal the manufactures of Picardy.

BOULOGNE, the capital of the country or diviſion of Boulenois, is ſituated at the mouth of the little river Liane. The harbour is very incommodious, and the road before it extremely bad, the ſea being exceſſively rough and boiſterous with any winds but what blow from the north to the ſouth-eaſt. It is divided into the upper and lower town, which laſt is the largeſt and moſt conſiderable for it's trade.

CALAIS, in the Pais Reconquis, is at preſent a conſiderable mart. The port is very happily ſituated, but yet it has ſeveral inconveniences, for no veſſel can enter it without running a great danger, whether it comes along the eaſt or weſt mole, and there is here no road for ſhips to ride at anchor.

PIEDMONT is bounded on the eaſt by the Duchies of Milan and Montferrat; by the territories of Genoa, and the country of Nice, on the ſouth; by High Dauphiné, and part of Savoy, on the weſt; and by the duchy of Aoſte, and part of the Milaneſe, on the north. The river Po divides it into two parts. It's length, from north to ſouth, is about 130 miles, and breadth from eaſt to weſt, where broadeſt, about 94 miles. It reaches from 43 degrees 25 minutes, to 45 degrees 50 minutes of latitude, and from 7 degrees to 8 degrees 30 minutes eaſt longitude.

Piedmont, as it is a very rich and fertile country, ſo it is likewiſe one of the moſt pleaſant and plentiful in all Italy. It produces great abundance of corn of all ſorts, wines, and fruits in great variety; as alſo hemp, flax, ſaffron, mulberries to feed great quantities of ſilk-worms, the ſilk here being a great manufacture; and affording good ſtore of cattle, ſome metals, and, in a word, plenty of every thing fit for man's uſe and delight, and ſo well peopled, that the Italians uſed to ſay the duke of Savoy has but one city in Italy, 300 miles in compaſs.

This country is divided into Piedmont, properly ſo called, and French Piedmont.

PIEDMONT, properly ſo called. This country is bounded with Monſerrat on the eaſt; the territory of Genoa on the ſouth; the marquiſate of Saluzzo on the weſt; and that of Suſa, and the marquiſate of Jurea, on the north.

FOSSANO was ſo called from ſome medicinal ſprings in the neighbourhood of it, not unlike thoſe of our Epſom and Tunbridge. It ſtands upon the river Stura, between Saluzzo to the weſt, and Mondovi to the ſouth-weſt, 27 miles ſouth of Turin, 8 north-eaſt from Coni, and 30 of Pignerol.

FRENCH PIEDMONT. This country ſcarcely deſerves to be made into a ſeparate article, it conſiſting only of three towns, which lie contiguous to that we have been deſcribing above, and on the weſt ſide of it.

REMARKS.

No country of it's dimenſions yields the ſovereign ſo great a revenue as Piedmont does the king of Sardinia: the Engliſh alone have taken off the value of, at leaſt, 200,000l. of their raw ſilk annually, for ſeveral years; but their crops of ſilk-worms are ſometimes deſtroyed by ſtorms of hail, called the plague of Piedmont. See SILK-WORMS, SILK.

PILCHARD. The pilchard is a ſea fiſh, bigger than the anchovy, but ſmaller than the herring.

The pilchard has a gilt head, a white belly, and the back of a ſea-green colour, that is, a little whitiſh. This fiſh, eaten when it is freſh, and lightly ſprinkled with ſalt, is reckoned exceedingly good; thoſe of Royan, a ſmall town in Xaintonge, are reckoned the beſt, if we can credit the French.

There are proper ſeaſons for the pilchard-fiſhery, being as the anchovy and the herring, a paſſage-fiſh.

They are dreſſed and ſalted in the ſame manner as anchovies and herrings, with this difference nevertheleſs, that they leave the head of the one on, and take it off the other. The anchovy is eaſily diſtinguiſhed from the pilchard, though this laſt had it's head taken off; the anchovy having a round back, and the pilchard being very fat.

The pilchard-fiſhery is very conſiderable in France; it is carried on from the road of Olone Sands, in lower Poitou, as far as the bay of Douarnenez, even to Breſt. It commences in the month of June, towards the ſand's ſide of St Giles. This fiſh, in thoſe places, is ſold as ſoon as catched, to people that ſalt them, and carry them on horſeback to the neighbouring towns; where, at their firſt coming in, they are much eſteemed.

Pilchards commonly follow the ſhore, and a little while after they appear at the Sands and St Giles, they begin to take them at Belleiſle, next at Port Louis, at Crac, and at Quiberon; afterwards at Concarneau, and, laſtly, at Douarnenez, Crozon, and Cameret, near Breſt. Pilchards have been caught in the bay of Douarnenez at Chriſtmas.

Along the coaſt of Bretagne, from Belleiſle as far as Breſt, there is a great trade of pilchards; ſome are ſold ſalted, or in piles, ſome in caſks, others are dried by the fire, or in ſmoke, and others are put into little barrels, and are called pickled pilchards.

They do not prepare ſuch quantities, either ſalted or in piles, as they did formerly, upon the account of the exactneſs of the cuſtom-officers, who examine them when they come to the cuſtom-houſe, and take off all the ſalt, without which they ſoon putrify.

Thoſe that come in caſks, are called preſſed, or pickled pilchards, becauſe when they have been in ſalt for a while, they are well waſhed and put into caſks, in which they are well packed, in order to drain out all the oil which would corrupt them. The caſks which they make uſe of, are a little bigger than half a barrel, and the beſt are made of beech-tree, pilchards being preſerved therein, better than in any other ſort of wood. Though theſe caſks be ſmall, they give but four of them to a ton. There are ſtatutes about their quantities, becauſe in all Bretagne they buy them by the ton, always packed in caſks.

Towards the end of the fiſhing time, when pilchards are a little bigger, they pack ſome in caſks of a common ſize; but thoſe are bought and ſold on account, in which the credit of the fiſhermen is truſted to, who put them in caſks, and mark upon the bottom the quantity of pilchards therein contained.

Pilchards that are caught in the months of July, Auguſt, and September, are not fit for packing, becauſe the great heats rendering this fiſh ſoft, it burſts eaſily on packing; and for this reaſon, the pilchards which are packed at Belleiſle, Port Louis, Crac, and Quiberon, are not much eſteemed, the fiſhing time laſting, in thoſe places, but 'till the month of September; whereas, it does but begin at Concarneau and Douarnenez, when the weather is not too hard, and ſometimes laſts 'till Chriſtmas.

It is from thoſe two laſt places, particularly Douarnenez, that the beſt pilchards are caught, and beſt preſerved. The Maloins load whole cargoes of them there, to export to different places of the Levant.

In order to have the pilchards of a good quality, they muſt be well packed, firm, white, and clear; neither burſt, nor ſoft, nor yellow, but of a good bigneſs, that a caſk may contain 6000 of them; for when it contains more, even 10,000, they are two ſmall, and when leſs, they are too large; for which reaſon, a little caſk ſhould not contain above 2000, or 3000; ſo that a trader who is obliged to ſell them by retale, can get nothing by them.

The dried pilchards are bought and ſold on account; when they are not broiled, they are more valued than thoſe packed, and thoſe ſalted alſo, are dearer. It is of the laſt fiſhing, and

when

when the pilchards are very firm and big, that they dry them. There is a great ſale of theſe fiſh at Bourdeaux, Rochelle, and Nantes, as well as in ſome little harbours in the country of Aunis, and the province of Xaintonge.

Sometimes they ſend them to Bayonne and Biſcay; but they are not dear there, but when the fiſhing has not been favourable in Spain, where great quantities are caught upon the coaſts of Galicia.

The pilchard fiſhery, in France, employs more than 300 ſhalloops, and almoſt all the ſeamen of the country, in the ſeaſon, upon the coaſt of Bretagne; each ſhalloop is commonly of 2 or 3 tons burthen, and has 5 men, and 12 nets, from 20 to 30 fathom.

The barrel is ſold from 20 to 50 livres; the greateſt conſumption of this fiſh is in Spain, Portugal, Italy, and all the Mediterranean; the fiſhery is commonly ſo good, that at Port Louis only, they vend 4000 barrels yearly.

Pilchards which are caught in Languedoc, are tranſported to Rouſſillon, Dauphiné, and the Lyonnois.

The preſſed oil of pilchards is put into caſks; it ſerves to burn, and it would have more virtue if it was not ſalted.

There is ſo plentiful a fiſhery of pilchards upon the coaſts of Dalmatia, in the months of May and June, near the ſouth of the Iſle of Iſſa, that it ſupplies, not only a part of Greece, but alſo a part of Italy; the Turks take this fiſh as a medicine, when they are ſick.

Pilchards follow the light, and encompaſs the ſhalloop that carries it in the night, and that contributes very much to their catching. To facilitate which, they make uſe, upon the coaſt of France, of cods eggs; thoſe eggs being a kind of bait for pilchards.

A fiſhing, almoſt as peculiar to Great-Britain as the herrings, is that of pilchards. The Corniſhmen ſay of the pilchard, that it is the leaſt fiſh in ſize, moſt in number, and greateſt for gain, of any fiſh they take out of the ſea.

Their ſeaſon is chiefly from the beginning of Auguſt to All-Hollowtide, as the countrymen call the 1ſt day of November.

They are ſaid to purſue, on the coaſt of Cornwall in England, a ſmall fiſh called the brit: and this draws them into the mouths of rivers and havens. They ſwim ſo near the ſurface, that they are diſcerned by the rippling of the water at a great diſtance.

There are two ways of fiſhing for theſe pilchards, and the fiſhermen are called drovers or ſeyners.—The drovers watch the ſhoals of the fiſh entering into the mouths of rivers and harbours as above, where they wait with large ſquare nets, placed athwart the ſide; and the ſhoal of pilchards paſſing by, and over them, all that come in the way of the net are entangled.—The ſeyners take them in the open ſea. Theſe complain that the drovers ſpoil the fiſhing, for that thoſe driving nets take but a few, and that they break and ſcatter the ſhoals of the fiſh, driving them from the ſhores: neither are the fiſh taken that way ſo merchantable, being bruiſed in the maſhes of the nets, and in tearing them haſtily out.

The ſeyne is a large net, the ſame in form with thoſe uſed in rivers, but far much larger: for, as the river ſeyne nets are 30 or 40 fathom long, thoſe uſed in the ſea, are ſometimes 5 or 600 fathoms; and each ſeyne is managed by three or four large boats at leaſt, each boat having 6 men. With theſe boats and ſeynes, they ply about in the ſea, where they expect the fiſh; and they are directed in their work by a man, or ſeveral men, who are placed on the hills, called the balkers or ſuers. Theſe men ſtanding on a high clift, can diſcern the courſe the fiſh take, by the rippling of the water: and they give notice by ſhouting, by waving a flag, or ſuch ſignal as is agreed on; and accordingly the men in the fiſhing boats order their matters. At the appointment of theſe balkers, the men in the boats let down the ſeyne, and draw it this way or that way, as the ſhoal of fiſh lies: then the net being wholly ſpread, they row round, and coming behind the fiſh, they beat the water with their oars to drive them into the net: at laſt, they either cloſe and tuck up the net in the ſea, drawing the fiſh into their boats, or draw it away to land; which, if the ſhore be free from rocks, and not too ſteep, is much the ſureſt, and moſt advantageous way. By this method they ſometimes take 2 or 300 tons of fiſh out of a ſhoal.

The pilchards are cured by packing and preſſing, as the herrings, and ſent into the Streights from England, to the ſeveral parts of Spain, Italy, and the Levant; where they generally meet with a good market. They formerly cured them by ſmoaking; but they have many years left off that method in England.

PILOT. A pilot is he that has the government of a ſhip, under the maſter, or who is intruſted with the ſteerage of the ſame. And it has been uſual for pilots not only to direct the ſhip's courſe, but alſo to ſteer her too themſelves, as they are ſtill obliged to do amongſt us, when the ſhip has any dangerous place to paſs through, or is ſo near the ſhore that a more than ordinary ſkill is requiſite to bring her ſafe off; but otherwiſe, ſuch of the other mariners as are moſt capable of the function are appointed to do it by turns.

By the ſea laws of Wiſbuy [ſee WISBUY LAWS] every pilot, mate, or mariner, that does not underſtand his buſineſs, ſhall be obliged to repay to the maſter whatever wages he had advanced him, and beſides be bound to pay half as much more as he had promiſed him. The laws of Denmark puniſh an ignorant pilot by ſentencing him to paſs thrice under the ſhip's keel: and by the laws of Oleron [ſee OLERON'S LAWS] if a pilot undertakes the conduct of a veſſel, to bring her to any port, and fail of his duty therein, ſo as the ſhip miſcarry by reaſon of his ignorance in what he undertook, and the merchant receives damage thereby, he ſhall be obliged to make ſatisfaction for the ſame, if he have wherewithal; and if he hath not, or where the fault of the pilot is apparently groſs, that the ſhip's crew ſee an apparent wreck, they may lead him to the hatches, and ſtrike off his head. Sea Laws, 176. Leg. Oleron, 23.

The laws of France ordain, That no perſon ſhall be received as pilot, nor perform that function, 'till he has made ſeveral voyages, and paſſed a ſtrict examination as to his knowlege and experience in navigation; and he ſhall be obliged, for proving his voyages, to produce the journals thereof. The pilot ſhall provide himſelf with all maps, books, and inſtruments neceſſary for his art: and in long voyages, he ſhall have two journals, in one of which he is to write the changes of the courſes and winds, the days and hours of the changes, the leagues which he believes the ſhip has ſailed in each, alſo the reductions in latitude and longitude, the variations of the compaſs, together with the ſounds and ſhores he has diſcovered; and in the other he ſhall write out, once in 24 hours, the courſes, longitude and latitude reduced, and the latitudes obſerved, and all other remarkable things diſcovered during the voyage; and at the return of ſuch long voyages, ſhall lodge a copy of his journal in the Admiralty, on pain of 50 livres. Sea Laws, 291, 292.

And by the ſame laws, if a pilot, by ignorance or negligence, occaſions the loſs of a ſhip, he ſhall pay 100 livres fine, and be for ever deprived of the exerciſe of pilotage; and, if he does it deſignedly, he ſhall be puniſhed with death. But no maſters of ſhips ſhall force pilots to paſs through dangerous places, or to ſteer courſes againſt their will; and, in caſe there be difference in opinion, they ſhall be governed by the advice of the moſt expert mariners.

When a ſhip comes to a harbour or river, and the maſter doth not know the coaſt nor the river, he ought to take a pilot of that country to carry her up the river or harbour; which pilot ſhall be maintained by the maſter, and paid by the merchant: alſo, if it is thought convenient in any river, or off any dangerous coaſt, to take aboard a pilot of the country, though the merchant oppoſes it, if the maſter, the ſhip's pilot, and the major part of the ſeamen are for it, he may be hired, and ſhall be paid by the ſhip and cargo, as avarages are calculated for goods thrown overboard. Leg. Wiſb. 44 and 60. Ibid. 185, 188.

The maſter of the ſhip generally in charter-parties [ſee CHARTER-PARTY] covenants to find a pilot, and the merchant agrees to pay him his pilotage: though if a ſhip ſhould be loſt coming up the river, under the charge of the pilot, it has been a queſtion, whether the maſter ſhould anſwer for the inſufficiency of the pilot, or whether the merchant may have his remedy againſt both? But it has been conceived, that the merchant hath his election to charge either; and, if he charges the maſter, then the maſter muſt have his remedy againſt the pilot. After the ſhip is brought into ſure harbour, the pilot is no further liable, for then the maſter is to ſee to her bed and lying, and hath all the charge upon himſelf; ſo that he muſt anſwer all danger and hazard, except that of the act of God: but, before ſhe arives at het place or bed, and while ſhe is under the pilot's care, if ſhe or her goods periſh or be ſpoiled, the pilot ſhall make good the damage. Leg. Oleron. Molloy, 254, 255.

By ſtatute 3 Geo. I. cap. 13. If any perſon ſhall take upon him to conduct and pilot any ſhip or veſſel, by or from Dover, Deal, or the Iſle of Thanet, to any place on the rivers Thames or Medway, before he has been examined by the maſter and wardens of the ſociety of Trinity-Houſe, and ſhall be approved and admitted into the ſaid ſociety at a court of load-manage, by the lord-warden of the Cinque-Ports, or his deputy, and the ſaid maſter and wardens: every ſuch perſon, for the firſt offence, ſhall forfeit 10l. for the ſecond 20l. and for every other offence 40l. to be ſued for and recovered by any one in the court of admiralty for the Cinque-Ports, if the offending pilot live within the juriſdiction of that court; or elſe by action of debt, &c. in any of the courts at Weſtminſter, one moiety to go to the informer, and the other to the maſter and wardens of the ſociety aforeſaid, to be diſtributed among ſuperanuated pilots, and the widows of pilots of the ſaid ſociety.

And the maſter, and ſuch two wardens of the ſaid ſociety as ſhall be appointed to examine into the ſkill and ability of any perſon on his being admitted as a pilot, ſhall take the following oath, to be given them by the regiſter of the ſaid court of load-manage, or his deputy, viz.

I A. B. do ſwear, That I will impartially examine and enquire into the capacity and ſkill of T. D. of, &c. in the art of pilotage over the flats, and round the long Sand-Head, and the coaſt of Flanders and Holland, and will make true and ſpeedy return thereof to the lord-warden of the Cinque-

Ports for the time being, or his deputy, without favour, affecton, fee, or reward.

So help me God.

The number of ſuch pilots ſhall not be leſs than 120, whoſe names, ages, and places of abode, ſhall yearly be affixed in ſome public place at the cuſtom-houſes at London and Dover, to which all perſons may have recourſe; and not returning liſts, the maſter and wardens of the ſaid ſociety ſhall forfeit 10l.

But this act ſhall not prevent the maſter or mate of any ſhip or veſſel, or any part owner, reſiding at Dover or Deal, or the iſle of Thanet, from piloting his own ſhip from any of the ſaid places up the ſaid rivers, nor ſubject any perſon, though not of that ſociety, to the penalties before-mentioned, who ſhall be employed by any maſter to pilot his veſſel from the places aforeſaid, when none of the ſaid ſociety ſhall, within one hour after the arrival of ſuch ſhip or veſſel at any of the ſaid places, be ready to pilot the ſame. And maſters of merchant-ſhips may make choice of ſuch pilot of the ſaid ſociety as they ſhall think fit; alſo no perſon ſhall continue in this ſociety who ſhall not pilot a ſhip at leaſt twice in one year (unleſs prevented by ſickneſs) to and from the places above-mentioned. And for preventing any exorbitant demands from theſe pilots, for conducting any ſhip or veſſel from Dover, Deal, or the Iſle of Thanet, to any places on the rivers Thames and Medway, the following, and no greater prices, ſhall be taken or demanded, than are here mentioned, viz. for every ſhip or veſſel drawing ſeven feet water, 3l. 10s. for eight feet water, 4l. nine feet water, 4l. 10s. ten feet water, 5l. eleven fect water, 5l. 10s. twelve feet water, 6l. thirteen feet water, 6l. 10s. fourteen fect water, 7l. fifteen feet water, 7l. 10s. ſixteen ſeet water, 8l. ſeventeen feet water, 8l. 10s. and no allowance to be made for odd inches.

In this act there is likewiſe a clauſe, impowering the lord-warden of the Cinque-Ports to nominate three perſons there to adjuſt differences between the maſter of any ſhip and others, where ſhips by bad weather are forced from their anchors and cables, for ſaving and bringing them aſhore: and this act ſhall not hinder any perſon from aſſiſting a ſhip in diſtreſs there.

By the 7th of Geo. I. cap 21. The lord-warden of the Cinque-Ports, with the aſſent of the commiſſioners of load-manage, and of the maſter and wardens of the ſociety of pilots of the Trinity-Houſe, of the Cinque-Ports, at a court of load-manage held by the ſaid lord-warden, or his deputy, may make ſuch rules and ordinances for the better government of the pilots reſiding at Dover, Deal, and the Iſle of Thanet, as ſhall be thought convenient, and may order a ſufficient number of the pilots living at Dover, &c. no leſs than eighteen, to ply conſtantly at ſea, to be ready to conduct ſuch ſhips up the rivers Thames and Medway as ſhall have occaſion for them: and the ſaid lord-warden, &c. at a court of load-manage, may ſuſpend or deprive any of the ſaid pilots, for breaking the rules or orders; and if any pilot ſo ſuſpended or deprived, ſhall undertake to conduct any ſhip by or from Dover, Deal, &c. to any place in or upon the ſaid river of Thames, &c. he ſhall be liable to all ſuch pains and penalties as are ordained by the before-mentioned act of 3 Geo. I. againſt ſuch perſons as ſhall conduct ſhips from and to the places aforeſaid, without being firſt examined and approved of by the maſter and wardens of the ſaid ſociety, at the ſaid court, and admitted into the ſame.

By the ſtatute 5 Geo. II. cap. 20. No perſon ſhall undertake the charge of any ſhip or veſſel, as pilot thereof down the river Thames, or through the North Channel, to or by Orfordneſs, or round the long Sand-Head into the Downs, or down the South Channel into the Downs, or from or by Orfordneſs, up the North Channel, or the river Thames, or river Medway, but ſuch as ſhall be licenſed to act as a pilot by the maſter, wardens, and aſſiſtants of the Trinity-Houſe of Deptford-Strond, under the common Seal of the corporation, on pain of forfeiting 20l. being convicted before two juſtices of peace for the city of London, or the counties of Middleſex, Eſſex, Kent, or Surry, within their reſpective juriſdictions: but maſters of ſhips in the coal-trade, or other coaſting trade, are not obliged to employ a pilot.

The pilots to be ſo admitted and licenſed, ſhall be ſubject to the government of the ſaid corporation, provided their regulations do not relate to the pilots keeping of turns, or to ſettling the rates of pilotage, and ſhall pay the ancient dues, ſo as the ſame do not exceed 1 s. in the pound out of ſuch pilot's hire or wages, for the uſe of the poor of the ſaid corporation, within ten days after the ſervice of any pilot ſhall be ended. And in caſe ſuch pilots ſhall refuſe to take the charge of any of his majeſty's ſhips, when appointed thereto by the corporation, or ſhall miſbehave themſelves in the conduct of any ſhips, or other part of their duty, or if pilots ſhall refuſe to obey any ſummons of the ſaid corporation, or ſuch orders as they ſhall make, then the general court of the corporation, upon examination thereof, are required to re-call the warrants granted to ſuch pilots; and if, after notice of it given to them in perſon, or left at their place of abode, they ſhall act as pilots within the limits afore-mentioned, they ſhall be ſubject to the penalties inflicted on unlicenſed pilots.

This ſtatute ſhall not extend to the impeaching of any of the franchiſes, nor to take away the ſole right of piloting merchant-ſhips from or by Dover, Deal, and the Iſle of Thanet, up the rivers Thames and Medway, granted and allowed to the ſociety and fellowſhip of the maſter, wardens, and pilots of the Trinity-Houſe of Dover, Deal, and the Iſle of Thanet, by the ſtatute of 3 Geo. I. cap. 13.

And nothing herein ſhall impeach any privileges heretofore granted to, or which by ancient uſage have been enjoyed by, the pilots of the Trinity-Houſe of Kingſton upon Hull, or the Trinity-Houſe of Newcaſtle upon Tyne.

Nor to prejudice any juriſdiction of the mayor; or of the mayor, commonalty, and citizens of London, upon the river Thames; nor any juriſdictions belonging to the office of lord high admiral.

The act 8 Geo. II. cap. 21. continues the afore-mentioned ſtatutes for regulating pilots.

Of Pilots in Spain.

1. There are three ſeveral principal pilots belonging to the Weſt-India voyage in Spain, viz. the chief pilot of the India-Houſe, inſtituted to examine and give their degrees to other pilots, and judges of the charts, and other inſtruments of navigation. The next is the chief pilot of the armada, or navy royal, to ſecure the trade of the Indies, commonly called the galleons; and the third the chief pilot of the New Spain fleet. Theſe being all employments of great importance, it may be proper to give an account of the nature of them, their duty, qualifications, and the manner of beſtowing them.

2. We are firſt to ſpeak of the chief pilot of the India-Houſe, becauſe he takes place, and ought to be moſt knowing, as being to chuſe the pilots for the India ſhips, out of which are choſen thoſe for the galleons and floats: though as to ſeniority, there were chief pilots of the armadas before there were any of the India-Houſe; becauſe thoſe diſcovering the new world, made way for an India-Houſe, and, conſequently, for a chief pilot of it, who ought to be univerſal in the theory, not only for the voyage to the Firm Land, New Spain, the coaſts of thoſe provinces, and the Windward Iſlands, but for the river of Plate, for which there was once a particular chief pilot.

3. The firſt chief pilot of the India-Houſe was Americus Veſpaſius, ſettled at Seville, to draw charts upon the diſcoveries of others, and the ſalary aſſigned him was 50,000 maravedies; this was in the year 1507, and in the reign of king Ferdinand. Not only the chief, but all others whom the king received as his pilots, had ſalaries ſettled on them; and ſuch as were as well ſkilled in warlike as in ſea affairs, were received as ſea-captains, which was done with Ferdinand Magallanes, whom we call Magellan, who firſt diſcovered the ſtraight of his name, and Ruy Fallero, his companion, in 1518, aſſigning each of them, 40,000 maravedeis ſalary; and, in general great encouragement was given to all that were ſkilful in this profeſſion.

4. The municipal laws of the court of the India-Houſe ordained, That there be in the ſaid houſe a chief pilot, to be preferred by edict, which is thus: when the place is vacant, the king and the council of the Indies are acquainted with it, and there are edicts, or proclamations, put up in Seville, the univerſities of Salamanca, Valladolid, and Alcala, and alſo in thoſe parts where ſailing pilots are known to reſide, as Cadiz, S. Lucar, Port S. Mary, and Ayamonte; for though it be rare to find among the practical pilots any one ſo well ſkilled in the theory as to be fit to carry the place of chief pilot to the India-Houſe, yet they have ſometimes been allowed as candidates, and the ſame may happen again.

When the candidates have made their claims, the court acquaints the king how the parties are qualified, both by their own acts, and the information the preſident and commiſſioners have of them, declaring whom they judge moſt deſerving, and what they think of the reſt, that the council may adviſe, and the king decree, as ſhall be moſt expedient.

The profeſſor of coſmography is made after the ſame manner; but as for the coſmographer, who is to be an inſtrument-maker, his ſkill being of ſuch ſort as is not learnt at the univerſities, the edicts are ſent to court, and put up at the council, and in Seville, at the India-Houſe, and Exchange, and the candidates are remitted by the council to manifeſt their ability before the preſident and commiſſioners of the India-Houſe.

5. Though ſome of the practical pilots have been propoſed as candidates, yet none of them have hitherto carried the employment, the council wiſely providing, that he who fills this place be the moſt knowing that can be found, not only in the art of navigation, but in other parts of the mathematics, becauſe he is not only to examine the pilots for the India voyage, but to judge of the profeſſor of coſmography, and the coſmographer inſtrument-maker, whom he is to examine and cenſure, as much as he does the mariners that have been his ſcholars, in order to take the degree of pilots.

Vice-

Vice-admirals have been propoſed to fill this poſt. The deſign in inſtituting this chief pilot, was only to examine, and give their degree to the other pilots, forbidding him to teach navigation, or the uſe of any inſtruments, upon the penalty aſſigned, and he that learns of him to be incapable of being examined in two years; which was done to the end that affection for his own ſcholars might not cauſe him to wink at their ignorance. For the ſame reaſon, he is forbid making any ſea-charts or inſtruments to ſell, becauſe it being his buſineſs to judge of them uſed in the voyage to the Indies, he could never ſee any faults in his own, for no maſter will ſpeak ill of his own work. For theſe reaſons, the two employments of chief pilot and coſmographer were never but once conferred upon the ſame perſon, and many inconveniencies appearing in it then, they were ever ſince accounted incompatible.

6. When any are to be examined in order to be declared pilots, it is to be done in the India-Houſe, and no other place. The coſmographers and pilots that are then in Seville are to be preſent, to the number of ſix at leaſt, being men well ſkilled in ſea affairs; the candidates are to be ſtrictly examined, all the examiners taking an oath to do it fully, and give their votes according to the beſt of their judgment; and the perſon ſo approved is to be declared pilot, and not otherwiſe, upon forfeiture of 10,000 maravedies.

In the year 1604 it was ordered, That one of the commiſſioners of the India-Houſe ſhould be preſent at the examination, and then the act was performed in the chamber of direction, the commiſſioners, chief pilot, and coſmographers, ſitting under the preſident's canopy; which being thought too great an honour for them, they have ſince ſat in the court of conſulſhip, under a canopy, and the pilots and deputies of the corporation of ſailors ſit on the ſaid benches, two coſmographers taking place under the canopy, according to ſeniority.

7. It is to be obſerved, that one previous circumſtance to examination is, that they bring proof they are none of thoſe the law forbids to be admitted as pilots, which proof is to be made before the chief pilot, who, upon all public occaſions, takes place of the ſteward and deputies of the company of ſailors; and if they, being ſummoned by the pilot's meſſengers, refuge or neglect to appear, he may proceed to take information without them. When either the chief pilot, as a member of the India-Houſe, enjoys all the privileges, and is under all the prohibitions that others are, yet there is a particular ordinance, which forbids him receiving any thing whatſoever of the perſon that ſtands to be made a pilot; nor is he to take any fees for the commiſſion or warrant he gives them.

8. There are two coſmographers, as has been ſaid before; the one is profeſſor of coſmography, inſtituted by king Philip II. in the year 1552, to teach the art of navigation and coſmography, with order that none ſhould be admitted pilot or maſter who had not learnt under him a year, or thereabouts. This time was afterwards ſhortened to three months, and at laſt to two, in order to fit them for examination; and as for reading and writing, it was thought enough if they could read the ſailing orders, and write their own names; all which was ordered to be taught as follows: the treatiſe of the ſphere, or at leaſt the firſt and ſecond book of it: the treatiſe that teaches how to take the ſun's altitude, and the elevation of the pole, with all the reſt taught in it: the uſe of the ſea-chart, and how to find out the point where the ſhip is: the uſe of inſtruments, and manner of making them, to diſcover whether they are faulty, that is, the compaſs, aſtrolabe, quadrant, and Jacob's ſtaff, and how to obſerve the needles, to diſcover whether they vary eaſt or weſt, which is a matter of great moment, to keep an exact account when they ſail: the uſe of a general dial for day or night: and the pilots muſt know, either by memory or by writing, what the age of the moon is any day of the year, that they may know how the tides fall out to enter any rivers or bars, and other matters in continual uſe. A leſſon upon theſe ſubjects is to be read every day, at the hours appointed by the preſident and commiſſioners of the India-Houſe, that may be moſt convenient for the learners. There is a great room in the Exchange appointed for this uſe.

9. The other coſmographer is inſtrument-maker, the uſe of which the profeſſor teaches; but the firſt of theſe is the ancienteſt employ. Both the coſmographers are to ſit with the chief pilot, upon examining of pilots, and to put queſtions to them; and the law appoints, that if the coſmographer of the India-Houſe informs the ſaid commiſſioners that the examination is not duly made, the ſaid commiſſioners ſhall take care to ſee right done.

It is alſo the duty of the chief pilot and coſmographers to approve of, and mark the ſea-charts, and other inſtruments; and they are to have marks for that purpoſe, which are to be kept in the India-Houſe, in a cheſt under two keys, whereof the chief pilot is to keep one, and the younger coſmographer the other, that no inſtruments may be ſold or approved without the conſent of all three: to which purpoſe they meet every Monday, and no inſtrument is to be ſold without the mark, under the forfeiture of thirty ducats. Two practical pilots were to be appointed by the commiſſioners of the India-Houſe, to examine inſtruments, together with the chief pilot and coſmographers; but if the inſtruments were made by the coſmographer himſelf, then he was to have no vote in the approbation. If an aſtrolabe be faulty, it is to be broke and caſt again; and a chart, that cannot be mended, muſt be cut, and left in the treaſury-chamber, that it may not be put together again. When the pilot and coſmographers meet, if there are any to be examined for pilots, that is the firſt thing to be done; what time remained after making inſtruments, was to be employed in examining the general map, and adding what they think neceſſary; but all theſe things are now out of uſe, there being no further diſcovery made; and the inſtruments and ſea-charts generally uſed, being thoſe made by the coſmographer of the India-Houſe, of which he makes ſome profit, but nothing conſiderable, nor is he to take any fee for touching the needles to the load-ſtone.

PITCH and TAR. This is a clear, fat liquor, that flows from the trunks of old pines. When they would kill or deſtroy the tree, the Swedes and Norwegians cut the bark round the tree, which, inſtead of yielding a white incenſe, or reſin, yields a black liquor, which is the tar; and preſently, as ſoon as all that is fallen, the trees die, and are good for nothing but to burn.

This may help to undeceive ſeveral who believe, as many authors have vouched, that tar is made by burning of the pines; for it is certain, that all the tar we now ſell is made as already mentioned, and not by means of the pines that are burnt. That which is found clear, is improperly called oil of pitch, and ſold under the name of common or falſe cade oil. The tar is much uſed by mariners, farriers, and ſhepherds, to mark their ſheep, as well as to defend them from diſeaſes. Chuſe ſuch as is natural and clean, not ſuch as is made with oil and pitch, but the true Stockholm tar.

It is generally brought to us from Denmark, Norway, Finland, and Swedeland; but there is much of it made in New England, Virginia, Carolina, and other parts of Florida. It is the produce of all reſinous trees. It was firſt taken from the cedar, the larch-tree, fir-tree, and pitch-trees, but now chiefly from the pine-trees. It cures all ſorts of ſcabs, itch, tetters, ring-worms, and other vices of the ſkin.

Tar is better than pitch, becauſe, in boiling, the pitch loſes the more ſubtil and fiery parts; this, therefore, is proper for coughs, phthyſicks, hoarſeneſs, and other humours that fall upon the lungs. Tar and bees-wax make a plaſter that is diſcuſſive and anodyne, good againſt the gout, and all manner of old achs and pains. The ſpirit is very diuretic, opens all obſtructions, and reſiſts the ſcurvy.

(What we call ſamp black, is made by burning the foul parcels of pitch, reſin, &c. and gathering the light ſoot that they ſent up; this is much uſed by artificers of various kinds.)

Remark.

How importantly uſeful to ſhipping and navigation the articles pitch and tar are, need not be ſaid: and how they ought to be encouraged in the Britiſh plantations, ſee NAVAL STORES.

PLANTATIONS. A plantation, or colony, is a place whither people are ſent to dwell, with an allowance of land for their tillage, and immunities for the good of themſelves and the ſtate they belong to.

A nation, or people, being expelled out of their own land, may ſeek waſtes in ſome other country; and ſuch poſſeſſion creates a property againſt all perſons, but he that hath empire there: and if, before they can reap the fruits of their labour, they are in want of neceſſaries, by the laws of nature they may force a ſubſiſtence from a neighbour planter; for ſubſiſtence belongs to every man, who hath not merited to loſe his life. The written laws are conformable to this; by which, if proviſions fail at ſea, thoſe who laid in particular ſtores for the voyage, muſt produce them for the benefit of all.

Our plantations abroad, are the iſlands in America; and the iſles of Jamaica and Barbadoes, with ſome others, are much frequented by unfortunate perſons, who oftentimes become wealthy there. The Engliſh plantations in general are, beſides theſe iſles, Virginia, Maryland, New England, New York, Carolina, Bermudas, and the Leeward Iſlands, &c. and the ſettlement of Georgia.

The iſlands being originally gotten by conqueſt, or by ſome planting themſelves there, the king may govern them as he will: but it has been held, that the laws in force before the conqueſt of them, do bind 'till new laws are given; and even then, ſome of the old cuſtoms may remain, as they do in Barbadoes, &c. But Engliſh ſubjects having found an uninhabited country, all Engliſh laws are immediately in force. 3 Mod. Rep. 160. 2 Salk. 411.

The Iſle of Man and Ireland, are poſſeſſions of the Engliſh crown; yet retain their antient laws: ſo did Jamaica, 'till new laws were made. In Barbadoes, all freeholds are ſubject to debts, and eſteemed but as chattels, 'till the creditors are ſatisfied, and then the lands deſcend to the heir, which is different from the laws here. By the laws of Virginia, negroes are ſaleable as chattels. 2 Salk. 411. 666. 4 Mod. 226. See ſtat. 7 & 8 W. III. and 5 Geo. II.

If

If in an action for rent upon a leaſe of lands in Jamaica, &c. there be a foreign local iſſue, it may be tried where the action is laid; and the plaintiff may enrol a ſuggeſtion, that ſuch a place in ſuch a county, is next adjacent; and it ſhall be tried in the King's-Bench, by a jury from ſuch place, according to the laws of that country.

Here, it was ſaid, there may be a law in Jamaica againſt bonds; but it will not confine the action of debt on bonds made there to that country: an action of falſe impriſonment has been here brought againſt a governor, and the laws of the country given in evidence. 2 Salk. 651. Mod. Caſes 195.

In the year 1661, the then governor of Jamaica called the firſt aſſembly there, and made laws for raiſing a public revenue by a tax on ſtrong liquors, for upholding the government there, which were indefinite and perpetual. The king impowered another governor to chuſe his own council; and, with conſent of the major part, to frame general aſſemblies of freeholders, as in other plantations, and with their conſent to make laws ſuitable to thoſe of England, to be in force for two years; and the aſſembly granted the like revenue out of ſtrong liquors for two years only. The queſtion here was, whether this laſt law had totally laid aſide the former? It was reſolved, that the laſt council having power to make laws only for two years, it did not repeal the perpetnal law made before, but ſuſpended it's power for that time only. Raym. Rep. 397.

King Charles II. by letters patents, of October, in the 32d year of his reign appointed Sir Richard Dutton chief governor of Barbadoes, who appointed 12 men to be of the king's council during pleaſure; and by their advice eſtabliſhed courts, &c. and had authority to make a deputy-governor, &c. and Sir John Witham being ſo conſtituted, was charged with mal adminiſtration, and by order of the governor and council was committed to priſon; for which having brought an action, it was ſaid for him, that the cauſes of commitment (if any) were not cognizable by them, but by the king alone, &c. To which it was anſwered, that being committed by order of council, it ought to be preſumed his commitment was legal. Judgment was given in B. R. for the plaintiff, but reverſed in the houſe of lords. 3 Mod. 160, 161.

All governors on their entrance are to take oath, that to their utmoſt, the acts paſſed concerning the ſaid colonies be duly obſerved. And, on failure, complaint being made to the king, ſuch governor to be removed, and forfeit the ſum of one thouſand pounds. Stat. 12 Car. II. cap. 18. and 7 & 8 W. III.

By 11 and 12 W. III. cap. 12. If any governor, deputy-governor, &c. oppreſs any of the king's ſubjects under their government, or act any ways contrary to the laws of this realm, or in force with their governments, &c. it ſhall be determined in the King's-Bench in England: and ſuch like puniſhments inflicted, as are uſual for ſuch offences here in England.

And by 7 & 8 W. III. cap. 22. All laws, cuſtoms, &c. practiſed in any of the plantations, that are repugnant to any laws already here, or to this act, or any other law hereafter to be made, relating to thoſe plantations, are declared null and void. And all places of truſt in the courts of law, or relating to the treaſury, in any iſland or colony of England, ſhall be held by native-born ſubjects of England, Ireland, or of the ſaid iſlands. Alſo perſons claiming any right in any of them, ſhall not diſpoſe of the ſame to any other than natural born ſubjects of England, &c. without licence; and all governors appointed by ſuch proprietors, ſhall be approved by his Majeſty, and take the oaths accordingly.

By 12 Car. II. cap. 18. no alien may be a merchant or factor in any Engliſh plantation, on pain to loſe all his goods: and any governor of the plantations that ſhall ſuffer any foreign built veſſel to load or unload, without certificate, that the owners are not aliens, ſhall be removed.

Goods ſhall not be imported or exported, in any other but Engliſh or Iriſh ſhips, &c. and of which the maſter and three fourths of the mariners are Engliſh, on forfeiture of ſhip and goods. And any abatement or privilege in the book of rates, is to be underſtood, that the maſter and three fourths of the mariners be alſo Engliſh.

In the progreſs of our laws relating to the plantations, no ſugars, tobacco, cotton-wool, indigo, ginger, fuſtic, or other dyeing woods, the growth of any Engliſh plantation, were to be tranſported to any place but ſome Engliſh plantation, or to England, &c. on forfeiture of ſhip and goods. And for every veſſel ſetting out from England, &c. for any of the ſaid plantations, bond ſhall be given of 1000l. if the ſhip be under 100 tons, and of 2000l. if of greater burthen; that if the ſaid veſſel load any of the ſaid commodities at ſuch plantations, it ſhall bring them to ſome port in England, &c. But theſe laws were repealed by the acts of the 12th and 20th year of the reign of Geo. II. whereby liberty is given to carry ſugars from the Britiſh colonies, directly to foreign parts, 'till the year 1757. See alſo the article RICE.—The progreſs of the laws follows.

Alſo for all ſhips coming from any other port to thoſe plantations, the governor ſhall take bond as aforeſaid. And every ſhip taking in goods before bond given, or certificate from ſome cuſtom-houſe in England, &c. of ſuch bonds being there given, ſhall be forfeited; and the governors ſhall twice in every year return true copies of all ſuch bonds to the officers of the cuſtoms at London.

By 15 Car. II. cap. 7. no commodity, the growth or manufacture of Europe, ſhall be imported into any of the plantations, unleſs ſhipped in England, &c. and in Engliſh built ſhipping, legally manned, and carried directly thither, on pain of forfeiture.

But ſuch ſhips may lade in any part of Europe, ſalt for the fiſheries of New England and Newfoundland; and in the Madeiras and Azores, wines, the growth of thoſe Iſlands; and in Scotland or Ireland may take in ſervants, or horſes, and all victuals, the produce of thoſe places.

All perſons importing by land any goods into the ſaid plantation, ſhall deliver to the governor, or officer by him appointed, within 24 hours, their names, with a true inventory of the goods. And no veſſel ſhall lade or unlade, 'till the maſter have given due notice of his arrival, &c. and that the ſhip is Engliſh built, and legally navigated, and have delivered an inventory of her lading, &c. on forfeiture of ſhip and goods.

And any officers of the cuſtoms in England, &c. ſuffering any tobacco, ginger, cotton-wool, indigo, &c. the growth of the aforeſaid plantations, to be tranſported 'till firſt unladen in ſome port of England, &c. ſhall forfeit their places, and the value of ſuch goods.

All perſons who ſhall plant any tobacco in England, &c. forfeit 10l. for every rod of ground planted. And juſtices, on information, ſhall cauſe it to be deſtroyed; perſons reſiſting the act to forfeit 5l, and be impriſoned.

This act ſhall not hinder planting tobacco in phyſic gardens, &c. ſo it exceed not half a pole in any one garden.

By 22 & 23 Car. II. cap. 26. every veſſel lading at any of the Engliſh plantations, 'till bond be given, or certificate produced, or carrying the ſaid goods contrary to the tenor of it, was to be forfeited.

But the act 25 Car. II. cap. 7. ſeems to have taken off theſe penalties, ordaining, that if bond be not given, ſeveral duties are to be anſwered, payable, as appointed in the ſaid plantations: and if any perſons liable have not money, the officers ſhall take commodities amounting to the value, at the current price in the ſame plantations.

By 7 and 8 W. III. cap 22. no goods ſhall be imported or exported to or from any plantation, or port in the ſame, England, &c. in any ſhip but Engliſh, &c. or the ſaid plantations, and duly navigated, on forfeiture of ſhip and goods, &c. as by former ſtatutes.

No ſhip ſhall be deemed Engliſh, &c. built, or qualified to trade to any of the ſaid plantations, 'till regiſtered by the proprietor, and oath made by the owners, where the ſhip was built, who the preſent owners, and that no foreigner, directly or indirectly, hath any intereſt therein. Which oath being atteſted by the governor, or cuſtom-houſe officer before whom it is taken and regiſtered, ſhall be delivered to the maſter for ſecurity, and a duplicate ſent to the commiſſioners of the cuſtoms at London: any veſſel trading without ſuch proof, ſhall be liable to forfeiture as a foreign ſhip would. And no ſhip's name regiſtered ſhall be changed without regiſtering anew, under like penalties; alſo ſale of any ſhare to be mentioned by endorſement on the certificate of the regiſter.

All ſhips lading or unlading at any of the plantations aforeſaid, and the maſters of them, ſhall be ſubject to the ſame rules, ſearches, &c. as in this kingdom by 14 Car. II. cap. 11. And the officers for collecting the revenue, &c. ſhall have the ſame authority as the officers of the cuſtoms in England, by the ſaid act 14 Car. II. and to enter houſes and warehouſes, to ſearch and ſeize ſuch goods; and all perſons aſſiſting in conveying or concealing goods, or reſiſting the officers in their duty, and the boats, &c. ſhall be liable to the like penalties, as for prohibited goods in this kingdom; and the officers to the ſame penalties for frauds, &c. as here.

If the governors or officers of the cuſtoms have cauſe to ſuſpect any certificates to be counterfeit, they may require ſufficient ſecurity for the diſcharge of the plantation lading in England, &c. and if they ſuſpect the certificate of having diſcharged the plantation lading in this kingdom is falſe, they ſhall not vacate the ſecurity given in the plantations, 'till ſatisfied from England concerning it. And any perſon counterfeiting cocket, certificate, &c. forfeits 500l. and the cocket, &c. ſhall be invalid.

The ſureties of bonds taken purſuant to the forementioned act, ſhall be perſons of known reſidence and ability in the plantations; and the conditions of the bonds within eighteen months after the date (danger of the ſeas excepted) to produce certificates of having landed the goods in England, &c. or the bonds and copies to be in force.

Nor ſhall it be lawful on any pretence, to land in Ireland any goods the product of the ſaid plantations, unleſs firſt landed in England, &c. and the due rates paid, on forfeiture of ſhip and goods: but if any ſhip ſo laden, ſhall by ſtreſs of weather be ſtranded, or be driven into any port of Ireland, and unable to proceed, her goods may be put on ſhore, but ſhall be delivered to the chief officer of the cuſtoms there, 'till put on board ſome other ſhip, to be ſent to ſome port in England, &c.

Where any queſtion ſhall ariſe concerning importation or exportation of any goods, proof ſhall lie on the owner or claimer: and on any actions, &c. commenced in the ſaid plantations relating to the duties or forfeitures, none ſhall be of any jury but natives of England or Ireland, or of the plantations; and the offences may be laid to be in any precinct of the ſaid plantations, where they are ſaid to be committed.

By 3 and 4 Anne, cap. 8. Any native of England or Ireland, may ſhip in any port of Ireland in Engliſh built ſhipping duly manned, any linen cloth the manufacture of Ireland, and tranſport to any plantation, &c. belonging to England, and there vend the ſame. But no ſhip ſhall break bulk 'till notice be given to the governor, and a true invoice of the lading be delivered him, with a proper certificete from the chief officer of the port in Ireland where laden; and 'till the maſter hath taken oath before the governor, &c. that the goods are the ſame that were took on board, nor 'till the ſhip be ſearched.

If the maſter ſhall break bulk before ſuch notice given, &c. or on ſearch any other manufacture be found, ſhip and goods ſhall be forfeited. And ſhips coming from Ireland to any ſuch plantation, ſhall be ſubject to the like rules, ſearches, and penalties, as ſhips from England are.

If any ſhip laden in England for the plantations, ſhall put into any port in Ireland and take on board ſuch Iriſh linen, the like certificate and oaths ſhall be made; and the ſhip, her maſter, and lading, ſhall be liable to ſuch ſearches and penalties, &c. only ſuits are to be brought in a twelvemonth after diſcovery of any offence. See the act 3 Geo. I. cap. 21.

The act 6 Ann. cap. 30. recites, That her Majeſty by proclamation, dated 18 June, 1704, ſettled the currency of foreign coins in the American colonies, which was as follows:

A PROCLAMATION, for aſcertaining the currency of the foreign coins in the PLANTATIONS.

WE having had under our conſideration, the different rates at which the ſame ſpecies of foreign coins do paſs in our ſeveral colonies and plantations in America, and the inconveniencies thereof, by the indirect practice of drawing the money from one plantation to another, to the great prejudice of the trade of our ſubjects; and being ſenſible the ſame cannot be otherwiſe remedied, than by reducing all foreign coins to the ſame current rate within all our dominions in America: and the principal officers of our mint, having laid before us a table of the value of the ſeveral foreign coins which uſually paſs in payments in our ſaid plantations, according to their weight, and the aſſays made of them in our mint, thereby ſhewing the juſt proportion which each coin ought to have to the other, which is as followeth, viz. Seville pieces of eight, old plate, ſeventeen pennyweight, twelve, grains, four ſhillings and ſix pence; Seville pieces of eight, new plate, fourteen pennyweight, three ſhillings and ſeven pence farthing; Mexico pieces of eight, ſeventeen pennyweight twelve grains, four ſhillings and ſixpence: pillar pieces of eight, ſeventeen pennyweight twelve grains, four ſhillings and ſix pence three farthings; Peru pieces of eight, old plate, ſeventeen pennyweight twelve grains, four ſhillings and five pence, or thereabouts; croſs dollars, eighteen pennyweight, four ſhillings and four pence three farthings; ducatoons of Flanders, twenty pennyweight and twenty-one grains, five ſhillings and ſix pence; ecus of France, or ſilver Lewis, ſeventeen pennyweight twelve grains, four ſhillings and ſixpence; cruſadoes of Portugal, eleven pennyweight four grains, two ſhillings and ten pence farthing; three guilder pieces of Holland, twenty pennyweight and ſeven grains, five ſhillings and two pence farthing; old rixdollars of the empire, eighteen pennyweight and ten grains, four ſhillings and ſixpence; the halves, quarters, and other parts in proportion to their denominations, and light pieces proportionable to their weight. We have therefore thought fit, for remedying the ſaid inconveniencies, by the advice of our council, to publiſh and declare, that from and after the firſt day of January next enſuing the date hereof, no Seville, pillar, or Mexico pieces of eight, though of the full weight of ſeventeen pennyweight and a half, ſhall be accounted, received, taken, or paid within any of our ſaid colonies or plantations, as well thoſe under proprietors and charters, as under our immediate commiſſion and government, at above the rate of ſix ſhillings the piece current money, for the diſcharge of any contracts or bargains to be made after the time aforeſaid; the halves, quarters, and other leſſer pieces of the ſame coins, to be accounted, received, taken, and paid, in the ſame proportion, and the currency of all pieces of eight of Peru, dollars, and other foreign ſpecies of ſilver coins, whether of the ſame or baſer allay, ſhall ſtand regulated, according to their weight and fineneſs, in proportiun to the rate before limited and ſet for the pieces of eight of Seville, pillar, and Mexico; ſo that no foreign ſilver coin of any ſort be permitted to exceed that proportion upon any account whatſoever. And we do hereby require and command, &c. (the obſervance of the directions herein, &c.)

For the better enforcing the due execution of the ſaid proclamation throughout the ſaid colonies, and more effectual remedying the inconveniencies thereby intended to be remedied, it is enacted, That if any perſon within any of the ſaid plantations, ſhall, for diſcharge of any contract to be hereafter made, account, take, or pay, any the ſpecies of foreign ſilver coins mentioned in the above proclamation, at any higher rate, ſuch perſon ſhall ſuffer ſix months impriſonment without bail, and forfeit 10l. for every offence.

But nothing in this act or proclamation, ſhall compel any perſons to receive any of the ſaid ſpecies of foreign ſilver coin at the rates in the proclamation mentioned: nor any thing herein contained, reſtrain her Majeſty from ſettling the rates of the ſaid foreign coins in any of the ſaid plantations, as ſhe ſhall judge neceſſary by proclamation, or from giving her royal aſſent to any law hereafter made in any of the plantations, for the ſame purpoſe.

By 8 Geo. I. cap. 18. reciting divers acts, by which diverſe commodities of the Britiſh plantations, are reſtrained to be imported into this kingdom, or ſome other plantation, under ſecurities and penalties therein ſpecified, enacts, That copper ore ſhall be under the like ſecurities, as for other goods enumerated by any former laws.

By 4 Geo. II. cap. 15. All goods not mentioned in any former act, may be imported into Ireland from the American plantations, the act 7 and 8 Will. III. notwithſtanding. But the goods ſhall be in Britiſh ſhipping legally manned.

By 5 Geo. II. cap. 7. All real eſtates ſhall be chargeable with all juſt debts whatſoever, as they are by the law of England liable to ſatisfaction of debts due by bond, or other ſpeciality; and ſubject to like remedies and proceedings in any court, in any of the plantations, in the ſame manner as perſonal eſtates are there.

And for more eaſy recovery of debts in the colonies in any ſuit brought there, for debt or account, in which any perſon reſiding in Great-Britain ſhall be party, ſuch debts may be proved here on oath before any chief magiſtrate near where the perſon ſhall reſide, and being certified under the common ſeal of the city or town, &c. ſhall be of the ſame force, as if the perſons had appeared in open court, or upon commiſſion.

By 6 Geo. II. cap. 13. All ſugars and paneles of the product of any plantations not under his Majeſty's dominions, imported into any of his Majeſty's plantations, ſhall pay 5s. for every hundred weight, and for all rum or ſpirits of foreign produce, 9d. for every gallon; and for molaſſes 6d. the gallon. And on importation an entry ſhall be made with the proper officers, &c. and the duties paid down in ready money before landing the goods, on pain of forfeiture; and every ſuch offence may be proſecuted in an admiralty-court in the plantations, or court of record where committed.

By this act, ſugars, paneles, &c. rum and ſpirits of America, not the product of the Engliſh ſugar colonies, are prohibited to be imported into Ireland, but ſuch only as are ſhipped in Great-Britain, in ſhips legally navigated, &c.

By 5 Geo. II. cap. 22. No hats or felts ſhall be exported from one Britiſh plantation to another, on penalty of 500l. and forfeiture of the goods; and perſons aiding and aſſiſting therein, ſhall forfeit 40l. Any perſons may ſeize hats and felts found on ſhip-board, &c. and carry them to the king's warehouſe. And commiſſioners of the cuſtoms, &c. in the plantations, permitting entries for exportation forfeit 500l. This ſtatute alſo regulates the trade of felt-making, &c. and no perſon ſhall retain in the ſaid art any negro, on forfeiture of 5l. for every month.

By 3 Geo. II. cap. 28. Any Britiſh ſhip legally navigated clearing outwards in any port of England for the province of Georgia, may load rice there and carry to any port ſouthward of Cape Finiſterre, under reſtrictions limited in the act. And the officers appointed by the truſtees of Georgia, are impowered to do all things there, which may be done by virtue of the ſaid act, by the officers in Carolina. The ſhips concerning which province, ſhall proceed directly without carrying rice to any other American plantation; firſt taking out a licence from the commiſſioners, on a certificate from the collector and comptroller of the port, that bond is given, that no enumerated goods ſhall be taken on board at Carolina, or any plantation, unleſs for neceſſary proviſions in their voyage.

After landing the rice at ſome port of Europe ſouthward of Cape Finiſterre, the ſhip is to proceed for Great-Britain, and produce a certificate of having landed the ſaid rice, &c. and the maſter producing the licence to the officers of the port where given, they ſhall demand the amount of the half ſubſidy payable for rice ſhipped in Carolina, which would have remained, had the rice been firſt imported in Great-Britain, and afterwards re-exported; which not being paid within 30 days, the bond ſhall be forfeited, &c. At preſent, rice, as well as ſugar, is permitted to be carried to foreign countries from the plantations, without being brought to England.

REMARKS on PLANTATIONS before the laſt War.

In the courſe of this work, we have conſidered the Britiſh plantations in various lights the moſt nationally intereſting to our commercial proſperity. See the articles BRITISH AMERICA, CANADA, COLONIES, FLORIDA, LOUISIANA,

MAP, FRANCE, NORTH CAROLINA, PENSYLVANIA. See likewiſe our MAP of North America, compared with the French one of Monſ. D'Anville, performed by the order and under the patronage of the duke of Orleans, at a very great expence. Under the preceding heads, the reader will find the cauſes of the preſent precarious ſtate of our plantations in America, pointed out to him for ſeveral years paſt; and alſo ſuch meaſures, as we humbly apprehend, would have effectually protected our poſſeſſions from thoſe inſults and depredations, to which they ſeem daily liable, to the concern of all wiſe and honeſt men, who wiſh well to theſe kingdoms.

By the before-mentioned map it appears, how contiguous the French colonies in North America lie to the Britiſh, which are entirely ſurrounded by them, and that the claims of the French, in many reſpects, we have ſhewn to be groundleſs and unjuſt.

Several parts which they now claim, were, about the beginning of the reign of king James II. made over and ſurrendered by the Iroquois Indians and their allies, to the crown of England, the right and poſſeſſion whereof we have ever ſince aſſerted and endeavoured to ſecure, both by ourſelves and the above-ſaid Indians our confederates, who on their parts, on all occaſions of difference with the French or their Indians, have for that and other conſiderations, demanded the good offices and protection of the Engliſh; who knowing it their intereſt, have never failed, if the cauſe was juſt, to afford it them: as they did in the year 1696, when the count Frontenac, governor of Canada, with ſeveral thouſand French and Indians, attacked the Onondages, one of the Five Nations, and ravaged their country; but on the approach of colonel Fletcher, governor of New York, with ſome regular forces, militia, and Indians, he was forced to retire, not without a conſiderable loſs from theſe natives, who conſtantly attended him in his retreat, often fell on his rear, cut off many of his people, and all the ſtragglers they could meet with.

The Five Nations, when ſummoned on our two laſt unfortunate expeditions againſt Canada, readily joined the Engliſh troops under the command of General Nicholſon, with about a thouſand men, and the reſt of them were in motion in different parts; ſome to diſcover and obſerve the poſture of the enemy in their own country, others to ſcout about the rivers and lakes. And they had ſo great a reliance on the friendſhip and protection of the Engliſh, whom they have heretofore found and acknowleged to be truly juſt, honeſt, and punctual, in their treaties and dealings with them; that during queen Anne's war, they not only permitted, but alſo invited them, to build a fort in the very heart of their country, and on their main river, the gate of which adjoined to, and opened into one of their capital towns or fortifications, inhabited by the Mohawks, the chief and moſt warlike nation among them. The Engliſh garriſon being a detachment from the independent companies of New York and Albany, lived with them in the ſtricteſt amity, and daily entered their caſtle as the Indians did our fort, who conſtantly ſupplied the ſoldiers with veniſon, wild fowl, fiſh, and other neceſſaries in their way.

From theſe Indians of the Five Nations, the Engliſh of New York purchaſe the greateſt part of their furr and peltry-trade, and in exchange ſupply them with duffels, ſtrowds, blankets, guns, powder, ſhot, and other the manufactures of Great-Britain.

The French knowing and envying the great friendſhip and commerce the Engliſh of New York cultivate and carry on with theſe Indians, and being ſenſible of the mighty uſe and ſervice they are of, not only to that colony, but to all our other colonies to the northward, have on many occaſions endeavoured, by all the artifices imaginable, to draw them over to their party and intereſts, which when they failed in, they have attempted by force or fraud to extirpate or ſubject them: but that cunning and warlike people, by the advice and aſſiſtance of the Engliſh, have ever prevented their deſigns, to whom they continue moſt incenſed and irreconcileable enemies; though as long as the Engliſh have peace with them, they are purſuaded to continue the ſame.

Indeed, during the reign of king James II. they had certainly been cut off and exterminated by the French (the Engliſh being prohibited to give them the leaſt aſſiſtance) had not the happy Revolution of king William intervened, and the war with France ſoon ſucceeded.

Nay, even Col. Dungan, a Roman Catholic, made governor of New York by king James, was at that time ſo very ſenſible of the ruin intended to the Five Nations our allies, and in conſequence to the Engliſh plantations, that he ordered the Popiſh prieſts, who were by leave come into his government, under pretence of making proſelytes, to depart from thence, becauſe he found their deſigns was to betray our colonies to the French, inſtead of making converts of the inhabitants.

The French, as is related above, have many ways endeavoured to ruin or diſtreſs the Iroquois; but as they are well aſſured, nothing will affect them ſo much and nearly, as to deprive them of their fiſhing and hunting, which is moſtly on the borders of, and between the great lakes, and without which they muſt ſtarve; therefore they have attempted to build forts on the ſeveral narrow paſſages thereof, and the rivers which empty themſelves thereinto, in order to intercept them, either in their going or returning from thoſe places; but the Indians have as often prevented the finiſhing of them, or otherwiſe obliged them to demoliſh or deſert them.

But ſhould the French be permitted to eſtabliſh their projected communication between Cape Breton and the gulph and river of St Lawrence, as far as the Miſſiſſippi, and ſo downwards to the bay of Mexico, which will be a mighty addition and increaſe of territory, ſtrength, and power to them, it is much to be feared, they will carry their point one time or another, and thereby diſtreſs and ſubject theſe our allies; the conſequence of which will not only be very ſhocking, but of the utmoſt concern to the ſafety of our northern plantations: for if we now, in ſo great meaſure, ſtand in need of, and depend on them as our friends, for the ſecurity of our frontiers, what muſt we expect when that barrier is removed, and they become our enemies? And not only they, but all the reſt of our friendly Indians to the ſouthward, which we may of courſe depend on.

We have heretofore experienced the diſmal and tragical conſequences attending a defection, of only one or two paultry nations of Indians bordering on Carolina; and though other pretences have been urged as the cauſe thereof, and were, perhaps, in ſome meaſure true; yet the French, ſince their late ſettlements on the Miſſiſſippi, and the bay of Mexico, have frequently clandeſtinely fomented and widened the breach, which occaſioned the butchering of ſo many hundreds of the inhabitants of that colony, with the burnings, devaſtations, and almoſt entire deſolation thereof.

It is well known, that the frontiers of our colonies are large, naked, and open, there being ſcarce any forts or garriſons to defend them for near two thouſand miles. The dwellings of the inhabitants are ſcattered at a diſtance from one another; and it is extremely difficult, if not almoſt impoſſible, according to the preſent eſtabliſhment and ſituation of our affairs there, from the great number of our colonies independent on each other, their different ſorts of governments, views, and intereſts, to draw any conſiderable body of forces together on an emergency, though the ſafety and preſervation, not only of any particular colony, but of all the Engliſh plantations on the continent, were never ſo nearly concerned.

For ſeveral of theſe governments, pretending to or enjoying ſome extraordinary privileges, which the favour of the crown has formerly granted them, excluſive of others, if their aſſiſtance is demanded or implored by any of their diſtreſſed neighbours, attacked by enemies, perhaps, in the very heart of their ſettlements, they either by affected delays, inſiſting on punctilios and niceties, ſtarting unreaſonable objections, and making extravagant demands, or other frivolous pretences, purpoſely elude their juſt and reaſonable expectations; and by an inactive ſtupidity or indolence, ſeem inſenſible of their particular and moſt deplorable circumſtances, as well as regardleſs of the general or common danger, becauſe they feel not the immediate effects of it; not conſidering their own ſecurity is precarious, ſince what happens to one colony to-day, may reach another to-morrow. A wiſe man will not ſtand with his arms folded when his neighbour's houſe is on fire.

The only expedient which has been ſuggeſted (with the utmoſt deference to his Majeſty and his miniſters) to help and obviate theſe abſurdities and inconveniencies, and apply a remedy to them, is, That all the colonies appertaining to the crown of Great-Britain on the northern continent of America, be united under a legal, regular, and firm eſtabliſhment, over which it is propoſed a lieutenant-general, or ſupreme governor, may be conſtituted, and appointed to preſide on the ſpot, to whom the governors of each colony ſhall be ſubordinate.

It is further humbly propoſed, That two deputies ſhall be annually elected by the council and aſſembly of each province, who are to be in the nature of a great council, or general convention of the eſtates of the colonies; and by the order, conſent, or approbation of the lieutenant, or governor-general, ſhall meet together, conſult, and adviſe for the good of the whole, ſettle and appoint particular quotas, or proportions, of money, men, proviſions, &c. that each reſpective government is to raiſe for their mutal defence and ſafety, as well as, if neceſſary, for offence and invaſion of their enemies: in all which caſes, the governor-general, or lieutenant, is to have a negative, but not to enact any thing without their concurrence, or that of the majority of them.

The quota, or proportion, as above allotted and charged on each colony, may, nevertheleſs, be levied and raiſed by it's own aſſembly, in ſuch manner as they ſhall judge moſt eaſy and convenient, and the circumſtances of their affairs will permit.

Other juriſdictions, powers, and authorities, reſpecting the honour of his Majeſty, the intereſt of the plantations, and the liberty and property of the proprietors, traders, planters, and inhabitants in them, may be veſted in, and cognizable by, the aboveſaid governor-general, or lieutenant, and grand convention of the eſtates, according to the laws of England,

but

but theſe points are not thought fit to be touched on or inſerted here: this propoſal being general, and with all humility ſubmitted to the conſideration of our ſuperiors, who may improve, model, or reject it, as they in their wiſdom ſhall judge proper.

A coalition, or union of this nature, tempered with and grounded on prudence, moderation, and juſtice, and a generous encouragement given to the labour, induſtry, and good management of all ſorts and conditions of perſons inhabiting, or any ways concerned or intereſted in the ſeveral colonies above-mentioned, will, in all probability, lay a ſure and laſting foundation of dominion, ſtrength, and trade, ſufficient not only to ſecure and promote the proſperity of the plantations, but to revive and greatly increaſe the flouriſhing ſtate and condition of Great-Britain, and thereby render it, once more, the envy and admiration of it's neighbours.

Let us conſider the fall of our anceſtors, and grow wiſe by their misfortunes. If the ancient Britons had been united amongſt themſelves, the Romans, in all probability, had never become their maſters: for, as Cæſar obſerved of them, Dum ſinguli pugnabant, univerſi vincebantur; whilſt they fought in ſeparate bodies, the whole iſland was ſubdued: ſo if the Engliſh colonies in America were conſolidated as one body, and joined in one common intereſt, as they are under one gracious ſovereign, and with united forces were ready and willing to act in concert, and aſſiſt each other, they would be better enabled to provide for and defend themſelves againſt any troubleſome ambitious neighbour or bold invader: for union and concord increaſe and eſtabliſh ſtrength and power, whilſt diviſion and diſcord have the contrary effects.

It muſt ſeem to every man a very great indignity offered to his Majeſty and the nation, that when there are are 500,000 Britiſh ſubjects (which are, perhaps, three times more than the French have both in Canada and Louiſiana put together) inhabiting the ſeveral colonies on the eaſt ſide of the continent of North America, along the ſea-ſhore, from the gulph of St Lawrence to that of Florida, all contiguous to each other, who, for a century, have eſtabliſhed a correſpondence, contracted a friendſhip, and carried on a flouriſhing trade and commerce with the ſeveral nations of Indians lying on their back, to the weſtward and northward, for furrs, ſkins, &c. a moſt rich and valuable traffic, the colonies themſelves abounding with metals and minerals of copper, iron, lead, &c. producing hemp, flax, pitch, tar, roſin, turpentine, maſts, timber, and planks of oak, firr, and all other ſorts of naval ſtores in great abundance, and the beſt of their kind in the world; beſides wheat, beef, pork, tobacco, rice, and other neceſſary and profitable commodities; with a noble fiſhery for whales, cod-fiſh, &c. along the coaſt and in the bays thereof: I ſay it ſeems a great indignity offered to his Majeſty and the Britiſh nation, that the French ſhould preſume to make thoſe incroachments, and commit thoſe ravages and hoſtilities on our plantations, which are now the ſubject of daily converſation and ſurprize; eſpecially ſince the Engliſh have planted and improved them, from the ſea-coaſt almoſt up to the ſources of the largeſt rivers, by the conſent of the natives, whoſe lands they have actually purchaſed and paid for, and whoſe traffic we may be entirely deprived of, if the French do not meet with an effectual check.

Moreover, if the Engliſh ſuffer themſelves to be thus ſtraightly cooped up, without ſtretching their plantations further back into the continent, what will become of their offspring and deſcendants, the increaſe of their own and the nation's ſtock; who claim and demand an habitation and inheritance near their parents, relations, and friends, and have a right to be provided for in the country where they are born, both by the laws of God and man, and which the prudence and policy of the ſtate does likewiſe require, as convenient and neceſſary, both for extending our territories, ſtrengthening our hands, and enlarging our trade?

Beſides, as the Engliſh are not fond of extending their dominions on the continent of Europe, but confine themſelves to their iſlands, being content with their ancient territories and poſſeſſions, except what is abſolutely neceſſary to promote and ſecure their trade and commerce, the very vitals of the ſtate, I cannot apprehend with what reaſon or juſtice the French, or any other nation, ſhould incroach upon their claims, colonies, or plantations in America.

We have heretofore likewiſe been, with juſt reaſon, alarmed in Great-Britain by the many letters, memorials, repreſentations, and remonſtrances, which have, from time to time, been tranſmitted from divers of our colonies upon the continent of America, ſetting forth the danger they have been frequently expoſed to from the neighbourhood of the French, if they obtained full poſſeſſion of the province of Carolina, (which they ſome years ſince attempted) and the lands to the northward of it, as far as the five great lakes, which comprehend great part of what they call their Louiſiana.

For through theſe countries many great rivers have their courſe, proceeding from the back of our colonies of New York, New Jerſey, Penſylvania, Maryland, Virginia, North and South Carolina (their ſprings being not far diſtant from the heads of the chief rivers that belong to, and run through thoſe colonies) moſt of them navigable without interruption from their fountains, 'till they fall into the Miſſiſſippi. And by means of their ſettlements on that and the other inland rivers and lakes, from the bay of Mexico to the river and bay of St Lawrence, the French are drawing a line of communication, and now endeavouring to ſurround and ſtraighten all our colonies, from Nova Scotia to South Carolina. Thus are they working out their own grandeur and our deſtruction! Indeed the French, whom all the world acknowlege to be an enterprizing, great, and politic nation, are ſo ſenſible of the advantages of foreign colonies, both in reference to empire and trade, that they uſe all manner of artifices to lull their neighbours aſleep, with fine ſpeeches and plauſible pretences, whilſt they cunningly endeavour to compaſs their deſigns by degrees, though at the hazard of encroaching on their friends and allies, and depriving them of their territories and dominions in time of profound peace, and contrary to the moſt ſolemn treaties.

For beſides their ſeizing on, and ſettling the great river Miſſiſſippi, and ſome part of the north ſide of the bay of Mexico, and the claim they ſeem clandeſtinely to make to another of our inhabited ſouthern colonies adjoining thereunto, as I ſhall in the ſequel demonſtrate, they in ſome of their writings boaſt, that their colony of Louiſiana hath no other bounds on the north than the arctic pole, and that it's limits on the weſt and north-weſt are not known much better, but extend to the South-Sea, Japan, or wherever they ſhall think fit to fix them, if they can be perſuaded to fix any at all; intending one day, if it is in their power, to deprive the Britiſh nation of all that vaſt track of land ſituate between the gulph of Mexico and Hudſon's Bay, which includes the province of Carolina, the aforeſaid great lakes, and the whole country of our five indian nations and allies, with the furr, peltry, and other trade thereof.

And what further views and deſigns they may ettertain againſt the Spaniſh provinces of New Mexico and New Biſcay, may be eaſily conjectured, ſince we cannot forget the project framed by Monſieur de la Salle, to viſit and ſeize on the rich mines of St Barbe, &c. which if he thought no difficult taſk to accompliſh with about 200 French, and the aſſiſtance of the Indians adjoining to, and in actual war with, the Spaniards at that time; how much more eaſily will they become maſters of them, when with the united ſtrength of Canada and Louiſiana, both French and natives, they ſhall think fit to attack them? And after ſuch an acquiſition of the numerous mines of thoſe provinces, with the immenſe riches thereof, what may not all our colonies on the continent of America apprehend from them?

Beſides, Jamaica lying, as it were, locked up between their ſettlements in the iſland of Hiſpaniola, and thoſe on the bay of Mexico, will ſoon be in danger of falling into their hands; and whether the Havannah itſelf, and the whole iſland of Cuba, with the key of Old Mexico, La Vera Cruz, will long remain in the poſſeſſion of the Spaniards, is very much to be doubted, if the Spaniards ſhould neglect their true intereſt, and not act in concert with Great-Britain, to curb and reſtrain ſuch meaſures: and ſuppoſing the beſt that can happen to us, it will be but Ulyſſes's fate, to have the favour of being deſtroyed laſt.

We are all ſenſible what clamours were raiſed at the conceſſions made to France on the concluſion of the peace of Utrecht. There is ſcarce a man well verſed in the intereſt of trade and plantations, but blamed the then miniſtry for not inſiſting on the ſurrender of Canada, as well as Nova Scotia and Newfoundland, for the ſecurity of our northern colonies on the continent of America, and the traffic thereof: nor ought they to have allowed them the poſſeſſion of Cape Breton, if they had well conſidered or underſtood the nature of the fiſhery in thoſe ſeas.

The hiſtory of former ages, and the experience of theſe latter times, have informed us, that the French have ever been troubleſome neighbours, whereſoever they were ſeated: hiſtorians aſſerting, that the natural levity and reſtleſſneſs of their temper, their enterprizing genius, and ambition of extending their dominions and raiſing the glory and grandeur of their monarchs, contribute in great meaſure to make them ſo.

Wherefore it is to be hoped, that the Britiſh nation will be ſo far from continuing idle or indifferent ſpectators of the unreaſonable and unjuſt uſurpations and encroachments of the French on the continent of America, that they will let them know they have too much already of Canada and Cape Breton, and that, in reaſon and juſtice, they ought to abandon their new acquiſitions on the Miſſiſſippi and the Bay of Mexico, that river and the country belonging of right to the crown of Great-Britain.

And if, while they were weak, and in the infancy of their ſettlement in Louiſiana, we had duly aſſerted and maintained our right, we had a much better chance than at preſent to have kept them from further encroachments: for ſince they have had time to augment the number of their inhabitants, corrupt and influence the natives to their intereſt, ſtrengthen themſelves, by ſecuring with forts and garriſons, the paſſes of the rivers, lakes, and mountains, it will be no eaſy matter to curb and reſtrain them from going greater and greater

lengths;

lengths; but this muſt be done, or our plantations will be undone.

And I am apt to think, that prudence and policy will, or ought to prompt us to preſerve a ballance of power in America, as well as nearer home; and that, as we have, for many years paſt, found it our intereſt to check and put a ſtop to the growing power of France, and ſet bounds to their dominions here in Europe, we ſhall not eaſily be induced to allow them to encroach on, and deprive us of our colonies and plantations in America.

The Spaniards, if they knew their own intereſt, could not be leſs jealous and uneaſy than we, at the ſo near neighbourhood of THE FRENCH ON THE MISSISSIPPI; for it is certainly for their ſecurity to diſpoſſeſs them of their ſettlements there, and on the bay of MEXICO, leſt, in time, they render themſelves SOLE MASTERS OF THE NAVIGATION THEREOF; and, with the aſſiſtance of the Indians, make irruptions into the very hearts OF THEIR COLONIES, ATTACK THEIR TOWNS, SEIZE THEIR MINES, AND FORTIFY AND MAINTAIN THEMSELVES THEREIN.

And perhaps, if this matter was properly repreſented to the Spaniards, it is not improbable but they might be induced rather to DIVIDE THIS COUNTRY WITH US, AND SURRENDER ALL THEIR PRETENSIONS TO WHATSOEVER LIES EASTWARD TO THE MISSISSIPPI, except St Auguſtine, on condition that the French are obliged to remove thence, and retire elſewhere. And indeed nothing ſeems more proper and reaſonable, than for that great river to BE THE SETTLED AND ACKNOWLEGED BOUNDARY AND PARTITION BETWEEN THE TERRITORIES OF SPAIN AND GREAT-BRITAIN, ON THE NORTHERN CONTINENT OF AMERICA, NATURE SEEMING TO HAVE FORMED IT ALMOST PURPOSELY FOR THAT END, AS WILL BE EVIDENT TO THOSE WHO SHALL GIVE THEMSELVES THE TROUBLE OF VIEWING OUR MAPS; and at the ſame time they will perceive how the French have wormed themſelves into a ſettlement between the Engliſh and the Spaniſh plantations, on pretence of a vacancy, and, with an aſſurance ſcarce to be parallelled, have ſet bounds to the dominions of both. Whether ſome proper uſe may not be made of theſe ſuggeſtions, at this critical conjuncture, at the court of Madrid, is moſt humbly ſubmitted: if France, indeed, has not brought Spain into their ſcheme of ————, ſomething of this kind might poſſibly be brought about.

This is certainly a treatment moſt unjuſt and diſhonourable to the Britiſh nation, which I ſhould not have mentionod, if the duty I owe to my ſovereign, and the affection I bear to my country did not forbid me at ſuch a juncture, and on ſo important an occaſion, to be ſilent and unconcerned.

If we tamely ſubmit to theſe inſults and injuries which are daily committed by the FRENCH IN AMERICA, without being alarmed, and taking the neceſſary ſteps towards a ſpeedy and effectual redreſs of them, ſhall we not ſeem infatuated, and wanting to ourſelves, be arraigned as felo de ſe, and accounted, with good reaſon, the eternal bubbles of the French? From what has been ſaid, and the ſeveral writings, charts, and maps of the French, it is evident to what a narrow extent of ground they have confined the Engliſh plantations, and particularly in L'Iſle's, as well as D'Anville's map, the beſt and moſt approved of any they have lately publiſhed: beſides many very remarkables, there is one in L'Iſle's which we cannot omit taking notice of, viz. that on the part where they fix Carolina, now and long ſince inhabited by the Engliſh, they have inſerted this memorable paſſage, 'Caroline, 'ainſi nommez en l'honneur, de Charles IX. par les Fran-'çois, qui la decouvrierent en prirent poſſeſſion et s'eſtabli-'rent, l'an 15.'—That is to ſay, Carolina, ſo named in honour of Charles the IXth, by the French, who diſcovered, took poſſeſſion of, and ſettled it, in the year 15.—By which the author ſeems to intimate the right of his nation to that province; who, if they were ſo bold to put in their claim in ſo bare-faced and ſo public a manner, will they not, when they think themſelves ſtrong enough, attempt by force to aſſert it?

But if the French ſhould ever grow ſo powerful in America, as to be able to intercept or engroſs the trade with the INDIANS, or ruin or ſubject our plantations, there is an end of the conſumption of our home-produce and manufactures in America, of all our ſhipping-trade thither, of the duties for goods exported thither, or imported from thence, the increaſe of our ſailors, and the advantages of raiſing our own naval ſtores; beſides the loſs of ſo large an extent of dominion, and at leaſt 500,000 Britiſh ſubjects therein. We may be likewiſe aſſured, that all our ISLANDS IN THE WEST-INDIES will ſoon undergo the ſame fate, or be terribly diſtreſſed, for want of their uſual ſupplies of fiſh, lumber, and other neceſſaries they conſtantly ſtand in need of, and receive from our plantations on the continent; which neither Great-Britain nor Ireland can eaſily aſſiſt them with, and which they purchaſe with their ſugar, rum, and melaſſes, the vent of which will be, in great meaſure, ſtopped on the loſs of our NORTHERN COLONIES, whereby they will be mightily diſcouraged and impoveriſhed, ſo as to become an eaſy acquiſition to any ambitious and powerful invader.

Thus Great-Britain being deprived of it's ſubjects, dominions, and trade in and to America, our merchants will be ruined, our cuſtoms and funds will ſink, our manufactures will want vent, our lands will fall in value, and, inſtead of decreaſing, our debts will increaſe, without the leaſt proſpect of the nation's emerging.

It looks with an aſpect ſomething very extraordinary and ſtriking, that both France and Spain ſhould take, almoſt ever ſince the late peace of AIX LA CHAPELLE, every meaſure to increaſe their MARITIME POWER, and procraſtinate, from time to time, the adjuſtment of all miſunderſtandings between the court of Great-Britain and theirs. Did we give up CAPE BRETON in America the more effectually to enable the French to maltreat and inſult us in that part of the world? Was the ASSIENTO CONTRACT given up to Spain for a ſong, to encourage them to continue their depredations upon our trade and navigation in America, and France to ruin our African trade? Do not FRANCE AND SPAIN SEEM, AT PRESENT, TO ACT IN CONCERT AGAINST GREAT-BRITAIN? Does not their conduct ſhew, that they have ſomething more in view than the humiliation of the piratical ſtates? [See our article MEDITERRANEAN.] This is an eaſy pretext, and may, like their domeſtic jars, be contrived only to cover ſome latent ſcheme of ————. Be this as it may, we cannot be too much upon our guard; and WITH THIS VIEW, AND NO OTHER, ARE THESE THINGS TAKEN NOTICE OF. But how far we may with ſafety depend upon the faith of a certain power, ſeems, at preſent, to be quite forgot: it may, therefore, be uſeful to remind the nation, and indeed all Europe, thereof, by giving a brief hiſtory of the late French king's perfidiouſneſs in the breach of ſolemn treaties.

Additional REMARKS ON THE CONSTANT PERFIDY OF FRANCE, WHICH WE OUGHT NEVER TO FORGET.

Before we come to the facts, it is neceſſary to take notice that the principles of ambition which led the late French monarch to aſpire to the univerſal monarchy, and the principles of treachery which were needful to be practiſed towards his obtaining it, were infuſed into him by thoſe who had the charge of his education, and his conduct gave the world a ſufficient proof that he cultivated both to the higheſt degree.

The biſhop of Rhodes, who was appointed his firſt preceptor, gave him for a model of government the deſigns of his grandfather, Henry IV. as appears by the book which the biſhop publiſhed on that ſubject. After that great prince had made good his title to the crown of Franee, by renouncing the proteſtant faith, and ſubduing thoſe who had made the Catholic league againſt him, he formed a project to caſt Europe into a new model, to reduce all the kingdoms and commonwealths of it to a certain number, and to preſcribe them ſuch bounds as he ſhould think fit, reſerving to himſelf ſuch a ſhare as might enable him, or his ſucceſſors, to graſp the univerſal monarchy, as his predeceſſor Francis I. intended before him.

To this end he choſe his generals, and other great officers, erected vaſt magazines of ammunition and arms, and laid up prodigious ſums of money; but, as he was going to model his army, he was murdered in his coach by Ravilliac.

In purſuance of the like deſign, Lewis XIV. applied himſelf in his youth to read the memoirs of the ſaid Henry IV. with thoſe of the preſent Jeanin and the biſhop of Rhodes; but though he copied very well after his grandfather's ambition, he ſtudied nothing of his generous qualifications, which made him the darling of his ſubjects, and procured him the eſteem of the greateſt princes and ſtates of Europe: ſo that he inverted his plan in every thing that carried a ſhew of equity, and ſet out upon the foot of making himſelf an abſolute conqueror, and of forcing all Europe to ſubmit to his chains.

In order to this, abundance of mercenary, but able pens, were employed to flatter his ambition, on pretence of making his character glorious: in order to which, they poſſeſſed him with the following maxims, 1. That any title was ſufficient to take poſſeſſion by the ſword, 2. That the greateſt part of Germany was the patrimony and antient inheritance of the crown of France. 3. That his predeceſſor Charlemain poſſeſſed Germany as king of France, and not as emperor: the writers on thoſe ſubjects were gratefully rewarded; and one of them dedicated a book to him, intitled, The juſt pretenſions of the King of France to the Empire; wherein, beſides the above-mentioned principles, he laid down theſe following propoſitions, viz. That the dominions of ſovereign princes have always been the dominions and conqueſts of their eſtates, and that the dominions and conqueſts of crowns, can neither be alienated nor preſcribed; though, at the ſame time, there were treaties betwixt the crown of France, the empire, and other princes, directly contrary to theſe maxims.

But, to come to the treaties, the firſt we ſhall take notice of, is that of Munſter, which was concluded betwixt the plenipotentiaries of the emperor and empire, and the French plenipotentiaries at that city, the 24th of October, 1648. As

to which, it is fit to obſerve, that the Empire having deſired the aſſiſtance of France againſt the houſe of Auſtria, the French, on pretence of that aſſiſtance, poſſeſſed themſelves of ſeveral provinces and conſiderable towns in Spain, Italy, Germany, and the Netherlands; ſo that the Empire finding themſelves to be in as much danger from France, as they had formerly been in from the houſe of Auſtria, they willingly came into that peace, and were content to ſit down with their loſſes, rather than truſt their French allies any longer. The court of France perceiving that they could not put off the peace of the empire by their uſual intrigues, nor hinder the Dutch to make a ſeparate peace with Spain, they found methods to have the treaty of Munſter finiſhed, without including the Spaniards, or the duke of Lorrain, in the general peace; and Monſieur de Wicquefort, in his book, intitled, L'Ambaſſadeur & ſes Fonctions, lib. ii. and ſect. 13. informs us, that cardinal Mazarine endeavoured to prevent the peace all that he could; and though his maſter's troops pretended to eſpouſe the intereſt of the proteſtants, and that the Spaniſh miniſters preſſed the imperial court to grant them all their demands, yet underhand he hindered it, that by continuing the war he might unite the Spaniſh Netherlands to the crown of France; and at the ſame time he favoured the elector of Bavaria, the chief of the papiſts, againſt the elector Palatine, who had been the head of the proteſtant League in the Empire. By theſe intrigues, the cardinal, and others of the young French king's governors, not only laid a foundation for a new war, whenever they ſhould think fit, but got all confirmed to them that they had taken from the emperor and empire in a hundred years before, viz. the city of Briſac, the Landgraviate of Upper and Lower Alſace, Suntgow, and the provincial lordſhip of the ten imperial cities in Alſace, with all their dependencies, to be incorporated with the kingdom of France for ever. They did alſo obtain a perpetual right to keep a garriſon in Philipſburgh, and to the ſovereignty of the cities and dioceſes of Metz, Toul and Verdun, by which they opened their way into the empire on the Moſelle, and the Upper and Middle Rhine, whenever they ſaw occaſion; or as ſoon as their king, who was then about ten years of age, ſhould be in a capacity to practiſe the ambition and treachery which they bred him up to.

When he came of age, cardinal Mazarine brought on the treaty of the Pyrenees, in order to lay a furer foundation for his maſter's greatneſs, and had the ſatisfaction to ſee his pupil outdo all the copies of perfidiouſneſs and treachery he had ſet him. This treaty was concluded by the cardinal for France, and Don Louis Mendez de Haro for Spain; by which a peace was made betwixt the two crowns, on the 7th of November, 1659, when the French king was left in poſſeſſion,

1. Of all Artois, except Ayre and St Omers, with their dependencies. 2. Of Graveling, the forts Philip, the Sluce, Hannum, Bourbourg, and it's chatellany, and St Venant, in Flanders. 3. In Hainault, he had Landrecy and Queſnoy, with their chattellanies and dependencies. 4. In Luxemburg, Thionville, Montmedy, and D'Anvilliers, with their dependencies, and the provoſtſhips of Ivoy, Chavaney, Chaſteau, and Marville, with all that belonged to them; Marienburgh and Philippeville, on the Maes with all their dependencies; Avennes, on the Sambre with all that belonged to it; Recroy, in the Ardernes; Le Chatelet, at the head of the Scheld, and Linchamp. 5. On the ſide of Germany, all that had been granted him by the treaty of Munſter was confirmed. 6. By this treaty the duke of Lorrain was in a manner ſacrificed to him; for Nancy, his capital, was to be demoliſhed, and not to be refortified; and all the guns, arms, and ammunition to be carried off: he was ſtripped of the whole duchy of Bar, the county of Clermont, the provoſtſhips of Stenay, Dun, and Jametz, Moyenvie, and their dependencies. 7. By this treaty all the French king's pretenſions to the kingdom of Navarre, were left in ſtatu quo, and his ſovereignty over the county of Carolois in Burgundy, was reſerved to him, the king of Spain being to hold it in fee, as before the war. 8. On the ſide of Spain, the county of Rouſſillon, the Viguery of Conflans, and part of Cardegna were yielded to him. 9. In Italy, the king of Spain obliged himſelf to reſtore Verreil, with it's dependencies, to the duke of Savoy, to withdraw his garriſon from Correggio, to pay the duke the arrears of the dower of the infanta Catharina, to reſtore the duke of Modena to his favour, and allow him a neutrality, to reſtore the prince Manaco; and, on the French king's interceſſion, the king of Spain reſtored Juliers to the duke of Neuburg.

By this means the French king had put into his hands the keys of the Empire, Spain, and the Netherlands; which were neceſſary for his deſign, to obtain the univerſal monarchy that he afterwards diſcovered.

We cannot ſuppoſe the Spaniards, who are a wiſe people, to have made him ſuch a ſacrifice, without a valuable conſideration; which was to preſerve what they had left intire, that they might be at liberty to recover the kingdom of Portugal, which had newly revolted from them, and to obtain reſtitution of the duchy of Burgundy, and ſome places of importance the French had taken from them in Flanders. Beſides, they had ſome hopes of tying down this young aſpiring prince, by the bonds of love, ſince they could not do it by force of arms; eſpecially when the hands of the German branch of the houſe of Auſtria were tied up from aſſiſting them, by the treaty of Munſter, and their own low circumſtances. In order to this, a contract of marriage was agreed on betwixt Louis and infanta Maria Thereſa, the king of Spain's eldeſt daughter, on condition that he and ſhe ſhould ſolemnly renounce all pretenſions for themſelves and their ſucceſſors, to the crown of Spain, or any of the dominions thereunto belonging; which was ratified by the 33d article of this treaty, and there called the chief part of it, and the moſt worthy, as well as the greateſt, and moſt precious earneſt of the ſurety of it's duration.

But that the French court might ſhew themſelves to be ſtill acted by the ſame maxims of treachery and cruelty; as they made the match betwixt the king of Navarre, afterwards Henry IV. and Margaret of France, a trap to ruin the Proteſtants, by the infamous maſſacre of St Bartholomew; ſo they made the like trap of this match to ruin the family of Auſtria, and uſurp their dominions, which has occaſioned ſo much blood in Europe, and God knows when the current will be ſtopped.

We come now to the French king's behaviour, at, and after this treaty; which opens ſuch a ſcene of perjury, atheiſm, and treachery, as, all circumſtances conſidered, never had it's parallel in the world.

To prove this, we ſhall bring ſome inſtances which make it evident, that the French king ſwore to the clauſe of renunciation with a deſign to break it. The firſt is from cardinal Mazarine's letter to Monſieur Lionne, of Auguſt 5, 1659, where he ſays, 'We could not ſuffer ourſelves to be perſuaded to loſe ſo many advantages, which with juſtice we might pretend to, without agreeing to the marriage of the king with a princeſs who might come to be heireſs of ſo great a monarchy as that of Spain.' And in the ſame letter he ſays, 'That when M. Piementel made the overture of the marriage, it was without making mention of the renunciation.'

In his letter to Monſieur le Tellier, of Auguſt 23, he gives an account of his conference with Don Lewis de Haro, the Spaniſh miniſter, wherein he would have perſuaded him to conſent to the marriage without the renunciation; but Don Lewis ſtopped his mouth, by telling him that the emperor had offered, in caſe he might have the infanta for himſelf, that he would break with France, and in all things follow the conduct of Spain; which obliged the cardinal to accept the match with the clauſe of renunciation.

In that ſame letter he ſays, that Don Lewis durſt not propoſe the marriage to the court of Spain, without the renunciation, they being ſo averſe to it, that there were none of the council but himſelf, and one more, who were for the match, even with that clauſe; for they all maintained, and he himſelf was of the ſame opinion, 'That if the king of Spain ſhould loſe his two ſons, which there was great reaſon to fear, they could not expect that the king of France would quit his hopes to ſucceed him, and renounce ſo great pretenſions.' Upon which the cardinal adds his own reflections in the following words: 'I am fully perſuaded of the truth of all this, for ſeveral very ſtrong and concluſive reaſons.' And he ſubjoins: 'moreover, I very well remember what the queen, his moſt chriſtian majeſty's mother, who likewiſe made a renunciation when ſhe was married to Lewis XIII. often told me, that when her brother, the king of Spain, had but one ſon; but, ſays he, (in a rapture of joy) I was well pleaſed to hear the ſame thing from the firſt miniſter of Spain, and that their whole council is of the ſame ſentiments.' Theſe letters being wrote for the king's own perufal, the cardinal durſt not have preſumed to uſe ſo much freedom, had he not been perſuaded that it agreed with his majeſty's intentions.

The ſecond inſtance is from Monſieur Aubery's Life of Cardinal Mazarine, dedicated to the king himſelf, by the author, who was an advocate of the parliament of Paris, and one of the king's council. He ſays, in the ſecond tome of Mazarine's life, p. 554. The cardinal acted prudently to ſign the contract of marriage, without having any regard to the pretended renunciation; which being manifeſtly contrary to common right, and to the law and general cuſtom of the ſtate, might be freely contradicted and diſavowed.

Theſe are full proofs of the French king's ſwearing to the treaty of the Pyrenees, with a deſign to break it: and what aggravates his crime is, that he had the ſame treacherous intention when he took his marriage oath; which after, according to the religion he profeſſed, he looked upon as a ſacrament, is a clear demonſtration that he was not to be tied, even by what he himſelf accounts to be moſt ſacred. The firſt open breach he made of this treaty, was, that though in the 6th article of the contract of marriage, it was ſtipulated, that he ſhould make another ratification of the renouncing clauſe, jointly with his queen, as ſoon as he ſhould be married, and enregiſter the ſame in the parliament of Paris, with other neceſſary clauſes, according to the uſual form, yet he would never comply with it; ſo early had he learned to play faſt and looſe with oaths and ſacraments, and ſo little

regard or love had he to the honour or perſon of the infanta, whom he could never have obtained without this renunciation.

The ſecond breach was that of the 60th article of the Pyrenean treaty, by which the French king obliged himſelf to abandon Portugal, and to give that king no aſſiſtance, in the following words: 'His ſaid majeſty ſhall meddle no more with the ſaid affair, and doth promiſe and oblige himſelf upon his honour, and on the faith and word of a king, for himſelf and his ſucceſſors, not to give unto the forementioned kingdom of Portugal, neither in general, or to any perſons of it in particular, of what dignity, eſtate, or condition ſoever, neither now nor hereafter, any aid or aſſiſtance, public or private, directly or indirectly, of men, arms, ammunition, victuals, ſhips, or money, under any pretext; nor of any thing elſe, either by land or ſea, or in any other manner: and that he would not ſuffer levies to be made in any part of his kingdoms and eſtates, nor grant free paſſage to thoſe which may come out of other countries to the aſſiſtance of the ſaid realm of Portugal.'

But ſo far was the French king from obſerving this article, that immediately after the treaty, he ſent privately ſeveral bodies of troops to Portugal, and encouraged their obſtinacy to maintain the duke of Braganza upon the throne, contrary to the houſe of Auſtria; which was ſo much the more groſs, becauſe it appears by many places of the cardinal de Mazarine's letters, that the French king muſt of neceſſity have continued the war, and gone without his bride; nor would the Spaniards have abandoned the duke of Lorrain, and the prince of Condé, as they did, in ſo many material points, but merely on the conſideration of the French king's abandoning Portugal. When the Spaniſh ambaſſador at Paris complained of this breach to the French king, that prince, to ſhew how well he was verſed in the art of diſſimulation, ſent orders to all his ports, that no forces ſhould embark there for Portugal, which they did notwithſtanding; and when the Spaniſh miniſter renewed his complaint, he was told, that this was the marſhal de Turenne's particular act, and that the court had no hand in it: though, at the ſame time, the Spaniards intercepted ſeveral letters betwixt Monſieur Leon, the archbiſhop of Ambrun, and Count Schomberg, which fully proved, that the latter kept a conſtant correſpondence with the French court, and received all his directions from thence for carrying on the war. So early had the French king learned the art of debauching Proteſtant generals, ſo far as to concur with him in carrying on his treacherous and tyrannical deſigns.

The treachery of the French king, in this matter, was ſtill more evident by the letters which the Spaniards intercepted; which made it evident, that ſoon after the treaty, he hindered the Portugueze from accepting the advantageous propoſals made them by the Spaniards, by promiſes of ſuch aſſiſtance, as ſhould enable them, not only to defend themſelves, but to carry the war into the heart of Spain. And ſoon after the cloſe of the treaty, Mr Colbert made ſeveral journeys into Portugal to encourage them, and to contract a ſecret alliance with them: aud Monſieur Courtin went to England, at the ſame time, to move the king of Great-Britain not to abandon the Portugueze: nay, the Spaniards intercepted, in a French veſſel coming from Portugal, an account of the expences and ſuccours which France had given, without intermiſſion, to the Portugueze from the cloſe of the treaty; and, among other things, that they had maintained troops there to uphold the war: and all this, at the very time when they offered to the Spaniards to compoſe the differences betwixt them and Portugal, by their mediation. But, as ill men become more and more hardened in their wickedneſs, by continuing the practice of it, the French king, in 1667, when he began to form his deſign of invading the Spaniſh Netherlands, did openly, in defiance of the Pyrenean treaty, make a league, offenſive and defenſive, with Portugal, againſt all nations, England excepted.

By this treaty, all the harbours which the Portugueze ſhould take in Spain, either upon the one or the other Sea, were to be put into the power of France, which was to furniſh them with men and money by way of loan; and this treaty was to laſt for ten years, and the French were not to treat until the Portugueze were intirely ſatisfied, as we are informed by the author of The Buckler of State and Juſtice.

Having thus treacherouſly enfeebled Spain, by continuing the war of Portugal, the French king dealt in the ſame manner with the duke of Lorrain; and, contrary to the reſervations made for the ſaid duke in the treaty of the Pyrenees, he forced him to ſell him his duchy, to the prejudice of his lawful ſucceſſor: but knowing that the contract was null of itſelf, the French king obliged him, by force, to put the only place left him into his hands; by means of which he revoked the bargain, and got the thing without paying the price.

The next thing the French king did, was to poſſeſs himſelf of thoſe provinces belonging to the Spaniards, where he was likely to meet with moſt oppoſition to his deſign of making himſelf maſter afterwards of the whole Spaniſh monarchy; either becauſe of their native ſtrength, or becauſe of the intereſt that neighbouring princes and ſtates were like to take in their preſervation; and theſe were Flanders, the French county, and Milan.

In 1665, the queen-mother of France, who had made the ſame renunciation as her ſon, the French king, had done, told the Spaniſh ambaſſador, in a diſcourſe, that ſhe was ſenſible of the ill advice given her ſon, the French king, to ſet up pretenſions upon the monarchy of Spain; ſhe was ſenſible alſo of his deſire of glory, and of the unquiet temper of the French nation, and being afraid that theſe things might give a diſturbance to the peace, of which ſhe looked upon herſelf to be the author: ſhe therefore deſired him to acquaint her brother, the king of Spain, that ſhe thought it neceſſary, ſince he had given ſo much for a peace, to give yet ſomething more for preſerving it, and to ſtop the mouths of thoſe that puſhed on the king, her ſon, to violent reſolutions; and that for her part, ſhe would inſpire him with all the moderation ſhe could.

But the French king was ſo far from having any regard to the advice of his mother, or to her honour, that he perfectly gave her the lye, in his letter to the queen-regent of Spain; to whom he wrote, that his mother, in this conference, told the marquis that his pretenſions were juſt, ſolid, and undeniable.

The Spaniſh ambaſſador gave the court an account of what had paſſed betwixt him and the queen-mother of France; but Philip IV. of Spain dying a little after, they returned no immediate anſwer, only the ambaſſador had orders, that if the queen-mother of France ſhould again debate that buſineſs, he ſhould inform her fully of the falſhood of the French king's pretenſions, and that the queen-mother of Spain could do nothing in thoſe things herſelf, during the regency.

The French king made no complaint of this anſwer, nor any new propoſals upon it: and when he ſent the marquis de Bellefonds to Madrid, with a compliment of condolance upon the king of Spain's death, he gave him no orders about his pretenſions; but, on the contrary, the archbiſhop of Ambrun, the French ambaſſador at Madrid, gave all aſſurances of his maſter's intentions to keep the peace, propoſed entering into a league with Spain, to compoſe their differences with Portugal; and reproached thoſe as perſons of a ſeditious and turbulent humour, who would call in queſtion his maſter's ſincerity. Nay the French king himſelf, when the Spaniſh ambaſſador took leave of him to return to Spain, charged him to engage his faith and word to the queen, that he would keep a conſtant amity with her and her kingdom, without ſaying one word of his pretenſions.

By theſe falſe promiſes he lulled the Spaniards aſleep; and, to prevent their making any alliances for their own defence with their neighbours, he declared to the Spaniards, that if they ſigned any treaty with England, or made a peace or truce with Portugal upon their mediation, he would immediately declare war againſt them, as appears by Sir William Temple's letter to the earl of Clarendon from Bruſſels, May 4, 1667.

The French king having alſo, by his practices and private intrigues with Charles II. king of Great-Britain, raiſed a war betwixt England and Holland, he continued it by the ſame arts, becauſe he knew very well that an union betwixt thoſe two powers, would be an effectual curb to his deſigns upon the Spaniſh monarchy. Being unwilling, however, to alarm Europe too much, he made his pretenſions at firſt only to the duchy of Brabant, with it's appurtenances; the lordſhips of Mechin, Antwerp, Upper Guelderland, Namur, Limburg, the united places beyond the Maeſe, Hainault, Artois, Cambray, the French county, and part of Flanders; which was expreſsly contrary to the PYRENEAN TREATY.

The French king having thus abuſed the credulity of the Spaniſh court, and prevented their taking neceſſary meaſures for their own preſervation, he aſſembled his army on the frontiers of Flanders, on pretence of a general review; and on the 8th of May 1667, he wrote to the queen of Spain, that he was ready to appear at the head of his army to do himſelf right, and at the ſame time ſent her his manifeſto, without having made any other demand of his pretended rights, but what paſſed in the conference formerly mentioned betwixt his mother and the Spaniſh ambaſſador. The queen-mother of Spain returned him an anſwer the 21ſt of the ſame month, wherein with great modeſty and reaſon, ſhe laid open the injuſtice of his pretenſions and proceedings; but told him, ſince he deſired an accommodation, ſhe was willing to agree to it, and deſired him to name commiſſioners, and appoint a place of treaty; but the French king, that his conduct might be all of a piece, did not ſtay for her anſwer, went to his army eight days after the date of his letter, and made thoſe ſurprizing conqueſts, which at that time alarmed and amazed all Europe: nay, he was ſo far from ſtanding to his own propoſal of an accommodation, that he rejected it with fury, when the Spaniſh miniſtry offered to agree to it, and to refer it to the arbitration of neighbouring princes.

All his neighbours being alarmed at his progreſs in Flanders, and his conqueſt of the French county, England and Holland clapped up a peace betwixt themſelves; and the king of England brought Portugal to a peace with Spain. In 1668, the triple league between England, Holland, and Sweden, was concluded;

concluded; which put a ſtop to the arms of France, and brought on the treaty of Aix la Chapelle at that time. This treaty ſaved the remainder of Flanders, and obliged the French king to reſtore the French county, after demoliſhing all it's ſtrengths; but he ſtill retained and had confirmed to him for ever, Charleroy, Binch, Aeth, Doway, Fort Scarpe, Tournay, Oudenard, Liſle, Armentiers, Courtray, Berges, and Furnes, with all their appurtenances and dependencies. Yet the French king, far from being ſatisfied with this, and knowing that the triple league was an invincible barrier againſt his deſign of graſping the univerſal monarchy, he reſolved to break it; and for that end ſent over the ducheſs of Orleans, who had an interview with her brother king Charles II. at Dover, in 1670, and not only prevailed with that prince to diſengage himſelf from that alliance, but to concert meaſures with France to carry on a joint war againſt the Dutch, which broke out in 1672. The reaſon of his attacking the Dutch was, that he knew they were concerned in intereſt, as well as obliged by treaty, to prevent his getting any more of the Netherlands into his poſſeſſion.

The motive which moved our king Charles II. to join with him was, the aſſurance given him by his ſiſter the ducheſs of Orleans, in the name of the moſt Chriſtian king, that he would aſſiſt him to attain an abſolute authority over his parliament, and to eſtabliſh popery in his dominions; as we are informed by the Hiſtory of the War with Holland, printed at Paris in 1682, with the French king's allowance, but afterwards ſuppreſſed; and the count de Maiole who wrote it, was put into the Baſtille, upon complaint of the Engliſh ambaſſador, becauſe it diſcovered the ſecret tranſactions betwixt the two courts. The French king likewiſe engaged the emperor to approve the confederacy againſt the Dutch, on condition that he ſhould not invade the empire nor the Spaniſh dominions. And all things being thus prepared, he actually invaded their provinces, and brought that republic to the brink of ruin. His treachery in this was ſo much the more palpable, that it was not only contrary to treaty, but without any declaration of war, or demand of reparation for any injuries real or ſuppoſed: though the States wrote very reſpectfully to him upon his preparations in 1671, and promiſed to make him all reaſonable ſatisfaction if they had failed towards him in any thing. King Charles II. of England followed his example in this, and attacked the Dutch Eaſt-India ſhips in their return home, without any declaration of war.

The French king and he publiſhed their declarations afterwards, as did the biſhops of Cologn and Munſter; but all of them ſo frivolous, that every body perceived that there was ſomething elſe at bottom than what was pretended in thoſe declarations. The Dutch publiſhed anſwers to them ſeverally, wherein they ſufficiently expoſed the treachery of all the four, and the falſeneſs of their pretenſions. Thus the French king engaged king Charles II. in treachery and perjury with himſelf. But the Engliſh being diſſatisfied with the meaſures of our court and the progreſs of the French king, it encouraged the Dutch to ſend deputies to England to ſollicit a peace. King Charles accordingly ſent over four perſons of quality to confer with the States and prince of Orange, to whom they pretended that the king deſigned only to humble, hut not to ruin them; and that being alarmed at the progreſs of France, he was much inclined to their intereſt. This was nothing in effect but a French artifice, for the ſame perſons renewed a treaty with the French king for three years, and both of them delivered their demands to the Dutch; which were ſo extravagant, that the States reſolved to riſk all rather than agree to them, and applied to the empire for aſſiſtance.

In 1674, the parliament of England being uneaſy at the war with Holland, a ſeparate peace was made with the Dutch and Spain, and a great part of the empire declared in their favour; which, together with the admirable conduct of the prince of Orange, retrieved their affairs. The French king continued his war, however, upon the Spaniards, which occaſioned a treaty of defenſive alliance betwixt the king of England and the Dutch; which was followed by another ſoon after, and by a third, by which the Spaniards were conſiderable loſers. For inſtead of Charleroy, Binch, Aeth, Oudenard, and ſome other parts of his conqueſts, which the French king reſtored to Spain, he had the French county, the towns of Beſançon, Valenciennes, Bouchain, Condé, Cambray, with the Cambreſis, Aire, St Omers, Ypres, Warvick, Warneton, Poperingen, Bailleul, Caſſel, Bavay, and Maubeuge, with their dependencies, confirmed to him for ever, as appears by the treaty of NIMEGUEN.—By this means the Spaniards entirely loſt the French county, and had but a weak barrier in Flanders: yet the French king not being ſatisfied with this, did, according to his uſual way of obſerving treaties, preſently after the peace, ſet up claims to ſeveral of the moſt conſiderable places of Flanders, &c. under the pretence of re-unions, dependencies, &c. but knowing theſe titles to be weak, he backed them with a powerful army; and, having ſecured the friendſhip of our king Charles II. he did not much value any other oppoſition. He took Luxemburg, put the Spaniſh provinces under contribution, and miſerably harraſſed them; but being ſenſible that he could not be long without oppoſition in theſe unjuſt proceedings, he propoſed a ſeparate and advantageous alliance with the Dutch, who rejected it, becauſe they ſaw the ſnare laid for them: and king Charles II. of England being uneaſy at home, becauſe of the too well-grounded jealouſies that the nation had of his popiſh and arbitrary deſigns, he propoſed by Mr Henry Sidney, afterwards earl of Romney, a treaty of guaranty to inforce that of Nimeguen, refuſed to ſettle the limits between him and Spain in the NETHERLANDS, according to that treaty, and forced the king of Spain to renounce his title of duke of Burgundy.

He proceeded in the ſame treacherous manner againſt the empire; and contrary to the treaties of WESTPHALIA and NIMEGUEN, continued his troops in the empire, refuſed to evacuate the places there, which he ought to have done by the treaty of Nimeguen, demanded contributions, obliged the ten towns of ALSACE to ſwear to him as their ſovereign, and the vaſſals and nobles of the country the like; he erected new courts of appeals there, and forbad appeals to the imperial chamber at Spires. He likewiſe ſet up pretenſions to the ſovereignty of the juriſdictions of Metz, Toul, and Verdun, and to other imperial ſtates and countries; confiſcated the revenues of the chapter of Straſburg, made new fortifications at Schleſtadt and Huningen, refuſed to reſtore Montbelliard, diſmounted Duckſburgh, took Homburg, Bitſch, and raiſed new pretenſions on Straſburg: all which were complained of in the diet of the empire, and repreſented to the French king, who was ſo far from thinking himſelf bound by the moſt ſacred treaties and oaths, that inſtead of redreſs, he invaded the Palatinate, ſurprized Straſburg by treachery; and, in order to graſp the univerſal monarchy, did all that he could by fraud or force to get the DAUPHIN choſen king of the ROMANS.

Much about the ſame time, in order to make himſelf maſter of Italy, and particularly of the Spaniſh dominions there, he purchaſed CASAL from the duke of MANTUA, and by his intrigues with the ducheſs regent of SAVOY, endeavoured to poſſeſs himſelf of the dominions of her ſon, then but fourteen years of age, on pretence of ſending him to Portugal to be matched with the infanta, and in her right to enjoy that crown. But this deſign was happily defeated by the nobility of SAVOY.

All theſe things together brought on the league of AUGSBURG in 1683, by the emperor, the king of Sweden, the ſtates of Holland, and ſeveral circles of the empire, of which league the prince of Orange, afterwards king William III. was the main inſtrument. In 1684, the French king continued his conqueſts in the SPANISH NETHELANDS; but, perceiving the vigorous oppoſition he was like to meet with from the prince of Orange, by virtue of the Augſburg league, he propoſed a twenty years truce with the perſons concerned in it, and alſo with the king of Spain: which being accepted, he ſecured himſelf of all that he had treacherouſly taken from the Spaniards, except COURTRAYE and DIXMUDE, which he reſtored after demoliſhing the fortifications.

It appeared, however, afterwards, that the French king entered into this twenty years truce, with the ſame treacherous intentions that he had formerly entered into all his other leagues; and when king James IId came to the crown of Great-Britain, he thought himſelf ſure by his intereſt and long alliance with that prince, where weakneſs and bigotry had made him his tool, to accompliſh his ambitious deſigns. He put him upon the ſame deſign of ſubverting the Engliſh parliament, and of eſtabliſhing POPERY in his dominions, as he had done his brother king Charles II. Which England being ſenſible of, they ſoon grew diſcontented, and being unwilling to be brought under the curſed yoke of POPERY and SLAVERY, they made application to the immortal prince of Orange for aſſiſtance, to free themſelves from the intended bondage, in which the States of Holland chearfully concurred. The French king perceiving this from their preparations, he ordered the count D'Avaux his miniſter, in 1688, to acquaint the States that he ſhould look upon their firſt act of hoſtility againſt king James, as a manifeſt rupture with himſelf, becauſe of the engagements of friendſhip and alliance betwixt him and that prince. This was an interpoſition which the French king was no ways concerned to make, had it not been for the treacherous alliance he had made with king James, contrary to the twenty years TRUCE and the TREATIES before-mentioned.

The ſtates of Holland were not to be frightened, however, by this memorial of the French ambaſſador, but came to a reſolution to aſſiſt the prince of Orange in his expedition to England; upon which occaſion, the Dutch take notice of the ſtrict alliance between thoſe two kings to deprive the ſtate of their allies, and to overturn it. This expedition brought on the late happy revolution, which diſconcerted the French king's meaſures; whereupon, contrary to the twenty years truce, he treacherouſly invaded the empire, and beſieged and took PHILIPSBURG, &c.

It is fit to obſerve here, that this very ſtep diſcovered his treachery alſo to king James: ſince it would have been a much more effectual aſſiſtance to him to have invaded the NETHERLANDS, which muſt needs have hindered the States

of

of Holland from lending their army to the prince of Orange, as he might have ſent troops to England to aſſiſt king James here. But this did not ſuit with his deſigns: for he believed, no doubt, that England muſt needs be engaged in a civil war by that expedition, and he thought it his intereſt to let Great-Britain be weakened by ſheathing their ſwords in one another's bowels, that they might not be able afterwards, upon the turn of affairs, to put a ſtop to his ambitious deſigns of univerſal monarchy, as they had done ſeveral times before: and thus he ſacrificed his dear friend and ally king James.

Theſe treacherous proceedings of the French king occaſioned declarations of war on both ſides, and the allies in theirs charged the French king home with his treacheries. That of the States of Holland charge him, (1.) With invading them in 1672, in a time of profound peace, contrary to ſolemn treaties then in being, for no other reaſon, as he expreſſes himſelf, but for the increaſe of his honour and glory. (2.) With the breach of the treaty of Nimeguen in 1678. (3.) With laying exorbitant duties upon their navigation and commerce, contrary to the ſaid treaty. (4.) With diſturbing their navigation as well within as without Europe, and attacking their men of war in time of peace, with a manifeſt deſign to ruin their trade, and rejecting all their deſires of redreſs with ſcorn. (5.) That during his perſecution of his own proteſtant ſubjects, he had alſo involved their proteſtant ſubjects reſiding in France in the ſame calamity, and treated them barbarouſly, contrary to the law of nations and expreſs treaties; parted wives from their huſbands, and children from their parents; impriſoned their ſubjects, refuſed them leave to withdraw, and barbarouſly uſed their conſuls. (6.) That he threatened the States for making alliances for their own defence, which, it is allowable to all ſovereigns, they had a liberty to do by the treaty of Nimeguen. (7.) That in time of peace, contrary to the ſaid treaties, he had ſeized the veſſels, perſons, and goods of their ſubjects in his dominions; ill uſed their merchants and traders, clapped them up in priſon, and ſold their ſhips, becauſe they would not change their religion. (8.) That his troops had burnt and plundered ſeveral places in their dominions, before the war was declared, or at leaſt on the ſame day, for no other reaſon, but becauſe they made ſome extraordinary levies for their own ſecurity againſt his private deſigns, of which they were too well informed.

The governor of the SPANISH NETHERLANDS, in his declaration of war againſt France, charges the French king, (1.) With declaring war againſt the Netherlands in April 1689, for no other reaſon, but becauſe the king of Spain had entered into an alliance with other princes and ſtates, for his own defence. (2.) With bringing the Turks upon Hungary, and endeavouring to prevent a peace betwixt the emperor and his allies, and the OTTOMAN PORTE.

King William and queen Mary, in their declaration againſt France, charge him, (1.) With invading the territories of the emperor and empire, their allies, and laying them waſte in a barbarous manner, contrary to treaties wherein England was concerned as guarantee. (2.) With many injuries againſt themſelves and their ſubjects, without giving reparation, though they had not been taken due notice of, for reaſons well known to the world. (3.) With invading our trade and ſettlements in NEWFOUNDLAND, from the governor of which the French did formerly take licence to fiſh. (4.) With invading our CARIBBEE ISLANDS, and poſſeſſing himſelf of NEW YORK and HUDSON'S BAY in a hoſtile manner, and treating the inhabitants with the utmoſt barbarity, while at the ſame time his miniſters were negociating a treaty in England for a NEUTRALITY and GOOD CORRESPONDENCE in AMERICA. (5.) With his countenancing the ſeizure of our ſhips by his privateers; forbidding the importation of a great part of our products, and laying exorbitant cuſtoms upon the reſt, with a deſign to deſtroy our trade and navigation. (6.) With diſputing our right to the FLAG, and barbarouſly perſecuting our proteſtant ſubjects in his dominions, contrary to the law of nations and expreſs treaties, and forcing them to abjure their religion by unheard-of cruelties; impriſoning and ſending to the gallies our merchants, maſters of ſhips, and ſeamen. (7.) With having promiſed aſſiſtance to overthrow the government of England, and invading the kingdom of Ireland.

During the courſe of the war, which followed theſe declarations, he treacherouſly brought the duke of Savoy to break the alliance, and to enter into a ſeparate peace with him.

We may alſo take notice here, that during the ſaid war, it appeared plain by the confeſſion of Grandval, and others executed abroad, and by the trial of Sir William Perkins, Charnock, King, and Keys, &c. executed here, that he was engaged with the late king James in ſeveral plots to aſſaſſinate king William and queen Mary; which is moſt cruel practice in private perſons, but ſo ſuperlatively vile and abominable in one prince towards another, that the moſt brutal of human ſavages have held it in abhorrence and deteſtation.

The war was at laſt concluded by the treaty of RYSWIC in 1697. But it ſoon appeared, that the French king entered into that treaty with no other deſign than to break it, as ſoon as he could with ſafety and advantage: and as the States of Holland charge him in their manifeſto of 1702, he did it with no other view than to induce the confederates to lay down their arms, to diſband their rroops, and to ſeparate them from one another, in order to weaken and ruin them: for that part of the treaty with the Dutch, which related to traffic and commerce, was ſcarce well ratified, when he began to invade the trade of their provinces, and openly refuſed to grant them the tariff ſtipulated in that treaty, and put their ſubjects and merchants to numberleſs troubles on that head, and the States to a tedious and expenſive negociation. After which they were obliged to ſubmit to a diſadvantageous tariff, contrary to the tenor of that treaty, rather than hazard a new war: and though it was alſo ſtipulated by the ſaid treaty, that the Dutch ſubjects who ſettled in France to carry on their trade, ſhould be exempted from the taxes and duties laid upon foreigners; yet he impoſed exceſſive duties upon them, without giving any redreſs when demanded.

It is alſo well enough known, how they chicaned and trifled with us about reſtoring our Hudſon's-Bay colony, and would never come to ſettle a tariff of trade with us. He treated the emperor and empire in the ſame manner, and broke that treaty, by refuſing for a long time to reſtore the fortreſs of Briſac, and by the injuries and damages he did to the houſe of Montbelliard, and countenancing a treacherous explanation of the fourth article of Ryſwic, by which the proteſtants of the empire were perſecuted: nor was he any thing more punctual, as to what he ought to have reſtored to the crown of Spain by that treaty. But notwithſtanding theſe new inſtances of his perfidiouſneſs and treachery, king William and the States-General being willing to ſecure the peace of Europe, if poſſible, and to prevent a new war about the ſucceſſion to the crown of Spain, upon the death of king Charles II. who was then in a languiſhing condition; they entered firſt into a treaty of PARTITION with the French king for ſettling the ſucceſſion of Spain on the electoral prince of Bavaria, on condition that Naples, Sicily, Guipuſcoa, &c. ſhould be granted to the Dauphin, and the duchy of Milan to archduke Charles. But the prince electoral happening to die, they came to a ſecond treaty of partition, by which the Dauphin was to have Naples, Sicily, &c. and the duchies of Lorrain and Bar, for which the duke of Lorrain was to have the duchy of Milan, and all the reſt of the Spaniſh dominions were to be given to the archduke and his heirs for ever. The French king entered into theſe treaties with all poſſible proteſtations of ſincerity, and pretended he had no other deſign in ſo doing, but to preſerve the peace of Europe, and to remove all obſtacles that might interrupt the ſame. That treaty was no ſooner concluded, than it manifeſtly appeared that the French king never intended to keep it; for he immediately uſed all manner of artifices in the court of Spain, not only to render the emperor odious to the Spaniards, but likewiſe to oblige king Charles II. to diſpoſe of his ſucceſſion by will in favour of France.

Here alſo it is fit to obſerve his treachery to king James II. his kinſman and ally, whoſe intereſt with that of his pretended ſon and daughter, he ſacrificed to the treaty of partition, contrary to ſolemn treaties, and all the rules of gratitude, ſince that unfortunate prince had ruined himſelf by following his meaſures.

The author of the fable of the LION'S SHARE, verified in the treaty of partition, who was an able writer employed by the imperial court, makes theſe judicious remarks upon the deſign of the French king in the treaty of Ryſwic, and thoſe of the partition. (1.) That he ſacrificed ſo many places of importance which he had fortified at a vaſt charge, beſides ſeveral provinces that he had conquered, and expoſed his own frontiers, by demoliſhing many ſtrengths, merely that he might have an opportunity of uſurping the monarchy of Spain. It was this alone that made the peace of Ryſwic abſolutely neceſſary to him; for it is well known, that when he concluded that treaty, he had the advantage of the allies by arms. (2.) His deſign by the treaties of partition was, to divide the allies among themſelves, and to break the two maritime powers, and the elector of Bavaria, with the houſe of Auſtria; who he had reaſon to think would never agree to it, and could ſcarce ever enter into a friendſhip again with the Engliſh and Dutch, for abandoning them in this manner, ſince by the fourth article of the firſt grand alliance, none of the allies were to conclude a peace, 'till the treaties of Weſtphalia, Oſnaburg, Munſter, and the Pyrenees, were vindicated, and all things reſtored according to the tenor of the ſame. (3.) Conſidering the weakneſs of the houſe of Auſtria, and their then circumſtances, he made no doubt either to bring them to agree to the treaty, or afterwards to break with the allies and join with himſelf, upon granting them better terms. (4.) Having by this means engaged the maritime powers to acknowlege the electoral prince of Bavaria's right, notwithſtanding the renunciation of his mother the archduchеſs to all the dominions of Spain upon her marriage with his father, he knew it laid a foundation for the dauphin afterwards to diſpute his right to the whole with that prince, notwithſtanding the renunciation of his mother the late queen of France; who being a daughter of Spain, he was nearer in blood to that crown than the electoral prince.

That

That ſame author adds, That the Spaniards finding themſelves deprived of their allies by this treaty, and their monarchy diſmembered, it was a powerful argument to induce them rather to accept of a ſon of France, than to ſuffer themſelves to be torn in pieces, and their monarchy partitioned. He is very modeſt, however, as to the motives, which he thinks might have induced king William and the States to enter into this treaty; and ſuppoſes, that perceiving the French king ready to break out into a war to make good his pretenſions to the Spaniſh monarchy, when England and Holland were not prepared to reſiſt him, he deſigned, like a wiſe politician, to charm the ſtorm with a negociation; and upon that account was not unwilling that the French king ſhould publiſh the treaty, by which the houſe of Auſtria may take the alarm, and enter into proper meaſures to prevent it.

But be that how it will, when the king of Spain died, the French king, who had ſecretly broke that treaty before, by procuring a will which ſettled the whole Spaniſh monarchy on the duke of Anjou, then publickly avowed it; and by a jeſuitical diſtinction betwixt the ſpirit and the letter of the treaty, he preferred that will to the treaty of partition, and advanced his grandſon to the throne of Spain, not only contrary to all theſe treaties, but alſo contrary,

1. To the laws of the kingdom, which do not allow the alienation of that crown, nor that it ſhould be placed on the head of a ſtranger; the ſucceſſion being ſettled by conſent of the States on the houſe of Arragon, from whom the houſe of Auſtria is lineally deſcended.

2. It was contrary to the renunciation made by Lewis XIII. and the infanta Mary-Anne his wife, at the time of their marriage, the validity of which was not then diſputed.

3. It was againſt the renunciation made by the French king and his wife the famous Mary Tereſa, at the time of their marriage, and the oaths which both of them ſwore on the altar.

4. It was againſt the treaty of the Pyrenees, of which that renunciation was one of the chief articles.

5. It was contrary to the will of Philip IV. purſuant to that renunciation.

6. It was contrary to all the arguments formerly made uſe of by Lewis XIV. againſt the renunciations above-mentioned; which made him guilty of the ſame injuſtice to the Dauphin and duke of Burgundy, that he himſelf had charged upon the ſaid renunciations.

7. It was expreſsly againſt the civil law, and the decretal of pope Boniface VIII. which ſays, 'That every renunciation 'made upon oath by a daughter above 12 years of age, in 'favour of her father, in order to contract a marriage, by 'which a ſufficient dowry is aſſigned her, ought to be good 'in law, though ſhe be then under the juriſdiction of her 'father.'

As to the pretended will of king Charles II. of Spain, by which the duke of Anjou claims the crown, we may obſerve, (1.) That it is contrary to the will of his father, which was founded upon a treaty with conſent of the States, and the ſolemn renunciation of two ſucceſſive kings and queens of France, ratified by the legiſlative power of France and Spain; which is no great argument of the piety of thoſe that put him upon making it, or rather ſigning it. (2.) That it was contrary to a will which he made but a little before in favour of the archduke, to his repeated aſſurances to the emperor, and to his known inclinations. All which make it evident, that it was an impoſition upon him when he was ſtruggling with the pangs of death, and in no condition to peruſe, much leſs to compoſe, ſuch a will.

To return to the treaty of partition; the French king not only broke it, but upbraided king William and the Dutch with it in ſuch a manner, as diſcovered both his treachery and ingratitude: for in his memorial after the king of Spain's death, he charges the treaty of PARTITION with being productive of infinite troubles and misfortunes common to all Europe: which was a full proof of his wicked deſign and inſincerity, when he ſollicited the Engliſh and Dutch to enter into it. For here he acted the part of the great enemy of mankind, firſt to tempt, and then to accuſe. In that ſame memorial he reflected upon them, as having no right to thoſe dominions, which were allotted him by the treaty; by which he charges them as uſurpers, and meddling where they had nothing to do: though upon the firſt publication of the partition treaty, he joined with them in their memorials to the other potentates of Europe; wherein it was expected, that the deſign of the treaty was to preſerve the peace of Chriſtendom; and that the partitioning of the Spaniſh monarchy for that end, was as neceſſary as the pulling down or blowing up a ſtreet or ſome houſes during a fire, to prevent a whole city's being conſumed.

He diſcovered his ingratitude ſtill further, by charging the maritime powers with inſincerity, in demanding what they never deſigned to obtain; and the Dutch in particular, with framing views contrary to the intereſt of their republic: and that neither we nor they ſtipulated any advantage to ourſelves. The deſign of this was to inſence the ſubjects of England and Holland againſt their reſpective governments, as if they had concerted meaſures with France, prejudicial to their trade and liberty: and we know well enough what uſe the diſaffected faction made of this in England, when in parliament they charged the king with having made a ſelonious treaty, and impeached his miniſters for conſenting to it.

The French king having thus ſeized the Spaniſh monarchy, by virtue of that pretended will, one would have thought he ſhould have piouſly obſerved the contents of it; but he was ſo far from doing ſo, that, according to his uſual treachery, he broke in upon it in many inſtances, and particularly by ſending Frenchmen to poſſeſs the chief truſts of the kingdom, and to govern their councils, contrary to the 23d article, by which king Charles II. ordered that each of his kingdoms ſhould be governed by natives, without any innovation.

This treachery and ingratitude of the French king brought on the then confederacy, wherein the late king William III. was the chief inſtrument, but died before the war was declared. Her majeſty queen Anne, who ſucceeded to his deſigns at firſt for the public welfare of Europe, as well as to his crown, publiſhed her declaration of war againſt France on the 4th of May, 1702, which was leſs than two months after king William's death. Her majeſty charges him there with unjuſt uſurpations and encroachments; with keeping poſſeſſion of a great part of the Spaniſh dominions; with exerciſing an abſolute authority over all that monarchy; with ſeizing MILAN and the SPANISH LOW COUNTRIES, and making himſelf maſter of the entrance into the MEDITERRANEAN, and of the ports of the SPANISH WEST-INDIES, with a deſign to invade the liberties of Europe, and to obſtruct the freedom of navigation and commerce.

It is fit to be obſerved here, that, before the death of king William, the French king had declared the pretender to be king of Great-Britain and Ireland, which was directly contrary to the 1ſt and 4th articles of the treaty of Ryſwick, by which he was bound to a perpetual peace and ſincere friendſhip with king William, to promote his intereſt, honour, and advantage, and tied up from affording any aſſiſtance, directly or indirectly, to any enemy or enemies of king William, and in no manner whatſoever to favour the conſpiracies and plots which any rebels, or ill-diſpoſed perſons, may in any place excite or contrive againſt the ſaid king; and that he would not aſſiſt with arms, or any other way, any perſon or perſons who ſhould hereafter, under any pretence whatſoever, diſturb or moleſt the ſaid king of Great-Britain in the free and full poſſeſſion of his kingdom, &c.

Upon this her majeſty, in her ſaid declaration, takes notice that the French king, inſtead of giving that ſatisfaction for his contravention of the above-mentioned treaties, which ought juſtly to have been expected, not only proceeded to further violence, but added thereto a great affront and indignity to her majeſty and her kingdoms, in taking upon him to declare the pretended prince of Wales king of England, Scotland, and Ireland; and had alſo influenced Spain to concur in the ſame affront and indignity, as well as in other oppreſſions.

The States-General, in their manifeſto, recapitulate the French king's former breach of treaties, and particularly that of Ryſwick; wherein, beſides the other infractions already mentioned, they charge him alſo with breaking the treaty of PARTITION, notwithſtanding the repeated proteſtations he had made never to depart from it: and that he had violated the ſame, without giving any previous communication of his intention to thoſe with whom he had made it, alleging, for his principal motives, that the SPIRIT and SENSE of the ſaid treaty, and not the LETTER, were to be regarded; and explained that SPIRIT and SENSE in his own way. He threatened them, at the ſame time, if they did not concur with him, which they juſtly obſerved was an uncommon, as well as unheard-of, breach of faith, and a dangerous inſtance, which tended for the future to undermine and ruin the faith of all PUBLIC TREATIES. They charged him likewiſe with having poſſeſſed himſelf of the Spaniſh dominions, contrary to the treaty of PARTITION, without any regard to the emperor's pretenſions; which being the foundation of it, the greateſt part of the Spaniſh monarchy was thereby yielded to the archduke. He likewiſe, contrary to that, and former treaties, had poſſeſſed himſelf of the SPANISH NETHERLANDS, notwithſtanding they had garriſons there by the conſent of the king of Spain, for the ſecurity of the country; by which the French deprived them of the BARRIER he had ſettled by former treaties, and particularly by that of the partitions, and had procured an abſolute ſurrender of thoſe provinces from his grandſon, whoſe dominions he governed in as abſolute a manner as if France and Spain were one and the ſame kingdom. He alſo endeavoured to force the States into a ſeparate treaty, without their allies; and, to compel them to it, ſeized Liege, and the moſt conſiderable places of the electorate of Cologn, that he might invade them on all ſides, as in 1672, and for that ſame end raiſed a conſiderable number of troops in the country of Wolfenbuttle. He likewiſe ſeized all the harbours of SPAIN, NAPLES, and SICILY, and other iſlands in the MEDITERRANEAN, and alſo of the SPANISH NETHERLANDS and the WEST-INDIES, to make himſelf entire maſter of the commerce of EUROPE, and to exclude them and other na-

tions from it. He endeavoured likewiſe to perſuade the king of Portugal to deny them his harbours, and ſent a ſquadron to the Weſt-Indies, to ſeize the PLATE-FLEET, in which the ſubjects of the States, and of other princes and potentates, had ſo great a ſhare; and at the ſame time he endeavoured to AMUSE them with a treaty for a GENERAL PEACE, though he erected a fort in the Netherlands, within cannon-ſhot of one belonging to the States, contrary to a treaty agreed on with Spain in 1648, contrary to the laws of nations, and thoſe of war.

The emperor, in his declaration, charges the French king with the breach of the treaty of Ryſwick, and of the Pyrenees; with ſeizing ſeveral hereditary countries belonging to the houſe of Auſtria; with invading the empire, and ſeizing ſeveral of his fiefs; with ſupporting the elector of Cologn in his diſobedience, and his grandſon, the duke of Anjou, in uſurping ſeveral titles, as that of duke of Auſtria, count of Hapſburg and Tyrol, &c. which belonged to none but the archducal houſe. In the laſt place, with ſeizing the dominions of Spain, on pretence of a will contrived by ſome bribed Spaniſh counſellor, according to the direction of the French king, which was offered to the king of Spain when he was ſo weak in body and mind, as not to be able to read or underſtand, much leſs to weigh and examine, as was neceſſary, the large contents of the ſaid will; which of itſelf was full of falſities, and incomprehenſible contradictions, as well as contrary to the intention of the ſaid king, which he had ſo often ſignified to the emperor.

All theſe things being conſidered, we may juſtly ſay that there was never a prince in the world, and much leſs any who aſſumed the title of Chriſtian, whoſe reign affords ſo many inſtances of ſtudied and deliberate perjury, and breach of ſolemn treaties; nor have we an inſtance of any prince that ever pretended to the belief of a God, that ſo frequently profaned his name by the breach of public oaths, or that played faſt and looſe in ſuch a manner with things that they themſelves accounted ſacred: ſo that, like another Pharaoh, he all along bid defiance to the Almighty, and it was the language of his practice, though not of his mouth. Who is the Lord, that I ſhould obey him?

Though the divine vengeance puniſhed him in a remarkable manner, by the defeats of his armies, and deſolating judgments upon his dominions, he went on ſtill in his obſtinate perjuries and uſurpations, and had ſo chicaned with the Confederates in the buſineſs of the preliminaries to the peace of Utrecht, and ſo egregiouſly impoſed upon the nation in that treaty, and attempted to do ſo infinitely more than he did, by an infamous treaty of commerce; that we have all imaginable reaſon ever to diſtruſt the ſincerity of a court that has proved ſo diſhonourable, eſpecially if we have ſufficient cauſe to believe, that the ſame ſyſtem of diſturbing the tranquility of Europe ſtill prevails, in order to aſpire at that univerſal empire which they have ſo long had in view.—And what advances they have really made thereto in EUROPE, which ſeem not to be duly noticed, will appear from what we have urged under the article FRANCE, which the reader is deſired to refer to: how far, likewiſe, their ſyſtem tends to deſtroy the ballance of commerce and empire in AMERICA, the reader is deſired to turn to our REMARKS on the article BRITISH AMERICA: ſee alſo our articles NORTH CAROLINA, CANADA, LOUISIANA, PENSYLVANIA, and FRENCH AMERICA, and all others to which we refer from thoſe.—And ſtill to confirm our opinion that we have entertained of the meaſures of this nation, ever ſince the laſt treaty of Aix la Chapelle, we ſhall conclude this head of Plantations with the two following ſpeeches of governor Shirley, of New England.

REMARKS before the laſt war.

Whilſt I have been drawing up this article, the public have had communicated from Boſton in New England, the authentic ſpeech of governor Shirley, which, as it gives an account, that may be depended on, of the conduct of the French in that part of America, we judge it neceſſary to give the ſame a place in this work.

The ſpeech of his excellency William Shirley, Eſq; to the great and general court, or aſſembly, of the province of the Maſſachuſetts Bay in New England, March 28, 1754.

Gentlemen of the council and houſe of repreſentatives,

Having received, in the receſs of the court, ſome diſpatches, which nearly concern the welfare of the province, I thought it neceſſary to require a general attendance of the members of both houſes at this meeting of the aſſembly, that the matters contained in them may have as full and ſpeedy a conſideration as the importance of them ſeem to demand.

By account ſent from Richmond Fort, and declarations made before me and his Majeſty's council, by two of the ſettlers at Francfort, upon the river Kennebeck, I am informed, that, in the ſummer before laſt, a conſiderable number of French ſettled themſelves on a noted carrying-place, made uſe of by the ſeveral Indian tribes inhabiting that part of the country in their paſſage to and from Canada, which ſeparates the head of the aforeſaid river from that of the river Chaudiere, which laſt falls into the great river St Lawrence, at four miles and a half above the city of Quebec.

And I have received further intelligence, that the French are ſettled very thick for twelve miles on each ſide of the ſaid river Chaudiere, at about 30 miles diſtance above the mouth of it, and in the mid-way between the river St Lawrence and the before mentioned carrying-place; and the captain of Richmond Fort, in his letter dated the 23d of laſt January, informs me, that the Norridgwalk Indians have declared to him, 'That they had given the new French ſettlers upon the carrying-place liberty to hunt any where in that country, as a recompence for the great ſervice they will be of to them, in a time of war with the Engliſh, by ſupplying them with proviſions and military ſtores.'

The ſame officer further acquaints me, in another letter, dated February the 11th, that ſeveral Indians of the Arreſſigunticook, and ſome of the Penobſcot tribe, amounting, together with the Norridgwalk Indians, to 600 effective men, beſides boys capable of bearing arms, were then lately arrived in the neighbourhood of the fort under his command: and that, though they aſſembled there on pretence of writing a joint letter to me, as they have done, yet he had reaſon to expect, from their haughty inſolent behaviour, the repeated open threats of ſome of them, and the private warnings from others, that, as ſoon as the rivers ſhould be free from ice, they would commit hoſtilities againſt the Engliſh, upon that and neighbouring rivers; in which they intimate, they are to be aſſiſted by a number of French from Canada, diſguiſed like Indians. And in another letter, dated the 10th of March, he acquaints me, that the French prieſt, miſſionary to the Indians of the river Kennebeck, appeared to him to be continually uſing artifices to excite the Indians to prevent our ſettlements from being extended higher up it, to ſet them at variance with the Engliſh, and diſpoſe them to a war with them this ſpring.

Moſt of theſe accounts are confirmed by the declarations of the before-mentioned ſettlers at Frankfort, with the additional circumſtances, that the French prieſt had been very inquiſitive after Roman Catholic families in this ſettlement, and uſed endeavours to draw off ſome of the inhabitants into the ſervice of the French, particularly for building a chapel and a dwelling-houſe for himſelf upon that river, about three or four miles above Cuſhana, and at a diſtance of 24 from Frankfort, and been very induſtrious to perſuade them that it was within the French territories; and the Indians have further declared, that they have been inſtigated by the governor of Canada, to hinder the Engliſh from ſettling upon any part of the river; which is ſtrongly confirmed by a depoſition of Capt. Lithgow, made in Auguſt laſt.

Upon this occaſion, gentlemen, I ſent as ſoon as might be, with the advice of his Majeſty's council, the neceſſary reinforcements of men and ſtores to all the eaſtern forts, iſſued commiſſions for raiſing ſix independent companies in the townſhips and diſtricts next adjacent, with orders for the officers and ſoldiers to hold themſelves in conſtant readineſs to march, upon any alarm, to the ſuccour of any neighbouring fort or ſettlement which may be attacked, to cut off the enemy in their retreat; and, in caſe that they ſhould find that the Norridgwalk Indians have committed hoſtilities, to break up their villages and ſettlements upon Kennebeck, and to kill or captivate all they can meet with of their tribe: I likewiſe ordered an officer, commiſſioned by me for that purpoſe, to proceed, by the firſt opportunity, to the ſuppoſed place of the new French ſettlement, in order to diſcover the certainty and circumſtances of it, and to require the French commandant to retire and withdraw the people under his command from that ſpot, as being under his majeſty's dominions, and within the limits of this government.

And I doubt not, gentlemen, from your diſtinguiſhed zeal for the defence of his Majeſty's territories, and the protection of his ſubjects within this government upon all occaſions, but that, upon a refuſal of the French to comply with that requiſition, you will make ſufficient proviſion for enabling me to compel them, with the armed force of the province, to free us from their encroachments.

The concern, gentlemen, which you expreſſed in your meſſage to me at our meeting in December laſt, upon your apprehenſions of the imminent danger which the province was in, from the French having fortified themſelves upon the river of St John's, cloſe to our borders, leaves me no room to doubt of your being ſenſible of the fatal conſequences in the general that muſt attend their encroachments, which it ſeems plain they are now puſhing into the heart of the province (as the general court, in a vote paſſed the 16th of January, 1749, juſtly call the river Kennebeck) unleſs they are timely removed.

But it may not be improper for me to obſerve to you in particular, that it appears from extracts which I have lately cauſed to be made of ſome original letters taken among Father Ralle's papers, at the breaking up the Indian ſettlement at Norridgwalk in 1724, and which paſſed between him, Father Lauverjat, prieſt of the Penobſcot tribe, and Father La Chaſſe, ſuperior of the Jeſuits at Quebec, during the Indian war in the years 1723 and 1724; that the head of Kennebeck river, near which the Indians have declared the French have made

a new ſettlement, was the centre of moſt of the tribes then at war with us, and the general rendezvouz of all that came to the eaſtern parts; the Hurons, the Iroquois of the falls of St Lewis, the tribe of St Francis (or Areſſigunticooks) and the Indians of the ſeignory (as the French call them) of Becancour on the one hand, uſed to aſſemble with the Norridgwalks here, from their ſeveral ſettlements; and the Penobſcots from their river, on the other: here they held their conſultations, and from thence iſſued out in parties united or ſeparate, as beſt ſuited them, againſt the Engliſh; hither they retired after action, and brought their wounded for relief; and here, if they met with proviſions, they fared well; if not, they ſuffered greatly for want of them.

It appears further from theſe letters, that the ſeveral French miſſionaries chiefly conducted and managed this war; that they had the care of ſupplying the Indians with the neceſſary proviſions and ſtores for carrying it on; were employed to make them perſevere in it, and to puſh them on to their boldeſt enterprizes; that they tranſmitted accounts of their proceedings to the government of Canada, through the hands of the ſuperior of the Juſuits at Quebec, through whom likewiſe they received their directions from thence, as the governor of Canada ſeems to have done his, upon this occaſion, from the court of France.

And I would further obſerve, that this route affords the French a ſhorter paſſage for making deſcents from Quebec upon this province, and deſtroying the whole province of Maine, with the king's woods there, and in the government of New Hampſhire, than any other whatever from Canada.

Theſe advantages, which the poſſeſſion of this river would give the French over this province, make it eaſy to account for their conſtant endeavours, ever ſince the treaty of Breda, at which it was determined, in the moſt ſolemn manner, between the two crowns, that the river Pentagoct, or Penobſcot, was the boundary between New England and Acadia, or Nova Scotia, to extend the limits by claim upon all occaſions (as in fact they have done) to the eaſtern ſide of the river Kennebeck; though they never attempted, until within theſe few years, to paſs over the river St Lawrence, within the extent of this province.

I am ſatisfied it is needleſs for me, gentlemen, to urge any thing more to ſhew how neceſſary for the ſafety of this government it is, that we ſhould ſecure to ourſelves the poſſeſſion of this important river, againſt the encroachments of the French, without delay: and I think the preſent ſituation of affairs in that country muſt convince you, how vain a ſcheme it would now be to have your ſole dependence for gaining this point upon making annual preſents to Indians, who appear to have entered into an offenſive alliance with the French againſt you, and have ſhewed evident marks of a diſpoſition to put the river into their power.

How different are ſuch proceedings from thoſe of the French? Whilſt we have been ſuing in vain to a few Indians, for their permiſſion to ſettle lands within the undoubted limits of this province, and which themſelves cannot deny to have been purchaſed of their anceſtors, and have in effect promiſed them a yearly tribute, to reſtrain them from committing acts of hoſtility againſt us, the French have marched armies into diſtant countries of numerous and powerful tribes, which, without any colour of right, they have invaded: they have forbid them to make further grants of any of their lands to the Engliſh, and have built, and are ſtill building ſtrong forts, with an avowed intent to drive them off from the lands already granted to them, and to exclude them from all commerce with thoſe Indians, whom they have threatened with deſtruction, if they ſhall preſume to interfere in their favour.

It is time, gentlemen, for you to deſiſt from having your chief dependence upon temporary expedients, which ſeem rather to have expoſed the government to the contempt of theſe Indians, than to have conciliated their friendſhip to it; and to take counſel in part from the policy of our neighbours.

Vigorous meaſures againſt the French, in caſe they ſhall refuſe to quit his Majeſty's territories within this government, without being compelled to it by force; building a ſtrong fort near the head of the river Kennebeck, above the ſettlements of the Norridgwalk Indians, and puſhing on our ſettlements upon it in a defenſible manner, would effectually rid the province of the encroachments of the former, and either hold the latter in a due dependence upon us, or oblige them to abandon the river.

And further, by making ourſelves, through this means, maſters of the paſs, which was the general place of rendezvous during the Indian war in 1723 and 1724, of all the tribes engaged in it, both in their incurſions and retreats, we ſhould have it in our power to curb all thoſe Indians for the future, and in a great meaſure prevent them from attempting to make depredations in our expoſed ſettlements.

I muſt further obſerve to you upon this occaſion, gentlemen, how dangerous delays to make ſuitable preparations for removing the French would be.

How practicable was it, at firſt, to have put a ſtop to their proceedings in building their fort at Crown Point? And you can't but remember what miſchievous effects of the neglect to do that in the beginning, were felt by this and the province of New-York, in the ravages which they ſuffered from thence during the late war.

A ſhort delay to diſlodge them from their encroachments near the river Kennebeck, might give them an opportunity of making themſelves maſters of that river likewiſe, in the end; and in that caſe we may expect ſoon to ſee another fort built by them, near the mouth of it, and the French in poſſeſſion of all the ſea-coaſt between that and the river St John.

Gentlemen of the council and houſe of repreſentatives.

I hope you will proceed in the conſideration of theſe matters with that unanimity and diſpatch which his Majeſty's ſervice and the ſafety of the province requires; and that you gentlemen of the houſe of repreſentatives will make the neceſſary ſupplies.

Council-Chamber,
March 28, 1754. W. SHIRLEY.

Boſton, April 25, 1754.

On the 2d inſtant his Excellency was pleaſed to make the following ſpeech to the great and general court, or aſſembly, then ſetting here, viz.

Gentlemen of the council and houſe of repreſentatives.

The occaſion of my ſpeaking to you now, is to acquaint you that I have received a letter from the right honourable the lords commiſſioners for trade and plantations, ſignifying to me, that his Majeſty has been pleaſed to order a ſum of money to be iſſued, for preſents for the Six Nations of Indians, and to direct the governor of New York to hold an interview with them for delivering thoſe preſents, at ſuch place and time as he ſhall appoint; and I am directed to lay this matter before you, and to recommend to you to make a proper proviſion for appointing commiſſioners from this government to meet commiſſioners of Virginia, Maryland, Penſylvania, New Jerſey, and New Hampſhire (to the reſpective governors of which colonies their lordſhips have wrote to the ſame effect) as alſo for making ſuch preſents as have been uſual upon the like occaſions.

I have likewiſe to acquaint you, that I find, by a paragraph of their lordſhips letter upon this occaſion to the governor of New York, which his honour lieutenant-governor De Lancey, commander in chief of that province, hath communicated to me, that he is herein directed to take care that all the provinces be, if practicable, comprized in one general treaty, to be made in his Majeſty's name.

And that Mr De Lancey hath given me notice, that he hath appointed the ſaid interview to be held at the city of Albany, on the 14th of June next.

I am perſuaded, gentlemen, I need not uſe arguments to convince you, that it is of very great conſequence to the intereſts of his Majeſty's colonies upon this continent at all times, that as many of the tribes of Indians inhabiting it as may be (thoſe of the Six Nations more eſpecially) ſhould be kept in friendſhip with the Engliſh, and a dependence upon the crown of Great-Britain; and that as free a commerce and intercourſe ſhould be maintained with them as is poſſible; but I think it my duty, at this time, to enter into a particular detail of theſe matters.

At the treaty of Utrecht, which is confirmed by that of Aix la Chapelle, theſe were looked upon to be points of that importance to the Britiſh intereſt in North America, that care was taken in that treaty to have the Indians of the Six Nations acknowleged by France to be ſubject to the dominion of Great Britain; and it is herein expreſsly ſtipulated, that the French ſhall give no hindrance, or moleſtation, either to them or the other natives of America, who were friends to the Engliſh: it is alſo ſtipulated, that the ſubjects of both crowns ſhould enjoy full liberty of going or coming (upon this continent) on account of trade; and that the natives of the countries upon it ſhould with the ſame liberty reſort, as they pleaſe, to the Britiſh and French colonies, for promoting trade on the one ſide and the other, without any moleſtation or hindrance either on the part of the Britiſh ſubjects or the French.

With regard to the Indians of the Six Nations in particular, I would obſerve to you, that, according to an account given by them in an open council at Turpehawkie, at their return from the Indian treaty at Philadelphia in 1742, of the ſeveral Indian nations which have been conquered by them, and are now in their alliance, and trade with the Engliſh, and which ſeems to be depended upon, the warriors belonging to thoſe tribes may be computed to amount to 16 or 17,000 at leaſt; and one, who muſt be a good judge of the ſtrength of the Five Nations themſelves, upon being interrogated by me concerning the number of their fighting men, made anſwer, That he did not know their number, but well knew that they are a numerous people, a terrible body of men, and able to burn all the Indians in Canada.

You muſt be ſenſible, gentlemen, what frequent attempts the French have made, from time to time, to draw off the Six Nations from the Engliſh intereſt into their own; and from the repeated advices we have received from his Majeſty's ſouthern colonies on this continent, what efforts they have lately exerted to win over their allies, together with the other numerous tribes inhabiting the vaſt countries lying along the great lakes and rivers, and to the weſtward of the Apalachean Mountains (all which may be reckoned to exceed double the number of the Indians of the Six nations, and thoſe in their alliance) as alſo what meaſures the French are taking to exclude the Engliſh from all trade and commerce with thoſe Indians.

To compaſs this, they have, in manifeſt violation of the aforeſaid treaties, entered the country of theſe Indians, upon the back of his Majeſty's ſouthern colonies, and within the limits of his territories, with large bodies of troops, ſeized the effects, and captivated the perſons of the Engliſh, whom they found trading there; abſolutely denied their right to traffic with thoſe nations, and erected a line of forts upon the lakes and rivers, from Canada to Miſſiſſippi, to cut off all commerce and intercourſe between them; they have committed hoſtilities againſt ſome of the tribes in friendſhip with the Engliſh, engaged others to take up the hatchet againſt them, and threatened thoſe with deſtruction who ſhall interfere with their avowed deſign to drive the Engliſh out of that country.

Should the Indians of the Six Nations, at this critical conjuncture, deſert our alliance, and go over to the French, how fatal an influence muſt ſuch an event have upon the Britiſh intereſt? On the other hand, ſhould proper meaſures be taken to attach them finally to it, how greatly would it diſappoint and check the preſent ſchemes and enterprizes of our dangerous neighbours?

It it is well known how wavering the diſpoſitions of theſe Indians have of late been, and how viſibly they have abated their former enmity to the French; and we can't be at a loſs to diſcover the real cauſes of it.

Nothing could at this time ſo effectually reclaim them to their old alliance with us, as the meaſures directed to by their lordſhips of the board of trade, one general league of friendſhip, comprizing all his Majeſty's colonies, to be made with them in his Majeſty's name, with ſtipulations to build ſuch forts in their country as they ſhall chuſe, and may be judged neceſſary for their ſhelter and protection againſt the French.

Such a coalition of the colonies for their defence, would be a convincing proof to them that they might ſafely depend upon his Majeſty for protection, and confirm them in their ancient alliance with the Engliſh; and how neceſſary ſuch a confederacy of the colonies for their ſafe-guard is, may appear to you from the following account, given by an Indian trader, who for more than 20 years had carried on a trade among the different nations of the Indians, ſome hundred miles weſt of Philadelphia, the truth of which I have great reaſon to depend upon, viz. 'That, at the commencement of the late war, he, with ſundry other traders of the Engliſh, was taken priſoner by ſome Frenchmen belonging to a fort upon the river Ohio, and from thence was tranſported from fort to fort to Quebec; by means of which forts and the lakes, the French, he ſays, have a communication open from Quebec to Miſſiſſippi; that they have forts there within 20 or 30 miles diſtance from each other, with a command of from 10 to 20 men in each; in which, he ſays, they put the ſqua's and papooſes of the Indians in alliance with them, for protection, whilſt the men go out to war, and there keep them until the men return; and he obſerves, that, by means of theſe forts, they bid fair, in a little time, to reduce the Indians in alliance with the Engliſh, as the Engliſh do not afford the ſame protection to their women and children, whilſt the men are gone to war, as the French do.'

I would therefore earneſtly recommend to you, gentlemen of the houſe of repreſentatives, to make ſuitable proviſion for ſending commiſſioners on the part of this government, to join in the approaching interview at Albany, duly authorized to concert ſuch meaſures, in conjunction with the government of New York, and commiſſioners of the before-mentioned governments, as ſhall be judged proper to be entered into for cementing a firm league of friendſhip with the Indians of the Six Nations, and retaining them in the Britiſn intereſt; and to give thoſe commiſſioners full power to agree with the other governments upon the quota of money and men to be furniſhed by this province for this ſervice.

I have taken the liberty to propoſe the ſame thing to be done by the other governments concerned in this interview, in my letters to his Majeſty's governors, and againſt the preſent dangerous enterprizes of the French on every ſide of them.

I have already let you know, gentlemen, his Majeſty's orders to me and his other governors upon this point, ſignified to us in the earl of Holderneſſe's letter of the 18th of Auguſt laſt, and how neceſſary it is that ſuch an union ſhould be immediately formed in the common cauſe: whoever takes a ſurvey of the whole extent of the invaſions and encroachments which the French are ſurrounding his Majeſty's territories upon this continent with, from their moſt eaſtern to their moſt weſtern limits, muſt ſoon be convinced.

Cloſe on the back of the ſettlements of his Majeſty's ſouthern colonies, they are joining Canada to Miſſiſſippi, by a line of forts and ſettlements along the great lakes and rivers, and cutting off all commerce and intercourſe between the Engliſh and the numerous powerful tribes of Indians inhabiting that country, whom they are attempting to engage in their intereſt by all manner of hoſtilities and artifices: and, at the ſame time, they are puſhing on their encroachments with equal vigour quite round his Majeſty's eaſtern colonies, where they have ſecured all the Indians in thoſe parts to join them againſt the Engliſh.

Should the French prevail in the former part of their ſcheme, and gain a general influence and dominion over the Indians behind the Apalachean Mountains, which they muſt, in the ordinary courſe of human events, do in a ſhort time; if they are not timely prevented by an union of his Majeſty's colonies, they will have, in a few years, a moſt formidable army of thoſe Indians at their command, maintained without any expence to themſelves; but, on the other hand, with great profit ariſing from an immenſe furr-trade carried on with them: and what fatal conſequences ſuch an army of warriors (a few of which have been found ſufficient to keep a large frontier in continual alarm) muſt have upon all his Majeſty's ſouthern colonies, by continually harraſſing them, at the direction of the French, and ſupported by them from Canada on one ſide, and Miſſiſſippi on the other, and covered in their retreat behind the mountains by a ſtrong line of forts, commanding the navigation of all the lakes and rivers, is eaſy to conceive; eſpecially if the Indians of the Six Nations ſhould deſert our alliance, and join the French, which muſt, in ſuch caſe, be a deciſive blow to the Britiſh intereſt on that part of the continent.

At the ſame time, if they are not prevented by a coalition of the colonies, from finiſhing the ſcheme which it is moſt manifeſt they are forming againſt the eaſtern provinces, and already far advanced in, they muſt ſoon have it in their power equally to diſtreſs them likewiſe; and all the Engliſh colonies will be involved together in one general flame. It is true, thoſe colonies are far ſuperior to the French in their number and ſtrength; but if that ſtrength, gentlemen, is not properly exerted, by an union among themſelves, how little will it avail? It is not difficult to imagine ſuch a body of troops as the French may ſoon collect, together with the aſſiſtance of all the Indians ſcattered throughout this continent on the back of the Engliſh colonies (as the French ſettlements likewiſe are) when under the command of the governor-general of New France, who, upon all emergencies, can direct their force as he pleaſes, may reduce a number of diſunited provinces, many of them very remote from each other, though much ſuperior to them in point of the number of inhabitants.

For forming this general union, gentlemen, there is no time to be loſt: the French ſeem to have advanced further towards making themſelves maſters of this continent, within theſe laſt five or ſix years, than they have done ever ſince the firſt beginning of their ſettlements upon it: and how determined they are to accompliſh their ſcheme as ſoon as poſſible, appears from their breaking through the moſt ſolemn recent treaties and agreements made between the two crowns in order to effect it.

Gentlemen,

His Majeſty hath given the ſtrongeſt proof of his paternal care of his colonies, and conſtant attention to their ſafety, in directing his governors to promote this union within their reſpective governments: and I hope you will not be wanting on your parts to contribute all in your power towards effecting it, by improving the opportunity which the approaching interview with the Indians of the Six Nations at Albany happily preſents for that purpoſe: and I doubt not but that you may depend on all reaſonable ſupport and protection on the part of his Majeſty, againſt all preſent and future enterprizes and attempts of the French againſt you.

Council-Chamber, April 2, 1754. W. SHIRLEY.

REMARKS on our article PLANTATIONS, ſince the laſt war and the DEFINITIVE TREATY OF PEACE, 1763.

From the whole drift and tenour of what we urged under this article, one would be led to think, that we were poſſeſſed of the gift of political prophecy; every thing falling out, with reſpect to the laſt war with France and Spain, as we had prejudged, though this work was begun juſt after the peace of Aix la Chappelle: and the revival of the paſt perfidy of France could not be malapropos, as being intended to rouze and alarm us to guard againſt the treachery of that ſtate. The precaution, we have all the way ſuggeſted, in relation to Spain joining France alſo, did not prove viſionary: we have likewiſe pointed out what came to paſs, in relation to the

the making the Miſſiſſippi the boundaries between Great-Britain and Spain; and even ſuggeſted the total extirpation of France from the whole American continent: and if it ſhould prove true, that France has actually ceded NEW ORLEANS, and their weſtern parts of the MISSISSIPPI to Spain, it will manifeſt how far human foreſight may reach in matters of a public nature, when a man is governed in his repreſentations by facts and impartiality. See LEEWARD ISLANDS, AMERICA, COLONIES, MEXICO, FLORIDA, BAHAMA ISLANDS, NEWFOUNDLAND.

PODOLIA. This province has Volhinia on the north, the river Nieſter on the ſouth, which ſeparates it from Moldavia, Oczrakow, Tartary, on the eaſt, and the palatinate of Lemberg on the weſt. It is divided into Upper and Lower, and is 250 miles in length, and near 80 in breadth, according to Moll. It is exceeding fruitful, and abounds particularly with wax and honey, and aſparagus grows wild in the fields: but the eaſt part of this province, although it be good land, is in a manner a perfect deſert, by reaſon of the frequent invaſions and ravages of the Turks, Tartars, and Coſſacks, to whoſe incurſions the whole province is very ſubject.

The upper, which is the weſt part, is populous and fruitful, though mountainous in ſome parts, and abounds with honey; and the valleys are well watered by rivers. In ſeveral places it has ſundry ſorts of marble and alabaſter.

CAMINIEC, the chief city of the Upper, and indeed of all Podolia, ſtands on the river Smotrzick, which about 110 miles below, falls into the Nieſter, not above 12 miles from the confines of Moldavia, 98 ſouth-eaſt from Lamberg, 224 eaſt from Cracow, 230 ſouth-eaſt from Warſaw, and 480 north-weſt from Conſtantinople.

The LOWER PODOLIA, which is the eaſt part, and alſo called, the palatinate of Braclaw, from it's chief town on the river Bog, 40 miles from the confines of Moldavia, and 92 eaſt from Caminiec.

POITOU, in France, is bounded on the eaſt by Touraine, Berry, and La Marche, on the north by Anjou and Britany, on the weſt by the Ocean, and on the ſouth by Aunis, Saintonge, and Angoumois. It is a large province, and more or leſs fruitful, according to the different ſituation of it's ſeveral parts.

CHATELLERAUD is ſituated on the river Vienne. The inhabitants of this place are induſtrious, and inclined to trade, They make a great quantity of watches, clocks, knives, ſciſſars, and other works of that kind. Their corn and wine they diſpoſe of within the country, but they export ſome flax and hemp.

PARTENAY, has a pretty conſiderable trade in cattle and corn.

ST MAIXANT has a manufactory of woollen ſtockings, caps, and ſerges, which they ſell within the kingdom and abroad: but their chief trade is in corn and all ſorts of grain, and in oxen, ſheep, horſes, and mules, of which they ſell a great many to the merchants of Auvergne, Lyons, Piedmont, and Savoy. They keep two markets weekly, and ſix fairs in the year.

FONTENAILLE-COMPTE, is a ſmall, but well built city, with a pretty good trade. They make here cloths, and ſeveral other woollen ſtuffs.

NIORT, is ſituated on the river Sevre. Within the diſtrict of this city they drive a great trade in cattle, horſes, and mules; and have in the city, manufactures of ſhamoy-leather, druggets, ſerges, and other woollen ſtuffs.

OLONE, is inhabited by people who apply themſelves chiefly to the marine, and are very good ſeamen.

POLAND, as it is now extended, is bounded on the north with Livonia, Muſcovy, and the Baltic; on the ſouth with Upper Hungary, Tranſylvania, and Valachia, on the eaſt with Moſcovy, and Little Tartary; and on the weſt with Germany. It's extent is from the frontiers of Pomerania on the weſt, to the frontiers of Tartary on the ſouth-eaſt, about 700 miles; and from the frontiers of Livonia, to the Crapach, or Carpathian mountains, which are the limits of Hungary, on the ſouth, above 600 miles.

By the ſituation, the climate is temperate, and the air not exceſſive cold; yet ſometimes it's lakes and rivers are ſo frozen, that coaches and carts paſs over them for 5 or 6 months together. The ſoil alſo is generally fertile, fit for tillage and paſture, and produces a vaſt quantity of corn and cattle; even enough to feed the populous nation of Holland, who yearly ſend vaſt fleets to Dantzick to buy the corn and oxen, ſent down thither from the ſeveral parts of Poland.

LITHUANIA, in particular, produces honey, wax, hemp, flax, leather, pot-aſhes, ſalt, wood, ſaltpetre, vitriol, and quick-ſilver. With theſe ſtaple commodities they purchaſe thoſe of other nations, viz. wines, cloth, ſtuff, wrought-ſilks, tapeſtry, jewels, ſablens, martens, tin, ſteel, iron ware, brandy, and ſpices. The country of Poland, in general, produces alſo all kinds of fruits and herbs, and a good breed of horſes; ſo that their cavalry is numerous, and well mounted. There are vines in many places, whoſe grapes are grateful to the taſte, eſpecially if the ſummer and harveſt be favourable, but the wine generally is very ſharp, when drawn off. In the mountains there are mines of lead, ſilver, copper, and iron; but the moſt conſiderable of all, are the ſalt mines in Leſſer Poland, which are the chief riches of the country, and bring moſt money into the Exchequer. They work in thoſe mines as the colliers do in our coal-pits. The ſalt is generally of a bluiſh colour, but ſome of it white and tranſparent. When it is dug it has a brackiſh taſte; but when expoſed to the air, it becomes brittle and more ſweet. They have alſo ſome veins of ſal-gemma. The woods are well ſtored with hares, conevs, ſquirrels, deer, foxes, bears, wolves, and boars. The Maſovian foreſts have plenty of elks, wild aſſes, wild oxen, called uri, and buffaloes, whoſe fleſh when powdered, the Poles eſteem a great dainty. In the Ukraine there are wild horſes alſo, whoſe fleſh is equally eſteemed by the nobility. The wolf, reſembling a hart, or the European linx, called lupus cervarius, and by the natives ris, with ſpots on it's belly and legs, affords the beſt furs in Poland. The quails in Podolia have green legs; it is ſaid their fleſh is unwholeſome, and, if immoderately eaten, breeds the cramp.

It is a plain flat country, rather inclining to marſh lands; ſo that no conſiderable woods or mountains are found here, except thoſe that make the frontiers to Hungary, which is a craggy ridge of 300 miles in length, and called the Crapach, or Carpathian Mountains. The eaſtern part of the country, indeed, is full of woods, foreſts, lakes, marſhes, and rivers, which affords a delightful proſpect to that part of it which is open. As for it's rivers, the moſt conſiderable is the Viſtula, the Niemen, or Cronus, the Nieper, or Boryſthenes, the Nieſter, or Tyras, the Bog, or Vagus.

The kingdom of Poland conſiſts of theſe parts.

I. Poland, properly ſo called, in the weſt.
II. Pruſſia on the banks of the Baltic.
III. The great dukedom of Lithuania in the eaſt.
IV. Samogitia and Courland, in the north.
V. Watſovia, Polachia, and Poleſia in the centre.
VI. Red Ruſſia, and Podolia, in the ſouth.
VII. Volhinia, and the Ukraine, in the eaſt.

The ſubdiviſions whereof are thus:

Poland, properly ſo called, is divided into the Upper and Lower.

Upper Poland, called alſo the Leſſer Poland, contains the three Palatinates of Cracow, Sendomir, Lublin.

Lower or greater Poland, contains the Palatinates of Poſnania, Kaliſh, Brezeſty, Wladiſlaw, Lencici, Inowloiz, Siradz, Rava, Ploezko, Dobrizin.

Pruſſia is divided into Royal, and Ducal.

Lithuania, is divided into the Palatinates of Witna, Troky, Breſlaw, Novogrodeck, Minſky, Mzciſlaw, Witepſk, Poloeza, Roſiem.

Samogitia hath theſe cities, Midnick, Schivende, &c.

Courland is divided into Semigallia, Courland.

Warſovia, otherwiſe called Maſſovia, hath one Palatinate of Czerſkow, and the city of Warſaw.

Polachia, the Palatinate of Bielſk.

Poleſiaſia, Breſſici, or Breſte.

Red Ruſſia contains three Palatinates, Lemberg, Belcz, Chelm.

Podolia, divided into Upper, wherein is the Palatinate of Caminiec. Lower, wherein is the Palatinate of Braclaw.

Volhinia, divided the Upper, which contains the Palatinate of Lufuck. The Lower, which is commonly called the Ukraine, contains the Palatinate of Kiow.

The Upper or Leſſer Poland, is ſituated between the Lower Poland and Warſovia on the north, Hungary on the ſouth, Red Ruſſia on the eaſt, and Sileſia on the weſt, containing in extent, from eaſt to weſt, near 200 miles, from north to ſouth, about 120, lying between 49 and 51 degrees of latitude. The river Viſtula, or Veiſſel, paſſes through it; the Warta hath it's ſource here, and ſeveral other rivers water the land, which is reaſonably fruitful, but over-run with woods.

It is divided into three Palatinates, wherein are theſe cities and chief towns, viz.

In the Palatinate of Cracow, being the ſouth-weſt part of the province, are, Cracow, Novoguria, Severia, Czenterow, Lelow, Oſwieczin, Zator, Wieliczka, Bochna, Sandècz, Lubowla, Bryecz.

In the Palatinate of Sendomir, which is the middle part, are, Sendomir, Zawicheſt, Cunow, Schidlowitz, Radom, Zarnaw, Malogocz, Pikzow, Viſlickia, Corezin, Polaniez, Pilſno.

In the Palatinate of Lublin, which is the north-eaſt part, are, Lublin, Kaſimiers, Piotrowin, Urzendow, Epol, Scodlec.

The PALATINATE of CRACOW has Sileſia on the weſt, the palatinate of Sendomir on the eaſt, Hungary on the ſouth, and Siradin on the north. There is a ſort of manna in this country, which they gather in May and June, ſweep it off the graſs with ſieves, together with the dew, and make ſeveral diſhes of it.

CRACOW, CRACOVIA, the metropolis of this palatinate, and of the kingdom of Poland, is ſeated on a rocky bank of the river Viſtula, about the middle of the Palatinate; 36 miles eaſt from the confines of Sileſia, 40 eaſt from Germany, 44, north

north from the confines of Upper Hungary, 86 ſouth-weſt from Sendomir, 120 ſouth-eaſt from Almuiz, and 127 from Breſlaw, 135 ſouth-weſt from Warſaw, and 185 north-eaſt from Vienna, 173 north from Buda, 250 ſouth from the Baltic Sea, 680 north-weſt of Conſtantinople, and near 720 weſt of Moſcow.

Near this city are falt mines, of which Dr Conner gives this account. They were diſcovered in 1548, are about 300 geometrical paces in depth, and have ſo many alleys and paſſages, that one can ſcarce go over them all in a week.

They are generally ſo cold as is ſcarce to be endured, and the winds are ſometimes ſo furious, that nothing can withſtand them. The yearly revenue of theſe mines is about 400,000 French livres, of which 50,000 go to the king, 10,000 to the queen, and ſome thouſands more to the officers of ſtate; beſides which, the proprietor is obliged to make a yearly preſent to all the cities of Poland, and their ſtaroſtas.

The falt here is of four kinds; one extreme hard, like cryſtal; another ſofter, but clearer; a third white, but brittle: theſe are all brackiſh; but the fourth is ſomewhat freſher. On one ſide of theſe mines there is a ſtream of ſalt water, and on the other one of freſh.

The other towns of note in this palatinate, are,

ZATOR, on the ſouth ſide of the Veiſſel, 22 miles ſouth-weſt from Cracow, and 20 from the confines of Sileſia.

SEVERIA is capital of a large duchy of the ſame name; in the neighbourhood are mines of ſilver and lead.

BIEEZ, 33 miles ſouth-eaſt of Cracow, is watered by the river Rapa, a branch of the Veiſſel, of whoſe froth they make ſulphur. This town ſtands on the confines of the palatinate of Sendomir, and has good mines of vitriol in the neighbourhood.

SANDECZ, 24 miles ſouth-eaſt from Cracow, is noted for trade, the induſtry of the inhabitants, and ſome mines of gold and copper.

OSVIECZIN, 30 miles from Cracow, on the ſouth ſide of the Veiſſel, near the river Sala, 12 miles from the borders of Sileſia, is reckoned the capital of Poliſh Sileſia. This town is a thoroughfare from Cracow to Vienna, and has a great trade in hard ſalt, of which there are great lumps expoſed to ſale in the public ſquares, of from 20 to 30 quintals in weight. It is dug out of the mines near Cracow, to the inhabitants of which, it is ſold for 8, 10, or 12 florins each, and the others from 50 to 70.

CZENTOCHOW, 57 miles north-weſt from Cracow, and 70 eaſt from Breſlaw, ſtands on the river Warta, and the confines of Sileſia. It is famous for good beer, tranſported over the nation and into Germany.

SLACOVEA, 25 miles north-weſt of Cracow, gives name to a duchy, and is noted for ſilver mines, which bring great profit to the biſhop of Cracow.

PROSZOVICE, 10 miles north of Cracow, on the banks of the river Sozienova. The king has a palace there, in which is kept a provincial dyet.

ILEUSSIA, 20 miles weſt of Cracow, is a royal town, noted for ſilver and lead mines, and the beſt bread and beef in Poland.

WIELIEZ, 25 miles eaſt from Cracow; and Bochnia, another town in the neighbourhood, are noted for quarries of excellent rock-ſalt, diſcovered in 1252, of which that of the latter is moſt tranſparent. The mines which are below the town, make one of the beſt branches of the revenue, and employ a thouſand men and many horſes. Such of them as work under-ground, grow blind, from the ſharpneſs of the ſalt. Here are alſo ſeveral ſprings, the water of which is boiled into ſalt. Our Philoſophical Tranſactions, N°. LXI. p. 1099, call them ſalt-gem mines. Here are three ſorts of ſalt, one coarſe and black, another finer and whiter, and the third very white and clear, like cryſtal. The black ſalt is cut out into maſſes of three Poliſh ells long, and one in thickneſs. They lay the great pieces before the doors, that the cattle may lick them. Theſe pieces are ground by mills and other engines.

This palatinate is ſmall, exceeds all the reſt in mines, except that of Sendomir only: for, beſide thoſe already mentioned, there are ſome, both of copper and gold, at Novoturgus; marble of all colours at Sileſia; pit-coal at Tencinum; and iron mines, and glaſs-houſes at Olſtinia.

The PALATINATE of SENDOMIR has that of Cracow on the weſt and ſouth-weſt, Hungary on the ſouth, Mazovia and Great Poland on the north, and Red Ruſſia and the palatinate of Lublin on the eaſt. It is divided into eight diſtricts, and has nine ſenators, viz. the palatine and caſtellan of Sendomir, and the caſtellans of Wiſliez, Radom, Zawichoſt, Zarnow, Malagoſh, Polowiez, and Sechow. It abounds with mines of gold, ſilver, copper, iron, lead, and marble, and has it's name from it's capital, viz.

SENDOMIR, on the weſt ſide of the Veiſſel, near it's confluence with the San, 70 miles north-eaſt of Cracow, and 75 ſouth of Warſaw.

The other towns of any note, are,

KUNOW, 40 miles north of Sendomir, noted for quarries of marble of all ſorts and colours.

SYDLOVEEZ, 40 miles north-weſt of Sendomir, is noted for ſtore of timber, iron, and ſteel, in it's neighbourhood, and plenty of fiſh.

VIARDEN, a new built town, of good trade much frequented.

ITZA ſtands on a river that falls into the Veiſſel, 70 miles north-eaſt of Cracow, and furniſhes all Poland with earthen ware.

KIELEZ is famous for mines of copper, and lapis lazuli.

CHENEIN, 12 miles eaſt of Kielez, noted for mines of lead and ſilver, and quarries of marble.

LAGOVIA is a city famous for making earthen ware.

The PALATINATE of LUBLIN lies north-eaſt from that of Sendomir, out of which it is taken; has Maſovia on the north, with Podlachia; is bounded on the eaſt by Lithuania, aud the palatinate of Ruſſia. It has two ſenators, viz. the Palatine and Caſtellan; and the Veiſſel and the Vieperd are it's two chief rivers.

LUBLIN ſtands at the foot of a hill, near the river Uſtrieza, 20 miles from the frontier of Red Ruſſia, 35 weſt of Chelm, 56 north of Sendomir, 55 ſouth-eaſt of Warſaw, and 130 north-eaſt of Cracow. It has a conſiderable trade, and is frequented by merchants of Turkey, Armenia, Muſcovy, Germany, Italy, France, England, &c. at it's four annual marts, which laſt each a month.

The LOWER or GREAT POLAND, is bounded on the north by Pomerania and Royal Ruſſia, by the Upper or Leſſer Poland on the ſouth, by Sileſia and the marquiſate of Brandenburg on the weſt, and on the eaſt by Maſovia, or the duchy of Warſaw. It is 165 miles from ſouth-eaſt to north-weſt, and the like, where broadeſt, from eaſt to weſt, according to thoſe geographers who include Maſovia in it: but, excluding this, which is rather a boundary than a ſubdiviſion of it, it is 200 from eaſt to weſt, and about 100 from north to ſouth.

It is, in general, a level champaign country, has pleaſant rivers, lakes, and ponds, and is well furniſhed with all manner of fiſh and fowl. It's hills abound with ſheep, and other cattle, and it's valleys with corn.

POSNANIA, called by the Germans POSEN, is bounded on the north by Pomerania, on the eaſt by Pomerelia, and by the palatinate of Kaliſh, part of which, together with Sileſia, bounds it alſo on the ſouth; and on the weſt it is bounded, partly by Sileſia, and partly by the marquiſate of Brandenburg.

It's capital city of the ſame name ſtands in a plain, among ſeveral little hills, by the river Varta, or Warta, 28 miles weſt of Gneſna, 40 north of Wratiſlaw, 43 north-weſt of Kaliſh, 135 ſouth of Dantzick, and 143 weſt of Warſaw.

There are three very famous commercial fairs kept in this city, much reſorted to by the German traders and gentry. The firſt is kept about the beginning of Lent, and laſts a month; the ſecond and third at Midſummer and Michaelmas, each of which continues five weeks.

The PALATINATE of KALIS lies along the river Warta, between the palatinate of Poſnan on the weſt, Siradia on the ſouth, Sendomir on the ſouth-eaſt, and Cujavia on the eaſt and north-eaſt.

The chief city of this palatinate, is,

GNESNA, which is the capital of the Lower Poland, and was formerly the metropolis of the whole kingdom, and ſeat of the king. It ſtands in the middle of the palatinate, in a plain, between hills and lakes, 37 miles north of Kaliſh, and eaſt of Poſnan, 46 ſouth-weſt of Thorn, 95 north of Breſlaw, 118 ſouth of Dantzick, 121 north-weſt of Warſaw, and 155 north-weſt of Cracow.

The PALATINATE of SIDARIA lies on the eaſt and weſt ſides of the river Warta, and is divided into four diſtricts, having Sileſia on the weſt, Little Poland and Sendomir on the ſouth and ſouth-eaſt, Kaliſh on the north, and Lencicia on the eaſt. It has five ſenators.

The PALATINATE of LENCICIA has that of Rava on the ſouth-eaſt, and Little Poland on the ſouth; is divided into three diſtricts.

The PALATINATE of RAVA lies eaſt from Lencicia, between Leſſer Poland, Maſovia, and Cujavia, and is ſeparated from Sendomir by the river Piltza.

The two following palatinates are comprehended in the province of Cujavia, which has Royal Ruſſia on the north, Kaliſch on the weſt, Lencicia on the ſouth, and Dobrin on the eaſt.

The PALATINATE of BREZESTEY, on the ſouth-ſide, is fertile in all ſorts of grain, of which it exports vaſt quantities to Dantzick, by ſeveral navigable rivers. It is divided into four diſtricts, and has it's name from a little town 16 miles weſt of the river Veiſſel, 30 miles ſouth-weſt of Thorn, and weſt of Ploczko, and 60 eaſt of Gneſna.

VLADISLAW is a palatinate, whoſe capital city of the ſame name is built among marſhes near the Veiſſel, in the midway between Ploczko and

THORN, 14 miles north-eaſt of Brezeſtey, 20 ſouth-eaſt of Thorn, and 75 north-weſt of Warſaw. Though the adjacent ſoil is marſhy, and ſo ſcarce of fuel, that the inhabitants ſuffer very much for want of it; yet it is fruitful in corn, and ſends great quantities to Dantzick.

The

The PALATINATE of INOWLOCK. It extends from the lake of Goplo and the city of Gruſwick, to the Veiſſel, and the confines of Pomerania; has Pruſſia on the north, the Veiſſel on the eaſt, Kaliſh on the ſouth, and lies north-weſt from Brezeſtey. It is divided into three territories.

DARBIN is by ſome made a diſtinct palatinate of the province of Maſovia, and by others a territory belonging to that of Brezeſtey. It lies on the eaſt of the Veiſſel, between Cujavia and Pruſſia; abounds with fruits and fiſh of all ſorts. It is divided into three diſtricts.

PLOCZKO, on the weſt ſide of the country, is by ſome alſo reckoned a palatinate of Maſovia, from which it lies rather to the eaſt, between the Veiſſel and Ducal Pruſſia. It is divided into four diſtricts

REMARKS.

DANTZICK being the chief city of traffic in Poland, we ſhall more particularly deſcribe that and it's commerce from the beſt accounts.

Dantzick, eaſt longitude 19, latitude 54, the capital of Royal Pruſſia, in the kingdom of Poland, ſituate on the weſtern ſhore of the Viſtula, which a little below falls into the Baltic Sea. It is an excellent harbour, and has the beſt foreign trade of any port within the Baltic. It ſtands 140 miles north of Warſaw, and 70 miles ſouth-weſt of Koningſburg. The town is large, and encompaſſed with a wall and fortifications of a great extent. The houſes are well built of ſtone or brick, ſix or ſeven ſtories high, and the grainaries, containing vaſt magazines of corn and naval ſtores, are ſtill higher, to which the ſhipping lie cloſe, and take in their lading; for the Dutch annually import from hence a great many thouſand tons of corn, timber, and naval ſtores, and other nations ſome; but the Dutch have the greateſt ſhare of this trade, paying for their merchandize with pickled herrings, the ſpices of India, ſugars, brandy, and other produce of the more ſouthern countries; whereas, the Engliſh and other nations are forced to purchaſe theſe things chiefly with treaſure. The inhabitants are computed to amount to 200,000 ſouls.

The moſt conſiderable part of the trade of Dantzick conſiſts in corn, which the Polanders bring down the Viſtula in large ſtruzes or barks, which carry in bulk about 50 tons Engliſh. Theſe barks generally come down annually, in very plentiful years to the number of 1600. They reckon by laſts, of 11 Engliſh quarters; the grain is ſmall, but the red ſort often ſells for 180 Poliſh gilders the laſt, and rye about half this value.

As theſe cargoes are often expoſed to the weather, it is a cuſtom to ſpread their ſails on the banks of the river, and dry their corn on them. They alſo export bees-wax annually, to near 1000 ſchip-pounds, for which they often get the price of 300 gilders per ſchip-pound. Narrow linens, of about 21 inches broad, and ſacking of different qualities, for bags and imbalage, are alſo exported to a great amount *; alſo pot-aſh †, weed-aſh ‡, and pearl-aſh; this laſt is calcined, and takes it's name from it's colour. Pipe-ſtaves are alſo a conſiderable article, and oak-plank, of which the greateſt part is 4 inches thick, 16 to 20 inches broad, and 50 feet long §. This ſpecies of timber will not ſtand the weather ſo well as Engliſh oak, but under the water is eſteemed equal.

* Some ſay near 100,000 l.
† Sold there at 50 f. per ſchip pound.
‡ Sold at 22 ½ f. per barrel of 360 lbs.
§ Of this near 30,000 l. value.

They import iron from Sweden, to the quantity of 1500 or 2000 tons, but of the woollens, and other manufactures of England, an inconſiderable quantity. The laws of commerce are very ſtrict to prevent one foreigner from ſelling to another, or to re-ſell to any other burgher than to the perſon he bought of, which muſt neceſſarily cramp the trade very much. Peter the Great made a law to the ſame purpoſe for Peterſburgh, and yet it is unrepealed; but the government knows very well, that to inforce the execution muſt be extremely prejudicial, and contrary to the maxims of all wiſe ſtates. Even in Dantzick, in the time of the fair, all ranks and degrees of people are admitted free, to ſell what, and to whom they pleaſe.

Poland abounds in Jews, ſaid to be of the tribe of Benjamin: whatever tribe they are of, they appear as deſpicable as any people in the world; yet their acuteneſs and induſtry have given them an eſtabliſhment, in which it is the intereſt, both of the lords and the clergy, to ſupport them; for the trade which they carry on, enables them to pay an intereſt of 10 per cent. per annum for large ſums.

They keep their accounts here in gilders, groſch, and phennigen, a ducat paſſing for 8 gilders, 6 groſch.

The Current Money here is,

3 ſhillings, or 18 phennigen	- -	1 groſch,
3 groſch	- - - - -	1 ditkin,
2 ditkins	- - - -	1 ſixer,
3 ſixers	- - - -	1 tymph,
7 ½ groſch	- - -	1 ach de halber,
4 ach de halbers	- - -	1 gilder.

A current dollar is 3 gilders, and a ſpecie dollar 4 gilders.

Here are alſo half, whole, 2 gilders, and 4 gilders pieces, of which the laſt is a French crown of Lewis XIV. eſteemed the beſt money current, when they have not been in the hands of the Jews. Poliſh coin ſells from 1 to 2 per cent. advance. The exchange is uſually 280 to 290 groſch per pound Flemiſh banco. Koningſburg draws in current money, 1 per mil. according to cuſtom, being deducted.

Weight in Dantzick.

32 lote	- -	1 pound,
24 pounds	-	1 ſmall ſtone,
34 dittos	- -	1 large ditto,
120 dittos	- -	1 centner,
320 dittos	- -	1 ſchip-pound, or 2 ½ hundreds Engliſh.

The weight is there 4 per cent. lighter than the Engliſh. A laſt of corn is 60 ſheffelt, but of malt 90.

Long Meaſure.

12 inches	- - - -	1 foot.
2 feet	- - - -	1 ell.
102 ells Dantzick	- -	make 50 ells Engliſh.
6 dittos	- - - -	5 Brabant ells.

The whole amount of the trade here, is ordinarily computed twelve millions of current dollars, on which the duties are about 7 or 8 per cent. One half is called the revenues of the crown, the other the property of the city.

This duty is paid in Alberto ſix dollars of 4 gilders. HANWAY.

Of the General Courſe of Exchange of Dantzick and Koningſberg.

72 rixdollars, more or leſs,	in France,	100 crowns d'or ſol.
270 Poliſh gros—idem	in Holland,	1 pound gros banco.
100 rixdollars	at Breſlaw,	103 rixdollars, more or leſs.
84 Poliſh gros, more or leſs,	at Frankfort,	1 rixdollar current.
110 dittos—idem	at Hamburgh,	1 rixdollar banco.
100 rixdollars	at Leipſic,	101 rixdollars, more or leſs, current.
56 Poliſh gros, more or leſs,	at Haremberg,	1 florin current money.

London exchanges, with Poland and Pruſſia, by the way of Amſterdam and Hamburgh,—See HOLLAND.

REMARKS before the laſt war between ENGLAND, FRANCE and SPAIN.

It is recent in every one's memory, that the death of king Auguſtus of Poland gave riſe to a bloody war between the houſes of Auſtria and Bourbon.

The late emperor Charles VI. was very far from being ſatisfied with the conduct of king Auguſtus, in the latter part of his reign, becauſe he ſuſpected, not without grounds, that he had ſome engagements with the courts of France and Bavaria, not very favourable to the Pragmatic Sanction; for which reaſon the imperial intereſt was employed in Poland, rather to traverſe than promote the king's views, with reſpect to the ſucceſſion.

But when his Poliſh majeſty was dead, and the imperial court found his ſon, the preſent king, very tractable, with reſpect to it's favourite point, the Pragmatic Sanction: this gave a new turn to the councils of the court of Vienna, and engaged them to favour that meaſure which they had hitherto impeded.

On the other hand, France, from firſt to laſt, openly ſupported the intereſt of king Staniſlaus, whoſe hiſtory, from the time of his being driven out of Poland, is, in a few words, this.

His generous friend, the king of Sweden, aſſigned him his paternal inheritance, the little duchy Deux Ponts for his ſubſiſtence, which he held ſo long as that prince lived; but upon his demiſe, the next heir took poſſeſſion, and king Staniſlaus was forced to retire to Straſburgh, where he lived on the bounty, as well as under the protection of his moſt Chriſtian Majeſty, who in the year 1723, married the princeſs Mary, his daughter; which conſequently intereſted France extremely in his favour. His great alliances, his many virtues, and his being freer from vices than almoſt any prince in his time, had preſerved him many friends in Poland; ſo that it was no difficult matter for the marquis de Monti, the French ambaſſador in that kingdom, at the death of king Auguſtus, in conjunction with the primate, to form a great faction in his favour, more eſpecially as they were both men of great abilities.

But the electoral prince of Saxony being ſupported by the courts of Vienna and Peterſburgh, a double election enſued. King Staniſlaus, who paſſed into that country immediately after the throne became vacant, went to Warſaw, where he was received and treated as king, but was very ſoon driven out again by the Ruſſian army commanded by count Munich, and obliged to retire to Dantzic, in which he ſuſtained a long ſiege, ran great hazards, ſuffered many hardſhips, and at laſt with infinite difficulty made his eſcape to Konigſberg, where he was protected by the late king of Pruſſia.

In the mean time, the crowns of France and Spain broke with the emperor, upon pretence of this diſpute, and of his having ſupported king Auguſtus III. and proſecuted that war with great vigour in Germany and Italy; 'till at laſt having carried their point, and forced the emperor to a peace, all the care that was taken of king Staniſlaus was, that he ſhould enjoy the title of king of Poland and the duchy of Lorrain for life, and on the other hand, France and Spain acknowleged king Auguſtus.

It was very clear from their whole management of this affair, that the court of Verſailles was never in earneſt in the ſupport of Staniſlaus's title to this crown; but made uſe of it only as a colour, firſt for engaging in a war againſt the houſe of Auſtria, and next for obtaining an immediate poſſeſſion of LORRAIN under his name, which otherwiſe they could never have gained.

It hath been the conſtant view of France for many years paſt, to extend her frontier to THE RHINE; and, upon the breaking out of ſeveral wars there, ſhe hath conſtantly ſeized great numbers of places, and fortified them at a vaſt expence. The return of peace hath generally demoliſhed them, and put the French under a neceſſity of employing large ſums again, upon the renewal of every war. The experience of this, and that they may be the more ready upon any occaſion, hath convinced them long before now, that LORRAIN, if not the greateſt, is at leaſt one of the moſt conſiderable acquiſitions, that they could poſſibly gain or deſire.

That Lorrain is of great uſe to the French in the deſign they have long ſince laid, of carrying their frontier to the Rhine, hath been ſufficiently ſeen in the great advantages they have received by that country, all the time of their uſurpation.

The union of Lorrain with France, advances THEIR FRONTIER FORTY LEAGUES INTO THE EMPIRE; for ſo many there are, from the extremity of the duchy of Bar to the city of Straſburg; makes them maſters of all the country between Queitſch, the Saar, and the Moſelle; opens a way into the Palatinate, and into the territories of Mentz and Triers. See LORRAIN.

This duchy ſecures the communication of France with the county of Burgundy, and the two Alſatia's; is ſituated at the head of the Moſelle and the Meaſe, and therefore cannot but be extremely commodious, as well to preſerve their old conqueſts, as to make new. Here they may aſſemble their forces, to diſtribute them in every part; make proviſion of corn to fill their magazines in Alſatia, and KEEP AN ARMY IN WINTER-QUARTERS, TO BE READY TO ACT UPON THE RHINE, BEFORE THEIR ENEMIES CAN TAKE THE FIELD. It is hard to imagine greater advantages than theſe; and if we add to all, that out of this country above 30,000 men are raiſed and paid, we ſhall find, that the French had good reaſon to obtain it, as they have done. Thus has France made dupes of all Europe, and gradually purſued their ambitious point towards UNIVERSAL EMPIRE; which is greatly to be feared they may ſtill one day obtain, if they are not effectually checked. To confirm the truth of which, ſee the articles FRANCE, and PLANTATIONS.

REMARKS on the article POLAND, ſince the laſt great war, and the DEFINITIVE TREATY OF PEACE, concluded in 1763.

The immenſe load of PUBLIC DEBTS and TAXES, with which this kingdom is at length incumbered, and by which our whole commerce and navigation are now oppreſſed, will, it is to be hoped, be a ſtriking memento to our rulers, that this nation may be as little as poſſible involved for the future in wars with the continent, which do not immediately concern the intereſts of Great Britain: for it is certain, that by engaging ourſelves in continental, in that moſt expenſive and profuſe manner we have done, has been greatly inſtrumental to entail upon us our tax-incumbrances. However neceſſary ſuch policy may have been heretofore judged, our own immediate ſafety will inſtruct us as readily to relinquiſh ſuch a ſyſtem as we have been to embrace it; our wares in general becoming ſo exceſſively dear, by one tax-incumbrance after another, that foreigners will not be able to purchaſe them at all; and if we cannot ſell our commodities and manufactures, how can we be able to buy the commodities of other nations? Can any means prove ſo effectual to the ABSOLUTE RUIN of our whole foreign trade, as to be eternally loading it with more and more taxes? And if once our imports decreaſe, in proportion as our exports do, will not the revenues both of CUSTOM AND EXCISES be gradually annihilated? and what then muſt become of the public credit, every wiſe man will tremble to conſider.

The choice of a king of Poland ſeeming to threaten Europe with a freſh continental war, in the opinion of ſome, we are willing to hope that this nation will by no means be drawn into it: for ſuch a war may be kindled by certain potentates, with the ſole view to that end, that thereby we may more and more incumber and oppreſs our commerce, that at length they may gain the dominion therein, and by that means recover more than the full value of what they loſt in the laſt war.

The election of a king of Poland being the firſt occaſion that has offered ſince the laſt peace, whereby certain powers may try the diſpoſition of the court of London towards another continental war; it will be our preſent as well as future intereſt, to convince them, that it is our intention never more to be trapanned into that DESTRUCTIVE SYSTEM, in the manner we have heretofore been—That we have ſufficiently experienced, that the chief ſecurity and proſperity of this notion will depend upon it's maritime ſtrength, which we are determined to cultivate to the utmoſt, and that we are reſolved to raiſe every ſhilling's worth of NAVAL STORES IN OUR OWN PLANTATIONS; and that whatever we ſhall expend for the future upon our maritime force, ſhall be raiſed WITHIN OURSELVES, and every ſhilling thereof ſhall likewiſe be SPENT AMONG OURSELVES: and to this great end, we are further determined to raiſe all FUTURE SUPPLIES to carry on our NAVAL WARS WITHIN THE YEAR; in conſequence of which, we ſhall be able to bid our enemies DEFIANCE.—Theſe are the meaſures that ſhall be ſteadily adopted by an Engliſh-born king; becauſe theſe meaſures, and theſe only, will conſtantly promote and advance the proſperity and happineſs of his people of Great Britain.

As the foregoing obſervations were drawing up, and not printed off, we have advice of the choice of a king of Poland; and it is worth remarking, that the election to that crown gives us the moſt ſtriking inſtance that we can imagine, of the effect the late war has had, in prejudice to the power of the court of Verſailles. If we look back a century paſt, the retroſpection will ſhew the amazing influence of France in the choice of Poliſh kings; and if we take the ſlighteſt review of the public tranſactions of a few months in Poland, ſince the death of Auguſtus, we ſhall find that her intereſt there has actually dwindled into nothing; or that ſhe is determined to avoid future continental wars, and not interfere ſo much as ſhe hath been wont to do in the wars of other ſtates, but ſeems determined now to mind more her own affairs; which it is to be hoped will caution other ſtates to pay a due regard to their own intereſt, and not interpoſe in the concerns of others ſo much as they have done.

It is at preſent currently ſaid, that Pruſſia deſires aſſiſtance from the Court of England, againſt Auſtria and France, in caſe of new troubles, which that monarch is apprehenſive of, from their jealouſy of his influence in Poland; and that a ſtrong memorial has alſo been preſented to the States of Holland, requeſting the ſame, and to have immediate anſwers to both. And on the other hand, it is ſaid, that Auſtria and France, in their memorials to our court, complain heavily againſt Pruſſia and Ruſſia, and inſiſt on knowing what part England intends to take in the new troubles that threaten Europe.

In anſwer to which memorials, we are informed, that they have been given to underſtand, that Great Britain would no ways interfere in the affairs of Poland, as the Poles certainly have a right to chuſe their own kings; and that if they had a mind to go to war, they might fight it out among themſelves: which wiſe anſwer, if perſevered in, will preſerve the peace of Europe; for if we pay either ſide, the Germans will ſoon find an enemy.

POLITICAL ARITHMETIC. By political arithmetic, we mean the art of reaſoning by figures, upon things relating to government.

The art itſelf is undoubtedly very antient, but the application of it to the objects of revenue and trade, is what Sir William Petty firſt began, who as yet has been followed by very few; he firſt gave it that name, and brought it into rules and methods; and his excellent diſcernment would have carried it very far, if he had lived to this time; for his ſkilful hand did all along want right materials to work upon, with which he might have been furniſhed, by the variety of new taxes that have been ſince his time levied in this kingdom.

The foundation of this art is to be laid in ſome competent knowlege of the numbers of the people; ſee the article PEOPLE: and in all his enquiries, he took for guides the cuſtoms, exciſe, and hearth-money, but the accounts of theſe revenues were not fully ſtated, and their produce was not known, at leaſt to him, when his books were written.

He endeavoured to compute the number of the people from the trade and conſumption of the nation, into which the exciſe and cuſtoms were to give him an inſight, and where the hearth-money might afford him yet better lights. He was to gueſs at our ſtrength and wealth, by the general ſtock employed in trade; and he might ſee a little into the quantity of money in the nation, by the turnings it made into the Exchequer, in the payments of cuſtoms and exciſe; the number of houſes in England ſhewed him in the number of families, from whence he was to gather how many inhabitants the kingdom might contain.

But his chief ſchemes were calculated, before the true produce of theſe three branches was fully known; for as to the exciſe, 'till the beginning of Mr Vincent's farm, which was anno 1674, the farmers in their ſeveral contracts, had never been

been obliged to give in a real ſtate of their accounts, and a true produce of their reſpective counties. And as to the hearth-money, it's groſs produce was likewiſe kept private 'till Mr Trant's farm (which began anno 1679) who was obliged by his contract to give it in. And we have yet never been able to meet with any true account of what the cuſtoms produced, 'till from the year 1674.

So that the very grounds upon which he built his calculations being probably wrong, he muſt, in many inſtances, be miſtaken in his ſuperſtructure; and the true produce of theſe branches being concealed from him, and indeed from every body elſe but the parties concerned, in all likelihood, he over-reckoned them in his mind, and was thereby brought to over-rate the inhabitants of England, and to under-rate the numbers, and the ſtrength and wealth of other countries: and this error in a fundamental, has led him into many others, and has miſled ſuch as have followed him in theſe matters.

It is true, Sir William Petty had very much ſtudied the bills of mortality, and the accounts of the births and burials, not only of this kingdom, but of other nations, which did certainly help him to very uſeful lights.

But, through the whole courſe of his writings it may be plainly ſeen, by any obſerving man, that he was to advance a propoſition not quite right in itſelf, but very grateful to thoſe who governed.

The growth of the French king, and chiefly of his naval power, was a very unpleaſant object for the parliament and the people of England to contemplate, and no doubt it did diſquiet the mind of king Charles II. But this prince delighting to be ſoothed in his eaſe and pleaſures, and to have no anxious thoughts, was very glad to ſee one of Sir William Petty's repute for calculations of this nature affirm *, That France exceeded England very little in point of territory; that we came near them as to the number of men, and that our numbers were as effectual in point of ſtrength; that the people of England had, head for head, thrice as much foreign trade as the people of France; that France was under a natural and perpetual impediment of being powerful at ſea; and that the French had not above 15,000 ſeamen to manage their trade, out of which, not above 10,000 could be ſpared for a fleet of war.

* Sir William Petty's Political Arithmetic, page 74, 75, 7, 85, 56, 57.

Every good Engliſhman does undoubtedly wiſh all this had been true; but we have ſince had manifeſt proofs, that this great genius was miſtaken in all theſe aſſertions; for which reaſon we have ground to ſuſpect, he rather made his court than ſpoke his mind.

The king was well pleaſed to be lulled aſleep by a flattering council, which ſuggeſted, that the power of France was not ſo formidable, and could never be prejudicial to this kingdom: for it excuſed his breach of the tripple alliance, and all the other meaſures which have ſince proved ſo pernicious to the intereſt of England. See the article PLANTATIONS.

But if ſuch as meddled with computations at that time, had truly compared the ſtrength of both kingdoms, and if the miniſters themſelves had duly weighed the increaſing wealth, trade, naval force, and growing greatneſs of that nation, it might, perhaps, have awakened both the king and parliament from that lethargy, which has ſince proved ſo fatal and expenſive to us.

The abilities of any miniſter have always conſiſted chiefly in this computing faculty; nor can the affairs of war or peace, be well managed without reaſoning by figures upon things. As for example, ſuppoſe a nation entering into a war, that may have a good event, if they can hold it out longer than the enemy; and a bad one, if they ſhall be obliged to give back firſt: in ſuch a caſe, does not a wiſe ſtateſman, even in the beginning of the buſineſs, compute and compare the power and riches of the adverſe party, with the wealth of his own country; and all in order ſo to huſband it's ſtrength, that it may continue to the very laſt? Does he not ſum up the revenues of the enemy, and, at the ſame time, reckon what may be gathered at home? And does not all this help him to govern wiſely his prince's affairs, and to give his maſter wholeſome and ſafe counſels? Does it not often happen that a nation, which, without any prejudice, may ſpend three millions a year for a long ſpace of time, may be ruined by the expence of twenty millions in three or four years? For that body which can bare frequent but moderate bleedings, muſt die, if too great a quantity of blood be drawn from it at once. Great ſtateſmen, therefore, have always taken care, not only to know the exact poſture of their own country, but likewiſe to underſtand perfectly the power or weakneſs of other people, with whom they have wars or alliances; and the judgment formed from thence, is political arithmetic.

It was by this computing faculty, that Fabius Maximus found out the way to break the ſtrength of Hannibal, and reſtore the affairs of Rome. Fabius conſidered, that the forces of his enemy were not of a repairing nature; that their ſupplies were to come from a factious and a diſtant country; that Hannibal was a wary captain, full of ſtratagems, and not to be ſurprized himſelf: that his voluntary troops, compoſed of different nations, were invincible in battle, and to be waſted and wearied out only by a long war, which might conſume their numbers. On the contrary, that the Romans were at home, and had recruits ready at hand; he therefore quite changed the manner of the war: and thus, by rightly computing and comparing the Roman and Carthagenian ſtrength, he prevailed more by not fighting, than many conſuls and dictators had done with their courage, not ſo wiſely governed and directed.

If it could be clearly ſtated what the real wealth and ſtock of a kingdom is, and if it can be known by what degree it grows rich in time of peace, and by what ſteps it becomes poor at other ſeaſons, ſome opinion might be formed, and judgment made, how long, and upon what foot a war might be carried on with ſafety to the public.

In the ſame manner, if the condition of the enemies affairs can be rightly underſtood, ſome gueſs may be made how long they can probably hold out, ſuppoſing fortune to incline neither way, and to diſtribute her favours (as ſhe uſually does among nations ſtrong and wiſe alike) with equal hands.

And if a country (engaged in a league with other nations) can be truly apprized of the ſtrength and riches of their allies, they may know whether any of their confederates are not juſtly to be called upon, and preſſed for a larger quota, and to aſſiſt with more vigour in the common buſineſs.

For theſe reaſons, able ſtateſmen in all ages, have been at a great expence in embaſſies, or ſpies in foreign courts, to get intellligence of the poſture of affairs in thoſe countries with which they are at war, or with whom they hold alliance.

He that would furniſh himſelf with ſuch ſkill in foreign affairs, as may make himſelf uſeful at home, muſt begin with an enquiry into the condition of his own country; in which, if he can attain to a competent knowlege, he will more eaſily find out the poſture and ſtate of orher places. See the articles BALLANCE of TRADE, BRITAIN [GREAT-BRITAIN], BRITISH AMERICA, CREDIT [PUBLICK CREDIT], DEBTS [NATIONAL DEBTS], FUNDS, BULLION, CASH, COIN, COLONIES, EXCHANGE, EXPORTATION, IMPORTATION, LABOUR, LANDED INTEREST, MANURE, MONEY, NAVAL AFFAIRS, PEOPLE, REVENUE, SHIPPING, TREATIES of COMMERCE.

He muſt know the laws, conſtitution, humour, and manners of his own country, with the number of it's inhabitants, and it's annual expence and income from land, [ſee the article LAND] with it's product from trade, manufactures, and the other buſineſs of the kingdom: and mankind in the maſs being much alike every where, from a true knowlege of his own country, he may be able to form an idea, which ſhall prove right enough concerning any other, not very diſtant people.

As for example, when the number of inhabitants in England is known, by conſidering the extent of the French territory, their way of living, and their ſoil, and by comparing both places, and by other circumſtances, a near gueſs may be made how many people France may probably contain. See the article FRANCE.

In the ſame manner he that knows the income of England from trade, by contemplating the frugality and induſtry of the Dutch, their ſeveral ſorts of commerce, the places to which they deal, and their quantity of ſhipping, ſhall be able to find out what annual profit ariſes to the Hollanders, from their foreign traffic. See HOLLAND and UNITED PROVINCES.

And he who knows what taxes [ſee TAXES] and impoſitions one country can pay, by conſidering the different humours of the people, their ſtock and wealth, their territory, their ſoil and trade, ſhall be able, by compariſon, to form a good conjecture, what revenues can be raiſed in another nation; and conſequently he may make a near gueſs, how long either kingdom can carry on a war.

In the art of decyphering, it is ſaid, where three or four words, perhaps letters, can be found out, the whole cypher may be diſcovered: in a great meaſure, the ſame holds in the computations we are treating of: and very probable conjectures may be formed, where any certain footing can be found, to fix our reaſonings upon.

No commonwealth or monarchy did ever arrive at a very great power, but by methods to be comprehended by the underſtandings of men; and we read of no great empire ruined, but the ſeeds of it's deſtruction may have been obſerved long before, in the courſe of it's hiſtory; there being a certain degree of wiſdom, induſtry, virtue, and courage, requiſite to advance a ſtate; and ſuch a meaſure of folly and ill conduct, neceſſary to pull it down.

In the ſame manner, the ways are evident by which a country grows rich, and the decays in the wealth and ſubſtance of a nation, may be likewiſe foreſeen early, by ſuch as bend their ſtudy to matters of this nature: for where the cauſes are apparent, we may judge eaſily of the effect. A people who keep their expence at home, or who protect their trade, [ſee the article COMMERCE] will not be much waſted by a war. A foreign war muſt needs drain a kingdom of it's treaſure.

ſure. This treaſure being the common ſtock, if it be diminiſhed, muſt certainly diminiſh the trade and buſineſs of that nation; and by how much the trade and buſineſs of a country is leſſened, and by how much it's treaſure is exported, [ſee BALLANCE of TRADE] by ſo much that country is grown poorer: indeed, to compute the exact degrees in all this, is difficult; but in ſo dark a point, conjectures that come ſomewhat near the truth, may be of ſervice to any ſtateſman.

It is true, that ſpeculations in the cloſet, which have not been enlightened and aſſiſted by practice and experience, will be very uncertain guides to him who deſires to know the ſtate and condition of his country: a ſtateſman, therefore, who would compute with any effect, conducive to the public good, muſt conſult variety of men, and men of different talents; and, in any ſcheme he is to form, above all things, he muſt avoid projectors, [ſee the article PROJECTORS] his flatterers or admirers, or thoſe who depend upon him. For the projectors are always too full of their own thoughts and buſineſs, to judge rightly of it. His flatterers will always aſſent; his admirers will be too much biaſſed by his opinions, and, from his dependents, he can never have that contradiction, by which truth muſt be ſifted out.

A great ſtateſman, by conſulting all ſorts of men, and by contemplating the univerſal poſture of the nation, it's power, ſtrength, trade, wealth, and revenues, in any counſel he is to offer, by ſumming up the difficulties on either ſide, and by computing upon the whole, ſhall be able to form a ſound judgment, and to give a right advice, and this is what we mean by political arithmetic. See the article PARLIAMENT [MEMBER of PARLIAMENT.]

He that has ſuch a computing head, will ſeldom enter into ill meaſures; he will not put the wars of his prince upon a wrong foot; he will not engage him in weak alliances; he will not propoſe ill digeſted ſchemes and funds for revenues that ſhall not anſwer. In any new council he will weigh the event beforehand, and conſider how far it may diſturb his maſter's affairs, or affect the nation's credit. Happy are thoſe kingdoms, which abound in ſtateſmen ſo qualified; but miſerable is that country, where the men of buſineſs do not reckon right; and where, in matters very important, and on which the whole welfare of a people depends, they are allowed to ſay, they are miſtaken.

This computing faculty may not only be uſeful to ſtateſmen in the general and higher affairs, but it will likewiſe help them in the more ſubordinate and miniſterial parts of government. It ſhall not only contribute to their well guiding and conducting the nation's whole ſtrength and wealth truſted to their care, but if they know rightly how to reaſon upon things by figures, they ſhall commit very few errors in relation to their prince's revenues, or to the trade of the kingdom.

There are few places which afford better helps for computation, than England does at preſent. The exciſe, the cuſtoms, and land-tax, are criteria, by which we may judge, not only of what the people conſume, but, in ſome ſort, they let us into a knowlege how their numbers increaſe or diminiſh. Thoſe duties are the very pulſe of a nation, from which it's health or decays may be obſerved. And theſe revenues muſt be the better guide to computers, becauſe the accounts of them are fairly kept and ſtated, and becauſe the reſpective branches have been under ſo exact a management, that their produce is known and underſtood.

The wealth of all nations ariſes from the labour and induſtry of the people: a right knowledge therefore of their numbers, is neceſſary to thoſe who will judge of a country's power and ſtrength. See the article PEOPLE.

And upon this account undoubtedly, the Romans did ſo often make the cenſus, that a judgment might from thence be formed, how able the commonwealth was to defend itſelf, or to invade others.

And the ſin David committed in numbering Iſrael, might be probably this, that it looked like a ſecond proof of rejecting theocracy, to be governed by mortal aids and human wiſdom. For without doubt, it muſt very much help any rules to underſtand fully that ſtrength which he is to guide and direct; ſince he may thereby know how many are fit for war, what hands ſupport the commonwealth by their labour and induſtry, and what ſort of men are idle and uſeleſs in it.

And this is ſo far from being a matter of mere ſpeculation, as ſome think, that very many concluſions may be drawn from thence, uſeful and reducible to practice.

For if the numbers of the people can be truly ſtated, if they can be divided into proper ranks and claſſes, if it can be diſtinguiſhed who are rich, who are eaſy, who can barely ſubſiſt, and who, by reaſon of poverty, can contribute little in any tax or aid to the public: if all this can be thoroughly underſtood, in the laying any kind of tax or impoſition, a very near computation may be made, what ſuch a duty ſhould produce to the government, ſuppoſing it to be duly collected, and under a good management.

When the different ranks and qualifications of men are divided and ſtated, when there is a right diſtinction made, between the number of ſolvent and inſolvent perſons, when it is known how many pay not to church and poor, how many receive alms, and how many are mere vagrants, a very good judgment may be made what any perſonal or family-tax ought to yield, ſtill ſuppoſing it to be well and carefully levied.

The number of the people leads us to know, what the yearly income may be from land, and what from mines, houſes, and homeſteads, rivers, lakes, meers, ponds; and what from trade, labour, induſtry, arts, and ſciences: for, where a nation contains ſo many acres of arable land, ſo many of paſture and meadow, ſuch a quantity of woods and coppices, foreſts, parks, and commons, heaths, moors, mountains, roads, ways, and barren and waſte land; and where the different value of all this is computed, by proper mediums, it is rational to conclude, that ſuch a part of the people's expence is maintained from land, &c. and ſuch a part from mines, houſes, &c. and that ſuch a part is maintained from trade, labour, &c. And the poor, exceeding ſo much the rich in numbers, the common people are the proper medium by which we may judge of this expence.

There is a certain ſum requiſite to every one for food, raiment, and other neceſſaries; as for example, between 7 and 8 l. per annum; but ſome expending leſs, and ſome more, it may not be improper to compute, that the maſs of mankind in England, expend one with another, near 8 l. per. annum: from whence it may be concluded, that an annual income of ſo many millions is needful for the nouriſhment of ſuch and ſuch a number of people.

And if land with it's product will not reach this ſum, it is rational to infer, that the reſt muſt ariſe from trade, arts, and manufactures.

And further, when a nation contains ſuch a number of people, ſkilled in huſbandry and the improvement of land, when they have ſuch an extent of territory, and when their acres are, one with another, of ſuch a value, it may be from thence concluded, that the land of this country will produce ſuch and ſuch a ſum.

So much of the product of the earth will nouriſh ſuch a number of the people; and a ſoil ſo and ſo improved, will yield ſuch a product; and if this be above what the people conſume, it follows, that there muſt be ſuch and ſuch a quantity of goods for exportation.

Such a number of men ſkilled in maritime affairs, verſed in traffic, with variety of ports, dealing to many countries, with ſuch and ſuch a native product to export, and ſuch an acquired ſtock to turn and wind, muſt gain ſo and ſo by trade.

And if land and trade do not reach the expence in queſtion, it follows, that the reſt muſt ariſe from arts, manufactures, and the other buſineſs of a people.

But if land and it's product, with what is done at home, is ſufficient to nouriſh ſuch a number of inhabitants, and that they are beſides able to export many commodities and manufactures, and that their ſtock is ſuch, as to deal in many goods with foreign people; we may infer, that there is ſuperlucration of wealth accruing to ſuch a country by their traffic.

Therefore a right diſtinction to be made between what part of the people's expence ariſes from land, &c. and what from trade; and what from arts, labour, &c. muſt be a good guide to princes and ſtates, in laying any kind of taxes or impoſitions.

Expence muſt ariſe from income, and ſuppoſe the general income of a nation, from land trade, arts, &c. ſhould be - -		44,000,000
Suppoſe of this, land to be -	14,000,000	
Trade - - - -	10,000,000	44,000,000
And arts, labour, &c. -	20,000,000	

And where this is the caſe, can it be reaſonable in taxing the people to lay almoſt the whole weight upon the twenty-four millions, and to let the other twenty millions in a manner eſcape. And yet this muſt happen, in countries the whole burthen is generally put upon land and trade.

So that ſuch a political arithmetic, as could diſtinguiſh in all the different parts which compoſe a nation's wealth, muſt be very uſeful and of public ſervice.

The eighth penny, raiſed upon the annual income or expence of England, would have maintained the war of king William a great while, on the foot of five millions a year, if the burthen had been put upon all degrees of men alike, with geometrical proportion; for, in all probability, an EQUAL land-tax, and moderate duties upon the whole conſumption, would have produced ſuch a ſum: and if this could have been compaſſed, the landed men had undoubtedly been in a better condition than they are at preſent, and we had avoided the vaſt debt, which was a weight upon the king's affairs.

This computing faculty conſiſts in comparing the ſtrength of nations, and in conſidering their number, power, policies, wealth, trade, ſhipping, naval force, land armies, and alliances.

But there is in this art a ſphere for lower capacities to move in, who can preſume no further than to find out and prepare materials, to be made uſe of by abler hands, and who think it praiſe enough to them, if they can make tools for ſkilful artiſts to work withal.

If general computations had been more ſtudied and improved, thoſe errors relating to the revenues, muſt probably have been avoided, which have ſo entangled the public affairs.

If ſome of the men of buſineſs had conſulted political arithmetic, the parliament had not been troubled ever ſeſſion, to make goad ſo many deficient funds, which have loaded England with a heavy debt.

Moſt undoubtedly a right ſkill in this art, would be of great uſe in all conſiderations relating to the public revenue: for though the number of people could not be certainly fixed, and though the conſumption of any commodity could not be truly known; yet he who goes by ſome rule (though not capable of a mathematical proof) ſhall ſeldomer err, than he who gropes entirely in the dark, and only follows the ſuggeſtions of his fancy.

The projectors of moſt new funds, have hitherto been generally miſtaken two parts in three: that art is therefore to be praiſed, the rules of which, if rightly followed, will ſhow à priori, within a ſmall difference, what any branch of the revenue ſhall produce, making allowance for the difference between war and peace, or any other extraordinary occurrences.

In all computations, the number of people is the groundwork; however, that knowlege will be but an uncertain guide, without other helps and directions. For in reckoning what any branch may yield, conſideration muſt be had of the preſent abilities and condition of the kingdom; of the current caſh, and even of the diſpoſition of the people to pay the duty. The nature of the commodity likewiſe to be charged muſt be conſidered, whether it be the proper object of a duty, and not eaſily concealed and evaded, and whether its collection is to be aſcertained by high or eaſy penalties; and whether it is to be come at by a few or by many officers; and the law itſelf, which is to give the duty, muſt principally be weighed; for if it is to be ſlackly penned, the branch will anſwer accordingly: by an univerſal contemplation of theſe matters, and by making every where proportionable allowance, in all the foregoing, and ſome other inſtances, a judgment may be formed, what ſum the government may reaſonably expect from any new revenue.

And, in computing any new duty, the number of the people will be an uncertain guide to thoſe who do not diſtinguiſh rightly, between the rich and the poor of a country: for in moſt computations, men are led into error, by reckoning and concluding, from what is in view, and juſt before them. But they who will make a true eſtimate in things of this nature, muſt conſider the maſs of the people together, and not meaſure the riches of the whole, by that plenty and pomp, which they ſee among a few.

He who will pretend to compute, muſt draw his concluſions from many premiſes; he muſt not argue from ſingle inſtances, but from a thorough view of many particulars; and that body of political arithmetic, which is to frame ſchemes reduceable to practice, muſt be compoſed of a great variety of members.

He who will arrive at this art, muſt look into all the public revenues; he muſt underſtand ſomething of their management; he muſt not be a ſtranger to the product and manufactures of every country and place; he muſt know what goods we export, and what foreign commodities are imported to us; and only from this general view, he muſt frame any ſcheme that may be uſeful to the public. A contemplation of one object, ſhall give him light into things, perhaps, quite of a different nature: for as in common arithmetic, one operation proves another, ſo in this art, variety of ſpeculations are helpful and confirming to each other.

Nor is the faculty of computing leſs uſeful in matters relating to trade, than in what concerns the public revenues.

The councils of a country are always inquiſitive after truth, but to hide it from them, and to perplex things which have relation to trade, is the intereſt of ſo many, that in the greateſt deliberations, wiſe men are often miſled by ſuch as in all their actings, conſult more their private profit than the common welfare.

There is hardly a ſociety of merchants, that would not have it thought the whole proſperity of the kingdom depends upon their ſingle traffic.

So that at any time, when they come to be conſulted, their anſwers are dark and partial; and when they deliberate themſelves in aſſemblies, it is too frequently with a bias, and a ſecret eye to their own emolument.

There is hardly a commerce, but the dealers in it will affirm, we loſe by all the reſt: when, perhaps, in time of eſtabliſhed peace, the kingdom gets by trade in general.

A true account of the ballance of trade would ſet all this right, and ſhew what traffics are hurtful, and what are beneficial to the nation; and the general ballance is not to be accurately found out, but by the aid of political arithmetic, and a ſkill in the foreign exchange. See BALLANCE of TRADE, and EXCHANGE.

And, perhaps, this art alone can ſhew the links and chains by which one buſineſs hangs upon another, and the dependance which all our various commercial dealings have each upon the other.

In firſt appearance, thoſe traffics ſeem hurtful which export money; but when we come to reaſon upon things by figures, we find that ſuch trades are often beneficial, when they bring in one way more bullion than they carry out another. See the article BULLION, Vol. I. page 397.

We may ſeem to loſe by the ballance in one place, but perhaps, that trade may be the cauſe of another, twice as profitable: ſo that to object againſt the motion of one wheel, without knowing and ſeeing how the whole engine moves, is to no manner of purpoſe.

He that would, therefore, compute with any good effect in matters relating to trade, muſt contemplate the wealth, ſtock, product, conſumption, ſhipping, exportations and importations of his country; and, at the ſame time, he muſt conſider the ſtate and condition of other places.

In this art, the moſt deficient point is, to find good materials, and to have a footing probably ſure to fix our reaſonings upon; for where our premiſes can be certain, our concluſions ſhall be almoſt undeniable.

It is a great guide, in concerns of this nature, to have before us an account of all the exportations from London and the out-ports, to every diſtinct country; and alſo of all the importations to London and the out-ports, from every diſtinct country, and of their values at prime coſt, and ſo downwards. Every commodity ſhould be under a ſeparate head, and the drawbacks upon re-exportation taken due notice of, and the value taken into conſideration, where the duty on goods is ad valorem. Theſe materials are very helpful in our computations of this kind.

But it would be a further light into the general ballance of trade, if we could form a good judgment of that beneficial trade of buying goods in one place, to ſell in another country, and what we gain by the articles of freight. If the true ſtate of theſe matters could be obtained, it would greatly contribute to our information in regard to the general loſs or profit made by commerce.

The general poſture of our traffic, as well in time of war as peace, is likewiſe requiſite to be taken into conſideration; for by contemplating the various charges in our exports and imports in thoſe different junctures, a judgment may be formed, from political arithmetic, how the ballance of trade formerly ſtood, and how it is like to ſtand hereafter, with the ſeveral countries wherewith England has commercial negociations.

Theſe are the out-lines of the art of political arithmetic; and how far this work may contribute to give the reader ſome knowlege of the art itſelf, can be known only by thoſe who ſhall peruſe our work throughout; wherein they will, perhaps, find more matter, if rightly applied, tending to information of this kind, than thoſe who have not dipped into it may be aware of.

POMERANIA. The ancient Pomerania was of a much larger extent than the modern, for it included Pomerelia, and Caſſubia, called Black Pomerland. The modern duchy of Pomerania, taken all together, is a long narrow track, above 200 miles from eaſt to weſt, and from 50 to 80 from north to ſouth, the breadth being very unequal.

It has Poliſh Pomerania on the eaſt: the Baltic Sea on the north; the marquiſate of Brandenburgh on the ſouth; and the duchy of Mecklenburgh on the weſt. It's air, by reaſon of it's being the extreme north-eaſt corner of Germany, is reckoned the coldeſt of any part of it. The ſoil in many parts is ſandy and barren, and their arable lands near the ſhore are frequently overwhelmed with ſand; yet in other parts they have corn enough, both for conſumption and export, beſides good paſtures filled with cattle, and many large woods and foreſts, which abound with deer, wild boars, hares, foxes, wolves, wild horſes, wild bulls, &c. and fowls of all ſorts. Here are alſo beavers, and ſuch plenty of water-fowls, that they reckon 20 ſorts of ducks. They have great plenty of ſalt and freſh-water fiſh, particularly ſalmon, and very large lampreys, eſpecially in the bay of Stetin and lake of Laſſen. About Gripſwald and Rugen they have good herring-fiſhing; and in the lake Madduje, near Colbatz, there is a large broad fiſh, called muſcum, found no where elſe in Germany. There are many fair and fertile meadows between the branches of the Oder, and has great quantities of fruits of all kinds, as in any province of Germany. They have no wine of their own growth, but excellent mum, and beer of ſeveral ſorts, particularly the bitter beer of Stetin, the mum of Gripſwald, and the ſtout of Wollin, which mariners tranſport elſewhere: and as there are ſcarce any mountains in the country, it has no mines, but ſome few of iron in the Upper Pomerania. It abounds with amber, eſpecially on the coaſts of Brandenburgh Pomerania, where it is not only thrown up by the ſea, and found among the ſea-weeds and ſands, but alſo dug out of the rocks and mines. It is frequently dug out

of

of the ground, at a great diſtance from the ſea, and many times found by the huſbandmen, as they plow their lands. There is a particular lake in this country, that communicates with the ſea, where they gather it in nets, when the ſea begins to flow, and ſometimes haul up pieces as big as one's fiſt. At firſt taking up it is ſoft, but ſoon hardens, by the air, into a ſtony ſubſtance: it is of ſeveral colours, white, yellow, black, and red: the ſort found in Pomerania is a dark yellow.

It is well watered by rivers and lakes: among the former are, the Oder, the Pene, the Rega, the Perſant, the Wiper, the Stolp, the Rekenitz, and the Barte. The Rekenitz ſeparates Pomerania from Mecklenburg, forming a large lake near Damgarten, and falling into the Baltic at Dars. The Barte riſes near Stalſund, and falls into the ſea at Bardt. The Oder, ſoon after it's entrance into Pomerania, divides into ſeveral branches, add after having paſſed by Garts, Griffenhagen, Schwedt, and Stetin, flows into the Damiſh lake, and then into Damantzkt, and at laſt dilates itſelf into a freſh-water lake, or ſea, called the Great Friſch-Haff, which is an excellent road for ſhipping, 30 miles in length, and 10 in breadth, abounds with fiſh, and falls into the Baltic by three currents, through which ſhips paſs to Stetin. Beſides the abovementioned, there are many more rivers in Pomerania, which fall into the Baltic.

The moſt common diviſion of this country is, into the weſtern, viz. the Upper, or Swediſh Pomerania; and the eaſtern, viz. the Lower, or Brandenburg Pomerania; which latter is alſo called Ducal Pomerania, or the duchy of Pomerania, becauſe it was given to the ducal houſe of Brandenburg by the treaty of Munſter.

The chief towns of the eaſtern, or Brandenburgh, i. e. Ducal Pomerania, are,

1. STOLPE, 22 miles north-eaſt from Rugenwald, 52 eaſt of Colberg, and 64 weſt of Dantzick.
2. RUGENWALD is the capital of Wenden duchy, on the river Wiper, 18 miles north-eaſt from Coſlin, and 20 from Carmin.
3. COSLIN, 18 miles north-eaſt of Colberg, is a very pleaſant town with a good air. It being but a league from the Baltic, the inhabitants can eaſily export their coin, and import what commodities they want from abroad. The Friſch-Haff lake is a treaſure to them, for they often, in the winter, bring up an hundred tons of fiſh there, at one draught of the net, if we may credit ſome. The adjacent country is fruitful, and interſperſed with little hills, on which ſtood formerly Popiſh chapels, much frequented by pilgrims. Here are three annual commercial friars, viz. the Saturday after Lady-Day, the Thurſday after the fourth Sunday in Lent, and All-Saints Day.
4. CORLIN, 13 miles eaſt of Colberg, and 12 weſt of Coſlin, has two annual fairs, viz. on the Saturday before Palm-Sunday, and on Aſcenſion-Day.
5. BELGART is a little town, with a good trade, five miles ſouth-eaſt of Corlin, 16 from the Baltic, 18 from Colberg, and 56 north-eaſt of Stetin.
6. COLBERG is the capital of that called the duchy of Caſſubia, and ſtands at the mouth of the Perſant, near the Baltic ſhore, 30 miles north-eaſt from Carmin, and 55 from Stetin. Salt is made here, of which large quantities are ſent abroad, to the great enriching both of the town and of the elector of Brandenburg, to whom the town came by the treaty of Munſter. It's harbour, which is a good one, though ſomewhat too narrow, is defended by a ſtrong caſtle.
7. CAMIN is a ſmall city, which ſome, however, reckon the capital of Ducal Pomerania, but five miles from the Baltic Sea, 32 north of Stetin, and 33 eaſt of Wolgaſt: it ſtands on the mouth of the Oder that is called Druvenow. It has three trading fairs a year, viz. the ſecond Sunday in Lent, on Trinity-Sunday, and Holy-Croſs-Day.

UPPER, or SWEDISH, called alſo the ROYAL POMERANIA, extends from the Oder to the frontiers of Mecklenburg, and from the marquiſate of Brandenburg to the Baltic.

1. GRIFFENHAGEN ſtands on the eaſt ſide of the Oder, above Stetin, almoſt oppoſite to Gartz. It has three fairs in a year, viz. on Thurſday after the firſt Sunday in Lent, on Trinity-Sunday, and on the 28th of October.
2. DAM is a ſmall but ſtrong town, on the eaſt ſide of the Oder, overagainſt Stetin. There are three annual fairs at this place, viz. on the Friday before the firſt Sunday in Lent, the eve of Palm-Sunday, and Michaelmas-Day.
3. STETIN, the metropolis of this Pomerania, ſtands on the riſing of a ſmall hill, with a fine caſtle on the weſt ſide of the Oder, which runs from thence through the lake called Groſs-Haff, into the Baltic, by the iſle of Uſedom. It is 18 miles from the frontiers of Brandenburg, 73 north of Frankfort 74 north-eaſt of Berlin, 153 weſt of Dantzick, 170 eaſt of Lubec, and 320 north of Vienna. It's trade was the moſt conſiderable of any in theſe parts, 'till the ſettlement of the Dutch republic. It was formerly one of the Hanſe-Towns, and the rendevous of the fleets which thoſe towns uſed to fit out to protect their trade, and ſecure their privileges. It is 40 miles to the ſea, yet ſhips of good burthen come up to the very walls of the city, where they have a fine key, though the river itſelf, which is navigable a great way above the town by leſſer veſſels, is a ſufficient harbour.

One branch of it's trade is, the exporting of ſalt and freſh fiſh, eſpecially thoſe taken in the Groſs-Haff, the lake abovementioned, which is about 15 miles below the town; and from thence they alſo ſhip off great quantities of naval ſtores, eſpecially oaken plank, maſts, with other wood, both for building and fuel; canvas, linen, yarn, honey, wax, roſin, &c. Many ſhips come yearly from hence to London: and as the Oder brings down a vaſt quantity of corn, which comes into it from Poland and Sileſia by the river Warta, about 50 miles above the city, here is a very great exportation of it, eſpecially for Sweden, which is ſometimes much diſtreſſed for want of it. In fine, it is ſo proper a center for exchanging the commodities of Poland and Germany, with thoſe brought from the Baltic by the conveniency of the river Oder, that it cannot fail of having a great ſhare of trade, and it, is now ſaid to be ſo populous, that many of the inhabitants are obliged to live in cellars and vaults. They have large granaries, ſtore-houſes, an arſenal, and a dock for building ſhips.

4. TRIPTOW, a pretty town, defended by a ſtrong caſtle on the Tollen Sea, or lake, not far from the confines of Mecklenburg, 26 miles ſouth of Gripſwald: it has three fairs a year.

There is a town of this name in the Lower Pomerania, near Coſlin, which is called Triptow on the river Rega, or New Triptow. The townſmen have an opportunity, by their river, of trafficking to ſea: it has a fair on St Peter and Paul's-Day.

5. PASSEWALCK, anciently PAZDEWALCK, ſtands between Prenzlow and Turgelow, on the weſt ſide of the river Ucker, by which the inhabitants ſend their goods through the Haff to the Baltic.
6. GARTZ is another town on the ſame confines, and is one of the paſſes of the Oder.
7. UKERMUNDE ſtands where the Uker river falls into the Groſs-Haff.
8. ANKLAM, on the river Pene, 17 miles ſouth-weſt from Gripſwald, and 31 north-weſt of Stetin. It made a good figure once among the Hanſe-Towns. It is advantageouſly ſituated among good arable lands and excellent paſture, with the conveniency of fiſhing, and of exporting their commodities abroad by the river Pene.
9. GUTSKOW is a town on the river Pene, 8 miles ſouth of Gripfwald, and 10 weſt of Wolgen, between Anklam and Loytz, and capital of a county of the ſame name, which formerly included Gripſwald, Loytz, and the abbey of Eldenow.
10. LOYTZ ſtands on the Pene river, between Grotſkow and Demain. It has four fairs a year, viz. the Monday before Lent, the Monday before Whitſuntide, a fortnight after Midſummer, and a fortnight after Michaelmas.
11. WOLGAST ſtands very pleaſantly, near the mouth of the Oder called Pfin, nine miles ſouth-eaſt from Gripſwald, 27 from Stralſund, and 40 north-weſt from Stetin. It is a very handſome, well-built, populous, and ſtrong town. The harbour, though 12 miles from the ſea, is the beſt in all this duchy, Stralſund excepted.
12. The ISLE of USEDOM lies weſt from that of Wollin, and is formed by the Pene, where it falls into the Baltic along with the Oder, ſo that one of the mouths of the Oder, which runs between this and Wollin, is called the ſwine, and the other, beyond Uſedom, the Pfin. Upon the deſtruction of Wollin, the town of Uſedom was reſorted to by the Daniſh and Poliſh merchants, and became a place of very good trade, being very large, and well fortified; but ſince 1473, when it was burnt down by an accidental fire, it has been only an inconſiderable ſea-port. This iſland is about ſix miles in length, abounds with wild boar, deer, and hares, and was the park where the dukes of Pomerania kept their game.
13. WOLLIN is the eaſtermoſt of the two iſlands formed by the tree mouths of the Oder: it is 25 miles long, 15 where broadeſt, and is divided by the Swine from Uſedom. The town, which ſtands at that mouth of it called Drenow, is five or ſix miles ſouth-eaſt of Rugen, 25 miles north of Stetin, and 25 ſouth-weſt of Volgaſt. It was built out of the ruins of Julinum, once a very famous town, and was one of the largeſt cities in Europe, and it's greateſt mart, next to Conſtantinople, being inhabited by Danes, Swedes, Ruſſians, Jews, and merchants of all nations, who had their ſeparate ſtreets and houſes of exchange; and ſaid to have been ſo powerful, as ſingly to maintain a war againſt Denmark; but having been partly deſtroyed by lightning, and partly by the arms of Woldemar king of Denmark, it was, in 1170, totally demoliſhed, and has been but an inconſiderable town ever ſince: it's commerce has been transferred to Lubec and Dantzic. This is the common fate of all places that loſe their trade.
14. GRIPSWALD, 9 miles north-weſt of Wolgaſt, 29 ſouth-eaſt of Stralſund, and 46 north-weſt of Stetin, which was one of the Hanſe-Towns, and formerly imperial, ſtands within half a league of the Baltic, at the bottom of a ſmall gulph, which they call the ſea of Stralſund, over-againſt the iſle of Rugen:

Rugen: and there being another bay in the iſland juſt oppoſite, both together make the paſſage above 20 miles over. The place is not ſo big as Stralſund or Stetin, yet it is a conſiderable town, being well built, well fortified, and has a good trade by ſea. The beſt ſalt was made here of any place upon the Baltic, but the works have been diſcontinued for want of fuel, which in this country is ſcarce. They have abundance of cattle here, and deal much in hides and tallow. Here is a good harbour, and a great many ſhips belonging to it, which are brought to the quay by means of a canal, that is cut from the gulph to a great lake on the other ſide of the place.

15. RUGEN is ſtrong both by art and nature, and much celebrated in ancient hiſtory for the courage of the Rugii, it's old inhabitants. It is about 30 miles in length, and as much in breadth (though ſome ſay the latter is not more than 20): it is ſo fruitful in corn, that it is called the granary of Stralſund; and in graſs, that it is well ſtocked with horſes, black cattle, ſheep, and the largeſt geeſe in Europe. The ſeas and lakes here abound with fiſh; and the Rugeners are not only good fiſhermen, but reckoned the beſt pilots in the Baltic, which makes them very uſeful to the merchants of Stralſund. The foreſt of Jaſund furniſhes them with fuel and timber, and the ſea, bays, and lakes, with plenty of fiſh for conſumption and export.

16. STRALSUND, the largeſt and richeſt town in Pomerania, the ſixth in rank of the Hanſe-Towns, and a free imperial city, by ſome reckoned the moſt conſiderable in the circle of Upper Saxony, ſtands near the banks of the ſea, over-againſt the iſland of Rugen, 19 miles north of Gripſwald, 32 miles north-eaſt of Roſtock, and 66 north-weſt of Stetin. It has an excellent haven, where ſhips come up to the very town, and is ſo well ſituated for trade, that it has a very great and lucrative commerce, both by ſea and land; for it is to be obſerved, that here begins the export of thoſe ſtaple commodities which all Europe ſends for to the Baltic, as corn and naval ſtores, viz. hemp, flax, &c. but eſpecially corn, of which great quantities are exported, this being the firſt city in the Baltic, to which the Dutch trade for it. Here are alſo great quantities of honey, and wax, tar, pitch, roſin, hides, and tallow, as alſo of linen, eſpecially canvas, of which a good ſort is made here.

POOR. There is certainly no ſtate in which may be found more laws than in ours concerning the poor: laws wiſer in appearance, or more humane, more equitable: or ſo many books and excellent repreſentations on this ſubject: ſo many hoſpitals: or, in ſhort, ſo great a fund of generoſity and charity, as in England: at the ſame time too, there is not, perhaps, a country in which there are ſo many poor.

Yet thoſe laws muſt be intrinſically defective, which being ſo important as they are to every member of ſociety, have not the force to make themſelves be executed, or which one may eaſily elude.

The poors-rate for England only, which is from two ſhillings as far as to ſix and eight ſhillings in the pound, in ſome parts, exceeds three millions and a half ſterling. If we add to it the private charities, and foundations of hoſpitals, a ſum ſufficient to maintain the tenth of the inhabitants.

The charges of the roads, and of the public works, are alſo immenſe, and continual reſources for ſuch as want employment.

The charity-ſchools maintain and bring up the twentieth part of the children that are born: nevertheleſs, in the towns, the ſtreets ſwarm with poor, ſome of whom ſoon after, perhaps, beg on the high-way with a preſented piſtol in hand.

The abuſe of the particular adminiſtrations of the poor's revenue, and the inſufficiency of the laws, are too glaringly evident, and the conſequences of this evil are too dreadful for the adminiſtration not to become a national concern.

There is no more effectual method of redreſs for it, than to appoint a committee of members of Parliament, before whom ſhould be annually laid a ſtate of the ſums levied, or applied to the maintainance of the poor, and a liſt of the poor maintained in every county.

By theſe circumſtantial ſtates and liſts, by compariſons and indiſputable facts, it would be made manifeſt,

1ſt, That ſome of the principal cauſes of there being ſo many poor are, privileges, excluſive rights of freemen, and corporations; the indiſcreet, as well as unfaithful, diſtribution of the pariſh-alms; the money ſcattered through towns and country, by the candidates, in the time of elections; the multiplicity of alehouſes, taverns, and other infamous ſnares of idleneſs, and debauchery.

2dly, That robbers owe their origin not to want, but indiſcreet charity. The claſs of men which has no right to the pariſh-alms, is far leſs abundant in robbers than that which has: that right is an encouragement to, and the certain refuge of, idleneſs, the parent of debauchery and crimes.

In ſhort, it would appear convincingly plain, that the only prompt remedy that can be brought for this urgent evil would be,

1ſt, To form a common national aggregate of all the ſums levied throughout all the pariſhes, under the name of the poor's tax, to which ſhould be joined the funds of all the ancient charitable foundations: with reſervation, however, of liberty to all future donors to appropriate particularly their charities to whatever counties or pariſhes they ſhould think fit.

2dly, To take into workhouſes, or alms-houſes, all beggars, even every perſon applying to the pariſh for charity, equally in caſe either of ſickneſs or of health, without any diſtinction even of the private poor, that is to ſay, of ſuch as are aſhamed of begging: becauſe there ought to be no poor of that nature in a nation where it is no ſhame for any one to work.

3dly, To aſſign to every perſon ſo received into theſe workhouſes, that ſort of work of which he ſhould be capable, inſomuch that the ſick, and ſuch as ſhould be deprived of the uſe of all their ſenſes, ſhould alone be diſpenſed with from it.

4thly, To divide theſe workhouſes into two wards, the one for the poor who ſhould work voluntarily, the other for them to be carried to, in caſes of neceſſary correction, and forced to work, ſhould they refuſe to ſubmit to it.

5thly, It would alſo be very neceſſary to collect together, in one common houſe, all the children diſperſed in the different ſchools and eſtabliſhments of each pariſh. The care of their firſt years of life, and of breeding them up to work, would be better adminiſtered in one common houſe than by pariſh-nurſes, who inhumanly ſacrifice, even in the cradle, ſo many innocent victims to their barbarous avarice. This is a truth inconteſtibly proved, by a compariſon of the number of dead beneath the age of ſeven years, amongſt the children nurſed by the pariſh-nurſes, and amongſt thoſe brought up in the Foundling-Hoſpital.

6thly, Every workhouſe or alms-houſe throughout England ſhould render an account of it's adminiſtration, atteſted by the magiſtrates or officers of each town or pariſh, to the committee of the nation. Theſe accounts would ſerve for checks upon one another. The members for every county ſhould be called to the inſpection of the account of the general adminiſtration, and, upon the report of this general committee, the poor's tax ſhould be ſettled, and paſſed by the nation.

From ſuch a form of adminiſtration as this, would reſult the following advantages:

The real miſery of the ſick and diſabled would receive the relief which is due to it.

The malverſation of particular adminiſtrations would be remedied.

The number of the poor would ſenſibly diminiſh: many now receive private alms, who would then reſolve to work, rather than receive public ones.

Society would be delivered from beggars, of whom the example and enormities are ſo much to be dreaded.

The produce of the work of ſuch as ſhould be free to leave the houſe when they pleaſed, and the work of the poor under confinement, would be a clear and new profit to the public.

The poor's tax would diminiſh conſiderably.

All the recenſions of the above-deduced three claſſes of men, and of their ſubdiviſions, ſhould be draughted and framed in each pariſh, by it's reſpective churchwardens, aldermen, overſeers of the poor, or the like proper officers. A ſhort enough time, and a great deal of order and method, would ſuffice to carry them to the requiſite perfection for making all the uſe to be promiſed from them, without much expence.

Dr D'Avenant's SCHEME for ſetting the POOR to WORK.

Firſt, That ſuch perſons as ſhall ſubſcribe and pay the ſum of 300,000l. as a ſtock for and towards the better maintaining the impotent poor, and for buying commodities and materials to employ and ſet at work the other poor, be incorporated and made one body politic, &c. by the name of the governor and company for maintaining and employing the poor of this kingdom.

By all former propoſitions, it was intended that the pariſhes ſhould advance ſeveral years rates to raiſe a ſtock; but, by this propoſal, the experiment is to be made by private perſons, at their riſk; and 300,000l. may be judged a very good ſtock, which added to the poor's rate for a certain number of years, will be a very good fund for buying commodities and materials for a million of money at any time. This ſubſcription ought to be free for every body; and if the ſum were ſubſcribed in the ſeveral counties of England and Wales, in proportion to their poor-rates, or the monthly aſſeſſment, it would be moſt convenient; and proviſion may be made, that no perſon ſhall transfer his intereſt but to one of the ſame county, which will keep the intereſt there during the term; and as to it's being one corporation, it is preſumed this will be moſt beneficial to the public. For firſt, all diſputes on removes, which are very chargeable and burthenſome, will

be at an end, this propoſal intending, that wherever the poor are, they ſhall be maintained or employed. Secondly, it will prevent one county which will be diligent, impoſing on their neighbours who may be negligent, or getting away their manufactures from them. Thirdly, in caſe of fire, plague, or loſs of manufacture, the ſtock of one county may not be ſufficient to ſupport the places where ſuch calamities may happen; and it is neceſſary the whole body ſhould ſupport every particular member; ſo that hereby there will be a general care to adminiſter to every place according to their neceſſities.

Secondly, That the ſaid corporation be eſtabliſhed for the term of 21 years.

The corporation ought to be eſtabliſhed for 21 years, or otherwiſe it cannot have the benefit the law gives in caſe of infants, which is their ſervice for their education; beſides, it will be ſome years before a matter of this nature can be brought into practice.

Thirdly, That the ſaid ſum of 300,000l. to be paid in, and laid out for the purpoſes aforeſaid, to remain as a ſtock, for and during the ſaid term of 21 years.

The ſubſcription ought to be taken at the paſſing of the act, but the corporation to be left at liberty to begin either the Michaelmas or the Lady-Day after, as they ſhall think fit; and per cent. to be paid at the ſubſcribing, to perſons appointed for that purpoſe, and the remainder before they begin to act, but ſo as 300,000l. ſhall be always in ſtock during the term, notwithſtanding any dividends, or other diſpoſition: and an account thereof to be exhibited twice in every year, upon oath, before the lord chancellor for the time being.

Fourthly, That the ſaid corporation do, by themſelves or agents, in every pariſh of England, from and after the day of during the ſaid term of 21 years, provide for the real impotent poor, good and ſufficient maintenance and reception, as good, or better, than hath at any time within the ſpace of years before the ſaid day of been provided or allowed to ſuch impotent poor; and ſo ſhall continue to provide for ſuch impotent poor, and what other growing impotents ſhall happen in the ſaid pariſh during the ſaid term.

By impotent poor is to be underſtood all infants and old decrepit perſons not able to work; alſo perſons who by ſickneſs, or any accident, are for the time unable to labour for themſelves or families; and all perſons (not being fit for labour) who were uſually relieved by the money raiſed for the uſe of the poor: they ſhall have maintenance, &c. as good, or better, as within years they uſed to have.

This does not directly determine what that ſhall be, nor is it poſſible, by reaſon a ſhilling in one county is as good as two in another; but it will be the intereſt of the corporation that ſuch poor be well provided for, by reaſon the contrary will occaſion all the complaints or clamour that probably can be made againſt the corporation.

Fifthly, That the corporation do provide (as well for all ſuch poor which on the ſaid day of ſhall be on the poor-books, as for what other growing poor ſhall happen in the ſaid term, who are or ſhall be able to labour or do any work) ſufficient labour and work proper for ſuch perſons to be employed in; and that proviſion ſhall be made for ſuch labouring perſons according to their labours, ſo as ſuch proviſion doth not exceed $\frac{3}{4}$ parts as much as any other perſon would have paid for ſuch labour. And, in caſe they are not employed and ſet to work, then ſuch perſons ſhall, until materials or labour be provided for them, be maintained as impotent poor; but ſo as ſuch perſons who ſhall hereafter enter themſelves on the poor's books, being able to labour, ſhall not quit the ſervice of the corporation, without leave, for the ſpace of ſix months.

The corporation are to provide materials and labour for all that can work, and to make proviſion for them not exceeding $\frac{3}{4}$ parts as much as any other perſon would give for ſuch labour. For example: if another perſon would give one of theſe a ſhilling, the corporation ought to give but nine-pence. And the reaſon is plain; firſt, becauſe the corporation will be obliged to maintain them and their families in all exigencies, which others are not obliged to do, and, conſequently, they ought not to allow ſo much as others. Secondly, in caſe any perſons able to labour ſhall come to the corporation, when their agents are not prepared with materials to employ them, by this propoſal they are to allow them full proviſion as impotent poor, until they find them work, which is intirely in favour of the poor. Thirdly, it is neither reaſonable nor poſſible for the corporation to provide materials upon every occaſion for ſuch perſons as ſhall be entered with them, unleſs they can be ſecure of ſuch perſons to work up thoſe materials; beſides, without this proviſion, all the labouring people of England will play faſt and looſe between their employers and the corporation, for, as they are diſobliged by one, they will run to the other, and ſo neither of them ſhall be ſure of them.

Sixthly, That no impotent poor ſhall be removed out of the pariſh where they dwell, but upon notice in writing given to the churchwardens and overſeers of the ſaid pariſh, to what place of proviſion he or ſhe is removed.

It is judged the beſt method to provide for the impotent poor, is in houſes prepared for that purpoſe, where proper proviſion may be made for ſeveral, with all neceſſaries of care and maintenance: ſo that in ſome places one houſe will ſerve the impotent poor of ſeveral pariſhes, in which caſe the pariſh ought to know where to reſort, to ſee if good proviſion be made for them.

Seventhly, That, in caſe proviſion be not made for the poor of each pariſh, in manner as aforeſaid (upon due notice given to the agents of the corporation) the ſaid pariſh may order their poor to be maintained, and deduct the ſum by them expended out of the next payments to be made to the ſaid corporation by the ſaid pariſh.

In caſe any accident happens in a pariſh, either by ſickneſs, fall, caſualty of fire, or otherways, and that the agent of the corporation is not preſent to provide for them, or having notice doth not immediately do it, the pariſh may do it, and deduct ſo much out of the next payment; but there muſt be proviſion made for the notice, and in what time the corporation ſhall provide for them.

Eighthly, That the ſaid corporation ſhall have and receive, for the ſaid one and twenty years, that is to ſay, from every pariſh yearly, ſo much as ſuch pariſh paid in any one year, to be computed by a medium of ſeven years; namely, from the 25th of March, 1690, to the 25th of March, 1697, and to be paid half yearly; and beſides, ſhall receive the benefit of the revenues of all donations given to any pariſh, or which ſhall be given during the ſaid term, and all forfeitures which the law gives to the uſe of the poor; and to all other ſums which were uſually collected by the pariſh for the maintenance of the poor.

Whatever was raiſed for, or applied to, the uſe of the poor, ought to be paid over to the corporation; and where there are any donations for maintaining the poor, it will anſwer the deſign of the donor, by reaſon there will be better proviſion for the maintenance of the poor than ever; and if that maintenance be ſo good as to induce further charities, no doubt the corporation ought to be entitled to them: but there are two objections to this article: Firſt, That to make a medium by a time of war is unreaſonable. Secondly, To continue the whole tax for one and twenty years, does not ſeem to give any benefit to the kingdom in that time. To the firſt, it is true we have a peace, but trade is lower now than at any time during the war, and the charge of the poor greater; and when trade will mend is very uncertain. To the ſecond, it is very plain, that although the charge may be the ſame to a pariſh in the total, yet it will be leſs to particular perſons; becauſe thoſe who before received alms, will now be enabled to be contributors; but beſides, the turning ſo many hundred thouſand pounds a year (which in a manner have hitherto been applied only to ſupport idleneſs) into induſtry, and the employing ſo many other idle vagrants and ſturdy beggars, with the product of their labour, will altogether be a preſent benefit to the lands of England, as well in the rents as in the value: and further, the accidental charities in the ſtreets, and at doors, is, by a very modeſt computation, over and above the poor rates, at leaſt 300,000l. per annum, which will be intirely ſaved by this propoſal, and the perſons ſet at work; which is a further conſideration for it's being well received, ſince the corporations are not allowed any thing for this ſervice.

The greater the encouragement is, the better the work will be performed; and it will become the wiſdom of the parliament, in what they do, to make it effectual; for ſhould ſuch an undertaking as this prove ineffectual, inſtead of remedying it will increaſe the miſchief.

Ninthly, That all the laws made for the proviſion of the poor, and for puniſhing idle vagrant perſons be repealed, and one law made to continue ſuch parts as are found uſeful, and to add ſuch other reſtrictions, penalties, and proviſions, as may effectually attain the end of this great work.

The laws hereunto relating are numerous, but the judgments and opinions upon them are ſo various and contradictory, and differ ſo in ſundry places, as to be inconſtant with any one general ſcheme of management.

Tenthly, That proper perſons be appointed in every county, to determine all matters and differences which may ariſe between the corporation and the reſpective pariſhes.

To prevent any ill uſage, neglect, or cruelty, it will be neceſſary to make proviſion, that the poor may tender their complaints to the officers of the pariſh; and that thoſe officers having examined the fame, and not finding redreſs, may apply to perſons to be appointed in each county, and each city, for that purpoſe, who may be called ſupervisors of the poor, and may have allowance made them for their trouble; and their buſineſs may be to examine the truth of ſuch complains; and in caſe either the pariſh or corporation judge themſelves aggrieved, by the determination of the ſaid ſupervisors, proviſion may be made that an appeal lie to the quarter ſeſſions.

Eleventhly,

Elevently, That the corporation be obliged to provide for all bublic beggars, and to put the laws in execution againſt public beggars, and idle vagrant perſons.

Such of the public beggars as can work muſt be employed, the reſt to be maintained as impotent poor; but the laws to be ſeverely put in execution againſt thoſe who ſhall aſk any public alms.

This propoſal, which in moſt parts of it ſeems to be very maturely weighed, may be a foundation for thoſe to build upon, who have a public ſpirit large enough to embrace ſuch a noble undertaking.

But the common obſtruction to any thing of this nature, is a malignant temper in ſome who will not let a public work go on, if private perſons are to be gainers by it: when they are to get themſelves, they abandon all ſenſe of virtue, but are cloathed in their whiteſt robe; when they ſmell profit coming to another, maſking themſelves with a falſe zeal to the commonwealth, where their own turn is not to be ſerved. It were better, indeed, that men would ſerve their country for the praiſe and honour that follow good actions; but this is not to be expected in a nation, at leaſt leaning towards corruption; and, in ſuch an age, it is as much as we can hope for, if the proſpect of ſome honeſt gain invites people to do the public faithful ſervice. For which reaſon, in any undertaking where it can be made apparent, that a great benefit will accrue to the commonwealth in general, we ought not to have an evil eye upon what fair advantages particular men may thereby expect to reap, ſtill taking care to keep their appetite of getting within moderate bounds, laying all juſt and reaſonable reſtraints upon it, and making due proviſion that they may not wrong or oppreſs their fellow ſubjects.

It is not to be denied, but that if fewer hands were ſuffered to remain idle, and if the poor had full employment, it would greatly tend to the common welfare, and contribute much towards adding every year to the general ſtock of England.

Among the methods that we have here propoſed of employing the poor, and making the whole body of people uſeful to the public; we think it our duty to mind thoſe who conſider the common welfare of looking with a compaſſionate eye into the priſons of this kingdom, where many thouſands conſume their time in vice and idleneſs; waſting the remainder of their fortunes, or laviſhing the ſubſtance of their creditors, eating bread and doing no work, which is contrary to good order, and pernicious to the commonwealth.

We cannot, therefore, but recommend the thoughts of ſome good bill, that may effectually put an end to this miſchief, ſo ſcandalous in a trading country, which ſhould let no hands remain uſeleſs.

It is not at all difficult to contrive ſuch a bill as may relieve and releaſe the debtor, and yet preſerve to his creditors all their fair, juſt, and honeſt rights and intereſt.

Thus have we endeavoured to ſhew, that to preſerve and increaſe the people, and to make their numbers uſeful, are methods conducing to make us gainers in the ballance of trade.

Extract of two letters wrote to the author, from an Engliſh gentleman of honour, who ſome time ſince reſided in Holland, and is now appointed in a public character at a certain court in Europe.

SIR,

'It is eaſy to anſwer your queſtion, How are the poor maintained in Holland? But to do it ſo as to pleaſe you, who look farther than the outſide of things, would require more than one day or one letter. However, defering other things to next poſt, I will be as particular as I am able, upon ſo ſhort warning, to be upon this ſubject; ſenſible that it is of the greateſt conſequence to us, and that thoſe who have never conſidered it, will hardly imagine what an IMMENSE PROFIT England might make by ſetting her poor at work, beſides all the advantages of getting quit of all your pickpockets, &c. &c. &c.

I will firſt give you ſome extracts of the laws of this country [meaning the UNITED PROVINCES] about the poor, and then an account of their practice.

The earlieſt law that I find in their ſtatute-books relating to the poor, is a long one of the emperor Charles V. It enacts, *

* 7 October 1531.

ARTICLE IX.

That whereas the poor of our provinces are now much more in number than they formerly uſed to be, and whereas it is found by experience, that many abuſes have ariſen from ſuffering them to beg and aſk alms, particularly that it fixes them in IDLENESS (which is the beginning of all evil), and that neither THEY NOR THEIR CHILDREN FOLLOW ANY TRADE OR METHOD OF GETTING THEIR LIVING, but

are thus brought into BASE ACTIONS, AND A BAD MANNER OF LIFE: ſo that though young, ſtrong, and healthy, they nevertheleſs extort, by great importunities, what ought to go to the poor and ſick; to the impotent, and thoſe who are in danger of ſtarving: and whereas, before our departure, we deſire to remedy and regulate theſe evils, &c. &c. &c.*

* Groot Placart. book 1. B. 20. T.

REMARKS.

It appears by this article, and the following one, and by the end of the 12th, that before this law, every body that had a mind WAS FREE TO BEG IN THESE PROVINCES.

ARTICLE X.

That no one, be it man or woman, from this time forward, ſhall BEG OR ASK ALMS, BY DAY OR BY NIGHT, SECRETLY OR OPENLY, in the ſtreets, in the churches, nor in or at the houſes of our good people, in any manner whatſoever, upon the penalty, that whoever acts contrary to this law ſhall be put, for the firſt offence, in PRISON, AND FED WITH BREAD AND WATER, according to the diſcretion of our officers, judges, and magiſtrates, who ſhall be commiſſioned to execute this our edict, &c. &c. And for the ſecond offence they are to be WHIPPED AND CORRECTED, according to the diſcretion of our officers, &c. except always the mendicant friers, &c. &c.

ARTICLE XI.

No FOREIGNER, nor outlandiſh perſon, ſhall beg or aſk alms, but ſhall be liable to the ſame penalties, except pilgrims, &c.

REMARKS.

Upon theſe two articles I cannot help obſerving, that the great freedom Holland once enjoyed from beggars, robberies, &c. &c. ſeems to have been entirely owing to the ſtrict execution of the article enjoining them to be kept upon BREAD AND WATER; this ſimple circumſtance being of the greateſt conſequence in taming otherwiſe incorrigible offenders, to whom not death itſelf is ſo terrible as LOW LIVING; and this plainly appears by their conduct, for they riſk their lives, only for the ſatisfaction of living LUXURIOUSLY, and therefore abſtinence is a more effectual puniſhment to them than hanging.

ARTICLE XII.

All poor people, who ſhall remove from one CITY OR VILLAGE TO ANOTHER, there to live or reſide, ſhall be liable to the ſame penalties and corrections, unleſs they are reduced by fortune of war, inundation, fire, or other ſuch misfortunes, and that they make this properly appear; in which caſes, and not otherwiſe, it is permitted to let them LODGINGS OR HOUSES; and all the poor reſiding in our ſaid provinces, and having been there a whole year, muſt remain in the places where they are ſettled, and have their ſhare and part of the alms which ſhall be there ordered them, without going about TO BEG ALMS OR BREAD, openly or ſecretly, as hitherto.

REMARKS.

This article is quite contrary to our NOTIONS IN ENGLAND, and to the liberty we give our poor, of trying to get their livelihood better in one pariſh than in another. I ſhall not venture to decide which of the two nations is in THE RIGHT, where much may be ſaid for both.

ARTICLE XIII.

Whoever ſhall permit their children, whether great or ſmall, to go and permit any RASCALITY, or to beg and aſk alms, ſhall undergo the aforeſaid penalties; and the children ſhall be whipped with rods, and otherwiſe corrected, according to the diſcretion of our officers and magiſtrates of the places where the offence ſhall happen.

REMARKS.

The making PARENTS PUNISHABLE in this caſe for their children (eſpecially if underſtood to be thoſe under 12 years of age) appears highly reaſonable.

ARTICLE XV.

As for the ſupport of the POOR, SICK, AND OTHERS, not able to get their bread, nor having any thing to live upon, in any town or village of our ſaid provinces; we order, that a common purſe ſhall be made of all CHARITIES, POOR-HOUSES, HOSPITALS, BROTHERHOODS, and others having the diſtribution of the PRODUCT OF ALMS, and that

part

part thereof ſhall be given to the poor, according to the advice of the maſters and governors of the aforeſaid CHARITIES, POOR-HOUSES, &c. joined with ſuch of the officers and magiſtrates of every town, pariſh, or village, as ſhall be deputed for that purpoſe, according to the manner hereafter declared; except that alms founded for eccleſiaſtics, as well mendicants as others, ſhall be diſtributed according to the directions of the founders.

REMARKS.

Might not the charities given annually by our COLLEGES, by being put into a common purſe, be more uſefully employed than now they are?

ARTICLE XVI.

That, for the future, boxes ſhall be placed in every PARISH-CHURCH of our provinces, to receive the SECRET ALMS OF GOOD PEOPLE; the ſaid boxes to be locked with three keys, of which the pariſh prieſt ſhall keep one, the magiſtrates another, and the deputies, who ſhall be appointed according to the manner hereafter declared, another; which ſaid perſons are impowered to take the money out of the ſaid boxes, whenever they ſhall think good; and farther, the magiſtrates and officers of each pariſh ſhall depute an honeſt man or two to go round the ſaid churches, once or twice a week, to collect for the poor; and beſides, the aforeſaid deputies of every pariſh ſhall go once a week, or oftener, to every houſe, in order to BEG ALMS FOR THE SUPPORT OF THE POOR; and all theſe ſeveral committees or deputies, as well thoſe who receive, as thoſe who diſtribute theſe contributions, are obliged hereby to give an account, at the end of every month, of what they receive or diſtribute, before the magiſtrates or their deputies, IN PUBLIC AND OPEN PLACES, where every body ſhall be admitted that have a mind to come in.

REMARKS.

This laſt paragraph ſeems to be a wiſe proviſion againſt MISAPPLICATION OF THE MONEY COLLECTED: as to the manner of collecting, I ſhall only ſay, that I have ſometimes thought—That one good way of collecting with us, as well as of altering a ſhameful cuſtom of giving money TO SERVANTS BEFORE THEIR MASTERS FACES, would be for every gentleman to hang up a box in his hall, where every viſitor might put his VOLUNTARY CONTRIBUTION, and that it ſhould be underſtood, that at the end of the year this was to be divided, one half to the POOR, and ONE HALF TO THE SERVANTS OF THE FAMILY. By this means no man would be obliged to pay more than he chuſes for dining with a lord, and a good uſe would be made of HALF the vaſt ſum collected in a year from thoſe who viſit their friends: beſides, ſervants would be mended by the temptation of ſtaying a year in their places, for the ſake of their diviſion.

ARTICLE XVII.

In order to regulate and conduct this work of charity, the officer * and magiſtrates of every town and village are hereby required to chuſe out perſons RESIDING AMONGST THEM, the beſt qualified for the ſaid purpoſes, whom we require and order to take upon them this care, according to their duty to God, and out of a true ſpirit of charity, and to regulate themſelves in it according as is preſcribed them by our edict; and the ſaid deputies ſo choſen, ſhall appoint themſelves a treaſurer to keep their particular accounts of the aforeſaid alms, and what belongs to them on that account, and ſhall each in his diſtrict, take or cauſe to be taken, an EXACT LIST OF THE NUMBER, STATE, QUALITY, AND CONDITION OF THE POOR within it, of WHAT TRADE, and of WHAT AGE they are, how they are burthened with children, what they gain or may gain.

* Officer ſignifies here, the chief magiſtrate for executing of juſtice in criminal affairs.

ARTICLE XVIII.

The aforeſaid committee ſhall keep a REGISTER IN EVERY PARISH, wherein ſhall be plainly written the reſult of their ſeveral enquiries, viz. the number of the POOR IN EACH FAMILY or dwelling, and the quantity OF MONEY NECESSARY FOR THEM, over and above what they can gain, conſideration being had of their abilities, neceſſities, and burthens.

ARTICLE XIX.

The alms ſhall be diſtributed in every pariſh, according to the diſcretion of the ſaid deputies, be it in MONEY, BREAD, FIRING, CLOATHS, or OTHER NECESSARIES, conſideration being had of the QUALITY AND CONDITION OF THE AFORESAID POOR PERSONS: to drunkards, idlers, gameſters, and ſuch like, NO MONEY is to be given, but only BREAD, FIRING, CLOATHING, AND OTHER NECESSARIES TO MANTAIN THEIR FAMILIES; and thoſe that lead idle or roguiſh lives, and are able, ſhall be COMPELLED TO WORK, and to bring their GAINS HOME, under the penalty of being deprived of the benefit of the alms-purſe, and beſides, of being CORRECTED ARBITRARILY by the magiſtrate.

REMARKS.

Theſe three laſt articles ſhew how the poor were governed, and the alms diſtributed, before the Reformed Church, and the offices of elders and deacons were eſtabliſhed in theſe provinces.

ARTICLE XX.

That SICK AND WEAK PERSONS, who cannot come out of their houſes, and women in childbed, ſhall be viſited and aſſiſted by the alms-purſe, and provided with linen, ſheets, and coverlids, with victuals, with firing, and other neceſſaries; and ſo likewiſe, muſt young orphans and foundlings be maintained out of the ſaid alms-purſe.

ARTICLE XXI.

As to the CHILDREN OF THOSE POOR PEOPLE, who, before the publication of this edict, were idlers living upon roguery, ſome ſhall be put to ſchool, and ſome to trades or to ſervice, and ſhall, on Holidays and Sundays, be taught the Lord's Prayer, the Creed, and the Commandments, and ſhall be carried to maſs and to veſpers every Sunday; and that the ſaid children may be put in a condition to go to TRADES OR SERVICE, the ſaid committee ſhall have them cleaned from all filth and naſtineſs, and cloath them in a decent manner.

ARTICLE XXII.

The poor that live upon this alms-purſe muſt wear a BADGE.

ARTICLE XXV.

We forbid all perſons, who by themſelves or their children, enjoy any ſhare of the diſtribution of the alms-purſe, from henceforth to go into, or converſe in TAVERNS, CABARETS, or SUCH LIKE PLACES: we likewiſe forbid them playing at ninepins, bowls, dice, or other ſuch forbidden games, upon pains of arbitrary puniſhment; conſenting, nevertheleſs, that they may ſometimes drink a pot of beer for their recreation with their wives, but not ſo as to be drunk. We are now come to the laws made ſince the Reformation, of which the firſt is an edict of the States of Holland, the nobility, gentry, and cities of Holland, &c. &c. *

* 19 March 1614.

ARTICLE I.

That all men and women, who being in health go a begging, or are vagabonds, either in the towns or open countries, ſhall be obliged, within FOUR DAYS from the publication of this edict, to quit the province of Holland, or to acquaint the officer of the place where they deſign to get their livelihood, by WORK or BY TRADE, and to give him a declaration who they are, whence they came, what is their buſineſs, and likewiſe inform him where they lodge and lie at nights, and pray permiſſion to ſtay in that place, one, two, or three days, engaging themſelves not to beg in the mean time.

ARTICLE IV.

The beggars and vagabonds, who are not able or FIT TO WORK, ſhall, within two days after the publication of this edict, be ſent to the place of their abode, where they muſt be maintained according to the uſage and cuſtom of the place; and from thence they are forbid to wander, or beg in other towns and villages, under the penalty of being, for the firſt offence, put to diet of BREAD AND WATER, according to the diſcretion of the magiſtrates; and, for the ſecond offence, to be WHIPPED AND BANISHED; the third offence, publicly whipped, marked with the burning-iron, and baniſhed again.

ARTICLE VIII.

All children forbid to beg, on pain of being put to bread and water, if above 8 years of age.

ARTICLE IX.

The fathers and lodgers of children, as well above as under 8 years old, are required to take good care that their children do not go a begging, under the penalty of being puniſhed as beggars themſelves.

ARTICLE XI.

For the clearing of the open country, all the droſts are ordered to go about their diſtrict every 8 days, and take up all vagabonds

vagabonds and beggars, and to deliver them into the hands of the officer of the place where they are taken, to be proceeded againſt according to this law. We command likewiſe the ordinary officers of juſtice, ſo often as they can, and at leaſt once a month, to do the ſame; and the aforeſaid droſts are ordered to give an account to the provincial council of ſtate, and the aforeſaid ordinary officers to the court of Holland, either by word of mouth or by writing, of what they have done, touching the execution of this article.

ARTICLE XII.

Officers required to ſearch inns, and all ſuſpected places, to find out beggars and apprehend them.

ARTICLE XV.

All carriers, waggoners, &c. &c. are forbid to tranſport any beggars, from one place to another, under penalty of three gilders for every offence.

The laſt law I ſhall quote, is one of the States-General, of the United Provinces *.

* Placart 25 June 1649.

ARTICLE IV.

It is likewiſe enacted, That every TOWN, VILLAGE, OR PARISH, ſhall maintain its poor out of the income of the charitable foundations and collections, ſo far as it will go; and, in caſe that theſe means ſhall fall ſhort, then the magiſtrates ſhall maintain them at the general expence of the inhabitants, as can moſt conveniently be done; provided always, that the poor be obliged TO WORK AND LABOUR, either for merchants, farmers, &c. &c. according to their ſtrength and abilities, for REASONABLE WAGES. In order that they may, as far as poſſible, be ſupported that way; provided alſo, that they are to be indulged in no idleneſs nor inſolence.

ARTICLE VI.

Forbidding, for the future, all maſters of poor-houſes, hoſpitals or charity-houſes, maſters of inns or taverns, farmers, or any other perſons whatſoever, to lodge or harbour, either in their houſes, granaries, or ſtables, or to ſupport with meat or drink, any idlers or vagabonds, foreigners, or others, who are HEALTHY AND SOUND OF THEIR LIMBS, and who nevertheleſs appear in various forms and manners of beggary and idleneſs: forbidding alſo agreements with them to go ſhares in the profit which they make by ſuch unlawful means, or to attend their rendezvous, or to go with them, or to ſhew them the way, unleſs along the common roads, or otherwiſe to ſhew them any favour or aſſiſtance, on pain of being taken for their accomplice, and being puniſhed as ſuch, as to juſtice ſhall appertain.

ARTICLE VII.

Nor ſhall it be any excuſe for the ſaid innkeepers, &c. that theſe people came by force and againſt their will to lodge with them, unleſs it be proved, that the ſaid innkeepers, &c. gave SECRET NOTICE to the officer of the place, that ſuch vagabonds were at his houſe.

ARTICLE IX.

To the end that the officers of the towns and open country may be better informed and advertiſed, where ſuch vagabonds and offenders are, we command and require them and their under-officers, to go about all ordinary markets, churches, hoſpitals, and poor-houſes, upon fair-days, upon marriages, and ſuch-like aſſemblies or feaſts, where theſe offenders are commonly found, to take them up, and proceed againſt them according to the contents of this edict.

ARTICLE X.

And to provide againſt the CHEATS that ſome beggars practiſe, of appearing to be afflicted with ſickneſs, or otherwiſe infirm; it is ordered, that beggars ſuſpected of ſuch deceits ſhall, by order of the magiſtrates, and at the expence of the place where taken, be viſited and examined by ſworn phyſicians and ſurgeons, that the truth being known, thoſe who have been guilty of ſuch cheats, may be PUNISHED according to the nature of their offence.

ARTICLE XIII.

Charging and commanding all officers of juſtice in their reſpective diſtricts, to do their duty, by apprehending all ſuch idlers, wanderers, and vagabonds, on pain of being, not only arbitrarily puniſhed, but of being obliged to pay all the damages which ſhall happen to any perſon, through their having neglected to apprehend ſuch offenders.

ARTICLE XV.

And that no difficulties may be made by SCHEPENS, JUSTICES, or officers of particular places, before whom the ſaid offenders ſhall be brought, about the JUDGING OF THESE OFFENDERS; we ſtrictly and expreſsly command, that whoever ſuch offenders are brought before, whether it be high-bailiff or other officer, he ſhall be obliged to examine, and SENTENCE THEM, upon pain of being not only deprived of his office, but otherwiſe arbitrarily puniſhed.

REMARKS.

Thus much for their laws; upon which I beg leave to make this obſervation; that this manner of providing for their poor was not begun at the Reformation, or occaſioned by the diſſolution of monaſtries; but rather was a natural conſequence of their increaſing in PEOPLE AND TRADE, which brought both buſy and idle people amongſt them: in the ſame manner, our law of the 43d of queen Elizabeth was made, upon our having flouriſhed for about the ſaid term of years. The diſputes between the archduke Maximilian, and the States of Flanders, which forced a great deal of trade into Holland, having only ended about 1491; and the firſt of theſe laws is made juſt 40 years after, as our law was forty years after the end of queen Mary's perſecution, and the beginning of queen Elizabeth's encouragement to trade *.

* See Mr North's Manuſcript upon the Poor, § 2.

Now, as to their practice, every town or congregation maintains it's own poor, either out of the collections which are made every Sunday, and church-day, or the ordinary collections which are made four times a year, from houſe to houſe, or the extraordinary ones, which are made when neceſſity requires, which have been frequently four times more. Theſe voluntary contributions are laid up and diſtributed by the deacons of the ſeveral congregations, and the poor are by them, either maintained in their own houſes, or lodged with others, according to their circumſtances or infirmities.

The charity of the people of Holland is ſuch, that the collections ſuffice, in ordinary years, for the maintenance of the poor; but in extraordinary ones, the magiſtrates have advanced great ſums for that purpoſe: as for example, in the year 1740, the magiſtrates of the Hague paid 15,000 gilders, and thoſe of Leyden 30,000 on that account.

But the diacony, or treaſury of the reformed and eſtabliſhed church of Amſterdam, is upon ſo good a footing, that they did not even in that year, want the aid of the magiſtrate; they diſtributed 578,758 gilders, but their income is about 500,000.

The Romiſh, Lutheran, and other diaconies, are directed in the ſame manner as thoſe of the eſtabliſhed religion, and diſtributed to about 500, and may keep in houſes 6 or 700 old people and children in Amſterdam: the eſtabliſhed church to about 1000 or 1200 poor families, beſides their three almſhouſes, where are about 1300 old people and children.

REMARKS.

There are other hoſpitals and poor-houſes, beſides theſe three, of which the great one, that takes in beggars children of all perſuaſions and foundlings, has about 1500 children.

The poor are here, not only free of all exciſes, but they have an allowance paid of ſome branches of the exciſe, and a third part of all fines in criminal caſes, computed, goes to the poor-houſes, of which there are two ſorts where poor children are maintained; one goes by the name of the orphan-houſe, the other of the poor-houſe; the former is filled with children of a BETTER RANK than the other, with the children of decayed SHOPKEEPERS, and thoſe who have LIVED WELL, and the latter with thoſe of the LOWEST SORT OF PEOPLE. When a child is taken into either of theſe houſes, the governors poſſeſs themſelves of whatever little effects they have for the uſe of the houſe.

Theſe children are extremely well taken care of; they have maſters and miſtreſſes, to teach them reading, writing, and accounts, and the girls plain needle-work. When they are fit to go out, they are put to maſters and miſtreſſes by the day to LEARN TRADES, and they come back to theſe houſes to dinner, and in the evening; what they gain during this time, in the poor-houſe, belongs to the houſe; but in the orphan-houſe, the children are allowed A FOURTH OR A FIFTH PART of what they gain for themſelves.

When they come to be upwards of 20 years of age, and are able to gain their living, the houſe CLOATHS THEM WELL, and TURNS THEM OUT; in the orphan-houſe they return likewiſe the value of the capital brought in with them, but the intereſt falls to the houſe: there are, however, ſome who, on account of defects in their underſtanding, or other reaſons, are maintained in the houſe all their days.

Theſe houſes have been ſome of them pious foundations of private perſons; ſome of them have been built or bought by the towns, and afterwards ſupported from pious legacies and charities, by which ſome of them are become rich.

The public old mens and womens houſe in Amſterdam, was founded by the profits of two LOTTERIES, about the year 1600, and is ſupported by ſome donations, and by periodical collections, in the old-church, and by one third of the profits of the PLAY-HOUSE, which is from 12 to 15,000 gilders a year; the other two thirds go to the ſupport of the burghers orphan-houſe.

The direction of theſe houſes is always in the BEST PEOPLE OF THE COUNTRY, and it is eſteemed an HONOUR, as well as a PIOUS OFFICE, to aſſiſt in looking after them. Thus ladies of the FIRST QUALITY have gone, once in three weeks, or oftener, to ſee that things are well adminiſtred, to examine the childrens linen, cloathing, nouriſhment, &c. &c. and to inſpect the expence and accounts.

As to the Raſp, and Verbetering, or correction-houſes for rogues, and thoſe who being able will not work, theſe are maintained by the reſpective towns, generally at a ſmall expence, there being a good deal of PROFIT MADE OF THE WORK THAT IS DONE IN THEM: they ſet the offenders reaſonable taſks, and when thoſe are well done, they allow them certain hours TO WORK FOR THEMSELVES: a few years ago the workhouſe at Breda coſt the barony a TRIFLE, AND MADE VERY FINE MANUFACTURES: the maſter, who was put in there, had been a broken CLOTHIER at Leyden, but who, tho' become a bankrupt by misfortunes, underſtood his buſineſs well, and inſtructed numbers of people in the workhouſe to make good cloths, by ſetting them firſt to comb wool, and ſo bringing them by degrees to more difficult branches.

The yearly expence of the Raſp-houſe at Rotterdam, is from 8 to 10,000 gilders, of which generally about 5 or 6 accrues from the labour of the people, and the remainder is ſupplied by the magiſtrates out of the ſurplus of ſome of their taxes.

There is a kind of Bridewell (called the Vrywillige Raſphuys) at Amſterdam, which is partly maintained BY AN ADDITIONAL TAX ON ALL THE GIN-SHOPS, PETTY HOUSES FOR SELLING WINE AND BEER, AND LITTLE TOBACCO-SHOPS.

The people in the Raſp-houſe are employed in two kinds of labour, CHIPPING AND RASPING LOGWOOD: a chipper muſt chip 3600 pounds in 14 days, Sundays included, for which the houſe is paid at the rate of 5 ſtivers per pound. A raſper muſt raſp 300 pounds nett in 12 working days, and the houſe is paid for it 30 ſtivers per 100 pounds. When they perform more than their ALLOTTED TASK, TWO-THIRDS go to themſelves. The women are employed in a great many different branches, and contribute in proportion as much towards the GENERAL EXPENCE AS THE MEN.

By more or leſs allowance of MEAT AND DRINK, as well as by the quality of it, the GOOD ARE ENCOURAGED, and the bad BROUGHT TO REASON: to thoſe who are remarkably obſtinate, they uſe ſuch ſeverity as ſoon reduces them to order, but it cannot be enough repeated, that the grand ſecret of reducing ALL ROGUES TO TEMPER AND REASON, is by DIET more than by any other correction; and I am perſwaded, if this was ONCE TRIED STEADILY IN ENGLAND, IT WOULD PREVENT ROBBERIES, &c. &c. more than any other method of ſeverity.

In the villages, or open country where there are no HOUSES OF CORRECTION, offenders are ſent to the towns who have them, and ſo much is allowed by thoſe who ſend them to the towns for their maintenance; and their poor children are taught and taken care of in the villages, by perſons appointed by the magiſtrates of the place.

In general, the adminiſtration of the poor here is excellent, tho' their diſcipline, with regard to foreign beggars, is much relaxed; but there being many CHECKS UPON THE ACCOUNTS OF ALL THEIR CHARITIES, it is difficult to attempt, and rare to hear of any fraud in the RECEIPT OR DISPOSITION OF THEM: the proviſion of the 16th article of the emperor Charles the Vth's law, enjoining the making up the accounts PUBLICLY, is, perhaps, alone ſufficient to guard the poor-money from any notorious mal-adminiſtration.

Theſe, Sir, are the informations I propoſed to give you relative to the poor of this country, their conduct with regard to them having been often cited as a pattern worthy imitation.'

GENERAL REMARKS on the article of POOR.

Let us caſt our eyes on the multitude of unfortunate people in this kingdom of reputable families, and of liberal, or at leaſt eaſy education: ſome undone by guardians, ſome by lawſuits, ſome by accidents in commerce, ſome by ſtocks and bubbles, and ſome by ſuretiſhip. But all agree in this one circumſtance, that they muſt either be burthenſome to their relations, or betake themſelves to little ſhifts for ſuſtenance, which (it is ten to one) do not anſwer their purpoſes, and to which a well-educated mind deſcends with the utmoſt conſtraint.

What various misfortunes may reduce the rich, the induſtrious, to the danger of a priſon, to a moral certainty of ſtarving! Theſe are the people that may relieve themſelves, and ſtrengthen our plantations, [ſee COLONIES and PLANTATIONS] by reſorting thither, and Great-Britain by their departure. I appeal to the recollection of the reader (though he be opulent, though he be noble) does not his own ſphere of acquaintance? (I may venture to aſk) Does not even his own blood, his ſett of near relations, furniſh him with ſome inſtances of ſuch perſons as have been here deſcribed? Muſt they ſtarve? What honeſt mind can bare to think it? Muſt they be fed by the contributions of others? Certainly they muſt, rather than be ſuffered to periſh. Are theſe wealth to the nation? Are they not a burthen to themſelves, a burthen to their kindred and acquaintance, a burthen to the whole community?

I have heard it ſaid (and it is eaſy to ſay ſo) let them learn to work; let them ſubdue their pride and deſcend to mean employments, keep ale-houſes or coffee-houſes, even ſell fruit, or clean ſhoes for an honeſt livelihood. But alas! theſe occupations, and many more like them, are overſtocked already by people who know better how to follow them, than they do whom we have been talking of. Half of thoſe who are bred in low life, and well verſed in ſuch ſhifts and expedients, find but a very narrow maintenance by them. As for labouring, I could almoſt wiſh that the gentleman or merchant, who thinks that another gentleman or merchant in want, can threſh or dig, to the value of ſubſiſtence for his family, or even for himſelf: I ſay, I could wiſh the perſon who thinks ſo, were obliged to make trial of it for a week, or (not to be too ſevere) for only a day: he would find himſelf to be leſs than the fourth part of a labourer, and that the fourth part of a labourer's wages could not maintain him.

I have heard it ſaid, that a man may learn to labour by practice; it is admitted: but it muſt alſo be admitted, that before he can learn, he may ſtarve. Suppoſe a gentleman was this day to begin, and with grievous toil found himſelf able to earn three pence, how many days or months are neceſſary to form him, that he may deſerve a ſhilling per diem? Men, whoſe wants are importunate, muſt try ſuch expedients as will give immediate relief. It is too late for them to begin to learn a trade, when their preſſing neceſſities call for the exerciſe of it.

Having thus deſcribed (I fear, too truly) the pitiable condition of the better ſort of the indigent, an objection ariſes againſt their removal, upon what is ſtated of their imbecility for drudgery. It may be aſked, if they can't get bread here for their labour, how will their condition be mended in our plantations? The anſwer is eaſy, part of it is well atteſted, and part ſelf-evident. They have land there for nothing, and that land is ſo fertile, that they receive an hundred fold increaſe for taking very little pains. Give here in England ten acres of good land to one of thoſe helpleſs perſons, and I doubt not his ability to make it ſuſtain him, and this by his own culture, without letting it to another: but the difference between no rent and rack-rent, is the difference between eating and ſtarving. See the article MANURE.

If I make but 20l. of the produce of a field, and am to pay 20l. rent for it, it is plain I muſt periſh if I have not another fund to ſupport me: but if I pay no rent, the produce of that field will ſupply the mere neceſſities of life.

Beſides the perſons before deſcribed, there are others whom it may be proper to ſend abroad, for reaſon will alſo ſhew at whoſe expence theſe other ſorts of indigent people ought to be removed. I think it may be laid down for a rule, that we may well ſpare all thoſe, who having neither income nor induſtry equal to their neceſſities, are forced to live upon the fortunes or labours of others; and that they who now are a heavy RENT-CHARGE UPON THE PUBLIC, may be made an IMMENSE REVENUE TO IT, and this by a happy exchange of their poverty for an affluence.

Believing it will be granted that the people before deſcribed ought in prudence to go abroad, or have land given them to cultivate at home, and that we are bound in humanity and charity to ſend them, there ariſes a queſtion, Whether our aiding their departure be conſiſtent with good policy? I raiſe this objection on purpoſe to anſwer it, becauſe ſome who mean very well to the public have fancied, that our numbers abſolutely taken, WITHOUT A DISTINCTION, ARE REAL WEALTH TO A NATION. Upon a little examination, this will appear to be a miſtaken notion. It ariſes from a miſapplication of Sir William Petty's Political Arithmetic, and of Sir William Temple's Obſervations on the United Netherlands. But when theſe great men eſteem people as the wealth of a nation, ſurely they can only mean ſuch as labour, and by their induſtry add yearly to the capital ſtock of their country, at the ſame time that they provide the neceſſaries or comforts of life for themſelves.

Perhaps the Raſp-houſes may be reckoned part of the riches of Holland, becauſe the drones are made to work in them: but is an infirmary of incurables wealth to a community? Or (which is worſe, becauſe it is remediable and is not remedied) are hundreds of priſons filled with thouſands of Engliſh debtors, and are they a glory or a reproach, a benefit or a burthen to the nation? Who can be ſo abſurd as to ſay, that we ſhould be enriched by the importation of a multitude of cripples, who might not be able, perhaps, to earn a fourth part of what is neceſſary to ſuſtain them?

If

If ten thouſand of theſe would be an addition to our wealth, ten millions of them muſt add a thouſand times as much to it. Did the fire of London add to the wealth of the nation? I am ſure it gave abundance of employment to the poor, juſt as people are employed in trade to feed and cloath the inhabitants of priſons. But theſe are alſo a ſlow fire, an hectic fever to conſume the vitals of the ſtate.

The true ſtate of national wealth is like that of private wealth, it is comparitive. The nation, as well as individuals, muſt work to ſave and not to ſpend. If I work hard all day, and at night give my wages to the next cripple I ſee, however good it may be judged of in a religious ſenſe, my worldly fortune is in the ſame condition as if I had ſtood idle. If the produce of the nation be in moveables, land, and labour, fifty millions in a year, and only forty-eight millions are expended to maintain the people, then has the nation added two millions to it's capital: but if it ſpends fifty-one millions, then is that to be made good by ſinking part of the perſonal eſtate, or mortgaging the real. And upon a par, plus a million, and minus a million in earning and expences, will operate nothing towards increaſing the national wealth: if you proceed in infinitum, it is only impoveriſhing the RICH TO MAINTAIN THE POOR: it ſeems, indeed, to have ſomething of levelling in it; to prevent which, I think our men of fortune would act wiſely once for all, to put theſe poor people on a footing of their own, and ſhake off the perpetual incumbrance by a ſingle act of prudent beneficence.

Some would have Scotland, Ireland, and Wales, ſunk under water, but all the people ſaved and ſettled in England. Such certainly deceive themſelves with a view of the artificial ſtrength of the Dutch, when their fiſhery was at the higheſt pitch, and when they were carriers for mankind.

But they have not been able to preſerve theſe branches of trade entire, and their numbers muſt decreaſe as do the means of maintaining them *. Therefore, inſtead of taking it for granted, that numbers of people neceſſarily create a traffic, we may invert the propoſition, and ſafely hold, that an extenſive traffic will infallibly be attended with ſufficient numbers of people.

* To illuſtrate the doctrine laid down in this ſentence, take the following part of a deſcription of a neighbouring country by a celebrated author,

I met in my day's journey nine cars loaden with old muſty ſhrivelled hides, one car-load of butter, one cow and calf driven by a man and his wife. A colony of one hundred and fifty beggars, all repairing to people our metropolis, and by increaſing the number of hands, to increaſe it's wealth: upon the old maxim, That people are the riches of a nation. And, therefore, one thouſand mouths with hardly ten pair of hands, or any work to employ them, will infalliby make us a rich and flouriſhing people. Secondly, Travellers enough, but ſeven in ten wanting ſhirts and cravats; nine in ten going barefoot and carrying their broagues and ſtockings in their hands. One woman in twenty having a pillion, the reſt riding bare-backed. Above two hundred horſemen, with four pair of boots amongſt them all; ſeventeen ſaddles of leather (the reſt being made of ſtraw) and moſt of their garranes only ſhod before. I went into one of the principal farmer's houſes out of curioſity, and his whole furniture conſiſted of two blocks for ſtools, a bench on each ſide the fire-place made of turf, ſix trenchers, one bowl, a pot, ſix horn-ſpoons, three noggins, three blankets (one of which ſerved the man and maid ſervant, the other two, the maſter of the family, his wife and five children) a ſmall churn, a wooden candleſtick, a broken ſtick for a pair of tongs. In the public towns, one third of the inhabitants walking the ſtreets barefoot, &c.

And yet theſe unhappy people, who are not able to earn above a fourth part of their ſubſiſtence at home, and as we have ſhewn, are a load on the fortunes and induſtry of others, may in ſeveral of our plantations, or by cultivating more land in Great-Britain and Ireland, provide by their labour a decent maintenance, and at the ſame time enrich their mother-country. See the article MANURE.

Upon what has been ſaid, the reader may be deſirous to ſee a ſtate of the difference (with reſpect to the intereſts of the induſtrious and wealthy part of the nation) between a poor perſon here, earning but half HIS SUSTENANCE, and the ſame perſon ſettled in a freehold, of a FERTILE SOIL WITHOUT TYTHES OR TAXES; and in this computation, let us remember, that of the many thouſands of poor debtors who fill our priſons, few earn any thing at preſent; and our colonies are chiefly intended for the UNFOTUNATE, there being no danger of the departure of ſuch as are able to maintain themſelves here.

A man who is equal in ability only to the fourth part of a labourer (and many ſuch there are) we will ſuppoſe to earn four pence per diem, or five pounds per annum in London; his wife and a child of above ſeven years old, four pence per diem more: upon a fair ſuppoſition (becauſe it is the common caſe) he has another child too young to earn any thing. Theſe live but wretchedly, at an expence of twenty pounds per annum. To defray which, they earn ten pounds; ſo that they are a loſs to the rich and induſtrious part of the nation of ten pounds per annum; for there are but three general methods of ſupplying the defect of their ability. Whatever they conſume more than they earn, muſt be furniſhed, firſt, either by the bounty or charity of others; or, ſecondly, by frauds, as by running in debt to the ruin of the induſtrious, &c. or, thirdly, by what our law calls force and felony, as theft and robbery, &c. They muſt be ſupplied at ſome of theſe rates; therefore, as obſerved, this family is a loſs to the rich and induſtrious of ten pounds per annum.

REMARKS on the article POOR.

Since the drawing up the foregoing, I have been informed by a gentleman of great honour and veracity, reſident at Ipſwich in Suffolk, that their poor there are ſo wiſely managed, as to maintain themſelves; which example, if it could be happily reduced to practice as ſucceſsfully in all other parts of Great Britain, would prove an extraordinary ſaving to the kingdom: certain it is, that to obtain ſuch eaſement from the poor rate, and at the ſame time to add thouſands upon thouſands of induſtrious ſubjects to the community, who are at preſent a dead weight upon it, well deſerves the efforts of every public-ſpirited man in his pariſh: and if once we had a few more examples evidencing the practicability of the Ipſwich one, it would animate other pariſhes to imitate it, whereby the ſame might become univerſal thoughout the nation. The employment of a million of hands, perhaps, amongſt the poor, would have a tendency to lower the price of labour in general, and conſequently fall the prices of our commodities and manufactures, which is ſo much wanted at this criſis. See our articles DUTIES, LABOUR, TAXES, WAR, and ſuch other, to which from them we refer.

PORCELAIN, or PURCELAIN, a fine kind of earthen ware made in China, and therefore alſo called China, or China-ware; but brought into Europe from other parts of the eaſt, as Japan, Siam, Surat, and Perſia.

The annals of the city of Feou-leam relate, that ſince the year 442, the workers in porcelain have always ſupplied the emperors with it: and that one or two mandarines, ſent from the court, had the care of that work. It is, however, probable, that before the year 442, this ware was in uſe, and that it has been gradually brought to it's preſent perfection.

The fine porcelain, which is of a bright and lively white, and of a beautiful ſky blue, is all brought from King-te-tching.

There is porcelain made in other parts, but it is very different from this both in colour and fineneſs. The emperors have brought to Pekin workers in porcelain, and all the materials employed in making it, but their work never ſucceeded. King-te-tching alone, has the honour of ſending porcelain to all the parts of the world. The Japoneſe come to buy it at China.

The matter of which it is made, is compoſed of two kinds of earth; one of which is called petunſe, and the other kaolin. This laſt is intermixed with corpuſcles, which have a kind of ſplendor, but the other is ſimply white, and very fine to the touch. At the ſame time that great numbers of large barques aſcend the river of Jaotcheou to King-te-tching, to be loaded with porcelain, almoſt as many ſmall ones deſcend from Kimuen, loaded with petunſe and kaolin, reduced to the form of bricks, for King-te-tching produces none of the materials proper for the porcelain.

The petunſes, whoſe grain is ſo fine, are nothing elſe but pieces of rocks dug out of quarries, and moulded into this form. All ſtones are not proper for this purpoſe, otherwiſe it would not be neceſſary to go twenty or thirty leagues, into the other provinces for it.

The Chineſe ſay, that the ſtone ought to be of a greeniſh colour. The firſt ſtep of the preparation is this; they break theſe pieces of ſtone with a large bar of iron, after which they put the broken pieces into mortars, and with peſtles which have heads of ſtone covered with iron, they reduce them to a very fine powder. Theſe peſtles play continually, either by the labour of men or by water, as the hammers of our paper-mills do. After this they throw the powder into a large urn full of water, and ſtir it briſkly about with an iron peſtle. When they allow it to reſt ſome minutes, a kind of cream four or five fingers breadth thick, floats on the ſurface. This they take off, and pour it into another veſſel full of water. Thus they ſeveral times agitate the water of the firſt urn, gathering the cream each time, 'till there remains none but the groſſer parts, which ſubſide to the bottom. Theſe are taken out and pounded afreſh.

With reſpect to the ſecond urn, into which they throw what they had collected from the firſt, they wait 'till a kind of paſte is formed at the bottom of it. When the water above this paſte appears very clear, they pour it off by inclination, that they may not diſturb the ſediment, and they throw this paſte into large moulds proper to dry it. Before it is quite hard, they divide it into ſmall ſquare pieces, which are ſold by the hundred. This figure and it's colour have made it get the name of petunſe.

The moulds into which this paſte is thrown, are a kind of very large and broad caſes. The bottom is filled with bricks laid end-ways, ſo as to make the ſurface equal. Over this

bed

bed of bricks thus ranged, they ſpread a cloth, as large as the cavity of the mould. Then they pour in the matter, which they cover with another cloth, over which they place a bed of bricks laid flat on each other.

This is done in order to force out the water the ſooner, without loſing any thing of the matter of the porcelain; which by becoming hard, eaſily receives the form of bricks. There would be nothing to be added to this labour, if the Chineſe were not accuſtomed to alter their merchandize; but people who roll ſmall grains of paſte in pepper, in order to cover them with it, and mix them with genuine pepper, do not care to ſell petunſe without mixing ſome ſediments with it; for which reaſon, they are obliged to purify them at King-te-tching, before they make uſe of them.

The kaolin, which enters the compoſition of the porcelain, gives leſs trouble than the petunſe, nature having a greater hand in producing it. There are mines of it in the boſom of certain mountains, which are covered eternally with a reddiſh earth. Theſe mines are pretty deep, and contain the kaolin in lumps, which they cut into ſquares, in the manner with the petunſe. The white earth of Matta, commonly called St Paul's earth, has a great reſemblance to the kaolin, though the former has not the little ſilver grains with which the latter is interſperſed.

It is from the kaolin, that the fine porcelain derives all it's ſtrength. Thus it is the mixture of a ſoft earth which gives ſtrength to the petunſes, which are taken from the hardeſt rocks. Some Engliſh and Dutch bought ſome petunſe and brought it into their own countries to make porcelain, but their enterprize failed, becauſe they had no kaolin.

Beſides the barques loaded with petunſe and kaolin, with which the ſkirts of King-te-tching are covered, we ſee others full of a whitiſh liquid ſubſtance, and this is the oil which gives the porcelain it's whiteneſs and luſtre. This oil or varniſh is drawn from the hardeſt ſtone, which is not ſurprizing, ſince it is thought that ſtones are principally formed of the ſalts and oils of the earth, which mix and are intimately united with each other. Though the ſpecies of ſtone of which the petunſes are made, may be indifferently uſed to obtain the oil, yet they generally chuſe that which is whiteſt, and has the greeneſt ſpots.

Though the Hiſtory of Feou-leam does not deſcend into a detail, yet it ſays, that the good ſtone for the oil, is that which has ſpots of a colour of a cypreſs-leaf, or which has red marks on a browniſh ground. This ſtone muſt be firſt well waſhed, after which it undergoes the ſame preparations with the petunſe. When they have in the ſecond urn the hardeſt parts they could take from the firſt, they throw a pound of ſtone or mineral like allum, upon a hundred pounds or thereabouts of this cream. It muſt be made red by the fire, and afterwards pounded. This is, as it were, the preſſure which gives it conſiſtence, though they take care to keep it always liquid.

This oil of ſtone is never employed alone. They mix another with it, which is, as it were, the ſoul of it. The compoſition is as follows: they take large pieces of quick lime, on which they throw a little water to diſſolve and reduce them to pieces. Then they make a bed of dry fern, over which they lay another of ſlacked lime, of theſe they put ſeveral alternately over each other. After this they ſet fire to the fern. When the whole is conſumed, they ſpread theſe aſhes on new beds of dry fern.

This is done five or ſix times, and the oftener they do it the oil is the better. Formerly, ſays the Hiſtory of Feou-leam, they uſed beſides the wood of a tree, whoſe fruit is called ſe-tſe.

If we judge of this tree by the ſourneſs of the fruit before it is ripe, and by it's ſmall top, we ſhould take it to be a kind of medlar.

It is no longer uſed at preſent, probably becauſe it is become too ſcarce in that country. Perhaps it is for want of this wood, that the preſent porcelain is not ſo beautiful as that of former times: the nature of the quick lime and fern contributed to the goodneſs of the oil; and it is obſervable, that what is brought from ſome parts, is better than what comes from others.

When they have a certain quantity of the aſhes of quick lime and fern, they throw them into an urn full of water. Upon an hundred pounds they muſt diſſolve one pound of ke-kao, ſtir the mixture well, and allow it to reſt, 'till there appears on the ſurface a cloud of cruſt, which they take off, and put into a ſecond urn. This they repeat ſeveral times. When a kind of paſte is formed at the bottom of the ſecond urn, they pour off the water by inclination, and keep this liquid paſte, which is the ſecond oil, to be mixed with the former; for a juſt mixture of theſe two depurated oils, they muſt be equally thick. In order to judge of this, they ſeveral times plunge into each of them pieces of petunſe, by taking which out, they ſee upon their ſurface whether they are equally thick.

This is what relates to the quality of thoſe two oils. As for the quantity, the beſt way is to mix ten meaſures of the oil of ſtone, with one meaſure of the oil of quick lime and fern. They who are moſt ſparing, never put leſs than three meaſures. If the merchants who ſell this oil, have the leaſt inclination to cheat, they can eaſily augment it's bulk by throwing water into it, and adding a proportional quantity of ke-kao, to cover this fraud and hinder the oil from being too liquid.

Before I explain the manner of applying this oil, or rather varniſh, I ſhall deſcribe how the porcelain is made. We ſhall firſt begin with the work performed in the leaſt frequented parts of King-te-tching. There is an incloſure of walls, within which they build vaſt piles, one ſtory above another, of a prodigious number of earthen urns. In this incloſure live and work an incredible number of labourers, each of whom has his taſk ſet him. Before a piece of porcelain is taken out of this to be carried to the furnace, it paſſes through more than twenty hands, and that without confuſion. They have no doubt found, that by this means the work is much more quickly carried on.

The firſt labour conſiſts in purifying again the petunſe and the kaolin, from the dregs which remain in them when they are ſold. They bruiſe the petunſe, and throw it into an urn full of water. Then they diſſolve it, by ſtirring it about with a large ſpatula. They let it reſt ſome moments, and take off what ſwims on the ſurface, and ſo of the reſt, in the manner above explained.

As for the pieces of kaolin, it is not neceſſary to break them. They only put them into a baſket, which they immerſe into an urn full of water. The kaolin is eaſily diſſolved of itſelf; there generally remains a ſediment, which muſt be thrown away. In a year's time the dregs are accumulated, and form great heaps of white ſand ſeparated from the kaolin. Thus prepared, there muſt be a juſt mixture of them. For fine porcelain, they put in as much kaolin as petunſe; for ordinary, they put four parts of kaolin to ſix of petunſe. The leaſt they ever put, are five parts of kaolin to three of petunſe.

After this firſt operation they throw this maſs into a large cavity, well paved and cemented every where. Then they tread upon it and knead it 'till it becomes thick.

From this maſs thus prepared, they take different pieces, which they extend upon large ſlates. On theſe they knead and form them into different ſhapes, taking care that there be no flaws therein, nor no mixtures of extraneous bodies; for a hair, or a grain of ſand, would ſpoil the whole work; for want of rightly managing this maſs, the porcelain ſplits, cracks, and warps. It is from theſe firſt elements, that we have ſo many beautiful works of porcelain, ſome of which are made on the wheel, others are only made upon moulds, and afterwards perfected by the chiſſel.

All the plain or ſmooth works are in the former manner. A cup, for example, when it comes off the wheel, is no more than a kind of imperfect cavity, almoſt like the crown of a hat before it is formed on the block. The workman firſt gives it the diameter and height he wants, and it comes out of his hands almoſt as ſoon as he has begun; for he has only three farthings Engliſh money for a ſhelf, and every ſhelf contains twenty-ſix pieces. The foot of the cup is at that time only a piece of earth of the bulk and diameter which it ought to be of, and which is hollowed out with the chiſſel when the cup is dry, and has acquired conſiſtency; that is, after it has received all it's ornaments.

This cup on coming from the wheel, is firſt received by another workman, who places it upon it's bottom. A little after it is given to a third, who applies it to it's mould, and gives it the ſame figure: this mould is a kind of turning-wheel.

A fourth poliſhes this cup with the chiſſel, eſpecially near the lips, to render it thin and tranſparent. He ſcrapes it ſeveral times, moiſtening it a little with water, if it is too dry, leſt it ſhould break. When the cup is taken off the mould, it muſt be rolled gently on the ſame mould, without preſſing more on one ſide than another; without which there will either be flaws in it, or it will warp. It is ſurprizing to ſee with what ſpeed and dexterity one of theſe cups paſſes through ſo many different hands. Some ſay, that a piece of porcelain has paſſed through the hands of ſeventy workmen.

The large pieces of porcelain are made at two different times. One half is raiſed on the wheel by three or four men, who ſupport it, each on the ſide next to him, to give it it's figure. The other half being almoſt dry, is applied and united to it, by the matter of the porcelain, diluted in water, which ſerves as a kind of mortar or cement. When theſe pieces thus united are entirely dry, they with a knife, ſcrape the internal and external ſides of the part where the union was, which, by means of the varniſh with which they cover it, becomes equal to the reſt.

It is in this manner, that they apply handles, ears, and other ornaments to veſſels. This principally regards the porcelain made upon moulds or by the hands, ſuch as ribbed pieces, or ſuch as are of a whimſical figure; ſuch as animals, idols, or buſts, which the Europeans beſpeak, or other things of a ſimilar nature. Theſe kinds of moulded works are made in three or four pieces, which they join to each other, and afterwards perfect with inſtruments proper to hollow, poliſh, and repair the different parts, which had eſcaped the mould.

As

As for their flowers, and other ornaments, which are not raiſed, but, as it were engraved, they are applied to the porcelain with ſeals and moulds. They alſo apply raiſed work prepared almoſt in the ſame manner, that gold lace is ſewed on a coat.

When they have the model of the piece of porcelain which is wanted, and which cannot be imitated on the wheel by the hands of the workmen, they apply over the model, earth proper for the moulds. This earth receives the impreſſion, and the mould is made of ſeveral pieces, each of which is pretty large. They ſuffer the mould to become hard, when the figure is imprinted on it. When they want to uſe it, they place it near the fire for ſome time; after which they fill it with porcelain, in proportion to the thickneſs they want to give it: they preſs with their hands on all parts, and then for a moment, preſent the mould to the fire. The imprinted figure is forthwith detached from the mould by the action of the fire, which a little conſumes the humidity that glued this matter to the mould. The different pieces of the whole drawn ſeparately are afterwards re-united, with the ſomewhat liquid matter of the porcelain. In this manner they make figures of animals, which are all ſolid. They leave this maſs to harden, give it the figure propoſed, perfect it with the chiſſel, or add the parts formed ſeparately. Theſe kinds of works are made with great care and pains. When the work is finiſhed, they lay on the varniſh and bake it. Then if they pleaſe, they paint it of various colours and gild it. Afterwards they bake it a ſecond time. Pieces of porcelain thus finiſhed, are ſold extremely dear. All theſe works ought to be defended from the cold; humidity makes them ſplit, when they are not dried equally, for which reaſon they ſometimes keep fires in theſe laboratories.

Theſe moulds are made of a fat yellow earth, which is found in a place near King-te-tching. This earth is kneaded, and where it is united, and becomes a little hard, they take a quantity of it neceſſary for the mould, and beat it ſtrongly; when they have given it the deſired figure, they dry it, and form it on the wheel.

This kind of work is ſold dear. In order ſpeedily to anſwer a commiſſion, they make a great quantity of moulds, that a vaſt number of labourers may be employed at once. If theſe moulds are taken care of, they laſt a long time. A merchant who has them ready for the porcelain-works, beſpoke by an European, may ſell his commodity better, and make a much more conſiderable gain than another who ſhould have them to make. If theſe moulds ſhould happen to crack, or have their ſurfaces ſplintered, they are no longer of any ſervice, except for porcelain of the ſame figure, but of a ſmaller ſize. In this caſe, they put them on the wheel and ſmooth them, that they may ſerve a ſecond time.

They often embelliſh their porcelain, by making it paſs through the hands of painters, who are not much richer than the other workmen. At this we need not be aſtoniſhed, ſince, except a few of them, they would only paſs in Europe for apprentices, who had been ſome months at the buſineſs. The whole ſcience of theſe, and of the Chineſe painters in general, is founded upon no principles, and only conſiſts in following a certain beaten track, aſſiſted with a narrow and confined imagination; they are ignorant of all the beautiful rules of this art: we muſt, however, confeſs that they paint flowers, animals, and landſkips, which are admired on the porcelain, as well as on ſcreens, and the window blinds of fine gauze.

The painting is divided in the ſame laboratory among a great number of hands. One only forms the firſt coloured circle near the edges of the china; the other traces the flowers, which a third paints; one is for rivers and mountains, another for birds, and another for animals; human figures are generally moſt mangled by them. Certain landſkips and plans of cities illuminated, carried from Europe to China, afford us the liberty of laughing at the Chineſe method of painting. As for the colours of the Chineſe painting, they are of all ſorts; the moſt common in Europe is of lively blue, on a white ground; there are ſome in which this ground reſembles that of a burning-glaſs: ſome are entirely red, and among thoſe ſome are coloured in oil, while others are of a blown red, and intermixed with ſmall points, almoſt like our water-colours. When theſe two works ſucceed to their perfection, which they rarely do, they are accounted extremely valuable, and are ſold at a great price.

There is ſome porcelain in which the landſkips are formed of a mixture of almoſt all ſorts of colours, heightened by the gilding: theſe are very beautiful, when of the right kind, but the ordinary porcelain of this ſort is not comparable to that painted with azure alone.

The annals of King-te-tchin ſay, that formerly the meaner people only uſed white porcelain; this probably happened becauſe they had not in the neighbourhood of Joa-tcheou, found a leſs valuable azure than that uſed for the fineſt porcelain, which is brought far, and ſold dear.

It is ſaid that a merchant who dealt in porcelain being ſhipwrecked on a deſert coaſt, found there much greater riches than he had loſt: as he wandered on the coaſt, while the crew were building a ſmall barque of the wrecks of the ſhip, he perceived that the ſtones proper for the moſt beautiful azure were very common there. He brought a large cargo with him; and it is ſaid that, by that means, there was never ſo beautiful an azure ſeen at King-te-tchin. The Chineſe merchant in vain attempted to find that coaſt again, on which he had been thrown by chance. The azure is prepared in the following manner: they bury it in gravel, which is about half a foot high in the furnace; here they bake it 24 hours; then they reduce it to an impalpable powder, as well as the other colours, not upon marble, but in large porcelain mortars, whoſe bottoms are without varniſh, as well as the peſtles employed to pound it.

The red colour is produced with copperas: they put a pound of copperas in a crucible, which they lute with another crucible, in the ſuperior end of which is a ſecond aperture, which is covered in ſuch a manner, that it may be eaſily uncovered, if neceſſity requires. They ſurround the whole with a large charcoal fire, and, that they may have the ſtronger reverberation of the heat, they encloſe the whole with bricks. So long as the ſmoke riſes very black, the matter is not duly prepared; but as ſoon as a ſmall cloud, fine and ſubtile ariſes, it is ſufficiently done. Then they take a little of this matter, dilute it in water, and make a trial of it upon a piece of board; if a beautiful red is produced by it, they remove the fire which ſurrounds it, and in part covers the crucible; when the whole is cold, they find a ſmall cake of this red at the bottom of the crucible, but the beſt red adheres to the ſuperior part of it. A pound of copperas yields four ounces of the red with which they paint the porcelain.

Though the porcelain is naturally white, and rendered ſtill more ſo by the varniſh, yet there are certain figures for which they apply a particular white upon the porcelain, which is painted of ſeveral colours. This white is made of the powder of tranſparent flints, which is calcined in the furnace, in the ſame manner as the azure. To half an ounce of this powder they add an ounce of ceruſs pulverized. For example, to make the green, to one ounce of ceruſs, and half an ounce of the powder of flints, they add three ounces of what they call tom-hoa-prien, which, according to all appearances, are the fineſt ſcoriæ of copper reduced to powder.

The prepared green becomes the matter of the violet, which is made by adding a proper quantity of white: they add more of the prepared green in proportion, as they want the violet more deep. The yellow is made by taking ſeven drachms of prepared white, to which they add three drachms of copperas. All the colours laid upon the porcelain already baked, after they are varniſhed, do not appear green, violet, red, or yellow, 'till they are baked a ſecond time. Theſe different colours are applied with ceruſs, ſalt-petre, and copperas; ſome ſay that they only employ ceruſs, which is mixed with the colour, when they diſſolve it in gum water.

The red colour in oil is produced by mixing the red tom-lonhum, or even the red I have mentioned, with the ordinary oil of porcelain, and another oil made of white flints, in the ſame manner with the firſt ſpecies of oil: ſeveral trials diſcover the particular quantity of each to be uſed; then they leave the porcelain to dry, and bake it in the ordinary furnace: if, after the baking, the red comes out pure and ſparkling, without the leaſt ſtain, they have attained then to the perfection of the art. Theſe kinds of porcelains do not ſound when they are ſtruck. The other ſpecies of blown red is made thus: they have the red prepared; they take a pipe, of which the apertures are covered with fine gauze; they gently apply the lower end of the pipe to the colour laid on the gauze, after which they blow into the pipe againſt the porcelain, which is, by that means, beautified with red ſpots. This ſort of porcelain is ſtill dearer and rarer than the preceding, becauſe the production of it is more difficult, if the workman obſerves all the requiſite proportion.

The black porcelain has alſo it's beauty and value: it is called oumien. The black is leaded, and reſembles that of our burning-glaſſes; the gold laid upon it renders it ſtill more agreeable. They give this black colour to the porcelain when it is dry; and, for this purpoſe, they mix an ounce of azure with ſeven ounces of the ordinary oil of ſtone: trials exactly teach the proportion of this mixture, according to the deeper or fainter colour they intend to give to the porcelain. When this colour is dry, they bake the porcelain, after which they lay on the gold, and bake it again in a particular furnace.

There is alſo a kind of porcelain made, which externally is all pierced, like pinking; in the middle is a cup proper to contain the liquor: the cup, however, is but one ſubſtance with the pinked work. There are other porcelains, on which the Chineſe or Tartar ladies are painted to the life; the drapery, the complexion, and the features, are all preſerved: at a diſtance theſe works are taken for enamel.

It is to be obſerved, that, when they lay no other oil on the porcelain than that of white flints, this porcelain is of a particular ſpecies, and is called tſou-tſchi; it is all marbled and croſſed in all directions, with an infinite number of veins. The colour which this oil gives is a white, ſomewhat cineritious. If the porcelain is all azured, and if they lay this oil on it, it will appear both cut and marbled when the colour is dry.

When they apply the gold they pound it, and diſſolve it in the bottom of a porcelain veſſel, 'till they ſee under the water, a ſmall canopy of gold. They ſuffer it to dry, and, when, they want to uſe it, they diſſolve a ſufficient quantity of it in gum-water. With thirty parts of gold they incorporate three parts of ceruſs, and lay it on the porcelain in the ſame manner with the other colours.

There is alſo a ſpecies of porcelain made in the following manner: they give it the ordinary varniſh, and bake it again; they ſometimes deſignedly delay the painting 'till after the firſt baking; ſometimes, alſo, they have recourſe to the ſecond baking, to conceal the faults of the porcelain, by applying colours to the defective places. This porcelain, which is full of colouring, is agreeable to the taſte of a great many people. It generally happens that we feel inequalities on this ſort of porcelain, and theſe have been neceſſary either to ſupply the ſhades of the painting, or cover the defect of the porcelain.

When the painting is dry, as well as the gilding, if there is any, they make piles of the porcelain, and putting the ſmall into the large veſſels, place them in the furnace.

Theſe furnaces may be of iron, when they are ſmall, but generally they are of earth. Some of them are as high as a man, and almoſt as wide as one of our largeſt hogſheads for wine. They are made of ſeveral pieces, of the ſame matter with the caſes for the porcelain; they are large pieces, about an inch thick, a foot high, and a foot and a half long.

Before they bake them, they give them a figure proper for becoming round; they are placed over each other, and well cemented. The bottom of the furnace is raiſed about a foot and a half above the ground, and placed upon two or three rows of thick, but not very broad bricks Round the furnace is a well-built incloſure of bricks, which at it's bottom has two or three air-holes, which ſerve as bellows to the fire. This incloſure is a foot and a half diſtance from the furnace, except in three or four places, which are filled up, and ſerve as ſupports to the furnace; they, at the ſame time, remove the furnace and the incloſure, without which the furnace cannot ſtand. They fill the furnace with the porcelain they want to bake a ſecond time, piling the ſmall into a large veſſel; when this is done, they cover the mouth of the furnace with pieces like thoſe of which it's ſides are built. Theſe pieces, whoſe edges are laid over each other, are cloſely united with mortar, or a kneaded earth fit for that purpoſe. They only leave an aperture in the middle, in order to obſerve when the porcelain is baked. They afterwards kindle a quantity of coals under the furnace; they alſo kindle coals on the covering, whence they throw the aſhes into the ſpaces between the incloſure of bricks and the furnace. The aperture at the top of the furnace is covered with a piece of a broken pot. When the fire is burning, they now and then look through this aperture, and, when the porcelain appears to be ſhining, and painted with briſk and lively colours, they remove the fire, and take out the porcelain.

There may naturally ariſe a thought concerning the colours which are incorporated with porcelain already baked and varniſhed with ceruſs, to which, according to the annals of Feouleam, they added ſalt-petre and copperas: if we employed ceruſs in the colours with which we paint the ſquares of glaſs, and afterwards give them a ſecond kind of baking, might not this ceruſs reſtore to us the ancient ſecret of painting glaſs, without deſtroying any thing of it's tranſparency? But this is only to be judged of by experience.

The Chineſe had formerly the art of painting, on the ſides of porcelain veſſels, fiſhes, and other animals, which were only perceptible when the veſſel was full of ſome liquor. They call this ſpecies kia-hin, that is, azure, is put in preſs on account of the manner in which the azure is laid on: this is all, that is retained of this ſecret; perhaps, in Europe, we may conjecture at what the Chineſs are ignorant of. The porcelain to be painted thus ought to be very thin; when it is dry, we ought to apply a pretty faint colour, not externally, as is uſual, but within on the ſides. They paint fiſh, as moſt proper to appear when the cup is filled with water. When the colour is once dry, they lay over it a ſlight bed of ſtrong but fine glue, made of the ſame earth as porcelain; this bed incloſes the azure between theſe two laminæ of earth. When the bed is dry they lay the varniſh on the inſide of the porcelain; ſome time after they put it on the mould and wheel. As it has received a body in the inſide, they render it externally as ſlender as poſſible, without penetrating to the colour. Then we muſt put the outſide of the porcelain into the varniſh, and, when the whole is dry, they bake it in the common furnace. This labour is extremely nice, and requires a dexterity of which the Chineſe are no longer maſters; they are, however, every now and then trying to recover the art of this magical painting, but to no purpoſe.

Be this as it will, we may at preſent ſay, that the beautiful azure appears again upon the porcelain, after having diſappeared for ſome time. When it is firſt applied, it is of a paliſh black colour; when it is dry, and has received the varniſh, it is totally eclipſed, and the porcelain appears white; the colours are then buried under the varniſh; the fire makes them blow, almoſt in the ſame manner as the natural heat brings out the moſt beautiful butterflies, with all their variety of colours. It is to be obſerved, that, before the varniſh is laid upon the porcelain, it is to be poliſhed, and it's irregularities removed: for this purpoſe, they uſe a pencil made of very fine feathers, which they moiſten a little with water, and paſs every where with a gentle hand.

Beſides, there is great art in the manner of laying the varniſh on the porcelain, both in putting on a ſufficient quantity, and ſpreading it equally on all parts. To very thin and ſlender porcelain they give, at two different times, two ſlight beds of varniſh, for, if theſe beds were too thick, the weak ſides of the cup would not bear them, but bend immediately. Theſe two beds are as good as an ordinary varniſh, which they give the fine and ſtrong china: they lay on the one by impreſſion, and the other by immerſion. At firſt they take the cup in one hand, on the outſide, and holding it ſlopingly over the urn where the varniſh is, they with the other throw as much into it as is ſufficient to varniſh it every where; this is done ſucceſſively to a vaſt number of cups. When they are dry within, they varniſh the outſide in the following manner: they hold one hand on the cup, and ſupporting it with a ſmall ſtick under the middle of it's bottom, they plunge it into the veſſel full of varniſh, and immediately take it out; it is to be remembered, that the foot of the cup remains ſolid: in a word, it is not 'till it has received the varniſh and becomes dry, that they put it upon the wheel to hollow the bottom; after which, they paint upon it a ſmall circle, and often a Chineſe letter. When this painting is dry, they varniſh the cavity they have made under the cup, and this is the laſt hand put to it, ſince it is forthwith carried from the laboratory to the furnace to be baked.

The place where the furnaces are, preſents us with another ſcene. In a kind of area, or entry, before each furnace, we ſee heaps of caſes, deſtined to contain the porcelain: every piece of porcelain, however coarſe, as well thoſe which have lids as thoſe which have not, has it's caſe. Theſe lids are but weakly attached to the lower part in baking, and are eaſily diſengaged by a ſmall ſtroke which they give them. As for the ſmall porcelain-ware, ſuch as tea and chocolate-cups, they have a caſe common to many of them. The workman in this imitates nature, who, in order to concoct and maturate fruits, includes them under a common covering, that the heat of the ſun may only penetrate them gradually, and that it's internal action may not be too much interrupted by the external air, during the cold damps of the night.

Theſe caſes have in the inſide a kind of bed of ſand, which is covered with the powder of koalin, that the ſand may not adhere too much to the foot of the cup, which is placed upon this bed, after having preſſed it, and given it the figure of the porcelain, which does not touch the ſides of the caſe: the mouth of the caſe has no covering. A ſecond caſe, of the figure of the firſt, furniſhed in like manner with porcelain, is ſo fitted into it, as to cover it intirely, without touching the porcelain below. In this manner they fill the furnace with large piles of earthen caſes, all furniſhed with porcelain. By means of thoſe thick coverings, the beauty, and, if we may uſe the expreſſion, the complexion of the porcelain, is not defaced by the fire.

With reſpect to the ſmall pieces of porcelain, which are contained in large round caſes, each of which is placed upon a ſupporter of earth, about the thickneſs of two crowns, and as wide as it's foot, the bottoms of theſe are alſo covered with the powder of koalin. When theſe caſes are large, they put no porcelain in the middle, becauſe it would be too far from the ſides, by which means, the caſe being deſtitute of due ſtrength, would break and fall down, and endanger the whole pile. We muſt obſerve, that theſe caſes are the third of a foot in height, and ſome of them are not baked no more than the porcelain; however, they intirely fill thoſe which have been already baked, and are ſtill fit for uſe.

We muſt not forget the manner in which the porcelain is put into theſe caſes. The workman does not touch it immediately with his hands, for, by that means, he might either break it, or produce irregularities in it; he draws it from off the plate by means of a ſmall cord; this cord is fixed at one end to two ſomewhat crooked branches of a fork of wood, which he takes in one hand, while with the other he holds the two ends of the cord, croſſed and open, according to the bulk of the porcelain. In this manner he ſurrounds it, raiſes it gently, and places it on the ſmall pedeſtal in the caſe. All this is done with incredible expedition.

We have already obſerved, that the bottom of the furnace is covered with a bed of gravel, a foot and a half thick; this gravel is deſigned for the more ſecurely placing the piles of porcelain, whoſe rows, which are in the middle of the furnace, are at leaſt ſeven feet high. The two caſes at the foot of each pile are empty, becauſe the fire does not act ſufficiently below, and becauſe they are in ſome meaſure covered by the gravel: for the ſame reaſon, the caſe placed at the top of the pile is left empty. In this manner they fill the whole furnace, leaving no vacuity, except at the place which is immediately under the vent.

In the middle of the furnace they place the piles of the fineſt porcelain, at the bottom ſuch as are coarſer, and at the entry ſuch as are of a deeper colour, which are compoſed of an equal quantity of petunſe and kaolin, and on which they have laid a varniſh made of the ſtone which has ſpots a little black or red, becauſe that oil has a ſtronger body than the other. All theſe piles are placed very near each other, and united below, above, and at the middle, with ſome pieces of earth which they apply to them in ſuch a manner, however, that the flame has a free paſſage to inſinuate itſelf equally on all ſides. This depends on the eye and dexterity of the workman, and is abſoluely neceſſary to ſucceed in his attempt, and avoid certain accidents, nearly ſimilar to thoſe which ariſe from obſtructions in the animal body.

All earths are not proper for the caſes which contain the porcelain. There are three ſorts uſed; the one is yellow, and very common; it is uſed in the greateſt quantity, and conſtitutes the baſe. The other is called laotu, that is, a ſtrong earth. The third, which is an oleous earth, is called yeoutou. Theſe two laſt earths are in the winter-time taken from very deep mines, where it is not poſſible to work during the ſummer: if they were mixed with equal quantities, which would coſt a little more, the caſes would laſt longer. They bring theſe earths ready prepared, from a large village at the foot of the river, about a league from King-te-tching. Before they are baked they are yellowiſh; but, when baked, they are of a dark red colour: as the workmen are very ſparing, they put in moſt of the yellow earth, which is the reaſon why the caſes do not laſt above two or three bakings, after which they ſplit altogether; if they are but ſlightly ſplit, they tie them round with a band of oſiers: the band is burned, but the caſe ſerves for that time, without doing any harm to the porcelain. They muſt not fill a furnace with new caſes, which have not been uſed before; the half of them muſt be ſuch as have been baked before: theſe are placed at top and bottom; in the middle of the piles they place ſuch as are new made. Formerly, according to the Hiſtory of Feou-leam, all the caſes were baked ſeparately in a furnace, before they were uſed for baking the porcelain; no doubt, becauſe at that time, they had leſs regard to the expence than to the perfection of the work: it is not ſo at preſent, becauſe the workers in porcelain are multiplied to an incredible number.

We ſhall now conſider the ſtructure of the furnaces. They are placed at the bottom of a pretty long entry, which ſerves as a bellows to them, and is of the ſame uſe as the arch of a glaſs-founder's. The furnaces are, at preſent, larger than they were ſome years ago, ſince in former times, according to the Chineſe books, they were only ſix feet in breadth and heighth; at preſent they are two fathoms high, and almoſt four fathoms broad. The arch as well as the body of the furnace, is pretty thick, that they may be able to walk upon it, without being incommoded by the fire. This arch, in the inſide, is neither flat, nor formed into a point, but runs ſlanting, and grows narrower in proportion as it approaches the great vent, which is at the extremity, and through which the flames and ſmoke are diſcharged. Beſides this vent, the furnace has in it's top five ſmall apertures, which are, as it were, the eyes of it; they cover them with ſome broken pots, in ſuch a manner, however, that they aſſiſt the air and fire of the furnace; it is by theſe eyes that they judge whether the porcelain is baked enough: they uncover the eye which is a little before the great vent, and with iron tongs open one of the caſes. The porcelain is enough baked when there is a clear fire in the furnace, and when all the caſes are red-hot, and when the colours are bright and clear: then they diſcontinue the fire, and cloſe up the door of the furnace for ſome time; the furnace having a deep fire all over it. They paſs over a plank into the cavity of the furnace, in order to range the porcelain. When they have kindled the fire, they forthwith ſhut the door, leaving in it an aperture neceſſary to throw in pieces of wood a foot long, but very ſmall. They firſt heat the furnace for a day and a night: then two men, who relieve each other, conſtantly throw wood into it; for one baking they generally burn four-ſcore loads. To judge of this matter by what the Chineſe book ſays, that quantity cannot be ſufficient: in it we are aſſured that they burned 240 loads for this purpoſe, and 20 more if the weather was rainy, though at that time the furnaces were ſmaller by one half than thoſe uſed at preſent. They at firſt kept up a gentle fire in them for ſeven days and ſeven nights, and on the eighth day made a very ſtrong fire. It is to be obſerved, that at this time the caſes of the ſmall porcelain were baked apart, before they were put into the furnace; it muſt alſo be owned, that the ancient porcelain had more ſubſtance than the modern.

The old workers alſo obſerved one thing, which is neglected at preſent; when there was no more fire in the furnace, they did not open the door 'till after five days, for the ſmall: at preſent, indeed, they delay opening the door, and taking out the large porcelain, for ſome days, for without this precaution they would ſplit; but for the ſmall, if the fire has been extinguiſhed in the evening, they take them out the next day: the deſign is probably to ſpare wood for the next baking. As the porcelain is exceſſively hot, the workman, in order to lay hold of it, uſes long ſlings hung about his neck.

After having in one day burnt a hundred and four-ſcore loads of wood in the entry of the furnace, it is ſurprizing that the next day no aſhes ſhould be found. They who attend theſe furnaces muſt be well accuſtomed to the fire: it is ſaid they put ſalt into their tea, that they may drink as much of it as they pleaſe, without being the worſe; but it is not eaſy to comprehend how this ſalted liquor allays their thirſt.

After what has been ſaid, it is not ſurprizing that porcelain ſhould be ſo dear in Europe. It is alſo to be obſerved, that, beſides the great gain of the European merchants, and that which their Chineſe commiſſioners make of them, it is rare that a baking ſucceeds entirely, that often the whole is loſt, and that, on opening the furnace, they find the porcelain and caſes reduced to a maſs as hard as a rock; and too great a fire, or ill-tempered caſes, may deſtroy the whole; that it is not eaſy to regulate the fire which ought to be applied; that the nature of the weather inſtantaneouſly changes the action of the fire, the quality of the ſubject on which it acts, and that of the wood which ſupports it. Thus for one workman who becomes rich, there are an hundred others who ruin themſelves, and tempt fortune, from the hopes they have of amaſſing wherewithal to ſet up a merchant's ſhop.

Beſides, the porcelain tranſported into Europe is almoſt all made upon new models, which are often whimſical, and in which it is difficult to ſucceed; provided it has but the ſmalleſt fault, it is diſliked by the Europeans, who will have nothing but what is perfect; for this reaſon, it remains in the hands of the workman, who cannot ſell it to the Chineſe, becauſe it is not agreeable to their taſte: it is, therefore, neceſſary, that the pieces ſold ſhould defray the expence of ſuch as are rejected.

According to the Hiſtory of King-te-tching, the gain formerly ariſing from porcelain was much greater than at preſent. This can hardly be believed, for there was not at that time ſo great a vent for porcelain in Europe. This happens becauſe the living is at preſent dearer than before; becauſe the wood in the neighbouring mountains being exhauſted, they are obliged to bring it a great way, and at a vaſt expence, becauſe the profit is divided among ſo many different perſons; and laſtly, becauſe the workmen are leſs ſkilful than they were in former times, and conſequently leſs certain in ſucceeding. This may alſo proceed from the avarice of the mandarins, who employing a great many workmen, make rich preſents to their protectors at court, and pay the labourers ill, which are ſufficient reaſons why the merchandize ſhould be dear, and the merchant poor.

The difficulty of imitating certain models ſent from Europe, is one of the circumſtances which augment the price of porcelain; for all the workmen cannot labour upon all the models ſent from foreign countries: ſome of them are impoſſible to be imitated in China, juſt as ſome of their works ſurprize ſtrangers, and are thought impoſſible to be done.

The following are ſome examples of this: we there ſee a large porcelain lanthorn, through which a flambeau enlightens a whole room. This work had been beſpoke by the hereditary prince, who alſo beſpoke ſeveral muſical inſtruments, and, among the reſt, a kind of ſmall organ, called t-ſeng, which is near a foot high, and compoſed of fourteen pipes, whoſe melody is very agreeable. They ſucceed perfectly in flutes, flagelets, and another inſtrument called yun-lo, which is compoſed of ſeveral ſmall, round, and ſomewhat concave plates, each of which has a particular ſound; they ſuſpend nine of them in a ſquare, which correſponds to ſo many different ſtages, which are touched with ſticks, like the drum: there is a ſmall chime, which agrees with the ſound of other inſtruments, and imitates voices. It is neceſſary, they ſay, to make a great many experiments, in order to diſcover the thickneſs, and the degree of baking proper for the tones neceſſary for harmony.

To return to ſuch of the Chineſe works as are curious. They ſucceed principally in groteſque pieces, and the figures of animals. The workmen make ducks and tortoiſes, which float upon the water; they make cats, painted in the natural manner, which upon their heads carry a ſmall lamp, the flame whereof forms the two eyes of the animal; by this means the rats are frighted in the night-time. They alſo make a great many ſtatues of Kouañ-in, a goddeſs celebrated in China; they repreſent her holding an infant in her arms, and ſhe is invoked by barren women who want to have children: ſhe may be compared to the antique ſtatues which we have of Venus and Diana; with this difference, that the ſtatues of Kouan-in are very modeſt.

There is another kind of porcelain, the making of which is very difficult, and is, therefore, very uncommon. The body of this porcelain is extremely thin, and it's ſurface very even, both within and without; it has mouldings, however, in it, groups of flowers, for example, and other ſimilar ornaments. It is made in the following manner: when it is taken off the wheel, they put on a mould, on which the figures are engraved, and theſe are imprinted on the inſide; they render it as ſmooth and fine externally as poſſible, working

ing it with the chiſſel, after which they varniſh and bake it in the ordinary furnace.

The European merchants ſometimes deſire the Chineſe workmen to give them plates of china for tables, the ſeats of chairs, or the frames of pictures; but theſe cannot be had: the largeſt and longeſt plates are about a foot ſquare; if they are made larger, let them be as thick as they will, they warp. For this reaſon, inſtead of making theſe plates thick, they make them with two ſurfaces, which they unite, leaving the inſide hollow: in the two ſides they make two apertures, to enchaſe them in joiner's works, or in the backs of chairs, where they make an agreeable appearance.

The Hiſtory of King-te-tching ſpeaks of ſeveral works ordered by the emperors, which they in vain attempted to make. The grandfather of this preſent emperor beſpoke urns, almoſt of the ſame figure with thoſe pots in which we put orange-trees; theſe urns he wanted to contain ſmall red, gold, and ſilver-coloured fiſh, which are accounted curioſities. Perhaps he alſo intended to bathe in theſe veſſels, for they were to have been three feet and a half diameter, and two feet and a half high; the bottom was to have been half a foot thick, and the ſides a third of a foot in thickneſs. The workmen laboured three years ſucceſſively at theſe veſſels, and made two hundred, none of which ſucceeded. The ſame emperor ordered plates for the porch of an open gallery; every plate was to be three feet high, two feet and an half broad, and half a foot thick. All theſe things, ſay the Annals of King-te-tching, could not be made; for which reaſon the mandarins of that province petitioned the emperor to have the work diſcontinued.

As every profeſſion has it's idol, and as divinity is there as eaſily communicated as the quality of count and marquis in Europe, it is not ſurpriſing that there ſhould be a god of porcelain. The Pouſa, which is the name of this idol, owes it's origin to theſe deſigns which the workmen cannot execute. It is ſaid, that formerly an emperor would abſolutely have porcelain upon a model which he gave. It was repreſented to him, that the thing was impoſſible; but all remonſtrances only excited his curioſity.

As porcelain has been in great eſteem for ſo many ages, perhaps the reader may want to know wherein that of former times differs from the preſent, and what the judgment of the Chineſe is in this particular. It is not to be doubted but China has its antiquaries, who are prepoſſeſſed in favour of their ancient works. Though the Chineſe are certainly admirers of antiquity, yet ſome of them ſtand up in defence of the modern works. But the porcelain does not, like old medals, give us an acquaintance with remote times.

The old porcelain may be adorned with ſome Chineſe characters, which, however, denote no point of hiſtory; ſo that the curious find nothing in it but the taſte and colours, to make them prefer it to that of the preſent days. It is ſaid in Europe, that porcelain muſt be long buried in the earth before it arrives at it's perfection. This is a falſe opinion, at which the Chineſe laugh. The Hiſtory of King-te-tching, ſpeaking of the moſt beautiful porcelain of former times, ſays, that it was ſo much ſought after, that the furnace was hardly opened, 'till the merchants were diſputing with each other, who ſhould have the firſt parcel. This by no means ſuppoſes that it was buried in the earth.

It is true, in digging in the ruins of old buildings, and eſpecially in cleaning old wells, there are ſometimes beautiful pieces of China found, which have been hid during revolutions in the ſtate. This porcelain is beautiful, becauſe the inhabitants only hid what was valuable, that they might find it again when the troubles were at an end. If it is eſteemed, it is not becauſe it has acquired any new degree of beauty in the earth, but becauſe it has retained it's ancient luſtre; and this alone is of great importance in China, where they give large ſums for the ſmalleſt veſſels, which were uſed under the emperors Yan and Chun, who reigned many ages before the dynaſty of Tang, at which time porcelain began to be uſed by the emperors. All that porcelain acquires by lying long in the earth, is ſome change in it's colouring or complexion, which ſhews that it is old. The ſame happens to marbles and ivory, but more ſpeedily; becauſe the varniſh hinders the moiſture from inſinuating itſelf ſo eaſily into the porcelain.

According to the annals of King-te-tching, there were formerly urns ſold at fifty-eight, or fifty-nine taels, which amount to more than eighty crowns. What an immenſe ſum muſt theſe have been worth in Europe?

Certain mandarins, to their protectors at court, make preſents of old porcelain, which they have the talent of making themſelves; that is, they have found the art of imitating ancient porcelain, or at leaſt ſuch as is pretty old. The matter of theſe falſe koutongs, or counterfeit antiques, is a yellow earth, found near King-te-tching. A plate of this earth weighs as much as ten porcelain ones of the ſame ſize. There is nothing particular in making this kind of porcelain, if not that they give it a varniſh made of yellow ſtone, mixed with ordinary oil, which prevails moſt in the compoſition. This mixture gives the porcelain a ſea-green colour. When it is baked, they throw it into a very rich broth, of fowls and other victuals, in which it is boiled. After this they put it into the filthieſt ſink they can find, and there leave it a month or more. When it comes out of this ſink, it paſſes for three or four hundred years old, or at leaſt as old as the dynaſty of Ming; when the porcelain of this colour and thickneſs was much eſteemed at court.

Theſe ſpurious antiques likewiſe reſemble the genuine ones in this, that when they are ſtruck, they do not ſound, and when they are applied to the ear, they produce no humming noiſe.

The natives of China are almoſt as curious about glaſſes and cryſtals which come from Europe, as the Europeans are of the Chineſe porcelains; but, whatever eſteem the Chineſe have for our commodities of this kind, they do not croſs the ſeas for European glaſſes, finding their own porcelain of more uſe, becauſe it bears hot liquors.

The method of giving a luſtre to the gold laid on porcelain; the different kinds of varniſhes and colours given to the porcelain; the method of preparing theſe varniſhes and colours; new deſigns of porcelain works; manner of emboſſing porcelain.

As gold laid upon porcelain is, in proceſs of time, effaced, and loſes a great deal of it's luſtre, they reſtore it's ſplendor by wetting the porcelain with pure water, and rubbing it with an agate-ſtone; but they muſt take care to rub the veſſel in the ſame direction, for example, from the right to the left.

The lips of the porcelain are principally ſubject to ſcale off. To remedy this inconveniency, they fortify them with a certain quantity of bamboo-coal pounded, which they mix with the varniſh that is laid on the porcelain, and which gives it a grey, or cineritious colour. Then, with the pincers, they make a border of this mixture round the porcelain already dry, putting it on the wheel. When it is time, they apply the varniſh to the border, as they do to the reſt of the porcelain; and when it is baked, the edges are extremely white. As there is no bamboo in Europe, it's place may be ſupplied by willow-coal, or rather that of alder, which more approaches to bamboo.

It is to be obſerved, Firſt, That, before the bamboo is reduced to coal, it's green ſkin muſt be taken off, becauſe the aſhes of that ſkin make the porcelain break in the furnace. Secondly, That the workman ought not to touch the porcelain with greaſy or oily hands, ſince by this means the part touched, would infallibly crack in the baking.

In blowing the colours of red and blue upon the porcelain, the latter is more eaſily done. The Chineſe workmen agree, that if it was not too expenſive, they could blow gold and ſilver upon porcelain, of a black or blue ground, as they do a red or blue; that is, diffuſe gold or ſilver equally all over it. This ſort of porcelain, of a new taſte, could not fail to pleaſe.

They blow the varniſh as well as the red. They have, for the emperor, made works ſo delicate and fine, and they were obliged to place them on cotton, becauſe they could not handle pieces ſo tender, without danger of breaking them; and, as it is not poſſible to plunge them in the varniſh, without touching them with the hand, they blow the varniſh upon them.

It is to be obſerved, that in blowing the blue, the workmen take a precaution to preſerve the colour which does not fall on the china, and to loſe as little of it as poſſible. This precaution is to place the veſſel on a pedeſtal, poſited over a large piece of paper, which ſerves for ſome time. When the azure is dry, they take it off, by rubbing the paper with a ſmall bruſh.

They have likewiſe found a new ſubſtance, proper to enter the compoſition of porcelain. This is a ſtone, or ſpecies of chalk, called hoache, which the Chineſe phyſicians uſe in a ptiſan, which they ſay removes wearineſs, is aperient and refreſhing. They take ſix parts of this ſtone, and ſix of liquorice, which they pulveriſe. They put half a ſpoonful of this powder into a large draught of freſh water, which they order the patient to drink.

They pretend that this ptiſan refreſhes the blood, and temperates internal heats. The workers of porcelain have thought fit to employ this ſtone inſtead of the kaolin. Perhaps ſuch parts of Europe, where kaolin cannot be found, may furniſh the ſtone hoache. It is called hoa, becauſe it is glutinous, and reſembles ſoap.

The porcelain made of hoache is rare, and much dearer than the other kinds. It has an extremely fine grain; and, with reſpect to the work of the pencil, if we compare it with the ordinary porcelain, it is almoſt what vellum is to paper.

Beſides, this porcelain is extremely light, which ſurpriſes a perſon accuſtomed to handle other porcelains. It is alſo more brittle than the common ſort, and the true degree of baking it is very hard to be hit upon.

Some workmen do not uſe the hoache for the body of their work, but make a thin glue of it, in which they dip the porce-

lain

lain when dry, before it receives the colours and the varniſh, by which means it acquires ſome degree of beauty.

They uſe the hoache in the following manner. Firſt, When they have taken it from the mine, they waſh it with river or rain water, to ſeparate it from the yellow earth which adheres to it. Secondly, They break it, and put it into a veſſel to diſſolve; after which, they prepare it in the ſame manner with the kaolin. They affirm, that porcelain may be made of the hoache alone, without any other mixture. Some Chineſe workmen, however, ſay, that to eight parts of hoache, they put two of petunſe; and that in other reſpects they proceed in the ſame manner as in making ordinary porcelain with petunſe and kaolin.

In this new ſpecies of porcelain the hoache is in place of the kaolin, but it is much dearer than the other. The load of kaolin coſts only twenty pence, whereas that of hoache comes to a crown. Thus it is not ſurpriſing, that this ſhould be ſold dearer than the common porcelain.

There is another obſervation to be made on the hoache; when they prepare it, and form it into ſmall ſquares, like the petunſe, they diſſolve in water a certain quantity of theſe ſquares, of which they form a very clear glue or cement. In this they dip the pencil, and draw various deſigns on the porcelain; and when it is dry they give it the varniſh. When the porcelain is baked, we perceive theſe deſigns to be of a different white from the reſt. They ſeem to be a delicate ſteam ſpread on the ſurface. The white of the hoache is called ſiamyape, or ivory white.

They paint figures on porcelain with chekao, as well as with hoache, which gives it another ſpecies of white colour; but the chekao has this peculiar to itſelf, that before it is prepared like the hoache, it muſt be toaſted on the hearth; after which it is broken, and prepared in the ſame manner with the hoache. They throw it into a veſſel full of water, and agitate it there. They, at different times take off the cream which floats upon it; and when all this is done, they find a pure maſs, which they employ in the ſame manner as the purified hoache. The chekao cannot ſerve as the body of the porcelain. Hitherto, nothing but the hoache has been found to ſupply the place of the kaolin, and give ſolidity to the porcelain. If, according to the Chineſe workmen, they were to put more than two parts of the petunſe to two parts of the hoache, the porcelain would infallibly be deſtroyed in baking, becauſe it's parts are not ſufficiently united.

We have not as yet ſpoken of a kind of varniſh, called tſe-kin-yeou, that is, burniſhed varniſh of gold. We might rather call it varniſh of a bronze, or coffee-colour, or of the colour of a withered leaf. This varniſh is of a late invention, and in order to make it, they take common yellow earth, and manage it in the ſame manner they do the petunſe. When it is prepared, they employ only the moſt delicate part of it, which they thow into water, and which forms a glue, as liquid as the ordinary varniſh, called peyeou, which is made of pieces of rocks. Theſe two varniſhes, the peyeou and the tſe-kin, are mixed together, and for this purpoſe they ought to be rendered equally liquid. Of this they make a trial, by plunging the petunſe into both; and if each of the varniſhes penetrates it's petunſe, they judge them equally liquid, and proper to incorporate with each other. They alſo mix with the tſe-kin, varniſh or oil of quick lime, and aſhes of fern, and of the ſame liquidity with the peyeou; but they mix more or leſs of theſe varniſhes with the tſe-kin, according as they want it, deeper or fainter. This may be known by ſeveral trials; for example, mix two cupfuls of the tſe-kin, with eight of the peyeou; then, to four cupfuls of this mixture, add one cupful of the varniſh of lime and fern. It is not long ſince they found the ſecret of painting the porcelain with tfoui, which is of a violet colour, and gilding it. They have tried to make a mixture of gold leaf with the varniſh and power of flints, which they applied in the ſame manner as the red, with oil; but this varniſh does not ſucceed, and they have found that the varniſh of the tſe-kin had more beauty and ſplendor.

Formerly they made cups, to which they gave the outſide a gilded varniſh, and the inſide the pure white varniſh. They afterwards varied, and to a cup or veſſel they intended to varniſh, they in one or two parts applied a ſquare or circle of paper; and after having laid on the varniſh, they raiſed the paper, and painted the unvarniſhed ſpace red or blue. When the porcelain was dry, they gave it the uſual varniſh, whether by blowing or otherwiſe. Some fill theſe empty ſpaces with a ground of blue or black, in order to apply the gilding after the firſt baking. In this reſpect we may imagine ſeveral combinations, according to our fancy.

They have alſo invented a new ſort of porcelain, which is of an olive colour, and which they call long-tſiven. This ſpecies was formerly called tſinko, the name of a fruit among them, whoſe colour reſembles that of olives. This colour is given to the porcelain, by mixing 7 cups of the varniſh called tſe-kin, with four cups of peyeou, two cups, or thereabouts, of the oil of quick lime and fern, and one of tſouyeou, which is an oil obtained from flint. The tſouyeou makes a large quantity of veins appear on the porcelain. When they uſe it alone, the porcelain is brittle, and without ſound when ſtruck; but when it is mixed with the other varniſhes, it is variegated by beautiful ſmall veins, and neither renders the porcelain leſs ſonorous, nor more brittle than the common ſort.

We muſt not omit one thing, which is, that before they give the varniſh to the porcelain, they poliſh it, and ſmooth all it's ſmalleſt inequalities. This is done by a pencil made of very fine feathers, which they moiſten with water, and gently paſs it over the whole; but it is principally with the fine china that they uſe ſo much pains.

The ſhining or reflecting black, is given to the porcelain by plunging it in a liquid mixture compoſed of prepared azure. In this caſe it is not neceſſary to employ the fineſt azure, but the compoſition muſt be a little thick, and mixed with the varniſh of peyeou and tſe-kin, adding a little of the oil of lime, and of the aſhes of fern. For example, with ten ounces of azure, pounded in a mortar, we muſt mix one cup of tſe-kin, one cup of peyeou, and two cups of the oil of fern, burnt with quick lime.

This mixture carries it's varniſh with it, ſo that it is not neceſſary to give it another. When they bake this ſpecies of black china, they place it in the middle of the furnace, and not near the vault, where the fire has the greateſt force.

It is not true, that the red laid on with oil, called the yeou-ci-hunc, is drawn from the red of copperas, ſuch as that which is employed in painting their baked pocelain red. This red laid on with oil, is made of the grains of red copper, and of the powder of a certain ſtone or flint of a reddiſh caſt. It is thought that this ſtone is a kind of allum employed in medicine. The whole is pounded in a mortar, along with the urine of a young man, and the oil of peyeou. This mixture is applied to the porcelain before it is baked, and they give it no other varniſh. They muſt take care, during the baking that the red colour falls not to the bottom of the veſſel. The Chineſe workmen ſay, that when they want to give this red to the porcelain, they do not make uſe of the petunſe to form it; but that, in it's ſtead, they employ, together with the kaolin, a yellow earth, prepared in the ſame manner with the petunſe. It is probable that ſuch an earth is more proper to receive this kind of colour.

Perhaps the reader will be glad to know how the grains of copper are prepared. In China there is no ſilver coin, ſince in commerce they uſe it in lumps, and there are a great many pieces bad. There are, however, certain occaſions on which it is neceſſary to refine theſe bad pieces, when, for example, taxes or ſimilar contributions are to be paid.

Then they have recourſe to workmen, whoſe only buſineſs it is to refine the ſilver in furnaces made for that purpoſe, and to ſeparate it from the copper and lead. Before the melted copper is hardened and congealed, they take a ſmall broom, which they dip ſlightly in water; then, by ſtriking on the handle of the broom, they ſprinkle the melted copper with water. A pellicule is formed on the ſurface, which they take off with iron pincers, and plunge it in cold water, where the grains are formed, and multiplied in proportion as they reiterate the operation. It is evident, that if they employed aqua fortis to diſſolve their copper, the powder would be more proper for making the colour of which we ſpeak. But the Chineſe are unacquainted with aqua fortis and aqua regia, and their inventions are all extremely ſimple.

They have executed deſigns which were thought impracticable. Theſe are urns, as before-mentioned, three feet high and more without the cover, which riſe a foot high, like a pyramid. Theſe urns conſiſt of three different pieces, ſo elegantly joined, that they ſeem to make but one.

There are alſo pieces of porcelain, which they call yao-pien, which ſignifies tranſmutation. This tranſmutation is cauſed either by the defect or exceſs of the heat, or by other cauſes, which are not eaſily diſcovered.

Theſe pieces, which have not ſucceeded agreeably to the intention of the workman, and are the pure effects of chance, are not leſs beautiful and valuable than the others.

A workman intended to make veſſels with red flowers blown; a hundred pieces were entirely loſt, while only one came out of the furnace, perfectly like a ſpecies of agat.

If they would run the riſk, and be at the expence of different trials, they might effectually diſcover the art of making, what chance at that time produced. For this reaſon, they have thought fit to make porcelain of a ſhining black, which they call oukom. The caprice of the furnace has determined them to this reſearch, in which they have ſucceeded.

When they want to give a varniſh, which renders porcelain extremly white, they add to thirteen cups of peyeou, one cup of the oil of fern aſhes, as liquid as the peyeou. This varniſh is ſtrong, and ought not to be given to the porcelain which is to be painted blue; becauſe, after baking, the colour would not appear through the varniſh. The porcelain which has got the ſtrongeſt varniſh, may without any dread, be expoſed to the greateſt heat of the furnace. Thus they bake it all white, either with a view to keep it in that colour, or to gild it, or paint it in different colours, and then bake it a ſecond time. But when they want to paint porcelain blue, with a deſign that the colour ſhould appear after the baking, they only take ſeven cups of peyeou, with one cup of varniſh, or of the mixture of lime and fern aſhes.

It is to be obſerved in general, that the porcelain, whoſe varniſh contains a grear deal of fern aſhes, ought to be baked in the moſt temperate part of the furnace; that is, either after the three firſt ranks, or at the botrom, about the foot, or a foot and a half high. If it was baked at the top of the furnace, the fern aſhes would be fuſed with precipitation, and fall to the bottom of the porcelain. The caſe is the ſame with the red laid on with oil, the blown red, and the long-tſiven, on account of the grains of copper contained in theſe varniſhes: on the contrary, in the top of the furnace they bake the porcelain, to which they have only given the tſoui-yeon, which is the varniſh that gives the porcelain ſo many viens, that it ſeems to conſiſt of pieces joined tngether.

The red of copperas, laid on the rebaked porcelains, is made in like manner with copperas called tſa-fan. But before we give the method of compoſing this colour, we ſhall firſt explain the proportion and meaſure of the Chineſe weights. The kin, or Chineſe pound, conſiſts of ſixteen ounces, which they call leams or taels.

The leam or tael is a Chineſe ounce.

The tſien or mas, is the tenth part of the leam or tael.

The fuen is the tenth part of the tſien or mas.

The by is the tenth part of the ſuen.

The hoa is the tenth part of the by.

To a leam or tael of ceruſs, they add two maſs of this red. They paſs the ceruſs and the red through a ſieve, and mix them together dry; then they incorporate them with water impregnated with common glue, reduced to the conſiſtence of mouth-glue.

This glue fixes the red to the porcelain, and prevents its melting. As the colours, if laid on too thick, would produce inequalities on the ſurface, they now and then dip the pencil in water, and tſen in the colour which they intend to uſe.

In order to obtain a white colour, to a leam of ceruſs they add three mas, and three fuen of the powder of the moſt tranſparent flint calcined, after having luted them in a veſſel of porcelain, which they bury in the ſand of the furnace before they heat it. This powder ought to be impalpable. They uſe ſimple water, wirhout any mixture of glue, in order to incorporate it with the ceruſs.

In order alſo to make the deep green, they add to one teal of ceruſs, three mas and three fuen of the powder of flint, with eight fuen, or near a maſs of tom hoa-pien, to make the green. They muſt waſh it well, and carefully ſeparate the grains of copper which are mixed with it, and which are not proper for the green. They only employ the ſcoriæ, that is to ſay, the parts of the metal which are ſeparated when they work it.

As for the yellow colour, it is made by adding to a tael of ceruſs three mas and three fuen of powder of flint, and one fuen and eight by of red, which has not been mixed with ceruſs. To make a beautiful yellow, you muſt add two fuen and a half of this primitive red.

A tael of ceruſs, three mas and three fuen of powder of flint, and two by of azure, form a deep blue of a violet caſt. Some workmen add eight by of azure.

The mixture of green and white, for example, one part of green, added to two of white, makes the water green, which is very clear.

The mixture of green and yellow, for example, two cups of deep green, added to one of yellow, produces the colour which reſembles a leaf ſomewhat faded.

In order to produce black, they dilute the azure in water, but the ſolution muſt be very thin. They mix with it a little common glue, macerated in lime-water, and boiled to the conſiſtence of mouth-glue. When with this black they have painted the porcelain, which they intend to bake a ſecond time, they cover the black parts with white. In the baking, this white is incorporated with the black, juſt as the common varniſh is with the blue of the common porcelain.

There is another, called tſin, which is prepared of a ſtone, or mineral, reſembling Roman vitriol. It is probable that this ſubſtance is taken from ſome lead mine, and that carrying imperceptible particles of the lead along with it; it inſinuates itſelf into the porcelain, without the help of the ceruſs, which is the vehicle of the other colours given to the re-baked porcelain.

It is of this tſin that they make the deep violet. It is found at Canton and at Pekin, but that found at the laſt of theſe places is by far the beſt. It is ſold at ſeven ſhillings and ſixpence a pound. The tſin is fuſed, and when it is ſo, ſilverſmiths, by way of enamel, lay it upon ſilver works. They will put, for inſtance, a ſmall circle of tſin about a ring, or they will enchaſe it by way of a ſtone. This ſpecies of enamel comes off at laſt, but they endeavour to prevent this by laying it on a ſlight ground of mouth or common glue.

The tſin, as well as the other colours we have mentioned, is only uſed for the re-baked porcelain. The tſin is prepared in the following manner. They do not toaſt it as they do the azure, but break it, and reduce it to a very fine powder; then they put it into a veſſel full of water, which they agitate a little; then they pour out the water, in which there is ſome naſtineſs, and keep the cryſtal which has ſunk to the bottom of the veſſel. This maſs, thus diluted, loſes it's beautiful colour; but the tſin recovers it's violet colour when the porcelain is baked. The tſin may be kept as long as they pleaſe. When they want to paint any porcelain veſſel with this colour, they muſt dilute it wirh water, mixing a little common glue with it; which, by ſome, is thought unneceſſary, but this muſt be determined by experience.

In order to gild or ſilverize the porcelain, they add two fuen of ceruſs to two maſs of diſſolved gold or ſilver leaf. The ſilver upon the varniſh tſe-kin has a beautiful ſplendor. If they gild ſome, and ſilverize others, they do not leave the ſilveriſed work ſo long as the gilt, in the ſmall furnace, otherwiſe the ſilver would diſappear before the gold obtains the degree of baking neceſſary to give it it's luſtre.

There is another ſort of coloured porcelain, which ſells deater than thoſe painted with the colours we have mentioned. Perhaps the account I am to give of it, may be of ſome uſe for perfecting the Engliſh pottery-ware, though we ſhould not be able to obtain to the perfection of the Chineſe porcelain.

To make theſe kinds of works, it is not neceſſary that the ſubſtance employed ſhould be extremely fine. They take cups that have been already baked in the large furnace, without being varniſhed, which are conſequently all white, and have no luſtre. They colour them by plunging them in the veſſel, where the colour is prepared, when they want them of the ſame colour. But if they want them of different colours, ſuch as the works called hoan-tou-houan, which are divided into a kind of ſquares, ſome of which are yellow, and others green; they apply theſe colours with a large pencil. This is all the ornament they give to this ſpecies of porcelain, only after the baking, they lay a little vermillion on certain places; as, for example, on the beaks of certain birds; but this colour is not baked, becauſe the fire would deſtroy it, for which reaſon it does not laſt long. When they have applied the other colours, they re-bake the porcelain in the large furnace, with other porcelains which have not been baked before. It muſt be placed at the bottom of the furnace, and below the air vent, where the fire has leſs activity; becauſe an intenſe fire would deſtroy the colours. The colours proper for this ſort of porcelain are prepared in the following manner: in order to make the green, they take tamhoa-pien, ſaltpetre, and powder of flint. When they have reduced them ſeparately into an impalpable powder, they dilute, and mix them together with water.

The moſt common azure, together with ſaltpetre, and powder of flint, forms the violet.

The yellow is prepared by adding three mas of the red of copperas, to three ounces of the powder of flint, and three ounces of ceruſs.

For producing the white, to four mas of the powder of flint, they add a tael of ceruſs. All theſe ingredients are to be diluted in water; and this is the whole of what relates to the colours of this ſort of porcelain.

When ſpeaking of the furnaces, where they re-bake the painted porcelain, we have obſerved, that they make piles of porcelain veſſels, putting the ſmaller into the larger, and thus ranging them in the furnace. Care muſt be taken, that the veſſels do not touch each other in the parts which have been painted; for, in this caſe, all the veſſels would be loſt. The foot of one cup may be ſupported by the bottom of another, though it be painted; becauſe the edges of the bottom of the ſmaller cup are not painted: but the ſides of one cup muſt not touch thoſe of another. Thus, when they have cups which do not eaſily enter into each other, ſuch as the long chocolate cups, the Chineſe workmen range them in the following manner.

Upon a bed of theſe porcelains, laid in the bottom of the furnace, they lay a covering, either of plates made of the earth with which the furnaces are built, or of the pieces of caſes for the porcelain; for in China every thing is uſed to the beſt advantage. Above this covering they lay another bed of theſe porcelains, and continue to do ſo to the very top of the furnace.

It is not true, as we have before obſerved, that they know that the painted or gilt porcelain is ſufficiently baked, when they ſee the gold or colours ſparkle with all their luſtre. The colours are not diſtinguiſhed 'till the re-baked porcelain is become cold. They judge that the porcelain, baked in the ſmall furnace, is ready to be taken out, when, looking through the aperture at the top, they, to the very bottom, ſee all the porcelains red with the fire; when they diſtinguiſh the piled cups from each other; when the porcelain has no longer theſe inequalities formed by the colours, and when the colours are incorporated in the body of the porcelain, in the ſame manner that the varniſh laid upon the beautiful azure, is incorporated with it by the heat of the large furnace.

As for the porcelain re-baked in the large furnace, they judge that it is ſufficiently baked, 1. When the flame which comes out is not of a very red, but rather of a whitiſh colour. 2. When looking through one of the apertures, they perceive that the caſes are all red. 3. When, after having opened a caſe at the top, and taken a piece of porcelain out of it, rhey perceive when it is cold, that the varniſh and colours are in the condition in which they want them. And, 4. When

looking

looking in at the top of the furnace, they perceive the gravel in it's bottom to be ſhining. By all theſe marks, a workman judges whether the porcelain is perfectly baked.

When they would have the blue entirely to cover the veſſel, they uſe leao or azure, prepared and diluted in water to a due conſiſtence, and in this they plunge the veſſel. As for the blown blue, called tſui-tſim; they in it uſe the moſt beautiful azure, prepared in the manner before-mentioned. They blow it upon the veſſel, and when it is dry, they lay on the ordinary varniſh, either alone, or mixed with tſoui-yeou, if they would have the porcelain veined.

Some workmen upon this azure, whether blown or otherwiſe, draw figures with the point of a long needle. The needle removes as many ſmall grains of the dry azure, as is neceſſary to repreſent the figure; after which, they lay on the varniſh. When the porcelain is baked, the figures appear painted in miniature.

There is not ſo much labour as may be imagined, in making the porcelains, on which flowers, dragons, and other ſimilar figures are emboſſed. They firſt trace them with the graver on the body of the veſſel; then they make ſmall incifions round them, which raiſe them; and, laſtly, they apply the varniſh.

The following things are to be obſerved in the manner of preparing the leao, or azure. 1. Before burying it in the gravel of the furnace, where it is to be toaſted, it muſt be well waſhed, in order to remove the earth which adheres to it. 2. It muſt be included in a caſe of porcelain well luted. 3. When it is toaſted it muſt be pounded, and paſſed through a ſieve. Then they put it into a well varniſhed veſſel, and pour boiling water upon it. After having agitated it a little, they take off the froth on the ſurface, and pour out the water, by inclining the veſſel to one ſide. This preparation of azure, with boiling water, is to be repeated twice. After this they take the azure, thus moiſt and reduced into a kind of thin paſte, and putting it into a mortar, pound it for a conſiderable time.

The azure is found in the mines of rock-coal, or in the red earths adjacent to thoſe mines. It ſometimes appears on the ſurface of the ground; and this is an infallible ſign, that by digging farther, more of it may be found. In the mine it preſents itſelf in pieces as large as a man's thumb, but flat, and not round. The coarſe azure is pretty common, but the fine is very rare, and not eaſily diſcerned by the eye; and we muſt make trial of it before we can judge of it's value.

This trial conſiſts in painting a porcelain veſſel with it, and then baking the veſſel. If Europe produced beautiful leao, or azure, and fine tſin, which is a kind of violet colour; theſe would, among the Chineſe, be commodities of great value, and eaſily tranſported: ſo that we might bring back the moſt beautiful porcelain in exchange for them. We have already obſerved, that a pound of tſin is ſold for a tael and eight mas, that is, for ſeven ſhillings and ſix-pence. For two taels they ſell a box of beautiful leao, which contains only ſix ounces, and this amounts to twenty-pence an ounce.

They have tried to paint ſome porcelain veſſels black, with the fineſt of the Chineſe ink; but this attempt had no ſucceſs: for when the porcelain was baked, it was found to be very white. As the parts of this black have not a ſufficient body, they were diſſipated by the action of the fire, or rather the had not force enough to penetrate the bed of varniſh, and produce a colour different from it.

Of the SAXON PORCELAIN, according to Mr HANWAY.

Perhaps it may be ſome indulgence, to a female curioſity at leaſt, to be informed concerning this brittle commodity, which has been ſo paſſionately ſought after by the fair ſex. But can this paſſion be deemed a folly, when we ſee even mighty princes * pride themſelves in it? Here are a great number of porcelain figures of dogs, ſquirrels, monkeys, wolves, bears, leopards, &c. ſome of them as big as the life; alſo elephants, and rhinoceros's of the ſize of a large dog; a prodigious variety of birds, as cocks, hens, turkeys, peacocks, pheaſants, hawks, eagles; beſides parrots, and other foreign birds, and a curious collection of different flowers. The Apoſtles, near three feet high, are in white porcelain. There is a repreſentation of the crucifixion, four or five feet high, with numerous other curious pieces: theſe laſt are intended for the Romiſh chapel, which is to be furniſhed with theſe rare materials. A clock is preparing for the gallery in this palace, whoſe bells are to be of porcelain: I heard one of them proved, and they are ſufficient to form any muſic; but the hammers muſt be of wood.

* His Majeſty of Pruſſia ſometimes calls his brother of Poland the Porcelain King.

Baron Botgen, about 46 years ſince, firſt began to make this porcelain; his firſt trial was the red, and from thence he proceeded to glazing, and ſince that, gilding and painting have been carried to an amazing perfection. In order to preſerve this art as much as poſſible a ſecret, the fabric at Meiſſen, which is near Dreſden, is rendered impenetrable to any but thoſe who are immediately employed about the work; and the ſecret of mixing and preparing the materials, is known to very few of them. They are all confined as priſoners, and ſubject to be arreſted if they go without the walls; and conſequently a chapel, and every thing neceſſary is provided within. There are about 700 men employed, moſt of whom have not above ten German crowns a month, and the higheſt wages are forty; ſo that the annual expence is not eſtimated above 80,000 crowns. This manufacture being entirely for the king's account, he ſells yearly to the value of 150,000, and ſometimes 200,000 crowns *, beſides the magnificent preſent he occaſionally makes, and the great quantity he preſerves for his own uſe. They pretend they cannot execute faſt enough the commiſſions which they receive even from Aſia, as well as from all parts of Europe, and are conſequently under no neceſſity of lowering the enormous prices; however, this muſt be the conſequence ere long, if the Engliſh and French continue to make ſuch great improvements in this art. It is with great ſatisfaction that I obſerve the manufactories of Bow, Chelſea, and Stepney, have made ſuch a conſiderable progreſs. On the other hand, it is equally a ſubject of horror to ſee ſo many ſhops in the ſtreets of London, ſupplied with the porcelain of Dreſden, though it is importable, only under oath of being for private uſe, and not for ſale.

* 35,000l.

REMARKS.

The French court ſeems to have very much at heart the promotion of the new manufacture of porcelain, which has lately been ſet up in the royal caſtle of Vincennes, with a view of equalling that of Saxony. The Sieur Charles Adams, the undertaker of it, has, in particular, extraordinary power given him over his workmen, to prevent their engaging with other projectors, to the damage of the ſaid Adams.

What renders the Oriental porcelain ſo univerſally eſtimable is, not only it's general delicacy, but it's general greater cheapneſs compared to that of Dreſden, or any other nation: and 'till England, France, Holland, or Saxony, can afford this manufacture at as reaſonable rates as the Eaſtern nations do, it can never be expected that any, or indeed all the united European porcelain manufacturers, will vend ſo large a quantity as is done by the Aſiatics in general.

It is certain that the art of pottery, as well in England as in Holland and France, has, within theſe twenty years, arrived to great perfection. And, if ever this, or any other European nation ſhould advance in the manufacture of China ware, to the degree of perfection that the Eaſtern countries have done, I am inclinable to think it muſt depend rather upon art than on the mere productions of nature; for, although in the eaſtern countries there may be earths of a quality for the purpoſe, ſuperior to ſuch as may have yet been diſcovered in any other parts of the world, yet the extraordinary beauty of their earth, we apprehend, is owing chiefly to art: and, if once the Europeans obtain that art, we believe there are earths enough, even in England, from which as good porcelain may be made, as from any that ever came from the Eaſt-Indies, or from Dreſden, and that it may come as cheap too, as ſome of our pottery-ware.

PORTO RICO. See ANTILLES ISLANDS.

PORTS, are thoſe places to which the officers of the cuſtoms are appropriated, and which include all the privileges and guidance of all members and creeks thereunto allotted.

Members are thoſe places where anciently a cuſtom-houſe hath been kept, and officers or the deputies attending, and are lawful places of exportation or importation.

Creeks, are places where commonly officers are or have been placed, by way of prevention only, and are not lawful places of exportation or importation, without particular licence from the port or member under which it is placed.

The ſeveral ports and members as now they account at the Cuſtom-houſe, are,

Note, All the ports and havens in England, are infra corpus comit. and that the Admiralty-court cannot hold juriſdiction of any thing done in them. Holland's caſe, earl of Exeter, 30 Hen. VI. And becauſe he held plea in the Admiralty of a thing done below the port of Hull, damages were recovered againſt him two thouſand pounds. Godbolt 260, 261.

The port of London being of great concern as to the cuſtoms, it's extent is by the Exchequer ſettled, and declared to be, from the North Foreland in the Iſle of Thanet, and thence northward to the oppoſite point called the Naeze, on the Eſſex coaſt, and continued Weſtward through the river Thames, and the ſeveral ſtreams falling into it, to London-bridge, ſave the uſual right to the ports of Sandwich and Ipſwich, and their members, and of the cuſtomers, comptrollers, &c. within thoſe ports, and the ſeveral creeks, &c. belonging to them within the counties of Kent or Eſſex.

And becauſe when ſhips did come up to the port of London, great frauds uſed to be committed by a promiſcuous ſhipping and landing of goods at ſeveral unknown wharfs, it was provided that a commiſſion might iſſue from the Exchequer, to

aſcertain all ſuch places, and his Majeſty hath been pleaſed to allow to be lawful keys, for lading or landing goods,

Brewer's Key Cheſter's Key Galley Key Wool Dock * Cuſtom-houſe Key	* The ſtone-ſtairs on the weſt ſide are declared not to be a place for ſhipping or landing of goods.
Porter's Key Bear Key * Sabb's Dock	* Excluding the ſtairs there, which are declared no lawful place for ſhipping or landing of goods.
Wiggon's Key Young's Key Ralph's Key * Dice Key	* The ſtairs there declared no lawful place for ſhipping and landing of goods.
Smart's Key * Somer's Key	* The ſtairs there declared unlawful for ſhipping and landing of goods.
Lyon Key Botolph Wharf Hamon's Key * Gaunt's Key	* The ſtairs on the eaſt declared unlawful for ſhipping or landing goods.
Cock's Key	One other place betwixt Cock's Key and Freſh Wharf, called part of Freſh Wharf, the ſtairs are declared unlawful for ſhipping or landing of any goods.
Freſh Wharf.	
Billingſgate	To be a common open place for the landing of fiſh, ſalt, victuals, or fuel of all ſorts, and all native materials for building and for fruit (all manner of grocery excepted) and for carrying out of the ſame, and for no other wares or merchandize.
Bridge-houſe in Southwark	Is only allowed for landing of any kind of corn for the city of London, and not upon any private or particular perſon's account.

Any perſon may lade into any ſhip or veſſel on the river of Thames bound over ſeas, horſes, coals, beer, ordinary ſtones for building: fiſh taken by any of his Majeſty's ſubjects, corn or grain, the duties being paid, and cockets, &c. duly paſſed.

So likewiſe deal-boards, balks, and all ſorts of maſts and great timber, may be landed at any place between Limehouſe and Weſtminſter, the owner firſt paying or compounding for the cuſtoms, and declaring where he will land them, and on licence had, and in the preſence of an officer, he may unlade them, otherwiſe he incurs a forfeiture.

PORTUGAL. This kingdom borders northwards on Gallicia in Spain, and is divided from it by the Minho next the ſea, and by ſome ſmall rivers and hills farther up land towards the eaſt. The weſt and ſouth ſides are waſhed by the ocean, including the little kingdom of Algarve on the ſouth, and on the weſt, the Guadiana parts the ſaid little kingdom from Andaluſia, from whence drawing a line northwards, Portugal borders on Andaluſia, Eſtramadura, and Leon. The whole extent of it from north to ſouth is 300 miles, that is, from 37 to 42 degrees of latitude. From eaſt to weſt where broadeſt, which is about the middle, it is about 120 miles, that is, from 7 to 9 degrees weſt longitude, and where narroweſt next Algarve, about 60.

Here are ſeveral mineral and medicinal ſprings, of great virtue, and much reſorted to, ſome of a hot, and others of a cold nature.

The ſoil here is, perhaps, the very worſt in all Spain, yet not univerſally ſo. But, upon the whole, it never produces corn enough to maintain it's inhabitants, but muſt be ſupplied either from Spain, or, when at war with it, from England, and other northern countries. As to wheat, it has been always obſerved to come ſhort of what the people require. Paſture is no leſs ſcarce, if we except ſome of the northern parts, as the province called Entre duero e Minho, and along the banks of ſome of their great rivers, where the beſt and largeſt cattle are fed; but on the ſouthern ſide, is very ſcarce, ſmall, and lean, though the fleſh generally good.

To make amends for this want of corn and paſture, here are vaſt quantities of wine made, which is indeed the beſt commodity of this kingdom, and ſo well known at preſent to all England, that we need ſay the leſs about it. Oil is here likewiſe, in great abundance, but far inferior to that which we have from other countries, that of Portugal being commonly ſo ſtrong and fœtid, that no one can diſpenſe with it, that hath been ever accuſtomed to the Spaniſh and Italian. Lemons and oranges alſo grow here, and are exported in great quantities, though the acidneſs of the latter, be nothing near ſo pleaſant as that of thoſe which come from Seville; nor are indeed any of their fruits, raiſins, figs, almonds, cheſnuts, &c. either ſo large or well taſted, as thoſe of Spain. Herbs and flowers of all ſorts are here commonly very good, and abundance of perfumed waters are diſtilled from thoſe of the odoriferous kind, which are here in great requeſt, they being in ſome ſhape or other, uſed in almoſt every thing that is eat, drank, or worn. This country produces likewiſe great quantities of allum, white marble, alabaſter, and eſpecially ſalt, of which immenſe loads are continually exported hence from the port of Setuval, for moſt northern nations. The woollen manufactures of this country are of ſo indifferent and coarſe a nature, that they are only worn by the meaner ſort, being ſcarcely fit for any other. Their ſilks are, in ſome places, much better, but far inferior, not only in beauty and goodneſs, but in quantity, to thoſe which are made in Spain.

The country in general is well peopled, and filled with goodly cities, towns, and villages, though not every where alike.—We ſhall, in the ſequel, give an account of the moſt remarkable ones.

This kingdom is divided into five provinces, to which if we add the little kingdom of Algarve, they will be in all ſix, of which we ſhall now ſpeak in due order, beginning at the north, and ſo deſcending to the ſouth. They are as follow:

I. Entre Duero e Minho.
II. Tra los Montes.
III. Beira.
IV. Eſtramadura,
V. Alentejo.
VI. Algarve.

I. The province ENTRE DUERO E MINHO. This province hath the Minho on the north, to divide it from Gallicia, and the Duero on the ſouth, which parts it from Beira; on the weſt it is bounded by the ocean, and on the eaſt by a ridge of mountains, which ſevers it from the province of Tra los Montes, or over the hills. It is but ſmall, not extending in it's utmoſt length above 36 miles, and in it's greateſt breadth above 30, and where narroweſt above 12 or 14. It extends from 41 to a little above 42 degrees of latitude, and within the 8th degree of weſt longitude; but though ſo ſmall is the beſt inhabited, has the greateſt number of cities, towns, and villages, of all the reſt, in proportion, beſides that it is one of the pleaſanteſt and moſt fertile, though mountainous, having many other rivers beſides the two that incloſe it, and a vaſt number of rivulets, and ſweet ſprings to water it, as we have already hinted; which makes it abound in good paſture more than any other parts of Portugal, though inferior, in this reſpect, to many of the provinces of Spain. Beſides theſe, the plains are every where covered with vines, fruit, and other trees of all ſorts, and the country well ſupplied with every neceſſary of life, except, as we obſerved before, that it hath not a ſufficient quantity of corn for it's inhabitants.

Braga, and Porto or Oporto, are the chief cities.

Guimaranes, Viana, Caminha, Valenza, Monzao, Barcelos, Ponte de Lima, Villa de Conte, and Amarante, are towns of note.

BRAGA, formerly the metropolitan ſee of Portugal, is ſeated on the ſouth ſide of the river Cavado, about 41 degrees 30 minutes of north latitude, and 8 degrees of weſt longitude: it is diſtant about 180 miles north of Liſbon.

PORTO, OPORTO, a famed city and ſea-port, on the north ſide of the Duero, about three miles from the ſea, is pleaſantly built on a rocky ground, that river waſhing it's walls. The port, a very commodious one, is ſo well known and frequented by our nation, that we need ſay the leſs of it. The harbour is ſafe againſt all winds, but when the floods come down, no anchor can hold the ſhips; at which times they are forced to ſqueeze and faſten them to each other along the walls, to avoid the fury of the torrent. The city ſtands in 41 degrees 10 minutes latitude north, and 8 degrees 30 minutes weſt longitude. It's diſtance is 120 miles north from Liſbon.

GUIMARANES is ſeated upon a hill, and is encompaſſed by a good wall. It ſtands about 10 miles eaſt from Braga, and about 150 miles north of Liſbon. The chief manufactures of this place are linen and fine thread, of both which conſiderable quantities are made and exported.

VIANA DE FEZ DE LIMA, ſituated on the mouth of the Lima, is a conſiderable ſea-port, encompaſſed with ſtrong walls. This town is become very conſiderable for trade, ever ſince the great conſumption of Portugueze wines in England; and is itſelf famed for a delicate ſort of it's own product, which is ſmall, and not unlike the French, nor hardly inferior to it; whereas thoſe that grow in the more ſouthern parts, are heavier and leſs pleaſant. It is diſtant from Braga about 20 miles ſouth, and about 130 north from Liſbon.

CAMINHA another, but ſmall, ſea-port, ſeated on the mouth of the river Minho.

VALENZA DE MINHO, about 12 miles above the laſt on the ſame river.

MONZAO, about ſix miles above the laſt on the ſame river.

BARCELOS ſtands on the river Cavado, in the territory of Viana.

PONTE DE LIMA ſtands about 180 miles north of Liſbon.

VILLA DE CONDE is ſituated on the ſea-coaſt, at the mouth of the river Ave.

AMARANTE ſtands on the banks of the river Tamada, and has the river of Locia running through the midſt of it. It hath a linen manufacture.

II. The province called TRA LOS MONTES. This ſmall province is called in Latin Tranſmontana, becauſe ſeated on the other ſide of that chain of hills which parts it on the weſt, from that of Entre Duero e Minho we have juſt deſcribed; on the north it borders on Gallicia, and eaſtward on the kingdom of Leon, and on the ſouth the Duero parts it from Beira. It's length from eaſt to weſt, is at moſt about 74 miles, and breadth near 60; being ſituated between the 41ſt and 42d degrees of latitude, and ſtretching from 6 degrees 40 minutes, to near 8 degrees weſt longitude.

This country is but dry and barren, being watered by but few rivers, and none of them of any conſiderable length or breadth. For this reaſon the territory has but few corn fields, except rye and ſome barley, but yields plenty of wine, and fruits of ſeveral ſorts, and abundance of game.

The cities of this province are Braganza and Miranda.

BRAGANZA is ſituated on the furtheſt angle of Portugal, but ſix miles diſtant from the borders of Leon, and at near the ſame diſtance from thoſe of Gallicia. It ſtands on a ſpacious plain, watered by the river Fervenza, which runs along it's walls. It is ſeated in the 42d degree of latitude, 6 degrees 30 minutes weſt longitude, and about 120 miles northward from Liſbon.

MIRANDA DE DUERO, ſtands on a rocky eminence, and it's walls are waſhed by a large pleaſant brook, which falls into the Duero a little below it.

III. The province of BEIRA is divided on the north from the province Entre Duero e Minho by the former of thoſe rivers; it is bounded by the ocean on the weſt, and by ſome part of Eſtramadura; on the ſouth by another part of that province, and by the Tagus; and on the eaſt it runs contiguous to the Spaniſh Eſtramadura, and the kingdom of Leon. The country, though not ſo rich and fertile as ſome in this kingdom, is yet capable of producing good corn, wine, and other uſeful commodities, if rightly cultivated.

COIMBRIA, once the metropolis of Portugal, is ſtill one of the fineſt cities in this kingdom, and no leſs celebrated for it's famed univerſity. It is pleaſantly ſeated on the north ſide of the river Mondego. It ſtands in 40 and a half degree of latitude, and 8 degrees 20 minutes of weſt longitude, being about ten miles from the mouth of the river Mondego, and about 90 north from Liſbon.

AVEIRO is a conſiderable market-town, commodiouſly ſituated in a plain, upon a bay at the mouth of a creek, on the weſtern coaſt, and made by a ſmall river, which divides the town into two parts, joined by a ſtately bridge. In this creek, which is pretty large, and forms a kind of haven, is made a vaſt quantity of ſalt, which is exported ſome into other parts of the kingdom, and the reſt into foreign countries. It ſtands in 40 degrees 40 minutes latitude, 8 of weſt longitude, and about 101 miles from Liſbon.

IV. The province of ESTAMADURA is a long narrow ſlip, running along the ſea-coaſt, and reaching from the mouth of the river Mondego northwardly down, ſouthwardly quite below the town of Setuval; ſo that it extends from the latter to the former, that is, from ſouth-weſt to north-eaſt, about 110 miles, or from 38 degrees 30 minutes to 40 degrees 10 minutes of Latitude. In breadth it is ſcarce 50, and in ſome places much narrower; and it's utmoſt verge weſtward, which is the Cape la Roca, or, as the ſailors term it, the rock of Liſbon, lies under 9 degrees 45 minutes weſt longitude. It is bounded on the north by the Mondego above-mentioned, which parts it from Beira, and the province of Alentejo. It hath again Beira on the eaſt, and the ocean on the weſt.

The land is here for the moſt part the very beſt in Portugal, and the climate very pleaſant and mild, by it's being ſo near the Weſtern or Pacific Ocean. It produces wheat and other grain, in greater plenty than the other provinces, abundance of wine, oil, fruits of all ſorts, eſpecially citrons, lemons, oranges, pomegranates, figs, dates, almonds, &c. upon which account the people here live much better, and above want. Here are alſo greater variety of manufactures carried on, and a much larger ſhare of trade and commerce; all which is owing partly to it's commodious ſituation and ſea-ports, to it's nearneſs to the city of Liſbon, the metropolis of this province and kingdom; to it's commodious harbour, and to the noble river Tagus, which is navigable a conſiderable number of leagues inland, and carries a very conſiderable commerce from that metropolis.

LISBON, the head city of this kingdom, the reſidence of it's monarchs, the great ſeat of all the courts of juſtice, the metropolitan ſee of Portugal, the moſt noble and celebrated univerſity of it, an emporium of the world, the receptacle of all the richeſt merchandizes of the Eaſt and Weſt-Indies, and the beſt ſea-port in the whole kingdom. It is ſituated in 38 degrees 46 minutes of latitude, and about 9 of weſt longitude, in an excellent air; and though that climate be rather inclinable to be hot, yet is refreſhed by the delightful breezes of the ſea, and of the river Tagus, on the banks of which it is pleaſantly and ſtrongly ſituated, and which conveys to it all the wealth of Aſia and America, as well as the chief commodities of Europe and Africa.

The harbour is one of the moſt commodious in Europe, it lying upon the Weſtern Ocean, and being capacious enough of itſelf to contain ten thouſand ſhips, all riding in ſafety, and without incumbering each other, and carries water enough for the largeſt veſſels to anchor before the windows of the royal palace. The entrance into it is defended by two handſome forts, the firſt ſeated on the ſhore, the other ſtanding oppoſite to it, on a ſhelf, in the midſt of the water. Beſides theſe, nature has provided it with another defence, which is the bar, very dangerous to paſs without pilots belonging to the place. Within this appears a vaſt capacious bay, which contracts itſelf as it draws near the city.

SETUVAL is a conſiderable ſea-port on this coaſt, a little below Liſbon. It is ſeated on a handſome bay, cloſe to the ocean, where the river Zadao diſcharges itſelf, and is much reſorted to by moſt northern nations, eſpecially for the vaſt quantities of ſalt that are made here every year.

It ſtands about 20 miles ſouth of Liſbon, and on the ſouth ſide of the Tajo, but in the ſame province with the metropolis, it's latitude is 38 degrees 27 minutes, and longitude about 8 degrees 48 minutes.

SANTAREM is ſituated on a high hill, cloſe to the Tajo. It hath on the ſouth ſide a deep valley, with a ſteep winding aſcent to the town, and on the north is a craggy ſolid rock, altogether inacceſſible; but on the weſt it faces a delightful plain, covered with gardens, orchards, and fertile fields, producing vaſt quantity of corn, oil, and variety of fruits. The Tajo abovementioned, which is here very broad and navigable, enriches, moreover, all that country, by little channels that are cut from it; inſomuch that we are told by ſome Spaniſh authors, that it yields a prodigious increaſe of wheat and other grain, but that it is often ſown, cut down, and threſhed, within the ſpace of two months. The town ſtands in 39 degrees 12 minutes latitude, 8 degrees 20 ſeconds weſt longitude, and about 42 miles north-eaſt from Liſbon.

SINTRA is ſeated near the ſea, at the foot of a ridge of mountains, and by the cape that bears it's name, almoſt on the utmoſt weſtern verge of Portugal. The town is juſtly eſteemed the moſt delightful ſpot in the whole kingdom, both for the beauty of it's ſituation and proſpect, and for the fruitfulneſs of it's territory, which produces, among other commodities, plenty of corn and wine, oil, lemons, oranges, and other fruits; and the rock on which it ſtands, hath a noble quarry of black and white marble, in great requeſt.

ALCAZAR DO SAL, ſo called, from the great quantities of ſalt which this territory produces, is ſituated on the river Zadao. It ſtands thirty-five miles ſouth-weſt from Liſbon, on the other ſide of the river Tajo, and about thirty at it's neareſt diſtance from that river.

V. The province of ALENTEJO borders on the north, on part of Eſtramadura, and of the river Tajo; eaſtward, on the Spaniſh province of Andaluſia and Eſtramadura; on the weſt it is bounded by the ocean, and part of the Portugueze Eſtramadura; and on the ſouth, by the little kingdom of Algarve. It lies between 37 deg. 30 min. lat. and about 39 degrees weſt longitude; but ſo irregular, and runs ſo much into the adjacent provinces, that it's extent can not be preciſely ſtated. In the whole it runs, where wideſt, between 90 and 100 miles; and in ſome places beyond, and in others much leſs than 80.

The country is reckoned the fineſt and fertileſt in all Portugal; and it's inhabitants, according to Faria, the wealthieſt and beſt bred. The far greater part of theſe are farmers; and the land here is ſo rich, ſo well watered by a number of rivers, which fall either into the Tajo, or Guadiana, which two laſt great ones, run quite acroſs this province, that they are all wealthy and induſtrious, and have few poor people among them.

This territory abounds not only with corn of all ſorts, wine, oil, fruits, and good paſtures, ſufficient for it's own inhabitants, but likewiſe to ſupply ſome of the adjacent provinces, which are more barren, or leſs cultivated: and this exportation is very much facilitated by thoſe rivers, which interſect the country, and run into the great ones above-mentioned, and ſome into the ſea.

EVORA is a very antient and conſiderable city, ſeated in the heart of this province, on a pleaſant hill, encompaſſed about with mountains. It ſtands about 60 miles ſouth-eaſt of Liſbon, and in 38 degrees 30 minutes latitude, and about 7 degrees 25 minutes weſt longitude.

ELVAS is ſituated on an eminence, ſtrong by nature, ſix miles from the frontiers of the Spaniſh Eſtramadura, where the river Coa divides it from Portugal. The country about is very pleaſant and fertile, and produces, in particular, great abundance of oil. The chief trade of this town is in the woollen manufacture.

ESTREMOS is ſeated on an high hill, on the top of which is a very ſtrong caſtle. Here is a curious manufacture of red earthen-ware, formerly much admired in England, and brought hence, rather for an ornament to mix among China-Ware, than for any other uſe.

Near the town is a noble ſpring, which throws up ſo much water

water in ſummer, as ſerves to turn ſeveral mills; and, contrary to all others, is dried up all the winter.
The town is about 105 miles diſtant eaſt from Liſbon, and 15 from Elvas.

VI. The little kingdom of ALGARVE. This is that part of Portugal, called, by ſome antient authors, Cuneus, or Wedge, being really wedged in by the ocean on the weſt and ſouth; on the eaſt by the Guadiana, which parts it from Andaluſia: on the north, by the mountains called Serra de Algarve, and Serra de Monchique, which divide it from Alentejo; ſo that it is but 90 miles in length, where longeſt, and but 28 in breadth, where broadeſt.
The country, though very mountainous in moſt parts of it, is yet very fertile. It does not, indeed, abound with any great quantity of corn, but abundance of wine, oil, figs, raiſins, dates, almonds, pomegranates, and other fruits. In the main, the country is nothing populous or wealthy, nor their cities and towns remarkable for any great matters.

Of the MONIES, WEIGHTS, and MEASURES of PORTUGAL.

The Portugueze keep their accounts in milreas and reas, 1000 reas making a milrea [ſee the article LEDGER]; they ſeparate the milreas from the reas thus, 769 ℔ 210, which is to ſay, 769 milreas, and 210 reas.

The GOLD MONIES of PORTUGAL are as follow, viz.

	Sterling money.
The 25 ℔ 600 reas piece - -	l. 7 : 4 : —
The 24 ℔ ditto	6 : 15 : —
The 12 ℔ 800 reas ditto - -	3 : 12 : —
The 12 ℔ ditto - - - -	3 : 7 : 6
The 6 ℔ 400 reas ditto - - -	1 : 16 : —
The 4 ℔ 800 reas, or moydore ſtamped	1 : 7 : —
The 3 ℔ 200 reas piece - -	— : 18 : —
The 2 ℔ 400 reas ditto, or half moydore	— : 13 : 6
The 1 ℔ 600 reas ditto - - -	— : 9 : —
The 1 ℔ 200 reas, or quarter-moydore	— : 6 : 9
The 800 reas or teſtoon-piece - -	— : 4 : 6

Their SILVER MONIES are,

The 400 reas, or cruſado, or the exchange-piece not ſtamped - - -	— : 2 : 3
The 480 reas, or one-tenth moydore-piece ſtamped in 1643 - -	— : 2 : 8⅔
The 240 reas, or 12 vintin-piece -	— : 1 : 6
The 100 reas, or 5 vintin-piece -	— : — : 9
The 50 reas, or 2 and a half vintin ditto	— : — : 4½

Their COPPER COIN.

The 20 reas, or vintin-piece -	— : — : 1½
The 10 reas, or half vintin ditto -	— : — : —¾
The 5 reas, or quarter vintin ditto -	— : — : —⅜

Their WEIGHTS

Are but of one kind, and divided thus: 2 drams = 1 octave, 8 octaves = 1 ounce, 16 ounces = an arrate, or pound, 32 pounds = an arobe, 4 arobes = 1 quintal, or 128 pounds, half an arobe = 16 pounds. They divide the ſaid ounce alſo into penny-weights and grains, as we do our ounce Troy weight. Their weights are about 3 or 4 per cent. heavier than our Engliſh avoirdupois.

Their MEASURES.

Their long meaſure.—The vare is the length of the ell Engliſh, and 81½ = 100 yards Engliſh. The other meaſure is the cavida, and is ¾ of a yard Engliſh.
Their liquid meaſure.—Their largeſt is the almuda = 2 cavadas, and half and quarter cavadas; they have other meaſures, that contain one half and one quarter of a gallon: the almuda = 4½ gallons of our Wincheſter meaſure.
Corn and ſalt meaſure.—60 alquiers = 1 moy = 3 Engliſh quarts, 2½ alquiers = 1 Engliſh buſhel.

Of the EXCHANGES of PORTUGAL with the principal places of EUROPE.

Portugal exchanges with London on the milrea, and London gives pence ſterling, more or leſs, for the ſame, from 60 to 66.
With Holland, and throughout the United Provinces, and with Hamburgh, on the cruſado of 400 reas, and gives gros Flemiſh, more or leſs, for the ſame.
With Spain for the Spaniſh ducat, and gives reas, more or leſs, for the ſame.
With France on the exchange-crown, and gives reas, more or leſs, for the ſame.
With Florence on the crown of 7½ livres, and gives reas more or leſs.
With Genoa on the ſcudi, and gives reas more or leſs.
With Leghorn on the dollar of 6 livres, and gives reas more or leſs.
☞ Exchanges are frequently made by the way of Amſterdam, Antwerp, or Hamburgh.
Suppoſe I owe the following ſums to my correſpondents, what will they amount to in the money of their reſpective countries?

	Cruſ.	Reas.	Courſe of exchange.
At Paris	560	300	at 490 ⅜ reas per crown of 60 ſols Tournois.
Amſterdam	1120	72	at 44 ⅜ den. de gros per cruſado of 400 reas.
London	2128	163	at 5s. 6d. ſterling per milrea
Madrid	1250	250	at 830 reas per ducat of 375 marvadees.
Genoa	1430	230	at 880 reas per piaſtre of 5 lires banco.
Leghorn	900	300	at 770 reas per piaſtre of 20 ſols d'or.
Meſſina	2000	200	at 420 reas per florin of 12 carlins.

Of the EXCHANGE of LISBON upon FRANCE.

EXAMPLE.

To reduce 560 cruſadoes, 300 reas, of Portugal, into crowns of France, of 60 ſols Tournois, the crown of exchange being at 490 reas per crown.

OPERATION.

Cruſ. Reas.
560 : 300
400

490)224300 reas (457 crowns, 45 ſols, 3 deniers, for which
2887 the draught upon Paris ought to be
33 60 made.

)22200(45
265
112

)1800(3

INSTRUCTION.

Multiply the 560 cruſadoes by 400 reas, the value thereof, and take in the 300, and divide the product, 224,300 reas, by the price of exchange, of 490 reas, and the quotient will give 457 crowns, with a remainder of 370; which multiplied by 60 ſols, the value of a crown, and divided by the ſame diviſor, the quotient gives 45 ſols, with a remainder of 150; this multiplied by 12 deniers, the value of a ſol, and divided by the common diviſor, it produces 3 deniers, to be received at Paris for the ſaid cruſadoes, &c.

Of the EXCHANGE of PORTUGAL upon HOLLAND.

EXAMPLE.

To reduce 1120 cruſadoes, 72 reas of Portugal, into florins and ſols bank money of Amſterdam, the courſe of exchange being at 44 ⅜ deniers gros per cruſade.

OPERATION.

1120 cruſadoes, 72 reas, to be multiplied
By 44 ⅜ deniers gros, the exchange.

4480
4480
280—for ⅜ = ¼ } of 1120 cruſadoes
140—for ⅛ = ⅛ }
5⅝ for 50 reas = ⅛ } of the exchange-price
2½ for 20 reas = 1/20
⅝ for 2 reas = 1/10 of 20 reas

40)49708 deniers gros.

1242 florins, 14 ſols, bank money, for which the draught on Amſterdam ſhould be made.

INSTRUCTION.

Multiply the ſum of the cruſadoes by the price of exchange, and divide by 40, the deniers in a florin, and there will remain 28, the half of which is 14 ſols bank money, to be received at Amſterdam.—For the proof hereof ſee the article HOLLAND, Vol. I.

Of the EXCHANGE of PORTUGAL upon LONDON.

EXAMPLE.

To reduce 2128 cruſadoes, 163 reas of Portugal, into pounds, ſhillings, and pence ſterling money of England, the courſe of exchange being 5s. 6d. ſterling per milrea of Portugal.

OPERATION.

OPERATION.

2128cruſ. 163reas, to be multiplied
By 400

851 ℔ 363

And multiply again by 5 : 6, the price of exchange

4255 d.
425 : 6, for the 6d. [price of exchange.
1 : 1, for the 200 reas, the $\frac{1}{5}$ of the
0 : 6, for the 100 ditto, the $\frac{1}{10}$ of ditto.
0 : 5, for the 63

Shillings ſter. 2|0(468|2 : 6(

1. 234 : 2 : 6, ſterling money, for which the draught ought to be made upon London.

INSTRUCTION.

Reduce the cruſadoes into reas, in multiplying by 400 the value thereof in reas, taking in the 163 odd reas, and the product will be 851 ℔ 363 reas, which multiplied by the price of exchange, and the aliquot parts taken as above, and added, make ſhillings ſterling, which divided by 20, give pounds, ſhillings, and pence ſterling.—For the proof hereof, ſee the article ENGLAND, Vol. I.

Of the EXCHANGE of PORTUGAL upon SPAIN.

EXAMPLE.

To reduce 1250 cruſadoes, 250 reas of Portugal, into rials of plate of 16 quartos of Spain, the price of exchange being 830 reas per ducat of Spain of 375 marvadees.

OPERATION.

1250 cruſadoes, 250 reas, to be multiplied
By 400 reas

500250 reas, to be multiplied
By 375 marvadees of Spain

2501250

)52394(18

Price of exchange.
830 reas
34 marvadees

3320
2490

28220 diviſor.

INSTRUCTION.

Reduce into reas the 1250 cruſadoes, 250 reas, in multiplying them by 400, the value of the cruſadoe, the product will be 500250 reas; theſe multiplied by 375 marvadees, the value of the ducat, the product thereof will be 187593750, for a dividend.

Multiply the 830 reas, the price of exchange, by 34 marvadees, the value of a rial, and the product will be 28220, for a diviſor.

Carry on the diviſion, and you will have a quotient of 6647 rials, with a remainder of 1541, which being multiplied by 34 marvadees, and divided by the ſame diviſor, it gives 18 marvadees old plate, to be received at Madrid: for the proof of which, ſee the article SPAIN.

The EXCHANGE of PORTUGAL upon GENOA.

EXAMPLE.

To reduce 1430 cruſadoes, 230 reas of Portugal, into piaſtres, ſols, and deniers d'or, bank money of Genoa, the price of exchange being 880 reas per piaſtre of 5 lires of Genoa.

OPERATION.

1430 cruſadoes, 230 reas, to be multiplied
By 400 reas

88|0)572|30(to be divided by the price of exch. of 880 reas.
442 (650 piaſtres, 15 ſols, 2 deniers, bank money,
for which the draught upon Genoa ſhould be made.

INSTRUCTION.

Reduce into reas the 1430 cruſadoes, 230 reas, in multiplying them by 400 reas, the value of a cruſadoe; divide the product, 572230, by the price of exchange, 880 reas, and you will have a quotient of 650 piaſtres, with a remainder of 23: this multiplied by 20 ſols, the value of the piaſtre, and divided by the ſame, it will give 5 ſols, and 20 for a remainder; which multiplied by 12 deniers, the value of the ſol, and divided again by the common diviſor, it gives 2 deniers bank money, to be received at Genoa.—For the proof of which, ſee the article GENOA, Vol. I.

Of the EXCHANGE of PORTUGAL upon LEGHORN.

EXAMPLE.

To reduce 900 cruſadoes, 300 reas of Portugal, into piaſtres ſols, and deniers d'or of Leghorn, the exchange at 770 reas per piaſtre of 20 ſols d'or.

OPERATION.

900 cruſadoes, 300 reas, to be multiplied
By 400

77|0)360300|0(to be divided by the exchange of 770 reas,
5211 (467 piaſtres, 18 ſols, 5 deniers d'or, for which
67 the draught muſt be made upon Leghorn.

INSTRUCTION.

Reduce the 900 cruſadoes, 300 reas, into reas, in multiplying by 400 reas, the value of the cruſadoe; divide the product 360300, by the price of exchange, of 770 reas, and you will have a quotient of 467 piaſtres, 18 ſols, and 5 deniers d'or to be received at Leghorn; for the proof of which ſee the article TUSCANY, where you will find the port-town of LEGHORN.

The remainder of the firſt diviſion muſt be multiplied by 20 ſols d'or, the value of the piaſtre, and that of the ſecond by 12 deniers, the value of the ſol, and dividing by the ſame, it will give 18 ſols, 5 deniers d'or.

The EXCHANGE of PORTUGAL upon MESSINA.

EXAMPLE.

To reduce 2000 cruſadoes, 200 reas of Portugal, into florins, ounces, tarins, grains, and piccioli of Meſſina, exchange at 420 reas per florin of 12 carlins.

OPERATION.

2000 cruſadoes, 200 reas, to be multiplied
By 400 reas

42|0)800200|0(reas, to be divided by the exchange of 420 reas.
3810 ($\frac{1}{5}$) 1005 florins, 1 tarin, 8 grains, 3 piccioli.

381 ounces, 1 tarin, 8 grains, 3 piccioli; for which ſum the draught muſt be made upon Meſſina.—For the proof of which, ſee the article SICILY, upon PORTUGAL.

INSTRUCTION.

Reduce into reas the 2000 cruſadoes 200 reas, in multiplying by 400 reas, the value of a cruſadoe, and divide the product, 800200 reas, by the price of exchange of 420 reas, and the quotient will be 1905 florins, and 10 for a remainder; which multiplied by 6 tarins, the value of a florin, and dividing the product by the ſame, it gives 1 tarin, with a remainder of 18, which alſo multiply by 20 grains, the value of the tarin, and dividing by the common diviſor, you will have 8 grains, and a remainder of 24; this again multiplied by 6 piccioli, the value of a grain, and being divided by the ſame, it produces 3 piccioli.

To reduce theſe florins, &c. take the $\frac{1}{5}$ (becauſe the ounce is equal to 30 tarins, and the florin 6 tarins) and you will find that you have to receive at Meſſina 381 ounces, 1 tarin, 8 grains, and 3 piccioli, for the ſame.

ADVERTISEMENT.

With relation to negociating bills of exchange in Portugal, it muſt be obſerved, that

Uſance { Of France, Of Holland, Of England, Of Genoa, Of Leghorn, Of Venice } is two months, comprehending the date; and that there are 6 days of grace allowed after the bill becomes due.

Of the ARBITRATION of the FOREIGN EXCHANGE wherein LISBON is concerned.

OPERATION.

Between AMSTERDAM, LONDON, LISBON, and LYONS,

If - - ŧ florin banco - = 402 deniers gros banco
And ŧØØ den. gros banco = 99 ½ ditto, proviſion deduct.
And ŧ2 ditto - - = ŧ ſol gros banco
And 17 34 ſols gros banco = 240 20 pence ſterling
And 11 ŧØØ pence ſterling = 99 ½ d. ſter. proviſion deduct.
And 66 ditto - - = ŧØØØ reas.
And 5ØØ reas - - = 3 livres Tournois, what will 2ØØØ florins banco make?

17 x 11 = 187, the diviſor.
9900 ¾ x 20 x 4 = (2 x 2), the dividend.
The quotient will be 4235 livres, 8 ſols, anſwer.

Again,

OPERATION.

Between AMSTERDAM, LONDON, LISBON, LEGHORN, and LYONS.

If - - ŧ florin banco - = 40 2 deniers gros banco
And ŧØØ den. gros banco = 99 ½ ditto, proviſion deducted
And ŧ2 ditto - - = ŧ ſol gros banco
And 17 34 ſols gros banco = 240 pence ſterling
And 11 66 pence ſterling = ŧØØØ reas
And 77Ø reas - - = 93 31 ſols Tournois for Leg.
And ŧØØ ſols Tournois = 99 ½ ditto, proviſion deducted
And 6Ø ditto - - = 3 livres Tournois, what will 2000 flor. banco amount to?

17 x 11 x 77 = 14399, diviſor.
9850747 x 31 x 2 = 61074642 ¼, dividend.

Which gives for quotient 4241 livres, 13 ſols, the anſwer, and the product of the circulation upon the abovesaid places.

Another EXAMPLE.

Amſterdam being to remit to London 750l. Flemiſh, the negociator firſt ſends it to France, at 12 crowns per pound Flemiſh; from thence to Venice, at 100 crowns per 100 ducats; from thence to Hamburgh, at 100 grots per ducat; from thence to Portugal at 50 grots per cruſadoe of 400 reas; and from Portugal to London, at 3000 reas per pound ſterling: it paſſing through ſo many places, the queſtion is, how much ſterling money muſt be received in London for the abovesaid remittance, excluſive of charges?

1 l. Amſterdam = 3 crowns
Crowns French = ducats of Venice
1 Ducat = 20 grots of Hamburgh
Grots of Hamb. = 8 reas of Portugal
Reas of Portugal = 1 l. ſterling

3 x 20 x 8 = 480l. ſterling, to be received in London.

REMARK.

In order to underſtand the reaſon and foundation of the preceding operations, the reader is deſired to conſult the articles ARBITRATION of EXCHANGES, ENGLAND, GENOA, HOLLAND, SICILY, SPAIN, TUSCANY, VENICE, and UNITED PROVINCES. Under theſe heads, alſo, is ſhewn the application of the foregoing general arbitrational rule, to the weights and meaſures, as well as to the monies of foreign countries.

	Antecedents.		Conſequents.
Suppoſe again that	5 l. Amſterdam	=	12 French crowns
	100 French crowns	=	100 ducats Venice
	1 Ducat Venice	=	100 grots of Hamb.
	50 Grots Hamb.	=	400 reas of Portu.
	3000 Reas of Portugal	=	1 l. ſterling

How much ſterling at London = to 750l. Flemiſh?

Now, ſuppoſe that you would find out the antecedent of the 400 reas of Portugal belonging to the foregoing queſtion; diſpoſe of the terms as follows, omitting the antecedent 400 reas, after which abridge, as directed under the preceding heads; then multiply and divide, and you will find 50 grots of Hamburgh to be the antecedent: thus

5 l. Flemiſh	=	12 crowns
100 Crowns	=	100 ducats
1 Ducat	=	100 grots
— Grots	=	400 reas
3000 Reas	=	1 l. ſterling
480 l. ſterling	=	750 l. Flemiſh

which abridged, will give 25 x 2 = 50 grots of Hamburgh, the antecedent required by the queſtion.
Let it be propoſed to find the antecedent to 1 l. ſterling, which muſt be reas, becauſe the conſequent that precedes it is 400 reas.

Antecedents.		Conſequents.
5 Amſterdam -	=	12 French crowns
100 French crown -	=	100 ducats of Venice
1 Ducat of Venice	=	100 grots of Hamburgh
50 Grots of Hamburgh	=	400 reas of Portugal
Reas of Portugal -	=	1 l. ſterling
480 l. ſterling - - -	=	750 l. of Amſterdam

The above abridged, as directed under the heads referred to, will give 12 x 2 x 5 x 25 = 3000 reas, according to ſuppoſition.
Suppoſe, alſo, that you would find the conſequent of the antecedent of 50 grots of Hamburgh, purſue the ſame method as directed in the laſt queſtion, and you will find it to be 400 reas; for the terms being properly ranged and abridged, the anſwer will turn out 50 x 4 x 2 = 400 reas, which anſwers the queſtion.

The application of this rule to find the juſt par of monies of exchange, according to the INTRINSIC VALUE of the real monies, by taking this value according to the weight and ſtandard.

EXAMPLE.

To find the par of money of exchange between France and another ſtate or kingdom, by the means of the real ſilver money, for inſtance, of the piaſtre of Spain, of 8 rials of old plate, or 128 quartos, by that of the effective piaſtre, marked with two globes, we muſt previouſly underſtand, that

170 Quartos is the value of this effective piaſtre in Spain,
506 88/100 Grains is it's weight - - - -
4608 Grains is the number that the mark contains - -
529 Grains fine is the ſtandard that the coinage gives to this piaſtre - - - - - -
262 Grains fine is that of the French ſilver crown
576 Grains is the number that the ounce contains
277 ½ Grains is the weight of the crown, 60 ſols is now it's value - - - - -
} in France.
128 Quartos is now the value of the piaſtre of exchange in Spain.

Theſe preliminaries being known, we muſt proceed, according to the foregoing conjoint rule, by antecedents and conſequents, as follows:

If 170 quartos - - - - = 1 piaſtre effective
And 17 ſuch piaſtres weight - = 506 88/100 grains
And 4608 gr. are receiv. for ſtand. = 259 grains fine
And 262 grains fine - - - = 8 oz. of French crowns
And 1 ſuch ounce weight - = 576 grains
And 277 ½ grains of ſilver - - = 60 ſols Tournois, how much are 128 quartos worth?

Anſwer, 81 ſols, 6 deniers Tournois.

OPERATION.

If 170 → 506 88/100
4608 — 259
131 262 — 8
1 — 576
277½ — 60 — 128

1113½
617992 ½ diviſor

)50412224 divid. (81 ſ. 6 de.

As this fraction produces nothing, we ſuppreſs it, though if you convert is the anſwer, and the ſolution of the rule.

vert it into a decimal of $\frac{5}{6}$, for greater preciſion ſake, you may divide by it; yet it will occaſion no alteration deſerving practical notice.

Instruction.

Multiply the antecedents together for a diviſor, which will give 617992 $\frac{1}{2}$; and the conſequents, which will produce 50412224, for a dividend, and the quotient will be 81 ſols, with a remainder of 354872, to be multiplied by 12 deniers, the value of a ſol, and dividing by the ſame diviſor, it will give 6 deniers: ſo that the par of the exchange piaſtre of 8 rials old plate, of 16 quartos each, is in France equal to 81 $\frac{1}{2}$ ſols, eſtimating the ſtandard of the piaſtre with two globes at 10 deniers 19 grains, as the coinage-office at Lyons receives it; and as they give in evaluation for the French crown of 60 ſols, which is it's current value.

But if the par of this exchange-piaſtre is required, according to the ſtandard of which the piaſtre of two globes is received in the mint of France, inſtead of 10 deniers 19 grains, or 259 grains, you ſhould ſubſtitute, in the courſe of the operation, 261 $\frac{1}{2}$ grains, and only 56 $\frac{1}{2}$ ſols; which is the proportional price of the mark of the ſaid French crowns, paid by the mint inſtead of 60 ſols currency.

In this caſe, the conjoint rule ſhould be thus conſtructed:

If 170—506 $\frac{88}{100}$
4608—261 $\frac{1}{2}$
262— 8
1—576
277 $\frac{9}{16}$ — 56$\frac{1}{2}$—128? Or, if 170—506 $\frac{88}{100}$
4608—261 $\frac{1}{2}$
262—46 liv. 18 ſols—128?

The anſwer to theſe poſitions is 77 $\frac{1}{2}$ ſols:

To which may be added, for the 4 den. per livre, given upon 10,000 livres - - } 1 $\frac{1}{4}$

Then the par of the piaſtre will be, according to this operation - - - } 78 $\frac{3}{4}$ ſols Tour.

The 46 livres 18 ſols of the laſt conſequent, are the price at which the mark is eſtimated with the French crown, in the mint of France.

And if you will ſuppreſs ſeveral proportions, to ſubſtitute in their ſtead the number only of piaſtres of two globes contained in the French mark, that is to ſay 9 $\frac{1}{11}$, and the price that is paid in their mints, which is 46 livres 9 ſols, you muſt then form your rule thus:

If 170 ——— 1 piaſtre
9 $\frac{1}{11}$ = 46 livres 9 ſols
1 livre 20 ſols. How many—128? The anſwer is, a little leſs than 77 ſols,

To which we add as above - - - 1 $\frac{1}{4}$

The true par, according to this operation - 78 $\frac{1}{4}$ ſols.

You will obſerve that there is a difference of 6 deniers between the two preceding pars, which is occaſioned by reaſon that the mint pays the mark of the French crown, as if it was of the ſtandard of 11 deniers, or 264 grains; whereas it is in effect but of 10 deniers 22 grains; for if, inſtead of the antecedent of 262 grains, we had placed the ſaid 264 grains, the two anſwers would have come out equal.

81 $\frac{1}{4}$ ſols is the par of the firſt operation,
78 $\frac{1}{4}$ ſols is that of the laſt,

3 $\frac{1}{4}$ ſols is the difference; which evidently proceeds from this, that the French crown iſſued by the mint for 60 ſols, pays no more than 56 $\frac{1}{2}$: and this difference would be ſtill greater, even 5 $\frac{1}{3}$ ſols, if the aſſay-office, inſtead of receiving the ſaid effective piaſtre at the ſtandard of 10 deniers 19 grains, ſhould receive it at the mint at that of 10 deniers 21 $\frac{1}{2}$ grains.

This being the caſe, you will aſk, How comes it to paſs that any one will carry theſe to the refiners? The anſwer is, Becauſe they give in payment ingots which the commerce of Lyons affords, that are worth more than 50 livres the mark of the ſtandard of 10 deniers 20 grains.

☞ Obſerve that to find the par of the places or countries to which France gives the variable courſe of exchange, you ſhould place in the propoſition the value in ſuch country, of the effective ſpecie, and that alſo of exchange, as is done in finding the par of the exchange piaſtre of Spain, by placing to the firſt antecedent of the rule, 170 quartos, and 128 to it's laſt term.

But it muſt not be ſo for the places or countries to which France gives the certain or invariable money: ſince in that caſe, you would find what will be given for the intrinſic value of the French crown, which is compoſed of ſols, and then you muſt place in the propoſition the price in ſols that the mint pays for the mark of the ſaid crown: that is to ſay, at 46 livres 18 ſols, or 938 ſols, to the firſt antecedent, and to the laſt term of the rule the 56 $\frac{1}{2}$ ſols of the crown, according to the courſe of exchange, and paſſes current for 60 ſols; which is done for England and Holland, France giving the certain and invariable exchange crown for an uncertain price of exchange.

Operation.

If 938 ſols, the value of the mark of the French crown, are for 8 ounces,
And 1 ounce contains 576 grains weight,
And 565 grains weight of the Engliſh crown are worth there 60 pence ſterling, what will 65 $\frac{1}{2}$ ſols be worth?—Anſwer, 29 $\frac{1}{2}$ pence ſterling.

Note, The ſtandard of the Engliſh crown-piece being the ſame with that of the French crown, we muſt only place, in the conſtruction of the rule, it's weight and it's value in the country; and as the 4 deniers per livre are not added to the firſt conſequent, you are not to take notice in the laſt term of the rule of the 56 $\frac{1}{2}$ ſols.

But the ſtandard of Holland being different from that of France, the rule muſt be thus conſtructed:

If 938 ſols are given for the ſtandard of 262 grains fine,
And 245 grains is the ſtandard of the mark, containing 4608 grains weight.
And 536 grains is the weight of the crown of Holland, there worth 100 deniers gros; What will be 56 $\frac{1}{2}$ ſols be worth?
Anſwer, 53 deniers gros, and a little more.

Remark.

If the effective piaſtre ſhould be diminiſhed in Spain to 160 quartos, inſtead of 170 that it is there worth, the firſt antecedent of the arbitrational rule being diminiſhed, and the diviſor, in conſequence thereof, to 581640, it undoubtedly follows, from this diminution, that the quotient muſt be greater, ſince, inſtead of the par of 81 $\frac{1}{2}$ ſols, of which we have ſpoken, it will give 86 $\frac{2}{3}$ ſols.

And if the price of the Spaniſh piaſtre remaining of the ſame value in Spain, the price of the French crown ſhould riſe to 70 ſols, the product of the multiplication of the conſequents becoming thereby greater (to 58814208) the diviſor being the ſame, the par, or the quotient, will be greater in the like proportion, that is to ſay, 90 $\frac{1}{4}$ ſols.

If France, by increaſing the price of their crown, the par with Spain ſhould only increaſe, it is not eaſy to conclude, that, if France diminiſhes the price of this ſame crown, the par in queſtion ſhould alſo diminiſh in the ſame proportion; and, if there was both in Spain and France an augmentation of ſpecie, exactly proportioned the one to the other, the par whereof we have treated will be the ſame, 81 $\frac{1}{2}$ ſols; and in like manner, if the augmentation was, at the ſame time, more conſiderable, both Spain and France.

Upon theſe certain principles, in relation to the par between France and Spain, to which France gives the uncertain price, to receive the certain, you may eaſily fix your point in view, and form your rule of conjunction accordingly, to obtain the par of Holland, &c. &c. to which France gives the certain for the uncertain price of exchange.

General Remarks upon the whole of this part of Exchange.

1. There is more difficulty, perhaps, in this matter of calculating the par of money between nation and nation, than moſt people imagine, yet there is no one who has fully diſcuſſed it; but ſince it is what ought to be well underſtood, as well by perſons of quality as by merchants, we ſhall obſerve, by way of further illuſtration, that all foreign coin is eſteemed as bullion to us, and ours as bullion to them; ſo that the extrinſic value regards chiefly the temporary intereſt of foreign money negociations, in their commercial, or foreign banking concernments.

2. Another point requiſite to be obſerved, is the fineneſs of our own coin, and the weight and fineneſs of the foreign, which we are to receive in exchange; and this knowlege of the foreign muſt be acquired, either by the experience of ſome aſſay-maſter of allowed repute and accuracy [ſee the articles Assay and Coin], or by the merchant's actual aſſay, few of whom are at all acquainted with the art of Assayng and Refining, and, therefore, are obliged to depend on the repreſentation of workmen who make it their buſineſs, or on the aſſay-maſter at the Tower, or Goldſmiths-Hall, on whom it is thought we may more ſafely depend, than on the ordinary aſſay-maſters, though many of them are very accurate in their aſſays.

Admit it were required to know how much ſterling bullion, or coin may be given for 1000 pieces of eight Seville.

	oz. dwt.
The fineneſs of our coin we know is - - -	11 : 2
And ſuppoſe the fineneſs of a piece of eight, we will ſuppoſe to be, though more or leſs - - -	11 : 3
And it's weight 17 dwts. 12 grains,	
Or the weight of 1000 pieces we find to be - -	875 : 0

3. The

3. The third particular is, to know how many ounces of ſilver, 11 oz. 2 dwt. fine, are equal to 875 oz. of 11 oz. 3 dwt. fine; which is found by ſingle indirect proportion thus:

oz. dwt. oz. oz. dwt. oz.
11 3 : 875 : : 11 2. to 878,94144 decim. the anſwer.

Here it is found that we may give 878,94144 oz. of bullion, 11 oz. 2 dwt. fine, for 875 oz. of bullion of 11 oz. 3 dwt. fine (or for 1000 pieces of eight Seville of the aforeſaid ſtandard) which if paid in coin, we muſt, for the 1000 pieces of eight, pay l. 227 : 1 : 2 $\frac{1}{4}$ ſterling: for

Grains. Grains.
1858,0645 : l. 1 ſterling : : 421891,89 : l. 227,059 ſterling.

That is to ſay, as 1858,0645 (the grains in 1l. ſterling) are in proportion to 1 l. ſterling, ſo is 421891,8912 (the grains in 878,94144 ounces of bullion, 11 oz. 2 dwt. fine, which are equal in value to the 1000 pieces of eight) to l. 227,059 ſterling, or l. 227 : 1 : 2 $\frac{1}{4}$.

4. But ſo often as I can buy 878,941 ounces of bullion for leſs than l. 227 : 1 : 2 $\frac{1}{4}$. (which we can always do ſo often as ſterling ſilver is under 5 s. 2 d. per ounce) ſo often we gain by making our exchange in bullion: if, however, we can buy bullion for 5 s. 1 d. per ounce, at that rate the 878,941 ounces (which we are to give for the 1000 pieces) will ſtand me in l. 223 : 7 11 $\frac{1}{2}$, which is leſs than l. 227 : 1 : 2 $\frac{1}{4}$ (the ſum we pay in exchanging coin) by l. 3 : 13 : 2 $\frac{3}{4}$, which is my gain by exchanging in bullion: thus in exchange, the par of money and bullion ought to be conſidered, as well as the par of domeſtic and foreign coins.

5. Though the foregoing rules, judiciouſly applied, contain the method of calculating the par of money; yet, ſince the price of exchange is agreed on in the currency of negociations by bills of exchange, it is uſeful to know how much ſterling money each of theſe foreign pieces are worth; for which reaſon we have, under the article COIN, ſhewed, according to the aſſays of Sir Iſaac Newton, the intrinſic value of the chief gold and ſilver coins of Europe; whereby the merchant will know when he may negociate therein to advantage, and the politician alſo be informed whether the nation gains or loſes in the ballance of trade with ſuch nation.

The ſtandard of the gold coin of this kingdom is 22 carats fine, and 2 alloy, per pound of gold; and 11 oz. 2 dwt. fine ſilver, and 18 dwt. alloy, the ſtandard pound of ſilver; and the diviſion of the pound of gold is into 44 $\frac{1}{2}$ guineas, and the ſilver into the uſual number of crowns. The guineas have varied in the nominal value ſeveral times, riſing up to 30 ſhillings, and declining to 21, the preſent current value, but never have been reduced again to the level of 20 ſhillings, nor indeed ought, when compared with the Portugal pieces of 3l. 12s. or 1l. 16s. it appearing to be better worth 21 ſhillings.

		To the lb. Troy.		l. s. d.
Portugal	l. 3 : 12	- 13	-	46 : 16 : 0
Engliſh guineas	1 : 1	- 44 $\frac{1}{2}$	-	46 : 14 : 6
				0 : 1 : 6
And the Portugal ſtandard worſe $\frac{1}{4}$ grain			-	0 : 2 : 6
Total worſe in lb. Troy, by ſtandard and tale				l. 0 : 4 : 0

This, with the difference in point of exactneſs in coining, wherein the Portugal is more defective than the Engliſh coin, may be good reaſons for their being refuſed in payments in the receipts of the public revenue; but anſwer very well the purpoſes of thoſe who benefit by the irregularity in trading with the heavier, and paſſing off the lighter by tale, and which if they can turn into guineas or heavy ſilver, make another gain.

A SHORT ACCOUNT of the COMMERCE of PORTUGAL, on a very INTERESTING OCCASION.

The Portugueze themſelves, carry on no active commerce of conſequence with any other European dominions: the Britiſh, French, Germans, Dutch (and thoſe who go under the denomination of Hamburghers), Danes, Swedes, Spaniards, and moſt of the ſtates of Italy, having conſuls and factories ſettled in Liſbon: and ſome of them, particularly the Engliſh, have the ſame at Oporto; alſo a few houſes in Viana, Figeira, Faro, and likewiſe on the iſland of Madeira. Of theſe people, the Portugueze merchants purchaſe the neceſſary commodities for their India, Guinea, and Brazil commerce; as the town and country dealers do thoſe for their home conſumption. And the ſame merchants purchaſe of the natives, or take in barter, the ſeveral products of their dominions, which they export to the countries proper for their ſale.

The native exports of Portugal are wine, lemons, oranges, dried figs, ordinary raiſins, almonds, ſalt, oil, cork, ſhumac, tunny fiſh, and other ſmaller articles. Wool uſed likewiſe to be exported in conſiderable quantities, but the extraction of it from that kingdom is now prohibited. However, there is reaſon to believe, that the Dutch get a good deal of it off ſtill under the name of Spaniſh wool, by the help of forged certificates and falſe ſwearing; of which bad practice the Portugueze make as little ſcruple for gain, as even the worſt of our own countrymen.

The commodities the Portugueze bring from their foreign dominions, and ſell chiefly at Liſbon, for other European countries, are diamonds of Brazil and India, ſugars, tobacco, Brazil-wood of ſeveral ſorts, cocoa-nuts, coffee, cotton, pepper, ſeveral ſorts of drugs, ſome inferior kind of ſpices, whalebone, raw and tanned hides, elephants teeth, arrac, orchella, citrons, and occaſionally China ware, Indian ſilks, and cotton piece-goods. And here it may be proper to obſerve, that all their India commerce is going to be made more regular and extenſive. To theſe exports we ſhall add, ſilver and gold. The former, as no product of their own, is allowed to be ſhipped off by entry and licence. The latter is not, except for corn in time of great want, and by ſtipulation for ſome articles they receive from Sweden. But in either of thoſe caſes, the procuring of the licence would be attended with ſo much trouble, that it is rarely, if ever, ſollicited. However, in their exports, gold muſt be, and is, underſtood as a COMMODITY, at the exportation of which Portugal ought to wink, or they could not carry on any of their other commerce. But Britain receives as ſmall, or a ſmaller proportion of gold, than any other nation trading with Portugal, as will be apparent from a general view of their commerce, notwithſtanding the weight of that accuſation in Portugal is levelled at us, through the folly and ignorance in ſome, and from a want of ſpirit, abilities, and reſolution in others; for Portugal, of all kingdoms in the world, has the leaſt reaſon to miſuſe or affront Great-Britain.

The imports in Portugal, for their home and colonies conſumptions, are almoſt all things neceſſary for the ſupport, convenience, ornament, or luxury of life; of moſt of which articles we ſhall give ſome account, when we come to treat ſeparately of the trade of each country.

The nature of the government of this kingdom, which is entirely abſolute, has too ſtrong a tendency to oppreſſions, deſtructive of induſtry, eſpecially in thoſe parts of the country where the climate is an additional encourager of lazineſs, as well as the promoter of vice. To which may be added, the invincible pride of all noble and genteel families, every branch of whom will abſolutely ſtarve, rather than uſe any ſort of employment for their ſupport. But above all, the burthens of prieſts, friars, nuns, and the ſuperſtitious influence they have over the people, as well as an univerſal litigious diſpoſition in the whole nation, conſpire to make every order of the people in that country poor. Theſe, joined to the natural ſterility of the ſoil, the number of ſoldiers neceſſary to garriſon a country which is almoſt all frontier, and whoſe pay is ſo ſmall as to oblige them to a life of celibacy, the great number of religious orders of all ſorts, and the neceſſary draught of people for their immenſe extent of territory in America, keeps the mother-country continually weak in people. So that they do, and muſt always, depend on the ſuccours and ſupplies of other nations, both for their protection and ſubſiſtence.

But the all-wiſe diſpenſer of bleſſings, to ſupply their deficiency in ſtrength, and the extent of kingdom, as well as of the exterior wealth of the earth, and even induſtry, has given them a treaſure from under it. Their gold and diamond mines in America, have enabled their monarchs of late, to figure amongſt the great potentates of Europe, and made them generally reſpected, from the convenient and neceſſary commerce carried on to their dominions, greatly beneficial to all.

The people of Portugal in general, look on no nation with ſo evil an eye as Spain: France they have no affection nor eſteem for; and always expreſs a juſt ſenſe of the natural connection they have with Great-Britain in commerce and intereſt, as well as faith and reliance on our ſupport in times of need.

We ſhall now return to the ſtate of the commerce; and, for the reaſons given above, muſt obſerve, the native poverty of Portugal was ſo great, on the diſcovery of their gold mines, that they would have found it impoſſible to have worked them, but from the credit given by other countries, and particularly Great-Britain, in the neceſſary commodities for that purpoſe. And as their returns of bullion augmented, their credit from us, and by degrees all other countries, grew greater; and though now conſiderably enriched themſelves, they ſtill work their very mines, and carry on almoſt all their colony commerce, and much of their home trade, with foreign capitals. For they are credited with all articles of traffic, 'till the returns come round: inſomuch that the merchants of other countries, not only ſtand the diſburſe of the coſt of their goods, and the charges of tranſporting them to Portugal, but alſo of the king's duties there, (which are very high on moſt of the articles that are re-exported) 'till, as was ſaid before, the returns for them arrive. A cuſtom and confidence ſo greatly advantageous to the king, as well as the ſubjects of Portugal, that the foreign merchants ſettled among them, eſpecially the Engliſh, ought to live under the faireſt and ſtrongeſt protection, even had they

they no treaty to exact it; becauſe, on the ſupport of the foreign factories, that neceſſary credit muſt depend: for, without ſuch merchants or factors reſiding in the kingdom, no ſuch credits could with ſafety be given, nor would it be ſo at all: and this as ſtrongly behoves every nation, that would preſerve it's commerce to that kingdom, to ſupport it's merchants eſtabliſhed there; otherwiſe the trade of that country will go gradually declining, and at laſt be entirely loſt.

The exports from Portugal to the Baltic, are ſome cargoes of ſalt, a few lemons and oranges, a little arrac, and a meer trifle of wine; ſo that the ballance paid in ſpecie muſt be exceeding great.

From Hamburgh and other neighbouring ports are imported immenſe quantities of German linens of all kinds and qualities; and, occaſionally, many of the Baltic commodities.

The exports of Hamburgh and it's neighbouring ports, are ſome ſalt, ſugar, and tobacco, whalebone, a little wine and arrac, a few lemons, oranges, and dried figs, ſome cocoa-nuts, coffee, cork, citrons, a few India goods occaſionally, and other trifling articles; the whole of which, however, cannot amount to one quarter of the value of their imports, conſequently the ballance paid in ſpecie muſt be very great. It is, notwithſtanding, to be acknowledged, the ſilver imported into Liſbon is chiefly in return for German linens, and ordinary Engliſh woollen goods; a trade greatly beneficial to Portugal.

From Holland are imported great quantities of fine thin woollen cloths, hair camblets, linens, ſpices, cordage, anchors, and all ſorts of naval ſtores, moſt of the Baltic commodities, all kinds of grain, prodigious quantities of ſmall round cheeſes, coach-horſes, arms, ammunition, and accoutrements of war, indigo, toys, and other articles.

The exports for Holland are a few lemons, oranges, and dried figs; a ſmall quantity of wines, ſome candied citrons, orchella, wool (under certificates of it's being Spaniſh), ſeveral cargoes of ſalt; diamonds, whalebone, a little ſugar and tobacco, Brazil-wood, ſome cocoa-nuts, coffee, Brazil hides, India goods, in conſiderable quantities, when to be had at public ſale; cork, ſhumac, canes for weavers, and other articles. The ballance paid by Portugal to Holland in ſpecie, and abſolutely carried over in their own ſhips, &c. is very great.

The French ſend to Portugal fine woollen cloths, various kinds of ſtuff, particularly a ſort of black goods called druggets, of which they ſell immenſe quantities for the habits of the clergy (having thereby entirely deſtroyed the conſumption of ENGLISH CRAPES, once a very important article of our trade), wrought ſilks, a great quantity of linens and cambricks, dreſſed CALVE-SKINS (another branch taken from us), HATS, SILK-STOCKINGS (both of which articles they are alſo getting from us every day), all ſorts of toys, furniture, ribbands, and moſt of the ornamental parts of female dreſs; grain of all kinds, when they have it to ſpare, and ſometimes in immenſe quantities; clarret, champagne and brandy, though prohibited, are ſmuggled in; as are flowered and figured ſilks, gold and ſilver laces, India goods, and other contraband commodities: they likewiſe import printed books, ſome ordinary ſort of cutlery ware, and an abundance of ſmaller articles, which it would be too tedious to enumerate.

By the help of wool ſmuggled from us, the French have made attempts to rival us in Portugal, in our very great article of LONG-BAYS, but hitherto without ſucceſs. God grant their future endeavours, aided by our inattention, may not bring ſuch a project to bear.

The French take from Portugal ſome raw hides, a ſmall quantity of fruit, a few cocoa-nuts, and occaſionally a little pepper; alſo ſome Brazil wood, and orchella. They formerly, likewiſe, uſed to receive ſome Brazil diamonds, but I think they now prohibit the importation of them in France. So that Portugal pays them a very great ballance in bullion, and for articles, in general, the leaſt neceſſary of any they import.

The Portugueze take from Spain immenſe quantities of cattle, both for labour and ſlaughter, a great deal of Biſcay iron, a vaſt many cheap wrought ſilks and velvets (moſt of which are ſmuggled, to defraud the king of his duties), many cargoes of a thin ſtrong kind of ruſhes, for ordinary cordage, and other uſes; printed books, ſome dried raiſins, and occaſionally corn and oil, and ſome other commodities.

The Spaniards take from Portugal, cured tunney-fiſh, ſome tobacco, a few ſugars, ſome cocoa-nuts, which are ſmuggled in, as is alſo a vaſt quantity of ſpecie; ſome part of which ballance Portugal, however, gets from them again, by the ſame method, in another part of the world. To this article we muſt alſo add, the vaſt ſums of money Portugal pays to Spain for the labour of the people of Gallicia, who are the principal ordinary working perſons at Liſbon, and in many other cities; they come young into Portugal where they work hard, and fare hard, for a conſiderable number of years: and then retire with incredible ſums, for ſuch people, to their own country.

The Italians import into Portugal immenſe quantities of wheat, a great deal of barley, and alſo a good deal of Levant rice, vermicelli, and oil occaſionally. They likewiſe import a prodigious quantity of writing paper, abundance of wrought ſilks and velvets, coral, and many expenſive curioſities; great quantities of glaſs beads, for their Guinea and home conſumption, a great many cotton goods (by ſpecial licence from Malta), many toys, and other inferior articles; not to particularize religious traffic, which is very great and public.

The Italians export from Portugal hides, a conſiderable quantity of ſugars and tobaccos, cocoa-nuts, pepper, ordinary ſpices, elephants teeth, Brazil wood, ſome drugs, and an immenſe quantity of bullion. Inſomuch that of late, while gold bore ſo high a price in England, it has been a drug all over Italy: a circumſtance well worthy of Britiſh attention.

The exports from England to Portugal are long bays of all kinds, Colcheſter bays, Spaniſh, Yorkſhire, and ſome few Glouceſter cloths; long-ells, ſhalloons, ſays, ſerges, Spital-fields, Norwich, and Coventry ſtuffs of various kinds; printed linens, watered tabbies, ſilk and worſted ſtockings, hats, great quantities of Birmingham and Sheffield wares, ſome wrought plate, lead, ſhot, copper, pewter, tin, coals, corn of all kinds, pulſe, flour, biſcuit, iron, hoops, toys, watches, arms and accoutrements of war, ſome cordage, ſhip-chandlery articles; and, in fine, almoſt every thing produced or made here that is uſeful, and cheaper than in other countries.

From Scotland they have barley, and a little cured ling.

From Ireland they receive butter in great quantities, ſalted beef and pork, ſalted ſalmon, and ſome ordinary camblets, barley and potatoes.

From Newfoundland, New England, and Nova Scotia, dried cod-fiſh, and particularly from the former place, in great quantities.

From Carolina, ſeveral cargoes of rice.

From New York, Philadelphia, Virginia, and Maryland, wheat, flour, Indian corn, biſcuit, pipe-ſtaves, bees wax, and lumber.

They alſo buy moſt of their commercial ſhipping from us, ſome river built, by order, but moſtly of Old or New England conſtruction, that have been uſed.

We export from Portugal almoſt all the wines that are ſhipped from their whole dominions, including the weſtern iſlands and Madeira. The ſame of lemons and oranges, ſalt for all our fiſheries, and moſt of our colonies uſe, in North America; for our fiſheries in England and Scotland, and to Ireland prodigious quantities for their fiſheries, exported proviſions, and the whole national uſe; dried figs, raiſins, almonds, cork, ſhumac, orchella, citrons, ſugars of late, in very great quantities for Ireland, near, if not ſufficient, for that kingdom's conſumption, and from thence we have heard a great many, when refined, have been run into England; the whole to the great reproach of our colony management, as is alſo our traffic there in French ſugars. Diamonds, both of Brazil and India, Brazil wood, arrac, and occaſionally other Indian commodities, which our ſhips ſmuggle into many parts of the Britiſh dominions; oil when they have it to ſpare, at a reaſonable rate; and ſometimes cocoa nuts, elephant's teeth, drugs, a few tobaccos and other articles.

N. B. I have not placed their cotton among the exports for any particular country, as hitherto they have not received great quantities from Marnham, and there are generally bidders upon it of all nations, who ſend it to thoſe places where it is likely to turn to account, the importation, I think, being prohibited no where.

From this ſhort view of the particulars of the Portugal commerce, it is apparent, that the trade of Great-Britain with Portugal, is the leaſt burthenſome, and diſadvantageous to them of any; that in no article do we enjoy any preference, or receive any favour; but, on the contrary, in the branch of fine cloths, a manifeſt injury.

I ſhall now recommend a few points, ſays this judicious patriot merchant, to the immediate conſideration of whom they may concern.

And firſt, I recommend to ſome ſubſtantial fabricant, or public-ſpirited gentleman, to endeavour in ſome place where labour is cheap, to ſet a manufacture on foot that may rival the BLACK FRENCH DRUGGETS; an article which, if it could be brought to bear, would employ every inhabitant of a conſiderable village *.

* Since this worthy gentleman has ſuggeſted this matter, for the public benefit, I have alſo followed his example, and recommended the ſame to one of the moſt ingenious maſter woollen manufacturers in the kingdom, who reſides in a cheap country, and who has aſſured me, that he will undertake the ſame, provided I can furniſh him with patterns of that ſpecies of the French manufacture. Wherefore, I muſt requeſt the favour of this public-ſpirited gentleman, to oblige me with patterns of ſuch druggets as he would have our manufacturers imitate; and I hope to be able to give him an acceptable account of the ſucceſs. They are deſired to be directed, in a packet, for me, to be left with Mr Knapton, Bookſeller, in London.

New Remarks since the foregoing.

Since the above, I have received patterns of the beforementioned French druggets, and put them into the hands of certain manufacturers, in order that trials might be made thereof in our kingdom; and the trial has ſucceeded, with reſpect to the quality of the manufacture, but not in price, by every one who has attempted it. I have been informed, that one of the manufacturers did ſucceed at PENRYN IN CORNWALL; and it has been affirmed, that they were made ſo cheap, at the commencement of the laſt war, as to have been delivered at the Liſbon markets for the ſame price that the French do theirs.—But it ſeems, that, it ſo fell out, that this branch of manufacture, which would have been attended with great national advantages, has been put a ſtop to, and the manufacturer almoſt ruined, becauſe he voted according to his conſcience for members of parliament, at the laſt general election.

Whether this can be done, ſince the encreaſe of our taxes, occaſioned by the laſt war, I have never heard.

Theſe light druggets, commonly called the French druggets, is a kind of cloth greatly eſteemed by the Spaniards and Portugueze, for it's being well worked, though at the ſame time thin, light, and cheap. The French were the firſt introducers of this manufacture; and are, at this time, the ſole venders thereof in the Liſbon and Spaniſh markets, to the great detriment of our trade. Theſe druggets are made in France of the beſt of the Spaniſh or Turkey wool, which are very well prepared and ſcribbled; and afterwards ſpun into the fineſt yarn that thoſe wools will admit of.—When placed in the loom, the chain and filling, or warp and woof, muſt be of one quality, and be driven pretty cloſe, as this cloth muſt not be beat up cloſe after it is wove; (THESE LAST PARTICULARS ARE WHAT THE GENERALITY OF OUR BRITISH MANUFACTURERS HAVE ERRED IN) a yard of this cloth, which is half-ell wide, when finiſhed, ſhould not weigh above four ounces.

The French ſell their druggets at Liſbon from 1s. 6d. to 1s. 10d. per yard. The French and Dutch ſuperfine cloths, which they underſell us with, at the Liſbon and Turkey, and other ſouthern markets, are greatly inferior to the ſuperfine cloths which are made in England, for laſting; but this is not the principal quality which the inhabitants of thoſe hot countries deſire in their cloth. They deſire a cloth, which is thin, and light, and of an inferior price to our ſuperfine cloth; but, at the ſame time it muſt be well dyed, and look pleaſing to the eye: this is the kind of cloth which the French and Dutch ſupply them with, and which our manufacturers cannot be brought to manufacture, becauſe they imagine it greatly inferior to our own; but if we expect thoſe people ſhould buy our goods, we muſt ſupply them with ſuch as are the moſt agreeable to them. Both of thoſe branches of manufacture may be carried on in ſeveral parts of this kingdom; and, therefore, if the government would give a bounty for the exportation of thoſe cloths, for a few years, 'till proper manufactories were eſtabliſhed, by way of encouragement, and uſe every meaſure to annihilate all thoſe taxes, will fall the heavieſt upon our manufactures, and duly regulate all the poor of the kingdom, we ſhall be able to rival, and underſell both the French and Dutch at all the ſouthern markets. See our articles, POOR, TAXES.

Secondly, To ſome of our northern counties, or to Ireland, I recommend, continues this gentleman, the making the ſort of cheeſe ſent by the Dutch to Liſbon; of which many cargoes go in a year: and I cannot think but in our country, they are to be made cheaper.

Thirdly, To whom it concerns, to ſupport and extend our HAT TRADE; chiefly by preventing the ſale of beaver to the French, and to encourage the importing of greater quantities of it.

Fourthly, Improving our ſilk-ſtocking buſineſs as much as poſſible, in point of cheapneſs and quality; particularly in gauze fabrics.

Of the extraction of gold from Portugal.

I am now, ſays this gentleman, to diſcuſs the intereſting point, that has puzzled ſo many weak heads; I mean the extraction of gold from Portugal, which has been ever fooliſhly repreſented as an immenſe evil to that kingdom, ſuffered, however, out of great kindneſs and particular favour to us, as is pretended.

Nothing is more evident, than that gold is, in itſelf, of no other value than for the neceſſary and convenient uſes it can be put to. For example, I will ſuppoſe every Portugueze had his houſe full of that metal, and was at the ſame time in want (as he muſt be if he would not part with it) of comfortable food and raiment; might he not, in ſuch a caſe, with propriety, be ſaid, amidſt his uſeleſs heaps of ſhining ore, to be miſerable, poor, and wretched? What are individuals, or what is a ſtate the better for dead and uſeleſs piles of wealth? It certainly might as well be kept under ground, as brought above it to no purpoſe; nay, it had better be kept there, on ſuch principles, than produced to the light; becauſe the care and labour of working the mines would then be avoided.

Should the whole race of Portugueze fall again into their old penurious, and inelegant methods of life; feed upon pulſe, or other ſuch ordinary food, and that in a ſparing manner, nay, even without cleanlineſs; when their own corn was exhauſted, if they would content themſelves with eating cheſnuts inſtead of bread, as the poor, in bad years, yet do in the north part of their kingdom; or with the pods of the locuſt tree, which often ſupply the like wants to this day in Algarve: I ſay, if the people of the metropolis and other affluent parts of their kingdom, could condeſcend to forego the comforts of grateful food, kick off their ſhoes and ſtockings once more, and make, as in times paſt, an ordinary cloak their cloathing by day, and only bed by night, of what value would gold become? Or, in what ſhape could they propoſe to make it ſerviceable to them? For my part, I ſee no other uſe it could poſſibly be put to, than the buying of themſelves, in time of need, a protection obſtinately to poſſeſs a wretched and comfortleſs independence. Whereas, on the contrary, by parting with their gold in commerce to other kingdoms [ſee the article BULLION], they enjoy, not only the comforts, but elegancies of life; make a reſpectful figure in Europe, and are ſecure, ſingly from Great-Britain (while they are ſo wiſe as to preſerve her friendſhip), of a fuller and ſafer protection than they could poſſibly buy from the hire of all the mercenary troops upon earth.

That Portugal muſt and does pay a great ballance in bullion to every other nation ſhe trades with, I hope, has been made apparently obvious: but if a further proof thereof is wanting, I appeal to the weekly, nay, I may almoſt ſay daily, practice of our buying bills of exchange for thoſe ballances of the ſeveral countries to whom they are due.

Such debts of Portugal do we purchaſe, commonly for ready money, in an exchange buſineſs, which ſeldom gives a profit equal to national intereſt, and a decent premium for ſea riſques: and yet is a negociation more favourable for us than any other nation, on account of our ſituation, and the number of privileged ſhips we continually have at Liſbon; as alſo from the ſuperior characters of our mercantile navigators, to thoſe of Holland and other countries; inſomuch that our ſhips not only bring the money to England, but are alſo the general carriers of it, for all nations, to Italy. Thus becauſe our ſhipping is principally uſed for the extraction of gold, and our country is made greatly a channel for it's conveyance, both the ignorant of Portugal and of Great-Britain imagine the ballance of our commerce with Portugal immenſely greater than it really is; for, as I ſaid before, England is only a channel for the greateſt part of the ſpecie our ſhips bring from Portugal; moſt of it going out of the kingdom at her eaſtern ports, as ſurely as it enters at the weſtern ones; ſo that our gain on the traffic for the payments Portugal makes to many other nations, by the way of England, including freight, commiſſion, profit, and charges, may be reaſonably eſtimated at from two and an half, to three per cent. and no more. Such is the profit for which we do the buſineſs, run the riſques, and bear the odium in Portugal, belonging to other countries.

I cannot quit this head without obſerving, that it is exceeding ill policy in Portugal to make the riſque of extracting gold great; becauſe, according to the difficulties, the exchanges will be proportioned more or leſs againſt them. And I muſt add, if we were not the carriers of any, it would nevertheleſs go, and more to the diſadvantage of Portugal: for national ballances, like thoſe of private people, muſt be paid, ought to be ſo, and will be, in bullion, let what laws ſoever be made to hinder it. See BULLION, and BALLANCE of TRADE.

The Portugueze, therefore, as our friends and well-wiſhers, ought, by all means, to preſerve to us the advantage of being the carriers of their bullion. Nay, the late king of Portugal did ſo, on a patriot principal, after his eyes were once well opened, as they were in Wingfield and Roberts's affair *; for it is well known he ever after diſcouraged informations and diligences about the extraction of coin, being well ſatiſfied of the abſolute neceſſity there was for it's going out of his kingdom.

* Two Engliſh merchants of eminence who were condemned to be hanged in Liſbon for ſhipping off gold (but not duſt, as has been ignorantly imagined), on which his late Britannic Majeſty appointed a fleet to be immediately equipped, as was really done; and the very order had it's proper effect, by ſaving the gentlemen's lives, reſtoring their effects, and convincing the king of Portugal of his error.

Nothing ſhews the ſenſe and ſpirit of the Britiſh court better, in regard to this matter, than the ſpeech of the great lord Galway, made in the year 1709, to his late Portugueze Majeſty (when that nobleman was general there of the Britiſh forces, and ambaſſador from queen Anne) on a project then in agitation at the court of Liſbon, to prevent the extraction of bullion: of which lord Galway having received infor-

mation, he immediately demanded an audience of the king, to whom he ſtrongly and elegantly delivered his ſenſe on the ſubject, in the following manner:

'Your Majeſty cannot be ſufficiently commended for the ſteady attention you have always ſhewn to the affairs of your government. And the pains you have lately beſtowed on examining into the ballance of trade, is a new proof of that merit which would entitle you to the crown, had it not deſcended to you from a long and glorious line of royal anceſtors. —But permit me, Sire, to obſerve, that there is a greater king; one by whom all kings reign, and whoſe providence is over all his works. According to his diſtribution of things, riches belong to ſome nations, and induſtry to others; and by theſe means the liberality of Heaven is made equal to all. Vain, Sire, are all haman councils, when oppoſed to his wiſdom; and feeble the efforts, even of royal powers, when directed to croſs his will. You have forbid gold to be exported out of your dominions, and you would willingly inforce the prohibition: but the thing is impracticable. You may reſtrain your ſubjects, but you cannot ſet bounds to their neceſſities. But ſay this was poſſible: ſuppoſe you could defeat the induſtry of the northern nations; what would be the conſequence? Their huſbandmen, graziers, weavers, and all that infinite train of manufacturers that now labour quietly at home, to cloath and feed your ſubjects, would then turn ſoldiers; and, inſtead of ſeeing their marchantmen in Liſbon, you would hear of their fleets conveying them to BRAZIL, to fetch much more of that gold you now fetch for them. Beſides, Sire, if they are gainers by their trade, they thereby become the natural guarantees of your dominions. It is not only their treaty, but intereſts, that bind them to your ſervices. You have potent enemies, and you require powerful friends. The ambition of France knows no bounds, and the pride of Spain will teach her to keep up a perpetual claim to your territories and crown. You have no recourſe to fruſtrate the views and defeat the endeavours of theſe potentates, but to the MARITIME POWERS; and, therefore, let me beſeech your Majeſty to conſider, that every project to diſtreſs them, is, in effect, a ſcheme to deſtroy yourſelf.'

This ſpeech had it's deſired effect, as ſuch ſpeeches ever muſt have in Portugal; at leaſt while the preſent ſyſtems of power and politics remain as they are in Europe, or the Portugueze preſerve their ſenſes, or the governing men their true loyalty to their king, and a generous zeal and patriot love for their country.

Of the privileges to which the Britiſh ſubjects in Portugal are entitled by treaty.

Of theſe privileges, many were the ſpecial grants (doubtleſs for wiſe reaſons) of ſeveral of the kings of Portugal in antient times, and were mere acts of grace and favour, 'till the celebration of Cromwell's treaty with John the IVth, when they became our abſolute right, by being declared ſuch in the third article thereof.

I ſhall now mention the particular articles of privileges at preſent contended for, as well as others that are loſt, and ſhall ſubjoin a ſhort obſervation on moſt of them.

We will begin with a very neceſſary one, which is the right of having juſtice duly adminiſtered in Portugal: and that certainly ought not to be reckoned a favour in any nation: but it is at preſent too well known to be the caſe in Portugal (and I am afraid has been for many ages paſt the cuſtom there) to regard perſonal influence more than impartial juſtice, in judicial determinations; which, doubtleſs, occaſioned the treaty's being ſo very full as it is, of regulations on that head.

The office of judge-conſervator is our ſtipulated right, by the 7th article of the treaty, whoſe province it is to judge all our cauſes: but with a right, however, for either party to appeal to a body of judges, who are to give the final ſentence within four months: which rule is ſo far from being obſerved at preſent, that law-ſuits may be kept undetermined for forty years. The judge-conſervator is, likewiſe, to protect the ſubjects of Great-Britain (not from juſtice, but) from wicked or vexatious inſults. But that authority, like every other, is now taken from him; and our merchants of the moſt reſpectable figure, are thereby ſubjected to the inſolences of the very meaneſt fellows in office, having many of them been carried by ſuch (unheard, unexamined) both with and without orders from their ſuperiors, to the Newgates and Gatehouſes of the kingdom; and ſuffered outrages in their houſes and properties (as we ſhall hereafter give examples of) without a poſſibility of obtaining reparation, or any ſort of ſatisfaction whatever; even after proving the illegality of the proceeding, and the innocence of the inſulted perſon.

Let every merchant of Great-Britain, every ſubject of theſe kingdoms, think ſeriouſly of ſuch a ſituation; and never venture more to pronounce a valuable body of their country-men blameable for ſoliciting, nay demanding (for it is their right) protection from ſuch unjuſtifiable violences; or that their judge-conſervator may be reſtored to his ſtipulated authority for that purpoſe.

As to the navigation articles for America, they are all become now of no account: our ſhips are not allowed, unleſs in diſtreſs, to go to any of their colonies, except Mazagam and their African iſlands, and there without preference. The right of having houſes of trade in Brazil, and their other ſettlements, is alſo entirely taken from us.

The right of a legal navigation and commerce to Portugal, with an equitable ſecurity of property, particularly in periſhable commodities, and ſome of them owing no duties to the king, are ſtipulated to be free from all vexatious embaraſſments; all of which is agreeable to reaſon, juſtice, and good policy, for them to allow of; and yet in moſt of thoſe articles our merchants are eternally plagued with vexatious obſtructions and plunderings, of which ſeveral very extraordinary examples ſhall be produced.

We have alſo, by ſtipulation, a right to the wearing of ſuch arms for our defence; as are uſed by the native: an article which I hope is not thought a favour for us to enjoy, becauſe thoſe nations who have no treaties with them do the ſame, and ought to do it in every country.

The liberty of profeſſing our religion, likewiſe, I hope this nation has too much dignity to receive as a favour from any in Europe, eſpecially while the ſame indulgence is granted to the people of all countries in Great-Britain.

That debts owing to our merchants by perſons ſequeſtered by the king or inquiſition, ſhould be made good to the creditors, is certainly a very reaſonable and neceſſary ſtipulation: yet in regard to the king it is not obſerved, in regard to the inquiſition it is.

That the king, or any other power, by arbitrary protections, ſhall not guard the effects of our debtors from legal executions, is likewiſe an article of mere juſtice, yet it is frequently and wantonly violated.

The not protecting our run-away ſailors, on a pretence of changing their religion, and the obliging them, when demanded to return to their ſhips, is an article now not at all regarded by the Portugueze: on the contrary, they are encouraged in unreaſonable and inſolent proſecution of their captains, ſeduced from their duty, and ſupported in their reſiſtance; debauched in infamous houſes, where they are encouraged to run in debt; for the payment of which, they are afterwards ſold like cattle to the Portugueze and others; ſuch practice being abſolutely become a traffic in Liſbon, to the diſhonour as well as prejudice of Great-Britain.

The Britiſh factory have a right, under the authority of their judge-conſervator, to appoint, out of their own body, adminiſtrators of the effects of ſuch of their countrymen who die without partners, or inteſtate: which is certainly, not only a very reaſonable, but very neceſſary article, and can be no evil to Portugal.

Our merchants are exempted from hired or perſonal military ſervice, as well as their domeſtics; and from civil and religious offices, and all church tributes, which in ſome points are merely reaſonable and agreeable to the practice of all nations: in others, moſt neceſſary exemptions. They have, moreover, the right of having all neceſſaries for their houſes and perſons, and thoſe of their families, duty free, but this privilege is now made of little conſequence to them. They have likewiſe, by royal decrees and the laws of the land, the right of being treated as gentlemen, even in the article of criminal proſecutions; but it is ſo far loſt to them, that they are continually, even from wanton inſolence, treated as ſlaves: and they have another privilege, which is that of being priſoners at large for debt.

By the ſeparate and ſecret article, the regulation of DUTIES on our WOOLLEN GOODS is made; but to the manifeſt prejudice both of Great-Britain and Portugal, it is, like moſt of the others, never regarded.

Such are the Britiſh privileges in Portugal, and the ſubſtance of the ſtipulations in our favour of the treaty with that crown, which ignorant perſons have thought full of mighty advantage to this nation: whereas the fact is ſo far otherwiſe, that if they join Charles the IId's treaty, and that of queen Anne to Oliver Cromwell's, and then take a cool view of our ſituation, and that of other nations in Portugal, it will be found we are upon much the worſt footing with them of any nation, being in nothing favoured in trade, and yet we are the only nation obliged to ſuccour and protect them, as we frequently have done at an immenſe expence.

The treaty made between queen Anne and Peter the IId of Portugal, conſiſting but of two articles (except the preamble and concluſion) and thoſe being ſhort ones, I ſhall here give them entire to the public.

ARTICLE I.

'His ſacred royal Majeſty of Portugal promiſes, both in his own name, and that of his ſucceſſors, to admit for ever hereafter into Portugal, the WOOLLEN CLOTHS and the reſt of the WOOLLEN MANUFACTURES OF THE BRITONS, as was accuſtomed, 'till they were prohibited by the laws; nevertheleſs upon this condition, that is to ſay,

ARTICLE II.

That her ſacred royal Majeſty of Great-Britain ſhall, in her own name, and that of her ſucceſſors, be obliged, for ever hereafter

hereafter, to admit the WINES of the growth of Portugal into Great-Britian; ſo that at no time, whether there ſhall be peace or war between the kingdoms of Britain and France, any thing more ſhall be demanded for theſe wines by the name of cuſtom or duty, or by any other title whatſoever, directly or indirectly (whether they ſhall be imported into Great-Britain in pipes or hogſheads, or other caſks) than what ſhall be demanded for the like quantity or meaſure of French wine, deducting or abating a third part of the cuſtom or duty. But if at any time this deduction or abatement of cuſtoms, which is to be made as aforeſaid, ſhall in any manner be attempted and prejudiced, it ſhall be juſt and lawful for his ſaid royal Majeſty of Portugal, again to prohibit the woollen cloths, and the reſt of the Britiſh woollen manufactures.'

I muſt here obſerve, that the cloth trade is not the only article to which we have an excluſive right; becauſe the treaty manifeſtly gives it for WOOLLEN GOODS IN GENERAL; and ſuch was the right that we accordingly did enjoy, in it's full and genuine ſenſe, 'till the late Dutch conſul M. Heſterman, found the means of explaining it away in favour of his nation, who thereupon began introducing Dutch cloths, now increaſed to a great trade.

And the French have ſince taken the like advantage of our ſupineneſs to traffic in cloths to Portugal, though in ſecret; and the better to cover it, their cloths go with ENGLISH MARKS, TICKETS, and PACKAGE, [to confirm the truth of which, ſee the article FRANCE, Vol. I. page 815] though they are well enough known: and as to any other kinds of FRENCH WOOLLEN GOODS, they are imported into Portugal openly, and in very great quantities.

From the ſenſe of the treaty, enforced by many years practice, it ſhould ſeem clear, that we have the SOLE EXCLUSIVE RIGHT of importing woollen goods of all kinds into Portugal; and we are the only nation who gave them an equivalent for that right; the conditions whereof, to their advantage, being duly obſerved by us, ſurely demands as honourable an obſervation on their part, of the ſtipulations made in our favour; and I ſee no reaſon for ſuffering ourſelves quietly to be elbowed out of our rightful poſſeſſions by any intruders whatever.

In regard to our national dignity, weight, and privileges, I have only to add, as a ſerious truth, that the Portugueze people laugh, nay, cry ſhame on us, for given them ſo tamely and readily up. The French act in all points with a quite different ſpirit: they have NO TREATY, NO PRIVILEGES, but from favour; and yet, from being better ſupported, their MERCHANTS gain ground on ours every day.

Of the unjuſtifiable treatment that our Britiſh merchants have lately ſuſtained in Portugal.

Having already explained, that a principal uſe of the conſervatorial office is to protect our merchants from oppreſſive vexations and perſecutions, I ſhall now, in proof of the ill conſequence of that officer's loſing his power, mention two recent and very extraordinary impriſonments, that our Britiſh merchants have ſuffered in Portugal.

The firſt was of a gentleman, who went on board of an Engliſh packet boat, on the morning ſhe was to ſail, to take leave of a friend, who was coming in her to England. He had been guilty of no tranſgreſſion; yet, on his return to the ſhore, he was ſeized by the officers of a cuſtom-houſe boat, and without any legal authority, nay even without carrying him before any magiſtrate whatever, he was, by people of no higher account than tide-waiters, hurried to the moſt ignominious priſon of Liſbon, where he remained a conſiderable time; and, at laſt, from the ſtrongeſt interceſſion of one of the higheſt * noblemen, both in rank and employment, made to the governing man of the cuſtom-houſe, he was, reluctantly, by that officer, ſuffered to become a priſoner at large; and has ſince left the kingdom, without receiving an entire releaſement, or any ſort of ſatisfaction for the inſult.

* The marquis of Mariabua, captain-general of the forces of Portugal, and maſter of the horſe to the king.

The ſecond was of a gentleman, who had a barrel of beer depoſited under his charge, about which there was a judicial contention; and there happening to leak out of the caſk a trifling quantity of the liquor, the ſame head officer of the cuſtom-houſe made the leakage a pretence (to gratify a pique) for committing him of a ſudden to the common priſon; from whence he, however, ſoon got releaſed, by the interpoſition of a * lady of very high quality, as no ſort of offence could be reaſonably alledged in excuſe for the violence done him.

* The marchioneſs of Gouvea, lady to the hereditary lord ſteward of the king's houſhold.

Biſcuit is a commodity that pays no duty to the king of Portugal, nor any fees but a few at the cuſtom-houſe. Yet the ſame good director of that office, took it of a ſudden into his head to inſiſt, that an Engliſh merchant, who had then imported a conſiderable quantity, ſhould pay a duty on it. The merchant diſputed the point: a proceſs enſued, and the biſcuit was thereby detained in the cuſtom-houſe warehouſes 'till it was ſpoiled: then the health-officers ſeized and condemned it, nay, laid a fine on the merchant for having bad proviſions on hand; whilſt his antagoniſt of the cuſtom-houſe notified him at his own charge, to throw his biſcuit into the river; which he was forced to comply with, and has never been able ſince to obtain any kind of redreſs for the wrong.

Alſo a Britiſh houſe of great figure, that had large warehouſes, at a country-ſeat they hired about a league above Liſbon, on the banks of the river, had a viſitation there by the very meaneſt officers of the cuſtom-houſe, under a pretence of ſearching for ſmuggled goods. The family being in town, and only one ſervant there, who had not the keys of the warehouſes, on their being demanded to be opened, the officers were told by the ſervant that he would ſend for his maſters and the keys, as he immediately did: but they inſolently, and without legal authority, broke open the doors; and finding nothing to ſeize, left the warehouſes expoſed to plunder, as the gentlemen found them when they arrived; for they went thither directly with their keys, on receiving the notice that was ſent them. For this, like all other violences, no ſort of ſatisfaction could be obtained: and yet if theſe fellows had carried but a pound of foreign tobacco, ſnuff, or ſoap, or a ſingle pack of foreign cards, and then ſwore they had found them there, this Britiſh houſe of trade would have been confiſcated and ruined.

The 17th article of the treaty expreſsly ſays, 'If it happens that any controverſy does ariſe between the ſaid king's inſpectors, officers, or miniſters, and the ſaid merchants, concerning the goodneſs of fiſh, or any other ſorts of proviſion whatſoever, which ſhall be carried to any of the ſaid king's dominions; the ſame ſhall be determined by the arbitration of good men, provided they are Portugueze, who ſhall be equally choſen by the magiſtrate of the place, and the conſul of the Engliſh nation, and they ſhall determine the buſineſs in ſuch a manner, that no damage may accrue to the owner in the mean time, while the matter is in diſpute.'

Notwithſtanding the equitable precautions in this article of the treaty, the health-officers are guilty of ſuch arbitrary inſolences and plunderings, as are wicked and infamous to the higheſt degree. For example, in the ſummer of the year 1752, a great quantity of foreign grain being then at Liſbon, under falſe and ridiculous pretences, they exerciſed ſuch tyrannies as would diſgrace, even a Barbary government. They ſeized on whole warehouſes of corn, fined the owners of it, condemned the grain, and threw conſiderable quantities, at the expence of the owners, into the river. From others they took bribes to be quiet, which was the real end they drove at, and not the ſafety of the public; for it is well known the people of that office are capable, for money, of ſuffering the very plague to be imported and ſold. With ſuch proceedings it muſt be concluded, all the holders of grain were greatly terrified; inſomuch that the prices of wheat, and eſpecially the Engliſh (which is not ſo fit for keeping as Straights grain at any time, and was that year, from a wet harveſt, of an inferior quality) fell 50, 60, nay 70 per cent. in price; ſo that the whole Britiſh commerce did not loſe leſs that ſummer than 50,000 l. ſterling, beſides the ſums given in bribes to thoſe harpies the health-officers.

On that occaſion, the whole Portugueze nation cried ſhame on ſuch proceedings! However, the ſpoilers found protection, the merchants were plundered without redreſs, and the dealers in Engliſh grain ſuffered more in proportion than any others. I muſt here beg leave to inſtance one barbarous act of their wanton tyranny, which was as follows:

Two Engliſh houſes, who had a great deal of our country wheat on hand, finding their corn begin to ſuffer in quality, from the hot weather and weavel, joined together in a petition to the health-office, for leave to ſhip it off, under bond-ſecurity for producing certificates of it's being landed in other countries; which petition was rejected, under the unwarrantable and improbable pretence, that they might convey it to other parts of Portugal, and obtain forged certificates to cover the fraud: whilſt their real motive for the refuſal was, not to let a commodity get out of their power, which they had hopes of ſqueezing gains from. And, as a proof of the iniquity of this proceeding, I can aver, that the corn was afterwards ſold for making bread at Liſbon; alſo, that it made very good bread; and yet it was embarraſſed in it's ſales by the health-officers, to the great loſs of thoſe who had ſued for a juſt and reaſonable right, and were refuſed it.

The hard impoſitions that even attend the unlading of corn on it's arrival at Liſbon, can be vouched for by almoſt every maſter of a ſhip that uſes the trade. It muſt be eaſily conceived, that hardly any cargo of corn can be navigated without receiving ſome little damage, either from heating, or water made by the ſhip on her paſſage. The firſt kind of prejudice is always removed by care in the warehouſe, after it is landed; and for the ſecond, any corn damaged by ſalt-water, it has been cuſtomery to ſell for what it might be found worth, to feed hogs or other animals with; for corn can hardly be ſo bad, as not to ſerve well for ſome neceſſary uſe.

uſe. Yet the health-officers have been ſo tyrannical of late, as to throw into the river great quantities of grain but little damaged, and ſometimes when it was not at all ſo, merely to extort inſquitous fees for themſelves.

It was not long ago that a merchant had a cargo of corn conſigned to him, ſome of which was ſpoiled by the ſhip's making water on the voyage; when he heard of it, he ordered the damaged wheat to be thrown overboard: no, ſays the health-officer, there muſt be a diligence done, and fees paid: the gentleman replied, there was no neceſſity for any ſuch diligence, ſince all he could do was to cauſe the corn to be thrown away, and he did not want to preſerve it: but his remonſtrances were in vain, for the pickpocket innovation was inſiſted on.

Such were the tranſactions in the corn trade, in the year 1752; and in the laſt ſummer, which was the following one, another game was played equally tyrannical and unjuſt: the harveſt had failed in Spain, and the crop alſo proved very ſhort in Portugal: however, in the latter kingdom there was a very conſiderable ſtock of foreign grain on hand; and, though the price of it was raiſed, yet the merchants went on ſelling it in their uſual manner, without any combination, fraud, or ill practice in their proceedings. They were not moleſted for a conſiderable time, that orders might be given for buying up farther great quantities, as was actually done, for a future ſupply: but in the month of Auguſt, juſt the dangerous time for embarraſſments to the ſtock on hand, miſrepreſentations having been made, out comes a ROYAL ORDINATION to circumſcribe and impede the ſales of grain; nay, in effect, to take it, in that critical ſeaſon, out of the proprietors hands; or at leaſt, putting it out of their power to uſe the proper means for it's preſervation, thereby expoſing many people to ruin: nay more, they were made liable to a treatment due only to the vileſt of felons, and that, even without the power of being heard in their own defence, for the order expreſsly directed the preſident of the corn-market to take out ſecret informations concerning all tranſgreſſors of it, and tranſmit them to the ſecretary of ſtate, for the king to determine the puniſhment in his cloſet.

Down falls corn on this proceeding, 25 per cent. in it's prices, which might make the difference of near another 50,000l. ſterling on the year's trade; beſides the danger to the merchants (from falſe informations) of ſequeſtration, corporal puniſhment, and baniſhment from the kingdom; all againſt the force of judicial determination, as well as reaſon and cuſtom; and alſo againſt the ſanction of a NATIONAL TREATY, in the 10th article of which there is this ſtipulation: 'And the people of this republic (England) may freely carry arms, corn, fiſh, and all other ſorts of merchandize, into the kingdom, ports, and territories of the king of Portugal, and ſell the ſame at their pleaſure, either by RETAIL or WHOLESALE, TO ANY PERSON WHATSOEVER, and for whatever prices they can get; AND THEY SHALL NOT BE PROHIBITED, CIRCUMSCRIBED, OR INCAPACITATED, BY HIS SAID ROYAL MAJESTY, OR HIS MINISTERS, GOVERNORS, FARMERS OF THE REVENUES, OR MONOPOLIES, OR BY ANY CHAMBER OR JURISDICTION OF ANY TRIBUNAL, EITHER PUBLIC OR PRIVATE.'

Such were the ſecurities under which the merchants had ſent for the corn, about which they were treated as before deſcribed. I have now only to add on the ſubject, that foreign grain is, by the very laws of the kingdom, a free trade; owing no kind of duty to the king, nor any fee whatever to his officers, except a trifle for any entry at the corn-table; and, therefore, there was no lawful plea for cauſing the prejudices our merchants were made to ſuffer, or the very alarming dangers to which they were ſo arbitrarily expoſed.

The Portugueze unjuſtifiable treatment of the Britiſh merchants in other reſpects.

Part of the ſeparate or ſecret article of the treaty between England and Portugal begins thus: 'That the people and inhabitants of England, trading (as has been already mentioned) in the kingdoms, dominions, ports, and territories of the ſaid king, ſhall not pay more duties and taxes, but only in the manner following, viz. That the Engliſh goods, merchandize, and manufactures, ſhall never exceed 23 per cent. on their valuation, for the payment of the DUTIES; and they ſhall be favourably VALUED, according to the regimen (or book of rates) of the cuſtom-houſe, and the ancient laws of the kingdom; and ſuppoſe there ſhould be any motive for raiſing the valuation, by reaſon of a riſe in the real value of goods and merchandize, it ſhall not be done but by the conſent, and in the preſence of two Engliſh merchants, who reſide and dwell in Portugal, and are choſen by the Engliſh conſul; and, granting that the merchandize ſhould fall from it's preſent or future exact value, the valuation and doubt ſhall be determined by diſintereſted perſons, who ſhall be choſen by the Engliſh conſul and the officers of the cuſtom-houſe.'

Such are the ſtipulations by treaty for regulating the duties on our Britiſh manufactures in Portugal; but theſe are at preſent as little attended to in that kingdom as the reſt, to our manifeſt injury, and indeed to that of the Portugueze alſo. The great article of CRAPES, which, as before obſerved, we have now loſt, was a commodity that paid a moſt enormous duty: and at preſent, LONG ELLS and SHALLOONS, and ſome other ſort of ſtuffs, pay from 28 to 30, and even upwards per cent. DUTIES on their valuation. The conſequences of which are, that theſe branches greatly decline, and moſt of the traffic in them becomes clandeſtine, to the great prejudice of the fair traders, and alſo of the royal revenue of Portugal. Beſides, Spain lies ſo very convenient for ſmuggling in her cheap and ſtrong ſilks, that, if not timely checked, they muſt infallibly undermine a very great part of our ſtuff-trade to Portugal, which can only be preſerved by a better and juſter regulation of the duties theſe goods are to pay.

It has become a practice of late for the provedors, or chief officers of the cuſtom-houſe, to act in ſo capricious and tyrannical a manner, that our merchants can make no certain calculations on hardly any thing they deal in, notwithſtanding there is a printed BOOK OF RATES *; and there are alſo certain officers in the cuſtom-houſe, whoſe ſole buſineſs is to aſſert the qualities of merchandize; but their determinations are no farther attended to, than as the ſuperior pleaſes. I ſhall furniſh two inſtances, out of hundreds that might be produced, of his overbearing and arbitrary management.

* Let any foreign merchant ſuppoſe this to be the caſe in England, upon what a precarious footing would he ſend the commodities of other countries hither? Were not the duties upon the Portugal wines duly aſcertained here, and the treaty in this caſe inviolably regarded, what would ſoon become of the vintages in Portugal? If we ſhould be obliged to retaliate in the like manner upon the Portugueze, they would ſoon feel the calamitous effects of our reſentment.

The firſt was of ſome Engliſh cloths, of a quality often imported by the gentleman thoſe belonged to. The valuers of the goods put them at their uſual rate, the director of the cuſtom-houſe inſiſted they ſhould pay according to another. The owner remonſtrated on the injuſtice of ſuch a demand: every valuer in the cuſtom-houſe peremptorily aſſerted they could not poſſibly have an higher eſtimation than their OLD one given, without a manifeſt injury to the merchant; yet the chief officer perſiſted in his demand. The merchant appealed to the higher tribunals, his cloths lying all the while (I believe near a twelvemonth) open in the cuſtom-houſe, but could obtain no redreſs, and was forced to ſubmit to the impoſition.

The ſecond inſtance I ſhall produce was concerning printed linens. One Engliſh houſe diſpatched in the beginning of a week, ſome caſes of them, at the uſual rate of paying duties for ſuch goods, which had always been regular and certain: about the middle of the ſame week, another Engliſh houſe ſent to diſpatch ſome caſes of the very ſame goods, both for kinds and qualities, and the valuers declared the rates for them to be as USUAL. But Mr chief director peremptorily inſiſted they ſhould pay more than CENT. PER CENT. higher duties. The owner remonſtrated, but in vain; he was obliged to pay the unreaſonable exaction; nay, the duties were afterwards raiſed greatly higher. When that gentleman reproached the cuſtom-houſe valuers for the impoſition, thinking it was their fault, the poor men ſhrugged up their ſhoulders, and ſhaking their heads, replied, 'What, Sir, would you have us to do? We are as badly uſed as yourſelf. Since I—— T—— came over here and did nothing, you muſt look upon yourſelves as given into the hands of this man, as we are, for him to do what he pleaſes with.'

Such capricious and unreaſonable exactions, made without any the leaſt previous notice, deſtroy all calculation, and render uncertain every rule by which merchants can, and do regulate their proceedings; and, therefore, are acts of the moſt barbarous oppreſſion and injuſtice.

Such were the violences and injuries, that have, from time to time, created uneaſineſs in the minds of our merchants at Liſbon; and, as they were contrary to ſtipulated regulations, they were certainly ſtronger grounds for complaint.

Our merchants were, upon too good grounds, put under an extraordinary apprehenſion ſome time ago. A method was taken to quiet their fears on that head, which effectually did it. They were, however, at the ſame time, promiſed their grievances ſhould alſo be redreſſed, and their juſt privileges reſtored: but what has been the event thereof? Reader, thou ſhalt be impartially informed; for the following novelties have happened within the two years laſt paſt.

1ſt, The few remaining powers of our judge-conſervator, for protecting the Britiſh merchants, have been entirely taken away, by a public printed decree of his moſt faithful Majeſty's.

2dly, Our corn trade has been made ten times more precarious, and the perſons and fortunes of our merchants rendered unſafe, from the worſt and moſt arbitrary violences, warranted by a written ordination of the king of Portugal's, which was ſtuck upon the doors of the corn-market in Liſbon:

Liſbon: it's whole tenor expreſsly contrary to the 10th article of the treaty; which they now ſo effectually annul, as to diſpatch no petition about corn, in which a right from that treaty is claimed. *

* By petitions all kinds of applications are made to every office, and all legal proceſſes are likewiſe formed upon them.

3dly, By a decree of the king of Portugal's, in favour of that righteous officer called the provedor of the cuſtom-houſe, all caſes, wrappers, barrels, and package whatſoever, are made his due, of any merchandize, imported into Portugal, and may be taken by him in ſpecie if he pleaſes. A moſt unjuſt ordination, as well as enormous tax! for the package is certainly as much the merchant's, as the goods it contains; and, in ſome caſes, ſuch as butter, rice, and flour, for example, cannot be ſeparated. In ſhort, never was there a law ſo unreaſonable, or ſo unjuſt. That officer's chief pay aroſe formerly on a duty only on package, which the kings of Portugal might have ſome grounds for exacting, as it was a light charge to the merchants; but henceforward it may be made, what an arbitrary officer pleaſes: though, in fact, we ought to pay no ſort of duty on package, as by a decree of king Emanuel's, (now incorporated with our rights) we are entitled to import, free of duties, canvas, wrappers, bags, and other neceſſaries for carrying on our buſineſs, provided they are for our uſe, and not for ſale.

4thly, The inſecurity of the perſons and fortunes of our merchants, from the before-mentioned corn ordination, well deſerves the attention of Great-Britain.

The enumerating of theſe facts are the beſt and fulleſt vindication of our merchants at Liſbon, that can, or need to be given for their proceedings, in appealing to their ſovereign (through the proper channel of his miniſtry) for his royal ſupport and protection. They are well known to have hearts filled with zeal, loyalty, duty and affection for their king, and a becoming reſpect for all who are in authority under him: but they would no longer deſerve the name of Britons, if they acted in a manner ſo unbecoming of themſelves, as to forget that juſtice is their due, and legal liberty their birth-right. There never was a more falſe and injurious opinion propagated, than that our merchants at Liſbon are either factious, turbulent, or unreaſonable; they are not ſo, but the reverſe: and as their cauſe is juſt, they truſt it muſt prevail.

Of other diſadvantages under which the Britiſh traders in Portugal labour.

The firſt we ſhall name, is the prejudice which bigotry inſpires them with againſt us, on account of our religion. It muſt be acknowleged, to the great honour of the Portugueze, that all orders of them are very civil to foreigners, and the better ſort are particularly polite: but ſtill they are rigid Roman Catholics, with whom it is a neceſſary point of faith, to think too ſeverely of thoſe who differ from them in religious principles. And although there are many of the nation who are very obliging in their carriage, nay, that do many kind and friendly actions for our Proteſtant merchants; yet it is not to be doubted but the very beſt of them would like us ſtill better, if we profeſſed the ſame tenets with themſelves: and there are others, no doubt, who eſteem it a merit to hate us; and who think it a much leſs crime to deceive, over-reach, and defraud us, than any ſuch as are of their own Church. Beſides, the difference in religion does in a great meaſure prevent a free intercourſe with them; and hinders our having that intereſt with the clergy, in particular, which is often of very great ſervice to the Roman Catholic merchants of other countries.

The next diſadvantage our countrymen labour under, is that of having too often improper, or encapable c——s. For example, what ſervice can any man be of, in that office, who goes over advanced in years, unacquainted with the laws, language, and cuſtoms of the country, and is withal, totally ignorant of commerce? Such a man, at beſt, can be of no uſe to the merchants; and if to the want of theſe neceſſary qualifications, are to be joined the poſſeſſion of ſome bad ones, ſuch as p--de, ind---ce, ob---n--y, or p-rv--ſſn-ſs, he is ſure to do them infinate diſſervice; of which having really happened ſeveral times, numberleſs inſtances can be given. Whereas, other nations have the moſt able and experienced reſident traders appointed to that office [ſee our article CONSUL]; men, who have been of the profeſſion themſelves, will certainly feel, as well as know how to act, for the merchants. And if the national end is to appoint a conſul for the ſervice of commerce, and the ſame to be the motive for the merchants paying for his ſupport, both are diſappointed, both are wronged, by the nomination of any man, who wants affability, aſſiduity, or abilities: and what, alas! muſt be the caſe, when all theſe, and many more neceſſary, qualifications are wanting?

The factory of Liſbon had formerly the indulgence of chuſing and recommending a conſul; but fooliſhly reſigned it, to prevent animoſities from growing up among themſelves; and there are perſons yet on the ſpot who ſigned the letter for that purpoſe. Fatal reſignation! for thereby, the office is now fallen, amongſt thouſands of others, to be ſquabbled for by people who regard it for nothing but for it's profits; and who, without conſidering conſequences, think of little elſe but making the poſt as eaſy as it is profitable to them. Now, rightly conſidered, I believe it will appear, there is no power can legally oblige one Briton to pay money to another, without an act of the legiſlature to authorize it: and therefore conſulage can be conſidered only as a voluntary gratification for ſatisfactory ſervices; conſequently the merchants have a right to demand reaſonable and proper ſervices, or refuſe paying any conſul his appointments; eſpecially if it is made a reſolution of the majority of their body. But as this is a point of law, any able practitioner would greatly oblige the world by impartially diſcuſſing it, as a matter in which the proſperity of commerce, and the rights of the ſubject, are greatly intereſted.

To the ill execution of the c----r o----ce muſt be added, that our countrymen labour ſometimes under the diſadvantage of having the m---ſt---l functions too, as badly performed. It is well known, that in Portugal, ſpirit and dignity in a miniſter, are very eſſential qualities for preſerving a national reſpect, as the certain conſequences of an abject, mean, or poſillanimous behavour, are it's being ſlighted, deſpiſed, and trampled on. I will ſuppoſe, for example, that if our nation ſhould be ſo unfortunate, at any time, as to have a miniſter at that court, who, in the face of ſo very proud a people, could be ſo mean as to trade, nay, ſo indiſcreet, as even to let his name appear at the head of a compoſition in a bankruptcy, what figure can it be thought he could make? And how little muſt he of neceſſity be reſpected, either by the natives or his own countrymen? Nay, I will carry my ſuppoſition farther, and imagine a Proteſtant merchant of our factory, proſecuted without a crime, ſhould apply to him, by the direction of the body of merchants, for his protection, and ſhould receive from him this anſwer, 'I cannot protect you, I come hither for other purpoſes; if you want protection YOU MUST GO TO A CONVENT FOR IT.' I ſay, if ſuch a thing as this could poſſibly happen, what opinion would Portugal have of Great-Britain? How would our merchants there look? How would they be treated by the very meaneſt of that people? And how long, after ſuch a diſgrace, could Portugal be tolerable to a Briton?

A noble negociator, that, not an age ago, left Liſbon, on terms bad enough with his countrymen, had, (notwithſtanding his piques) the wiſdom and honour to deliver his true ſentiments on the very evening of his departure from thence, in or near the following words: 'Well, after all, the trade of this place is of great conſequence to Great-Britain; and there ought to be a MINISTER here of illuſtrous birth, with a high character, and large appointments (nor is the beſt nobleman in the kingdom too great for the office) to ſupport properly the dignity of the crown, and the rights of the nation. And there ought to be a CONSUL of ſufficient abilities, who ſhould be a merchant; one that could obtain weight and influence in the tribunals of the kingdom, and do all the under parts of buſineſs, without troubling the miniſter, who ought never to appear but in matters of real importance; and, when he does move, he ſhould have ſuch powers as to enable him to act with great weight and dignity: and ſo I will inform the miniſtry when I get to London.'

It is to be hoped that ſo wiſe and neceſſary an information was given; and that, to this nation's great benefit as well as honour, a time will come for carrying ſuch prudent counſel into execution.

Were, therefore, the national diſadvantages of having bad c------s, and improper m---ſt---s prevented by wiſe determination here, moſt others would thereby be greatly weakened, if not entirely removed. Even the firſt I mentioned; their prejudice againſt us, on the ſcore of religion, would a good deal be blunted, or at leaſt many of it's bad effects removed, by a glare of grandeur on one hand, and a ſteady, wiſe, and prudent conduct on the other; eſpecially if attended with affability, liberality, and politeneſs. But from the reverſe of theſe qualities, either in miniſters or conſuls, I am ſure all honeſt and worthy merchants of Great-Britain will join me in ſaying, GOOD LORD DELIVER US!

Of the late miſunderſtandings, ſaid to have aroſe between the Britiſh factory, and the B——h c——l in Portugal, and the ill conſequences attending their unhappy differences.

The B——ſh c——l, in a public debate at a factory-meeting, oppoſing the whole body of merchants, in points of great concern to the nation, as well as themſelves, was ſo raſh as to ſay, that 'the treaty exiſting betwixt the two crowns, could not, nor ought to, prevent the king of Portugal from making what laws he pleaſed in contradiction to it, in his own kingdom.' To which a merchant, deeply intereſted in point of property in the matter debated, ſaid, in his reply, 'Sir, if you wilfully ſacrifice the rights of the nation, you will be a traitor to your king, and an enemy to your country.' There was no explanation demanded of theſe words, conformable

to the practice of all public assemblies; nor, indeed, was any explanation necessary, as the words if, and will be, made it clearly a supposed case. What followed was, that this officer, whose express duty it was to protect his fellow-subjects from extra judicial violences, applied to the arm of a foreign absolute power, to punish a supposed offender for what had passed in a British national assembly, and of which that court had no sort of right to take any cognizance.

A secret process was formed; the merchant who never was judicially accused, or, of course, allowed to make his defence, was banished (of a sudden and unexpectedly) from his house, at twenty-four hours warning, and from the kingdom of Portugal in five days: nor could then obtain the justice of being heard for himself, or even of making a written representation against so violent an outrage. These are the facts that have been told, and most of them given in a printed narrative of the affair; and the truth of them is vouched for by every one acquainted with the proceedings. The whole of which are so uncommon, so unjustifiable, in respect to the merchant's banishment, that history does not furnish a precedent of the kind.

As to the supposed crime, what was it? A warm expression, uttered in the heat of an entirely legal public debate; and that too, in reply to such a one as may, perhaps, be found to merit a most weighty censure. Is not every speaker on public affairs liable, from human frailty, to say more offensive things than were uttered by this man? Who, it is to be also observed, was not, on the occasion, an officious, idle babbler; but a speaker in behalf of his king, his country, of commerce, of the whole community present, of his own immediate property, and that of his friends entrusted to his care, in a foreign country.

In so very interesting a cause, if he had made a real rash slip, what did it, what could it deserve more than a reprehension? And even that, a gentle and polite one? But for a c——l, for such an offence, to drive a man to ruin, ignominy, banishment, and expose, he cared not whom besides, to inconveniencies and prejudices, was surely acting so wild, so outrageous a part, as must startle and shudder every humane and honest man to hear of. Can there be produced, from amongst the ablest and coolest speakers in public debates, hardly a man who has not been so much off his guard, as, on some occasions, to let words fall from his tongue, that drew on him the disapprobation of his hearers? Nay, that even himself has not been afterwards sorry for having uttered? Sure I am, that many instances can be given, on the affirmative side, of men who were even celebrated for an uncommon command of their tempers.

The mischiefs that followed the outrage done to this man, are many of them known, and others may be most reasonably supposed. It is not, therefore, a mere restoration, however honourable, that is satisfaction sufficient, either to him or his house of trade: they ought, likewise, to have a full indemnification, a most ample reparation; the voice of equity, the common practice of courts of judicature, the safety of commerce, and the honour of the nation, all demand it.

When a gentleman has been prejudiced in his affairs, and others in theirs through him, is it satisfaction sufficient, that, after a tedious time of suffering, the illegal and unjustifiable embarrassments and evils are merely removed? Surely no: an honest jury, in any court of justice, could not do otherwise than award very high damages; and every man, making the cafe fairly his own, would think they were undoubtedly his due.

But it may be said, justice is left open against the offender; who, I must say, may, or may not be able to be responsible for the determination; nor do I think it ought to be put on that issue: those who put him in the way of doing such mischief, or those who so unwarrantably did it at his instigation, ought in conscience, in justice, in honour, to stand in his place for the indemnification.

Of some other disadvantages, under which our Portugal merchants have laboured of late years.

Among the many particulars relating to our Portugal commerce, which have lately appeared in public, it has been a matter of surprize, to find that no one has wrote upon the subject of the money lost by our merchants, from on board the prince Frederick packet-boat, which was seized on her homeward voyage from Lisbon by the Algerines, seven years ago, carried into their port, and there plundered, under pretence of her not having a proper pass on board for her protection.

The king's colours, which those packet-boats are authorized to carry, were always thought, 'till that time, a sufficient protection; and the money put on board that vessel by our merchants, was shipped on a full persuasion that such colours were a full security against the plunderings of the Barbary corsairs: however, it has proved to be otherwise; for their money has been seized, divided, and is irrecoverably lost.

Nothing can be more evident, than that the Mooriſh pleas, urged in defence of this piece of roguery, were all chicanery; trumped up pretences, and temporary evasions of truth, reason and justice; however, they served their turn, in merely furnishing excuses for keeping of our money; which we thought not worth hazarding the safety of our navigation to quarrel about, and therefore accepted of their proposed expedient of making a new, and more explanatory treaty, which has been done; and the money, so unwarrantably seized, was accepted in lieu of a national present, which it is customary for us to make on such occasions.

Had no treaty been made, or any other national benefit accrued from this unwarrantable action, as the treasure was taken from under the king's colours, it is but reasonable that the royal revenue should be charged with the loss, since the presents to the piratical states must have been made out of that revenue. For if, as a new treaty has been obtained, for the fuller security of respect to our flag, and safety of our mercantile navigation, which that money has expressly paid for, there can be no just reason assigned, why a PUBLIC benefit should be purchased by INDIVIDUALS; and therefore it is an high injustice, that the money mentioned, has not been repaid to the just proprietors of it long ago.

If any man's absolute property, of what kind soever, is made subservient to public utility, by an application of any sort, contrary to his own free disposition, it has been the invariable practice of parliament (or the crown, if done on an emergency) to assign an ample equivalent for the appropriation they take upon them to make. And, therefore, as on the concluding of a national treaty with the Algerines, it is customary to make them an expensive present; and they, sensible of the illegality of this capture, agreed, on the making of a treaty, that it should stand in the place of such a gift; certainly the people, whose property that treasure was, ought to have it made good to them again, and without delay; honour and justice demand it should be done: and no man, no minister, who would be thought to have the interest of trade at heart, ought, for his own credit, or the national honour, to evade or obstruct so clear and necessary an act of justice.

And it must be observed, that public faith and honour were never more necessary to be set in a conspicuous light, than at present, when the French are said to be attacking our distant colonies, and where, for the preservation of them, it may be necessary that particulars should have strong grounds to rely on public honour and justice, for the voluntary disbursements and services that may be of the highest consequence for them to contribute; more especially so, since in those very parts of the world, there were, but a very few years ago, many too just and well-grounded complaints for hard treatment, in proceedings of the utmost service and importance to this nation.

Besides what has been represented, in relation to the conduct of the Portugueze towards our British trading subjects in general, they have begun, like some other of their neighbour-nation, to seduce our people into their commercial system, in order still more to insult and maltreat that kingdom which has been their protection. For by late authentic accounts from Lisbon, it appears, that the new EAST-INDIA COMPANY established there, are indefatigable in rendering their trade successful. Not long since five of the ships fitted out for that service, sailed from thence under the conduct of Mr Stevens, who was a lieutenant in the British navy. He was sent from thence to London, to procure persons to go as captains, and returned with three, who are also sent out commanders, upon their being strongly recommended for their great skill in navigation, and their knowlege of the country. And their salaries, which are very considerable, are to be paid by ENGLISH factors, who are principals in this undertaking, and agents for the company.

Nor are British factors only employed in this Portugueze undertaking, but it is very currently said and believed, that British captains, British sailors, and British money, are all employed in advancing the Portugueze East-India traffic, a considerable part of which returns, may very probably be smuggled into the British dominions. Is it not strange infatuation, that Britons should thus encourage a nation in their trade, at the very time such nation is attempting to ruin that of our own country? Is it not requisite, that strict inquisition into thismatter should be made on our side? Should not enquiry be made, who invited Mr S-----s to Lisbon? Under whose patronage did he live there? From whom did he receive his credit on England, when he came last hither? On whom was that credit given? What are become of the British sailors who navigated the two ships from London to Lisbon, called the King and Queen of Portugal, that were built here for the Portugueze India trade? Who are the British factors gone from Lisbon in the Portugueze service? To what houses of trade there did they belong? What connections have they with any partners in such British houses; and what are the conditions and obligations of their engagements? Will the alluring away our sailors, our merchants, and our money, by some nations; and our manufacturers, artizans, and shipbuilders, by others, tend to the advancement of the British trade and navigation? If we have it not in our power to retaliate upon the Portugueze, will not our laws call British subjects to account for practices so highly detrimental to the national

national commerce of our own country? Was the conduct of the Portugueze towards this kingdom, as unexceptionable as it ought to be, practices of this kind ſhould by no means be connived at among ourſelves: but when it is otherwiſe, too much rigour and ſeverity, conſiſtent with the laws, cannot be uſed to ſuppreſs evils of this kind, for if they are ſuffered with impunity, in regard to one nation, will not our own ſubjects follow the like example in reſpect to others? Will not an unreſtrained toleration of this nature, render the ſkill and ingenuity, as well as the capital ſtocks, of our Britiſh merchants, ſubſervient to the aggrandizement of the commerce of other nations inſtead of our own, under which they are protected?

Did all the Portugal gold that temporarily circulates in this nation, proceed from the advantageous ballance of our trade with that kingdom, it would, even in ſuch caſe, be a high indignity to Great-Britain to ſuffer ſuch treatment as our merchants have met with in Portugal. Would not this be the natural ſtep to bring us into irrecoverable contempt and ignominy, without due reſentment; and would not that ſoon reduce the ballance of trade, as well as ſink the honour and glory of the Britiſh nation? But when nine tenths of the Portugal gold that makes it's appearance among us occaſionally, belong to other countries, and England only is the carrier thereof, and the bridge over which it paſſes, to pay the ballances due from Portugal to other nations, that are greater gainers by her, what obligation is there on us to bear with the leaſt inſult? Where is the nation that takes ſo much of their wines and their fruit as Great-Britain does? What ſtate is more highly favoured in the duties laid upon their productions imported into theſe kingdoms, than Portugal? Is not an hundred pounds worth of our woollen goods worth an hundred pounds worth of their wine, without a pipe of which we can eaſily do, and yet not drink worſe in quality, or leſs in quantity, as I will one day attempt to demonſtrate? And what nation will they then get to take their luxuries off their hands, in the like proportion that Great-Britain does? Is not a thouſand pounds worth of our lead or our tin worth a thouſand pounds worth of their gold? Cannot Great-Britain find the way to the Brazils as well as the Portugueze, as lord Galway, in effect, gallantly told the late king of Portugal: and as his late Majeſty king George had reſolution and magnanimity enough to threaten to ſend a fleet to bombard the city of Liſbon, may not that be one day done in reality, if that nation ſhould once dare to rouze that lion againſt them, who has been their great ſafety and protection? What potentate have the Portugueze to depend upon, in caſe of need, except Great-Britain? and does wiſdom and policy dictate to them to ill treat their beſt and tried friends!

The natural and dangerous enemy of Portugal is Spain; for as the acquiſition of that kingdom would be of ſuch infinite conſequence in the points of eaſe, convenience, and power, to the Spaniards, the Portugueze would be blind and ignorant indeed, not to ſuppoſe their ambitious neighbours would miſs no opportunity, on any pretence, for ſeizing on their country. And that ſuch an apprehenſion does always exiſt in Portugal, is evident from the alarms conſtantly taken on any movements or augmentations of troops on the Spaniſh frontier. The antipathy and hereditary hatred the people of thoſe kingdoms have for each other (putting the Gallicians out of the caſe) are moſt extremely obvious and ſtrong. From traditions of former ſufferings, and a dread of future ones, the Portugueze even abhor Spaniards; they conſider them as having been the unwarrantable ſeizers of their country, and the tyrannical ruiners of it afterwards, to make the acquiſition ſecure: while, on the other ſide, it may be ſaid as violent a prejudice operates, and almoſt to an equal degree. The proud Spaniards conſider the Portugueze as a province of rebellious and revolted ſlaves, whom they want to ſhake their whips at, and conſtrain to a ſervile obedience, but cannot; they affect to deſpiſe the Portugueze, but, in the manner of expreſſing their contempt, always manifeſt an anger, that ſhews they are moſt ſenſibly hurt. Such is the animoſity that reigns now, and has for ages reigned betwixt theſe nations; nor is there the leaſt likelihood of an abatement of it, but, on the contrary, rather an increaſe: for if the preſent moſt Catholic king dies without iſſue, his ſucceſſor brings in the neighbourhood of Portugal a ſpecious claim to it's dominions, in right of his mother, heireſs of the houſe of Parma, and, by direct deſcent, repreſentative of an elder daughter of king Emanuel's of Portugal, than her from whom the houſe of Braganza inherit the throne. And, as a proof that the king of the Two Sicilies is not inſenſible of his claim, he wears the arms of Portugal, in an eſcutcheon of pretence, on his other royal bearings, if I greatly miſtake not, even on his very coin: and, therefore, it is probable neither he or his deſcendants will ever think they are in conſcience obliged to acquieſce in the determination of the law of * Lamego, or the nobility's choice at the reſtoration of Portugal, eſpecially if any favourable opportunity for the exertion of power ſhould offer.

* An ancient and fundamental law of the kingdom, by which it is determined the crown cannot be inherited by a prince born out of the kingdom; but that law, in other particulars, has been frequently violated.

To ſuch an unlucky and diſagreeable ſituation as this, a new and important affair has happened, which puts Portugal under great difficulties with regard to Spain, and that is, the treaty concluded between his late moſt faithful Majeſty and the preſent Spaniſh king, for the former giving up Nova Colonia to the latter, in exchange for other ſpecified territories in South America. An adjuſtment ſo diſadvantageous, and even dangerous to Portugal, that every ſubject of that kingdom ſpeaks of the negociation in the harſheſt terms, ſaying it was an impoſition on their king, in his very infirm ſtate of mind and body. However, the treaty having been ratified in form, the Spaniſh court claims it's being duly executed; and Portugal would be put to hard ſhifts for evaſion, did not, by great good luck, the Jeſuits intrigue in their favour: thoſe pious fathers, not chuſing any other European neighbour too near their own valuable poſſeſſions in America, have ſtirred up the natives of that country ceded to Portugal to oppoſe the ſurrender of it; and they accordingly profeſs a voluntary obedience to the Jeſuits, and refuſe it to the king of Spain; while the Portugueze, it may be concluded, ſecretly encourage the oppoſition, as in the mean time they remain poſſeſſors of Nova Colonia, and hope, in the end, to overſet the treaty; all which management muſt be plainly ſeen, and the purpoſes underſtood by the court of Spain, who ſeem, on their ſide, determined to carry their point. Theſe are the affairs that have occaſioned alarms of late in Portugal, from the military motions and reinforcements on the Spaniſh frontiers.

Thus having made appear that Portugal does, and always muſt, want a powerful ally for her ſupport, it is next to be conſidered who, of all her European neighbours, is the beſt able, and moſt to be depended on, for that purpoſe.

Of the dependency of Portugal on Great-Britain.

France has had, ſince the treaty of Utrecht, and poſſibly may have for many ages to come, a moſt cloſe, but unnatural connection with Spain; I call it unnatural in regard to intereſt and commerce, for in theſe points Spain has been greatly and manifeſtly injured, by the national advantages having been made ſubſervient to the mere family ties, as well as partial ambition of it's ſovereigns. The Spaniards, notwithſtanding they are become ſuch paſſive vaſſals, as, in reſpect to their crown, to glory in being obedient ſlaves, are not inſenſible that their French alliance is hurtful to them, and alſo, that their nation is not truly intereſted in providing dominions for the collateral branches of their royal family, or in extending ſuch foreign poſſeſſions at any price: a humour, however, that France will probably find her account by encouraging at the court of Madrid: but in the purſuit ſhe muſt tread warily, for the connection of the nations can never be other than a miniſterial one, that of a royal relationſhip, or the vanity of the Bourbon houſe: for, as I ſaid above, the ſubjects of Spain do not think ſuch an alliance for the national intereſt or honour; and beſides, are of manners ſo very different from the French, that they hate them, and ſeldom miſs an opportunity of expreſſing an abhorrence even equal to that they have of Moors, ſince nothing is more common than to hear them to ſay, in point of religion, That the heretics of other countries are better Chriſtians than the Roman Catholics of France.

In ſuch a ſituation with Spain, France can never be a ſafe ally to Portugal: for if ever, on any account, ſhe was to take part with Portugal againſt Spain, ſhe muſt loſe her intereſt infallibly with the latter; which would be giving up a greater convenience for a leſs, both in point of a military and commercial intereſt, as alſo be a ſure means of cauſing the laſt thing France is deſirous of ſeeing, the cloſer unity of Spain with great-Britain.

Nor, indeed, is there wanting this ſpeculative influence in Portugal againſt the French, the people of that nation having no opinion either of French faith, generoſity, or honour: they never ſpeak of them with eſteem or reſpect, are open in their ridicule of them, and behave to them, more than to other nations, as impertinent and unwelcome intruders, that come either as ſpies, or to pick their pockets.

Thus with Spain for an hereditary enemy, and France a friend that ſhe dares not truſt, where can Portugal, too weak to defend herſelf, look for an able and truſty ally? To Italy? No: they have no ſuccours to ſend, but, on the contrary, live themſelves in perpetual need of them from others. Can Holland do the buſineſs? Moſt certainly no: her ſtrength and weight are no more. As for the more northern kingdoms, they are at too great a diſtance, and too poor, to enter upon, or comply with, ſuch an engagement. Great-Britain, then, is the only nation that ever has been, can, or will be, the ſafe, the truſty, the generous, the able, ſupporter of Portugal. If we examine hiſtory, from almoſt the firſt foundation of their monarchy, it will be found we were always their true and honourable allies We generally helped them to conquer their country, and have ever protected them in it: for the truth of which I appeal to their own hiſtorians, as well

as

as ours. At the reſtoration of their monarchy, our Charles the Firſt was one of the firſt princes that acknowleged their John the Fourth, and entered into a treaty with him: the good effects of which were, however, in ſome meaſure prevented, by the unhappy troubles that juſt then broke out in Britain. If a ſquabble happened in Oliver's time, it was from an indiſcretion of the court of Portugal, that they paid heartily for: and, on their becoming wiſer, we became their friends again. Charles the Second was no ſooner reſtored to his dominions, than the intereſts of Portugal were by him taken to heart. He married their Infanta, in preference to all other princeſſes, notwithſtanding the Spaniſh king offered to portion higher any other Catholic or Proteſtant princeſs that he would chuſe. He confirmed all former treaties made betwixt the nations, and made a new and perpetual one with Alphonſo the Sixth; by which Great-Britain is to ſuccour them in times of need, and particularly with a naval force adequate to the neceſſity of their demand. It was under the ſame king's ſingle and expreſs mediation the treaty was negociated, by which Spain firſt acknowledged the independency of Portugal, Charles being guaranty; and by his power did the earl of Sandwich abſolutely accompliſh and ſign the treaty.

In conſequence of our abovementioned engagement, did Great-Britain, in the year 1735, ſend them a ſuccour of near thirty ſhips of the line, ſo very expeditiouſly fitted out, that they carried themſelves the firſt public news of their appointment; which fleet remained under the command of Sir John Norris, twenty-two months in the river Tagus, to the coſt of above A MILLION STERLING to this nation. And whenever they require another and greater aſſiſtance, I hope we ſhall as readily grant it, on the ſingle condition that Portugal as fully and willingly complies with her obligations to us, in obſerving thoſe regulations in reſpect to commerce which the ſame national treaty confirms and preſcribes, and which is not demanding from them any favour, nothing diſhonourable to their crown, or diſadvantageous to their country; nothing but what impartial juſtice exacts, and what good policy on their ſide would readily promote.

REMARK.

That Great Britain might be made amends by the court of Portugal for the obligations, under which ſhe lies to her; that court eſtabliſhed in the year 1756, a wine company at Oporto; and endowed the ſame with the following excluſive powers; which by law ſtrikes at the root of the priviledges of an Engliſhman in the kingdoms and dominions of Portugal. See our article TREATIES OF COMMERCE AND NAVIGATION, where is contained THE TREATY OF PEACE concluded by OLIVER CROMWELL, in favour of England: alſo various other laws, decrees, &c. made at ſundry times, and on divers occaſions, made by the kings of Portugal, in favour of the ENGLISH NATION. To which is added, the king of Portugal's new law, concerning the diamonds found in the Brazils.

INSTITUTION of the GENERAL COMPANY for the culture of the VINEYARDS of ALTO DOURO, in the kingdom of PORTUGAL.

MOST GRACIOUS SOVEREIGN,

Your majeſty's dutiful ſubjects, the vintagers of Alto Douro, and the good men of the city of Porto, humbly beg leave to repreſent to your majeſty, that, whereas the ſubſiſtence of great part of the religious communities, private families, and chief inhabitants of the three provinces of Behira, Minho, and Tralos-montes, depends upon the culture of the vines; this ſpecies of agriculture is nevertheleſs reduced to ſo great a decadency, and is in ſo ruinous a ſtate, that beſides the detriment occaſioned by the circumſtance of the wines not yielding a ſufficiency wherewith to cultivate the lands which produce them, this loſs of capital, to the proprietors in particular, is aggravated by the farther loſs of health to the public in general. For, as the number of taverners in the city of Porto is multiplied to an extravagant exceſs, forbidden by your majeſty's laws, as well as by the regulations of the guild of the ſame city, beyond the poſſibility of reducing that multitude to rule; it thence follows, that, as the ſaid taverners adulterate the wines, and corrupt them from their native purity, by a multiplicity of mixtures hurtful to human conſtitutions, they deſtroy not only the reputation of ſo important and conſiderable a ſpecies, but alſo all the commerce which is carried on in that commodity; nay, and the very conſtitutions of ſuch of your majeſty's ſubjects as make uſe of the wines which the ſaid taverners vend for home-conſumption.

Animated therefore by the unparallel'd clemency with which your majeſty has already afforded relief to your afflicted ſubjects, even in caſes of lighter grievance than the above-mentioned, the petitioners have agreed among themſelves to form, under your majeſty's royal favour, a company, which, by competently promoting the culture of the vineyards, may at the ſame time preſerve the produce thereof for the advantage of foreign and domeſtic commerce, as well as of the health of your majeſty's ſubjects.

SECT. I.

The ſaid company ſhall conſtitute a body politic, having a governor, twelve directors, and a ſecretary; all of whom ſhall be qualified ſuch in the manner hereafter declared. Beſides the ſaid directors, there ſhall be ſix conſultors, men well verſed in this branch of trade. The ſaid company ſhall be ſtiled, THE GENERAL COMPANY FOR THE CULTURE OF THE VINEYARDS OF ALTO DOURO. All the authentic papers iſſuing from it ſhall be diſpatched in name of the governor and directors of the ſame company, and ſealed with it's common ſeal, which ſhall exhibit the image of St Martha, protectreſs of the territories of Douro, and underneath it, a ſcrip, or label, with this device: PROVIDENTIA REGITUR.

SECT. II.

The ſaid governor and directors ſhall be either natural-born, or at leaſt naturaliſed ſubjects of your majeſty, and inhabitants of the city of Porto, or of Alto Douro, who have in the company's funds ten thouſand cruſados ſtock, or upwards.

SECT. III.

The elections of the ſaid governor, directors, and conſultors, ſhall always be made in the common hall, or guild of the company, by a majority of votes of all ſuch proprietors therein as are poſſeſſed of three thouſand cruſados ſtock, or upwards. Such of them, however, as have not ſo much capital ſtock, may unite to make up out of leſſer ſhares one total to the above amount, wherewith to conſtitute a ſingle vote in the name of ſeveral, to be given by whom they ſhall judge proper to be nominated for that purpoſe. The firſt choſen for this eſtabliſhment ſhall ſerve the office for the ſpace of three years, and all others, who ſhall ſucceed him, ſhall ſerve for the ſpace of two years; provided always, that ſuch as ſhall have ſerved may not be rechoſen in the next election, without having a majority of votes in their favour not leſs than two thirds, as is more expreſsly declared in ſection iv. At the ſame time, and in the ſame manner, ſhall be choſen, from among the ſaid directors, a ſub-governor and a ſubſtitute, who ſhall gradually fill the office of governor, in caſes of death or hindrance.

SECT. IV.

The governor, directors, and conſultors, ſhall at the firſt election be nominated by your majeſty, to ſerve for the ſpace of three years; at the expiration of which they ſhall produce, in a general court, the accounts of their whole management, and diſtribute to the proprietors the dividends belonging to them, or ſuch as the court, by a plurality of votes, ſhall appoint to be made. This done, they ſhall immediately proceed to the election of the new governor, directors, and conſultors: on whom it ſhall be incumbent firſt, and before all things, to examine the accounts delivered in by their predeceſſors, in order to paſs to conteſt them, according to their deſert: and the ſame ſhall continue to be the practice in future elections, ſo long as this company ſhall ſubſiſt. Still, in caſe the proprietors ſhould think fit to re-elect one or more from among the ſaid governor, directors, or conſultors, they ſhall be entitled to admit the ſame again into office, on condition of their having a majority of votes of at leaſt two thirds in their favour. The judge conſervator (or recorder) ſhall tender to thoſe firſt, who are to be nominated by your majeſty, an oath that they will well and faithfully manage the effects of the company, and maintain it's ſeveral members in their reſpective rights: and to thoſe who ſhall be thenceforward choſen, the ſame oath ſhall be tendered at the board of the company, by the governor who quits the office, and regiſtered in a ſpecial book he is to ſet apart for that purpoſe.

SECT. V.

The ſaid governor and directors ſhall be the treaſurers of the capital ſtock, of which this company ſhall be poſſeſſed from it's firſt eſtabliſhment, and of all intereſts thence ariſing, 'till the times of making a dividend of them among the reſpective proprietors: to which effect they ſhall keep one or more coffers, as occaſion may require, with proper keys to them, of which keys every one ſhall keep his own, ſo that each may remain bound for himſelf, and every one for all, to anſwer for every deficiency which may be found in the ſaid ſtock, 'till they deliver up the capital to their ſucceſſors, and make a dividend of the intereſts thereof among the ſeveral proprietors in the ſaid company.

SECT. VI.

All affairs, which ſhall be propoſed at the board, ſhallbe decided by a plurality of votes, and all which ſhall be thereby

thus done, and ordain'd, ſhall have full credit given to it, and ſhall be put in its full and due execution, in the ſame manner as is practiſed in your majeſty's tribunals; provided that at the ſaid boards nothing be diſpoſed in alteration of the eſtabliſhed laws and regulations relative to the ſtate of the Brazils, or that be contrary to any other of your majeſty's laws, ſave what is allowed to it in virtue of its preſent eſtabliſhment. The ſaid governor and directors ſhall make choice of what officers they ſhall deem neceſſary for the good government of the company, as well in the city of Porto, and within the kingdom, as in foreign parts. They ſhall have ample juriſdiction over them; to ſuſpend them, put them out, bring them to juſtice, and provide others in their places: all of them ſhall continue in their poſt ſo long as ſhall ſeem meet to the company, which ſhall have the inſpection of their accompts, and paſs to them acquittances, ſign'd by two of the directors, and ſealed with the company's ſeal, after their ſaid accompts have been reviſed and examined at the board.

Sect. VII.

This company ſhall have a judge conſervator (or recorder) who, with privative juriſdiction, and excluſion of all other tribunals, ſhall hold courts of oyer and terminer for all contentious ſuits, wherein the governor, directors, conſultors, ſecretary, clerks, managers, and other officers of the company, ſhall be either plaintiffs or defendants; whether the matter of the ſaid ſuits be criminal or civil, ſo long as they are carried on between the ſaid officers of the company, or between them and perſons who do not belong to it: which ſaid judge conſervator (or recorder) ſhall call the ſaid ſuits to his tribunal in the city of Porto by poſitive decree, and elſewhere by precatories; and ſhall have a definitive power in himſelf to the amount of 100 cruzados, without appeal or demur; as well in civil cauſes, as in the penalties decreed by him: but in all other caſes, and in thoſe, which being proved, are capitally criminal, he ſhall proceed in judgment in the high court of juſtice, call'd the relaçao, by one ſole joint form of proceſs, with the aſſiſtants which ſhall be appointed him by nomination from the chief juſtice for the time being of the relaçao and king's bench at Porto, or whoever ſhall ſerve office. Both the judge conſervator (or recorder) and his clerk, as alſo his marſhal, ſhall be nominated by the ſaid board, and confirmed by your majeſty, who ſhall oblige the miniſters, whom the company may chuſe to ſerve the ſaid office; and that notwithſtanding the ſtatute, lib. 3. tit. 12. and all other laws hitherto publiſhed, relative to the office of conſervatory (or recorderſhip); for as the judgment of the ſaid judicature is not recurr'd to, as a voluntary privilege for the moleſtation or vexation of the parties, but as a weighty contract for the ſervice of your majeſty, for the common good of your ſubjects, and for the good management of the affairs of the company, and the writings which it ſhall paſs in your majeſty's royal name; all theſe motives render the ſaid judge conſervator (or recorder) abſolutely neceſſary. Such diſputes, however, as may ariſe between perſons intereſted in the ſame company, concerning the capital ſtocks, intereſts, and the dependences thereof, ſhall be propoſed at the board of adminiſtration, and there verbally decided, in mercantile form, by plain dealing, according to the known truth, without form of proceſs, or other allegations than thoſe of ſimple matter of fact, and thoſe of the rules, uſages, and cuſtoms of commerce and navigation, commonly received as ſuch, in the preſence of the judge conſervator (or recorder) and of the attorney-general of the company; which ſaid board, with the approbation of the two aforeſaid miniſters, ſhall decide all cauſes, not exceeding the amount of 300 milreis, without appeal or demur: and ſuch as exceed the amount of that ſum, where the parties are unwilling to abide by the deciſion of the ſaid adjudgers, ſhall be forthwith laid before your majeſty, in an humble addreſs from the board, for your majeſty to nominate ſuch judges as to your wiſdom ſhall ſeem meet, who ſhall determine the ſame in like form, without intervention of any other ordinary or extraordinary recourſe; all other diſpoſitions of law or ſtatutes to the contrary notwithſtanding.

Sect. VIII.

The ſaid conſervator (or recorder) ſhall, by ſummonſes in the royal name of your majeſty, diſpatch all ſuch orders as ſhall be forwarded to him by reſolution of the company, for the good government of the ſame; as alſo for the hiring of carts, and embarkations for the carriage of wines, and for the compulſion of vintagers, coopers, taverners, and all other artiſts on whom this branch of commerce may depend, to enter into the ſervice of the ſaid company, on condition of it's paying them their ſalaries. And the miniſters of your majeſty ſhall not take away, or interrupt their boats, carts, veſſels, or any other things whatever, on which the diſpatch of their loadings may depend; but rather, having occaſion for more, the miniſters to whom it may belong ſhall be required to ſend them more. And for whatever elſe may be further neceſſary towards the good government of the ſaid company, it ſhall be empowered to ſummon ſuch miniſters, as do not comply with, and effectually execute it's orders, before the relaçao, (or court of king's bench) of the city of Porto, whither they ſhall repair to anſwer to the charge, the ſaid judge conſervator being firſt heard, who ſhall attend the board of the company, whenever he ſhall receive a meſſage for that purpoſe, having there a ſeat ſuitable to his dignity.

Sect. IX.

It being indiſpenſably neceſſary for the company to have ſufficient houſe-room, for it's diſpatch of buſineſs, for the ſecurity of it's coffers, for the accommodation of it's clerks and other officers, and for warehouſes wherein to keep their wines, veſſels, and other materials thereto neceſſarily appertaining, your majeſty is graciouſly pleaſed to grant to it the privilege of ſettling, ſo as that their judge conſervator (or recorder) may cauſe dwellings to be aſſigned over to it's uſe, wherever the company ſhall judge them to be moſt for it's conveniency, without becoming ſubject to the having the rents, they were valued at before, raiſed upon that account; which rents the company will pay to the owners; and in caſe of diſpute, the ſame ſhall be adjuſted to the ſatisfaction of the parties, by the arbitration of proper perſons, your majeſty having for this effect abrogated all privileges of ſettlement, which the perſons may be poſſeſſed of, from whom ſuch dwellings ſhall be taken, or who have lodged their effects therein.

Sect. X.

The main purpoſe of this company being that of ſupporting, together with the credit of the wines, the culture of the vineyards, and to promote, at the ſame time, the advantage of the commerce, which is carried on in this commodity, by fixing ſuch a regular price for it, as may produce a competent profit to the manufacturers of it, and a reciprocal lucre to the traders in it; by avoiding, on one hand, the exorbitant prices, which, rendering it's conſumption impoſſible, deſtroy the ſpecies; and not ſuffering it, on the other hand, to fall to ſo low an ebb as that the vintagers ſhall be unable, without loſs to themſelves, to ſupport the yearly expences of their agriculture; it is neceſſary for theſe uſeful ends to eſtabliſh certain competent funds: wherefore the capitatal ſtock of this company ſhall be one million two hundred thouſand cruzados, divided into actions of four hundred mil-reis each; the half of which may be advanced in competent wines fit for vent, by ſuch as ſhall be willing to be concerned in the actions; and the other half ſhall be conſtituted in abſolute caſh, that the company may be enabled to fulfil it's engagement of ſupplying the neceſſities of the vintage, and commerce, in the following manner.

Sect. XI.

On the ſtrength of the aboveſaid fund, the company ſhall lend to neceſſitous vintagers, not only the neceſſaries for the conſtruction and dreſſing of the vineyards, as well as for the managing of the wines, but alſo whatever elſe may be needful to them towards ſome of thoſe minute expences, which the preſervation of human life makes a daily matter of indiſpenſable neceſſity, without requiring of them, for ſuch loan, any higher intereſt than at the rate of three per cent. per annum; provided always that the ſaid loans ſhall not exceed one half the value in general of the wines, which every ſuch vintager is wont to collect: which wines, in conſideration of the ſaid loans, ſhall become and remain, effectively pledged to the company, in ſuch manner as to give it the ſame preferable right over them as landlords of houſes have over the goods therein contain'd, without it's having occaſion for any other title thereto, or other proof, than that of the ſaid loans being entered in the books of the company, and verified by a writing under the debtors hands, recognized with the ſignature of ſome public officer.

Sect. XII.

The company ſhall hold in readineſs all materials neceſſary for the making of wine-veſſels, not only for the year in which it may make it's ladings, but alſo for the year following, that no deficiency of this kind may occaſion either damage to the wines, or a baulk in the proviſion of them, which they are to furniſh the ports of Brazil with, according to your majeſty's gracious grant for this commerce.

Sect. XIII.

And that the ſaid ports of Brazil may not experience any want of this commodity, the company ſhall, for the preſent, ſettle a ſtock of 10,000 pipes of good wine, and fit for exportation, to enable it the firſt year to bear any diſappointment it may meet with in it's firſt ladings, and to wait for the produce thereof for a competent time.

SECT. XIV.

In order to facilitate the purchaſe of ſtocks, in favour of the vintagers of the wines of Alto Douro, the company ſhall take of the purchaſers of actions, ſuch wines as are of the beſt ſort, and in their natural perfection, without mixtures or brewings, capable of ſpoiling them, at the price of 25 mil-reis per pipe of common meaſure; and ſuch of an inferior ſort as are nevertheleſs fit for navigation, it ſhall take in like manner at the rate of 20 mil-reis. At the ſame prices they ſhall purchaſe the ſaid wines for the time to come, whether this commodity happen to abound or fall ſhort: wherefore as the company is to pay for their wines at the above rates in the years of plenty, ſo likewiſe ſhall the vintagers be obliged to deliver them at the ſame rates, without any alteration, in the years of ſcarcity, or dearth: the reſpective intereſts of each party being thus fairly compenſated to the advantage of the commodity itſelf.

SECT. XV.

And that neither the company may deſtroy the navigation of the city of Porto, by diſappointing it of the lading of wines, which is its principal ſupport, nor the navigation may prejudice the company by omitting to ſupply it with a competency of ſhipping for the tranſport of wines to the ſtates of Brazil: your majeſty is graciouſly pleaſed to eſtabliſh, that for the carriage of every pipe of wine, brandy, or vinegar, which the company ſhall ſhip from the city of Porto for Rio de Janeiro, it ſhall pay to ſuch ſhips ten mil-reis freight, after the manner heretofore practiſed, without any alteration in this reſpect whatever, on one ſide or the other. For ſuch wines, &c. as ſhall be ſhipped for Bahia, it ſhall pay eight mil-reis per pipe as above; and in like manner eight mil two hundred reis per pipe freight, for thoſe it ſhall ſend to Pernambuco, which freights ſhall not be altered in any wiſe whatſoever, neither by the company nor the proprietors, nor by the captains of ſhips, on pain, to ſuch as ſhall act in any wiſe contrary to this regulation, of paying double the amount of ſuch freights, the whole of which ſhall be applied, one half to the informer's uſe, the other half to the uſe of the hoſpital of the city of Porto, beſides two months impriſonment of the delinquents.

SECT. XVI.

The wines, brandies, and vinegars, which the company ſhall ſend to the Brazils, ſhall be ſhipped on board the veſſels of the reſpective ſquadrons of that city, which ſhall put up for ladings, dividing them among them, and each of them, in proportion to their aſſortments; and the ſaid veſſels ſhall be obliged to receive them, without heſitation, in the ſame manner as is practiſed with regard to the ſalt-contract. Nevertheleſs, if it ſhould happen that the conſumption of the ſaid commodities ſhould increaſe to ſuch exceſs in the ſtates of Brazil, that the private ſhips of the trade be not able to convey thither the quantity neceſſary for daily proviſion, the company in that caſe ſhall be obliged to get ready, and ſend at its own expence, the ſhips neceſſary for ſuch tranſport, only, however, to that port, for whoſe uſe the wines exceed the burthen of the ſaid private ſhips belonging to the mart of the city of Porto. And in this caſe, neither ſuch ſhipping, nor their equipages, nor whatever ſhall be neceſſary for their conſtruction and fitting out, ſhall be ſeizeable to any other uſes than thoſe of the ſaid tranſport and the dependencies of the ſame company, not even under colour of your majeſty's royal ſervice, on pain to the perſons acting in oppoſition thereto of paying to the ſaid company, out of their own effects, all the damage thence reſulting to it; to which intent they ſhall be called to an account before the judge conſervator, or recorder, of the ſame company, and not at any other tribunal whatever, notwithſtanding any privileges they may enjoy to the contrary.

SECT. XVII.

Conſidering the notorious prejudice which ſalt, in it's nature, does to wines in general, and the abſolute neceſſity there is for that commodity in the ſtates of Brazil, which obliges all the ſhipping to take competent ladings of it, your majeſty is pleaſed to will, that none of the veſſels on board of which the above wines are ſhipped ſhall carry any ladings of looſe ſalt, but ſhall carry the whole in wooden cheſts, as they ought and are bound to do, ſtowing them well and cloſe on that ſide where the wines are put, and placing between the wines and the ſalt other moiſt commodities, ſo as by every poſſible means to prevent the damage which may reſult to the wines from their immediate nearneſs to the ſalt, on pain to the captain or commander, who ſhall act contrary, of paying to the company double the value of all the wines which ſhall be found damaged at their arrival, as alſo of three months impriſonment for the firſt offence, and the penalties ſhall be douhled in proportion to the relapſes into the ſame.

SECT. XVIII.

The chief agent and deputies of this company, and the factors or adminiſtrators it ſhall employ in the ſtates of Brazil, for their adminiſtration, and the clerks it ſhall employ in the city of Porto, for their ſalaries, ſhall be entitled only to their commiſſion, at the rate of ſix per cent. to be levied in the following manner: two per cent. on the coſts the company ſhall be at in it's ſeveral diſpatches at Porto; two per cent. on the ſales which ſhall be made in the ſaid harbours of the ſtates of Brazil; and two per cent. on the returns and charges in the city of Porto; which ſaid ſix per cent. ſhall be made to ſuffice for the full payment of the whole adminiſtration belonging to the trade, without the company's being liable to any other charges of the like nature; ſave only that it ſhall be chargeable with all coſts ariſing from the ſalaries of ſuch miniſters, and other officers, as are to make a part of their body politic and œconomic, as alſo with ſuch as may ariſe from the renting of houſes and magazines, all which ſhall run on the company's account.

SECT. XIX.

In order that this company may be able to ſupport itſelf, and be enabled to make ſuch a profit as may compenſate the obligations it lays itſelf under by this eſtabliſhment, and be a valuable conſideration for the advantages thence reſulting to the common-weal of the ſaid provinces, your majeſty is pleaſed to grant to it in the four governments within the ſtates of Brazil, of S. Paolo, of Rio de Janeiro, of Bahia, and of Pernambuco, the excluſive commerce of all the wines, brandies, and vinegars which ſhall be ſhipped from the city of Porto for the ſaid four governments and their reſpective harbours; to the intent that no perſon of any condition whatever ſhall be qualified to ſend thither any of the ſaid commodities, except the ſame company, which ſhall enjoy the ſaid excluſive privilege in the following manner:

SECT. XX.

The brandies and vinegars may not be ſold by the company in the ſaid harbours for more than fifteen per cent. free to the proprietors of the principal coſt, caſkage, carriage, freight, cuſtoms of import and export, ſhipping, commiſſion, the one per cent. to the coffer, and of all other charges thereon to be made to the act of ſale, which ſhall wholly run on the account of the buyers; conſidering, however, the greater danger the wines are in of ſuffering damage in their quality, and that, on that account, they more immediately threaten ſome loſs to the ſaid company, therefore the ſaid company ſhall be allowed the liberty of ſelling their wines at ſixteen per cent. free to the ſaid company from all the above-mentioned charges, but not at any higher price.

SECT. XXI.

And in order to juſtify it's ſales, and make appear the exactneſs with which the company obſerves the ſaid prices, it ſhall he obliged to ſend to it's reſpective factors, or adminiſtrators, the accompts of the ſeveral cargoes ſigned in an authentic manner, by all the deputies, and ſealed with the ſeal of the company, in order to be thus made known to the people, that every purchaſer may be enabled to examine thereby the true value of the ſeveral commodities as may be parcelled out, in which accompts of cargo ſhall be ſpecified in the moſt circumſtantial manner the prime coſts and other charges of each of the ſaid commodities, that there may be no room to ſuſpect the leaſt unfair dealing.

SECT. XXII.

This, however, is to be underſtood on ſuppoſition, that the ſaid commodities be ſold for ready money, or paid for, in caſe of ſale, at the preciſe term agreed upon; becauſe the debtors, on default of payment, ſhall incur the penalty of farther paying five per cent. intereſt, for the whole time of their delay of payment, or ſo long as the execution ſhall laſt, with which they may be ſerved: But if the ſaid wines be trucked in exchange for the goods of thoſe governments, whoſe value is uncertain, and depends on the free will of the ſellers; in that caſe, the agreement ſhall he fixed by convention of the parties; as it would not be fair for the inhabitants of that ſtate to raiſe their goods to ſuch a height as may do hurt to company, nor for the company to undervalue them, ſo as to diſcourage their agriculture.

SECT. XXIII.

And becauſe, likewiſe, it would not be fair for the company to hurt ſuch perſons in thoſe governments, as ſell the ſaid commodities by retail, by depriving them of the means of ſubſiſtence, the ſaid company ſhall not be entitled to ſell at any time by itſelf, or it's factors, any of the above-mentioned commodities

commodities by retail, nor diſpoſe of any leſſer quantity than one pipe of each of the ſaid commodities; the ſale of which ſhall always be made at the magazines of the ſaid company, and never in ſhops, or ſuch like private places, on pain to ſuch of it's factors as ſhall act contrary hereto of being chaſtiſed for every diſorder, which ſhall thence reſult; remaining (ipſo facto) incapable of ſerving the company, as alſo of all and every the offices of juſtice, or property, beſides being condemned in a five years baniſhment to Angola.

Sect. XXIV.

No perſon, whatever be his qualifications or condition, ſhall be allowed to ſend, take, or introduce into the ſaid governments of S. Paolo, Rio de Janeiro, Bahia, and Pernambuco, the ſaid wines, vinegars, and brandies, which are to be exported in the ſquadrons from the city of Porto, or ſhall be of the product of the lands of Alto Douro, on pain of the forfeiture of them, and as much more of their value amounts to: the whole to be applied, one half in favour of the company, and the other half in favour of the informers, who may give their information publickly, or in ſecret, (provided their informations be made good, upon corporal apprehenſion) in this kingdom, before the judge conſervator (or recorder) of the company, and in that ſtate before the preſiding miniſter of the houſe of intendency, or before any common judges, in places where there are no intendants; all which ſhall cauſe the informations to be notified to the company's factors, that they may act as plaintiffs in the matter, being entitled thereby to a fifth part of the value; and they not thus fulfilling their duty, their effects ſhall be liable to anſwer the damages thence ariſing.

Sect. XXV.

Nevertheleſs, if it ſhould happen that ſome of the vintagers do not agree to the prices determined in ſection xiv. and ſhould have a mind to ſhip the wines of their own manufacture for the ſaid ports of Brazil, they ſhall be allow'd ſo to do by the hands of the directors of the company; who, at the charges and riſk of the ſame vintagers, ſhall ſend them to their factors, to be ſold in the ſaid ſtate, at the ſame prices as the company's wines ſhall be ſold at, and by no means at greater; provided always, that the quality thereof be equivalent to the ſaid prices. And for the very reaſon that any ſuch vintager did not care to content himſelf with the eſtabliſhed prices on one occaſion, he ſhall be excluded the privilege of obliging the company on any other, to take his wines at the ſaid prices; and the company ſhall reimburſe the ſaid vintagers the amount of their product, abating commiſſions, according to the eſtabliſhed rule, and all other expences attending the returns, ſo ſoon as the company ſhall have received the ſame: it being underſtood, that all charges attending the ſaid wines, till put on board, ſhall be paid at the coſt of the vintager, and not of the company.

Sect. XXVI.

If the company ſhould find any advantage in extending it's commerce of wines and brandies to the foreign nations of Europe, it ſhall be at liberty to do ſo, on paying the duties already eſtabliſhed in the ſame branch of trade; as alſo thoſe of entry at the cuſtom-houſe of the goods it imports in exchange; and for that purpoſe, the company may retain in it's ſervice the ſhipping it may ſtand in need of, which it may diſpatch, as it ſhall think beſt, without any hindrance, and without being liable to have them, or their crews, diſturbed, or taken from it, even under colour of your majeſty's royal ſervice.

Sect. XXVII.

The company ſhall pay all the duties hitherto wont to be paid on the above commodities, as well in this kingdom, as in the ſaid ſtate of Brazil, in the ſame manner as has been heretofore practiſed; and the ſame ſhall be obſerved with the returns it ſhall make from the ſame ſtate of Brazil to this kingdom.

Sect. XXVIII.

Whereas every one knows the grievous prejudice, which has been done to the reputation of the wines of Douro, and conſequently to the culture of the ſame, by the great liberty hitherto taken in the dealing therein, and by the exceſſive number of taverners, who retail them in the city of Porto, and the neighbouring towns; every one endeavouring to adulterate them from their native purity, with mixtures, and foreign compoſitions: and whereas the whole is contrary to what remains eſtabliſhed by the charter of the 23d of February, 1605, by the act of conſulſhip of the 18th of June, 1655, and by the proviſion of the board of Dezembargo do Paço, (or ſenate) of the 23d of Auguſt of the ſame year: your majeſty, in order to provide againſt theſe evils, is graciouſly pleaſed to ordain, that in the city of Porto, and in the neighbouring places, within the diſtance of three leagues, no wines ſhall be ſold, but on the account of this company, by retail; which ſaid company, for that purpoſe, ſhall purchaſe of the proprietors the quantity of wines neceſſary, and the governor and directors ſhall be entitled to no more than one per cent. on the price thereof, and the other charges thereto incidental, on account of carriages, caſks, duties, warehouſes, and ſale, or other trifling expences, by way of commiſſion; out of the product of which they ſhall pay the factors they may employ in this ſervice; and all the remaining profit ſhall belong to the ſeveral perſons intereſted in the ſaid company, by a liquid balance to be divided among them in the manner above eſtabliſhed in ſect. iv. And that this regulation may be put in force, without any notable trouble to the parties, regard is to be paid to the following ſections.

Sect. XXIX.

Whereas an entire and abſolute ſeparation is to be made of the wines of the coaſts of Alto-Douro, and it's diſtrict, in order ro be ſhipped for America and foreign nations, from all the other wines of ſuch places as only produce a ſort fit to be drank in the country, that by this means the inferiority of theſe wines may not deſtroy the credit due to thoſe on account of their native excellence; your majeſty is graciouſly pleaſed to will, that there be made, with the greateſt expedition, a map and general ſurvey of the two coaſts of the river Douro, north and ſouth, wherein may be deſcribed all that territory which produces THE TRUE WINES FOR EXPORTATION, capable of paſſing forth of the bar of the ſaid river, ſeverally and diſtinctly ſpecifying the great and ſmall vintages of this peculiar kind, and exhibiting an eſtimate, by a common ſupputation or average, according to the produces of the laſt five foregoing years, of what each of the ſaid vintages is wont to yield, in order that the proprietors thereof may not ſell any, without making known to the company what they do ſell, nor be enabled to ſell to the company, or to foreigners, any greater number of pipes, than that which is allotted to them in the ſaid regiſter or ſurvey, on pain, in caſe of exceeding the ſaid quantities in their ſales, of paying nine times the value of the exceſs, and remaining incapacitated to ſell wines any more out of the kingdom.

Sect. XXX.

No wine whatever ſhall be brought from without the limits of the territory above deſcribed into the ſame, unleſs accompanied with permits, paſſed by the whole body of the guilds of the places whence the ſaid wines are brought; which permits ſhall declare the place they are bound to, the uſe they are deſtined for, the name of the vintager and vintage where they are received, the perſons to whom they are conſigned, and the direct road by which they are to be tranſmitted; which permits, in the above form, ſhall be exhibited to the commiſſaries, whom the company ſhall have nominated in the reſpective places, to inſpect whether, in fact, the uſe be made of them for which they were deſigned. All this under the penalty, that the wine which is tranſmitted without permits, diſpatched in the above form, or which ſhall be found to be out of the direct roads and highways, ſhall be forfeited in favour of the company: and this, in order to prevent the ſorry wines from being mingled with the good, to increaſe their quantity in prejudice of their credit, and to the detriment of the company, and of foreigners, who are to become purchaſers thereof. And if inferior wines ſhould happen to be diſcovered in houſes not approved for their reception by the guilds, with the company's conſent, not only the ſaid wines ſhall be forfeited, but thoſe perſons in whoſe cuſtody they be found, ſhall be fined the treble of their value to the profit of the ſame company.

Sect. XXXI.

In like manner, to prevent the fraudulent introduction of adulterated and ſorry mixed wines into thoſe foreign countries, whither the wines which are to be qualified as above are tranſported, no perſon, whatever be his ſtate or condition, ſhall, under the above ordained penalties, be entitled to embark any wines for the city of Porto, but ſuch as come addreſſed with the domeſtic manifeſtos of the vintagers to the board of directors of the company; which, finding them exact, ſhall order their mark to be put upon them as fit for exportation; finding them to be of another inferior quality, it ſhall order the proper mark to be put on them as inferior wines, fit only for home conſumption on the ſpot, or within the kingdom; and finding them fit to be ſhipped for the Brazils, or for foreign countries, licence ſhall be granted for the ſale thereof, and the board of the ſaid company ſhall be obliged to make out annually a general and particular liſt of all the pipes of qualified wine which ſhall be ſhipped out of the bar of Porto to be navigated as above; putting on every one of them, with a hot iron, the mark of their approbation, and pointing them out with permits, ſigned by the

the governor, and all the directors of the company to the ſeveral cuſtom-houſes to which they are bound; and declaring in the ſaid permits the names of the perſons who make the ladings, and the certain number of pipes which every one of the ſaid perſons ſhippeth, though it be but a ſingle pipe, or even but a barrel; to the intent, that if any ſhould have an inclination to introduce into any of the ſaid foreign countries any wines without permits, or in quantities exceeding the number ſpecified in the ſaid permits, on the ſuppoſition of their being wines of Alto Douro, the cheat may be inſtantly diſcovered in the reſpective cuſtom-houſes of the ſaid foreign countries, as it will be evident in both caſes that the wine is of different territories, and ſubjected to thoſe mixtures and frauds which the company is endeavouring to prevent for the common good. And for a ſtill greater ſecurity the company will, at the end of every year, remit to the different ports of America and Europe, to which any wines are exported, a printed general account, and circumſtanced as above, with the names of the laders, and with a declaration of how much every one of them ſhipped, that it may reach the knowlege of every body.

Sect. XXXII.

For the ſale of wine by retail in the city of Porto, no more taverners ſhall be allowed than the ninety-five eſtabliſhed by the charter of the 23d of February 1605. by the act of conſulſhip of the 18th of June, 1655, and by the proviſion of the board of Dezembargo do Paço (or ſenate) of the 23d of Auguſt of the ſame year: inſomuch, that neither the number of taverns ſhall be altered, nor any change made with reſpect to the places appointed for them; nor ſhall any taverner be admitted to hold any one of them, who is not approved and licenſed for that purpoſe by the board of the company, on pain of forfeiture to the company's uſe, of all the wine found in taverns not licenſed as above, and of ſix months impriſonment to ſuch as ſhall be detected ſelling therein: this penalty to be doubled and trebled, in caſes of relapſe, againſt ſuch taverners or owners of wines as ſhall be ſubject thereto.

Sect. XXXIII.

That the manufacturers of wine, and the purchaſers thereof, may be enabled to act upon certain grounds, ſo as that neither the manufacture may claim, by ſelling it, ſuch profits as may prove prejudicial to the commerce, nor the commerce be able to ruin the manufacture in it's beginning for the purchaſes thereof, the company ſhall unalterably pay for all the wines it may take up for exportation at the rate of twenty-five mil-reis per pipe, according to the two different qualities thereof, in the manner above declared in ſect. xiv. ſo that, in caſe of there being a great deficiency of the aboveſaid qualified wines, and a great demand for the ſame, thoſe of the firſt rank may not exceed the price of thirty mil-reis per pipe, nor thoſe of the ſecond ſurpaſs the price of twenty-five mil-reis. Such, however, as may prove unfit for exportation, and yet proper enough for home-conſumption, ſhall alſo be bought and ſold by the ſame company at certain fixed prices, in the following manner: ſuch as are of the growth of the lands lying between Porto and Arnellas ſhall be bought at the rate of four mil-reis per pipe, and ſold at the rate of ten reis per pint, the company being at all expence and charges thereof: thoſe of the growth of the lands lying between Arnellas and Bayao ſhall be bought at the rate of five mil-reis per pipe, and ſold in the ſame manner at the rate of twelve reis per quart: thoſe of the growth of Anſede and it's territory, which ſhall be hereafter deſcribed, ſhall be bought as above at the rate of ſix mil-reis per pipe, and ſold in like manner at the rate of twelve reis and a half per quart: thoſe of the growth of the lands of Barqueiros, of Mazaofrio, of Barrou, and Penhajoya, ſhall be bought at the rate of eight mil-reis per pipe, and ſold at the rate of fifteen reis per quart: the other ripe wines of the hills beyond douro, lying without the limits deſcribed of the lands productive of wines for exportation, ſhall be ſold at the rate of twelve mil-reis per pipe, and ſold in like manner at the rate of a vintem (or twenty reis) per quart: and the governor and directors of the company ſhall cauſe the ſaid wines to be diſtributed among the taverns, to be ſold at retail in the manner eſtabliſhed in ſection xxviii. with this farther declaration, that for each of the aboveſaid ſorts of wine the ſaid company ſhall provide proper caſks, marked with a hot iron, diſtinguiſhing their ſeveral qualities and prices: and that the taverner who inverts the ſaid orders, either by putting the better ſort of wines in the caſks of the inferior ſort, or by mingling the one with the other, ſhall for the firſt offence pay a hundred mil-reis, ſhall forfeit all the wine he may be found poſſeſſed of, in favour of the informer, and have ſix months impriſonment; for the ſecond, the ſame penalties ſhall be doubled; and for the third, he ſhall be liable to the ſame, and ſhall be over and above publicly whipped and tranſported to the kingdom of Angola. And becauſe there will be ſome wines of ſo bad a ſort as to be only fit to burn, or make vinegar, the company ſhall immediately grant licences to the proprietors of ſuch wines for reducing them to brandies or vinegars, and being diſpoſed to make their proviſions of theſe two commodities, they ſhall purchaſe the ſame by mutual agreement of the parties.

Sect. XXXIV.

If in ſome years the growth of the wines ſhould be ſo redundant as to render it impracticable for the company to diſpoſe of it readily, neither for American conſumption, nor for that of the city of Porto, the vintagers ſhall be at liberty to ſell the ſaid commodity, for the conſumption of any part of the kingdom, where there is no prohibition thereof; and if it is to be convey'd without the bar, the quality thereof ſhall be marked on the caſks it is conveyed in, and the whole ſhall be accompanied with the company's permit, that the place it is deſigned for may be known; and that it may not be tranſmitted to foreign countries, and become productive of the ill conſequences before mentioned.

Sect. XXXV.

Whereas this company is eſtabliſhed on the ſtock and proper ſubſtance of the perſons therein intereſted, without any mixture of ſtock from the royal revenue; and whereas every one is free to diſpoſe of his own effects as to himſelf may appear the moſt for his own advantage, the ſaid company and the management ſhall be under the immediate ſubjection to the royal perſon of your majeſty, and independent of all the tribunals, as well the greater as the leſſer ones, ſo as that no miniſter or tribunal of your majeſty ſhall in any caſe or accident whatever interfere with it or with what belongs to it, nor ſhall be intitled to hinder or interrupt the ſame in the management of all which belongs to it, nor demand of it any account of it's proceedings, it being the duty of the directors, who quit their office, to lay before thoſe who ſucceed them, in the manner laid down already in ſect. iv. And this is to be underſtood with expreſs inhibition to all the ſaid tribunals and miniſters, and notwithſtanding the right of their reſpective juriſdictions; for though it may ſeem that the management of the ſaid company's affairs ſhould be ſubject to ſuch or ſuch juriſdictions, nevertheleſs, as they do not interfere with your majeſty's royal revenues, but belong wholly to the perſons who put their own ſtock into the ſaid company, it is they who are to have the management thereof entirely to themſelves, with that ſeparate and privative juriſdiction which your majeſty is pleaſed to grant them. In the caſe, however, of a tribunal's wanting to be informed by the board of managers of any thing relative to your majeſty's royal ſervice, it may order it's ſecretary to write to the ſecretary of the ſaid board of managers, who being by him acquainted therewith, will direct him what anſwer to give. If it ſhould be what the board does not think expedient to comply with, the tribunal which ſhall have made the enquiry may addreſs your majeſty, to the intent that, after the ſaid board has been heard upon the ſubject, your majeſty may take ſuch reſolutions as to your great wiſdom ſhall ſeem meet.

Sect. XXXVI.

In caſe the agents and factors of the company in America, or elſewhere, ſhould happen to die, neither the judges for the dead and the abſent, nor the judges for orphans, nor any other than the proper judge appointed by the company to take cognizance of it's affairs in the reſpective places, where ſuch agents or factors ſhall die, ſhall interfere in the ſeizure of the books and effects of the deceaſed; which ſaid judge, or ſuperintendant of the company's affairs, ſhall ſeize the ſaid books and effects, and ſhall give an account thereof to the board of the company in the city of Porto, that the ſame may firſt, and with preference to all other titles, ſeparate what belongs to the company, and then deliver up the remainder to the judges or parties where and to whom it may belong. The ſame is to be underſtood with regard to the coffers and ſuperintendents of the city of Porto, with whom the company ſhall ſettle accounts in the foregoing manner, down to the hour of death, admitting their heirs to be heard, to whom, however, the right of adminiſtering to the deceaſed is not to be transfered, but muſt always remain untransferable.

Sect. XXXVII.

It is your majeſty's royal pleaſure, that the debts due to this company, which have been contracted from effects of the ſame, and not of any other nature, be recovered in favour of the company by it's recorder (or judge conſervator) or by the miniſters every where, who ſhall be required to recover them, the ſame as your majeſty's royal revenue, notwithſtanding any privileges or reſolutions which the debtors ſhall allege to the contrary.

SECT. XXXVIII.

It is alſo your majeſty's royal pleaſure, that all perſons concerned in the trade, whatever be their ſtate or condition, and however privileged they be, on being called before the board of the company for any affair belonging to the management thereof, ſhall be obliged to attend the ſame forthwith, and on failure of ſo doing the recorder (or judge conſervator) ſhall proceed againſt them as to him ſhall appear moſt proper.

SECT. XXXIX.

All perſons who ſhall enter into this company with ſix thouſand cruſados ſtock, and thence upward, ſhall, as long as the ſaid company perſiſts, enjoy the privilege of not being confinable but within their own houſes, in thoſe caſes in which ſuch privilege is uſually granted: and the officers of the ſame, for the time being, ſhall be exempt from bearing arms in any companies, whether of horſe or foot, and from furniſhing recruits, or attending general muſters, in virtue of their reſpective employments. And the trade which ſhall be carried on in the ſaid company as above, or by means of ſtocks, or by employments exerciſed by the board of the company, in the poſt of governor and directors thereof, ſhall not only be of detriment to the nobility of the perſons, who carry it on, but ſhall rather be, on the contrary, a proper means towards attaining to acquired nobility; ſo that the afore-mentioned voting members, conſtituted by your majeſty to ſerve at this firſt eſtabliſhment, ſhall remain habilitated for being inſtalled in the military orders, without any diſpenſation on the ſcore of mechanics, and their child ſhall alſo, without ſuch diſpenſation, be qualified to contend for promotion before the ſenate of Liſbon; on condition, however, that after having exerciſed the ſaid employment, they do not themſelves ſell by retail in warehouſes or ſhops, and that they do not take up any buſineſs degrading to the ſaid poſt, after having filled it: this, nevertheleſs, is to take place upon future elections, only in favour of thoſe perſons who ſhall have filled the poſts of governor and ſub-governor, after having ſerved at leaſt two years compleat, to the ſatisfaction of the company.

SECT. XL.

The offences committed againſt any officer of the company, by deed or word, in matter concerning his office, ſhall be puniſhed by the recorder (or judge conſervator) as if done to your majeſty's officers of juſtice.

SECT. XLI.

No brokers ſhall be allowed to interfere in the purchaſe or ſale of the company's effects; and only when the managers thereof ſhall think fit to make uſe of them in bargaining upon any affair, they ſhall be paid for the ſame, the hire agreed upon between them; which otherwiſe they ſhall not be obliged to undertake.

SECT. XLII.

Though the company be reſolved to act in every thing which relates to preparing and diſpatching it's ladings and ſhipping with the utmoſt mildneſs, and without applying to methods of ſeverity, as nevertheleſs it may find itſelf in abſolute neceſſity of having recourſe to the aſſiſtance of the miniſters of juſtice: it is your majeſty's royal pleaſure, that, to this effect, the board, by means of it's recorder (or judge conſervator) may ſend meſſage to the judges of criminal and to the high bailiffs of the city of Porto, for theſe to execute the orders which ſhall be ſent them; and your majeſty will look upon the good offices done by them on ſuch occaſions, as if done for the advantage of the royal ſervice, that they may receive from your majeſty the reward thereof in their promotions, on preſenting to the ſaid judges for that purpoſe a certificate from the ſaid board: and on the reverſe, if they do not comply with this obligation, it ſhall be matter of complaint, and be imputed to them as a failure of duty in their reſidences.

SECT. XLIII.

Your majeſty is graciouſly pleaſed to grant to the governor, directors, ſecretary, and conſultors of this company, the ſpecial favour, that, while they continue to ſerve in the ſaid poſts, they may not be taken up, or confined, by order of any tribunal, military commander, or miniſter of juſtice, in any caſe civil or criminal (unleſs it ſhould be in flagrante delicto) without authority therefore from his recorder (or judge conſervator:) And that their factors and officers, who ſhall repair to the provinces, and other places out of the city of Porto, to make purchaſes and execute the commiſſions with which they may be charged, may make uſe of

all ſorts of ſteel and fire-arms neceſſary for the ſafety of their perſons and the capital they have with them; on condition that they carry with them licences for ſo doing, diſpatched by the recorder (or judge conſervator) of the company, in your majeſty's royal name.

SECT. XLIV.

Whereas the fund, or joint capital ſtock of this company conſiſts of one million two hundred thouſand cruſados, divided into actions of four hundred mil-reis each, as is already eſtabliſhed in ſect. x. every proprietor may have one or more actions, as he ſhall think fit, provided that, on compleating the number to the amount of ten thouſand cruſados, which is the ſufficient ſhare towards qualifying perſons poſſeſſed of actions for poſts in the management thereof, thoſe actions, over and above the ſaid amount, do remain concealed in the books of the company, without being laid down in the public accompts, which are to be diſtributed among the members, who have a right of voting at general elections.

SECT. XLV.

The company ſhall remain open to the reception of the ſums competent for the aforeſaid actions, to wit, for the city of Porto and the whole kingdom, for the ſpace of five months: for the iſlands of Açores and Madeira, for ſeven: and for all the Portugueſe dominions in America, for the ſpace of one year: the ſaid terms to commence from the day of publiſhing the proclamations, that it may reach to every one's knowlege. And after the ſaid terms are ended, or before the expiration thereof, if the abovementioned joint capital ſtock of one million two hundred thouſand cruſados be compleated, the company ſhall be cloſed, ſo as to be no more enabled to admit into the ſame any other perſon whatever: with this declaration, that for every one who ſhall enter into this company, it will be ſufficient to pay down at his entrance one half the amount of the actions he ſubſcribes for, and for the other half a credit will be given him of ſix months, reckoning from the day of fixing up the ſaid proclamations to pay in the ſame, at two different payments, of three, and three months each.

SECT. XLVI.

The perſons who ſhall enter with the aboveſaid actions, whether natives or foreigners, may diſpoſe of the value thereof in that manner, and to that intent, which they ſhall think beſt, whether by way of intail, chaplainſhip, truſt temporal or perpetual, deed of gift to the living, or reverſion in caſe of death, or other ſuch methods, making ſuch adoptions, and applying ſuch diſpoſals and clauſes as they ſhall think fit; all which it is your majeſty's royal pleaſure to approve and confirm, from this inſtant, of your own free will, certain knowlege, and royal plenary and ſupreme power, notwithſtanding any diſpoſitions to the contrary, though naturally requiring to be eſpecially mentioned, ſo, and in the ſame manner, as if the ſaid diſpoſals, adoptions, and clauſes had been written in deeds of gift under ſpecious claims, or in laſt wills, confirmed by the death of the teſtators. Foraſmuch as, ſince the right which every one, in virtue of natural liberty, is entitled to of freely diſpoſing of what is his own, authoriſes donors and teſtators to contract and diſpoſe as above in favour of private families and perſons, much more may the perſons entering with the ſaid actions be authoriſed to act in the ſame manner, when over and above the onerous titles of the contracts they enter into with the company, and the company with your majeſty, they concur to the improvement of the advantages ariſing from this eſtabliſhment to your majeſty's royal ſervice, to the commonweal of your kingdom, and to the preſervation and credit of a commodity, which, though ſo important, is in ſo ruinous a ſituation.

SECT. XLVII.

The money which ſhall be thrown into this company ſhall not be extracted thence, during the time of it's continuance, which ſhall be that of twenty years, reckoned from the day of the departure of the firſt ſquadron it ſhall diſpatch; which term of years may nevertheleſs be renewable for ten more, if the company ſhall requeſt as much, and your majeſty be graciouſly pleaſed to grant it the ſame. However, that the perſons who ſhall enter with their ſeveral capitals may have it in their power to make uſe thereof, they ſhall be at liberty to ſell the whole, or part of the actions they are poſſeſſed of, as if they were abſolute maſters of the ſame, at the prices they ſhall agree for, transferring the ſame actions to the perſons who ſhall be the purchaſers, which contracts the board of the company ſhall be immediately informed of, and the ſame ſhall cauſe the neceſſary minutes to be taken of the ſaid tranſfer, without fee or reward on that account, paſſing new policies in favour of the

new owners of ſuch actions, and entering marginal notes in the old policies of the ſellers thereof, whereby the ſale they have made of the ſame may evidently appear, and taking care to fix to the ſaid actions ſuch neceſſary lights as may ſerve for a full title to the new proprietors. All which is to be underſtood, ſo long as the ſaid company ſhall remain with a mercantile form of management, and veſted with the privileges your majeſty is pleaſed to grant to it as above. For, in caſe of it's mercantile form of government being changed, or of failure of the accompliſhment of the ſame privileges, every perſon poſſeſſed of actions in it ſhall be at full liberty to call out immediately the capital of his actions, together with the intereſt thereof, which till that day ſhall be found due to him. And your majeſty confirms the ſame, with the ſame clauſes, to be literally and inviolably obſerved, without interpretation, modification, or any meanings of fact or law, which can or may be alleged to the contrary.

Sect. XLVIII.

The intereſts ariſing from the funds of this company ſhall be divided for the firſt time in the month of July, of the third year, to be reckoned from the departure of the firſt ſquadron, on board of which the ſaid company ſhall ſhip it's goods for the Brazils, and from thenceforward a dividend pro rata of the ſaid intereſts, ſhall be annually and ſucceſſively made in the month of July aforeſaid; although the directors ſhould happen to have more than a year to remain in their offices.

Sect. XLIX.

Such ſtocks and intereſts as ſhall be found after the expiration of the twenty years, which compleat the term of the company's charter, or after the expiration of the farther term for which it may be renewed, having the nature of an intail, of a chaplainſhip, of a truſt temporal or perpetual, or being the property of the abſent, ſhall immediately be paſſed from the coffers of the company to the general depoſit of the court and city of Liſbon, where they ſhall be laid up with the ſame ſecurity as the ſaid depoſit itſelf is, in order to be diſpoſed of, applied, or delivered up, according to the diſpoſal of the perſons who ſo ſettled them at the time of putting into the company. But thoſe ſtocks which are not under any ſuch reſtrictions, and are perfectly allodial and free, ſhall require nothing more or leſs to entitle their proprietors to receive the full value thereof, than the very policy of the ſame; and the money being paid to the perſon who produces the ſaid policy, this ſhall remain in the coffer, to ſerve as a diſcharge from the ſaid action or ſtocks; for the recovery of which no copies ſhall ever be of uſe, but the originals themſelves ſhall be always required.

Sect. L.

All this ſhall extend to foreigners, and perſons reſiding in foreign countries, whatever quality or condition they be of; and in caſe, that during the above twenty years term of charter, or the farther renewal thereof, this crown (which heaven avert!) ſhould be at war with any other power whoſe vaſſals have thrown their effects into this company, nevertheleſs no arreſt, embarraſſment, ſequeſtration, or repriſal, ſhall affect them, or the intereſts thence ariſing to the owners, but rather they ſhall remain to them as perfectly free, exempt, and ſecure, as if every one had them in their own hands: a ſpecial favour which your majeſty is pleaſed to grant to this company from the motives above-mentioned; and which your majeſty, thus on your royal word, promiſes to fulfil to them.

Sect. LI.

And becauſe in courſe of time many things may occur, which cannot at preſent be expreſſed for want of reflecting on them, your majeſty is graciouſly pleaſed to empower the ſaid company, as occaſion ſhall offer, to lay them before your majeſty, by means of the ſecretary of ſtate for the affairs of the kingdom, that your majeſty may determine concerning them as your wiſdom ſhall find beſt for your own royal ſervice, and for the common good of your dutiful ſubjects and of this company. And the company ſhall do ſo accordingly, even in matters relating to it's own advantage, whenever any one of the directors ſhall inſiſt on a caſe being laid before your majeſty, provided the affairs be of moment, and it's conſequences of importance to your royal ſervice, to the common-weal of the kingdom, or to ſome weighty affair of the company.

Sect. LII.

Whereas it is of great uſe to fix a time certain for the departure of the ſquadrons from the city of Porto to the ſtates of Brazil, as well as that the wines may be navigated at a convenient ſeaſon, as that the inhabitants of thoſe governments may make their neceſſary proviſions at a certain period of time: It is your majeſty's royal pleaſure, that the ſquadrons, bound for thoſe governments, do preciſely ſet ſail in the ſpring tides of the month of September, or, at the lateſt, in the firſt of thoſe of October of every year, on pain, that the ſhips which do otherwiſe, ſhall not be impowered to go out till the like time of the following year; and that leave ſhall not be granted to them to lade or to ſail at any other time.

Sect. LIII.

And whereas your majeſty, after hearing the petitioners, has been graciouſly pleaſed to nominate the perſons, whoſe names are hereunder ſubſcribed, to eſtabliſh and govern this company for the firſt three years; they, and every one of them; ſign this writing in the name of the ſaid vintagers and good men of the city of Porto; perſonally binding their own effects with which they enter into the company, and alſo thoſe of the perſons in general, who ſhall enter into the ſame, ſo far only as the portions wherewith they enter therein may extend: that your majeſty may vouchſafe to confirm the ſaid company with all the clauſes, pre-eminence, privileges, and conditions contained in the ſame writing, and with all the ſtrength and force neceſſary for it's validity and ſecurity.

I, the king, make known to thoſe who may ſee this charter of confirmation, that having, and with perſons of my royal council, and other miniſters learned, experienced, and zealous for the ſervice of God, of myſelf, and of the common-weal of my ſubjects, whom I thought fit to conſult, maturely weigh the three and fifty chapters and conditions contained in the three and thirty afore written half ſheets, marked by Sebaſtian Joſeph de Carvalho e Mello, one of my council, and ſecretary of ſtate for the affairs of the kingdom, which the principal vintagers of upper Douro, and the good men of the city of Porto, therein mentioned, have made and ordained, with my royal approbation, in order to eſtabliſh a company, which may competently ſupport the culture of the vineyards of Alto Douro, and at the ſame time preſerve the growths thereof in their natural purity, to the advantage of domeſtic and foreign trade, as well as of the health of my ſubjects, without any expence to my revenue, but rather to the improvement of that and of the common-weal of my kingdom: and whereas upon examination of the ſaid conditions, with mature counſel, and prudent deliberation, they have been found not only convenient, as well as the company itſelf, which is of manifeſt utility to the ſaid city of Porto, and to the provinces thereto adjoining; but alſo, that the ſaid company is of ſingular ſervice in this particular, as alſo the perſons, who thereby contribute to the advancement of commerce and agriculture, by ſo advantageous and ſolid an eſtabliſhment: it is my royal will and pleaſure to confirm all the ſaid conditions, and every one in particular, as if they were, word for word, here inſerted and declared: and, by this my charter, I confirm to it and them the ſame, of my own free will, and certain knowlege, royal and abſolute power, to the intent that they may be put in execution, and fully obſerved, according to the tenor and meaning thereof. And it is my royal will that this confirmation, in the whole and for every part thereof, be inviolably obſerved, and never be repealed, but do always remain in it's full force and vigour, as firm, valid, and perpetual, without diminution; and that no doubts or demurs be raiſed to obſtruct the accompliſhment of the ſame, either in part or in the whole, in judgment or out of it; and that it be underſtood to be done in the beſt form, and in the moſt perfect meaning which can be expreſſed and underſtood in favour of the ſame company, and it's commerce and the ſupport thereof; ſupplying, and having for ſupplied, (as if inſerted in this charter) all clauſes and formalities of law and practice, which may be requiſite to give it it's full force; and I repeal, and have for repealed, all and every the laws, ſtatutes, ordinations, decrees of courts, proviſions, extravagants, other charters, and opinions of doctors, which by any means, or in any manner whatſoever, may be contrary to the conditions of the ſaid company, or to any one of them, though they ſhould be ſuch as to render it neceſſary to make herein a ſpecial and expreſs recital thereof, word for word,

word, notwithſtanding the ordination of the ſecond book, title forty four, which ordains that no ordination ſhall be deemed to have been by me repealed, unleſs expreſs mention of the ſame be made: and for the greater force and irrevocable exiſtence of this confirmation, I promiſe and give aſſurance, on my royal word, thus to fulfil it, and to cauſe it to be fulfilled and maintained, and not to revoke it, but to ſupport the perſons intereſted in the ſaid company in the preſervation of that and of it's commerce, in the quality of protector thereof, as I am in fact: and this charter ſhall have the force of a law, that the confirmation of the conditions and chapters therein contained may always remain in their full vigour without any alteration. Wherefore I command the ſenate of Liſbon, the courts of requeſts, the court of exchequer, the ultra-marine-council, the board of conſcience, the guild of the city of Porto, and other courts and tribunals, as alſo all the governors, generals of the Brazils, officers majors, intendants of the revenue, auditors general, and guilds of that ſtate, and all the magiſtrates, miniſters, judges, and juſtices of my kingdoms and lordſhips, that they in like manner do fulfil and obſerve it, and cauſe the ſame to be fulfilled and obſerved, without doubt or demur, of any ſort, not admitting any plea which may obſtruct, in the whole or in part, the effect of the ſaid conditions, as whatever relates to the company belongs to the board of the ſame. And it is my pleaſure, that this charter have force as an inſtrument, without paſſing through the chancery-office, and notwithſtanding the ordination, book ſecond, title 39, to the contrary, though it be more than a year before it have it's full effects.

Given at Belem the 10th of September, 1756.

REY.

Sebaſtain Joſeph de Carvalho e Mello.

Charter, by which your majeſty is pleaſed, for the reaſons therein alleged, to confirm the fifty-three chapters, and the conditions contained in the thirty three half leaves aforewritten, which the principle vintagers of Alto Douro, and the good men of the city of Porto, have made and ordained, with your majeſty's royal approbation, for forming a company, which, maintaining the culture of the vineyards, may preſerve the produce thereof in it's natural purity, to the advantage of the vintage, of commerce, and of public health.

For your majeſty's inſpection,

Done by JOACHIM JOSEPH BORALHO.

Regiſtered in the office of the ſecretary of ſtate for the affairs of the kingdom, in book I. of the ſaid company, leaf 1. and the following.

The printer, Michael Rodrigues, may print the chapters, and the conditions of the general company for the culture of the vineyards of Alto Douro; I having, by this decree, granted him the neceſſary licence for that purpoſe only.

With his majeſty's royal ſignature.

Regiſtered.

REMARKS ON OUR ARTICLE PORTUGAL, ſince the laſt war, and the treaty of peace of 1763.

The Portugueze being invaded by the Spaniards in the year 1762, we again ſuccoured them at no leſs expence than we did before, and they became a contracting party to the DEFINITIVE TREATY of 1763. See AMERICA for the treaty at large. But we have not received or got any grateful returns, ſuitable to all the obligations which Portugal is notoriouſly under to Great-Baitain; though it has been ſaid, we are in daily expectations to receive ſuch in a commercial way, as will make us an ample compenſation for all the expences, which we have been at: but we know there is little gratitude amongſt princes, when their turn is ſerved. However, if Portugal only amuſes and deceives us again; it is to be hoped, that this nation will never more aſſiſt them, without previouſly conſulting her own immediate intereſt by ſo doing: we are no longer in a condition to fight the battles of other nations, without receiving advantages, more than equivalent to the expence, and the attention required by the court of England, when engaged in ſuch enterprizes. The largeneſs of our PUBLIC DEBTS, and the multiplicity of our TAXES, it is to be hoped will be a memento to relinquiſh ſuch ſyſtems, till we have got rid of our national incumbrances, or ſufficiently reduced them.

Let any man of candour and impartiality judge, whether the above wine company is not an eſtabliſhment, calculated to deſtroy and annihilate all the commercial privileges to which the Engliſh are entitled in the kingdom of Portugal: we are perſuaded, that he cannot think otherwiſe, when he compares it with the articles in Oliver's peace, which he will find under our article of TREATIES OF COMMERCE.

However, whether the court of Portugal, will or no think proper not only to ratify and confirm all the ancient privileges of Britiſh ſubjects in that kingdom, but add ſome freſh one to them, in grateful remembrance of the greateſt expence the crown of Great-Britain has been at for the ſupport of that nation, and the diſtinguiſhed attention this nation has lately given to her preſervation; we ſhall ſoon hear, his excellency Count de la Lippe being juſt now charged with a ſpecial commiſſion from our court to Portugal, for that purpoſe, than whom no one could be more acceptable to the court of Portugal, the count having done it ſuch important ſervices, by means of Great-Britain.

PORTUGUEZE AFRICAN TRADE. The Portugueze have a great ſhare of the trade to Africa; and, as the Dutch trade thither for gold rather than for ſlaves, ſo the Portugueze trade there rather for ſlaves than for gold, though they have ſome ſhare of the gold alſo, eſpecially on the eaſt coaſt. But this trading chiefly for ſlaves has been, in ſome reſpect, the ſafety of the Portugueze commerce: for as the Dutch, who are every where their rivals in trade, have kept the coaſt where there is moſt gold, ſo the Portugueze quietly poſſeſs their factories in Congo, Angola, and the ſouth coaſt of Africa, where there are ſlaves, but no great quantity of gold.

As the Dutch want but few ſlaves, becauſe they have but few plantations in America, ſo the Portugueze want a great number, becauſe their plantations in Brazil are ſo very great; and they increaſe their trade upon the coaſt of Africa, becauſe their colonies in Brazil increaſe conſiderably every year. See the articles BRAZIL and PORTUGUEZE AMERICA.

In order to ſupply themſelves with negroes, they have a trade with all the factories upon the coaſt of Angola, and the whole kingdom of Congo is, as it were, their own; by which they enjoy all that which geographers call the coaſt of Congo, or the Lower Guinea, from the Portugueze fort on the north of the iſland Fernando, in the latitude of 7 degrees ſouth, to Cape Negro, in latitude 16 degrees, beſides a powerful ſettlement up the country, at St Salvador.

In this vaſt extent of country they have a moſt extenſive and advantageous trade, having made very conſiderable ſettlements; but the principal, and where their governor or viceroy keeps his reſidence, is at Loando in Angola, and Cape Palmerhino, where they have ſtrong garriſons, and are able to bring together, for their defence againſt the natives, 2 or 3000 men at a time, very well armed. See the following particulars of all their ſettlements in that country, with a brief account of the trade they carry on at all of them reſpectively: for they have no ſettlements here like that of the Cape of Good Hope, merely for baiting and refreſhing their ſhips.

The Portugueze ſettlements on the coaſt of Africa, with their trade, are as follow:

In GUINEA PROPER, or UPPER GUINEA.

ARCHIEM, a fort upon a ſmall river, near Cape Three Points: their trade here is chiefly in elephants-teeth, ſome gold, but not much.

They once had DEL MINA, a ſtrong caſtle, and now the biggeſt and faireſt fortification in all Guinea. N. B. This caſtle was taken from the Portugueze, who built it, by the Dutch, anno 1631, and the Dutch ſtill hold it, and have made it very ſtrong.

WIDDAW: here they have a ſmall ſettlement, but not much trade; they ſay they pretend to ſettle there chiefly for intelligence.

In CONGO.

FERNANDO PO, an iſland the fartheſt north, and near the Engliſh factories. Here they obtain ſome gold and elephants-teeth, with much bees-wax and civet; but the chief trade here is for freſh proviſions for the Portugueze ſhips out-bound for India.

CAPE LOPOS. Here they have ſuch a ſettlement that the king of the country lives in the fort with them, and they are all confederates; they get here a great many ſlaves, and ſome drugs.

LOANGO: it is a kingdom, and has it's proper king; but the Portugueze may be ſaid to be more properly kings of this whole country, eſpecially the ſea-coaſt, which they are fully poſſeſſed of for 1100 miles together; and they carry from thence yearly 25,000 ſlaves, or negroes, for the Brazils, but little or nothing elſe.

GREAT CASCAIRS, at the mouth of a ſmall nameleſs river, not navigable.

GOANGO, at the mouth of the river Zaire: here alſo they get abundance of ſlaves.

ST SALVADOR, the capital city, above 100 miles within the country.

LOANDO, where the Portugueze governor reſides.

In Angola.

Cape Palmerhino,
Cape Lehdo,
Libolo,
Benguelas, or St Philip.
☞ The Dutch have a ſmall ſettlement here, but the Portugueze drive a very good trade from hence notwithſtanding.
Tortuga,
Angra De Negros.

} Theſe are the places where the bulk of their ſlaves are collected, and where alſo they load their ſhips with what other things they find.

Beſides all theſe, they have ſome ſmall factories on the northern coaſt, about Cape Verd and Rio Grand.

From theſe ſouthern parts they carry a very great number of ſlaves every year to the Brazils; and as their colony there is exceeding great and populous, as well as rich, were it not that they have ſuch extended ſettlements on the coaſt of Africa, for the ſupply of negroes, they could not be able to carry on their ſugar-works, their mines, and other planting buſineſs in the Brazils, where the ſlaves are not long-lived.

But this is not all they have to depend upon for ſupplying the Brazils: they have ſeveral conſiderable ſettlements on the eaſt coaſt of Africa, as in the territory of Mozambique, and the whole coaſt of Zanguebar, a country that takes up the ſea-coaſt from the Rio de Ladrones, in latitude 27 degrees ſouth of the Line, where the Portugueze ſay the government of Mozambique begins, to Jubo, which lies directly under the Equator, or within one degree north latitude, and from thence even to the gulph of Moccha, or the Red Sea.

The Portugueze governor of all this territory reſides at Mombaza, in the kingdom of Melinda, where the king of Melinda alſo reſides. They are abſolute maſters of all theſe coaſts, where they are never interrupted by the viſits of any ſhips or company from Europe, except their own, or except they be ſhips in diſtreſs, in their return from India; for in their going they ſteer quite another courſe.

On this coaſt of Africa they poſſeſs vaſt dominion, and have ſeveral powerful people, countries, and even kingdoms tributary to them; of which we muſt take notice, otherwiſe their trade from thoſe places cannot be fully deſcribed.

In Monomotapa.

Inhagua, an iſland near the mouth of the river St Eſprit, where the Portugueze dominions ſouth of the Line begin. Here they get abundance of elephants-teeth, and alſo much gold: here alſo they begin to be full of black cattle, and they furniſh great quantities to the Dutch at Cape de Bonne Eſperance.

St Martin, an iſland alſo, in the mouth of the great river Cumana, where they have a traffic with the natives for European goods, but bring little away but proviſions.

Puado, an iſland in a branch of the ſame river Cumana. By this river the Portugueze carry on a great commerce with the Caffres, or inland negroes, exchanging a vaſt quantity of European goods for ſlaves and gold, to their very great profit.

Mozambique, and therein

The coaſt of Zanguebar, containing two governments:

St John of Mozambique, an iſland with a city in it, which is very populous, and full of trade: it is wholly poſſeſſed by the Portugueze as ſovereigns. They have a ſtrong fortreſs here for protecting their trade, in the nature of a citadel, which commands both the country, the city, and the harbour, which is alſo very good; and here moſt of their ſhips for Goa and Macao call, as well for trade as to refreſh themſelves, as they return from China and India. Here alſo they drive a very gainful trade, trucking the manufactures of Europe for gold and elephants teeth, but not many negroes.

Mongale, an inland town, poſſeſſed alſo by the Portugueze, and garriſoned, and which is the ſtaple of their European goods, manufactures, &c. of which they ſell great quantities to the natives, for ſmall bits or lumps of gold, to very great advantage.

Quilsa: this is a ſtrong fort, built by the Portugueze, but the country is unhealthy, ſo that the factory could not hold it, and they demoliſhed it again: but the king is tributary to them, and pays for their protection, as they call it, 1500 pounds weight of gold per annum, and a great quantity of ivory; and, as the people are cloathed here alſo, the Portugueze ſell them abundance of European goods, manufactures, &c.

Mombaza, a government and ſtrong fortreſs, but loſt to the natives in 1631, who took it by ſtorm, and cut all the Portugueze to pieces in it; but the Portugueze returned it, for they recovered it again, with greater ſlaughter of the inhabitants, and made it very ſtrong. Here they have alſo a very advantageous trade.

Melinda, a large country; ſubject to the Portugueze, though they have a king of their own alſo. The capital city is called likewiſe Melinda, a large populous place, wholly built by the Portugueze in the latitude of 8 degrees, a ſea-port, with a very good harbour, and a ſtrong citadel, which commands the entrance into the port. At this city the Portugueze are ſo numerous, that they have 17 churches, beſides religious houſes. Here they have ſuch large warehouſes for all ſorts of European goods, that they ſupply the whole coaſt and country for 1000 leagues within land; and here they yearly carry off a very great number of ſlaves, as alſo gold, horſes, rich gums and drugs, and ſome oriental pearl.

Adjoining to this country there are five ſeveral kingdoms, all tributary to the Portugueze; ſo that they have the ſovereignty of as much land in this country, as the whole kingdoms of Spain and Portugal take up in Europe; and the merchants of Melinda are immenſely rich.

Brava: ſome call it a republic; whether it be ſo or not matters not much, they are ſubject to the Portugueze, and pay a tribute for carrying the Portugal ſtandard. The Portugueze trade here chiefly for ambergreaſe, elephants-teeth, and gold; and they take off great quantities of European goods, becauſe the people go cloathed after the Portugueze manner.

From hence to the Red Sea the Portugueze have the command of the coaſt, though no ſettlement or trade with the people.

Whoever conſiders the extent of the Portugueze dominions on theſe coaſts, and includes the many nations and kingdoms which are their tributaries, muſt neceſſarily allow their trade to thoſe countries to be exceeding great: and though the people of many of thoſe nations go almoſt naked, or with very little cloathing, and, therefore, conſume not much woollen or ſilken manufactures (the climate being exceeding hot where moſt of them live), yet this is greatly ſupplied by the infinite number or people, who all make uſe of ſomewhat; and the export in the whole, from Portugal to thoſe places, muſt be very great. As for their returns, they are made with great advantage to the merchant, as well as to the nation in general, for they are in ſome of the moſt precious and valuable things in the world; ſuch as,

Slaves,
Gold-duſt,
Elephants-teeth,
Gums of the richeſt kinds,
Oſtrich-feathers,
Bees-wax.
Drugs, { Senna, Aloes, Guinea grains, Civet, Ambergreaſe, Incenſe, Frankincenſe, &c.
Wild beaſts and birds, { Lions, Leopards, Tygers, Civet-cats, Elephants, Oſtriches, Apes, Parrots, Horſes, very fine, of the Arab breed, from Magadoxa.

The Portugueze have alſo ſeveral poſſeſſions, and a great trade, in ſome iſlands in ſeveral parts of the world. For example,

Madagascar, right againſt the ſhore of Mozambique and Kanguebar, on the coaſt of Africa, where they get ſlaves in conſiderable numbers, but no gold.

Madeiras, a body of iſlands near the Canaries, and which carry on a large trade in wine of that dominion alſo.

Terceras, or the Azores, or Westward Isles. Theſe are alſo a ſmall cluſter of Iſlands, ſeven in number, not far off from the coaſt of Africa, and have a ſmall trade with Portugal for European manufactures and corn, but have very little returns to make, except corn and cattle: they lie very convenient for victualling the Brazil ſhips outward-bound. See Azores Islands.

Cape De Verde Islands. From whence they derive their name is eaſy to judge, they lying juſt off Cape de Verde, or, in Engliſh, the Green Cape.

All theſe iſlands are poſſeſſed by the Portugueze, except that of Madagaſcar, and even there they have the people under ſuch command, that it is all one as if they poſſeſſed it. In all theſe they have a very conſiderable trade, but eſpecially to the Cape de Verde and the Madeiras: the latter, in particular, is ſaid to ſend 20,000 pipes of wine a year to the Engliſh and French colonies in the Weſt-Indies, particularly to Jamaica, Barbadoes, and Martinico; and the Cape de Verde iſlands to furniſh ſalt to New England, and the Engliſh colonies on the north of America, for their fiſhing-trade.

☞ The

☞ The Portugueze had once begun a trade into the empire of the Abyſſines, or Ethiopia, but were given out of it again by the Ethiopians, who fancied they intended to ſtop the channel of the river Nile, and turn it into the Red Sea, and ſo cut off their commerce and communication with Egypt.

One thing is to be noted of the Portugal trade, viz. that having no manufacture worth naming in trade, with which to carry on their affairs to all theſe remote ſettlements, and where they have infinitely more people to ſupply than their whole country in Europe contains, all their ſhips therefore go loaded with the product and manufactures of other nations, juſt as the Spaniards do to New Spain, ſuch as thoſe of England, France, Holland, and Hamburgh: and as the Engliſh have the greateſt opportunity to oblige them, by the treaties made between them in trade, ſo the greateſt quantity of Engliſh manufactures have heretofore been ſent to them, which they have again exported to all theſe remote parts of the world.

All theſe things confirm what is ſaid above, viz. how greatly the trade of Portugal is increaſed in a few years, upon the occaſion of the growth of thoſe colonies, and of their intereſt in them; inſomuch that it is apparent Portugal alone has taken off more Engliſh goods yearly, within the laſt 40 years, than both Portugal and Spain took off together any year before.

This is chiefly owing to the increaſe of their colonies in the Brazils, and on the eaſtern African coaſt, which are ſo very much improved of late, and are daily increaſing, by the vaſt number of native Portugueze who go to ſettle there, and who all grow rich, that it is believed Brazil only, in 40 years more, if it goes on as it has done for 40 years paſt, will be the greateſt colony in America, and have more people in it than are in all Portugal and Algarve in Europe.

Remarks.

From this account of the Portugueze ſituation in Africa, the following particulars are obſervable:

1. That as the ſucceſs of the gold and diamond-mines in Brazil, as well as the ſugar-works, belonging to the Portugueze, depends upon the labour of negroes, they conſtantly take care to obtain a competent number for this purpoſe, by virtue of their African ſettlements.

2. That from the greater dominion in ſovereignty, as alſo the greater extent of territory in Africa than any other European power has, they neceſſarily purchaſe the productions in this part of the world at cheaper rates than other powers can do: that is to ſay, they exchange leſs quantities of the merchandizes of Europe for their African ſlaves, their gold, ivory, &c.

3. That their having brought far more of the natives to cloath in the European manner, than all the reſt of the potentates conſidered together who have ſettlements there, the general traffic of the Portugueze in Africa is not of leſs conſideration to them, perhaps, than that of all the other powers of Europe unitedly comprehended.

4. That the policy of the Portugueze in Africa points out, and even demonſtrates, that it is by no means impracticable for the Engliſh in particular, who have ſuch a number of good forts and ſettlements in Africa [ſee English African Company] to make at leaſt as great advancement into the inland commerce of Africa as the Portugueze; and to bring thouſands, perhaps millions, of the natives, ſo to cloath in the European manner, as to add infinitely more to the exports of this nation in that part of the world, than we have ever hitherto done: for, although England has been in poſſeſſion of forts and ſettlements in Africa ſince the time of queen Elizabeth, yet we have never enjoyed any thing but a trifle of the coaſt-trade; we have never yet entered into the heart of Africa, and, conſequently, have not enlarged our commerce there any thing like to the degree it will admit of.—But this, we apprehend, depends upon quite other meaſures than what they have ever yet been taken. See the article English African Company, Vol. I. and ſuch other heads to which from hence we have referred.

PORTUGUEZE AMERICA. The territories belonging to Portugal in America, are the Brazils; which for ſituation, extent, and other advantages derived from nature, have proved unſpeakably beneficial to the poſſeſſor. We ſhall not enter farther back into the hiſtory hereof, than what may be requiſite to our purpoſe. Among the various contentions amidſt ſeveral powers for theſe territories, the Dutch were the laſt who declared war againſt Portugal on this occaſion; but after five years, they were glad to make a peace, under the mediation of our king Charles II. which was ſigned in Auguſt 1660; and the Portugueze have, ſince this time, remained in quiet poſſeſſion of this vaſt country. See the article Brazil.

The trade which the Portugueze carry on to this colony has been ſo great, that ſome have thought that to have been the principal cauſe why they have neglected that of the Indies.—See the article Portugueze East-India Trade.

The trade of the five northern captainſhips of Brazil, viz. Paria, Maragnen, Siere, Rio Grande, and Parayba, is carried on in the laſt mentioned port, which lies on the river of the ſame name, at five leagues diſtance from the ſea.—It is a pretty fair and populous town, and there are annually about 7 or 8 ſhips ſent thither from Liſbon and Oporto, of about 250 tons burden. Their lading conſiſts chiefly in ſugar, of which they make more in theſe northern captainſhips, than in the ſouth; eſpecially ſince the diſcovery of the gold mines, which has made the inhabitants negligent in reſpect to this and all other productions and manufactures.

There was a time when the trade of Brazil ſugar was ſuperior to that of any in the world; for the Brazil ſugar was the firſt known in Europe, and the Portugueze are ſaid to have ſet up their ſugar-works in this country, about the year 1580; and their long poſſeſſion has made them more careful and exact in it, than any other nation; ſo that even at preſent, the clayed ſugars from Brazil are whiter and finer than ours, and yet the method of doing it is no great ſecret. See the article Sugar.

Beſides ſugar, they bring from hence dyeing woods, ſeveral ſorts of drugs, and other valuable commodities from Parayba, which is the leaſt frequented port in Brazil, though theſe northern captainſhips are the beſt peopled, and the inhabitants are eaſy in their circumſtances, notwithſtanding there have been no mines yet wrought in theſe parts.

Tamarca, which lies next to Payraba, and the captainſhip of Fernambuco, carry on their trade from the city of Olinda. It is ſeated on a hill not far from the ſea, which renders the ſtreets uneven and incommodious. The port is but narrow, and entry extremely difficult; yet there is a conſiderable reſort of ſhipping there from the other parts of Brazil, and from the Canaries: and the annual fleet from Liſbon, conſiſts generally of about 30 ſail, eſcorted by a man of war. Theſe merchantmen are generally about the ſame ſize with thoſe ſent to Parayba, and their cargoes are compoſed chiefly of ſugar and Brazil wood, which laſt is ſaid to be the beſt of it's kind in the world. See Brazil Wood.

Bahia, or the Bay of All Saints, is the next captainſhip of Brazil, is about 12 leagues over, but ſcarce navigable in ſeveral places. There are in this bay ſeveral ſmall iſlands, where there are tobacco and ſugar plantations; and they have alſo very good fiſheries on the coaſt of theſe iſlands, and on the banks.

St Salvador city lies in the latitude of 14 degrees ſouth, and is at preſent the center of the Portugueze trade in this part of the world. Authors differ in the accounts they give of the fleets ſent annually hither from Liſbon, ſome making them double what others report; but the reaſon of this is, we apprehend, that the one ſpeak of the whole Brazil fleet, which generally aſſemble in the Bay of All Saints, in order to return together to Europe; and the other of the fleet from Liſbon expreſsly deſtined for the Bay, which is about 30 ſail eſcorted by two men of war, about the month of March commonly.

The commodities they carry are wines, brandies, meal, or flour; oil, cheeſe, cloths, ſtuffs, linen, iron, rough and wrought; paper, all kinds of kitchen utenſils, laces, and moſt kinds of apparel. On the other hand, they bring from thence the beſt tobacco in Brazil, ſo highly eſteemed in Europe; alſo ſugar, indigo, balſam capaiva, ipecacuanha, pareira brava, cinnamon, long-pepper, ginger, woods for dyeing, and ſome for inlaying; ambergreaſe, and other rich drugs and perfumes: beſides theſe, they alſo export from hence raw hides, train-oil, and whale-fins, abundance of theſe creatures being taken upon the coaſt, and, for above theſe forty years laſt paſt, gold, amethyſts, and diamonds.

There are likewiſe ſome ſilver mines in Brazil, which, though not wrought to ſuch profit as to allow the exporting much of this metal to Portugal, yet furniſh ſufficient for home circulation; and of this ſilver that money is coined at St Salvador, which is current through the whole colony; and which bears on one ſide the arms of Portugal, and on the other a croſs charged with a ſphere, with the following motto: Under this ſign will I ſtand.

The reſt of the captainſhips which lie farther to the ſouth, carry on their trade by the Rio Janeiro, ſo called for it's having been diſcovered in the month of January 1515; and which, from being ſcarce known 'till of late years, is, at preſent, become one of the moſt conſiderable rivers in the world. The banks of it are as beautiful and pleaſant as can be imagined, the climate fine, the ſoil extremely fertile, producing ſugar, indigo, tobacco, and cotton, all in perfection.

It has alſo been experienced, that European corn will grow here with little trouble and to great perfection; but for the reaſons aſſigned, this, and all other improvements, have been diſregarded, though independent of the gold mines, which have been diſcovered in this and the neighbouring captainſhips of St Vincent, this might be conſidered as the richeſt part of Brazil. The Portugueze ſettled here are quite a different people from thoſe in the Bay of All Saints; for they are active, induſtrious, well inclined to foreigners, and ſuffer the Indians who live among them, to enjoy as much freedom

as themſelves, which renders the country a paradiſe; and it is not eaſy to imagine, what vaſt cargoes were brought from the Rio Janeiro, before the gold mines in that country were diſcovered.

St Sebastian city is the capital of this country, and ſtands commodiouſly in 23 degrees ſouth latitude on the weſt of the river, about two leagues from the ſea. It is the ſeat of the Portugueze governor, a biſhop's ſea, ſuffragan to the archbiſhop of St Salvador, and is well fortified.

There are likewiſe ſeveral other conſiderable towns on the Rio Janeiro, all of which have a large ſhare of trade, as may appear from the number of ſhips which compoſe the fleet ſent hither annually from Portugal, and which conſiſts of between 20 and 30 ſail of veſſels, of 500 tons burden, which are uſually eſcorted by two men of war.

The commodities brought from hence are generally the ſame with thoſe from the Bay of All Saints, diamonds only excepted.—In regard to the diamond-mines, it is about forty years ſince, that ſome precious ſtones were brought to the city of St Sebaſtian, taken out of a ſmall river lying weſtward of that city, which were at firſt judged to be very fine pebbles, but it was not ſo ſoon that they were brought over to Europe. About the cloſe of queen Anne's war, theſe fine pebbles were found in greater quantities; and we are told, that ſome rich planters began to employ their ſlaves in digging the black heavy earth, on the ſides of the mountains, from whence this river deſcended, and then theſe ſtones were found in greater plenty: ſome of them were very large, but moſt of a black or yellowiſh caſt, which blemiſhed their luſtre, and ſunk their value; notwithſtanding which, many of the yellow ſtones were brought to Liſbon and ſold for topazes. See the article Topaz.

After the crown of Portugal interpoſed, the working of theſe mines were prohibited; which, however, did not hinder their coming in conſiderable quantities; for it was ſometimes ſaid, they were found in this or that river, and not dug out of any mine; ſometimes they had other names given them, and many were ſent to St Salvador, and from thence exported to Europe, under pretence of their coming from the Eaſt-Indies by the Goa fleet. This involuntary fraud raiſed their value, and at length the crown of Portugal became convinced, that ſuch as pretended to great ſkill in ſtones had deceived them, and that ſome of theſe Brazil ſtones were ſcarce to be diſtinguiſhed from Oriental diamonds: upon this the court altered their meaſures, and it was permitted to ſend over rough diamonds in the Rio Janeiro fleet, under certain reſtrictions; which licence rendering the value of thoſe jewels ſtill more and more apparent, the king of Portugal reſolved to put this trade under a new regulation. This new order took place in the year 1740, when his Portugueze majeſty let theſe mines to a company at Rio Janeiro, for an annual rent of 138,000 cruſadoes, which is 26,000l. of our money, upon condition that they employed no more than 600 ſlaves at theſe mines.

Theſe ſtones coming into Europe, ſunk the price of diamonds at firſt conſiderably; but this diſcovery has, notwithſtanding, proved highly beneficial to the Portugueze, ſince it has operated in their favour greatly, with regard to the general ballance of their trade; for as they have diſpoſed of theſe ſtones to any nation, upon whom they have already a ballance, they muſt bring money into the kingdom; and if, on the other hand, they have ſold them to ſuch nations to whom they pay a ballance in trade, this has leſſened the ballance in the favour of ſuch nations, and has prevented the exportation of gold in the like proportion; ſo that take it either way, the diſcovery of theſe diamond mines has been of high conſequence, and may prove ſtill of far greater advantage to this nation.

St Vincent captainſhip lies ſouthward from that of Rio Janeiro, which is the richeſt country in Brazil, perhaps in all South America. It is bounded on the north by the captainſhip of Rio Janeiro, on the eaſt by the ocean, on the ſouth by that of Del Rey, and on the weſt by the mountains of La Plata, and countries inhabited by various ſavage nations: it extends from the latitude of 22 degrees to 27 degrees ſouth, and is in length from north to ſouth about 300 miles, and in breadth from eaſt to weſt, in ſome places near 180 miles, but the greateſt part of it is not above half ſo broad.

St Vincent town is ſituated on a fine bay of the Atlantic Ocean, or a kind of peninſula according to ſome, well fortified: a little to the north-weſt lies the town of Santos, which ſome look upon to be the capital of the province; and which has as fine a port as any in the Weſt-Indies, capable of holding the largeſt ſhips.

Remarks.

A ſummary of this trade and poſſeſſion.

The extent of this colony and government is the greateſt at this time in the world, that is adminiſtered by one deputy or viceroy: the dominions of the Spaniards in America are, indeed, greater, but then they are divided into ſeparate governments, and under governors independent of one another, though all ſubject to the ſame ſovereign.

The proper bounds of this colony from north to ſouth, is from the river Amazons to the river Paraguay, or La Plata, [ſee the article Paraguay] above 2200 miles, being from the line, or within half a degree of it, to latitude 37 degrees ſouth, and the breadth above 1000 miles; but of that indeed they poſſeſs very little, for the Portugueze are ſo ill beloved by the natives, and the latter, who are a terrible people, and the moſt furious and bloody of all ſavages, are ſo numerous in the inland parts of the country, that the Portugueze, who are not the braveſt men in the world, dare not venture far among them; that is, dare not plant far from the coaſt. And this is the reaſon, that though the Brazils are ſo exceeding large as above, and that the Portugueze are poſſeſſed of the whole coaſt for above 2000 miles, yet they are hardly any where ſettled above fifty miles from the ſea, except in the Bay of All Saints, and on the ſouth parts to the banks of the Rio de la Plata; which alſo may be called a coaſt, becauſe bounded by the banks of that great river.

The length of the ſea-coaſt entitles them to a great many good ports for trade; and the extent of the land entitles them to many different productions fit for merchandize. As the moſt northern parts are exceſſively hot, being under the line, and conſequently cannot produce corn or maintain cattle; on the contrary, the ſouthermoſt parts produce very good corn and maize, and ſuch an abundance of cattle, that the hides and tallow are very conſiderable articles in their exportations. The produce of the country in general is as follows.

Rice, corn, maize, ſugar, cotton, tobacco, Brazil woods, fuſtic, hides, tallow. Some valuable ſtones and metals, as emeralds, jaſper, cryſtal, diamonds, ſilver, gold: drugs, as balm, lacque, ſaffron, ambergreaſe, caſſavy.

But the chief produce for merchandize beſides the gold and diamonds, are only three of theſe heads, namely, ſugar, tobacco, and hides.

It was many years the Portugueze carried on the trade of this colony, and with ſucceſs too, without knowing any thing of it's ſubterranean wealth: ſilver, indeed, they expected, though they found very little at firſt; and the number of ſhips ſent to the Brazils, was uſually but from nine to twelve ſail in a fleet, and thoſe fleets once a year; one fleet to the Bay of All Saints, and the other to Fernambuco, then newly recovered from the Dutch.

About the year 1680, they diſcovered a great deal of gold in the mountains, at ſome diſtance from the city of St Salvador; and after that they found the like in ſeveral other parts, chiefly in the mountainous country, and remote from the ſea: by this their trade has been ſo enlarged, and the number of their inhabitants ſo wonderfully increaſed, multitudes going over every year, tempted by the good fortune of their countrymen, that it is ſuppoſed the Portugueze in Brazil will in a few years be richer and more numerous than they are in Portugal itſelf.

The increaſe of this commerce may be gueſſed at by this, that they are ſaid to bring yearly from the Brazils to Portugal, the value of five millions ſterling in gold, coined and uncoined, beſides a great quantity of ſugar, tobacco, and hides.

The tobacco is a very conſiderable article, it comes all very fine dreſt, and ſpun up in great rolls, which ſometimes weigh between two and three hundred weight: it is moſt of it made afterwards into fine ſnuff, which is ſomewhat medicinal, and is eſteemed the moſt valuable tobacco in the world.

On the ſouth ſide of the Brazils, towards the Rio Paraguay, there are ſuch multitudes of cattle running wild, that thouſands of them are killed every year for the hides and tallow; and every fleet brings home the hides to Portugal, ſometimes from 17 or 18,000, to 20,000 at a time.

In return for all this wealth, the Portugueze ſend over in every fleet exceeding large quantities of the richeſt European goods, and eſpecially of Britiſh manufactures about 30 years ſince, of which they made ſuch vaſt demands in England, that in the year 1722, Portugal took off more Engliſh goods in one year, than ever Portugal and Spain together had called for in any year before 1700.

This general trade, as has been ſhewn, ſtill continues, and is like to continue and increaſe, among the European powers in general, though it is in a great declenſion with relation to England in particular, if the flux of gold continues in the country; and, as the Portugueze tell us it is inexhauſtible, we may venture to ſay it will increaſe; becauſe, as the wealth of the Portugueze in the Brazils ſhall increaſe, ſo alſo will their numbers of inhabitants: for every fleet carries away multitudes of people, who go thither to plant and ſettle, ſo that the colony ſpreads continually; and as they increaſe, and their wealth increaſes, ſo their expence in living (as it is with all the European nations) will increaſe every year, and conſequently they will make ſtill larger demands of goods from the other European ſtates, and England is entitled to have a ſhare equal to the encouragement ſhe gives to the conſumption of the wines and fruit of that kingdom.

It is for the ſupport of this vaſt colony, and for working in the hills where this treaſure is found, that the Portugueze call

for

for ſo many negroes from Africa; and the number is ſo great which they have now there, that if we may believe the Portugueze, they have above 200,000 in that part only which lies to the ſouth of the Bay of All Saints, and incluſive of the bay and colony adjoining; beſides what they have at Fernambuco, where they may, perhaps, employ one third of the number more.

Nor can it be leſs, if they carry over 50,000, and more, every year from the eaſtern coaſt of Africa, as hath been affirmed to be the caſe by themſelves, when ſpeaking of the Portugueze trade at the city of Melinda on the coaſt of Mozambique.

The Portugueze had not ſhewn any great concern, either for extending or improving their territories in Brazil after the expulſion of the Dutch, 'till a certain ſtateſman adviſed Don Pedro, about the year 1685, to think of improving his American dominions, and more eſpecially the two extremities of Brazil.

That miniſter ſuggeſted, that the climate at the Bay of All Saints, would fruſtrate whatever endeavours might be uſed to render the people active and induſtrious; but that it was otherwiſe, both with the northern and ſouthern extremities of Brazil, where a wiſe government and a little encouragement, might render the country of much greater advantage to the crown of Portugal, than hitherto it had been. This advice was received and followed, which gave birth, on the one hand, to the eſtabliſhing the Portugueze forts and ſettlements towards the river of Amazons; and on the other, to the improvement of the new colony at Santos, which was then but very ſmall.

The method taken for this purpoſe was ſingular enough; moſt of the perſons made choice of were of the mixed herd, or, as the Portugueze call them, Meſtices, who married Brazilian women, and the perſon intruſted with the government of theſe new plantations, were prieſts and monks; but they were ſent expreſsly from Portugal, and care was taken that they ſhould be fit for the purpoſe. The captain-general of Brazil, and all the officers of the ſouthern captainſhips, had orders to treat theſe people kindly, and to give them no diſturbance in their meaſures.

It very ſoon appeared by the effects, that this plan was very wiſely concerted; for they multiplied prodigiouſly, and, in the ſpace of about fifteen years, the prieſts added ſeveral hundreds of families to their colony; extending weſtward fourſcore or one hundred miles, farther than the Portugueze had any ſettlements before that time. By degrees they purchaſed ſlaves, more eſpecially the eccleſiaſticks, whom they employed in the ſilver mines; and, treating the negroes better than moſt of their neighbours, they ſoon became very rich; ſo that ſeveral pariſh-prieſts in the captainſhip of St Vincent were worth from ten to fifteen thouſand cruſadoes; that is, from fifteen hundred to eight thouſand pounds ſterling a piece. They paid the king's fifth very regularly, and this was the beginning of the riches drawn from this part of the world. But when it was once known, that ſo much wealth was to be had in theſe hitherto uncultivated regions, there began very ſoon to reſort thither abundance of adventurers, of all countries and of all characters; when we ſay of all countries, we mean Spaniards as well as Portugueze, free negroes, Mulattoes, and all the different mixtures that are to be met with in Brazil, down to the Caribocos, who are the offſpring of Brazilian ſavages by negro women; and by different characters, we mean monks as well as laymen, ſoldiers, mechanics, broken planters; and, in ſhort, all that ſort of men who are ready to go any where, or do any thing to get a living. As theſe were quite a different race from thoſe of the new colony before-mentioned, it is not to be ſuppoſed that they could dwell together, more eſpecially as the former were the quieteſt and moſt ſimple, the latter the moſt riotous and turbulent, people in the world.

Theſe adventurers, therefore, took care to look out for a new ſettlement, and they found one of the propereſt places in the world for their reception, at no great diſtance. This was the thick and vaſt foreſt of Parnabaccaba, which overſpread all the mountains at the back of this captainſhip, and in which hitherto none but wild beaſts took up their dwelling. They ſoon cleared a part of this wilderneſs for their habitation, in which they eſtabliſhed not only a new town, which they call San Paulo, but a new republic alſo, in which they lived after the manner they liked beſt. At firſt this was overlooked, becauſe the country was judged of no great value, and the adjacent captainſhips were very well pleaſed to be rid of thoſe ſort of folk, who reſorted thither. In the ſpace, however, of a very few years, they grew too ſtrong to be dealt with; for, receiving, as they did, all ſorts of people, they quickly increaſed from two or three hundred, to as many thouſand men; and being a bold, hardy, enterprizing, and daring crew, the governors knew not how to manage them. In the firſt place they took care to fortify the avenues to their territory, which were naturally ſtrong; and they ſeldom ventured abroad, but in bodies of fourſcore or one hundred men, and in ſuch parties they frequently traverſed the whole extent of Brazil. Theſe were the people who firſt diſcovered and wrought the gold mines, which muſt be exceſſively rich, ſince they were able to obtain ſuch vaſt quantities of metal, without any of thoſe aſſiſtances which the Spaniards have in their ſettlements in Chili.

As this required, however, a great number of hands, they ſeized upon all the ſtraggling Indians and negroes they could meet with, and compelled them to undergo ſuch fatigues as they thought proper.

This new and extraordinary commonwealth, was denominated, from the place of it's ſituation, Pauliſts, and they would not ſuffer any of the Portugueze officers to enter their territories; yet they acknowleged the ſovereignty of the crown of Portugal, and paid regularly what they ſaid was the fifth of the gold they obtained; which, in the year 1691, amounted to one thouſand marks, or eight thouſand ounces; which ſhews, that at that time they drew annually from the rivers and mountains in their poſſeſſion, forty thouſand ounces of gold: they took care, however, every time they paid the tribute, to declare, they did it freely, and of their own accord, out of reſpect to the crown of Portugal, and not from any ſort of fear or ſenſe of obligation. The tyranny of the governors of Brazil, and the oppreſſion of the Spaniſh governors in the adjacent provinces, furniſhed this new ſtate with abundance of members, ſo that at laſt it became a very difficult thing to get admittance amongſt them, and the method in this reſpect was ſingular enough to deſerve notice.

They obliged ſuch as preſented themſelves upon their frontiers, which they never ſuffered any ſtranger to enter, to ſubmit to a very ſtrict examination, that they might know whether they were fit for their community, and to be ſure they were not ſpies, or perſons who intended to betray them: upon the bare ſuſpicion of which, they made no ſcruple of beating their brains out: but if, upon this examination, they judged they might prove uſeful members, they obliged them to bring in two ſlaves for their ſupport; aſſigning them a dwelling and plantation, by which they commenced Pauliſts, and were to continue ſo to the end of their lives; for any attempt to deſert, was puniſhed with death without mercy. They made no exception of country or complection; a ſavage was as welcome to them as an European; and every man after his admiſſion, was at liberty to lead what kind of life he liked beſt, provided he did not diſturb the peace of the ſociety. The Jeſuits of Paraguay, either as they pretended out of concern for the ſouls of the people, or rather moved by the report of their great riches, made ſeveral attempts to get amongſt them, but to no ſort of purpoſe; yet they lived upon very fair terms with this ſtrange ſociety; and the Portugueze ſhrewdly ſuſpected, that the reverend fathers furniſhed them with fire-arms and ammunition, becauſe they knew not how they could be furniſhed any other way. See the article PARAGUAY.

How this little republic was ſubverted, we do not ſatisfactorily learn; but it is certain, that all this country is now in the hands of the Portugueze, and as much under the obedience of the king of Portugal, as any other part of Brazil; but the city of St Paul is ſtill looked upon as the center of the mines, and a garriſon is maintained there for their ſecurity. Nor are we well informed, in what manner the gold is wrought or refined there; but, in all probability, their chief works are lavadero's, ſince we do not hear of their uſing quickſilver, as the Spaniards do: but it is very certain, that they are much increaſed in value, ſince the king of Portugal's fifth amounts very commonly to about 300,000 l. per annum: and it appears by the lateſt account, that theſe mines in particular are continually improving.

DEL REY is the only captainſhip to the ſouthward of that of St Vincent, extending from the latitude of 28 to 34 degrees 30 minutes ſouth, being about four hundred miles in length, but not above one hundred broad in any part of it. The country is fruitful and pleaſant, but the Portugueze abſolutely neglected it, 'till the diſcovery of the mines of St Vincent put them upon planting and ſecuring it, by erecting ſeveral forts on the north ſide the river La Plata, to which the Spaniards formerly pretended, and upon which they are ſtill ſuppoſed to caſt a jealous eye.

The country in this province is as pleaſant and fruitful as any in Brazil, and as capable of improvement; but as it has not been ſo long inhabited as the other captainſhips, it is far from being thoroughly peopled. There are only a few villages upon the ſea-coaſt, and ſome fortreſſes upon the river of Plate. The chief advantage which the Portugueze draw at preſent from this province, is a kind of ſmuggling trade, which they carry on with the Spaniards whom they furniſh with rum and tobacco of their own growth, and with wines, brandy, cloths, ſilks, and linens from Europe; which occaſion quarrels and diſputes between the two nations, though in reality the true ground of their contentions is the thirſt of gold in both parties, and the deſire that each has of becoming idle poſſeſſors of the large ridge of mountains, which are the weſtern boundaries of this province and that of St Vincent, and are ſuppoſed to be full of mines.

Some ſpeculative politicians have inſinuated, that it is not impoſſible, that the Spaniards may, ſome time or other, carry their point; but if they do, they muſt begin with the Paraguay Indians who are at preſent ſubject only to the Jeſuits; for

for otherwiſe it is very certain, that they cannot raiſe men enough to give the Portugueze any uneaſineſs, who, though they have not people to ſpare for ſettling this laſt diſtrict in Brazil, have, however, ſuch numbers in the adjacent captainſhip of St Vincent, as would very ſoon repel any invaſion from their neighbours, who, after all, it is very certain, are on this ſide rather weaker than themſelves. So that ſtruggles of this nature, if ever this ſhould happen, may be reputed at a great diſtance; and, if the Portugueze were as free from any apprehenſion of inteſtine diſorders, it might be affirmed, that ſcarce any colony is more ſecure than that of Brazil. But this may one day give ſome other power an occaſion of ſupplanting the Portugueze, if they eſpecially are weak enough to forfeit the good-will of Great-Britain towards them.

The ſmall country of Portugal, which had hitherto made ſo inconſiderable a figure among the kingdoms of Europe, began to take the lead of them all; and, from creeping along the coaſts of Africa with a few little veſſels, her fleets began to ſtretch to the Eaſt-Indies, [ſee the article PORTUGUEZE EAST-INDIA TRADE] and to embrace that trade, which was the object of Alexander's ambition. The Eaſt-Indies by the rout of the Cape of Good Hope, was their proper diſcovery; and, though Columbus had a little the ſtart of them, yet the finding and ſettling of Brazil, plainly proves that America could not have lain long hid from their reſearches.

The fruit of theſe great diſcoveries and conqueſts, was a prodigious trade, immenſe riches, and an amazing naval power, all deduced from a right turn in the government, which eſtabliſhed it's power in the extention of that of it's ſubjects, without exerting a tyrannical authority over them. This created fleets, armies, and a dominion ſuperior to any thing the Europeans had enjoyed, from the deſtruction of the Roman empire. Theſe are the effects of well choſen colonies! But as a true and laudable ambition raiſed the Portugueze to ſuch a height, a falſe and baſtard ambition made way for their ruin. Sebaſtian king of Portugal was a hero, he had all the virtues incident to that character, but they took a wrong turn: he embarked the whole force of Portugal in a war upon the continent for his own glory, and to ſerve no national purpoſe whatſoever; there he periſhed, and all his army with him; which, in itſelf, was a great misfortune to his ſubjects, but in it's conſequences a much greater; for this threw them under the dominion of Spain, which was the greateſt miſchief that could befal them; for after this, there appeared no public ſpirit in the government; all their conqueſts in the Eaſt-Indies were either given to men who had an intereſt at the court of Spain, or to ſuch as that court deſired to get out of their way.

There was no longer any ſpirit of virtue, generoſity, or concern for public good, either left or encouraged; the enriching of private families took place of this, and while a few of theſe carried their point, the Dutch ſtripped them of their empire in the Eaſt-Indies, and bid fair for making themſelves maſters of Brazil; which, if they had, Portugal had remained a province of Spain, and not a very conſiderable province neither.

When the Portugueze recovered their former government, they recovered ſpirit enough to preſerve Brazil; but ſince that time, the court has been infected with the Spaniſh policy; and the deſire of extending their royal power has, in a great meaſure, extinguiſhed that ſpirit which once made them a great people. But, to confine our reflections to Brazil, the great point in the Portugueze councils at preſent is to ſecure this trade, or at leaſt the profits of it, to the crown; in order to which, the ſeveral fleets deſtined for Parayba, Fernambuco, the Bay of All Saints, and Rio Janeiro, ſail as regularly as the Spaniſh galleons, and in the very ſame manner. If this trade had been left more open, the number of ſhips would have been vaſtly greater, and there would have been no need of men of war to eſcort them, or of another ſquadron being ſent to look out for, and bring them home, as is at preſent the caſe every year, and yet the Algerines frequently pick up ſome.

Yet all this policy is far from producing mighty things, as we ſhall ſee from a few examples: Brazil-wood is now a royal commodity, that is to ſay, it is ſold for the advantage of the crown only [ſee BRAZIL-WOOD]; and it produces about 200,000 cruſadoes, which is ſomething better than 30,000l. ſterling annually: we have already ſeen what the diamond-farm brings in: and take the whole of the king's fifth from the gold-mines, and it will never be found to exceed a million of our money.

There was, indeed, a project of quite another kind ſet on foot, for the improvement, as they call it, of this trade in Portugal, of which we ſhall give a very ſhort account. In the year 1709, the king of Portugal, perceiving that the vaſt quantities of gold that came from Brazil did but juſt touch at Liſbon, and then travelled over all the countries of Europe, directed this matter to be very ſeriouſly examined in his council: ſuppoſing, that if a method could be found out to prevent this gold from ſtraying, the buſineſs would be done, and himſelf become, at once, the richeſt prince in Europe. His council accordingly examined this point very carefully, and they reported that the Engliſh and Dutch ran away with all the gold, in conſequence of their furniſhing the goods and manufactures, which ſhould be prohibited in that colony; and that the people ſhould be content with what could be ſent them from Portugal. This was conſidered as a great ſtroke of policy, and was on the very point of being put in execution, when it was prevented by the famous lord Galway, as we have before noticed under the article PORTUGAL.

Further OBSERVATIONS on the nature of this TRADE.

'There is not a place in the world, ſays an ingenious French author, in a voyage to the Brazils in the year 1717, China only excepted, where there is ſo much trouble to get on ſhore, or to know how to act when one is on ſhore, as in Brazil. We came into this bay on the 16th of November, and, when we were within a league of the city of St Salvador, we were reſtrained from proceeding any further, by a gun fired from a little fort, upon which we came to an anchor, and ſent our ſupercargo aſhore in our boat; he was a very ſenſible man, and withal had a great deal of gravity, a quality of all others the moſt neceſſary for one who has any buſineſs to tranſact with the Portugueze. As ſoon as he came aſhore, he was conducted to an audience of the viceroy, who received him with a great deal of ſtate, and yet ſhewed him, at the ſame time, as much civility as he could expect. He told his excellency, That he came on behalf of three French ſhips homeward-bound from the Eaſt-Indies, that were in many reſpects greatly diſtreſſed, and had no hopes of performing their voyage, but from his affording them protection and relief.

The viceroy continued for ſome minutes ſilent, and then gave him his anſwer to this effect: That he was very ſorry for their misfortune, becauſe his maſter's orders were very preciſe againſt admitting any foreign veſſels into any port; and that he was the more concerned to hear that they were French, becauſe it was chiefly on their account that theſe orders were given, becauſe ſeveral veſſels of their nation, that had been admitted into the ports of that country upon the very ſame pretences, had carried on an illegal trade directly contrary to the king's orders, and had ſhipped great quantities of tobacco. He told him further, That the king's orders were to ſeize and confiſcate, without diſtinction, whatever foreign veſſels entered that port, unleſs it plainly appeared they were in ſuch a condition as not to be able to keep the ſea; that therefore they were to have 24 hours given them to conſider whether they would come and anchor under the guns of the fort, in order to be examined, or to put to ſea without receiving any relief at all. He added, That if the caſe was ſuch as our agent repreſented it, he might very freely enter the port, and, upon examination, all the care ſhould be taken to aſſiſt and ſupply him that he could deſire; but that he would do well to remember that the Portugueze were not to be impoſed upon.

As our ſhip was really in ſuch a condition that we had no reaſon to fear any examination, we made ſail immediately on the return of our ſupercargo, and came to an anchor under the fort. The next day the judge came on board, attended by ſeveral ſecretaries, and other officers, all of them very grave ſober-looking people, who examined every thing with all the nicety and ſtrictneſs of an inquiſition. They called for our journals, queſtioned our pilots, mariners, and even the cabbin-boys, particularly as to this point, Whether we had not formed a deſign of touching at Brazil before we were in ſuch diſtreſs? They all anſwered in the negative; but ſtill we had ſo little hopes, that every one in the ſhip, who had it in his power, made them ſome preſent or other, which they took indeed, but ſcarce gave us thanks. At laſt they took their leave, and ſent ſome carpenters on board, to whom our captain made ſuch an application, that they reported our leaks to be ſo dangerous, that the crew were very much alarmed, and were afraid of ſinking before they got out of the ſhip.

As ſoon as this report was made, we had leave to go on ſhore, which was refuſed us before, and we had alſo leave given us to take lodgings where we thought fit in the city, but with ſtrict caution not to attempt any kind of trade on pain of forfeiting both ſhip and cargo. The officers put on board the veſſel talked the ſame language at firſt; but ſeeing the impreſſion it made, and that our people were very exact in that particular, they were ſo kind as to explain themſelves the third day, telling us that this was all a farce; that the judges themſelves knew it; that they underſtood by our preſents, we were a good ſort of people, and that we ſhould have, every night, boats come off with all ſorts of merchandize, and that they would take care we ſhould run no ſort of riſque, either in buying or ſelling. The boats came accordingly, and though at firſt we were a little ſuſpicious, yet, in one week's time, their language was perfectly underſtood, and trade went on briſkly every evening, as ſoon as it was dark.'

PORTUGUEZE EAST INDIA TRADE.

A Short History thereof.

The Portugueze were once the chief navigators of the world, and the firſt Europeans who viſited the Indian coaſt from the new way by the Cape of Good Hope.—Upon their arrival, on their firſt voyage, at Callicut, on the coaſt of Malabar, they found Zamorin, the king of the country, receiving them kindly, and encouraging his people to trade with them, and offering to enter into a league with the king of Portugal, for ſettling a further commerce to mutual advantage.

They found in all the ports of India abundance of ſhipping, of Arabians and Moors: thoſe called Moors were ſuch as Ethiopians or Egyptians, who dwelt on the weſt border of the Red Sea, and traded by their ſhipping between the ſaid ſea and the coaſt of India, Malabar, Ceylon, Coromandel, Golconda, Bengal, &c. as alſo others, who were mere Arabians, from the gulph of Perſia.

Theſe traders, when the Portugueze firſt came, were as civil to them as Zamorin was before: but, when they came to underſtand that theſe Portugueze were Europeans, that they had found a way about by long ſea, from the coaſt of Spain and Portugal, into their Indies, and, returning the ſame way, they would carry the Indian goods directly thither, and withal ſeeing that they were ſtout ſhips, of prodigious burthen, and would carry a great quantity of goods, and that alſo they had more ſhips (for a ſecond fleet of 13 ſail ſoon arrived), they preſently found that all their trade to Suez, and to the Arabian and Perſian gulphs (the way whereby it had been carried on before) would be ruined: upon which they turned firſt the ſecret, and at laſt, the open and implacable enemies of the Portugueze, and of their whole commerce; and they ſhewed it firſt by provoking Zamorin, the king of Callicut, againſt them, and making him, from their friend, become their utter enemy.—This was in the year 1499.

The next year Alvarez de Cabrale, another Portugueze admiral, coming again with ſix ſhips more, the ſame people oppoſed him alſo, not only by engaging the king againſt them, but by engroſſing all the goods, and foreſtalling the markets: ſo that, notwithſtanding the king's orders, the Portugueze could buy nothing.

But the Portugueze were not, in thoſe days, ſo eaſily maſtered as they have been ſince; for on complaint to the king, and his majeſty declaring that it was not with his knowlege, or by his direction, the admiral, Seignior de Cabrale, fell upon the Moors and Arabs ſhips in the harbour [☞ the Arabians were at that time called Saracens] and ſoon beating their ſailors, they diſpoſed of their cargoes much cheaper and better than they might have had them before. This put the Arabians upon a military revenge: for the Portugueze having taken ſeveral houſes on ſhore in the town, the Arabians attacked them in the night, plundered them, and killed ſeveral of the Portugueze.

Cabrale applied for ſatisfaction to the king, concluding, that as he had diſowned the Arabians before, he would abſolutely renounce them now: but the king appearing partial and cold, and the Portugueze not obtaining the ſatisfaction which they demanded, their admiral attacked 10 other Arabian ſhips in the ſame harbour, killed all the men, and unladed the ſhips into his own: and, when he had ſo done, to convince the king that he had not courted his friendſhip out of fear of his power, he turned his broad-ſides upon the city, and furiouſly battered it for ſeveral hours; and, leaving it in that ſhattered condition, ſailed out of the harbour before their faces, for Cochin, where he was kindly received, and all the trading advantages given him that he could deſire.

The next voyage the Portugueze made was not to Callicut, but directly to Cochin: but the Arabians, &c. not forgetting the affront offered them before, fell upon them with 20 ſtout ſhips in thoſe days; but Vaſco de Gama, another Portugueze admiral, gave them ſo warm a reception, that he intirely overthrew them. From this time the Portugueze grew potent in the Indies, and carried on a prodigious commerce, by means of their forts and ſettlements.

It was towards the latter end of the ſixteenth century that the Engliſh and Dutch began to interfere with the Portugueze in theſe parts; and they very ſoon, by the aſſiſtance of the natives, took from them the moſt conſiderable places they poſſeſſed, and ſome of them they abandoned themſelves. It would take up a great deal of room, and, perhaps, anſwer the purpoſe but indifferently, if we ſhould attempt to give a large hiſtory of the manner in which theſe places were reduced, and therefore we ſhall rather take them in the courſe of their ſituation, by which the reader will clearly perceive how the empire of this nation in the Eaſt was diſſolved.

Shah Abbas, when monarch of Perſia, had an earneſt deſire to rid himſelf of the neighbourhood of the Portugueze; but he wanted a maritime force ſufficient to accompliſh his deſign, and, therefore, he applied himſelf to the Engliſh, who had likewiſe ſuffered much by the pride and avarice of the Portugueze; and, by their aſſiſtance, part of his forces were tranſported into the iſland of Ormuz (whereof the Portugueze were poſſeſſed) which was attacked both by land and ſea, on the 20th of January, 1622. The defendants behaved with great bravery and good conduct, and made a noble reſiſtance; but the Engliſh having deſtroyed their fleet, took the garriſon, which ruined the power of the Portugueze on that ſide.

The rich city of Surat, formerly a place of the greateſt trade in the Indies, ſuffered ſeverely from the Portugueze, who burnt it down to the ground, on purpoſe to favour the commerce of their own city of Diu, which ſtands at the entry of the gulph of Cambaya, and which they had rendered one of the ſtrongeſt and fineſt places in the Eaſt, keeping the monarch of that country in abſolute ſubjection. But, notwithſtanding their policy in this reſpect, and that they ſtill remained maſters of Diu *, yet the Indian princes in the neighbourhood traded freely with all Europeans; and Surat, which they took ſo much pains to deſtroy in 1520, is now in as flouriſhing a condition as ever, and the Portugueze are almoſt the only nation that are not benefited by it's traffic.

* This city of Diu ſtands in the latitude of 21 degrees, 20 minutes, upon an iſland about a league in length, and not a third part of a league in breadth. The country about it abounds with all the neceſſaries of life; and the city itſelf is as well built, and as well fortified, as any in the Indies. At preſent, the Portugueze are about to eſtabliſh as well the trade of this city, as of others in the Indies.

On this coaſt they were poſſeſſed of ſeveral ſtrong places, down to Goa; of theſe, Daman is ſtill in their hands, and is a place of pretty good trade; Bacaim is lately fallen into the hands of the Indians. Bombay they yielded to the Engliſh, on the marriage of queen Catherine with king Charles II. and has continued in our hands ever ſince. From Goa to Cape Comorin they had alſo very conſiderable ſettlements, moſt of which they have been diſpoſſeſſed of by the Dutch, who in the year 1663 becoming maſters of Cranganor, Cochin, and Coulan, ſoon after deprived them of Cananor, which was the firſt place they had ſettled at: and thus was their power greatly reduced on the coaſt of Malabar.

Doubling this famous cape, and proceeding along the coaſt of Coromandel, we meet firſt with the port and fortreſs of Nagapatan, which, when the Portugueze came firſt into the Indies, was no more than a village; but they, conſidering the importance of the place, fortified it with great care, and rendered it in every reſpect very conſiderable. But after the Dutch had deprived them of the iſland of Ceylon, they did not long let them reſt here, but, by the aſſiſtance of an Indian prince, beſieged and became maſters of that place, in 1658. From thence all along the coaſt, quite up to Bengal, the Portugueze have loſt all power; and as for ſettlements, they had none of any great conſequence to loſe, having, in the time of their greateſt power, contented themſelves with a ſmall eſtabliſhment at Meliapour, or St Thomas, reſtraining all the reſt of the coaſt by their ſquadrons, which were continually cruizing in the bay of Bengal.

On the oppoſite ſide of the gulph, the Portugueze had once very great power in the kingdom of Pegu [ſee Pegu], in conſequence of their aſſiſting the monarch of that country againſt the king of Siam, who had invaded his territories, and would very probably have made him his tributary, if a body of Portugueze had not come to his aſſiſtance, by whom he was enabled not only to defend himſelf effectually againſt his enemy, but even to purſue him into his own country.

It is very eaſy to diſcern what mighty advantages might have accrued to the Portugueze from this favourable turn, if they had known how to improve it; but what might have turned ſo much to their benefit, proved, by their own ill management, the cauſe of their ruin, and that in a very ſhort ſpace of time. The king of Pegu, it ſeems, was ſo ſenſible of the ſervice they had done him, in driving the king of Siam out of his country, that, in pure gratitude, he made one Seignior Thomas Pereyra, who commanded the Portugueze in the war, generaliſſimo of all his forces, which preferment made the Portugueze ſo inſolent, that, in a few years, they became intolerable to all ranks and degrees of perſons in Pegu. Both kings grew tired of war, but both were too proud to make advances towards peace; ſo that, for many years, they had ſkirmiſhes with ſmall parties, though not ſet battles; and wherever the Portugueze arms went, they had victory to accompany them.

The king of Pegu, to have his forces nearer the borders of Siam, ſettled his court at Martavan, and kept the Portugueze near him, to be ready upon all occaſions, either to repel or aſſault the Siam forces, as opportunity ſerved; and Thomas Pereyra was the great favourite at court: he had his elephants of ſtate, and a guard of his own countrymen to attend him.—But he loſt his life, and the Portugueze were all cut off, from an act of violence committed by him on the wife of one of the natives.

The kingdom, or, as ſome call it, the empire of Siam, lies next to Pegu, and is a country of vaſt extent, the monarch of which was too powerful for the Portugueze to think of making any great conqueſt in his dominions, and therefore they choſe to live with him upon good terms, for the ſake of the vaſt trade carried on in his dominions, which are extremely

tremely well ſituated for commerce, having on one ſide the kingdoms of Laos, Camboya, and Cochin-China, and on the other the countries bordering on the gulph of Bengal. Beſides, there annually reſorted thither a fleet of merchant-ſhips from China, laden with all the rich goods of that empire. They continued to hold a fair correſpondence with this monarch and his ſubjects, as long as their power ſubſiſted in the Indies; but, by degrees, the Dutch have, in a great meaſure, excluded them from their influence here ſince 1630, when they erected their factory here, and have ſince wrought themſelves ſo effectually into the confidence of this prince, that he has granted them an excluſive privilege of purchaſing all the tin in his dominions, which is a branch of commerce of prodigious importance; yet the Portugueze are not wholly ejected, though their trade is greatly fallen from what it was. There are ſeveral ſmall principalities on the iſthmus, before one comes to the country of Malacca, which were all of them formerly under the power of the Portugueze, as appears by their retaining ſtill a mixture of that language with their own. The chief of theſe principalities are thoſe of Ligor on one ſide, and Quedah on the other; but the people are ſo barbarous and perfidious, that the Europeans carry on ſcarce any trade on their coaſts.

The great peninſula of Malacca, at the time the Portugueze came thither, was ſubject to the king of Johore; but the viceroys of the crown of Portugal attacked, and made themſelves maſters of that city. After it came into their hands, it changed it's conditions entirely; and from being a place of ſmall account, in a ſhort time became famous all over India and Europe, lying almoſt in the centre of trade, brought thither by ſhipping from the rich kingdoms of Japan, China, Formoſa, Luconia, Tonquin, Cochin-China, Cambodia, and Siam, beſides what Johore produced, and Sumatra, Java, Borneo, Macaſſar, Banda, Amboina, and Ternate Iſlands, that abound in valuable commodities.

After Goa and Ormuz, this was by very far the richeſt city in the Indies, and a great market for all the different commodities that theſe countries produced. The whole was encompaſſed with a ſtrong ſtone wall, regularly fortified with baſtions, the place extremely well peopled, and the garriſon numerous, and well ſupplied, becauſe the Portugueze conſidered it as the eaſtern frontier of their dominions.

In 1605, the Dutch [ſee the article DUTCH EAST-INDIA COMPANY], who were then become very potent in the Indies, attacked and deſtroyed the fleet of the Portugueze here, conſiſting of thirty-four ſail, on board of which were three thouſand men; but they were not able to take the place. The next year, the king of Johore inveſted it with an army of ſixty thouſand men, in revenge of what the Portugueze had done againſt him three years before, when they took and deſtroyed his capital; however, he was obliged to raiſe the ſiege with great loſs. But the Dutch well knowing the importance of the place, and the vaſt advantages accruing to the Portugueze from it's ſituation and commerce, the former affording them an opportunity of levying 10 per cent. upon all veſſels paſſing through the Straights, and the latter producing annually a large revenue, they attacked it in the year 1640, ſo vigorouſly, that they became maſters of it, after a ſiege of ſix months. The walls and fortifications they preſerved, and ſome of the churches, and the great hoſpital they have turned into a warehouſe. In the kingdom of Cambodia, or Camboia, the Portugueze have ſtill a conſiderable trade, and they are likewiſe well received in Tonquin.

The troubles in the Low-Countries, which produced a war between the crown of Spain and the republic of the United Provinces, began about 1570, and England interpoſing in favour of the States, their power increaſed to ſuch a degree, that they were not only able to defend themſelves againſt Spain by land, but to give that potent monarchy inexpreſſible trouble by ſea. But this war ſeems to have no relation to Portugal, and we do not hear of their attacking any but the Portugueze ſettlements in the Eaſt-Indies. In order to reſolve this difficulty, we muſt remember that the crown of Portugal was united to that of Spain in 1579, by which means Philip II. became maſter of both the Indies, and conſequently the States of the United Provinces were as much at war with the Portugueze, who were ſubjects to the king of Spain, as with any of the reſt of his ſubjects; and conſequently this gave them a right to attack the Portugueze ſettlements, both in the Eaſt and Weſt-Indies, which they proſecuted with ſuch vigour, that they bid fair for becoming maſters of all that the Portugueze had poſſeſſed in either Indies.

We have ſeen what mighty acquiſitions they have made in the Eaſt; but it is neceſſary to our ſubject to obſerve likewiſe, that their Weſt-India company became in that ſpace of time, ſo powerful, as to make almoſt an entire conqueſt of Brazil. It is very evident from hence, that nothing but the union of the crowns of Spain and Portugal could have afforded the Dutch either a pretence for attacking, or an opportunity of reducing theſe countries, both of which, in a ſingular degree, they from this accident obtained. For as, on the one hand, his Catholic Majeſty had enough to do in defending his hereditary dominions, before this acceſſion of the territories of Portugal; ſo he was tempted to apply the revenues of that crown to the immediate wants of the Spaniſh government, which we may conclude were very great, ſince on his death-bed he owned, that the wars of the Low-Countries had coſt him five hundred and ſixty-four millions of ducats, which is upwards of one hundred and twelve millions of our money; whence it is eaſy to perceive, that he could not ſpare as much as was requiſite for the defence of the Portugueze territories. On the other hand, the Portugueze themſelves, though they had always been diſtinguiſhed for their loyalty to their natural princes, were far enough from ſhewing ſo much zeal in the ſervice of the king of Spain; and it is very natural, when the minds of private men are entirely deſpoiled of public ſpirit, for the affairs of the ſtate to fall into confuſion.

But one would have imagined, that after the ſeparation of Portugal from Spain, which happened in the year 1640, things would have taken another turn; becauſe, with king John IV. the Dutch had no pretence of making war. To give the reader a clear idea of this matter, we muſt remember that the Dutch had taken Brazil from the king of Spain, or rather from the Portugueze, while they were his ſubjects; but afterwards, that nation conſidering this as an injury not to be borne, attempted to drive the Dutch out, notwithſtanding the treaty concluded between the States and the king of Portugal, in 1641; which, to ſay the truth, had been but indifferently obſerved on both ſides*; that is to ſay, the Dutch had encroached upon the Portugueze in the Eaſt-Indies, and they, on the other hand, gave the Dutch little or no reſpite in Brazil, out of which, in ten years time, they drove them entirely.

* At the time the Portugueze delivered themſelves from the Spaniſh yoke, the Dutch were employed in reducing the iſland of Ceylon, and made uſe of abundance of artifices, in order to proſecute the advantages they had gained, notwithſtanding the peace concluded between the States-General and the crown of Portugal in Europe; neither did they deſiſt from their hoſtilities, even after the peace was proclaimed in the Indies, but continued to give the Portugueze almoſt as much trouble as while the war continued. This they did under pretence of being allies to ſuch Indian princes as were at war with the Portugueze; and where this pretence was wanting, they took care, by their emiſſaries, to ſtir up new wars, and, under pretence of reſtoring the Indians to their freedom, contrived things ſo as to engage them in long and bloody wars, which had no other end than to oblige them to change their maſters, with this difference only; that whereas the Portugueze endeavoured to keep large countries, and to oblige the Indian princes to pay homage to the king of Portugal, the Dutch contented themſelves with the ſea coaſts, and forbidding thoſe princes to trade with any other nation; ſo that their ſlavery was equally great, though not always equally apparent, which ever ſide prevailed.

About this time died king John IV. and left his ſon Alphonſo VI. a minor, which advantage the Dutch took to declare war againſt the crown of Portugal, from a perſuaſion that this opportunity of regaining what they had loſt in the Weſt, and proſecuting their conqueſts in the Eaſt-Indies, was not to be loſt; the rather becauſe Portugal was at that time engaged in a dangerous war with Spain, and the Dutch had lately concluded a peace with that crown.

It was in conſequence of this new war, that the Dutch attacked the Portugueze again in the Eaſt-Indies, and even endeavoured to deprive them of Goa; but in this they did not ſucceed: and, on the other hand, the Portugueze found means to traverſe all the attempts that the Dutch made to eſtabliſh a trade in China, as alſo to raiſe ſuch a ſtorm, as deprived them of the iſland of Formoſa, which they had conquered, and which was of prodigious conſequence to them.

But, in the mean time, the great fleets they ſent to the Eaſt-Indies, enabled them not only to extend their conqueſts, but in the year 1661, to defeat the whole naval power of the Portugueze in two general engagements. But while the public ſuffered exceſſively from the conſequences of this fatal war, ſome private merchants in Liſbon and in the Eaſt-Indies, fitted out ſo many privateers, and of ſuch ſtrength, that the Dutch ſuffered exceſſively in their trade; and therefore both nations began to be weary of the war, and inclined to a negociation.

The crown of Great-Britain interpoſed it's mediation, in conſequence of the marriage between king Charles II. and the Infanta of Portugal, by which peace was brought about in the year 1661, and thereby the Portugueze were left in poſſeſſion of Brazil, and the Dutch accepted a ſum of money as a ſatisfaction for their pretenſions.

In the Eaſt-Indies things were to remain as they then ſtood, and both parties were to keep what, at the concluſion of this peace, ſhould be in their reſpective poſſeſſions; but the Dutch kept this no better than they did the former treaty; on the contrary, in 1663, they attacked all the places which the Portugueze held on the coaſts of Malabar, particularly Cochin, which they had no ſooner taken, than they deſtroyed all the wild, or baſtard cinnamon, which, after the loſs of Ceylon, had proved an advantageous branch of commerce to the Portugueze. There were high complaints made of this

in Europe to the States-General, who were either deceived by the plauſible accounts given them by their Eaſt-India company, or pretended to be deceived, that they might, with a better grace, protract the negociation relating to this affair, 'till their ſubjects in the Eaſt-Indies had ſo fortified the places they had taken, as to put it entirely out of the power of the Portugueze to attempt the recovery of them. *

* The Dutch, though their Eaſt-India company gained ſufficiently by theſe practices, ſuffered very ſeverely, as a ſtate, from the jealouſies they excited in their neighbours. The Engliſh had ſome experience of a like diſpoſition towards them; and though the French had not, at that time, any grounds of complaint in the Indies, yet they were far enough from being pleaſed with the growth of the Dutch naval power; and therefore readily joined in a war to humble them, as they phraſed it, which was that of 1672; and how far the cauſes of that war were connected with the conduct of the Dutch in the Indies, may appear from a fact charged upon them by Mr Tavernier, who, in his Travels, relates, that the Dutch factory of Gambron in Perſia, publicly burnt the picture of king Charles II. in a fire partly made of cinnamon, which was ſuch an indignity as that prince never forgot, and which gave a very bad impreſſion of the Dutch to the Perſians, who laboured all they could to hinder it.

Theſe proceedings gave the finiſhing blow to the ruin almoſt of the Portugueze, who have never ſince been able to undertake any thing of conſequence in the Eaſt-Indies; but, on the contrary, have exhauſted much of their remaining ſtrength in defending themſelves againſt their Indian neighbours, who, encouraged by the progreſs of the Dutch, and excited thereto by ſome of their agents, have been ſince endeavouring to tear from them the ſmall remains of their poſſeſſions in India, and have often kept Goa itſelf blocked up for many months together.

We have already pointed out many of the cauſes of the declenſion of that mighty power, which, in ſo ſhort a ſpace of time, the crown of Portugal acquired in the Eaſt; but as this is, perhaps, the moſt uſeful part of the preſent article, it may not be amiſs to add a few farther obſervations on this ſubject.

One great cauſe of their ruin was, the circumſtances of their government at home; where, for many years together, they were engaged in a long, expenſive, and dangerous war againſt the crown of Spain, in defence of their independency, which at once employed their whole force, and exhauſted their whole revenue. It is true, indeed, that this was rather the misfortune, than the fault of the Portugueze, ſince it was what they could not avoid; but it was, nevertheleſs, the great cauſe of their loſſes in the Indies.

We may add to this, their ſending over men of too great quality, as viceroys to Goa, with a view rather to better their fortunes than the public ſervice; which is the reaſon that, of late years, we hear nothing more of the Gamas, the Albuquerques, the Pereyras, or the Galvanos; but are forced to ſearch for the names of their viceroys in the private regiſters of the palace, inſtead of the public records of hiſtory: beſides, as theſe men have been, generally ſpeaking, too poor to mind any thing ſo much as mending their own eſtates; ſo they have been too well allied to be called to any account, on their return, for their mal-adminiſtration.

When their affairs began firſt to decline in this part of the world, it was a common thing for a governor of Moſambique, which was eſteemed the firſt viceroyſhip, and with all the other governors in the power of the viceroy, to become immenſely rich. Now, as it is impoſſible that ſuch exorbitant ſums ſhould be made any other way, than by oppreſſing the Indians, and taking large ſums from the merchants, we may eaſily perceive, that all theſe private fortunes were made at the expence of the public intereſt.

The bad examples of the governors, had a bad effect on all the ſubordinate officers; ſo that pride, vanity, luxury, and a pompous diſplay of wealth, attained by illicit means, took place of that diſintereſted public ſpirit, which enabled their anceſtors to lay the foundation of ſo large an empire, with an inconſiderable part of that power, which was in the poſſeſſion of thoſe who loſt it.

The clergy too followed the example of the laity, and inſtead of promoting, as at the beginning, the converſion of the natives to the Chriſtian faith, from the pretended view of ſaving their ſouls, they now proſecuted that work from the motive of making them ſubſervient to their own purpoſes, and enabling them to acquire vaſt riches, FOR THEIR KINGDOM IS OF THIS WORLD. This corruption proceeded ſo far by degrees, that not only many of the Jeſuits at Goa, engaged in trade, contrary to the rules of their order and their duty as miſſionaries, but even deſcended ſo low, as to diſguiſe themſelves in the habits of faquirs, or Mohammedan monks, that they might have an opportunity of viſiting the diamond mines, and purchaſing ſtones there of extraordinary value *.

* We owe this circumſtance to the Hiſtory of Holland, by M. de la Neuville, who tells us, that the Dutch being extremely piqued at the trouble the Jeſuits gave them at China, diſcovered this practice to the governor of the diamond mines at Viſapour, who caught two of the fathers diſguiſed like faquirs, with ſtones about them to the value of twenty-five thouſand pounds, which he took from them, and after whipping them publicly, for profaning the habit of thoſe holy men, took ſuch meaſures as prevented their carrying on that trade in this ſhape ever after.

But what moſt of all contributed to corrupt the inhabitants of the Portugueze ſettlements, was the little care taken to prevent their leaving all things to the care of their negroes and other ſlaves, and their intermarrying with the people of the country; practices ever fatal to all European eſtabliſhments, becauſe it not only effeminates the minds of ſuch as fall into this way of living, but alſo makes them loſe all regard for their country, and inclines them to take ſuch meaſures, as are moſt likely to preſerve them in the enjoyment of ſuch ſervile pleaſures.

The Portugueze at Goa have been, for more than a century paſt, ſo much addicted to this ſenſual kind of life, that provided they might enjoy their magnificent houſes in the city, and their country palaces in it's neighbourhood, they gave themſelves no pain about what happened elſewhere, or how great progreſs the Dutch made in ſubduing their diſtant ſettlements. The natural conſequence of this was, that when ſuch ſettlements were loſt, thoſe who were driven from their habitations, inſtead of repairing to Goa, and taking arms in the king's ſervice, for the recovery of any part of his dominions, went into the territories of ſome Indian prince, and there, for a pitiful ſubſiſtence, entered into his pay, or accepted of ſome low office in his court; ſo that while the fleets and armies of Portugal grew thin and contemptible, for want of ſoldiers and ſeamen, there were many thouſands of that nation ſcattered all over the Indies, diſgracing their country, by the manner in which they got their bread; when, by a proper behaviour, they might have reſtored the affairs of their prince, as well as their own fortunes.

One may ſafely affirm, that all theſe miſchiefs were, at the bottom, owing to the want of a right adminiſtration in Portugal; where, if a council for the Indies had been ſettled [ſee INDIA-HOUSE OF SPAIN], compoſed of men of real abilities, and competent experience in commercial concerns, who had been intruſted with the ſole power of beſtowing places in that country, and had been charged to look carefully into the conduct of ſuch as were employed by them, might, before things had gone too far, have reſtored diſcipline in their colonies, and recalled ſuch, as from diſcontent or diffidence in their former governors, had taken refuge in other places.

But their attention to other things, and more eſpecially to their ſettlements in Brazil, which have, indeed, accidentally compenſated, in ſome meaſure, their loſſes on this ſide, hindered them from thinking of their affairs in the eaſt, 'till they became almoſt paſt recovery.

In this diſtreſſed and dejected ſtate they lie at preſent, which, however, muſt not excuſe us from giving the reader a view of them, even in this condition, becauſe the Portugueze are ſtill conſidered as having ſome intereſt in the Indies, though it be in a manner nothing in compariſon of what it was; they are, however, at preſent, taking meaſures to revive and eſtabliſh their trading intereſt again in this part of the world, and that, as we have before ſeen, by the means of BRITISH MERCHANTS, BRITISH SAILORS, and BRITISH MONEY.

The dominions at preſent ſubject to the Portugueze viceroy of the Indies are very eaſily deſcribed. The city of GOA, of which we have ſpoken before, is ſtill the capital, the ſeat of the viceroy, the archbiſhop, and the inquiſition, which are heavy burthens on ſo exhauſted an eſtabliſhment. In the neighbourhood of this city they preſerve the iſlands of Salſette, Bardes, Augedive, and ſome others of no great conſequence, farther than that they ſupply the city of Goa plentifully with proviſions, which is hard to ſay whether it be an advantage to that place or not: for as rice comes in great quantities, and very cheap, to Goa, it encourages the citizens to keep a vaſt number of ſervants, eſpecially negroes, who are content with one diſh of this food at noon, and another at night. If theſe were kept for any kind of labour or manufactures, there would be no great objection to it; but almoſt every houſe-keeper has ſix, ſome of them 12, ſome 30 or 40, that have no other buſineſs than carrying their maſter's palanquin and umbrella; ſo that, in reality, they are not kept ſo much for ſervice as for ſtate: and thus they rather exhauſt, than increaſe, the riches of the inhabitants.

DIU, which formerly belonged to the kingdom of Guzarat, is the ſtrongeſt place they have, and is, indeed, very well ſituated for commerce. It has a very good port, and, while the Portugueze had any fleets of conſequence, they were generally laid up here; and at this city the Moors, and other traders in thoſe ſeas, were obliged to take out their paſſports, before they proceeded any farther to the Eaſt. At preſent, almoſt all the trade which was carried on here is removed to Surat, and what little ſtill remains at Diu, in the hands of the Portugueze, is carried on under Gentile colours; that is to ſay, the Portugueze think themſelves ſafer under them

than

than under the flag of Portugal, formerly ſo much reſpected in the Indies.

The port of DAMAN, on the gulph of Cambaya, is yet in tolerable good condition, though nothing in compariſon of what it was, the old town being in a manner deſerted, and the new not near ſo well peopled as might be expected from it's extent.

There are, however, ſtill ſome manufactures carried on here, particularly in ſilk, with which they furniſh the market of Goa, and thereby enable the merchants ſettled to carry on what ſmall commerce they have left. CHAOUL ſtands behind the mountains, on the ſame coaſt, and has a very ſafe and good port.

Theſe are all the places that they have on the Malabar coaſt; and in other parts of the Indies they have few factories, and no eſtabliſhments at all, except it be in the iſlands of Innor and Solor, not far from the Moluccas, which they poſſeſs jointly with the Dutch. Once in two or three years they ſend a ſhip from Goa to theſe iſlands, the chief commodities of which are ſandal-wood, much eſteemed in China, very good wax, and a ſort of medicine called ſolor-ſtones, which are very little, if at all, inferior to the beſt bezoar. On the coaſt of China they have the iſland and port of Macao, from whence they carry on a conſiderable trade to China and the Philippines.

All that remains under the Portugueze dominion, from the Cape of Good Hope in Africa, to the city of Macao in China, is governed by a viceroy, with the title of captain-general, who reſides at Goa, as the metropolis of India. There are ſix, and ſometimes eight, deſembargadores, or judges, that attend the government as a ſovereign court, or council, who wear gowns down to their heels, over a caſſock of the ſame length, the gown with wide ſleeves down half way their arms: they wear golillas, and huge perukes of the French faſhion. The chief court theſe gownmen ſit in is called Relacon, which adminiſters juſtice in civil and criminal caſes, having power over all miniſters, and tries all appeals brought from all parts of their dominions. The viceroy ſits as chief of this court, under a canopy; the gownmen ſit on benches placed on the plain floor. The council de Facada is like the court of Exchequer, where one of the gownmen ſit as the viceroy's deputy. Thus the pomp and ſplendor of this government is ſtill kept up, though the extent of it is much leſſened, and the power and credit of it in a manner decayed.

There are ſtill as many governments as ever, that is, in title; for otherwiſe they are of no great conſequence; and thoſe on whom they are beſtowed have the characters of generals. There is, for inſtance, a general of the gulph of Ormuz, who has four ſhips under his command; a general of the notth, who directs the ſmall towns on the coaſt of Malabar; a general of Salſette, who has a territory of about fifteen miles; a general of China, who is, properly ſpeaking, governor of Macao, and an abſolute vaſſal to the Chineſe. There is another general in the iſlands of Timor and Solor, to whom even the Portugueze there ſcarce pay any obedience, and who lives in a miſerable fort, the guns of which are in no condition for ſervice. There is likewiſe a general of Goa, whoſe buſineſs is to take care of the channels between the iſlands, and to reſtrain ſmugglers *.

* There is a very wide difference between theſe titular preferments and the governments formerly in the gift of the viceroy of Goa, which were five; the firſt was that of Moſambique, which is ſtill in their hands, and the only one of the old government that is ſo; the ſecond was that of Maſcat, on the Arabian coaſt, which was of very great importance, and brought in a large revenue; the third was that of Ormuz, on the coaſt of Perſia; the captain-general of the iſland of Ceylon was the fourth, and the governor of the important fortreſs of Malacca was the fifth. Upon each of theſe general governments there depended many others of leſs conſequence, and of which theſe generals had the abſolute diſpoſal; but thoſe who held them, were continued in them for no longer than three years. And it was for this reaſon they were guilty of ſo much extortion, looking upon their governments as leaſes for ſo many years, in which they were to make their fortunes.

But the beſt of all the governments that ſtill belong to the Indies, is that of Moſambique [ſee PORTUGUEZE AFRICAN TRADE], which is an iſland ſituated near the coaſt of Africa, in the latitude of 15° ſouth, within half a league of the continent. They have a ſtrong fort there, with four good baſtions, which commands the channel, and in which there are ſeventy pieces of braſs cannon; and here there is always kept a good garriſon, and in tolerable order. The governor is honoured with the title of general of the river of Senna, where he has his lieutenant, which employment was worth to him ſeveral hundred thouſand crowns a year. There are but a few houſes about the fort, the inhabitants keeping their effects on the neighbouring continent: but notwithſtanding the narrowneſs of the place, there are monaſteries of Jeſuits, Dominicans of St John de Dios, beſides the chief church and that of the Miſericordia. The merchandize brought to this place by the ſhips of the company, are bought at a ſet price by the royal factory, which afterwards ſends them to Chelimani; the mouth of the river of Senna running three hundred miles along the coaſt, in galliots and ſmall veſſels, becauſe of the flats from Chelimani; the goods are ſent up the river againſt the ſtream, in almandies or little boats, which are ten days going up and about five coming down. It is very difficult going up, for thoſe who are not well acquainted with the ſhallows and windings of the river. The Caſres, or Blacks, reſort to this port from provinces and kingdoms three or four months journey diſtant, to buy or take up goods upon truſt for ſo much gold, which they never fail to bring punctually the next year, unleſs death prevents them. This trade yields above cent. per cent. ſo that the Portugueze may be ſaid to have another India in Africa.

SENNA is a little town on the right-hand of the river, inhabited by fifty Portugueze families, who make it populous enough, by the great number of blacks they keep. Theſe till the ground, and dig in the mines, and by that means maintain their maſters inſtead of being kept by them.

About fifteen days journey from hence lies Sofala, where the Portugueze have likewiſe an eſtabliſhment, ſubject, however, to the general of Mozambique, and here a prodigious trade is driven on, of which the Portugueze are, or might be, maſters. It conſiſts chiefly in gold, of which there are greater quantities here than in any other country in the world, ſince the annual produce of this market is computed, by the beſt judges, at forty-ſix thouſand ounces. There are vaſt quantities of Spaniſh and Canary wines, oil, ſilks, linens, cottons, coral, and other European goods ſold here, which are carried by the inhabitants of the little kingdom of Sofala, through all the great empire of Monomotapa, which the Portugueze ſtile the empire of gold, from the prodigious quantities of that precious metal which is brought to them from thence. There are likewiſe, ſome other very rich commodities brought hither by the negroes, ſuch as the moſt excellent ebony in the world, great quantities of ivory, abundance of fine mats, which are much eſteemed in the Indies, and a great number of ſlaves; ſo that Goa, and all the reſt of the Portugueze ſettlements, are furniſhed from hence. One may juſtly wonder, that, conſidering the value of this ſettlement, and it's convenient ſituation, the Dutch had not made themſelves maſters of it long ago, as well as of all the other places belonging to the crown of Portugal on this coaſt.

In the year 1605, they attempted Mozambique with very little ſucceſs, which, however, did not diſcourage them; as it muſt be allowed, that where there is a proſpect of gain, the Dutch are not eaſily diſcouraged: and, therefore, in 1607, they attacked it a ſecond time with greater force, but with the ſame ill-luck as before, except that they made themſelves maſters of a rich Portugueze fleet, which, in ſome meaſure, paid the expence of the expedition. This rich trade, notwithſtanding, is much fallen off by the Arabs making themſelves maſters of Monbaza, and other places which gives them an opportunity of ſupplying the Africans with European goods, which they purchaſe in different parts of the Indies.

As for the ſhare which the Portugueze ſtill retain, the gold obtained thereby is ſent to Goa and to Diu, where it is coined into ſmall pieces, called St Thomas's, which are not worth above half a crown of our money; and it is obſerved, that this coin is of a worſe touch, that is, of a baſer allay than any other in the Indies [ſee the article EAST-INDIA TRADE in general] which is another ſign of a declining trade; for the Saracens, which were formerly coined at Ormuz, when in the Portugueze hands, were eſteemed the beſt gold in the Indies; but they are now become extremely ſcarce, and the St Thomas's are coined in leſs quantities every year.

Theſe poſſeſſions are ſaid to produce ſo little to the king of Portugal, that it has been more than once debated in the council of that prince, whether it would not be for the intereſt of the crown to abandon them all together withdrawing their artillery and effects; and we are likewiſe told, that it is not any political, but purely a religious motive, that has hindered this meaſure from being taken, the prieſts having ſuggeſted that, in ſuch caſe a multitude of ſouls would be loſt to the Church. We ſhall the leſs wonder at this, if we conſider, that ſuch as are beſt acquainted with the laſt India trade aſſure us, that a ſingle merchant and a ſingle ſhip of a reaſonable burden, may carry on as great a commerce, as what at preſent ſubſiſts between Liſbon and Goa. This matter, however, deſerves ſome explanation. There are yet a great many ſhips employed from Goa, Diu, and Daman, to the coaſts of Perſia, Pegu, Manilla, and China, but they are moſtly on the account of Indian merchants, there being ſcarce a Portugueze trader at Goa able to furniſh a cargo of the value of 10,000 crowns; and it is very much doubted, whether in the whole of their trade, they employ above two hundred thouſand crowns; ſo that it is not at all ſtrange, that one year with another, there are not above two ſhips ſent directly from Goa to Liſbon, and thoſe not a fourth part ſo rich as when they annually ſent twenty.

Yet

Yet there has been a late regulation made at Goa, for the preſervation and promotion of trade, which thoſe who underſtand that ſubject beſt, agree compleated it's ruin. This is an excluſive company, which has the ſole right to the commerce of Mozambique and Macao, which company has taken upon itſelf the payment of the royal officers, who are alſo two thirds concerned therein: this has given ſuch a blow to the natural commerce of Goa, that the beſt part of the Indian merchants that were left, are now retired from thence. To ſay the truth, it was the great ſhare the viceroys, governors, and other officers, always took in commerce, without contributing any thing thereto, except protecting the merchants from the violence committed by themſelves on ſuch as did not admit them to a ſhare in their trade, that firſt deſtroyed the extenſive commerce they enjoyed. And, upon this ſubject, the wits of the Indies have framed a very pretty allegory: they ſay, that when the Portugueze came firſt there, they had a ſword in one hand, and a crucifix in the other; but that they might fill their pockets the faſter, they quickly diſpenſed with the firſt, and ſoon after laid down the laſt, by which they have loſt all. But though their power and their commerce are ſo much declined, their pride is as great as ever, inſomuch, that they refuſe the natives of the country, who are called Canarians, the privilege of wearing ſtockings, though they employ them as phyſicians, lawyers, and merchants, by which many of them are ſo rich, that they keep a dozen or fourteen ſlaves, and are in much better circumſtances than the Portugueze themſelves.

The revenues of the Church have ſuffered very little by this ſurprizing change in the State; there being hardly a monaſtery that does not receive four or five thouſand crowns out of the treaſury, at the ſame time the ſoldiers ſtarve and mutiny for want of pay; which is ſo much the harder upon the government, becauſe the reverend fathers know very well how to take care of themſelves, inſomuch that it is affirmed, the Jeſuits in Goa have a better revenue than the crown of Portugal. It is not eaſy to know what becomes of the money theſe Popiſh churchmen raiſe, but it is very evident, that the wealth they poſſeſs, together with the eſtabliſhment of the inquiſition at Goa, is ſuch a dead weight on the ſettlement, as muſt ſooner or later deſtroy it, unleſs other meaſures are ſoon taken to prevent it.

The wiſeſt of the Portugueze in Europe underſtand this very well, and would be glad to ſee ſome proper remedy applied, not from any prejudice againſt the Church or Churchmen, which is far enough from being the vice of that nation, but out of pure regard to the crown, and to the nation; and one would think, that the Clergy themſelves, inſtead of graſping at more, ought to be willing to part with ſome proportion of what is already in their hands, in order to render the State more able to protect them in the poſſeſſion of the remainder.

Beſides, there is nothing clearer, than that the erecting of religious houſes is directly oppoſite to the very ſcheme of planting, and muſt always ruin the ſettlements where it prevails, and conſequently the religious houſes themſelves, which is certainly an argument that ought to prevail even with Popiſh princes, to lay ſome reſtraint on the miſſionaries that are ſent abroad, unleſs they prefer the reputation of zeal among ſuch as are no competent judges, not only to maxims of policy and good government, but to the principles of true religion. For, if there be any piety in converting Pagans to the Chriſtian faith, it follows, that there is ſtill greater piety in doing this effectually, and in maintaining for ever the eſtabliſhments neceſſary to ſupport them, which reaſon and experience ſhews, the building monaſteries, and maintaining numbers of idle people in them, will not do, but, on the contrary, will bring on in time the deſtruction of thoſe colonies, in which this humour is ſuffered to prevail.

A few years ſince we had advices from this part of the world, that ſeveral Indian princes were driven from before Goa, which they had blocked up with a numerous army, by the powerful ſuccours ſent by the preſent king of Portugal, and by the excellent condition of the late viceroy, who was the count De Laurical, and behaved there with great reputation. Such expeditions, however, are to be conſidered as expedients only, which may for a time preſerve that ſettlement, but can never reſtore it, or bring the affairs of this nation in theſe parts into ſo good order, as to make them worth the attention of a prince, who has the honour of his crown and the good of his people at heart.

But, it ſeems, the Portugueze are, at preſent, determined to take effectual meaſures for the reſtoration of their Eaſt-India commerce, and they intend to commence the ſame at the port of Diu; which has been long ſince obſerved by M. Tavernier to be well ſituated for trade, and as capable of improvement, as any in that part of the world, or more ſo: and, if put under a proper regulation, that is, if made in ſome meaſure a free port, as it is ſaid the Portugueze deſign, it muſt neceſſarily come in for a large ſhare of that commerce now carried on at Surat, and, in all probability, retrieve much of the Arabian and Perſian traffic that has been ſo long loſt to them. And as the Portugueze have ſtill ſome factories at Biſnagar, and other places on that coaſt, it would be no difficult matter to re-eſtabliſh their commerce in the heart of India, at the ſame time that the port of Macao would furniſh them with the means of ſupplying the China market as cheap, or cheaper, than any other European nation, becauſe their colony at Mozambique is ſo ſituated, as to ſerve them for the ſame purpoſes that the Cape of Good Hope does the Dutch, or the iſland of St Helena the Engliſh.

POSTAGE of LETTERS. Soon after the reſtoration of king Charles II. an act of parliament paſſed for erecting a general poſt-office in England; and in the 1ſt year of king William III. an act of parliament paſſed in Scotland, for erecting a poſt-office in that kingdom; but in the ninth of queen Anne, after the Union, an act of parliament paſſed for repealing both thoſe ſtatutes, and for uniting both the ſaid poſt-offices, and for erecting and ſettling one general poſt-office throughout all her Majeſty's dominions; by which it is enacted, That there ſhall be one general poſt-office in London, and one poſt-maſter general, who ſhall have the ſole receiving and diſpatching all letters within this united realm, and without, &c. except letters which concern goods ſent by common carriers, and which ſhall be delivered with the goods, without any profit for receiving or delivering them; and except merchants letters, and thoſe of maſters of ſhips; ſo as ſuch letters be delivered to the perſons to whom they are directed, without receiving any profit for them; and except proviſions, affidavits, writs, &c. and any letters ſent by private friends, in their journey, or by any meſſenger about private affairs or buſineſs.

Proviſo, That carriers do not receive letters which do not concern goods then in carrying, nor drivers of ſtage-coaches, nor maſters of paſſage-boats, nor paſſengers therein, nor watermen or bargemen, though without hire or reward.

The poſt-maſter general, and his deputies, and no other perſon, ſhall provide horſes and furniture for any perſon riding poſt, where any poſt-roads ſhall be ſettled, at the rate of 3 d. per mile for every poſt-horſe, and 4 d. for the guide, and ſhall not charge any thing for carrying a bundle, ſo as it does not exceed eight pounds.

And for letters he ſhall take, viz.

For every ſingle letter not coming from, or directed from on ſhip-board, and to and from any place in England, not diſtant above 80 miles from London, 3d. and for every double letter 6d. and for the packets of writs, deeds, and other things 12d. per ounce: for every ſingle letter above 80 miles from London, 4d. and for a double letter, 8d. and for other things, 1s. 4d. per ounce; for every ſingle letter from London to Edinburgh, or vice verſa, 6d. and a double letter, 12d. and for other parcels, 2s. per ounce; for any letter from Edinburgh, to any place not exceeding 50 miles in Scotland, 2d. and a double letter, 4d. and for other parcels, 8d. per ounce; and if above 50 miles, 3d. and for a double letter, 6d. and for other parcels, 12d. per ounce; if above 80 miles, then for every ſingle letter 4d. and for a double letter, 8d. and for other parcels, 1s. 4d. per ounce: and for the poſtage of letters and packets directed on board, or brought from any veſſel riding or ſtopping in any port in England, 1d. over and above the ſaid rates; and for the poſtage of all letters and packets paſſing and repaſſing by the penny-poſt, and to be received and delivered within 10 miles diſtant from the General Poſt-Office 1d.

The poſt-maſter may erect croſs-ſtages, and he or his deputy may demand and receive the ſame rates in any ſuch croſs-ſtages, in proportion to the diſtances of places, as letters to and from London are rated.

He may appoint one to meaſure the roads by the wheel, except ſuch roads where the ſtages are already ſettled; and he who makes ſuch ſurveys, ſhall make oath before ſome juſtice, &c. in each kingdom reſpectively, to perform the ſame according to the beſt of his ſkill, and the juſtice, &c. ſhall certify the ſame in writing, to be kept and entered in the General Poſt-Office, without fee.

Proviſo, That merchants accounts, not exceeding one ſheet, and all bills of exchange and invoices, and bills of lading, ſhall be allowed to paſs without rate in the price of letters; and likewiſe the covers of letters, not exceeding one fourth part of a ſheet, ſent by the way of Vienna, Marſeilles, Venice, or Leghorn, to be ſent to or from Turkey.

None other but the poſt-maſter general, or his deputies, ſhall receive, take, or carry letters, either by land or ſea, or provide horſes for riding poſt, or collect any letters, or ſet up any foot-poſt, horſe-poſt, or packet-boat, or any other conveyance for the carrying or delivering of letters, under the penalty of 5 l. for every offence, and alſo 100 l. for every week that the offender ſhall continue the ſaid offence.

If through the default or neglect of the poſt-maſter, any perſon riding poſt ſhall fail of being provided with ſufficient horſes, after demand, the party offending ſhall forfeit 5 l. one moiety to the crown, the other to the proſecutor, to be recovered in any court of record.

Proviſo, That if the mail be carried out of England in any veſſel which is not a free ſhip, and navigated by ſeamen as by the law is required, that then the poſt-maſter-general ſhall forfeit 100 l. one moiety to the crown, the other to him who will ſue, to be recovered by bill, plaint, or information.

All money due for letters not exceeding 5l. ſhall be recovered in the ſame manner, and under the ſame rules, as ſmall tithes, by complaint in writing before two juſtices, who may ſummon the party complained of, and, on default of appearance, determine the cauſe, and give allowance and coſts, not exceeding 10s.

If the party refuſe to pay in 10 days after notice, the conſtables, &c. are to deſtrain, by warrant from the juſtices, and the diſtreſs to be ſold in three days.

All inland letters muſt pay at the ſtage where laſt delivered, unleſs they are directed to any ſhip or veſſel, or to any perſon in the army, or ſent by the penny-poſt, and unleſs letters going out of Great-Britain, which have uſually paid rates in England.

After the 1ſt of June, 1743, the old rates ſhall be taken for letters again.

Perſons opening, detaining, or delaying any letter, after the ſame is delivered into the General Poſt-Office, except by warrant in writing, under the hand of a ſecretary of ſtate, or unleſs the perſon to whom directed refuſes to pay the poſtage, or where the letter ſhall be returned for want of due or true direction: the perſon ſo offending, or embezelling a letter, forfeits 20l. to be recovered in the courts at Weſtminſter, if in England; if in Scotland, in the court of ſeſſion or exchequer, by ſuch perſons who will ſue, with full coſts, and the offender is diſabled, and rendered incapable of any employment in the Poſt-Office.

Poſt-maſter general, and all in any employment relating to the Poſt-Office, muſt take the oath following, before one juſtice of the peace of the county where ſuch perſon reſides.

I A. B. do ſwear, That I will not wittingly, willingly, or knowingly, open, detain, or delay, or cauſe, procure, permit, or ſuffer to be opened, detained, or delayed, any letter or letters, packet or packets, which ſhall come into my hands, power, or cuſtody, by reaſon of my employment in, or relating to, the Poſt-Office, except by conſent of the perſon or perſons to whom the ſame is, or ſhall be directed, or by an expreſs warrant in writing, under the hand of one of the principal ſecretaries of ſtate for that purpoſe; or except in ſuch caſes where the party or parties to whom ſuch letter or letters, packet or packets, ſhall be directed, or who is or are hereby chargeable with the payment of the poſt or poſts thereof, ſhall refuſe or neglect to pay the ſame; and except ſuch packets or letters as ſhall be returned for want of due directions, or when the party or parties to whom the ſame is, or ſhall be directed, cannot be found; and that I will not any way embezzle any ſuch letter or letters, packet or packets as aforeſaid.

It is enacted, by ſtat. 6. Geo. I. cap. 21. That when bills of exchange are ſent wrote on one and the ſame piece of paper with a letter, as alſo ſeveral letters to ſeveral and diſtinct perſons, are ſent wrote on one and the ſame piece of paper, that every ſuch bill, and every ſuch letter, ſhould be rated and paid for as ſo many ſeveral and diſtinct letters, according to the rates 9 Ann. cap. 19.

And whereas by the act 9 Ann. cap. 19. it is provided, That all bills of exchange, invoices, and bills of lading, ſhall be underſtood to be allowed without rate in the price of the letter; and ſome doubts having been made, touching the ſaid proviſo, it is by the ſaid 6th of king Geo. I. cap. 21. declared and enacted, That it was, and is the intent and meaning of the ſaid act, that the ſaid proviſo and allowance ſhall extend only to ſuch merchants accounts, bills of exchange, invoices, and bills of lading, as ſhall be ſent to or from the General Poſt-Office in London to any parts beyond the ſeas not within his Majeſty's dominions; and that all other merchants accounts, bills of exchange, invoices, and bills of lading, ſhall be rated and paid for as ſo many ſeveral letters, according to the rates mentioned in the ſaid act 9 Ann. cap. 19.

By ſtat. 4 Geo. II. it ſhall be lawful for any penny-poſt-man to demand, for every letter originally ſent by the Penny-Poſt, which ſhall be delive ed to, or for any perſon, at any place out of London, Weſtminſter, or Southwark, and their reſpective ſuburbs, one penny beſides the penny paid on putting the letter into the ſaid office; and no penny-poſt-man ſhall incur any penalty for detaining ſuch letter until the payment thereof.

A letter, in which there were bills of exchange, was delivered at the General Poſt-Office in London, to one who was appointed by the poſt-maſter to receive letters, and there it was opened, and the bills taken out; and, in an action brought againſt the Poſt-maſter, three judges, againſt Holt, chief juſtice, held, That it would not lie, becauſe this was an office of intelligence, and not of inſurance, or of conveyance of treaſure; but the chief juſtice held, that the action would lie, becauſe the poſt-maſter hath a reward, which is the reaſon that inn-keepers and carriers are to keep goods ſafely.

By the 26th of Geo. II. every writ is to pay as a diſtinct letter; and letters incloſing ſeveral patterns, not exceeding one ounce weight, to pay only as a double letter.

N. B. The laſt act in relation to poſtage of letters, included in the tobacco-act.

A warrant to take a diſtreſs for money ordered to be paid, by two juſtices, for poſtage.

Eſſex, ſſ. Whereas, on complaint this day exhibited, by A. B. of, &c. unto us, W. B. and J. S. Eſqrs. two of his Majeſty's juſtices of the peace for the county aforeſaid, That L. M. of, &c. has refuſed to pay the ſum of, &c. by him juſtly due for the poſtage of letters, and the ſum of, &c. which we awarded for coſts on his refuſal, as aforeſaid: upon examining into, and determining the cauſe of complaint, according to the direction of the ſtatute in that caſe made: theſe are therefore to require you to levy the ſaid ſeveral ſums of, &c. on the goods of the ſaid L. M. by diſtreſs and ſale, if not redeemed in three days; and, for your ſo doing, this ſhall be your ſufficient warrant, Given, &c.

POT-ASH, are the lixivious aſhes of certain vegetables, uſed in the making of glaſs, ſoap, bleaching, dyeing, &c.

Although pot-aſh is a thing daily uſed, and well known even to the vulgar; yet, as the making of it is a mechanic art, practiſed only by the vulgar, and neglected and overlooked by the learned, ſo we have had no ſatisfactory account of it; and they who underſtand it, generally keep it a ſecret, leſt others ſhould learn ſo beneficial an art. But, as it is a commodity that no nation hardly can well be without, either for making ſoap, glaſs, dyeing, or bleaching, ſo the way of making it, is generally underſtood in moſt countries except our own. For, in France and other countries, where they make wine, they make a kind of pot-aſh, in an eaſy manner, from the lees of their wine. In thoſe, and other more ſouthern climes, they have many kinds of herbs hereafter mentioned, either ſpontaneous, or cultivated on purpoſe, which they as eaſily convert into pot-aſh. In Germany, and other more northern countries, they make great quantities of pot-aſh, by extracting the ſalts of their wood-aſhes, in a manner that is well known. But it is only in Ruſſia, Sweden, and other northern nations, where the art of converting their wood-aſhes into pot-aſh, without the tedious proceſs of elixiviation, is either well known to the learned, or practiſed by the vulgar. By this means moſt nations are ſupplied with this neceſſary commodity of their own, except the Engliſh, who might be ſupplied with any quantities of it, from the great plenty of otherwiſe uſeleſs wood they have in their colonies, if not at home, if they knew how to make it. But it ſeems this art is ſo little underſtood among us, that many attempts have all proved unſucceſsful, merely upon that account, ſo as to be intirely laid aſide. This has put us, for ſome time, upon enquiring into the ways of making this commodity, of which ſeveral have been ſuggeſted, from the ſeveral trials and informations hereafter mentioned.

It is well known, that the aſhes of all kinds of vegetables whatever, afford pot-aſh in ſome meaſure or other; although ſome are much more fit for that purpoſe than others, which may be determined from the experiments of Redi, in the Philoſ. Tranſ. No. 243, p. 281. Boerhaave, Merret, and others; ſo that we need not inſiſt upon them here.

As for the trees and herbs of our colonies in North America, moſt of thoſe that are common in their woods are known to be fit for this purpoſe, as the aſhes of them all, burnt promiſcuouſly in their houſes, make a very ſtrong lye fit for ſoap. Of theſe, the fitteſt for that purpoſe is their hiccory, the moſt common tree in their woods, which makes the pureſt and whiteſt aſhes, of the ſharpeſt taſte, and ſtrongeſt lye, of any wood. Their ſtickweed is ſaid to do the ſame, which is as common a weed. For this reaſon, the aſhes of both theſe plants were uſed by our Indians there, inſtead of ſalt, before they learnt the uſe of common ſalt from the Europeans. The aſhes of tobacco likewiſe, when damnified, or not fit for a market; or it's ſtalks, ſtems, and ſuckers, of which great quantities are thrown away, and rot and periſh, are very fit for pot-aſh, as they contain a great deal of ſalts, and are well known to make a ſtrong lye.

On the other hand, pines, firs, ſaſſafras, liquid amber, or ſweet gum, or all odoriferous woods, and thoſe that abound with a reſin or gum, are unfit for pot-aſh, as their aſhes are well known, even to our planters, to make a very weak lye, unfit for ſoap.

Beſides theſe that contain little or no ſalt, there are ſome other vegetables that afford a large quantity of it, but make a bad kind of pot-aſh, at leaſt for many purpoſes, on account of a neutral ſalt with which they abound. This ſeems to have been the caſe of the pot-aſh made in Africa, in a manufacture of that commodity, ſet up there by the late African company, which Mr Houſton (who was chiefly concerned about it) tells us, in his travels, proved ſo bad, on account of a neutral ſalt it contained, that the manufacture was left off on that account; or, perhaps, from their not knowing how to make it right. What thoſe vegetables are, that afford this kind of aſh, is not well known, if it be not fern, and ſome ſea-plants.

Whatever vegetables we make our pot-aſh of, ſhould be freſh or green, and no ways rotten, dried, or decayed. They ſhould

ſhould likewiſe be burnt to aſhes by a ſlow fire, or in a cloſe place; otherwiſe, when they are burnt in the open air, by a ſtrong fire, great quantity of the aſhes is conſumed in ſmoke, by the ſaline and terreſtrial parts being carried up in fumes, before they are ſeparated from theſe exhalable parts, by the action of the fire. For the difference between burning wood in a cloſe place, or the open air, is ſo great, that the quantity of aſhes obtained from one, is more than double the other. This we learn from the experiments of Lundmarck hereafter-mentioned, who tells us, he burnt a quantity of birch in a cloſe ſtove, from which he obtained five pounds of aſhes; whereas, the ſame quantity of the ſame wood, burnt in the open air, yielded only two pounds.

It is for this reaſon, that moſt people who make pot-aſh, burn their wood in kilns, or pits dug in the ground; although the Swedes burn it in the open air, as the author above-mentioned informs us. This firſt ſtep, or the burning the wood to aſhes, ſeems to be taken, by many, for the whole proceſs of making pot-aſh; for they who pretend to have learned this art in Ruſſia, as wells as Lemery, and ſome other authors, hardly give us any other account of it.

But, in order to convert the aſhes, prepared in this or any other manner, to what is called pot-aſh, there are many different ways practiſed in different countries, which make as many different kinds of pot-aſh, that are all to be found in our markets, and have all their reſpective uſes.

1. The firſt of theſe is commonly called pearl-aſhes by our people, who import great quantities of it from Germany. This is no other than the lixivial ſalt of wood-aſhes, extracted by making a ſtrong lye of them, and by evaporating it to dryneſs, in a manner that is well known, and ſufficiently explained by Kenkelius, in his art of making glaſs, Boerhaave, and many others; ſo that we need not inſiſt upon it here: we ſhall take a more fit opportunity to explain it, for the uſe of our people in America.

2. But the art of converting theſe wood-aſhes into pot-aſh, without this tedious proceſs of elixiviation, is only practiſed in Ruſſia, Sweden, and other northern countries, where it has been lately diſcloſed by one Lundmarck, who tells us he had often made it himſelf, in the manner he now deſcribes. This account is contained in an academical diſſertation upon this ſubject at Aboe, in Sweden, and was communicated to Dr Mitchell, by Dr Linneus, profeſſor of botany at Upſal, as a genuine account of this art; which I think has hitherto been generally unknown.

This author tells us, 'They have many large woods of beech in Smoland, and other parts of Sweden, in want of which they take alder: of theſe they are allowed to uſe only the old and decaying trees for this purpoſe, which they cut to pieces, and pile in a heap, to burn them to aſhes upon the ground, by a ſlow fire. They careſully ſeparate theſe aſhes from the dirt or coals in them, which they call raking them; after which they collect them in baſkets of bark, to carry them to a hut built in the woods for this purpoſe. This they continue to do 'till they have a ſufficient quantity of theſe aſhes. Then their whole art follows: for which they chuſe a convenient place, and make a paſte of theſe aſhes with water, by a little at a time, in the ſame manner, and with the ſame inſtruments, as mortar is commonly made of clay or lime. When this is done, they lay a row of green pine or fir logs on the ground, which they plaſter over with this paſte of aſhes: over this they lay another layer of the ſame ſtrait logs of wood, tranſverſely, or a-croſs the others, which they plaſter over with the aſhes in the ſame manner: thus they continue to erect a pile of theſe logs of wood, by layer upon layer, and plaſtering each with their paſte of aſhes, 'till they are all expended, when their pile is often as high as a houſe.

This pile they ſet on fire with dry wood, and burn it as vehemently as they can; increaſing the fire from time to time 'till the aſhes begin to be red hot, and run in the fire. Then they overſet their pile with poles, as quickly as they can; and while the aſhes are ſtill hot and melting, they beat and clap them, with large round flexible ſticks, made on purpoſe, ſo as to incruſt the logs of wood with the aſhes; but which the aſhes concrete into a ſolid maſs as hard as ſtone, provided the operation has been rightly performed.

This operation they call walla, i. e. dreſſing. At laſt they ſcrape off the ſalt thus prepared, with iron inſtruments, and ſell it for pot-aſh; which is of a bluiſh dark colour, not unlike the ſcoriæ of iron, with a pure greeniſh white ſalt appearing here and there in it.'

All the pot-aſh we have from Ruſſia, Sweden, and Dantzick, is exactly like what our author here deſcribes, and ſeems to be made in this manner. It is, however, generally obſerved, that the Ruſſian is the beſt of theſe, on account of the greater quantity of ſalt in it. Now if, in the preceding proceſs, we make our paſte of aſhes with lye, inſtead of water, it is plain the pot-aſh will be impregnated with more ſalt, and make all the difference there is between theſe ſorts of pot-aſh. This then is likely to be the practice in Ruſſia; where their wood may likewiſe be better for this purpoſe, and afford more ſalt. This is well known to be the caſe of different kinds of wood: ſo our author abovementioned tells us, he obtained 2 $\frac{27}{64}$ lb. of ſalt out of eight cubic ells of poplar, which was very ſharp and cauſtic; but the ſame quantity of birch afforded only one pound of ſalt, and that not ſo ſtrong; and fir hardly yielded any at all.

The way of making pot-aſh above deſcribed, may be the more eaſily underſtood by our people in America, for whom this is chiefly intended, as it is the ſame with their way of making lime of ſhells, the only lime they uſe in moſt places. Theſe ſhells they burn to lime between the layers of a pile of wood (inſtead of a kiln) 'till reduced to aſhes, in the ſame manner as is here directed to be done with aſhes, to make pot-aſh. The lime thus made, is reckoned very good; but, as it is impregnated with the aſhes of the wood, and the marine ſalt that is often in the ſhells, it is apt to make the houſes that are built with it very damp in moiſt weather, ſo that the water often runs down their walls in ſtreams; which cannot but be very unwholeſome, in an air that is naturally cloſe and damp: the only way to prevent which, would be to waſh and dry their ſhells frequently, and burn them in dry pine, that afford little or no lixivial ſalt. But to return to our purpoſe:

3. There is another way of making pot-aſh, practiſed chiefly in England, where they make it in the following manner. With their aſhes of fern, or wood of any kind, they make a lye, which they reduce to what they call pot-aſh, by burning it with ſtraw. To do this, they place a tub full of this lye nigh a clean hearth of a chimney, in which they put a handful of looſe ſtraw, ſo as to take up a quantity of lye with it. The ſtraw thus impregnated with lye, they carry as quick as they can to hold it over a blazing fire on their hearth, which conſumes their ſtraw to aſhes, and at the ſame time evaporates the water from the ſalts of the lye. Over the blaze of the firſt parcel of ſtraw, they burn another, dipped in lye in the ſame manner. This they continue to do 'till their lye is all expended. By this means the coals and aſhes of the ſtraw, and ſalts of the lye, are left on the hearth, and concrete together into a hard ſolid cake, of a greyiſh black colour, which they ſcrape off, and ſell for pot-aſh.

This is an eaſy way of making pot-aſh, in want of proper veſſels to extract the ſalt of the lye by evaporation, or in want of wood to reduce aſhes to pot-aſh, in the way above-mentioned, for which it ſeems to be contrived, and for which it is only to be commended. For the pot-aſh made in this manner, is full of the coal of the ſtraw, and it's ſalt is not ſo ſtrong, as our workmen ſay, or ſo ſharp and corroſive as the ſalt of the foreign pot-aſh, that is calcined in an open fire; beſides other differences hereafter mentioned, which makes this pot-aſh unfit for ſome purpoſes, and not above half the value of the foreign.

4. They have a very different way in the north of England of reducing their kelp to pot-aſh, which they uſe for making allum. This is made of the different kinds of fuci, or ſea-weeds, thrown upon the ſhore, or gathered upon the rocks; which they dry a little in the ſun, and afterwards burn in a kiln, built of the ſtones they find on the ſhore, in a cylindrical form, and about two feet or leſs in diameter. In this they firſt burn a ſmall parcel of the herb, and before it is reduced to aſhes they throw on more, 'till the kiln is full, or their materials are expended. This is ſaid to reduce the aſhes to a hard and ſolid cake, by the heat of the kiln, and quantity of ſalt in the herb, which makes what is commonly called kelp-aſhes.

There are ſome other ways of making pot-aſh, ſuggeſted by ſeveral, both authors and others, which appear to be more eaſy and ready than any of the abovementioned; for which reaſon they are apt to be tried, by thoſe who make attempts of this kind. Theſe are deduced from what they reckon the nature and properties of this production: and there is no doubt, but if that was well underſtood, it might afford ſome inſight in the way of making it. For this reaſon we made the following experiments with the beſt Ruſſia pot-aſh, in order to diſcover it's nature and properties, and how they are moſt probably communicated to it; that we might ſee what we are to make, in order to imitate the beſt, or to make what is accounted good pot-aſh.

1. Ruſſia pot-aſh, as it is brought to us, is in large lumps, as hard as a ſtone, and black as a coal, incruſted over with a white ſalt, that appears in ſeparate ſpots here and there in it.

2. It has a ſtrong fœtid ſulphureous ſmell and taſte, as well as a bitter and lixivial taſte, which is rather more pungent than other common lixivial ſalts.

3. A lixivium of it is a dark green colour, with a very fœtid ſulphureous ſmell, and bitter ſulphureous taſte, ſomewhat like gunpowder, as well as ſharp and pungent, like a ſimple lixivium.

4. Although it is as hard as a ſtone, when kept in a cloſe place, or in large quantities together in a hogſhead; yet, when laid in the open air, it turns ſoft, and ſome pieces of it run per deliquium; whilſt moſt other kinds of pot aſh only turn friable, and crumble in the open air.

5. It readily diſſolves in warm water, but leaves a large ſediment of a blackiſh grey colour like aſhes, which is in a fine ſoft powder, without any dirt or coals in it, that are to be obſerved in moſt other kinds of pot aſh.

6. As it is diſſolving in water, there has been ſcummed off from ſome lumps of it, a dark purple bituminous ſubſtance, like

like petroleum or tar, which readily diſſolved in the lixivium.
7. This, or any other true pot-aſh, or a lixivium made thereof, will preſently tinge ſilver of a dark purple colour, difficult to rub off; whilſt a mere lixivial ſalt has no ſuch effect.
8. Pieces of this pot-aſh, boiling in water, make a conſtant exploſion like gunpowder; which was ſo ſtrong, as not only to throw the water to ſome height, but to lift up, and almoſt over-ſet, a ſtone cup in which they were boiled. Theſe exploſions were owing not ſo much to the included air, which ſome perhaps may imagine, as to the ſulphureous parts of the compoſition expanding and flying off: for this boiled lixivium had neither the green colour, nor fœtid ſulphureous ſmell and taſte; at leaſt, in any degree, like what it has, when made of the ſame pot-aſh, by a ſimple infuſion in warm water.
9. We evaporated ſome of the green lixivium, made only by infuſion, and filtered through a double rag: as ſoon as it began to boil, a green powder, to which it's colour is owing, fell to the bottom, and the lye became pale. After it was evaporated to a pellicle, and ſet in a cool place, a ſalt ſeparated from it on the ſides of the cup, in angular cryſtals like tartar. Theſe cryſtals were ſoon formed, and in pretty large quantities, but were difficult to ſeparate from the alkaline lye and ſalt, in which, and the open air, they were apt to diſſolve: but from the pellicle, I obtained ſome pieces of the ſame ſalt that would not diſſolve in the open air.
10. Oil of vitriol makes a ſtrong efferveſcenſe with this green precipitate, with a white fume, and a very ſtrong ſulphureous ſmell. It does the ſame with theſe white cryſtals, although the ſulphureous ſmell is not ſo ſtrong. But with the pure fixed alkali, there was no ſuch ſulphureous ſmell to be diſcerned.
From theſe experiments, we may determine ſomething about the nature and contents of pot-aſh. This we are the better enabled to do, from the accurate experiments and reaſonings of the learned Mr Geoffroy, on a like ſubſtance made of charcoal, and an alkali ſalt calcined together; in which he obſerved all the properties and contents of pot-aſh above-mentioned, particularly related in the Memoirs of the Royal Academy, for the year 1717. This was made of the ſame materials, and had all the properties above-related of our pot-aſh; particularly a green lixivium, a ſtrong ſulphureous ſmell and taſte, a ſulphureous green precipitate, cryſtallized ſalts, and ſulphureous fumes, with oil of vitriol. From hence this learned author concludes, that this ſubſtance contained the active ſulphureous parts of the wood, blended with more active igneous particles. Theſe united with the alkaline ſalts, make a kind of ſoap, or ſulphureous ſaponaceous ſalt, reſembling ſoap of tartar, or hepar ſulphuris. The cryſtallized ſalts he attributes to the acid of the wood mixing with the alkaline ſalts. All theſe parts of the wood then are contained in our pot-aſh; and he obſerved the ſame in the common ſoda, or cineres clavellati, although they are in a leſs degree in that than in the Ruſſian pot-aſh.
Beſides theſe, he ſhews that pot-aſh contains a metallic ſubſtance, which affords the Pruſſian blue [ſee BLUE, PRUSSIAN BLUE]. We may add further, that the combination of theſe principles makes many properties in pot-aſh, more than what reſult from them in a ſtate of ſeparation. The moſt remarkable of theſe ſeems to be it's exploſive quality; which we take to proceed from the cryſtallized ſalts approaching to the nature of nitre, and uniting with the ſulphur and charcoal; by which they form, from all theſe ingredients of gunpowder, a kind of that exploſive ſubſtance, whoſe parts are highly rarefied in an intenſe and confined heat, by which they readily explode in boiling lye.
By this we may perceive, that the difficulty in making pot-aſh a-right is, firſt, to reduce the materials to cinders and aſhes, and at the ſame time to preſerve their volatile, ſulphureous, and exhalable acid parts, that are totally deſtroyed in ſuch a degree of heat; and, ſecondly, to calcine theſe aſhes ſtill further, ſo as to flux their ſalts, and vitrify their terreſtrial parts, and at the ſame time to keep them ſeparate from each other, or prevent their running into an indiſſolvable glaſs. To give pot-aſh ſome of theſe properties, ſeems plainly to require a degree of heat that will totally deprive it of others.
The moſt likely way by which it comes to receive all theſe properties, is from the way of making it in Sweden above deſcribed. In that proceſs, the green fir in which the aſhes are burnt, impregnates them with the acid ſaline parts of the wood or tar, which is well known to be in pretty large quantities, and is abſorbed and fixed by the alkaline ſalts, and porous terreſtrial parts of the aſhes in this proceſs; ſo that, beſides the fixed alkaline ſalts of the aſhes, the pot-aſh thus made, muſt likewiſe contain the more volatile ſalts of the pine, which are exhaled in ſmoke, by burning the pine alone in the open air. Beſides theſe, it likewiſe contains the reſinous parts, and ſulphureous fumes of the pine, that are hindered from exhaling by the heap of the maſs.
At the ſame time the alkaline ſalts are fluxed in the open fire, and in a manner vitrified with the terreſtrial parts of the aſhes, which gives them their hard and ſolid conſiſtence; whilſt the ſulphureous and acid parts of the green wood hinder them from turning to a perfect glaſs, or inert calx. All theſe parts united together in the fire, make that ſaponaceous ſubſtance we find in the pot-aſh thus made, which further hinders the vitrification of the maſs, and endows it with many of it's moſt peculiar and active properties.
From hence we may ſee how difficult it is to make a ſubſtance, endowed with all theſe properties, in any other manner. This is the reaſon why we could never before make pot-aſh equal to that of Ruſſia, and the other northern countries, although we have much greater plenty of materials, and perhaps better: for this way of making it has never before been thought of by the learned, or practiſed any where elſe.
Somewhat of the ſame qualities are communicated to the Engliſh pot-aſh, by the way of making it above deſcribed; but in a degree as much inferior, as dry ſtraw, uſed for that purpoſe, is to green wood: accordingly our workmen find that pot-aſh is much inferior to the foreign, for many purpoſes.
From this account of the contents and qualities of pot-aſh, and the way of making it, we may form ſome judgment of the other ways of making it, propoſed by authors, and ſuggeſted by many. Thus Lemery and others tell us, pot-aſh is made in Ruſſia, and all the northern countries, only by calcining the aſhes in pits bricked within, and ſprinkling them well with lye, 'till they become hard and ſolid. But ſuch a calcination of aſhes with a lixivial ſalt, muſt render them whiter inſtead of black, and muſt further deſtroy the active ſulphureous parts of the wood, which we find in pot-aſh rightly made. So that this only leaves the aſhes in the ſtate they were at firſt, or turns them into a kind of indiſſolvable glaſs, as we have found upon trial.
This, and the like miſtakes, about the way of making pot-aſh, ſeem to proceed from a general error concerning the nature of it; for it is commonly ſuppoſed to be only a kind of inert calx, impregnated with nothing but a lixivial ſalt. Some ſuch miſtakes ſeem to have fruſtrated all the attempts hitherto made of making pot-aſh in America; for, upon trial, what they have made there, was found to be no better than common aſhes.
But the moſt general miſtake about the way of making pot-aſh, ſeems to proceed from the accounts we have of making it, from glaſs-wort, and ſome marine plants, which are ſaid to be eaſily converted to this kind of ſubſtance, in the manner above-mentioned. But we apprehend, the way of making it from wood muſt be very different: for theſe herbs are eaſily reduced to aſhes by a ſmall fire, that does not intirely conſume their ſulphureous parts, which wood is not. Theſe aſhes abound with a great quantity of alkaline and ſome neutral ſalts, that readily convert them to a hard and ſolid conſiſtence, which wood does not. They have likewiſe few or no terreſtrial parts, to run them into an indiſſolvable glaſs, when fluxed in the fire, as happens in wood aſhes. Beſides, theſe herbs have few or no ſulphureous or acid parts, like moſt woods; and the pot-aſh made of them has few of theſe principles in it, like what is made of wood.
It is, however, generally ſaid, if we burn our wood in a cloſe place, as a kiln in which we burn lime, or make charcoal, or a pit dug in the ground, we may impregnate the aſhes with the ſulphureous fumes and acid parts of the wood, only by the cloſeneſs of the place, or by ſmothering the fire in it. If at the ſame time, we impregnate them with a greater quantity of lixivial ſalt, it will flux the whole maſs, and make it run into a ſolid hard conſiſtence like pot-aſh. This is commonly directed to be done, by throwing freſh or green wood or herbs upon the others, as they are burning, before they are quite reduced to aſhes; or by ſmothering the fire, as in making charcoal; and at the ſame time to ſprinkle the aſhes, thus burnt with a ſtrong lye, from time to time, in the manner commonly practiſed with glaſs-wort.
This would be a more ready way of making pot-aſh than any of the above-mentioned; but as thoſe who give their advice about it, have neither tried it, nor ſeen it done; and thoſe who have tried this or any other way, find more difficulty in it, than at firſt imagined, we ſhall ſuſpend our judgment about it, 'till we ſee it fairly tried, leſt we ſhould deter ſome from making uſeful experiments of it, or lead others into fruitleſs and expenſive attempts.
By the various ways of making pot-aſh above-mentioned, and the different materials it is made of, there appear to be many different kinds of it, that have as different qualities. It would lead us too far beyond our preſent deſign, to give a particular account of each of theſe; but as they are uſed in many of our manufactures, it ſeems worthy of enquiry, to know what ſorts are generally uſed, and what are the fitteſt to be uſed in them.
The workmen in England make two general kinds of it, which they diſtinguiſh by the names of pearl-aſh and pot-aſh. The firſt is a mere lixivial ſalt, which is ſuppoſed to be the only ingredient of any efficacy in pot-aſh; but, upon trial, there is found to be a great difference between them, eſpecially in making ſoap. The ſalt is ſo weak in the pearl-aſh, that it does not entirely diſſolve and unite with the fat. The reaſon ſeems to be, that theſe ſalts are diſſolved in water, in order

order to extract them; by which they loſe many of their cauſtic igneous parts; whereas in pot-aſh the ſalts are calcined, and fluxed in an open fire, with the ignited terreſtrial parts of the aſhes, which makes them more ſharp and corroſive: they are likewiſe incorporated with the coal and fuliginous parts of the vegetables they are made of, or with the reſinous parts of fir, which gives them the ſulphureous quality above-mentioned, and makes a kind of ſoap of tartar, or hepar ſulphuris, in all pot-aſh; which makes theſe ſalts ſo ready to diſſolve, and incorporate with oil, or other pinguious ſubſtances.

This is, perhaps, the reaſon why the Cineres Ruſſici are ordered for this purpoſe, inſtead of a mere lixivial ſalt, by the College of Phyſicians, in their late Diſpenſatory. The ſoap made of them muſt be impregnated with their heating ſulphureous quality, which will make it more aperient and detergent, but not ſo mild and ſoft as ſome others; by which it may be more fit for obſtinate and indurated obſtructions, but will be more offenſive to the ſtomach; which is much complained of by ſome people, who take large quantities of the ſharper kinds of ſoap.

But, to conſider pot-aſh as a commodity in trade and manufactures, which is it's chief uſe; it appears that the people in England not only have it at a dear rate, but the worſt ſorts of it, at leaſt for moſt purpoſes; which cannot but have a proportional influence on their manufactures: for it is generally of as great, and ſome ſorts of a greater value in their markets, than a pure lixivial ſalt; notwithſtanding the ſmall quantity of ſuch ſalt in aſhes, and the trouble and expence of extracting it; which ſeems to be occaſioned by their not knowing how to convert aſhes into this commodity; for in Sweden, where the art is known, Lundmarck tells us, pot-aſh is ſold for little more than a farthing a pound, which coſt our workmen nigh ſixpence.

But this is not the only inconvenience we labour under for want of this commodity; the ſorts we are chiefly ſupplied with, are perhaps the worſt of any, and unfit for many purpoſes for which pot-aſh is uſed. The only pot-aſh almoſt to be met with here, comes from Ruſſia, Sweden, and Dantzick, or is made in England. Theſe are all made either of wood or fern-aſhes, whoſe ſalts are never ſo pure and white at the beſt, as ſome others: but, by the way of making them and the experiments on them above-mentioned, they appear to be impregnated with coal, ſmoak, and ſoot, which renders them ſtill more foul and impure, makes them of a black, brown, or green colour, and of a peculiar ſulphureous quality. On this account they are entirely unfit for making white glaſs: they make a very coarſe and ſtrong kind of ſoap; they are too foul, ſharp, and corroſive for bleaching, and are as unfit for dyeing, at leaſt many colours.

It is, perhaps, for this reaſon, that the workmen here make all their white glaſs with ſaltpetre; which muſt not only be more coſtly, but Neri, Merret, and others, tell us it is not ſo good, at leaſt for the better ſort of glaſs, as a ſharper lixivial ſalt. See GLASS. It is ſaid they uſe the volatile alkali of urine; but the French pot aſh, made of the lees of wine, is generally allowed to be the beſt for that purpoſe. So likewiſe the Alicant pot-aſh is reckoned much the beſt for bleaching, and making of ſoap; as the Syrian and Egyptian is for making of glaſs.

Theſe purer kinds of pot-aſh are all made of herbs, that grow only in the more ſouthern climates, whoſe ſalts are finer and whiter, and leſs acrid and corroſive than the ſalts of wood, or moſt other vegetables; and by the way of extracting them by calcination in a more open fire, they are more free of coal, ſmoke, and ſoot, or any other heterogenous mixture. On this account they are much better for the purpoſes above-mentioned, than the coarſe and foul kinds of pot-aſh that our people are ſupplied with.

All we have of theſe kinds of pot-aſh, it ſeems, comes only from Spain; for which reaſon our people were obliged to petition, to allow the importation of pot-aſh from thence, during the late war; as appears by an order of the king and council, of the 24th of June, 1742, ſince they could not do without it in many manufactures: ſo that it may be worth our enquiry, to know what it is that produces ſo neceſſary a commodity.

This kind of pot-aſh is commonly called barrilha, from an herb of the ſame name in Spain that produces it. The firſt account we have of this barrilha, is from Amatus Luſitanus, who leaves us much in the dark about it. It is generally ſaid in England, to be a plant pretty well known to the Botaniſts, by the name of Ficoides Neapolitana, flore candido. Hort. Ludg. Bat. but for what reaſon I cannot ſay. We have as little reaſon to believe with John Bauhine, that it is what he calls Kali vulgare; for Monſieur de Juſſieu has ſhewn us, that the true barrilha is a different plant from any of theſe, from his own obſervations of it in Spain, where it is cultivated; of which he has given us a particular account of them, anno 1717, p. 93.

The pot-aſh made of this plant, he tells us, makes the beſt ſoap, the fineſt glaſs, and is the beſt for bleaching of any other; for which reaſon it is much ſought after in all countries, where they value themſelves for theſe manufactures. See BLEACHING. But I queſtion very much, whether our workmen have it either pure and genuine, or in ſufficient quantities for theſe purpoſes. All the uſe I find made of it among them, is to make hard ſoap; although they ſay what they have of it ſpoils their ſoft ſoap, by making it curdle. This is well known to be the effects of ſea-ſalt; and Monſieur de Juſſieu and others tell us, that the true barrilha is often adulterated with ſea-weeds, which contain ſuch a marine ſalt: ſo that it is probably only this adulterated ſort that they have. Accordingly, all the barrilha we have found here, was of a dark brown colour, and very foul and ponderous; whereas, the true ſort is ſaid, by all who know it, to be more porous, pure, and of a blueiſh colour. It is for this reaſon, in all probability, that notwithſtanding all the barrilha our workmen have at ſo dear a rate from Spain, yet they have not been able, 'till very lately, to make ſo good ſoap as what comes from thence, and ſome other places; which is now done as I am informed, by captain Marchant, at his ſoap manufacture near Stepney.

The only way then, by which we are likely to have this commodity, either pure and genuine, or in ſufficient quantities at a reaſonable rate, is from the herb itſelf that produces it. Whether or not it would grow in England, is not known; as I believe it has never been tried: but there is no doubt but it would grow very well in our colonies in America, as I am certainly informed it does in the Spaniſh colonies there, where they have great plenty of it; and a ſort that is indigenous, particularly in Peru, which might probably be found in our colonies, if ſought for by thoſe who knew it. But wherever it will grow in any of the Engliſh dominions, there is no doubt but it would be a conſiderable improvement, where pot-aſh of all kinds is ſo valuable a commodity, and ſo much wanted; for it grows on the ſame ground with corn of any kind, which it does no harm to, as it is a ſmall annual herb, that does not ſpread 'till the corn is ripe, or off of the ground.

There are ſome other plants that are known to make a kind of pot-aſh, commonly called rochetta, which is ſaid to be even preferable to the barrilha, eſpecially for making glaſs. Theſe are the firſt and ſecond kinds of kali, deſcribed by Proſper Alpinus, in his account of the plants of Egypt. The firſt of which is the above-mentioned ficoides that grows in Italy, and all over the Levant, but the other is peculiar to Egypt. Theſe would be fit improvements for our colonies in America, where we ſeem to want nothing more than ſome proper productions for the vaſt tracts of land we are poſſeſſed of there. But theſe plants alone afford a commodity, which Proſper Alpinus, and Rauwolfius tell us they ſaw many large ſhips yearly loaded with in Egypt, and which gives the excellency to the glaſs and ſoap that are made at Venice.

It would be worth while then, at leaſt to make a trial of a production, that is likely to improve both our trade abroad and our manufactures at home.

REMARKS on Pot-aſh ſince the laſt war, and the DEFINITIVE TREATY OF PEACE, 1763.

In our remarks on the article NORWAY, we have ſhewn the national emolument that would accrue from ſupplying ourſelves, from North America, with every ſpecies of TIMBER our colonies will admit of, as well for every ſort of houſe-building, as that of ſhipping, that we may ſtand in need of. It was too long before the legiſlature could be prevailed on, to admit of the importation of ſow and pig iron from America, and but very lately bar; we were ſo wiſe as to give the preference to foreign iron, as we do ſtill for Norway timber, than give our own people in our plantations due encouragement to attempt thoſe articles. Herein daily experience evinces our egregious impolicy. It has been the ſame by pitch and tar, and continues to be ſo, with regard to other NAVAL STORES, to the great loſs of the nation, all which might have been long ſince prevented.

In regard to the article of pot-aſh, which we have two long alſo taken from Ruſſia, as well as HEMP and IRON, we may amply furniſh ourſelves with this ingredient in the manufacture of SOAP; for as theſe colonies abound with timber of a great variety of qualities, and all proper meaſures are taken for the felling of timber, and ſaw mills erected for the cutting the ſame into boards for every kind of uſe, the very ſaw duſt, and the underwood, and topping will furniſh plenty of material for making pot-aſh, if ſkilful people are employed, who are maſters of the proceſs, to inſtruct our people in the beſt manner of making it; and, when our nation is highly loaded with public debts and taxes, it is neceſſary to make every national ſaving, the better to enable us to leſſen our weighty incumbrances. We can now have no excuſe for neglecting the production of every poſſible material in North America, ſince we have no body to oppoſe us, except the Savages, who will ſoon be reduced. See INDIAN AFFAIRS.

POTTERY, the art of making earthen pots, and other veſſels, or the manufacture of earthen ware.

The perfection of this art conſiſts chiefly in the choice of proper earth, and the right management thereof, ſo as to afford the moſt beautiful matter for veſſels.

REMARKS.

The delicacy of this art ſhould ſeem to depend, rather upon the peculiar preparation of certain kinds of earth, than upon the uſe of them as they are produced by nature: thus we find, that the Dreſden and the Chelſea porcelain exceed the ware of China, although it is allowed, that no part of the world produces earths ſo good for the purpoſe, as that of the eaſtern nations; and yet we do not find that any of the oriental earths are imported into Europe for the works of Dreſden, &c.—If this be the caſe, and Europe affords no earths that will naturally produce wares ſo beautiful as thoſe of the Eaſt; the Europeans who excel herein, muſt do that by art, which the Chineſe do chiefly by virtue of the natural excellency of ſome particular earths.

The end of this art is to produce a matter that will not vitrify and turn into glaſs by fire, and yet will be as beautiful and tranſparent, by proper management, almoſt as glaſs itſelf. Now nature affords divers materials, that ſeem to admit of theſe properties; as oyſter and cockle ſhells, and various other the ſhells of fiſh; which bid fair to anſwer this intent, by due calcination and purification, and by compoſition with other ſuitable materials. Pebbles, bones, pipe-clay, ſpars, and talc, and divers other foſſils, may, in ſome ſhapes be advantageouſly applied to ſeveral kinds of pottery wares: but the due preparation hereof, depends upon the philoſophical application of the active and paſſive principles of nature. By the active principles of nature, in this reſpect, we not only underſtand fire, air, and water, but ſome peculiar kind of foſſil productions; which will eaſily work a great change upon certain bodies, but the ſucceſs of ſuch things depends upon a ſeries of experiments, made with judgment, upon bodies that ſeem proper ſubjects, for the intention, with regard as well to the active, as to the paſſive natures.

For the improvement of the art of pottery many good hints may, perhaps, be derived from what we have ſaid, under the articles PORCELAIN, EARTH, CLAYS, BOLES, and FOSSILS in general; for many of thoſe things, judiciouſly prepared, will afford earthen wares, perhaps, little inferior to thoſe of China; and why we may not, one day, fall upon ſome compoſitions that will produce a porcelain, as cheap and as good as the Indian in general, we ſee no reaſon to deſpair of.

And if we can once obtain the fit materials for the purpoſe, our potters are already ſo expert in the art of moulding, and management of the fire, that there will be no obſtruction on that account to the improvement of the art of pottery in this kingdom to it's laſt perfection.

The art of glazing and painting on fine earthen ware.

Potters who paint with colours on earthen ware, may be ranged in the ſame claſs with painters upon glaſs, ſince they uſe almoſt the ſame materials, and, in many reſpects, the ſame method.

To prepare a white glazing.

Take of lead two pounds, tin one pound, calcine them to aſhes, and melt them together. Of this take two parts, calcined flint or pebble one part, ſalt one part; mix them well together, and melt them in a cake.

The Rotterdam fine ſhining white.

Take of clean tin aſhes two pounds, lead aſhes ten pounds, fine Venice glaſs two pounds, tartar half a pound, and melt them to a cake. Or,

Lead aſhes eight pounds, tin aſhes three pounds, fine clear calcined flint or pebble ſix pounds, ſalt four pounds, melt them into a cake. Or,

Calcine eight pounds of lead and four pounds of tin into aſhes; of theſe take one quart, ſalt and pebble of each one pound, and melt them into a cake.

Another fine white for earthen ware.

Calcine ſix pounds of lead, and three pounds of tin to aſhes; whereof take two parts, ſalt three parts, pebble or flint three parts, and melt them into a cake.

Another white.

Take eight pounds of lead, and four pounds of tin aſhes, among which mix ſix pounds of Venice glaſs and a handful of rock ſalt; melt them into a cake.

A Saltzburg white.

Take three parts of lead, ſix parts of tin; or ſix parts of lead, and three parts of tin, ſalt three parts, tartar one part, and pebble five parts, &c. Or,

Take five pounds of lead, one pound of tin, three pounds of flint, three pounds of ſalt, &c. Or,

Take ſix pounds of lead, one pound of tin; melt and burn them to aſhes, whereof take twelve ſpoonfuls, twelve of flint, and twelve of fine wood aſhes.

To lay a ground upon earthen ware, on which the white glaſs will better ſpread.

Take calcined tartar one pint, flint and ſalt of each one pint; mix them together, and uſe them for a layer or ground over your earthen wares, before you glaze them.

The right Dutch maſtirat for white porcelain.

Take calcined pebble, flint or ſand, 100 pounds, ſoda 40 pounds, wood aſhes 30 pounds. This mixture is by the Dutch called maſtirat; of this take 100 pounds, tin and lead aſhes together 80 pounds, common ſalt 10 pounds, and melt them three times in a cake.

The tin and lead aſhes are made of 100 pounds of lead, and 30 pounds of tin.

The common ware is thus glazed.

Take 40 pounds of clear ſand, 75 pounds of litharge or lead aſhes, 26 pounds of pot-aſhes, and ten pounds of ſalt; melt them three times into a cake, quenching it each time in clear cold water. Or,

Take clean ſand 50 pounds, lead aſhes 70 pounds, wood aſhes 30 pounds, ſalt 12 pounds; melt them to a cake.

With this mixture they glaze fine and coarſe ware and ſet it in an earthen glazing pan, which is round; the ware is ſet on them upon three cornered bars, that go through the like holes in the pan, and the ware is kept aſunder from touching one another.

The opening before, is only left in the figure to ſee how the wares ſtand, otherwiſe the pan muſt be entirely cloſed up.

Of ſeveral colours for potter's glazed-work.

A fine yellow.

Take red lead three pints, antimony and tin of each two pounds; melt into a cake; grind it fine, and melt it again. Repeat this ſeveral times, and you will have a good yellow. Or,

Take 15 parts of lead ore, three parts of litharge of ſilver, and 15 parts of ſand. Or,

Take eight parts of litharge, nine parts of calcined flint, one part antimony, and a little iron filings; calcine and melt them to a cake.

Fine citron yellow.

Take ſix parts of red lead, ſeven parts of fine red brick duſt, two parts of antimony; melt them to a cake.

A green colour.

Take eight parts of litharge, eight parts of Venice glaſs, four parts of braſs-duſt; melt them for uſe. Or,

Take ten parts of litharge, twelve parts of flint, or pebble, one part of æs uſtum, or copper-aſhes.

Blue colour.

Take lead-aſhes one pound; clear ſand, or pebble, ſalt two pounds; white calcined tartar, one pound; Venice, or other glaſs, 16 pounds; zaffer half a pound: mix them well together, and melt them; quench them in water, and melt them again; repeat this ſeveral times: but, if you will have it fine and good, it will be proper to put the mixture in a glaſs-houſe furnace for a day or two. Or,

Take litharge four pounds; clear ſand two pounds; zaffer one pound; calcine and melt it together.

Take 12 pounds of lead, one pound of tin, and one pound of zaffer, five pounds of ſand, and three pounds of ſalt, tartar and glaſs one pound; calcine and melt it into a cake. Or,

Take two pounds of litharge, a quarter of a pound of ſand, one pound of zaffer, and one pound of ſalt; melt them. Or,

One part of tartar, one part of lead-aſhes, one part of zaffer, one part of ſand, and two parts of ſalt; melt it as before.

A brown colour.

Take of common glaſs and manganeſe, or brown ſtone, of each one part, lead-glaſs twelve parts.

A fleſh colour.

Take twelve parts of lead-aſhes, and one of white glaſs.

Purple brown.

Take lead-aſhes 15 parts, clear ſand 18 parts, manganeſe one part, white glaſs 15 meaſures, and one meaſure of zaffer.

Iron grey.

Take 15 parts of lead-aſhes, 14 parts of white ſand, five parts of copper-aſhes, one of manganeſe, one of zaffer, and one of iron filings.

A black.

Take lead-aſhes 18 meaſures, iron-filings three, cooper-aſhes three, zaffer two meaſures; this, when melted, will-make a brown black; but if you would have it blacker, put ſome more zaffer to it.

Brown on white.

Manganeſe two parts, red-lead and white glaſs one part; melt them well together.

A fine red.

Take antimony two pounds, litharge three pounds, ruſt of iron calcined one pound; grind it to a fine powder.

To glaze with Venice glaſs.

When your ware is well dried, and ready to bake, ſtrike it all over with white-wine lees; then lay on the Venice glaſs (ground fine, and mixed with ſalt of tartar and litharge) and bake it as directed.

A green.

Take copper-duſt two parts, yellow glaſs two parts; melt them twice. Or,
Two parts of copper-filings, one of lead-aſhes, and one of white glaſs; melt them to a cake.

Yellow.

Menning three parts, brick-duſt two parts, lead-aſhes two parts, antimony two parts, ſand one part, of the above white glaſs one part, well calcined and melted. Or,
Red-lead four ounces, antimony two ounces; melt them to a cake.

Gold yellow.

Take of antimony, red-lead, and ſand, an equal quantity, and melt it to a cake.

A fine blue glaſs to paint with.

Take lead-aſhes one pound, clear ſand two pounds, ſalt two pounds, white calcined tartar one pound, flint-glaſs half a pound, zaffer half a pound; melt them together, and quench them in water; then melt them again, and repeat this ſeveral times.
Zaffer finely ground by itſelf makes good blue, to paint white glazed earthen ware.

A liver colour.

Take twelve parts of litharge, eight of ſalt, ſix of pebble, or flint, and one of manganeſe.

A ſea-green.

Take five pounds of lead-aſhes, one pound of tin-aſhes, three pounds of flint, three quarters of a pound of ſalt, half a pound of tartar, and half a pound of copper duſt.

To lay gold, ſilver, or copper, on earthen ware, ſo as to reſemble either of theſe metals.

Make an utenſil of fine potter's earth, form and ſhape it thin' neat, and ſilver-faſhion; then bake it, and, when baked' glaze it: but before you bake it again, if you will ſilver, gild, or copper it, take a regulus of antimony, melt your metal with it, and beat it to a powder, grind it with water very fine, and glaze it therewith; then bake it, and, when done, the whole utenſil will look like ſilver; for, when it comes into the fire, the antimony evaporates, and leaves the ſilver, &c. behind. But if you will ſilver or gild it only for ornament-ſake, and keep it from any wet, then you may lay on the gold or ſilver leaves with brandy, and afterwards poliſh and finiſh it in the beſt manner, after the common method.

REMARK.

In regard to the glazing of the earthen or porcelain ware, on the inſides, we would, by all means, recommend to the workmen the leaving out of lead and it's litharge, acids diſſolving them, and their nature being inſalubrious and ſometimes poiſonous: and this we conceive, may be eaſily done, by proper experiments.

PRINTING, the art of taking impreſſions with ink, from certain types, or characters, upon paper, parchment, vellum, or the like matter.

It's ORIGIN and PROGRESS, eſpecially in EUROPE.

1. At Haerlem I obtained, ſays the judicious Mr Ellis, the ſight of the firſt book printed by Coſterus: it was not Donatus, as the Inſcriptiones Hollandicæ ſay; nor Virgil, nor Tully's Offices, as others have acquainted the world; but a Dutch piece of Theology, printed on one ſide only of the paper; and after this is a ſingle page of Latin, intitled, Liber Vitæ Alexandri Magni, which made ſome believe it to be Q. Curtius, but it is a monkiſh Latin of that time. This and the theology were printed in the year 1430; whereas the Inſcriptions, and ſome other authors, have told us, from Coſterus's picture, that printing was by him invented but anno 1440; but a picture of Coſterus before another Dutch piece (bound up in the ſame volume, and printed 1432) bears the date of 1430; under which picture is the inſcription mentioned by Mr Ray (only the date is ten years ſooner) and the tetraſtich which is tranſcribed by the author of the Inſcriptions, from an effigies of Coſterus, which was then extant in a garden at Haerlem, but is not now to be found.
2. What Mr Ellis ſays about the books printed at Haerlem by Laur. Coſter, agreeing ſo well with the account given by Theodore Schrevelius and others, leaves us little or no room to doubt (who muſt needs take it for granted, that his obſervation is accurate, and the dates to be true) whether the honour of the invention be due to this or the other cities, whoſe writers have ſo eagerly contended for it, ſince none of them have pretended to ſhew any book printed ſo ſoon as A. D. 1430, or 1432, or near that time. But the difficulty lies either in ſhewing why the practice of this art ſhould be at a ſtand from A. D. 1432, to the noted reviving of it at Mentz, by John Fuſt and Peter Schoeffer, who, as it has been vulgarly, but erroneouſly ſaid, did print the firſt printed book there, A. D. 1465, namely, Tully's Offices; or elſe, in giving any tolerable account of the progreſs of this invention during an interval of above 30 years.
Boxhornius (as I remember) as well as Schrevelius, and other authors, do expreſsly ſay (and, if they had not, it might well be imagined) that Coſter could not advance this invention ſo far as to print ſo large a work as the Speculum Salutis, without gradual improvements, and that his firſt eſſays were on looſe and ſmall leaves of paper, before he attempted whole books; theſe being looſe and ſingle, are ſuppoſed to be all loſt; but I once obſerved a looſe leaf of paper in octavo, lying in an old MS. breviary in her Majeſty's royal library at St James's which I then thought (and am ſtill of the ſame opinion) that it was one of Coſter's firſt pieces, done when he had attained to ſome experience in the art, and to get money. It is a little rude wooden cut, of the five wounds of our bleſſed Saviour, and the inſtruments of his paſſion, with a Latin inſcription at the bottom, to this purport, That thoſe who ſhould ſay ſo many Ave Maria's before it, ſhould have ſo many thouſand years of pardon. In this cut, or print, the ink which made it was writing-ink, and it was all black, without thoſe other colours with which Coſter ſeems afterwards to have adorned his books.
In the abovementioned Boxhornius's book de Origine Artis Typographicæ, it is ſaid, That Hadrianus Junius had a book printed by Coſter, and like that kept in the cheſt at Haerlem: now amongſt thoſe bequeathed to the Bodleian library at Oxford, by Mr Francis Junius (who was a kinſman of Hadrianus's) there is a thin book in ſmall folio (numbered 31) which may probably be the ſame, and which Mr Foſs, a learned and curious Daniſh gentleman, did aſſure me was very like to that of Haerlem. This contains the ſum of the hiſtory of the Old Teſtament, all repreſented in rude wooden cuts, coloured with divers colours without ſhadows, like to our cards (which, with ſheet-ballads, are remains of the old manner of printing) and ſtamped upon one ſide only; the white ſide of two leaves being paſted together, the black both in the pictures and inſcriptions, which ſhew the meaning of them, being writing-ink * (as the aforeſaid leaf) inartificially ſpread upon the wooden block, here thick, there thin, ſpreading and yellowiſh; the letters extremely rude, and altogether manifeſtly ſhewing that art was yet in it's infancy. The ſtamping of this book on one ſide only, was not (as ſome think) becauſe the printer did not know how to diſpoſe the pages in ſuch manner as might be proper and eaſy for the bookbinder's uſe, for it has it's ſignatures all along, in minuſcule letters (ſet in the middle of the page, which is remarkable) but becauſe it was thought that the paper would not bear a ſecond impreſſion on the backſide; juſt as the book-writers of thoſe times (when paper began to be cheap, and to be made up into books) would yet have the firſt and laſt leaf of each quarternio, ſenio, &c. to be of parchment,

* It is to be wiſhed that Mr Ellis, when he had Coſter's books in his hands, had obſerved whether the black ink was printing ink or not; whether Coſter's picture was ancient, and coloured or not; or if there were more in either of the books: whether the whole was cut upon wood, or compoſed with printing letters; whether there were ſignatures for the bookbinders, &c.

for

for ſtrength ſake. This book (as I remember) is imperfect, and has no date now appearing, and perhaps never had any; neither has ſuch another book as this, which contains the hiſtory of St John, and the Apocalypſe, in ſuch like wooden coloured pictures and inſcriptions: this is inſcribed LAUDE 65, in the ſame Bodleian library, and has it's ſignatures alſo in majuſcule letters (as indeed I have obſerved ſignatures in many MSS. of different ages, as high as a thouſand years ago, and upwards, expreſſed either by letters or numbers); this book, though printed on one ſide, and paſted as the former, is yet more elegant, and ſhews that the art was much improved.

And here it may not be impertinent to obſerve, that in the ſame library (Arch B. Bodl. 88.) is an antient MS. with the ſame figures and inſcriptions, though the habits of the figures be different, thoſe of the MS. being of the older faſhion; and it is very likely there is another copy of this book in the emperor's library at Vienna; for Lambecius, Comment. de Biblioth. Cæſ. lib. xi. page 772, reckons amongſt thoſe which he brought away from the archducal library at Inſpruck, a book of which he gives this account, Apocalypſis S. Joannis apoſtoli & evangeliſtæ, Latino-Germanica, chartacea in folio, una cum vita ipſius, & multis figuris ligno inciſis quæ propter vetuſtatem ſuam ſpectatu ſunt digniſſimæ; and in this book at Oxford, beſides the printed cuts, alſo a commentary upon the Apocalypſe, in High Dutch. Beſides theſe two moſt antient printed books, Mr Bagford told me, That in the manuſcript library of Corpus Chriſti, or Bennet College, in Cambridge, he ſaw a third, containing the hiſtory of our Saviour, printed on one ſide only of the paper, with ſuch like wooden cuts, but yet more neatly than either of the former which I had before ſhewn him at Oxford. And theſe three books being, as is aforeſaid, ſtamped but on one ſide of the leaf, the whole wrought or cut upon wood, not ſet or compoſed with printing-letters, and printed with writing-ink, do ſufficiently demonſtrate, that the art was as yet in it's infancy, and may, though they bear no workman's name, be very reaſonably aſcribed to Coſter, not only becauſe no body elſe lays claim to them, but becauſe, in divers circumſtances, they agree with the hiſtory of the man, and with what remains of his workmanſhip.

If it be aſked, Why Coſter did not ſet his name and the year to theſe books, as well as to that at Haerlem, mentioned by Mr Ellis? it may be anſwered, That Schrevelius tells us, that Coſter bound Fuſt abovementioned by oath of ſecrecy, and not to betray the art to any perſon whatſoever; wherein it is likely that his deſign was not ſo much to let the world think that he had a new way of multiplying the copy of a book much quicker than the quickeſt penman, but that he had deſigned to impoſe upon the world, by ſelling his printed books for new written copies, whereby the book-writer and illuminator muſt (as he might well pretend) be ſo paid for their work as to maintain themſelves and families. This trick might be long undiſcovered in and about Haerlem, becauſe there was no other printing whereby this might be condemned; but at length, as Boxhornius and Schrevelius write, Fuſt ran away with all his maſter's tools and materials, and, in proceſs of time, ſet up a printer's ſhop at Mentz, being aſſiſted by his ſervant Peter Schoeffer (a young man of a good genius) who afterwards married his daughter, and became his partner in the buſineſs.

The ſtory goes, that this John Fuſt went to Paris (but whether before or after his ſettling at Mentz I cannot tell) and that he there offered a great number of printed Bibles to ſale, as if they were manuſcripts. But the French were not to be ſo caught; they conſidered the number of theſe books, and their exact conformity to one another throughout the whole, to a line, a word, a letter, a point, and that the beſt of book-writers could not be thus exact; and, therefore, by indicting him of diabolical magic (or threatning him with it) they at once gave birth to the ſtory of Dr Fauſtus, and cauſed him to diſcover the art. And I doubt not but about this time very many books were printed and ſold for manuſcripts, I have ſeen divers ſuch books without dates, which looked rather older than any I have ſeen with them. I ſpeak now of thoſe that are ſet, or compoſed of letters, which, with printing-ink of lamp-black and oil, and the printing-preſs, is ſaid to be the improvement of Schoeffer abovementioned, though Schrevelius, with leſs reaſon, aſcribes the two former to his countryman Coſter.

When Fuſt and Schoeffer began firſt to work at Mentz is uncertain; but the firſt mention I find of him, as a printer at Mentz, is in Schrevelius, Haerlem, p. 272. where he ſays, That this Fuſt (or Fauſtus as he calls him) publiſhed Alexandri Doctrinale, cum Petri Hiſpani tractatibus, A. D. 1442; but this, and ſome other books mentioned by writers on this ſubject, are never ſaid to be extant in any particular place, in order to be conſulted upon occaſion, and, therefore their titles and dates are not ſo much to be relied upon. But another date, which, though not ſo old, is more authentic, may be found in the above-cited book of Lambecius, p. 989, where he ſays, he brought away from Inſpruck, amongſt other choice volumes, and placed in the imperial library at Vienna, a Pſalter printed upon parchment, with this inſcription at the end: Præſens Pſalmorum codex venuſtate capitalium decoratus, rubricationibuſque ſufficientur diſtinctus, ad inventione artificioſa imprendi ac charecterizandi, abſque calami ulla exaratione ſic effugiatus, & ad Euſebiam Dei induſtria eſt conſummatus per Johannem Fuſt, civem Moguntium, & Petrum Schoeffer, de Gernzheim, Anno. Dom. Milleſimo CCCCLVII. in vigilia Aſſumptionis. From this time there are conſtant remains of the induſtry of thoſe men; and I can mention more books printed by them than the Durandus (in the library of Baſil in Switzerland) printed (as a gentlemen who ſaw it told me) A. D. 1458. Joannes Joanuenſis's Catholicon (in her Majeſty's and the lord biſhop of Norwich's libraries) printed 1460; the Latin Bible of 1462, yet extant in the French king's library, and in divers monaſteries beyond the ſeas, and perhaps in England; the Tully's Offices, printed both in 1465 and 1466 (if both theſe be not the ſame edition, the laſt ſheet or leaf being compoſed afreſh): ſo on 'till Schoeffer worked for himſelf, after the death of Fuſt, and Schoeffer's poſterity after him.

I add alſo, that upon the firſt diſcovery of the art by Fuſt at Paris, or at his firſt ſettlement or public profeſſion of it at Mentz, it quickly ſpread over the beſt parts of Europe †, and was commonly uſed in other countries before it was known in England (notwithſtanding what ſome writers do affirm to the contrary) the firſt book that we pretend to have been printed here being Hierom (or rather Rufinus) on the Creed, printed at Oxford, A. D. 1468.

† From theſe places, and from books, or parts of books, where, or wherein ſuch ſorts of letter were uſed, the printers do ſtill call their letter Italic, Roman, Engliſh, &c. auſtin, canon, pica, primer, brevier, &c.

To prove this in ſome meaſure (not to mention the progreſs of printing in other countries) I inſtance in Italy, and particularly Rome. Here, not to inſiſt on the large catalogue of printed books deſcribed in an epiſtle to pope Xyſtus IV. publiſhed at the beginning of the fifth tome of the Bible, printed, with Lyra's commentaries, at Rome, A. D. 1472, and tranſcribed by Boxhornius, I ſhall only relate the ſum of what I meet with in Bernard Montfaucon's Diarium Italicum, tom. i. p. 255, 256; it is, That Joannes Alericenſis, in a flattering epiſtle to pope Paul II. (who was elected A. D. 1464) congratulates him becauſe printing was firſt uſed at Rome under his pontificate: which, if ſpoken of the very firſt practiſe of the art at Rome, and not of an eſtabliſhed imprimery, ſeems to be falſe, becauſe this learned monk, in the ſame place, ſays he ſaw a Lactantius in the muſæum (or ſtudy) of Monſ. de la Thuliere, which has theſe words at the end: Lactantii firmiani inſtitutiones cauſæ in venerabili monaſterio Sublacenſi, anno 1461, antepenultima Octobris. Now unleſs a man will ſuppoſe printing to be invented in this monaſtery, he muſt believe it to be brought hither from Rome, which is but about 20 miles diſtant from it; and the ſame author ſays, That Floravantes Martinellus, in his Roma Sacra, affirms, that printing was practiſed at Rome, in the palace of the Maximi, A. D. 1455, under pope Nicolaus V. by Conrad Sweynheim and Arnold Parnartz, who were both Germans, and continued printers there for many years after.

The cuſtom of putting the dates of printed books at the end of them, was taken up in imitation of divers of the middle-aged and recenter manuſcripts (for I never ſaw or heard of any ancient manuſcript in capital letters, either Greek or Latin, which has a profeſſed date written in the firſt hand); but here the inſpector ought to be cautious, leſt he be led into an error, for ſeveral manuſcripts at the end have a date, which may be by ſome underſtood of the time when thoſe individual copies were written, when as they only notify the time when the author finiſhed his work; and ſome of theſe dates, being printed from the manuſcripts, have deceived many curious men: for example, the firſt edition of Lynwood, Paulus à Sancta Maria, and others which I could name; beſides ſome dates in ancient printed books, being not corrected are falſe: ſuch as a book printed in the beginning of the 16th century, in the library belonging to the Aſhmolæan muſæum at Oxford, which thus pretends to 400 or 500 years of age: Julius Hyginus, once ſhewed to me by Mr Millington the bookſeller, printed at Paris (as there put down) Ann. Dom. MCCCCXII, inſtead of MCCCCCXII; for the printer is mentioned as then living in L'Origne de l'Imprimerie de Paris. I have indeed a book, wherein, amongſt other tracts, is one of an old print, at the end of which there ſeems to be ſuch a miſtake, though not ſo eaſily rectified as the former: the words are theſe, Expliſcit opuſculum Enee Sylvii de duobus amantibus in civitate Leydenſi, Anno Domini Milleſimo CCCC quadrageſimo tertio Leien. Now though Leyden ſeems to be the place where it was printed, yet 1443 cannot be the time when: for juſt before Sylvius ſays himſelf, Vale, ex Vienna quinto nonas Julias Mo CCCC quadrageſimo quarto. Sylvius was elected pope by the name of Pius I. A. D. 1458, and died A. D. 1464: now it may ſeem probable, that, if this tract was printed after his election (as ſuppoſe A. D. 1463) or even after his deceaſe, his papal

papal dignity might have been remembered; if it be judged to have been printed before his election, I know of none that will allow of printing at Leyden (or even in Lyons) ſo very early.

One objection may be urged againſt what is ſaid of Coſter's or the old printed books abovementioned, being printed upon paper about A. D. 1430, or ſoon after: for ſome authors are of opinion, that paper made of linen rags was firſt made at Baſil, by ſome Greeks who fled out of their country after the ſackage of Conſtantinople, A. D. 1452, in imitation of the cotton paper, commonly uſed in the Levant. But this can have no force, our paper being much older: for I have a piece, the writing upon which ſeems to be about 350 years old, and agrees very well with a charter which I have ſeen of Thomas Beauchamp earl of Warwick, bearing date, A. D. 1358, and 32 Edward III. In the archives of the library belonging to the R. R. dean and chapter of Canterbury, I ſaw an inventory of the goods of Henry, prior of Chriſt's Church there, taken upon his deceaſe (as I remember) the 20th year of king Edward the IIId, and this is written upon paper in the Cottonian library, though ſearching after other matters, I could not but obſerve ſeveral writings upon our paper, in the time of moſt of our kings and queens, as high as the 15th of king Edward IIId. and I doubt not but there are others more antient in the ſame place. But in the Eaſt the uſe of cotton paper is much more ancient; and I have, in the Bodleian library, ſeen an Arabic manuſcript (amongſt thoſe which the univerſity bought out of Dr Huntingdon's) written in the 427th year of the Heigra, A. D. 1049; and others in the ſame place, without dates, ſeem older.

The proximity of the ſubject cauſes me here to take notice, that, though the invention of the rolling-preſs is commonly aſcribed to Lipſius, yet it ſeems older than his time, from a printed book in the Bodleian library, placed Laudi D. 138. this is a Miſſale ſecundum uſum eccleſiæ Herbipolenſis (i. e. Wurtzburgh in Germany): Rodolfus, archbiſhop of that church, ſets forth, in an inſtrument at the beginning of the book, the reaſons why he cauſed this Miſſal to be publiſhed, which inſtrument bears date the 8th of November, 1481; by which time he orders all the copies to be finiſhed by Jorius Ryſer, his printer, who ſeems to have done ſo, ſince his name, and this year 1481, is written at the end of the book.

Inſtead of a ſeal to this inſtrument, is an engraven print, being the arms of the ſee, ſupported by two angels, and St Kilian (it's firſt biſhop and protector) behind; as alſo this prelate's own arms, with thoſe of the ſee, in another eſcutcheon, and a very fine mantling. This is extremely well engraven for the time, and equals the performances of ſome of our beſt workmen at preſent. The evident marks of preſſure by the plate, with ſome touches of ink at the edges, the roughneſs of the print, and other circumſtances concurring, I thought this muſt needs be wrought off at the rolling-preſs: but being unwilling to rely too far upon my own judgment, I ſhewed it to divers very knowing and curious gentlemen, to ſeveral printers, engravers, and others working conſtantly at the rolling-preſs, who all concurred (though at different times, one not knowing what another had ſaid) that it was not only excellently well engraven (and this before Albert Durer's time) but that it was certainly pulled from the rolling-preſs, and could be done no other way. And that this print was not done after that time, appears from ſeveral notes written here and there in the book: one of them ſpecifies that William Keuſth, vicar of Bartholomew's church in Wurtzburgh, bought this book the ſame year 1481, paying 18 florins for the parchment, printing, rubrication, illumination, and binding. By another it appears, that he gave it to his church for ever; and by ſome others it appears, that it remained there during the time of his ſeveral ſucceſſors, 'till the laſt age, when, as I ſuppoſe, the Swedes under Guſtavus Adolphus, plundered the church, and brought it out.

3. The antiquity of printing, and the firſt inventors, having been treated of by many authors, I ſhall now only give a ſhort account of the obſervations I have made in many years, from old books of ſeveral ſorts and kinds. The general notion of moſt authors is, that we had the hint from the Chineſe; but I am not in the leaſt inclined to be of that opinion, for, at that time of day, we had no knowlege of them. I think we might more probably take it from the ancient Romans, their medals, ſeals, and the marks, or names, at the bottom of their ſacrificing-pots, which antiquities we had amongſt ourſelves in Europe, rather than fetch it ſo far.

But if it be certain, that cards are as old as our king Henry the VIth, nothing, that I have ſeen or conſidered of, ſeems to give ſo fair a hint for printing as the making of cards; as is evident by the firſt ſpecimen of printing at Haerlem, and by ſome books in the Bodleian library at Oxford, one in Junius's collection, another in archbiſhop Laud's, and a third in the ſame, being the lives of the Ruſſian ſaints, in a thin folio: the leaves are not paſted together, as the former two, but cut on wooden blocks, and illuminated. There is alſo another rare ſpecimen of the firſt, in that valuable collection of archbiſhop Parker, in Bennet college library at Cambridge, bound up with a MS. book. This was ſhewn me at firſt by Mr. Bullord, and differs very much from them at Oxford; it is the life of Chriſt, in figures, or rather the types, of the Old and New Teſtament. They have not ſo many ſpecimens of the firſt printing at Haerlem, as we have in England; and I am apt to believe, that, if ſome curious perſons had the liberty of looking over the libraries in both univerſities, and that of the Royal Society, there might be found other ſpecimens of the ancient printing, the aforementioned books being taken notice of but of late.

The cutting of the moulds or blocks for making our playing cards, is after the ſame manner as thoſe of the books printed at Haerlem. They lay a ſheet of moiſt or wet paper on the form or block, being firſt lightly bruſhed over with ink, made of lamp-black mixed with ſtarch and water; then they rub it off with a round liſt with their hand, which is done with great expedition: this is for picture or court cards: after which they paſte them together threefold, the coarſeſt in the middle. They colour them by the help of ſeveral patterns or ſtanefiles, as they call them; they are card-paper cut through with a penknife, for every colour, as red, &c. (for at the firſt printing the card has only a mere out-line:) theſe patterns are painted with oil-colours, to keep them from wearing out with the bruſhes; they lay it upon the picture, and by ſliding a bruſh that is full and looſe gently over the pattern, it fixes the colour into the cut holes, and leaves it on the print that is to be a card, and ſo goes through all the colours you ſee on cards; but this cannot be ſo well underſtood by a deſcription, as by ſeeing them perform it. This I humbly conceive to be their way of printing firſt at Haerlem, and thoſe books abovementioned. This, methinks, might have been conſidered before now, if they would have put themſelves to the trouble of inſpecting the old manuſcripts 900 years old; for the great letters are done by the illuminators, the ſame way as card-making.

The next form of printing at Haerlem was by cutting whole forms in wood from manuſcripts exactly written, and without pictures: ſuch I take the Donatus to be, mentioned in Hiſtories; and this might bear date in 1450, ſome ſay 1440. This may be as plainly demonſtrated as the former, from copy-books which we have ſeen printed at Rome, Venice, Switzerland, and England, as high as 1500; and, if I miſtake not, there is a block cut in box in the collection of the Muſæum of the Royal Society. This writing is harder to perform than either the Roman, Italic, or any other letters uſed in printed books.

The third way of printing was with ſingle types made of wood, but to whom the honour of the invention is due, is not very evident; it was then eſteemed ſo great a rarity, that the printers carried their letters in bags at their backs, and got money at great mens houſes, by printing the names of the family, epitaphs, ſongs, and other ſmall pamphlets.

The fourth improvement of this noble art, was the invention of ſingle types made of metal. Here we muſt entirely give the honour to Peter Schœffer of Grenſchen, ſervant, and afterwards ſon-in-law, to Fauſt, who entertained him to work in his houſe at Mentz: he obſerving how induſtrious his maſter was every day to improve this art, undertook it himſelf, and with much ſtudy and induſtry brought it to perfection. After he had made ſeveral eſſays, at laſt he ſhews it to his maſter Fauſt, who having tried ſome experiments with his new invented ſingle types, finding that it would anſwer his expectation, was ſo tranſported with joy, that, for his reward, he promiſed he ſhould marry his daughter, whoſe name was Chriſtian, which ſome time after he performed; and continued together improving this art with great ſecrecy, 'till it became known, and ſpread itſelf over all Europe. Sometimes you have their names to the books they printed at the end, and ſometimes not; ſometimes with dates as high as the year 1457, as the Pſalms printed by them, now in the emperor's library, which Lamberius mentions in his Bibliotheca, and as low as the year 1490; and for this we have the authority of Eraſmus, in a preface to Livy, printed at Baſil by Froben, in 1500.

As for John Guttenburgh, though by abundance of authors he is ſaid to be the firſt inventor of printing, we cannot find one book with his name and printing.

We may rationally conjecture, that printing with plates of pewter, braſs, or iron, either graved, or eat with aqua fortis, was firſt practiſed by the working goldſmiths; for they have a way of taking off the impreſſion of their work by the ſmoke of a lamp, which, perhaps, gave the hint to the graving on braſs. We have a dark ſtory of it in ſome authors.

Having treated of printing, to ſatisfy the curious, I ſhall ſay ſomething of the ſeveral advances and improvements it hath received.

The Haerlem printing at firſt was a book with pictures; they took off the impreſſion with a liſt coiled up, as the card-makers uſe the ſame to this day.

But when they came to uſe ſingle types, they made uſe of ſtronger paper, with vellum and parchment: then they made uſe of a preſs, although they afterwards contrived and made it more uſeful.

Neither was their ink for printing brought to the perfection it is at the firſt, but improved by degrees.

Rolling-preſs printing was not uſed in England, 'till king James I. and then brought from Antwerp by our induſtrious John Speed.

Now, as printing itſelf is but another way of writing, and brought to perfection by degrees, as other arts; and as pictures either painted, cut in wood, or graved, were called the laymens books, for every one could read a picture, and ſay this is an houſe, and that a tree; ſo I may ſay, that the pictures or drawings of the Antients, gave the firſt hint of printing: and if the ſcribes in proceſs of time, had not brought their art of writing into the decorum and uniformity, and rule in their ſeveral volumes, the printers could not have followed them ſo exactly in the imitation of their letters and pages of their books. Pictures firſt were thoſe of devotion; then the making of cards was another introduction to the invention of printing: the making of cards I take to be very ancient.

For the firſt ſpecimen of printing was on one ſide only, as that at Bennet College, moſt in figures, with ſome few words only on the ſide in labels, like that at Oxford.

The next ſtep is that book at Haerlem; the deſigns of the prints are better performed; and then they came to have not only lines, but whole pages of words, beſides the pictures on a page.

The next ſtep was ballad-printing, with the like pictures, and them but on one ſide.

The next improvement of this noble art, was the cutting of whole pages on wooden blocks or moulds, and printing on both ſides of the page; and the firſt ſpecimen of this nature was a Donatus, and, as authors ſay, was printed at Haerlem and at Mentz, although ſome ſay a Bible was printed the ſame way 1457.

Since arts and ſciences, eſpecially ſtatuary and ſculpture, were arrived at ſo great perfection, when the Roman empire was in it's glory, as the many beautiful ſtatues, the exquiſite intaglia's, and fine medals, which time hath handed down to us, do ſufficiently evince; it is much to be wondered at, that they never hit upon the method of printing books.

The dies they made for their coins, and the ſtamping them on the metal, was in reality printing on metal; their ſeals cut in cornelians and agates, and their preſſing them on dough and ſoft wax, was another ſort of printing; and a third ſort was their making their earthen veſſels, while the clay was ſoft, with the name of the potter, or the owner the veſſel was made for. Theſe being of a larger ſize, were properly called ſigna; the ſeals cut in ſtone were called ſigilla; ſigillum being a diminutive of ſignum, as tigillum is of tignum: but the later and more barbarous Latiniſts, have formed the diminutive of ſignum into ſignetum; and if a very ſmall pocket-ſeal, they have called it ſignaculum. *

* See Joh. Mich. Heinecius de Sigillis. Francof. 1709. fol. p. 16, & ſeq. Vol. IX. Part. IV.

Montfaucon, in his Antiquité expliquée, Tom. III. part 2. chap. 12. gives us the figures and deſcriptions of ſeveral of theſe larger ſigilla or ſigna, whereon he ſaith, the names were all cut in hollow in capital letters, Domini patronique nomen majuſculis literis inſculptum, which he expreſſes in French, imprimé en creux; and he imagines their uſe to have been to mark earthen veſſels, particularly thoſe great earthen jars, wherein the Romans uſed to keep their wines. If any of them had occured to him with the letters exciſæ, exſculptæ, protuberant or ſtanding out, as the types in our modern way of printing are made, ſo accurate a deſcriber of antiquities could not have paſſed ſuch an one over, without having mentioned it, and that the rather, becauſe of it's being a greater rarity: though ſeveral lumps of terra cocta are ſtamped with letters impreſſed or hollow, from ſuch protuberant letters as in the following deſcribed ſtamp, but the greater number have the letters raiſed, or ſtanding out.

The laſt ſort of ſtamps, where the letters are exſculptæ or protuberant, as is likewiſe the edge or border round the whole ſtamp, is made of the true ancient braſs, and is covered over with a green ſcale or coat, ſuch as is uſually ſeen on ancient medals. There was one found in or near Rome. On the back is faſtened a ring, whereof the hole is $\frac{27}{40}$ of an Engliſh inch one way, and $\frac{23}{40}$ the other way; the plate itſelf is two inches long, wanting $\frac{1}{40}$, and it's breadth exactly $\frac{33}{40}$ of an inch: the ſides are parallel to one another, and the ends are likewiſe parallel to each other, but they are not upon an exact ſquare with the ſides, varying about one degree and an half from an exact rectangle. On the under ſide ſtand two lines or rows of letters $\frac{7}{40}$ of an inch in height, and well formed Roman capitals: the faces of them ſtand up all upon an exact level with one another, and with the edge or border of the ſtamp; their protuberance or height above the ground is different, the ground being cut uneven; for cloſe to moſt of the letters the ground is cut away only $\frac{2}{40}$, cloſe to ſome near $\frac{3}{40}$, and cloſe to the edges full $\frac{3}{40}$. The firſt line contains theſe letters, CICAECILI, with a ſtop or leaf to fill up the line; in the ſecond line, HERMIAE SN. which is judged to be read Caii Julii Cæcilii, Hermiæ Signum. Who this Caius Julius Cæcilius was, we cannot find, he being probably a man in a private ſtation, and ſo his name hath not been handed down to us in any monuments, but only accidentally in this ſtamp. In Gruter occur two of the name of Hermias, and ſeveral of the Cæcilii, but none with theſe two names joined together.

The uſe of this ſtamp ſeems to have been for the ſignature of the above-mentioned private man, to ſave him the trouble of writing his name, as ſome people have now a-days. It was certainly uſed on paper or membranes, being firſt dipped into ink, or ſome ſort of paint, becauſe of the protuberance of the letters, the hollow letters being fitter for ſoft ſubſtances, on which they leave the impreſſion ſtanding up, and conſequently more eligible. Another argument that this ſtamp was not to be uſed on any ſoft ſubſtance, into which it might be preſſed quite down to the ground, is the unevenneſs and roughneſs with which the ground is finiſhed; which, was it to have made part of the impreſſion, the workman would have finiſhed it with more accuracy; but he, knowing that the ſurface of the letters was to perform the whole work required, was only attentive to finiſh them with that accurate evenneſs that theſe have.

Mr Mattaire, in his Annales Typographici, Hægæ 1719, in 4to, p. 4. concludes from the beſt authors, that our modern art of printing was firſt thought of about the year 1440. A copy of the book he mentions, ib. p. 13. called Speculum noſtræ ſalutis, being pictures of ſtories out of the Bible, with the verſes underneath in Dutch, is to be ſeen in the Stadthouſe at Haerlem. Each page was printed from a block of wood, like a ſorry wooden cut; and this was the firſt eſſay of printing, which hint was taken from engraving, and is what he means, p. 4. by typi fixi; after which they ſoon improved to uſe ſeparate types, as we now do, which he terms, ibid. typi mobiles. This ſtamp is, in reality, a ſmall frame of fixed types and prints, with our modern printer's ink, which is only a ſort of black paint, as readily as any ſet of letters, cut in the rude manner theſe are, can be expected to perform.

By the foregoing deſcribed ſtamp of two lines, we may ſee that the very eſſence of printing was known to the Romans, and they had nothing to do but to have made a ſtamp with lines three or four times as long, and containing twenty inſtead of two lines, to have formed a frame of types that would have printed a whole page, as well as Coſter's wooden blocks, which he uſed in printing the Speculum Salutis, which we have in his hiſtory.

In the firſt volume of a Collection of ſeveral pieces of Mr John Toland, printed London 1726, in 8vo, p. 297. is a ſmall tract of his, entituled, Conjectura veroſimilis de primæ Typographiæ Inventione, which is founded upon the following paſſage in Cicero, in cap. 20. lib. ii. De Natura Deorum; where Balbus the Stoic uſes the following words in an argument againſt Velleius an Epicurean.

Hic ego non miror eſſe aliquem, qui ſibi perſuadeat, corpora quædam ſolida atque individua vi & gravitate ferri; mundumque effici ornatiſſimum & pulcherrimum, ex eorum concurſione fortuita? Hoc qui exiſtimet fieri potuiſſe, non intelligo cur non idem putet, ſi innumerabiles unius & viginti formæ literarum (vel aureæ vel quales libet) aliquo conjiciantur; poſſe ex his in terram excuſſis annales Ennii, ut deinceps legi poſſint, effici; quod neſcio anne in uno quidem verſu poſſit tantum valere fortuna.

He conjectures, that this very paſſage gave the firſt hint to the inventors of printing, about the year 1445, becauſe they retained even Cicero's name for their types, calling them formæ literarum, and made them of metal, as he ſays, aureæ vel quales libet. Moreover, in cap. 10. lib. iii. De Divinatione, Cicero hath the very phraſe imprimere literas.

Brands for making cattle were in uſe in Virgil's time, Georg. lib. iii. ver. 158. where he ſays,

Continuoque notas, & nomina gentis inurunt.

Procopius, in his Hiſtoria Arcana, ſays, the emperor Juſtinus, not being able to write his name, had a thin ſmooth piece of board, through which were cut holes in form of the four letters JUST. which, laid on the paper, ſerved to direct the point of his pen; which being dipped in red ink, and put in his hand, his hand was guided by another. Poſſibly this may likewiſe have given the hint to the firſt of our card-makers, who paint their cards in the ſame manner, by plates of pewter or copper, or only paſteboards, with ſlits in them in form of the figures that are to be painted on the cards.

The advantage of printing above writing, has prevailed with the Grand Seignor to permit a printing-preſs to be ſet up at Conſtantinople. It was obtained upon a memorial preſented to him by the Grand Vizier, with the conſent of the Mufti: the privilege was firſt granted to Zaid, the ſon of Mehemet Effendi, ambaſſador in France, above 20 years ſince, and Ibrahim Mutaſarrica, the author of a ſmall tract. The licence extended to the printing all ſorts of books written in the oriental languages, except ſuch as treated of the Mahomedan

medan religion: this book ſeems to be one of the firſt that ever was printed there. For, though Gianhauri's Arabic Dictionary tranſlated into Turkiſh, was what the Turks deſigned, for particular reaſons, to begin withal, yet the manuſcript from which they printed off the firſt ſheets, was found to be ſo incorrect, that the Grand Seignor ordered the printing of it to be ſtopt, 'till a more correct copy could be procured.

During this ſtop, the book I am to give a brief account of was printed, containing about 150 leaves. The language of it is not Arabic, as was ſuppoſed, but Turkiſh, though it has ſeveral words and ſome ſentences that are ſo.

The title, or what may ſerve as ſuch, is TUHHFAT ILKIBAR, or, A PRESENT TO THE GREAT, containing an account of ſeveral engagements at ſea. The author is Hagi-Caliba, ſtiled Chelebi Almurhhum, i. e. A gentleman who has obtained mercy or deceaſed. It conſiſts of two tracts, a large, and a very ſmall one. The latter is done by the publiſher, Ibrahim Mutafarrica; Mutafarrica is a title of honour, ſignifying a horſe-ſoldier, obliged to go to the wars when the Grand Seignor goes in perſon, but not elſe. It is a ſhort account of geographical meaſures of diſtances, &c. particularly of the circumference of the earth. The principal treatiſe is partly hiſtorical, and partly geographical; the latter treats of the nature of the terreſtrial globe, the uſe of maps, and ſituation of places, particularly of Venice, Corfu, Albania, &c. and ſuch as border upon the Turkiſh dominions. The hiſtorical part is an account of ſeveral naval expeditions and battles between the Turks and Chriſtians, eſpecially during the Holy War in the Mediterranean Sea, with their conqueſt of the iſlands and places of note upon the ſea-coaſts. It is an abridgment of the hiſtory of their admirals, from the taking of Conſtantinople to the year 1653; gives a deſcription of the Grand Seignor's arſenal at the Porte, with the charges of maintaining it, and concludes with ſome directions to the Turkiſh officers.

Beſides a general map of the world, there are three others; one of the Mediterranean, or White Sea, as the Turks call it; another of the Archipelago, and the third of the Venetian Gulph: they have each ſcales of Turkiſh, French, and Italian miles annexed; but what is ſomething ſurprizing, theſe maps have the degrees of latitude, but not of longitude, marked upon the ſides. The laſt plate has two mariner's compaſſes, the one containing the Turkiſh names of the ſeveral points, the other, beſides the Turkiſh, has the Arabic names, which are taken from certain ſtars ſuppoſed to riſe and ſet upon or near theſe points.

The book ends with words to this ſenſe: this treatiſe was done by the perſons employed in the buſineſs of printing, at the printing-houſe erected in the noble month of Dulkaadah, in the year 1141 (i. e. 1728) in the good city of Conſtantinople. May God, &c. I forgot to obſerve, it has the imprimature or commendations of a Turkiſh divine, and three effendies, prefixed; and at the end an index of the errata, with their emendations, in three pages. The whole is done upon ſhining or gummed paper, ſtamped with three creſcents in pale and an imperial crown, proper to the Turks.

Thoſe who would enter into the hiſtory of printing in England, may conſult the TYPOGRAPHICAL ANTIQUITIES: Being an Hiſtorical Account of Printing in England: With ſome Memoirs of the Antient Printers, &c. By the curious and judicious Mr Joſeph Ames, F. R. S. and Secretary to the Society of Antiquaries.

The method of printing with metallic types, is ſo well deſcribed by others, and ſo generally underſtood, that we ſhall not dwell upon this matter. The art, at preſent, is brought to as great perfection in England, as in any part of Europe.

PRINTING OF CALLICOE. See CALLICOE-PRINTING.

PRINTING FROM COPPER-PLATES.—The ink being duly prepared, they take a ſmall quantity of it on a rubber, made of linen rags, ſtrongly bound about one another; and therewith ſmeer the whole face of the plate, as it lies on a grate over a charcoal fire. The plate being ſufficiently inked, they firſt wipe it coarſely over with a foul rag, then with the palms of the hand; and to dry the hand, and forward the wiping, rub it from time to time on whiting, which is no advantage to the beauty of the work.

In cleanſing the plate well, yet without taking the ink out of the engraving, conſiſts a good part of the addeſs of the workmen. The French printers uſe no whiting, as being detrimental to the colour of the ink; nor do they lay the plate on the grate to warm, 'till after inking and wiping it.

The plate thus prepared, is laid on a thick paper, fitted upon the plank of the preſs: over the plate is laid the paper, firſt moiſtened to receive the impreſſion; and, over the paper, two or three folds of blanketing, ſmoothly laid.

Thus diſpoſed, the arms of the croſs are pulled; and, by that means, the plate, with it's furniture, paſſed through between the rollers; which pinching very ſtrongly, yet equably, preſſes the moiſtened paper into the ſtrokes of the engraving, whence it licks out the ink. See the articles ENGRAVING, DESIGN, and PAINTING.

Some works require being paſſed twice through the preſs, others only once, according as the graving is more or leſs deep, or the greater or leſs degree of blackneſs the print is required to have.

It muſt be obſerved, that the ſtronger and thicker the ink is, the ſtronger muſt the rollers pinch the plate: this tempts many of the workmen to uſe a thinner oil, in order to ſave labour; which proves prejudicial to the impreſſion.

The wetting of the paper ought to be done two or three days before printing it, to render it the more ſupple and mellow: as the prints are drawn off, they are hung up to dry.

After the number of prints deſired have been wrought off from the plate, they rub it over with olive oil, to prevent it's ruſting, and ſet it by againſt a new impreſſion. If the ſtrokes of the graving be perceived full of ink, hardened therein in the courſe of the printing, they boil it well in lye, before the oil be applied.

Plain inſtructions for limning and colouring prints, maps, &c. with water colours

Of the colours generally uſed in that art.

For White, uſe,	1 White lead.	Yellow	1 Yellow oaker.
	2 Flake white.		2 Maſticot.
	3 Muſſel ſilver.		3 Pale maſticot.
Blue	1 Indigo.		4 Dutch pink.
	2 Blue lake.		5 Gamboge.
	3 Blue verditer.		6 Naples yellow.
	4 Smalt.		7 Shell gold.
	5 Ultramarine.	Brown	1 Brown oaker.
	6 Latinus.		2 Chimney ſoot of a wood fire.
	7 Pruſſian blue.		3 Cologne earth.
Red	1 Vermillion.		4 Umber.
	2 Red led.	Black	1 Lamp black.
	3 Red oaker.		2 Ivory black.
	4 Lake.		3 Sea-coal black.
	5 Carmine.		4 Indian ink.
Green	1 Sap green.		
	2 Verdigreaſe.		
	3 Terra verde.		

Out of theſe colours you may temper all the reſt which your work may require.

Some colours are to be waſhed and ground; as for inſtance. 1. White lead. 2. Brown oaker. 3. Dutch pink. 4. Umber. 5. Cologne earth. 6. Ivory black.

Some are only to be waſhed, which are, 1. Red lead. 2. Maſticot. 3. Blue biſe. 4. Smalt. 5. Ultramarine. 6. Vermillion.

Others are only ſteeped in fair water; as, 1. Gamboge. 2. French yellow, to which you muſt add a little allum. 3. Sap green. 4. Blue lake. And 5. Latinus.

And others again are only ground, viz. 1. Flake white. 2. Indigo. 3. Lake. 4. Diſtilled Verdigreaſe.

Grind all your colours with fair water, on a hard ſtone, or on a piece of looking-glaſs, which fix with white pitch and roſin upon a flat board, having alſo a muller of that kind.

Of the colours (after you have ground them very fine) you may take as much as will ſerve your preſent occaſion, and temper them in a gallipot, or ſhell, with gum water, in which you have alſo diſſolved ſome ſugar-candy. You muſt obſerve, that colours which are very dry, require a ſtronger gum-water; in others it muſt be uſed very ſparingly.

If your colours will not ſtick, or the paper or print be greaſy, mix a very little ear-wax, or a little drop of fiſh or ox gall amongſt your colour; you may dry your fiſh or ox gall, and dilute it when you have occaſion for it, with a little brandy.

If your paper or print ſinks, then with clean ſize and a ſponge wipe it over, after you have faſtened the edges round upon a board, and let it dry.

You ſhould be provided always with phials, containing the following liquids, which are very neceſſary and uſeful in painting or colouring with water colours.

1. A phial with water, in which allum had been diſſolved. This you uſe in wiping over the table, parchment, or paper, before you begin to lay on your colours; it will cauſe them to lay ſmooth, and with greater a luſtre.

2. A phial with lime-water; you diſſolve or ſlacken ſome quick lime with fair water, then take the water from off the ſettled lime, and put it up for ſervice; this is of great uſe in tempering of ſap green and litmus, which colours being apt to turn yellow, are preſerved thereby.

3. Gum-water is made of gum-arabic diſſolved in fair water; if you add a little white ſugar-candy to it, that will keep the colours from cracking, and flying off the parchment or paper.

4. Ox gall, or the gall of eels, boiled up in a little water, and ſcummed, then put up in a phial; this is of great uſe in painting of water colours, where the parchment or paper happens to be greaſy, by only touching the point of your pencil, to touch it therewith, and to temper it with your colour.

5. White

5. White wine vinegar; this is of uſe in grinding of diſtilled verdigreaſe, as preſerving that colour from changing upon the yellow.
6. A little phial of ſpirit of hartſhorn, a little drop whereof, mixed among the carmine, adds to the beauty thereof.
You muſt chuſe pencils of ſeveral ſizes, agreeable to the work you are to uſe them for; as for laying on a ground, a ſky, or clouds, chuſe a larger ſize than thoſe that you uſe for drapery, trees, &c. wherein you muſt follow your own reaſon: thoſe pencils of which the hairs, after you have wetted them between your lips, and turned them upon your hand, keep cloſe together, are the beſt.

To paint or colour a clear ſky.

Take clear blue verditer, mixed with a little white: with this begin at the top of your landſkip or picture, and having laid on the blue for ſome ſpace, break it with a little lake or purple, working it with a clean pencil, one colour imperceptibly into another; apply more white and maſticot, in order to make it fainter and fainter towards the horizon, working all the while the colours imperceptibly one into another, from the horizon to the blue ſky; after which, you may lay ſome ſtronger ſtrokes of purple over the light, ſo as to make them appear like clouds at a diſtance.
For a fiery red ſky, uſe red lead, and a little white inſtead of the purple ſtreaks or clouds, working them, according to art, imperceptibly one into another.
Clouds you are to lay on with white and black, ſometimes mix a little purple therewith; but the beſt and ſureſt direction you can have, is from nature herſelf.

To lay a ground for walls of chambers, halls, &c.

You muſt uſe for a common wall, which is of reddiſh hue, brown, red, and white, and temper your colour according as it is old or new; ſhade it with brown or red, only mixed with a little biſtre or ſoot.
Other walls lay on with black and white, and ſhade it with the ſame colours; ſometimes mix a little purple with it, and then you ſhade it with black and lake.
For waniſcotting, that is embelliſhed with carved mouldings, and figures, you muſt uſe one colour, for both the plain and the carved work, ſhading and heightening it with judgment and care.
To paint a fore ground, in imitation of ſand or clay, lay on the darker parts with brown oaker; to what is in their diſtance, add a little white, and ſo on in proportion, ſhading it with brown oaker, and the ſtrong ſhades with ſoot.

Of carnation, or fleſh colour.

In carnation, or fleſh colour, uſe for young women and children flake white, burnt oaker, and a little vermillion; ſome add a little lake, but that muſt be but ſparingly: having laid on the colour for the carnation, you ſhade the lips, cheeks, chin, knees, and toes, with fine lake and vermillion, and the naked parts, with ſea-coal and a little lake, or brown red, or with brown oaker and lake, or elſe with Indian ink or lake; for a browniſh complexion, mix a little brown oaker among the carnation colour.
Some artiſts lay the dead colouring of the carnation for young women on with white; they ſhade it with paper black, and bring in the carnation colour where it is required.

The paper black is made in the following manner.

Take the paper in which the leaves of gold have lain, burn them quick one after another, and let them drop into a baſon of clean water; then take them out and grind them on a ſtone to a fine paſte, form it into little tents, and let it dry; when you uſe it, temper it with gum-water as you ſee meet.
For ancient people uſe vermillion, brown oaker, and white; ſhade it with biſtre and lake.
A dead corpſe of a young perſon, paint with flake white, brown oaker, and a little indigo, or ſea-coal, and ſhade it with biſtre or ſea-coal.
For an old dead corpſe, leave out the indigo, but ſhade it as before.
For dead bones, take white lead, mixed with a little biſtre or chimney ſoot, with which you ſhade and heighten it with white lead.
For the hair of young women and children, lay them with light oaker, ſhade them with deep oaker, and heighten them with maſticot and white.
Grey hair, lay on with black and white; ſhade them with black, and heighten them with white; and thus proceed in painting any other coloured hair.
Drops of blood, lay on with red lead, ſhade it behind, where the light falls, with carmine and lake.
Trees are laid on, ſome white, black, and biſtre, ſhaded with brown oaker, and heightened with the ſame colour, with more white in it. Thoſe that ſtand at a diſtance, are laid on with indigo blue, brown oaker and white, and ſhaded with indigo and brown oaker. Thoſe that are further diſtant lay on faint, and ſhadow them but ſlightly; which order you muſt obſerve in colouring of ſhips, houſes, and other buildings.
In thatched houſes, paint the thatch or ſtraw, when new, with Dutch pink, and ſhade it with brown oaker; and, to heighten the ſtraw, uſe maſticot and white. Old ſtraw, lay on with brown oaker, ſometimes mixed with black and white; heighten the ſtraw with brown oaker and white.
In colouring cities, caſtles, or ruins, you muſt obſerve nature, for no rules can well be given; however, to give a little light to a young practitioner, it muſt be obſerved, that thoſe houſes which lie neareſt the fore ground, are coloured with vermillion, white, and a little brown oaker, ſhading it with that and ſome biſtre; the heightenings are done with more vermillion, and more white.
Houſes further diſtant, are laid on with lake, and a little blue and white, ſhaded with blue and lake, and heightened with adding more white.
Such buildings as lie ſtill further, are laid on with a faint purple, and a little blue, ſhaded ſoftly with blue, and heightened with white; and the further they are off, the fainter and ſlighter muſt be your colour.
Flames and ſmoke, are laid on with a pale yellow; ſhade the ſmoke with paper black, or ſoot; the flames ſhade with red lead, or vermillion, and heighten them with Naples yellow.
In colouring of rocks, hills, &c. that are at a great diſtance, obſerve the ſame rule. Such as lay nearer the fore ground, you are to imitate according to nature. Trees that are upon the fore ground, you paint with ſeveral ſorts of greens, the better to diſtinguiſh one from the other; ſuch as are on diſtant hills, muſt be done with the ſame colour as the hills.

Of a fine collection of prints.

A collection of this kind may be divided into hiſtorical and moral ſubjects, the progreſs of arts, and mixed ſubjects.
The hiſtorical will contain the hiſtory of the world, according to it's ages, monarchies, and nations, repreſented by maps, battle-pieces, medals, ſtatues, baſs-reliefs, portraits, &c.
The moral part will comprehend emblems, devices, enigmas, of the religion, manners, and politics of different nations, with repreſentations of their virtues and vices.

Remark.

I have often thought that it would prove greatly ſerviceable to the cauſe of liberty and proteſtantiſm, if ſome of our beſt artiſts for deſign and engraving, would oblige the world with a ſett of curious prints, repreſenting the progreſs of Popery and Slavery, in all it's various lights. Nothing, we are inclined to think, could have a more general and happy tendency to diſcountenance, and indeed, in time, eradicate, if poſſible, thoſe deſtructive principles, from among mankind. The Papiſts we know, ſtudy every deluſive art to captivate, by their paintings and idolatrous images, the minds of the vulgar, and inſtigate them to become bigots in their cauſe: and will it not well become the Proteſtant intereſt, to baffle the wiles of ſuch deceivers, with artillery of the like univerſal power and prevalence? Certain I am, that ſomething of this kind, executed in a maſterly manner, would greatly contribute to root out of the minds of the maſs of the people, thoſe deteſtable notions, and not only ſtrengthen the Britiſh conſtitution in particular, both in Church and State, but tend to the univerſal propagation of the Proteſtant intereſt throughout the world.—Such prints would alſo be of great uſe among our Indian allies in North America, and give them, in general, a more lively idea of the happineſs which attends living in conſtant friendſhip with the friends to liberty, than with thoſe of ſlavery and arbitrary power.

The progreſs of arts, will take in the different ſtiles; by comparing the antique remains with the works of the Gothic ages, and of thoſe eminent maſters who have flouriſhed within theſe 250 years; in order to obſerve their original increaſe and declenſion, and their re-eſtabliſhment, to the degree of excellency to which they are now arrived.
The mixed ſubjects may contain volumes of portraits of celebrated perſonages, hunting-pieces, and groteſque ſubjects, &c.
In relation to the hiſtory of the world, the 1ſt, ſhould contain the account thereof, as given us in the Pentateuch.—The 2d, ought to be the ſequel of the ſacred hiſtory, as we find it in Joſhua, Judges, Kings, &c.—The 3d, the remainder of the hiſtory of the Old Teſtament, according to Eſdras, Tobit, &c.—The 4th, may exhibit an abridgment of nature, according to the antient poets and philoſophers.—The 5th, ſhould ſhew the fabulous hiſtory of the Heathen Deities.—The 6th, the hiſtory of the heroic times, the voyage of Argonauts, the war of Thebes, and alſo Ovid's Metamorphoſes; the wars of Troy, voyages of Eneas and Ulyſſes, with the laſt

laſt acts of the heroic ages.—The 7th, ſhould contain maps and actions of the firſt and ſecond monarchies of the Aſſyrians and Perſians, with other Aſiatic, Egyptian, and African hiſtories.—The 8th, the third monarchy of the Macedonians, comprehending the acts of Alexander the Great, and his ſucceſſors.—The 9th, the commencement of the 4th monarchy of the Romans; the reign of their 7 kings: under Numa Pompilius may be ranged, thoſe peices which relate to their religion, ſacrifices, ceremonies, and burials of the Romans: under Tullius Hoſtilius, every thing that relates to their militia: under Tarquinius Priſcus, whatever gives an idea of their habits, ornaments, magnificence and triumphs, with the pomp of their public ſpectacles, feaſts, and baths.—The 10th, may take in part of the tranſactions of the Roman republic, from the expulſion of their kings, under their conſuls and dictators, 'till the time of Julius Cæſar; to which ſhould be added, a collection of medals, and other monuments of the antient Roman families.—The 11th, may contain what we have of the reigns of their emperors, Julius Cæſar and Auguſtus.—The 12th, might ſhew the manner of the wars of the Greeks, Romans, and antient barbarians.

From the Chriſtian Æra, ſhould be ſhewn, 1. The ſubjects of the birth, life, and miracles of our Saviour, who appeared in the 42d year of the Roman Empire, under the reign of Auguſtus: alſo the death and ſufferings of Chriſt, and a collection of holy parables —2. The reigns of the emperors Tiberius, Caligula, and Claudius; under which will be included the hiſtory and purity of the infant Chriſtian Church.—3. What paſſed under Nero and his ſucceſſors, to the end of the reign of Trajan, with regard both to ſacred and profane hiſtory.—4. The hiſtory of the Dacian war, as repreſented in the column of Trajan.—5. The ages and reigns of the emperors, from Adrian to the government of Alexander, the ſon of Mammæa.—6. The emperors, from Alexander to the time of Conſtantine the Great.—7. The empire of Conſtantine and his children, to the end of Theodoſius's reign, which may be called the laſt period of the Roman grandeur; at the end of which volume ſhould be placed, the eccleſiaſtical geography of the partriarchates.—8. The diſſipation of the diviſion of the Roman Empire, which began to be uſurped by the barbarous nations in the times of Arcadius and Honorius, and ended in the Eaſt, by the taking of Conſtantinople, in the year 1453—9. The dreadful concluſion of the eaſtern affairs in Africa, by the conqueſts of Mahomed, and other Ottoman emperors, by the ſophies of Perſia, and the kams of Tartary.—10. Should be a ſeries of Mahommedan princes, and Egyptian ſultans; the cherifs of Morocco, and kings of Barbary: with which may be connected, a collection of hiſtorical pieces to this third part of the globe; the Aſſyrians, the kingdoms of Congo, and ſeveral others.—11. Should contain the habits and ornaments of the Chriſtian Greeks, and other ſubjects of the Grand Seignor, with thoſe of the Turks and Romans; of the Tartars, and other barbarous nations: alſo a collection of ſome cruelties, and executions.—12. Should be the commencement of the religious orders, which were inſtituted in the Eaſt; ſuch as thoſe of St Anthony, St Baſil, the Croſs-Bearers, the Jeromites, and the Carmelities.—13. Some hiſtorical pieces of the knights of Malta.—14. The inſtitution of the weſtern religious orders, as thoſe of St Auguſtin and St Bennet.—15. The different orders that have flouriſhed in the Eaſt, ſince St Bennet, to the time of St Dominic and St Francis; i. e. of the Carthuſians, Premonſtratenſes, of the Shady-Valley, the Mathurins, and of the order of the Ciſtercians.—16. The order of the Dominicans, and hiſtorical pieces of the Holy Roſary; a collection of the images of the Virgin Mary, held in veneration by Papiſts.—17. Whatever can give an idea of the life of St Francis, and of the moſt remarkable male and female ſaints, of his three orders: alſo a deſcription of his deſert of Aveſne.—18. Should be the ſequel of the order of St Francis, with ſome pieces relating to the order of the Capuchins.—19. Whatever relates to the religious confraternities that have aroſe in the Romiſh Church ſince St Francis and St Dominic, to the preſent time.—20. A collection of all the whimſical habits and ornaments of eccleſiaſtical perſons, and of the orders of monks and nuns.—21. The repreſentations of religious ceremonies, and of the magnificence of the court of Rome.—22. The ceremonies practiſed at the interment of Chriſtians, and of the ancient Pagans, and barbarous nations.—23. Public rejoicings, entries, triumphs, tournaments, fire-works, comedies, dances, and maſquerades.

1. Of the chronological hiſtory of the Papacy, divided into centuries, from the time of Leo III. to the preſent Pontificate.—2. The ſequel of the hiſtory of the Weſt, containing a deſcription of the modern city of Rome, it's churches, palaces, public buildings, villas, ornaments, and monuments of it's ancient grandeur.—3. Of the temporal ſtate of the Popes, as now within and out of Italy.—4. Of the ſovereign States of Italy, wherein ſhould be a collection of what chiefly relates to the Republics of Venice, Genoa, Lucca, Raguſa, and St Morino.—5. The ſequel of Italy, including the dominions of the kings of the Two Sicilies and Sardinia, the grand duke of Tuſcany, duke of Modena, and of the houſe of Auſtria, and other princes in Italy, and thoſe of New Spain; and all that relates to America.—6. The hiſtorical ſubjects relating to the kingdom of Old Spain.—7. Thoſe of the kingdom of Portugal.—8. Hiſtorical pieces relating to the houſe of Auſtria in the Low Countries.—9. The dominions of the king of Spain in Aſia; under which ſhould be comprized what relates to the Eaſt-Indies, China, Japan, India Proper, and the reſt of the Indian princes.—10. A collection of what concerns the republic of the United Provinces. 11. An hiſtorical collection of whatever regards the kingdoms of England and Ireland, to the end of the reign of queen Elizabeth.—12. What relates to the kingdom of Scotland, and to the three kingdoms of England, Scotland, and Ireland, ſince the union of thoſe crowns in the perſon of king James the VIth of Scotland, and Iſt of England, with a deſcription of this monarchy.—13. What regards the northern States, as Ruſſia, Poland, Sweden, Denmark, and other northern countries.—14. Should contain the ſtate of the kingdoms of Bohemia and Hungary, the archduchy of Auſtria, the county of Tirol, and other hereditary dominions of the houſe of Auſtria.—15. Hiſtorical ſubjects concerning the emperors of Germany, from Conrad, duke of Franconia, who transferred the empire from the French to the Germans, to the late emperor.—16. What relates to the ſeveral electors of the empire, as well the eccleſiaſtical as ſecular.—17. What concerns the other German princes.—18. Of the free cities of the empire.—19. What relates to the Republics of Switzerland, Geneva, the Griſons, the principality of Neufchatel, and the other allies and ſubjects of the Switzers.—20. What concerns the duchies of Burgundy, Normandy, Lorrain, and Britany, before they were united to the French monarchy.—21. The antiquities of the Gauls, and portraits of their illuſtrious perſons, before the coming of the Franks, under their firſt king Pharamond.—22. What regards the hiſtory of the French, during the firſt race of their kings, after their arrival in Gaul, under the conduct of Pharamond.—23. What regards the ſecond race of their kings, from Pepin to Louis the Vth.—24. Should begin with the third race of their kings, and contain all materials that relates to them, from Hugh Caput, to the end of the reign of Charles the Fair, where the right line of the eldeſt branch ended.—25. What concerns their kings of the third race, from Philip of Valois, to the death of Louis XI.—The reigns of their kings Charles the VIIIth, Louis the XIIth, Francis the Iſt, and Henry the IId; and as by the marriage of Mary of Burgundy with Maximilian, Europe has been divided into the two families of Auſtria and Bourbon, to avoid confuſion, thoſe pieces relating to the foreign wars of the French, with the portraits of the eminent men who have been either their allies or enemies, may be put under the reigns of their kings.—26. May contain the reigns of their kings, Francis the IId, Charles the IXth, and Henry the IIId.—27. What relates to the order of the Holy Ghoſt, inſtituted by Henry the IIId: here may be added the names and arms of all the commanders and knights of the order, from it's firſt inſtitution to the laſt creation.—28. What relates to the reign of Henry the IVth —29. May contain the beginning of the reign of Louis XIII. his portrait, thoſe of the queen, the princes and princeſſes of the blood, with the arms and portraits of the cardinals, biſhops, and great officers of the crown.—30. The arms and portraits of diſtinguiſhed eccleſiaſtics, religious, and ſeculars, who lived during the reign of Louis the XIIIth; to which may be joined Vandyke's portraits.—31. Pieces of the magnificent ceremonies, rejoicings, and other feſtivals that paſſed in France, during the reign of Louis the XIIIth.—32. What paſſed of the ſame kind in foreign countries, in this reign.—33. Pieces repreſenting the warlike exploits of the French nation, from the beginning of the reign of Louis the XIIIth, to the year 1629, when all the cautionary towns of the Proteſtants were reduced to his obedience.—34. The military actions that paſſed in Europe, from the time of Louis the XIIIth, to the rupture of the peace with Spain, in the year 1635.—35. The military actions of the treaty of peace at Treves, to the death of Louis the XIIIth.—36. May contain the habits and ornaments of the ancient and modern French, from the eſtabliſhment of that monarchy to the preſent time; to which may be added, thoſe of the conquered provinces, with the cries of Paris, Callot's beggars, and the rural ſports of the French.—37. A ſeries of the military actions during the reign of Louis the XIVth, the regency of the duke of Orleans, and the reign of Louis the XVth, now living.—38. A ſeries of the magnificent ceremonies, feſtivals, public rejoicings, fire-works, &c. during the ſame period.—39. Geographical deſcription of the French monarchy, as divided into provinces, parliaments, generalities, &c. to which may be added, charts of the coaſts, plans, or profiles, of the fortified towns and fortreſſes, of the principal churches, royal palaces, and public buildings, &c.—40. Maps of the States and Provinces, with plans, or profiles, of the principal towns and fortreſſes which have been added to the French monarchy, from the beginning of the reign of Louis the XIIIth, to the preſent time.—[☞ This would convince all Europe of the ſtrides of the French to UNIVERSAL EMPIRE.]—See our article FRANCE.—41. Suitable repreſentations of the

unchangeable treachery and perfidiouſneſs of the French, in regard to treaties, down to the preſent times.—[See our article PLANTATIONS.]—42. Portraits of all the eminent men in the kingdom of France, either for arts or arms, ſince the reign of Louis the XIIIth, to the preſent time; to which may be added, thoſe of Flanders and other countries.—43. Portraits of thoſe people who ought to be avoided; ſuch as the authors of different ſects of religion, of men noted for impiety or libertiniſm, &c. to which may be added, the repreſentations of monſters in the brute creation, by way of contraſt.—44. Portraits of ſaints and martyrs, and their perſecutors, with repreſentations of the various tortures inflicted on them, to the preſent time.

Pieces which illuſtrate the fine arts of painting, ſculpture, and engraving, and curious matters of antiquity, will compoſe many volumes.—The firſt may contain the origin of the art of painting, in the Egyptian hieroglyphics, ſome bas-relievo's, trophies, rings, cameo's, vaſes, urns, ornaments of architecture, ancient inſcriptions and epitaphs.—2. Pieces relating to the ancient Hebrews, with a collection of feſtivals, medals, and antique ſtatues.—3. May regard the two books of the marquis Juſtiniani's gallery, which are full of antique pieces, and the Trajan column, the moſt entire piece of antiquity extant.—4. May ſhew the decline of painting and ſculpture, during 1100 years, that the empire was on the decline, from Conſtantine to the end of the fifteenth century; which ſhould be compoſed of pieces in the Grecian, Egyptian, and Gothic ſtiles, taken from the old paintings, tombs, medals, ſeals, and tapeſtry.—5. May be the books intitled Roma Subterranea, filled with pieces in the decline of the empire, of the Gothic ſtile.—6. Should be the ſequel of the decay of arts, with ſeveral pieces from wooden plates, which ſhew the rudeneſs of their deſigns, ſince the invention of printing.—7. May be the origin of the art of engraving, about the year 1490, containing pieces of the moſt ancient artiſts; as of Iſrael and Martin Tederco, the maſter of Albert Durer; of Daniel and Jerom Hopfer, and others.—8. The works of Albert Durer, the reſtorer of painting, and great perfecter of engraving, in Germany and the Low-Countries, about the year 1520.—9. A ſequel for the works of the German and the Low-Country maſters, containing pieces of Lucas of Leyden.—10. May be filled with pieces engraven on wood, done in Germany ſince 1500, to this time, as well by Lucus Cranis, Jacob Pens, Holbeins, Hans Schanflig, as others.—11. May be a ſeries for Germany and the Low-Countries, containing pieces of the leſſer maſters, ſuch as George Pentz, Aldegraef, Lebalde, John D'Hiſpanien, &c.—12. Should be compoſed of the works of Francis Flora, who is called the Flemiſh Raphael, and thoſe of Martin Hemſkirk.—13. A ſequel for Germany and the Low-Countries, containing ſome pieces of Lambert Serave, Lambert Lambard; of Peter Brughel, John Mabuſe, M. Quintin, George Behan, Gilles Maſſart, and Gilles Coignet; of Otho Venius, Cornelius Cort, and Theodore Bernard, of Amſterdam; of Francis Klein, a Dane, and of John Strada.—14. Should be ſtill a ſequel for Germany and the Low-Countries, containing ſome pieces of Charles Mander and Francis Pourbus, of Diterlin, and Lambert Lenoir, H. Utouch, Denis Calvaert, Abraham Janſſens; of Paul Morelſer, Nicholas Hoey, Geldorp, Goltzius, Joſhua of Monpre, John Hæfnaghel, Gerard of Groningen, Cornelius Vanſichem, John Bol, David Van Boons, and Peter Vander Borcht.—15. Should contain ſome of the works of Henry Hubert, and James Julius Goltzius.—16. The works of William and Criſpin de Pas of Magdalen and Barbara de Pas, and of ſeveral others of that name.—17. A ſuit for Germany and the Low-Countries, compriſing ſome of the works of Nicholas le Bruyn, of Theodore de Bry, and of James de Gehin.—18. The works of John, Raphael, Juſtus, and Gilles Sadalaer, and alſo thoſe of Martin de Vas.—19. A ſuit for Germany and the Low-Countries, and to contain ſome pieces of Anthony and Jerom Wierx, of Lucas Veſterman, Valder, John Saenredam; of John and Herman Muller, James Mathan, Simon Phrygius, Bartholemew Dolende of Mireuelt, and the Balſwert's; of Michael Synders, Baptiſt Urintz, Hans Bel, Peter and Gerard de Sade; of Aſſuerus Londerſeel, and of Adrian Collaert.—20. Another ſuit of maſters that flouriſhed in Germany and the Low-Countries, in the beginning of the ſeventeenth century, viz. of Joſeph Heintz, John of Vingth, John Abhac, John Rottenhamer; of M. Kager, Peter Candide, and Dominic Cuſtos; of Chriſtopher Schuvarts, John Speccard, and Gerard Seghers; of Bartholomew Sprangers, Abraham Bloemaert, Anthony Van Dyck; of Abraham Brower, Gerard Hontherſt, James Jordeans, and of Robert prince Palatine.—21. Should be the works of Sir Peter Paul Rubens, a famous painter of the Low-Countries.—22. The repreſentations of night, and other dark gloomy pieces, of various maſters of all nations: as of L. Genth, J. Velde, Wittembrouck, Rembrant, Vamuliet, and others.—23. A collection of divers landſkips, done by maſters of different nations; that is to ſay, of Paul and Matthew Bril, of the Sadalaers, Peter Stephano, Cornelius Corneli, Roeland Savery of Monperche, Claude of Lorrain; of Fouquieres, Perelles; of Frederic Scalberge, Som, and the Nains, and ſeveral others; to which may be added, the pieces of ruins of Henry of Cleves, Michael Colyns, and Newland; with ſome ſea-pieces and maritime proſpects.—24. Should be another ſuit of different landſkips, viz. by Peter and John Brughel, Londerſeel, J. Velde, Tobit Verdach, Vanderloons, Merian, and others.—25. In order to ſee the re-eſtabliſhment of the art of ſculpture and engraving, ſhould contain ſome pieces of the firſt painters and engravers, as of Anthony Pollarolo, Andrew and Benedict Montegna; of Dominic Campagnola, John of Breſia, and James of Verona; as alſo of ſeveral ancient engravers, whoſe pieces are only known by their marks: as the maſters of the name of Jeſus, Mercury, the crab-fiſh, the bird, the ſtar, and ſeveral others; to which may be added ſome pieces of the firſt Italian painters, as of Giotto, Chirlandaio, or Hercules of Ferrara; of Peter of Perugia, the maſter of Raphael, and of Giorgine, the maſter of Titian. 26. Should be a ſuit of the Italian maſters, containing only ſome of the works of Raphael of Urbin, and thoſe engraven only by Mark Antonio, and Auguſtine of Venice.—27. A ſuit of the works of Raphael, engraved by the ancient maſters, from 1530 to 1560; that is to ſay, by Julius Bonaſone, Sylveſter, and Mark of Ravenna, Beatrix of Lorrain, and others.—28. Should contain ſome pieces of Michael Angelo.—29. Another ſuit of the works of the Italian maſters, containing ſome pieces of Anthony of Correggio, Francis Matzuolo, ſirnamed Parmigiano, and Polydore of Caravagio.—30. The works of Titian.—31. Should contain the works of Julio Romano, the Caracci, and Perin del Vaga, engraved by John B. of Mantua, and Diana his daughter, as alſo by Theodore Ghiſi, and George Julius of Mantua.—32. The works of the painters and ſculptors that were contemporaries of Raphael and Michael Angelo, to the end of the ſixteenth century, viz. of Baccio Bandinelle, the Salviati; of Balthazar of Peruzzi, Dominico Beccafumi; of Sodom of Sienna, Pordenone, Marcellus Venuſto, and Baptiſt, a monk of the order of Camaldoli.—33. Should contain ſome pieces of Thaddeus and Frederick Zucchero, of Daniel of Volaterra, Mark of Sienna, and Baptiſt del Moro.—34. Some pieces of Paul of Verona, Paul Farinate, the Baſſans; of Tintoret, Baptiſt Franco of Mutiano, and the elder and younger Palma.—35. Some pieces of thoſe who flouriſhed between the year 1550 and the end of the ſixteenth century, viz. of Æneas Vico, Martin Rota, and Reverdino; of Camillo Proccacini, Baptiſt Fontaner; of Cornelius Cort, Paſſaro, and Sebaſtian of Venice.—36. A ſuit of the works of the Italian engravers who flouriſhed towards the latter end of the ſixteenth, and the beginning of the ſeventeenth century; that is to ſay, of Cherubino Alberto, Villamena, of Raphael Shiaminoſa, and the Tomaſini.—37. Should contain the pieces of Francis Vanius, Ventura, Salembeni; of Civoli, Michael Angelo, Caravagio, and the three Caracci.—38. Should be a ſuit of the works of the Italian painters of the ſeventeenth century, viz. of the Capuchin friars, Piazzo, and Coſmo of Caſtel Franco; of Hippolitus Scarzelin of Schiavone, Cangiage Borgian, Charles of Venice, Paſqualin of Verona, Alexander Ceſalani, Bernard Caſtello, Veſpaſian Strada, Anaſtaſius Fontebuono, Francis of Virterbo, Luke Ciamberlani, Andrew of Ancona; of Anthony Pomerange, of Matthew and Frederic Greuter; of Philip of Naples, and Stephen Dellabella.—39. A ſuit alſo of the works of the painters and ſculptors that flouriſhed during the ſeventeenth century, viz. of Cavalier Joſepino, Guercino, Cirano, Francis the Fleming, and Marcel of Provence, the reſtorer of moſaic painting; of Gentilique, Valentin, Edward Fialetti; of Peter Beretino of Cortona, Dominichino and Guido Rheni.—40. Should be to ſhew the re-eſtabliſhment of painting in France, and contain ſome pieces of René, king of Sicily, of Leonard da Vinci, Andrew del Sarto, and Roſſo.—41. A ſuit of ſome of Primaticio's works, engraved by Leo of Aveſennes, and Anthony Jantus, his engravers; as alſo ſome pieces of Jeffrey of Montiers, Leonard of Limogues, Stephen of Loſne, René Boivin, Luke Penis, Dominic of Florence, and Leonard Thury.—42. May be filled with the works of John Courſin, John Genet, of Swiſs, of Little Bernard, Peter of Latour, Laurence the glazier, Juſtus of Egmont, and of ſeveral others engraved in France ſince the commencement of the ſixteenth century.—43. Should contain ſome pieces of thoſe maſters who flouriſhed at the latter end of the ſixteenth century, and during the reign of Henry the IVth and Mary of Medicis, viz. of Freminet de Breuil, Burnet, Caron, du Bois Lallemand, Thomas de Leu, Leonard Gaultier, and others.—44. The works of thoſe maſters who flouriſhed about the middle of the ſeventeenth century, that is to ſay, of James Blanchard, de Rabel, Ferdinand, Iſaias Fournier, John Lis Faber, and Mallerac; of Ruelle, Bellango, and James Callot.—45. Should alſo be compoſed of the works of James L'Homme, of Little Francis, Vanmol, Mellin, Queſnel, St Igny, Joſſelin, Rouſſellet, and Peter Brebiette.—46. May be filled with the works of the beſt French engravers, viz. Claudius Mellan, Gregory Huret, Peter Daret, Gilles Rouſſellet, Michael Laſne, and many others.—47. With the works of the moſt eminent French painters; that is to ſay, of Simon Voüet, Nicholas Pouſſin, James Stella, Champagne Bourbon,

Bourdon, de la Hire, Vignen, Loir, Charles de Brun, and Peter Mignard, engraved by the beſt maſters.—48. May be filled with the fineſt pieces of the moſt celebrated engravers of the ſeventeenth century.—49, 50, &c. may contain a collection of pieces of different maſters of all narions, who have been either omitted or forgotten in the preceding account, or have flouriſhed ſince the end of the ſeventeenth century, as well as of others now living, whoſe names we ſhall not ſpecify, having an equal veneration for them all.

The ſubjects of morality will alſo form ſeveral volumes, viz. 1. May contain ſome emblems of the Chriſtian worſhip.—2. May be the repreſentations of the virtues and the vices, with their ſymbols.—3. A collection of different emblems, fables, and enigmas.—4. A collection of devices of popes, king's, prelates, princes, noblemen, and others.—5. May be compoſed of a collection of hiſtorical emblems, devices, and enigmas, relating to love and death.

The mixed ſubjects will compoſe ſome volumes, viz. 1. May be a collection of the remarkable women mentioned in the Old and New Teſtaments.—2. Of holy virgins, martyrs, female ſaints, beatified nuns, &c.—3, 4. May alſo be collections of Chriſtian empreſſes, queens, and illuſtrious women of different nations.—5. The repreſentations of Roman ladies, taken from the antique ſtatues, buſto's, bas-relievo's, &c.—6. A collection of the goddeſſes of the ancient pagans, with ſome illuſtrious Egyptian, Grecian, Aſiatic, Perſian and Mahometan ladies.—7. May be filled with the portraits of women, both ancient and modern, who were either imperfect, mad, or proſtitutes.—8. May comprehend a collection of all ſorts of hunting, fiſhing, and fowling-pieces; to which may be added, a collection of remarkable animals that are treated of in the aforeſaid pieces.—9. May be filled with a number of groteſque pieces; to which may be added, a collection of all ſorts of maſquerades.

Remarks.

Our principal reaſon for enumerating the preceding particulars is, with a view to give the reader a general idea how extenſive a ſubject the article of prints may be rendered, what ſcope there is for the genius of the greateſt artiſts, and how conſiderable a branch of trade is derivable therefrom. See our articles Design, Engraving, and Painting. For theſe reaſons, it is certainly good policy to give all reaſonable public encouragement to all our own ſubjects who ſhall excel herein, that the catalogue may be ſwelled as well with the names of Britons as of foreigners; for, in that caſe, we may become exporters as well of the productions of our own celebrated maſters, as importers of thoſe of other countries. Beſides, to excel in the refined arts in general, gives a reputation and dignity to a nation in all it's commercial concerns; and, indeed, where theſe arts do not flouriſh, commerce can never arrive to that height it will do in nations where they do, they being the foundation of multitudes of other dependent trades.

It is needleſs to ſay a word in favour of an art ſo apparently uſeful in other reſpects, it tending to communicate an univerſal knowlege of nature and hiſtory, men and things, in general, in the moſt familiar manner, and greatly to aid and aſſiſt the memory in the retention of what we may have read for the embelliſhment of the mind, and the improvement of the underſtanding.

The elegancies of life, to a polite and wealthy people, become neceſſaries; the very natural wants of a refined Briton and a ſavage Indian are not the ſame. Artificial deſires, by long habit, work themſelves into our conſtitution, and in the next generation become, as it were, innate. A new refinement creates a new deſire, as importunate as any of the immediate calls of nature, when we once perceive the gratification within the reach of a little more induſtry.

Hence a peculiar paſſion ariſes, uſeful, like all the reſt, under proper regulation, and productive of much ſocial good, ſerving both to excite our own induſtry and that of others, to carry the ſtandard of genius, and rational invention ſtill higher, and to find endleſs employment for an increaſing people. Luxury, if the name were not in ill repute, might be diſtinguiſhed into virtuous and vicious: ſo far as it partakes of invention, and diſcovers the application of the higher gifts of God in the creation, it is virtuous; and grows vicious only, when we are tempted by it to an abuſe of theſe improvements.

The lower branches of manufacture, wherein the price is paid chiefly to labour, contribute moſt to the increaſe of labouring hands. The trades of refinement are no ways comparable to theſe, for the number they employ. The arts of elegance are in next eſteem, wherein we are an age behind our neighbours; what theſe may want in merit, as to increaſe of numbers, they make up in that of wealth, the price of art riſing above labour, in proportion as genius is a ſcarcer commodity than ſtrength.

There is nothing incompatible in the arts of ingenuity and thoſe of labour; and all the plainer trades may be retained, notwithſtanding the higher arts are introduced, in which caſe we ſhould be both a richer and a greater people.

This art is the parent of many others: it is the parent of Design in general, and that is the great parent of numberleſs uſeful and elegant arts and trades. An academy for the fine arts under a royal charter has been long talked of in this nation, and why it ſhould be ſo long neglected is matter of concern.

In the liberal ſciences in the knowlege of nature, and the means of conveying it, we are not inferior to any other nation in Europe. He that deſigns, as well as he that writes, muſt find his advantage in this; ſince the learning of the hiſtorian, poet, and philoſopher, are as requiſite to the accompliſhed painter, as to him that is diſtinguiſhed by either of thoſe particular appellations. At leaſt, the painter cannot univerſally excel without a tincture of all thoſe ſciences, in which the profeſſors of literature are ſeverally and diſtinctly excellent.

But the greateſt pre-requiſite, the moſt eſſentially neceſſary of all qualifications, is ſkill in drawing. Without this, neither the genius nor learning of the deſigner, painter, or ſculptor, can be diſplayed to advantage. It is the ſine quâ non, after all other accompliſhments are obtained.

Monſieur de Voltaire obſerves, that the Italians, on the revival of the liberal arts and ſciences, gave them the name of Virtue. From this word was derived the term Virtuoſo, which has been accepted throughout Europe, and is of daily uſe in England. Should not this appellation intimate, to thoſe who aſſume it to themſelves, that the ſtudy of what is beautiful, in nature or art, ought to render them more virtuous than other men?

That theſe ſtudies have really ſuch a tendency, when not perverted to laſcivious or immoral purpoſes, is undeniable: and whether, when thus perverted, they ought to be ranked among the ornaments of life, I very much doubt. We are certain that the poets, artiſts, and philoſophers, who have acquired the higheſt ſeats in the temple of Fame, are not thoſe who proſtituted their genius or ſkill to the gratification of the ſenſual and culpable paſſions.

The painter, the ſculptor, the architect, (who, with the muſician, are properly diſtinguiſhed from other artiſts by the epithet liberal added to their profeſſions) have ſo near an affinity with the poet, the philoſopher, the orator, and the geometrician, that there needs no apology for the frequent parallel we have made betwixt them. A noble and admired author, no leſs an one than the earl of Shafteſbury, has done the ſame; and whilſt he preſers the artiſt of genius, to the mere ſcholar by profeſſion, gives ſuch reaſons for it, as I ſhould do myſelf an injury not to tranſcribe.

'Hardly can I forbear, ſays his lordſhip, making ſome apology for my preſent recourſe to the rules of common artiſts, to the maſters of exerciſes, to the academies of painters, ſtatuaries, and the reſt of the virtuoſo tribe. But in this I am ſo fully ſatisfied I have reaſon on my ſide, that, let cuſtom be ever ſo ſtrong againſt me, I had rather repair to theſe inferior ſchools to ſearch for truth and nature, than to ſome other places, where higher arts and ſciences are profeſſed.

I am perſuaded that to be a virtuoſo (ſo far as befits a gentleman) is a higher ſtep towards the becoming a man of virtue and good ſenſe, than the being what in this age we call a ſcholar; for even mere nature itſelf in it's primitive ſimplicity, is a better guide to judgment, than improved ſophiſtry and pedantic learning. The faciunt, næ, intelligendo, ut nihil intelligunt, will be ever applied by men of diſcernment and free-thought to ſuch logic, ſuch principles, ſuch forms and rudiments of knowlege, as are eſtabliſhed in certain ſchools of literature and ſcience. The caſe is ſufficiently underſtood, even by thoſe who are unwilling to confeſs the truth of it. Effects betray their cauſes. And the known turn and figure of thoſe underſtandings, which ſpring from nurſeries of this kind, give a plain idea of what is judged on this occcaſion.

To imitate nature agreeably, is undoubtedly the perfection of art; but this can be done only by a good eye, which makes a beautiful choice among the objects that nature preſents.' This is well explained by the ſame noble author, whoſe thought, attentively conſidered, might reconcile thoſe who diſpute concerning the propriety and juſt extent of that imitation.

'A painter, ſays his lordſhip again, if he has any genius, underſtands the truth and unity of deſign; and knows he is even then unnatural, when he follows nature too cloſe, and ſtrictly copies life. For his art allows him not to bring all nature into his piece, but a part only. However, his piece, if it be beautiful and carries truth, muſt be a whole by itſelf, complete, independent, and withal, as great and comprehenſive as he can make it. So that particulars, on this occaſion, muſt yield to the general deſign, and all things be ſubſervient to that which is principal. In order to form a certain eaſineſs of ſight, a ſimple, clear, and united view, which would be broken and diſturbed by the expreſſion of any thing peculiar or diſtinct.'

An

An act for the encouragement of the arts of deſigning, engraving, and etching hiſtorical and other prints, by veſting the properties thereof in the inventors and engravers, during the time therein mentioned.

Whereas divers perſons have by their own genius, induſtry, pains, and expence, invented and engraved, or worked in mezzotinto, or chiaro oſcuro, ſets of hiſtorical and other prints, in hopes to have reaped the ſole benefit of their labours: and whereas printſellers, and other perſons have of late, without the conſent of the inventors, deſigners, and proprietors of ſuch prints, frequently taken the liberty of copying, engraving, and publiſhing, or cauſing to be copied, engraved, and publiſhed, baſe copies of ſuch works, deſigns, and prints, to the very great prejudice and detriment of the inventors, deſigners, and proprietors thereof; for remedy thereof, and for preventing ſuch practices for the future, may it pleaſe your Majeſty that it may be enacted, and be it enacted by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in this preſent parliament aſſembled, and by the authority of the ſame, That from and after the twenty-fourth day of June, which ſhall be in the year of our Lord 1735, every perſon who ſhall invent and deſign, engrave, etch, or work in mezzotinto, or chiaro oſcuro, or, from his own works and invention, ſhall cauſe to be deſigned and engraved, etched, or worked in mezzotinto or chiaro oſcuro, any hiſtorical or other print or prints, ſhall have the ſole right and liberty of printing and reprinting the ſame for the term of fourteen years, to commence from the day of the firſt publiſhing thereof; which ſhall be truly engraved with the name of the proprietor on each plate, and printed on every ſuch print or prints; and that if any printſeller, or other perſon whatſoever, from and after the ſaid 24th day of June, 1735, within the time limited by this act, ſhall engrave, etch, or work, as aforeſaid, or in any other manner copy and ſell, or cauſed to be engraved, etched, or copied and ſold, in the whole or in part, by varying, adding to, or diminiſhing from the main deſign, or ſhall print, reprint, or import for ſale, or cauſe to be printed, reprinted, or imported for ſale, any ſuch print or prints, or any parts thereof, without the conſent of the proprietor or proprietors thereof firſt had and obtained in writing, ſigned by him or them reſpectively, in the preſence of two or more credible witneſſes, or, knowing the ſame to be ſo printed or reprinted without the conſent of the proprietor or proprietors, ſhall publiſh, ſell, or expoſe to ſale, or otherwiſe, or in any other manner diſpoſe of, or cauſe to be publiſhed, ſold, or expoſed to ſale or otherwiſe, or in any other manner diſpoſed of, any ſuch print or prints, without ſuch conſent firſt had and obtained, as aforeſaid; then ſuch offender or offenders ſhall forfeit the plate or plates on which ſuch print or prints are or ſhall be copied, and all and every ſheet or ſheets (being part of, or whereon ſuch print or prints are or ſhall be ſo copied or printed) to the proprietor or proprietors of ſuch original print or prints, who ſhall forthwith deſtroy and damaſk the ſame; and further, that every ſuch offender or offenders ſhall forfeit 5s. for every print which ſhall be found in his, her, or their cuſtody, either printed or publiſhed, and expoſed to ſale, or otherwiſe diſpoſed of contrary to the true intent and meaning of this act; the one moiety thereof to the king's moſt excellent Majeſty, his heirs and ſucceſſors, and the other moiety thereof to any perſon or perſons that ſhall ſue for the ſame, to be recovered in any of his Majeſty's courts of record at Weſtminſter, by action of debt, bill, plaint, or information, in which no wager of law, eſſoign, privilege, or protection, or more than one imparlance ſhall be allowed.

Provided nevertheleſs, That it ſhall and may be lawful for any perſon or perſons, who ſhall hereafter purchaſe any plate or plates for printing from the original proprietors thereof, to print and reprint from the ſaid plates, without incurring any of the penalties in this act mentioned.

And be it further enacted by the authority aforeſaid, That if any action or ſuit ſhall be commenced or brought againſt any perſon or perſons whatſoever, for doing or cauſing to be done any thing in purſuance of this act; the ſame ſhall be brought within the ſpace of three months after ſo doing; and the defendant and defendants, in ſuch action or ſuit, ſhall or may plead the general iſſue, and give the ſpecial matter in evidence; and if upon ſuch action or ſuit a verdict ſhall be given for the defendant or defendants, or if the plaintiff or plaintiffs become nonſuited, or diſcontinue his, her, or their action or actions, then the defendant or defendants ſhall have and recover full coſts, for the recovery whereof he ſhall have the ſame remedy, as any other defendant or defendants in any other caſe hath or have by law.

Provided always, and be it further enacted by the authority aforeſaid, That if any action or ſuit ſhall be commenced or brought againſt any perſon or perſons, for any offence committed againſt this act, the ſame ſhall be brought within the ſpace of three months after the diſcovery of every ſuch offence, and not afterwards; any thing in this act contained to the contrary notwithſtanding.

And whereas John Pine of London, engraver, doth propoſe to engrave and publiſh a ſet of prints copied from ſeveral pieces of tapeſtry in the houſe of lords, and his majeſty's wardrobe, and other drawings relating to the Spaniſh invaſion, in the year of our Lord 1588; be it further enacted by the authority aforeſaid, That the ſaid John Pine ſhall be intitled to the benefit of this act, to all intents and purpoſes whatſoever, in the ſame manner as if the ſaid John Pine had been the inventor and deſigner of the ſaid prints.

And be it further enacted by the authority aforeſaid, that this act ſhall be deemed, adjudged, and taken to be a public act, and be judicially taken notice of as ſuch by all judges, juſtices, and other perſons whatſoever, without ſpecially pleading the ſame.

Remarks.

This act has given ſome little encouragement to thoſe artiſts, but is no way equivalent to the difficulties and diſcouragements under which they have long laboured, by printſellers and others, as I could inſtance, though it is apparent that they have manifeſted talents no way inferior to the artiſts of any other nation: ſo great is this merit, that they ſtand in need of nothing but the effectual patronage of the great to render them ſuperior to any other artiſts in all Europe. See the articles Engraving and Design.

PRISAGE and BUTLERAGE.

I. * Priſage is a certain taking or purveyance of wines to the king's uſe, out of every ſhip bringing in wines, belonging to the natives of England, except thoſe particularly hereafter exempted, being the only duty or cuſtom that was anciently payable for the ſame to the kings of England: † and that the king's butler might not take more than was really neceſſary for the king's uſe, the ſteward of the king's houſe, and treaſurer of the wardrobe, were to ſend the certain quantity to all the ports of England, the which he was to take within ten days.

* 40 Hen. III. 28 Edw. I. 6 Edw. III. 20 Rich. II.
† 20 Edw. III. cap. 21. 43 Edw. III. cap. 3.

This duty is not due 'till the unlading or breaking of bulk, for the words are, De qualibet nave importante vina & diſonerante inde, ſo that the breaking of bulk, or the landing of any part of the cargo, ſubjects the ſhip to the whole duty, according to the quantity on board, though there be not more than one ton landed; therefore, when there are any wines on board, deſigned for foreign parts, the maſter ſhould diſtinguiſh them in his report, from thoſe which are to be landed in England: and when priſage is taken at any one port, and the ſhip proceeds to another, the collector of that port ſhould be acquainted thereof, by noting it on the back of the maſter's report, which he is to carry with him, to prevent it's being taken again.

This duty is either ſingle or double.

Single priſage is one ton, and is due in kind, when the quantity imported amounts to, or exceeds, 10 tons, but is under 20 tons: for if under ten tons, there is not any priſage due.

Double priſage is two tons, and is due in kind, when the quantity imported amounts to, or exceeds, twenty tons, which is the moſt due out of any one ſhip: one ton to be taken before the maſt, and the other behind the maſt, at the pleaſure of the king's butler or priſage-maſter; who may taſte the whole cargo, and chuſe the beſt wines, and fill up the veſſels, or chuſe thoſe that are the fulleſt, and take them away, allowing only * 20s. per ton for freight; or if the owners had rather, he may compound with them for the whole quantity at a certain price, as is the practice in London, and moſt other ports.

* 28 Edw. I. cap. 2.

But note, if any merchant brings in, to the quantity of above nine or nineteen tons, be it but a tierce or upwards, whereby to evade the payment of priſage, he is liable to the ſame, as if the full quantities of ten or twenty tons had been imported; or if any ſhip brings into the quantity of priſage at ſeveral times within the compaſs of the ſame vintage, this duty is due as if all thoſe quantities had been imported all together; or if any merchant enters any quantity of wines in ſeveral bottoms at the ſame time, or at ſeveral times within the compaſs of the ſame vintage, in the whole quantity amounting to priſage, the ſame is due, as if imported in one bottom, and at one time.

But king Edward III. by his charter, dated 6 Martii, anno regno primo, granted a diſcharge from priſage to the mayor, commonalty, and citizens of London, in hæc verba, quod de vinis civium, nulla priſa fiat, ſed perpetuo inde eſſent quieti, &c. which was afterwards allowed in the Exchequer. Though it is not every citizen that is capable of this exemption, but only thoſe that are reſident within the city, being freemen and houſekeepers, paying ſcot and lot; for he that would

would claim the benefit of this diſcharge, ought to be civis & incola commorans: for upon complaint that the lord mayor of London made ſtrangers citizens, it was declared by an act of the 4th of Henry VI. (a private act) that the diſcharge from priſage ſhould not extend to ſuch citizens as were donati, made free, but only to ſuch as commorant, incolant, and are reſident in the city: and not only the merchants of London, but alſo of the Cinque Ports, Southampton, and Cheſter, are exempted from priſage by particular charters; yet if an inhabitant of any other place, ſhould conſign wines to be delivered and landed at any of thoſe places, the bare diſcharge of the goods will not acquit the importer; for it is not the party's importation, but his domicil that exempts him.

II. * Butlerage is a duty of two ſhillings for every ton of wines, for which freight is to be paid, brought into this realm by merchant-ſtrangers; being a compoſition (in lieu of the duty of priſage payable in kind by Engliſh only, and from which ſtrangers were exempted) in conſideration of the liberties and freedoms firſt granted by king John, and afterwards by king Edward the Iſt, to all merchant-ſtrangers by theſe words, in a charter called † charta mercatoria; Conceſſerunt de quo libet doleo vini quod adducent, vel adduci facerent, infra regnum, &c. ſolvent nobis & hæredibus noſtris, nominæ cuſtumæ, duos ſolidos, &c.

* Book of Rates referred to by 12 Car. II. cap. 4.
† 31 Edw. I. cap. 1 & 2. 27 Edw. III. cap. 26.

With regard to thoſe duties of priſage and butlerage, it muſt be obſerved, That if * wines are entered in another man's name, in order to defraud the king of the duty, the penalty is double the value of the priſage, and all the offender's goods and chattels perſonal for ever, provided the proſecution be within three years: and that the † collector, comptroller, and ſurveyor, are not to take any man's entry of wine, 'till he hath produced the butler's or his deputy's bill, teſtifying that he hath ſeen the ſame.

* 1 Hen. VIII. cap 5. §. 6, 7. 2 & 3 Edw. VI. cap. 22. §. 3, 4, 5. 1 Eliz. cap. 11. §. 6.
† In Rot. Scac. Term. Sanct. Hil.—7 Eliz.

And though by the * act of tonnage and poundage, a ſubſidy and additional duty were laid upon all ſorts of wines imported, yet as the priſage of wines, or priſe wines were exempted from thoſe duties, the duties of priſage and butlerage were ſtill continued and confirmed to be paid in like manner as before.

* 12 Car. II. cap. 4. §. 15.
† 12 and 27 Rules of the Book of Rates.

Though priſage and butlerage (which were originally the only duties due upon the importation of wines) were taken and received for the proper uſe of the crown; yet for many years paſt, the kings of England have been pleaſed to grant the ſame to ſome nobleman, who by virtue of his patent or grant, is to enjoy the full benefit and advantage thereof, and may cauſe the ſame to be levied and collected in the ſame manner as the kings themſelves might, and were formerly wont to do, and under the ſame pains and penalties.

The patentee or proprietor of theſe duties, appoints a deputy in every port (uſually the collector of the cuſtoms) to levy and collect the ſame for him, in the beſt manner he can, by taking the priſage either in kind, or by making a compoſition, the latter whereof is the moſt uſual method.

And when priſage is compounded, it is by paying a certain rate per ton, according to agreement made with the priſage-maſter, for all the wines on board each ſhip, liable to this duty: but as there is a difference in favour of the priſage-maſter, between the cuſtoms and other duties due to the crown, which are to be paid by him and the merchant; ſo that if the merchant compounds, and enters the quantity for priſage, which, if taken in kind, muſt have been entred by the priſage-maſter, he will pay leſs duty to the king for the ſaid quantity; therefore, in this caſe, over and above the compoſition aforeſaid, ſuch difference in the duties muſt be allowed to the priſage-maſter, unleſs the compoſition be at ſuch an high rate as ſhall be equivalent.

Some law caſes relating thereto.

King Edward I. having laid ſome impoſitions on the merchants, which in the twenty-fifth year of his reign were taken away, with promiſe that neither he nor his ſucceſſors ſhould do the like, without aſſent of parliament, in the 31ſt year of that king they granted him an increaſe of cuſtoms: in lieu of which, he granted to ſome places divers immunities, as releaſe of priſage, &c. And king Edward III. by his charter, dated the 6th of March, in the firſt year of his reign, granted to the mayor, commonality, and citizens of London, that they ſhould be for ever diſcharged from priſage of wine; which charter was afterwards allowed in the Exchequer. 44 Eliz. It has been held, that it is not every citizen of London that is capable of this privilege, but only thoſe citizens that are reſident within the city; ſo it was ruled in the caſe of one Knowles, who being a citizen and free grocer of London, removed with his houſhold to Briſtol, where he dwelt, but yet kept his ſhop in London; and a ſhip of his arriving with wines at London, and being unladen, the priſage was demanded: he claimed the benefit of diſcharge as a citizen, theſe being his own proper goods. It was adjudged he was not intitled to the ſame; for he who claims the benefit of his exemption, ought to be a citizen and inhabitant there. In this caſe, it was ſaid for the defendant Knowles, that if a perſon unlade his wines before priſage paid, then the king's officer cannot have his election. Trin. 4. Hen. VI.

If a ſhip bound for the port of London, ſhould by ſtreſs of weather or otherwiſe, be forced into any other port, in ſuch caſe the citizens are to enjoy their privilege, as well as if the ſhip had arrived at London. Hardr. 311. In caſe ſeveral ſhips of burden import wine into a port in ſmall parcels, as where only nine tons and three hogſheads were imported in each veſſel; this was held to be fraud, and that priſage ſhould be paid for them: and, in equity, it hath been the uſual cuſtom to cauſe ſingle priſage to be paid for nine tons and a half; but not if it be only nine tons imported. Hardr. Rep. 218, 477.

The king granted to a Venetian merchant, that he ſhould be quit of all cuſtoms, ſubſidies, and impoſitions, and all other ſums of money, debts and payments, for any merchandizes whatſoever imported, and that he ſhould be as free as the citizens of London; notwithſtanding theſe particular words in the grant, it was reſolved in the Exchequer, that by that grant he was not diſcharged from priſage, becauſe the priſage is not ſpecially expreſſed therein, although the city of London were, by a ſpecial charter, free of priſage. The lord mayor of London cannot make ſtrangers-citizens to be diſcharged from payment of priſage. Davis's Rep. Hil. 43 Eliz. B. R.

Priſage is not due and demandable 'till the bulk is broken: but if a foreigner brings a ſhip, laden with wines, to a port with intent to unlade, and before the goods are entered, or bulk broke, he ſells them to a citizen, priſage ſhall be paid; for the kings grant ſhall not diſcharge any citizen in ſuch a manner. If the king, by grant, diſcharges a certain ſhip of A. being at ſea, particularly naming the ſame, from paying priſage, and the owner dies before the ſhip arrives, no duty can be demanded; it is otherwiſe if a particular perſon has a grant to him to be diſcharged of his goods, and he dies before the arrival there, the duty ſhall be paid. Hil. 13. Jac. I.

An information being brought by Sir Thomas Waller, chief butler to king James I. againſt Frances Hanger, widow, for detaining eight tons of wine due for priſage, ſetting forth that two ſhips laden with wines, belonging to George Hanger, came to the port of London, and afterwards two more, in which four ſhips there were 124 tons of wine, whereof eight tons were due to the king, and that the defendant, who was the widow of the ſaid George Hanger, refuſed to deliver them: the defendant confeſſed that the four ſhips did arrive in the port of London; two in the life time of her huſband, and two after his death, and that he was poſſeſſed of the ſaid wines ut de bonis propriis; and being ſo poſſeſſed thereof, made her his executrix, and died: that ſhe proved her huſband's will, and took upon her the executorſhip, and did unlade thoſe two ſhips which arrived after the death of her huſband; then ſhe pleaded the grant, Old 3. unto the mayor, &c. of London, quod de vinis civium, of citizens wine, no priſage ſhall be taken, but that they ſhall for ever be diſcharged of the ſame, and denied that theſe wines were her goods; for that ſhe had nothing in them, but as executrix to her huſband, and that he was a freeman and citizen of London. Upon this plea, it was a queſtion, whether priſage was due for thoſe wines, and adjudged, that the huſband was a citizen of London at the time of his death, and that the wines were bona civi, and ſo within the grant; and by conſequence diſcharged from the payment of priſage in the hands of the executrix, who repreſented his perſon. Trin. 11. Jac. Bridgm. 1, 2. Bulſt. 250.

This great caſe was ſeveral terms, and in divers courts depending, wherein there was a diverſity of opinions among the judges; ſome inſiſted, that priſage ought here to be paid unto the king, eſpecially for the two laſt ſhips, for the widow and executrix has the wines in another's right. And as to the p ivilege of diſcharge, the difference ought to be, where the goods are attached in the life of the huſband, and where after his death; when it is in his life-time, and he dies the ſame day, yet the diſcharge ſhall continue; but here the ſame was after his death: and theſe are not the wines of George Hanger now, for that he is dead, and he hath no goods, nor is he now a citizen; and the diſcharge here ſhould go only to the perſon of a citizen. But the lord chief juſtice Coke held, that this privilege, to be exempt from priſage, is not ſo much tied to the perſon, but alſo to the wines of citizens, and the charter itſelf goeth unto them; and the diſcharge is of wines as of a chattel, and then a repreſentative ſhall be within the compaſs of a grant; alſo an executor ſhall not forfeit the goods which he hath as executor; and the reaſon is, becauſe they ſtill are the goods of the dead: here George

Hanger was a complete citizen in every reſpect, and ſo continued 'till his death; and theſe wines, in the hands of his executrix, are bona civium, and therefore within the extent of this grant, to be freed from priſage. 3 Bulſt. 2, 23, 26. By the act of tonnage and poundage, 12 Car. II. c. 4. it is declared, that the priſage of wines ought not to pay tonnage or cuſtom, and ſhall not be charged with the payment of any cuſtom, ſubſidy, or ſum of money, impoſed upon wines by this ſtatute, or any thing therein contained. But in the 1 Jac. II. c. 3. there is a proviſo, that no merchant ſhall be charged with any duty granted by this act for the priſage of wine, which he imports in any ſhip or veſſel; but that it ſhall be received and taken from the perſon who hath the benefit of the ſaid priſage wine, who is hereby appointed to pay the ſame. And by a late * act, which makes allowances to merchants importers, out of the ſeveral duties laid on wines for ſuch wine as is damaged; it is enacted, That the ſaid allowances ſhall be made, not only to the merchant at importation, but alſo to the priſage-maſter, or proprietor of the duties of priſage: though it is here declared, that any thing in this act contained, or to be done in execution thereof, ſhall not extend to diminiſh or leſſen the duties of priſage and butlerage of wine, due upon the importation of the ſame; but that the ſaid duties ſhall be collected and received, in the ſame manner as if this act had never been made.

* The ſtatute 6 Geo. I. c. 12. §. 2 & 7.

In a late caſe, where an action was brought for money received to the uſe of the plaintiff, a ſpecial verdict was found by the jury; that king Charles I. gave to J. S. and his heirs, the duty of priſage of all wines imported, to hold the ſame, diſcharged of all aids and taxes; and the queſtion was, Whether the grantee ſhould pay tonnage or not? It was here obſerved, that the duty of tonnage was firſt impoſed by 12 Car. II. viz. 4 l. 10 s. on all French wine; then comes 1 Jac. II. c. 3. and impoſes 8 l. per ton on French wines, with a clauſe, that the grantee of priſage ſhould pay the duty: after this the 7 and 8 W. III. c. 20. impoſes 25 l. a ton; and then comes 9 & 10 W. III. c. 23. which grants an additional duty of 4 l. 10 s. per ton, to be levied as by the ſtatute 12 Car. II. On this remarkable cauſe in the court of exchequer, it was there adjudged, that the ſaid grantee of the priſage wine ſhould not pay the duty of tonnage: but, upon this, a writ of error was brought in the Exchequer Chamber, and the judgment was there reverſed. Hil. Term 8 Ann. Paul againſt Shaw.

It was argued, that the grantee of priſage was an antient and royal revenue, and if the crown had not granted it away, tonnage could not be due to the queen, for ſhe could not pay that duty out of her own priſage; therefore the grantee claiming under the crown, ought to have the ſame privilege and exemption, and the rather, becauſe it was granted to him with this immunity. To this it was anſwered, and accordingly reſolved, that tonnage ſhould be paid for priſage wines, by the grantee of priſage; becauſe, immediately on importation, this duty attaches upon the wines, and therefore, whatever part the grantee receives for priſage, he takes it charged with the duty; otherwiſe it would be raiſed on the people to enrich a private man, which could never be the intent of the law-makers: it is true, the queen could not be charged with a duty to herſelf, but the duty revives when priſage comes to a ſubject; and as to the covenants of diſcharge, in this grant of Charles I. they could only extend to the tonnage then in being, and which he then had, and not to what he had not, or might afterwards be given to his ſucceſſors. 2 Salk. Rep. 617. 1 Nelſ. Abr. 585. See the end of every letter relative to the BUSINESS OF THE CUSTOM-HOUSE.

PRIVATEERS and PRIZES. A privateer is a kind of a private man of war, though the commiſſion be not reckoned very honourable: the uſe of them is not very antient, and ſome perſons account thoſe but one remove from pirates; who, without any reſpect to the cauſe, or having any immediate injury done them, or not being ſo much as hired for the ſervice, ſpoil men and goods, and innocent traders, making a traffic of it, amidſt the calamities of a war.

That privateers in general are lawful when under right conduct, there is no room to queſtion; for if a war be entered into on a juſt foundation, they cannot be unjuſt: all ways of bringing an enemy to reaſon, which are not againſt the laws of nations, are allowed; and it is no matter whether a perſon ſo commiſſioned is paid by the prince, or content to pay himſelf out of the ſpoils of the enemy; or if he acts for no pay at all, but out of love to his country, and loyalty to his prince.

It has therefore been cuſtomary, ſince the trade of Europe hath been ſo extenſive, for princes and ſtates, in caſe of a rupture with other princes, to iſſue forth commiſſions to private men, to equip ſhips of war; and the perſons concerned in privateers, adminiſter at their own coſts a part of a war, by providing ſhips of force, and all other military utenſils, to endamage the enemy; and they have, inſtead of pay, leave granted to keep what they can take from an enemy, allowing the admiral his ſhare, &c.

Beſides the common private commiſſions, there is mention of ſpecial commiſſions granted to perſons that take pay, who are under diſcipline; and if they do not obey orders, may be puniſhed with death. And the wars in later ages, have generally given occaſion for the iſſuing commiſſions to annoy the enemies in their commerce, and hinder ſuch ſupplies as might ſtrengthen them, or lengthen out the war; and likewiſe to prevent the ſeparation of ſhips of greater force from their fleet.

By a law made in the 6th year of queen Anne, the lord high admiral, or commiſſioners of the admiralty, during the war, were empowered to grant commiſſions to commanders of Britiſh ſhips (on their giving ſecurity as uſual, upon granting ſuch commiſſions, except for payment of the tenths to the lord admiral) for the ſeizing and taking ſhips and goods belonging to enemies, in any ſea or river in America, &c. and perſons ſerving on board privateers, &c. are not to be impreſſed by any ſhip of war, under 20 l. penalty.

Privateers may not attempt any thing againſt the law of nations; as to aſſault an enemy in a port or haven, under the protection of any prince or republic, be he friend, ally, or neuter; for the peace of ſuch places muſt be kept inviolably. When theſe private commiſſions are granted, there is always great care to be had and taken, by caution to preſerve the leagues of our allies, neuters and friends, according to their ſeveral treaties; and therefore, by a marine treaty, between king Charles II. and the ſtates of Holland [ſee the article MARINE TREATY], made at London in the year 1674, before a commiſſion ſhall be granted to any privateer or caper, the commander is to give ſecurity in 1500 l. and if ſuch ſhips have above one hundred and fifty men, then in 3000 l. &c. that they will make ſatisfaction for all damages, which they ſhall commit in their courſes at ſea, contrary to treaties with that State; upon pain of forfeiting their commiſſions, and anſwering ſuch damage, for which the ſhip is made liable.

By other articles in the ſaid treaty, if torture, cruelty, or any barbarous uſage, after a caption, be done to the perſon taken in the prize, the ſame ſhall diſcharge ſuch prize, although ſhe was lawful; and the captains ſhall loſe their commiſſions, alſo both they and the offenders be ſubject to puniſhment. This agreement between the Engliſh and Dutch, is fit to be a ſtandard to all nations whatſoever; and by the treaty of Utrecht, there is an article with France to the ſame purpoſe.

Ships carrying powder, ſhot, and other warlike inſtruments and proviſions of armature for ſea or land, bound for an enemy from a neuter nation, or a ſtate in amity with both the warring ſtates, ſhall be taken as prize, and ſo may money, victuals, &c. But this muſt be in a time of neceſſity, when the war is ſo bad, that a prince cannot poſſibly defend himſelf or damage the enemy, without intercepting of ſuch things. And, according to ſome treaties, thoſe goods which may be uſed out of war as in war, (except ſhips) ſhall not be called prohibited, nor liable to condemnation, unleſs carried to places beſieged: and goods made uſe of for pleaſure and luxury only, are free, and not reckoned among ſuch as are prizable in neutral ſhips. Molloy Jur. Marit. 29.

If a part of the cargoe of a ſhip, taken by a privateer, be prohibited goods, and the other part not prohibited; but ſuch as, according to the neceſſity of the war, ſhall be ſo deemed, that may draw on a conſequential condemnation of the ſhip as well as lading.

In caſe part of the lading is prohibited, and the other part merely for pleaſure, the goods prohibited only ſhall be adjudged prize, and the ſhip, and the reſt of the cargo be diſcharged; which may proceed in the voyage, on delivering up the other goods, without being brought into port: but if a ſhip be wholly laden with contraband goods, both the ſhip and goods may be made prize. Ibid. 30.

If any ſuch ſhips ſhall be attacked, in order to be examined, on their refuſing to ſubmit they may be aſſaulted; and if the perſons on board do not ſurrender themſelves, the ſhips may be entered by force, and the perſons reſiſting be ſlain. But where a commander of a privateer wilfully commits any ſpoils on the ſhips or friends of neuters, or on the ſhips of their fellow ſubjects, according as the circumſtances of the crime are more or leſs heinous, he is liable to puniſhment by death or otherwiſe, and the ſhip to be forfeited. Trin. 3 Jac. in B. R.

The owners of privateers are not to convert any part of their captures to their own uſe, until they are condemned as prize: and whether a ſhip be prize or not ſhall be tried in the admiralty, and no prohibition ſhall be granted: as was reſolved, where in time of war between us and Denmark, a privateer belonging to Scotland took a Daniſh ſhip, and ſhe was condemned by the admiralty of Scotland, and ſold; whereupon a perſon ſuggeſted in the admiralty of England, that ſhe was not a Daniſh veſſel, but a ſhip of London, which belonged to an Engliſh merchant, and being to diſpute the property, it was inſiſted, could not be tried there: the court held that the

defendant

defendant had no property but by the ſale, and the only queſtion was, prize or no prize; therefore they would ſtay nothing, nor award a prohibition. 2 Keb. Rep. 158, 176.
In an action of trover for a ſhip, tackle and furniture, whereof a Dutchman born, but a denizen of England, was the owner; it appeared, that in the war between France and Holland ſhe was taken as a Dutch prize, and condemned in the court of admiralty in France, and there ſold to the plaintiff: after which, the defendant, as ſervant to the owner, took her from the plantiff to whom ſhe was ſold: it was here adjudged, that the ſentence of the admiralty of France ſhould not be examined in this action, and the plantiff had judgment. Raym. 473.
Our laws take not much notice of privateers; but the diligence of enemies hath, times paſt, obliged us to be alſo diligent in this way, and therefore ſome acts of parliament have been made for the encouragement of privateers, and ordering of prizes; as particularly the ſtatute 4 & 5 W. & M. cap. 25. which enacted, that all veſſels with their ladings, and all goods and merchandizes that ſhall be taken and ſeized as prize, ſhall be brought into ſome ports of this kingdom; and, before breaking of bulk, put into the poſſeſſion of the commiſſioners of prizes, or their agents, who, with two or more perſons, as the officers and mariners of the reſpective ſhips ſhall intruſt, and ſuch as ſhall be appointed by the commiſſioners of the cuſtoms, are to preſerve the ſame, 'till they ſhall be adjudged prize, except where it ſhall appear to the judge of the admiralty, that the goods are periſhable; in which caſe bail ſhall be taken for them, yet ſo as to be ſubject to ſale and diſtribution, as provided by this act.
After ſuch goods and merchandize ſo taken, ſhall be adjudged prize, they ſhall, as ſoon as conveniently it may be done, be ſold by the commiſſioners for prizes, &c. in the preſence of perſons entruſted by the commiſſioners of the cuſtoms, and the owners, officers, and mariners of the ſhips of war, publickly by inch of candle, notice being given fourteen days before, of the quantity and quality of the things to be ſold, and of the time and place of ſale; and the proceed of ſuch ſale, after the cuſtom duties are paid and deducted, in caſe ſuch prize were taken by a private man of war, ſhall be divided into five parts; four parts whereof to be anſwered to the perſons intereſted in the privateer, and the fifth to their Majeſties; and the ſhip, with it's furniture, is to be enjoyed by the perſons intereſted in the privateer.
And if the prize be taken by any of the king's ſhips, the nett proceed ſhall be divided into three parts; one third to be anſwered to the commander, officers, and mariners, taking the ſame, according to the cuſtom of the ſea for ſharing prizes, &c. (a third of which is to be diſtributed among the ſhip's crew) one third part to be paid to the treaſurer of the navy, for the relief of ſick and wounded mariners, and the widows, children, and impotent parents, of perſons ſlain at ſea, in their Majeſties ſervice, and the other third part to the uſe of their Majeſties: and in caſe a prize be taken by a merchant's ſhip, employed in the ſervice of the crown, the proceed thereof ſhall be divided in like manner, as ſhips taken by men of war.
If any perſons, who ſhall take ſuch prize or prizes, ſhall embezzle or conceal any parts of the goods or merchandize, or put the ſame on ſhore, in any other place than their Majeſties warehouſes, they ſhall forfeit their ſhare of ſuch goods, upon proof made of it by one or more witneſſes upon oath before the commiſſioners of the cuſtoms in the port of London, if the offence be committed within the ſaid port; and before the chief magiſtrate of the place, in the preſence of the chief officer of the port, in any other ports; one moiety whereof to be to the uſe of the informer, and the other to their Majeſties; and ſeamen, and others concerned in prizes, ſhall be permitted to ſee and peruſe the accounts of any prize.
Where any ſhips or goods ſhall be taken by any privateer, by colluſion, on proof made thereof in the court of Exchequer, or court of admiralty, they ſhall be adjudged lawful prize, and one moiety ſhall be to their Majeſties, and the other to him that ſhall diſcover the ſame; and the bond given by the captain of ſuch privateer is declared to be forfeited; and if ſuch ſhips or goods ſhall be taken by colluſion, by any man of war, the commander ſhall forfeit 1000 l. alſo his command or employment, and be incapable of any office under their Majeſties during ſeven years.
In all caſes where ſuch prize ſhall not be taken by any private men of war, one-tenth part, after deduction of their Majeſties cuſtoms, and before any diviſion is made of the proceed thereof, ſhall be paid to the treaſurer of the navy, and by him kept apart, to be diſpoſed of by warrant from the commiſſioners of the admiraly, or lord high admiral, for medals, and other rewards for officers and ſeamen, who ſhall do any extraordinary ſervice. And if any man of war, or privateer, ſhall take or deſtroy any French man of war, or privateer, they ſhall receive for every piece of ordnance, in any ſhip ſo taken or deſtroyed, 10 l. reward, to be paid by the commiſſioners for the prizes, out of their Majeſties ſhare of prizes.
And if the commiſſioners do not pay the ſame, or give a bill for it, payable out of the firſt monies that ſhall come to their hands, within three days after the ſame ought to be paid, and demand thereof made, the ſaid commiſſioners ſhall be incapable to hold any office in their Majeſties ſervice for the future. And, by another clauſe in this act, if the commiſſioners for prizes, or of the cuſtoms, ſhall detain the ſhares belonging to perſons intereſted in privateers, two days after they ought to be paid, &c. free from all deductions, except for warehouſe-room, and 2 l. per cent. for all other charges, they ſhall forfeit double the ſum ſo detained.
When any veſſel ſhall be taken as prize by a privateer, having no goods on board of the growth and manufacture of France, the perſons intereſted in ſuch privateer ſhall have the whole in their own uſe, after condemnation and payment of cuſtoms, and other duties, without deduction for tenths, or any other parts to their Majeſties, or the lord high admiral. If any ſhip, whereupon wool is laden to be tranſported, contrary to law, be taken by any privateer, on proof thereof in the Exchequer, the perſons concerned in the privateer ſhall have a moiety of the ſhip and goods, and their Majeſties the other moiety. But where any veſſel ſhall be taken within any of their Majeſties ports, rivers, or havens, by any privateer, ſuch prize ſhall belong to their Majeſties, as a perquiſite of the admiralty of England, and the captors to have only ſuch a part as their Majeſties ſhall think fit to allow, by way of encouragement.
If any ſhip or veſſel taken as prize, or any goods therein, ſhall appear to belong to any of their Majeſties ſubjects, continuing under their protection and obedience, which were before taken by their Majeſties enemies, and now retaken, ſuch veſſels and goods, and every part thereof ſhall be reſtored, by decree of the court of admiralty, to the former owners, they paying in lieu of ſalvage, if retaken by a man of war, an eighth part of the value, which ſhall be anſwered to the captains, officers, and ſeamen in the ſaid man of war, to be divided as in this act is directed, touching the ſhare of prizes belonging to them, where ſuch prizes are taken by any of their Majeſties ſhips of war: and, if taken by a privateer, or other ſhip, after having been in poſſeſſion of the enemy twenty-four hours, an eighth part of the value ſhall be paid; if above twenty-four hours, and under forty-eight, a fifth part; if above forty-eight hours, and under ninety-ſix, a third part; and, if above ninety-ſix hours, a moiety; all which payment to be made without any deduction. And if ſuch retaken ſhip appears to have been ſet forth by the enemy as a man of war, the former proprietors ſhall pay the full moiety of the value.
The lord high admiral, or commiſſioners of the admiralty, ſhall expreſs all things by this act directed to be obſerved concerning prizes, &c. in the inſtructions by them to be given to captains and commanders of their Majeſties ſhips of war, and to commanders of privateers.

An order of council to releaſe ſhips, and exempt them from moleſtation by men of war and privateers.

At the court at Windſor, Auguſt 13, 1705.

Preſent the Queen's moſt excellent Majeſty in council.

Her Majeſty is graciouſly pleaſed this day to order, that all ſhips belonging to the ſubjects of the States-General of the United Provinces, which have been taken by any of her Majeſty's ſhips of war, or privateers, or which are now under arreſt in any of her Majeſty's ports, together with their loadings, be forthwith releaſed; and that, for the future, no ſhips having paſſes from the ſaid States-General to trade with France, be taken or moleſted in their voyage, by any of her Majeſty's ſaid ſhips of war, or privateers, her Majeſty having already opened the trade with the dominions of Spain, for the advantage of her own ſubjects. And her Majeſty is pleaſed futher to declare and order, that the inſtruction be now given for the future to the commanders of her Majeſty's ſhips of war and privateers, not to bring up or moleſt either the ſhips of her own ſubjects, or thoſe of the ſubjects of the States-General, furniſhed with proper paſſes from her Majeſty or the ſaid States reſpectively, ſo as they do not carry any goods or merchandize which are contraband. And all commanders of her Majeſty's ſhips of war, as well as privateers or merchant-ſhips, having letters of marque, are to conform themſelves hereunto, notwithſtanding any commiſſions or inſtructions heretofore given to the contrary. And for their more particular direction for the future, his royal highneſs the lord high admiral is forthwith to order ſuch inſtructions to be prepared, as may be proper for the commanders of ſhips of war and privateers in this behalf, to be delivered to them as ſoon as may be.

CHRISTOPHER MUSGRAVE.

By the ſtatute 6 Ann. cap. 37. for encouragement of the trade to America, all prize-offices are ſuppreſſed and taken away, and the flag, and other officers and ſeamen of every ſhip of war, ſhall have the whole intereſt in ſhips and goods they ſhall take there (being firſt adjudged prize in any of the courts of admiralty) ſubject to the duties to her Majeſty for ſuch goods, and to be divided as her Majeſty and ſucceſſors ſhall direct.

The

The judge of the admiralty ſhall, in five days after requeſt, finiſh the preparatory examinations, in order to enquire of prizes, and the uſual monition ſhall, on requeſt, be executed in three days; and, in caſe no claim be made and atteſted on oath, giving twenty days notice after execution of ſuch monition, &c. then the judge of the admiralty, upon producing the ſaid examination, or copies thereof, and alſo all papers and writings taken in or with the capture, upon oath (or oath that no ſuch papers were found) ſhall immediately proceed to ſentence, either to acquit or condemn the ſame.

If claim ſhall be made, and ſecurity given by the claimant, to pay double coſts to the captors, in caſe the ſhip or goods be adjudged prize, and there ſhall appear no occaſion to examine witneſſes, other than ſuch as are near the court, then the judge ſhall cauſe ſuch witneſſes to be examined, and, in ten days after ſuch claim and ſecurity given, proceed to ſentence. But if it appears doubtful whether it be lawful prize, and it is neceſſary to have an examination of witneſſes remote, and if it be deſired, the ſaid judge ſhall cauſe the ſame to be forthwith appraiſed, by perſons named on the captor's part, and ſhall, after the appraiſement, and in fourteen days after claim, take ſecurity for the claimants to pay the captors the value of the appraiſement, if the ſame be adjudged lawful prize; and, after ſuch ſecurity taken, the judge ſhall order the releaſing or delivering the ſame to the claimants. And in caſe any claimant refuſe to give the ſaid ſecurity, the ſaid judge is to require ſecurity from the captors, to be approved by the claimant, to pay the value of the appraiſement, in caſe ſuch capture ſhall not be adjudged prize, and thereupon the ſaid judge ſhall make an order to releaſe and deliver the ſame to the captors, or their agents.

There ſhall not be paid to the judge and officers of the court of admiralty, for condemning of captures as prize, above 10l. if the prize be above 100 tons, nor above 15l. if of greater burthen. And if any judge, or officer, ſhall delay proceeding relating to the condemning, diſcharging, releaſing, or delivering of prizes, as aforeſaid, within the time limited, or as ſoon as the ſame ought to be done by this act, he ſhall forfeit 500l. one moiety to the queen, and the other to the informer.

The parties may appeal to her Majeſty and council, ſo as it be made in fourteen days after ſentence, and ſecurity be given to proſecute the appeal, anſwer the condemnation, and pay treble coſts, in caſe the ſentence be affirmed; and ſo as execution be not ſuſpended by ſuch appeal.

By ſtatute 9 Ann. cap. 27. all prize goods and merchandizes taken by ſhips of war, and imported into Great-Britain, &c. ſhall be liable to the payment of the ſaid cuſtoms and duties as thoſe goods would have been had they not been prize.

PRIZES.

The LAWS of ENGLAND relating to PRIZES.

The officers and ſeamen of the king's ſhips, and of other Britiſh ſhips having letters of marque, are intitled to the ſole intereſt and property of all ſhips and goods by them taken, and adjudged lawful prizes by the court of admiralty. Stat. 13 Geo. II. cap. 4. §. 1 and 2.

The prize is to be divided among the officers and ſeamen of the king's ſhips, as he ſhall appoint by proclamation. Among privateers, the diviſion is according to the agreement between the owners. Ibid.

The court of admiralty are to finiſh the examination of the perſons to be examined, to prove the lawfulneſs of the prize, in five days after requeſt for that purpoſe made: the monition is to be executed in three days. And in caſe no claim of the capture be duly entered, giving twenty days notice after the execution of the monition; or if there be a claim, after the claimant does not give ſufficient ſecurity to pay double coſts to the captors, if the prize be adjudged lawful, then the court are to proceed to ſentence in ten days. Ibid. §. 3.

In caſe of doubt, or of writings being remote, the court may releaſe the prize, on the claimant's giving good ſecurity to the captor for the payment of the full appraiſed value, in caſe the prize be adjudged lawful. Ib. §. 3. fin.

Judges and officers, on failure of their duty in reſpect to the condemnation of prizes, forfeit 500 l. with full coſt of ſuit, one moiety to the king, and the other to the informer. Ib. §. 6.

The judges and officers of the court of admiralty in the king's plantations or dominions abroad, ſhall not receive above 10 l. in caſe the prize be under an hundred tons burthen; not above 15 l. if it be of greater burthen. Ib. §. 7.

Commiſſioners of appeals, in cauſes of prizes, are to be appointed under the great ſeal, and appeals may be made to them within fourteen days after ſentence. Ib. §. 8.

Agents for prizes are to be choſen by the captors. Ib. §. 10.

The treaſurer of the navy is to pay to the officers and ſeamen on board ſhips of war, or privateers, in an action where any ſhip of war, or privateer, ſhall have been taken from the enemy or deſtroyed, 5 l. for every man on board ſuch prize or ſhip deſtroyed in the beginning of the engagement. Ib. §. 15.

The captures of flota ſhips, or galleons, or regiſter-ſhips, bound from Buenos-Ayres, or Honduras, can be tried only in the high court of admiralty. Ib. §. 17.

This ſtatute enacts ſeveral penalties and forfeitures for taking prizes by colluſion. Privateers forfeit the prize, half to the king, and half to the informer; and the commander of a man of war forfeits 1000 l. to be divided between the king and the informer. Ib. §. 19. See PRIVATEERS.

PRIZE-SHIPS. The duty of poundage is alſo payable (after the rate of 5 per cent. of the value upon oath) for ſhips taken as prize, and regularly condemened in the court of admiralty: but it is the practice not to charge them with any other duty whatſoever.

No goods to be imported into, or exported from thence, in any other but ſhips of the built of Great-Britain, Ireland, or the ſaid plantations, wholly owned by the people thereof, and whereof the maſter, and at leaſt three-fourths of the mariners, are of the ſaid places (except ſhips taken as PRIZES, and legally condemned, navigated by the maſter and three fourths of the mariners Britiſh, or of the ſaid plantations, and owned by Britiſh) upon forfeiture of the ſhip and goods, one-third to his Majeſty, one-third to the governor, one-third to the ſeizer and informer.

Prize-goods not to be exempted from duties, &c. but the goods may be unladen and brought on ſhore, in the preſence of the officers of the cuſtoms, and ſecured in proper warehouſes, under the ſeparate locks of the collector, comptroller, and agent of the captors. 'till they are appraiſed and ſold; and after they are ſold, before delivery to the buyer they are to pay the cuſtoms and exciſe. 6 Ann. cap. 13. §. 9.

Prize-goods of the growth and product of foreign plantations, condemned in, and imported from, the Britiſh plantations in America, are, upon proper certificates and oaths, to pay the ſame duties as if the produce of the ſaid Britiſh plantations. 10 Ann. cap. 22. §. 2. and 15 and 16 Geo. II. cap. 31. §. 6.

Foreign-built ſhips, or ſuch not built in any of his Majeſty's dominions of Aſia, Africa, or America, are not to enjoy the privilege of ſhips belonging to Great-Britain or Ireland, although owned or manned by Britiſh (except ſuch ſhips as are taken at ſea by letters of marque or repriſal, [ſee MARQUE LETTERS of MARQUE, and REPRISAL] and condemned as lawful prize in the court of almiralty) but are to be deemed aliens ſhips, and to be liable to aliens duties. See the article PRIVATEER.

The LAWS of FRANCE relating to PRIZES.

Art. I. No perſon ſhall fit out a ſhip for war without a commiſſion from the admiralty.

II. Such as obtain commiſſions for equipping ſhips for war, ſhall be obliged to cauſe it to be recorded at the admiralty-office where the ſhip is fitted out, and to give ſecurity for the ſum of 15,000 livres, which ſhall be received by the lieutenant, in preſence of our attorney.

III. We forbid our ſubjects to take commiſſions from any foreign kings, princes, ſtates, to arm ſhips for war, and ſail under their flags, except it be by our order, under pain of being treated as pirates.

IV. All veſſels belonging to our enemies, or commanded by pirates, buccaneers, and others, ſailing without the commiſſion of any ſovereign prince or ſtate, ſhall be good prize.

V. All veſſels fighting under another flag than that of the nation whoſe commiſſion they carry, or having commiſſion from two different princes or ſtates, ſhall likewiſe be good prize; and, if they be armed for war, the captains and officers ſhall be puniſhed as pirates.

VI. All veſſels, and their lading, in which there are no charter-parties, bills of lading, nor invoices, ſhall be likewiſe good-prize: and we forbid our captains, officers, and ſeamen of ſhips taking them, to divert them, under pain of corporal puniſhment.

VII. All ſhips having effects on board belonging to our enemies, and the goods of our ſubjects or allies on board of enemies ſhips, ſhall likewiſe be good prize.

VIII. If any of our ſubjects ſhips be retaken from our enemies, after having been four-and-twenty hours in their hands, they ſhall be good prize; and, if it is before four-and-twenty hours, they ſhall be reſtored to the owners, with all that is in them, and one-third ſhall be given to the ſhip that retakes them.

IX. If the ſhips, without being retaken, be abandoned by the enemy, or if by tempeſt, or any other accident, they return into the poſſeſſion of our ſubjects, before they have been carried into any enemy's ports, they ſhall be reſtored to the owner, who ſhall reclaim them within the year and day, though they have been more than four-and-twenty hours in the enemy's poſſeſſion.

X. The ſhips and effects of our ſubjects and allies, retaken from pirates, and reclaimed within a year and a day after the declaration made to the admiralty, ſhall be reſtored to the owners, they paying one-third of the value for the charges of the retaking.

XI. The

XI. The arms, powder, ball, and other munitions of war, even the horſe and furniture, tranſported for the ſervice of our enemies, ſhall be confiſcated, in whatever veſſels they be found, and to whoſoever they belong, whether they be our ſubjects or our allies.

XII. All veſſels refuſing to ſtrike and bring to, upon the ſummons of our ſhips, or thoſe of our ſubjects armed for war, may be compelled thereto by artillery, or otherwiſe; and, in caſe they reſiſt and fight, they ſhall be good prize.

XIII. We forbid all captains of veſſels armed for war to detain thoſe of our ſubjects or allies who have brought to, and ſhewed their bills of lading and charter-parties, or to take, or ſuffer any thing to be taken from them, under pain of death.

XIV. No veſſel taken by foreigners may remain above four-and-twenty hours in our harbours, except they be detained there by tempeſt, or be taken from our enemies.

XV. If in the prizes brought into our ports by foreigners, here be found goods belonging to our ſubjects or allies, thoſe belonging to the former ſhall be reſtored, and thoſe of the latter ſhall not be put in warehouſes, nor bought by any perſon, under any pretence whatſoever.

XVI. As ſoon as the captains of armed veſſels ſhall render themſelves maſters of any ſhips, they ſhall ſeize their licences, paſſports, ſea-letters, charter-parties, bills of lading, and all other papers concerning their lading and voyage, together with the keys of their cheſts, trunks, and chambers, and ſhall cauſe to be ſhut the hatches, and other places where there is any goods.

XVII. We enjoin all captains that take prizes, to bring or ſend them, with the priſoners, to the ports where they are armed, under pain of loſing their rights, and of an arbitrary fine, except they be obliged, by tempeſt or enemies, to put into ſome other port, in which caſe, they ſhall forthwith acquaint the concerned.

XVIII. We forbid, under pain of death, all captains, ſoldiers, and ſeamen, to ſink the ſhips they take, and put aſhore the priſoners upon remote coaſts or iſlands, in order to conceal the prize.

XIX. And where the takers are not in a condition to take the charge of the ſhip taken, and of the priſoners, and only take out the goods, or agree for a ranſom, they ſhall be obliged to ſeize the papers, and bring with them at leaſt the two principal officers of the prize, under pain of being deprived of what may belong to them therein, and of corporal puniſhment, &c.

XX. We forbid them to open any cheſts, bales, ſacks, pipes, barrels, caſks, or trunks, or to tranſport or ſell any goods of the prize; and we likewiſe forbid all perſons to buy them, before the prize be condemned, or 'till it be ordained by authority, under pain of reſtitution of four-fold, and corporal puniſhment.

XXI. As ſoon as the prize is brought into any road or port of our kingdom, the captain that has taken her, if he be there, and, in his abſence, the perſon that is intruſted with her, ſhall be obliged to make his declaration to the officers of the admiralty, to ſurrender into their hands the papers and the priſoners, and declare to them the day and hour, place and degree of latitude, in which the veſſel was taken, whether the captain refuſed to ſhew his commiſſion or his paſſport; whether he attacked, or only defended himſelf; what flag he bore; and all the other circumſtances of the taking and voyage.

XXII. After the delivery of the declaration, the officers of the admiralty ſhall immediately go aboard of the prize, whether ſhe be in the road or in the port, and ſhall draw up a verbal proceſs of the quantity and quality of the goods, and of the condition in which they find the cabbins, trunks, hatches, and hold; which they ſhall afterwards cauſe to be ſhut, and ſealed with the ſeal of the admiralty; and they ſhall there eſtabliſh a watch, to take care of what they have ſealed, and prevent the embezzlement of the effects.

XXIII. The officers of the admiralty ſhall make their verbal proceſs in preſence of the captain, or maſter of the prize, and, in his abſence, before the two principal officers and ſeamen belonging to him, together with the captain or other principal officers of the ſhip that took the prize; and likewiſe in preſence of the reclaimers, if any be.

XXIV. They ſhall hear, concerning the matter of the prize, the maſter or commander thereof, and the principal men of his company, and likewiſe ſome of the officers and ſeamen of the ſhip that took her.

XXV. If the ſhip be brought in without priſoners, charter-party, or bill of lading, the officers, ſoldiers, and ſeamen of the ſhip that took her, ſhall be examined ſeparately upon the circumſtances of the prize, and how the ſhip came to be brought in without priſoners; and the ſhip and goods ſhall diſcover, if poſſible, to what nation they did belong.

XXVI. If by the depoſition (or oath) of the company, and the ſearch and view of the ſhip and goods it cannot be diſcovered of whom they have been taken, an inventory ſhall be taken of the whole, and it ſhall be appraiſed, and put into ſafe cuſtody, to be reſtored to whomſoever it may belong, if reclaimed within a year and a day; and if otherwiſe, it ſhall be divided as a wreck between us, the admiral, and the * armateur.

* Armateur is the deſignation given in France to merchants or others concerned as owners, in the arming of privateers &c.

XXVII. If it be neceſſary before the condemnation of a prize to take the goods out of a ſhip, to prevent their being damnified, an inventory ſhall be made in preſence of our attorney, and of the parties concerned, who ſhall ſign it if they can write; and afterwards the goods ſhall be delivered into the hands of ſome ſufficient perſon, or in warehouſes locked with three different keys; of which one ſhall be given to the armateur, another to the receiver of the admiral, and the third to the reclaimer, if any be; and if none, to our attorney.

XXVIII. Goods which cannot be kept, ſhall be ſold at the deſire of the parties concerned, and adjudged to the faireſt offerer, in the preſence of our attorney, at the ſhutting up of the court, after three delays of the ſale, from three days to three days; the port ſales, or publication being duly made beforehand, and the placards affixed in the uſual places.

XXIX. The price of the ſales ſhall be conſigned in the hands of a ſufficient merchant, to be delivered after the adjudication of the prize, to whom it ſhall belong.

XXX. We enjoin the officers of the admiralty to proceed inceſſantly to the execution of decrees and ſentences given concerning prizes; and to cauſe the veſſels, goods, and effects, for which a replevy ſhall be ordained, to be delivered immediately, and without delay, under pain of interdiction of a fine of five hundred livres, and of all coſts, charges, and damages.

XXXI. Before the repartition, the charges of the unlading, and of the keeping of the ſhip and goods, ſhall be deduced, according to the account which ſhall be ſtated by the lieutenant of the admiralty, in the preſence of our attorney and the parties concerned.

XXXII. After the aforeſaid deduction, the tenth of the price ſhall be delivered to the admiral, and the charges of the court ſhall be taken out of the remainder; which ſhall be afterwards divided amongſt the parties concerned, according to the conditions of their partnerſhip.

XXXIII. If there be no contract of partnerſhip, two-thirds ſhall belong to them that have furniſhed the veſſel, with munitions, arms, and proviſions; and the other to the officers, ſeamen, and * ſoldiers.

* By ſoldiers, in this and ſeveral other articles of the French marine, is only meant ſuch land-men as enter themſelves on board of privateers, only for fighting; and thoſe go for the moſt part, no purchaſe no pay; for they have no regular and diſciplined troops on board their privateers in France, no more than elſewhere.

XXXIV. We forbid the officers of the admiralty to become directly or indirectly the parties to whom veſſels, goods, or effects, belonging to prizes are adjudged, under pain of confiſcation, a fine of fifteen hundred livres, and interdiction of their offices.

PRIZES, under what regulations in SPAIN.

Of the manner of diſpoſing of prizes taken by the armada's or flota's trading to the Weſt-Indies.

1. The inſtructions given to Peter Arias Davila in the year 1513, when he was ſent governor and captain-general of the province of the FIRM LAND, which was then that of DARIEN, and the country about, ſpoke to the matter thus: That of whatſoever he ſhould take with the fleet he went over in, of which the ſhips and proviſions were his Majeſty's beſides the fifth, two parts ſhould come to the king, the one for his ſhip and the other for his proviſions; but if there went with the fleet any ſhip belonging to private perſons, and upon their own charge, and they ſhould take any prize, his Majeſty ſhould have only his fifth, and the reſt be divided among all the fleet, becauſe it was to be ſuppoſed the prize had been taken by the aſſiſtance of it, and the diſtribution ought to be according to every man's pay and allowance.

2. The emperor Charles V. afterwards declared, That though when any prince was taken in war, his ranſom and moveables were his Majeſty's undoubted right, yet in conſideration of the great fatigues his ſubjects endured in the conqueſt of the Indies, he required only the ſixth part of the ranſom of any cazique taken, or the treaſures belonging to him, and all the reſt, after deducting the king's fifth, to belong to the conquerors; but if the cazique were ſlain in the battle, his Majeſty ſhould have one half of his treaſure, and the other half, after deducting the fifth, be equally diſtributed.

3. In 1558, the admiral Peter de Roelas having taken a French ſhip, and recovered a Spaniard's taken by that privateer, it was ordered, that the admiral ſhould have the king's fifth of what belonged to the Frenchman, and the reſt of it to be divided for that time between the ſaid admiral and his men;

men; and as for the ſhip retaken, the one half ſhould be for the admiral and men, and the other reſtored to the owners. In 1570, ſome doubts ariſing between two prizes taken, the king decided the controverſy thus, That the admiral ſhould have the fifth belonging to his Majeſty, and all the reſt to be divided betwixt the officers, ſoldiers, and ſailors, belonging to the fleet: but if any ſhips coming from the Indies were retaken from pirates, they ſhould be reſtored entire to the owners.

4. If there ariſe any controverſy about prizes taken, the court of the India-Houſe is to decide it; but if it be above 600,000 marvadees value, there lies an appeal from it to the committee of war for the Indies, as was practiſed in the year 1649, in the caſe of an Engliſh ſhip, which, though taken in time of peace, was condemned as lawful prize, becauſe it had Weſt-India commodities aboard. D. Francis de Soto-major coming from Potoſi by the way of Buenos-Ayres, was taken by the Dutch, and carried to Baia de Todos or Santos in Brazil, which place being recovered by D. Frederic de Toledo, D. Francis pretended, that as much of his plate and goods as could be found ought to be reſtored him; becauſe the war pirates make being unjuſt, they could not deprive him of the juſt dominion over what was his own, though it had been above 24 hours in their hands, and he had judgment given for him. In the year 1584, orders were given to all the commanders in the Indies, that when prizes were taken from pirates, if there were any goods found belonging to his Majeſty's ſubjects, they ſhould be delivered as they were found, without diminiſhing, to the owners.

PROJECTOR, one who contrives, ſchemes, or forms any public deſign.

Remarks.

Man is the worſt of all God's creatures to ſhift for himſelf; no other animal is ever ſtarved to death; nature without, has provided them both food and cloaths; and nature within, has placed an inſtinct that never fails to direct them to proper means for a ſupply: but man muſt either work or ſtarve, ſlave or die; he has, indeed, reaſon given him to direct him, and few who follow the dictates of that reaſon come to ſuch unhappy exigencies; but when by the errors of a man's youth he has reduced himſelf to ſuch a degree of diſtreſs, as to be abſolutely without three things, money, friends, and health, he dies in an hoſpital.

Ten thouſand ways there are to bring a man to this, and but very few to bring him out again. Death is the univerſal deliverer, and therefore ſome who want courage to bear what they ſee before them, hang themſelves for fear; for certainly ſelf-deſtruction is the effect of cowardice in the higheſt extreme.

Others break the bounds of laws to ſatisfy that general law of nature, and turn open thieves, houſe-breakers, highwaymen, clippers, coiners, &c. 'till they run the length of the gallows, and get a deliverance the neareſt way at St Tyburn.

Others, being maſters of more cunning than their neighbours, turn their thoughts to private methods of ttick and cheat, a modern way of thieving, every jot as criminal, and in ſome degree worſe than the other, by which honeſt men are gulled with fair pretences to part from their money, and then left to take their courſe with the author, who ſculks behind the curtain of a protection, or in the Mint, or Friars, and bids defiance as well to honeſty as the law.

Others, yet urged by the ſame neceſſity, turn their thoughts to honeſt invention, founded upon the platform of ingenuity and integrity. Theſe two laſt ſorts are thoſe we call Projectors; and as there were always more geeſe than ſwans, the number of the latter are very inconſiderable, in compariſon of the former; and, as the greater number donominates the leſs, the juſt contempt we have of the former ſot, beſpatters the other, who, like cuckolds, bear the reproach of other people's crimes.

A mere projector then is a contemptible thing, driven by his own deſperable fortune to ſuch a ſtraight, that he muſt be delivered by a miracle or ſtarve; and when he has beat his brains for ſome ſuch miracle in vain, he finds no remedy but to paint up ſome bauble or other, as players make puppets talk big, to ſhow like a ſtrange thing, and then cry it up for a new invention, gets a patent for it, divides it into ſhares, and they muſt be ſold; ways and means are not wanting to ſwell the new whim to a vaſt magnitude; thouſands, and hundreds of thouſands are the leaſt of his diſcourſe, and ſometimes millons; 'till the ambition of ſome honeſt coxcomb is wheedled to part with his money for it, and then

— — — Naſcitur ridiculus mus.

The adventurer is left to carry on the project, and the projector laughs at him. The diver ſhall walk at the bottom of the Thames; the ſalt-petre-maker ſhall erect a dunghill into a palace; the engineers build models and windmills to draw water, 'till funds are raiſed to carry it on, by men who have more money than brains, and then good night Mr Patent and Invention; the projector has done his buſineſs, and is gone. But the upright and honourable projector is he, who having by fair and plain principles of ſenſe, honeſty, and ingenuity, brought any contrivance to a ſuitable perfection, makes out what he pretends to, picks no body's pocket, carries his project in execution, and contents himſelf with the real produce of his uſeful invention.

Neceſſity has ſo violently agitated the wits of men within half a century paſt, that it ſeems not at all improper, by way of diſtinction, to call it the projecting age. For though in times of war and public confuſions, the like humour of invention has ſeemed to ſtir, yet, without being particular to the preſent, it is, I think, no injury to ſay, the paſt ages have never come up to the degree of projecting and inventing, as it refers to matters of negoce and methods of civil polity, which we ſee this age arrived to.

For the improvement of the deſtructive art of war, there has been project after project; eſpecially in conducting armies, and in offenſive engines; witneſs the new ways of mines, fougades, entrenchments, attacks, elodgments, and a long et cetera of new inventions, which want names, practiſed in ſieges and encampments: witneſs the new ſorts of bombs and unheard-of mortars, of ſeven to ten and twenty tons weight, with which our fleets ſtanding two or three miles off at ſea, can, in ſome degree, imitate the ſupreme Being himſelf, and rain fire and brimſtone out of heaven, as it were, upon towns built on the firm land: witneſs alſo our new invented child of hell, the machine which carries the thunder, lightning, and earthquakes in it's bowels, and tears up the moſt impregnable fortifications.

But if we ſhould ſearch for a cauſe, from whence it comes to paſs that this age ſwarms with ſuch a multitude of projectors more than uſual, who, beſides the innumerable conceptions which die in the bringing forth, and (like abortions of the brain) only come into the air and diſſolve, do really every day produce new contrivances, engines, and projects to get money never before thought of: if I ſay, we would examine whence this comes to paſs, it muſt be thus:

The loſſes and depredations which wars occaſion will not only fall upon private traders, but bring incumbrances on the nation in general; and theſe have prompted men by neceſſity, to rack their wits for new contrivances, new inventions, new trades, ſtocks, projects, and any thing, to retrieve the deſperate credit of their private fortunes, and ſupport the credit of the nation. That this is probable to have been the cauſe, will appear further; thus, France has, without queſtion, felt it's ſhare of loſſes by war as well as Great-Britain; but the poverty there falling chiefly on the poorer ſort of people, they have not been ſo fruitful in inventions and practices of this nature, 'till the Miſſiſſippi affair [ſee Mississippi], their genius being quite of another ſtrain. As for the gentry and more capable ſort, the firſt thing a Frenchman flies to in his diſtreſs is the army; and he ſeldom comes back from thence to get an eſtate by painful induſtry, but either has his brains knocked out, or makes his fortune there.

If induſtry be in any buſineſs rewarded with ſucceſs, it is in the MERCHANDIZING PART OF THE WORLD, who indeed may MORE TRULY BE SAID TO LIVE BY THEIR WITS, THAN ANY PEOPLE WHATSOEVER. All foreign negoce, though to ſome it is a plain road by the help of cuſtom, yet it is in it's beginning ALL PROJECT, CONTRIVANCE, AND INVENTION. Every new voyage the merchant ſchemes, is a project; and ſhips are ſent from port to port, as markets and merchandize differ, by the help of ſtrange and univerſal intelligence; wherein ſome are ſo exquiſite, ſo ſwift, and ſo exact, that a merchant ſitting at home in his counting-houſe, at once converſes with all parts of the known world. This and travel, MAKE A TRUE BRED MERCHANT, THE MOST INTELLIGENT MAN IN THE WORLD, and conſequently the moſt capable, when urged by neceſſity, to contrive new ways to live: and from hence we conceive, may be very properly derived the variety of projects wherewith we have abounded.

And from this ſort of men, it is eaſy to trace the origin of BANKS, STOCKS, STOCK-JOBBING, ASSURANCES, FRIENDLY SOCIETIES, LOTTERIES, AND THE LIKE.

To which may be added likewiſe, the long ANNUAL ENQUIRY of the houſe of commons FOR WAYS AND MEANS, which has been a particular movement to ſet all the heads of the nation at work. And I appeal, with ſubmiſſion, to the gentlemen of that honourable houſe, if the greateſt part of the beſt ways and means to raiſe public money, out of the common road of land-taxes, polls, and the like, have not been handed to them from the MERCHANT.

Projects of this nature have been doubtleſs in general of public advantage, as they have tended to the improvement of TRADE, AND EMPLOYMENT OF THE POOR, and the CIRCULATION AND INCREASE OF THE PUBLIC STOCK OF THE KINGDOM; but this is ſuppoſed of ſuch as are built on the honeſt baſis of ingenuity and improvement; in which though I'll allow the author to aim primarily at his OWN ADVANTAGE, yet with the circumſtances of PUBLICK BENEFIT added.

Wherefore it is neceſſary to diſtinguiſh among the projects of the preſent times, between the honeſt and the diſhoneſt.

There

There are many fair pretences of fine diſcoveries, new inventions, engines, and I know not what, which having been advanced in notion, and talked up for great things to be performed, when ſuch and ſuch ſums of money ſhall be advanced, and ſuch and ſuch engines are made, that have raiſed the fancies of credulous people to ſuch a height, that merely on the ſhadow of expectation, they have formed companies, choſe committees, appointed officers, ſhares, and books, raiſed great ſtocks, and cried up an empty notion to ſuch degree, that people have been betrayed to part with their money for ſhares in a NEW NOTHING: and when the inventors have carried on the jeſt, 'till they have ſold their own intereſt, they have left the cloud to vaniſh of itſelf, and the poor purchaſers to quarrel with one another, and go to law about ſettlements, transferrings, and ſome bone or other thrown among them by the ſubtlety of the authors, to lay the blame of the miſcarriage upon thoſe, who have been their bubbles. Thus the ſhares at firſt begin to fall by degrees, and happy is he that ſells in time, 'till like braſs money it will go at laſt for nothing at all. So have I ſeen ſhares in JOINT STOCKS, PATENTS, ENGINES, AND UNDERTAKINGS, blown up by the air of great words, and the name of ſome man of credit concerned, to 100 l. for a 500th part or ſhare, ſome more, and at laſt dwindle away, 'till it has been ſtock-jobbed down to 12, 10, 9, 8 l. a ſhare, and at laſt there has been no buyer; that is, in ſhort, the fine new word for nothing worth, and many families ruined by the purchaſe. If we ſhould name linen manufactures, ſaltpetre-works, copper-mines, diving-engines, and the like, for inſtances, we ſhould do no wrong to truth, or to ſome perſons that have been too viſibly guilty of forming ſuch like deceitful projects.

We might go on upon this ſubject to expoſe the FRAUDS AND TRICKS OF STOCK-JOBBERS, PATENTEES, COMMITTEES, WITH THOSE MOUNTEBANKS WE VERY PROPERLY CALL STOCK BROKERS; but we have not gall enough for ſuch a work: as a general rule of caution to thoſe who would not be tricked out of their eſtates by ſuch pretenders to enrich others, let them obſerve, that all ſuch people who may be ſuſpected of deſign, have aſſuredly this in their propoſals, to get a ROUND SUM TO themſelves, before any one elſe can hope to GET ANY THING.

But this is no reaſon why inventions upon honeſt foundations and to fair purpoſes, ſhould not be encouraged; no, nor why the author of any ſuch fair contrivances ſhould not reap the harveſt of his own ingenuity: our acts of parliament for granting patents to FIRST INVENTORS FOR FOURTEEN YEARS, is a ſufficient acknowlegment of the due regard which ought to be had to ſuch as find out any thing which may be of public advantage, new diſcoveries in trade, in arts and myſteries, of manufacturing goods, or improving of land, are, without queſtion, of as great benefit, as any diſcoveries made in the works of nature, by the ſeveral academies and royal ſocieties in the world.

There is, it is true, a great difference between new inventions and projects, for the improvement of manufactures or lands, which tend to the immediate benefit of the public, and employing of the poor, and thoſe framed by ſubtle heads, with a ſort of a deceptio viſus and legerdemain, to bring people to run needleſs or unuſual hazards: and we give a due preference to the firſt, and yet ſucceſs has ſo ſanctified ſome of thoſe other ſorts of projects, that it would be a kind of blaſphemy againſt fortune to diſallow them; witneſs Sir William Phipps's voyage to the wreck; it was a mere project, a lottery of a hundred thouſand to one odds; a hazard, which if it had failed, every body would have been aſhamed to have owned themſelves concerned in: a voyage that would have been as much rediculed as Don Quixote's adventure upon the windmill. Bleſs us! that folks ſhould go three thouſand miles to angle in the open ſea for pieces of eight! why they would have made ballads of it, and the merchants would have ſaid of every unlikely adventure, it was like Phipps's wreck voyage: but it had ſucceſs, and who reflects upon the project?

However, this ſort of projects comes under no reflection as to their honeſty, ſave that there is a kind of honeſty a man owes to himſelf and to his family, that prohibits him throwing away his eſtate in improbable and impracticable adventures; but ſtill ſome hit even of the moſt unlikely, of which this was one of Sir William Phipps's, who brought home a cargo of ſilver of near two hundred thouſand pounds ſterling, in pieces of eight, fiſhed up out of the open ſea remote from any ſhore, from an old Spaniſh ſhip which had been ſunk above forty years.

REMARKS on our Article PROJECTOR.

A ſhort hiſtory of ſome remarkable projects.

The invention of arts with engines and handicraft inſtruments for their improvement, requires a chronology as far back as the eldeſt ſon of Adam, and has to this day afforded ſome new diſcovery in every age.

The building of the ark by Noah, ſo far as you will allow it a human work, was the firſt project we read of; and no queſtion ſeemed ſo rediculous to the graver heads of that wiſe, though wicked age, that poor Noah was ſufficiently bantered for it; and had he not been ſet on work by a very peculiar direction from heaven, the good old man would certainly have been laughed out of it, as a moſt ſenſeleſs and ridiculous project.

The building of Babel was a right project; for, indeed, the true definition of a project, according to modern acceptation, is a vaſt undertaking, too big to be managed, and therefore likely enough to come to nothing; and yet as great as they are, it is certainly true of them all, even as to the projectors propoſal; that according to the old tale, if ſo many eggs are hatched, there will be ſo many chickens, &c. Thus it was moſt certainly true, that if the people of the old world could have built a houſe up to heaven, they would never have been drowned again on earth, and they only had forgot to meaſure the heighth; that is, as in other projects, it only miſcarried, or elſe it would have ſucceeded.

And yet when all is done, that very building, and the incredible heighth to which it was carried, is a demonſtration of the vaſt knowlege, of that infant part of the world, which had no advantage of the experiments or invention of any before themſelves.

A very diverting account might, perhaps, be given of this, but I ſhall not attempt it. Some are apt to ſay with Solomon, No new thing happens under the ſun, but what is, or has been; yet I made no queſtion, but ſome conſiderable diſcoveries have been made in their later ages, and inventions of human original produced, which the world was ever without before, either in whole or in part; and I refer only to two cardinal points, the uſe of the load-ſtone at ſea, and the uſe of gun-powder and guns; both which, as to the inventing part, I believe the world owes as abſolutely to thoſe particular ages, as it does the working in braſs and iron to Tubal Cain, or the inventing of muſic to Jubal his brother.

As to engines and inſtruments for handicraft men, this age, I dare ſay, can ſhew ſuch as never were ſo much as thought of, much leſs imitated before; for that is not a real invention, which has ſomething before done like it, it is more properly an improvement. For handicraft inſtruments, I know none owes more to true genuine contrivance, without borrowing from any former uſe, than a mechanic engine contrived in our time, called a knitting-frame, which being contrived with admirable ſymmetry, works really with a very happy ſucceſs, and may be obſerved by the curious to have a more than ordinary compoſition, for which I refer to the engine itſelf, to be ſeen in every ſtocking-weaver's work-ſhop.

I ſhall trace the original of the projecting humour that has reigned more particularly in England, and ſome other parts of Europe, no farther back than the year 1680, dating it's birth as a monſter then, though it had indeed ſomething of life in the time of the late civil war. We allow, no age has been altogether without ſomething of this nature: and ſome very happy projects are left to us as a taſte of their ſucceſs, ſuch are the water-houſes for ſupplying of the city of London with water, and ſince that, the New-River, both very conſiderable undertakings, and perfect projects, adventured on the riſque of ſucceſs.

In the reign of King Charles the Firſt, infinite projects were ſet on foot for raiſing money without a parliament; oppreſſing by monopolies and privy ſeals; but theſe are excluded our our ſcheme, as irregularities: for thus the French are as fruitful in projects as we, and theſe are rather expedients or ſtratagems than projects.

After the fire of London, the contrivance of an engine to quench fires, was a project the author was ſaid to get well by, and we have found to be very uſeful. But about the year 1680, the art and myſtery of projecting began viſibly to creep into the world. Prince Rupert, uncle to king Charles II. gave great encouragement to that part of it which reſpects engines, and mechanical motions; and biſhop Wilkins added as much of the theory to it, as writing a book could do: the prince has left us a metal called by his name, and the firſt project upon that was caſting of guns of that metal, and boring them; done both by a peculiar method of his own, and which died with him, to the great loſs of the undertaker; who, to that purpoſe, had, with no ſmall charge, erected a water-mill at Hackney-marſh, known by the name of the Temple-mill, which mill very happily performed all parts of the work: and there were of theſe guns on board the Royal Charles, a firſt rate ſhip, being of a reddiſh colour, different either from braſs or copper. There might be ſome reaſons of ſtate, for laying that project aſide. After this there was a floating machine ſet on foot, to be wrought with horſes for the towing of great ſhips, both againſt wind and tide; and another for the raiſing of ballaſt, which, as unperforming engines, had the honour of being made, expoſed, tried, and laid by, before the prince died.

If thus we introduce it into the world under the conduct of that prince, when he died, it was left a hopeleſs brat, and had hardly any hand to own it, 'till the wreck voyage before noted, performed ſo happily by Capt. Phipps, afterwards Sir William; whoſe ſtrange performance ſet a great many heads at work, to contrive ſomething for themſelves; he was immediatley

mediately followed by my lord Mordaunt, Sir John Narborough, and others from ſeveral parts, whoſe ſucceſs made them ſoon weary of the work.

The project of the penny-poſt, ſo well known, and ſtill practiſed, I cannot omit; nor the contriver, Mr Dockwra, who had the honour to have the injury done him in that affair repaired, in ſome meaſure, by the public juſtice of parliament. And the experiment proving it to be a noble and uſeful deſign, the author muſt be remembered, to his great reputation.

It was, no queſtion, a great hardſhip for a man to be maſter of ſo fine a thought, that had both the eſſential ends of a project in it, public good and private advantage; and that the public ſhould reap the benefit, and the author be left out; the injuſtice of which, no doubt, diſcouraged many a good deſign; but ſince an alteration in public circumſtances recovered the loſt attribute of juſtice, the like, we hope, is not to be feared in future. Mr Dockwra had the ſatisfaction to ſee the former injury diſowned, and an honourable return made, even by them who did not the injury, in bare reſpect to his ingenuity.

A while after this, ſeveral people, under the patronage of ſome great perſons, had engaged in planting of foreign colonies; as William Penn, the lord Shaftſbury, Dr Cox, and others, in Penſilvania, Carolina, Eaſt and Weſt Jerſey, and the like places; which we do not call projects, becauſe it was only proſecuting what had been formerly begun: but here began the forming of public joint ſtocks, which, together with the Eaſt-India, African, and Hudſon's-Bay companies, before eſtabliſhed, begat a new trade, which we call by the new name of STOCK-JOBBING; which was at firſt only the ſimple occaſional transferring of intereſt and ſhares from one to another, as perſons alienated their eſtates; but, by the induſtry of the STOCK-BROKERS, who got the buſineſs into their hands, it became a trade; and one, perhaps, which has been managed with the greateſt intrigue, artifice, and trick, that ever any thing which appeared with a face of honeſty could be handled with; for, while the brokers HELD THE BOX, they made the whole exchange THE GAMESTERS, and raiſed and lowered the prices of ſtocks as they pleaſed; and always had both buyers and ſellers, who ſtood ready, innocently to commit their money to the mercy of their mercenary tongues. This upſtart of a trade having taſted the ſweetneſs of ſucceſs, which generally attends a naval propoſal, introduced the illegitimate wandering object I ſpeak of, as a proper engine to find work for the brokers. Thus ſtock jobbing nurſed projecting, and projecting in return has very diligently pimped for it's foſter parent, 'till both are arrived to be public grievances; and, indeed, are now almoſt grown ſcandalous to the nation.

Ever ſince the ſuperlative art of fund-projection hath been cheriſhed in this kingdom, we have had PROJECT UPON PROJECT, AND BUBBLE UPON BUBBLE, IN ORDER TO RUN US INTO DEBT, AND MULTIPLY OUR TAXES THE FASTER; whereby the millions upon millions that we have gained by SOLID COMMERCE AND NAVIGATION, HAVE BEEN TRANSFERRED TO FOREIGNERS FOR THE PAYMENT OF INTEREST OF OUR NATIONAL INCUMBRANCES, AND OTHERWISE SQUANDERED AMONG USURERS AND MONEY-MONGERS, WHO HAVE INDOLENTLY SUBSISTED ON THEIR INCOME FROM THE EXCHEQUER, inſtead of employing their capital IN TRADE, for the employment of the INDIGENT, FOR THE SUBSTANTIAL RICHES OF THE STATE, and the permanent ſupport of the PUBLIC CREDIT. To ſuch a pitch of projecting have theſe meaſures brought the nation, that in the year 1720, the whole kingdom became PROJECTORS AND BUBBLE-MONGERS, OUR COMMERCE SUSTAINED AN UNIVERSAL TEMPORARY STAGNATION, AND THE PUBLIC CREDIT WAS SUNK TO AN EBB ALMOST PAST RECOVERY. This has already once proved the fatal effect of fund-projects: and as the harpies of thoſe times were for a time ſucceſsful, in this their moſt ſuperlative ſcheme of iniquity, with intent to draw all the TREASURE OF THE NATION into thoſe FEW HANDS, who were in the SECRET; ſo tribes of inferior projectors afterwards broached ſcheme after ſcheme, in order to plunder the public of what little the South-Sea blood-ſuckers had left them poſſeſſed of. See our articles ACTIONS, and BUBBLES, and SOUTH SEA COMPANY.

After the bleſſed æra of 1720, and the dreadful wound which the nation had received from that deteſtable South-Sea project, was ſkinned over, we had another cardinal project offered to the nation, for the payment of the NATIONAL DEBTS, and the infallible ſupport of the PUBLIC CREDIT: this was the eſtabliſhment of a SINKING FUND, in order gradually to ſink or diminiſh the public debts: and this was to be the SOVEREIGN SPECIFIC to cure the nation of all it's maladies; but what has been the end of this project? Why truly, inſtead, of this SACRED FUND being inviolably applied to the gradual payment of our PRINCIPAL MONEY-DEBT, it has been made ſubſervient to the increaſe thereof, from 50 to 80 MILLIONS! and from 80 to 140 MILLIONS! See the aaticles INTEREST of MONEY, CREDIT [PUBLIC CREDIT], DEBTS, [NATIONAL DEBTS], FUNDS.

And although it coſt the nation ſeveral millions of money in the public accounts, to bring the IRREDEEMABLE public debts into a ſtate of REDEMPTION, in order to amuſe the public with a notion of the gradual payment thereof; yet have we not had project after project ſince, to render our debts again IRREDEEMABLE? Are not theſe retrograde meaſures a certain indication and proof, that our funds have hitherto been only tampered with by SUPERFICIAL PROJECTS, which have ſwelled inſtead of leſſened the NATIONAL INCUMBRANCES? Has the reduction of intereſt in the public funds hitherto proved any thing more than a TEMPORARY EXPEDIENT (which is no better than a time-ſerving PROJECT) to raiſe a fund to pay INTEREST-MONEY FOR MORE AND MORE PUBLIC DEBTS; and the more theſe national incumbrances increaſe, will not the whole property of the MONEYED-INTEREST become more and more PRECARIOUS? And what may one day be the inevitable conſequence of ſuch fund-bubbles, ſee our article MONEYED-INTEREST.

The grand project upon which the credit of our funds ſeems to be bottomed at preſent, is that only of the continued REDUCTION OF INTEREST, 'TILL THE PRINCIPAL MONEY-DEBT SHALL AT LENGTH BECOME TO BE WORTH NOTHING; and if this project is our only reſource in times of exigency, muſt not the property of the public creditors be reduced to an intereſt of 2 per cent. and at length to one, and from thence may not this reducing project abſolutely annihilate the whole 140 millions of money now due to the public creditors?

But if this ſcheme of reduction, carried to extremity, is to be the nation's whole dependance, muſt it not, in the end, defeat itſelf; for what is it that ſupports theſe funds, whoſe ſurpluſſes conſtitute the SINKING FUND, but the SPENDING-MONEY of the nation, which ſupports the whole public revenue? And if the SPENDING-MONEY, or the INTEREST-MONEY of the FUND PROPRIETORS is once reduced to little or nothing, what will become of the AGGREGATE FUND, THE SOUTH-SEA FUND, AND THE GENERAL FUND, the ſurpluſages of which conſtitute ſo great a proportion of the Sinking fund? Does not this conſideration alone, demonſtrate the truth of what we have endeavoured to ſhew in many other lights, viz. that the PRESENT CONSTITUTION OF THE PUBLIC REVENUE OF THIS KINGDOM, IS NOT FOUNDED ON A NATIONAL BASIS, and that the PUBLIC CREDIT, and the COMMERCE of the kingdom, cannot be upheld, and advanced by ſuch PROJECTING EXPEDIENTS? For really they are no better, the effects thereof having hitherto proved it beyond contradiction, however plauſible and artfully ſome people may attempt to ſhew the contrary, to anſwer ſuch temporary purpoſes only, as will tend to plunge the nation into greater and greater debts and difficulties, inſtead of extricating it from thoſe under which it manifeſtly labours.

Does not this ſtate to which the public revenue is now reduced, prove the rectitude of that meaſure, THAT THE ANNUAL EXPENCE OUGHT NEVER TO EXCEED THE ANNUAL REVENUE; and that, conſequently, when an increaſe of the former becomes neceſſary for ſecuring or vindicating the honour or rights of a nation, the latter ought to be increaſed in proportion, if neceſſary, even to the utmoſt the people can ſpare from their daily ſubſiſtence?

For ſuch honeſt and honourable projects, that will ſolidly and permanently ſupport and uphold the true intereſt, and the honour and glory of the kingdom, ſee our articles ARTIFICER, DUTIES, MANUFACTURER, LABOUR, LAND, MERCANTILE COLLEGE, MUSÆUM, PARLIAMENT, [MEMBER OF PARLIAMENT], PHILOSOPHY EXPERIMENTAL, POOR, ROYAL SOCIETY, REVENUE, SOUTH-SEA COMPANY, TAXES, WAR.

PROVENCE, in France, is bounded on the north by Dauphine, on the eaſt by the Alps, and the river Var parts it from the dominions of the duke of Savoy; on the ſouth it has the Mediterranean Sea, and on the weſt it incloſes the ſtate of Avignon, and is ſeparated from Languedoc by the Rhône.

The trade of this province is very conſiderable, for almoſt all the trade of France to Italy, Spain, and eſpecially the Levant, is carried on at Marſeilles; and if we may credit an account publiſhed ſome time ago, they ſend into Italy for above three millions and fifty thouſand livres of merchandize, viz. of cloth and other woollen ſtuffs manufactured in Dauphiné, Languedoc, and Province, to the value of two millions of livers; almonds, plumbs, figs, honey, capers, olives, anchovies, oil, brandy, cotton, linen, &c. all which articles amount to above a million more.—They take in return, hemp, wheat, rice, ſulphur, manna, and ſilk. Their trade to Spain is more conſiderable ſtill, ſince it amounts to nine millions, one hundred and ſeventy thouſand livres. The merchandizes are all ſorts of linens made in France, gold and ſilver lace, fine ſilks, manufactured at Avignon, hats, toys, cottons, all ſorts of drugs, &c.

They drive alſo a conſiderable trade to the Levant, whither they ſend above one hundred veſſels of more or leſs burden, viz. to Conſtantinople, Smyrna, Candi, Aleppo, Cairo, Alexandria, &c. [See the article LEVANT TRADE.]

The climate and ſoil is not the ſame over all Provence. In the upper part the air is temperate, and the country abounds in paſtures and cattle, and produces corn, apples, pears, and very little wine, but what there is of it, is very good. In Lower Provence the air is exceſſive hot, and would be more ſo along the ſea-coaſt, were it not for the wind that blows generally from ten in the morning 'till nine at night. The north-weſterly wind alſo cools this part of the country, and ſometimes dries the ground prodigiouſly. This part of the country does not produce half the quantity of corn neceſſary for the uſe of the inhabitants, and it's dry and ſandy ground is covered with pomegranates, orange, lemon, and olive-trees, cypreſs-trees, palm-trees, fig-trees, and ſeveral others peculiar to the country. There is here a great deal of wine, but it is ſtrong, heady, and ſweet. The fiſh they take in the Mediterranean, is not by a great deal ſo good as that of the ocean.

It is believed that there are in this country, eſpecially in an eſtate belonging to the marquis de Lue, mines of gold, ſilver, copper, and lead: and, notwithſtanding the exceſſive heat of this country, there are here many woods, which afford a great quantity of timber for ſhipping and other uſes. In the wood of the county of Salt, there are ſeveral glaſs-houſes.

There are no conſiderable rivers in this province; thoſe of ſome note are the Durance, the Sorgue, the Largens, the Lore, the Verdon, the Hubaye, the Baune or Weaume, and the Var.

Provence is uſually divided into Upper, Middle, and Lower. We ſhall, however, enlarge only on the chief places of commerce in this county.

AIX, the metropolis of Provence. There is here a parliament, which judges, in the laſt reſort, all the cauſes of the province; a court of aids and finances, a court or chamber of accounts, a generality, an office of treaſurers of France, and a court of the mint. The other conſiderable places in this dioceſe, are St Maximine, Brignole, and Barjols.

RIEZ, ſituated on the rivulet Auveſtre, about 9 leagues from Aix to the north-weſt, in a pleaſant country, which abounds in excellent wines, and moſt ſorts of fruit.

SENEE', ſituated in a cold and barren country amongſt mountains.

COLMARS, in the Alps, on the river Verdun, on the borders of the county of Nice. They make here a great quantity of coarſe cloth, which they ſell to the inhabitants of the mountains of Provence and Piedmont.

CASTELLANE, ſituated in a fruitful and agreeable vale.

ARLES, ſituated on the eaſtern bank of the river Rhône, over which, it has a timber bridge. The city was formerly the capital of the kingdom of Burgundy, and is at preſent a fair and ſpacious city, dignified with a metropolitan ſee, and an academy of men of letters, known by the name of The Royal Academy of Sciences and Languages.

MARSEILLES, one of the richeſt, moſt populous, and moſt ancient cities of France; was founded, they ſay, 500 years before Chriſt, by a colony of merchants from Phocis in Ionia. They flouriſhed in the time of Julius Cæſar, when they lived under a republican government, and had a famous academy, much frequented by the young gentlemen of France, and even of Rome. But as they followed Pompey's party, againſt Cæſar, they were ſubdued by the latter. Having thus loſt their power, they applied themſelves to get riches, and even gave themſelves up to pleaſure, to ſuch a degree, that the manners of the Marſeillians became a common proverb, to expreſs all kind of luxury and diſſoluteneſs, as we learn from Athenæus. However, they had acquired much reputation in former times, on account of their learning and courteouſneſs, according to the teſtimony of Cicero: they now excel chiefly in the knowlege of maritime affairs, for the capital gallies of France are laid up here, and it is the uſual rendezvous of all the Levantine ſhips, and the whole Turky trade of France. See LEVANT TRADE, with regard to the regulations made thereof in France, as the ſame reſpect this city.

The city is ſituated on a little hill, and has a very capacious and ſafe harbour on the coaſts of the Mediterranean Sea, at the diſtance of about ſeven leagues from Aix to the ſouth, aud fourteen from Arles to the ſouth-eaſt. The port, which is defended on one ſide by a fortreſs, and the abbey of St Victor, is flanked on the other with a wall above 1300 paces long, it's mouth being ſhut up with a chain, lying at a certain diſtance, on three pillars of ſtone, leaving a ſpace open for the paſſage only of one large veſſel. This harbour is very long, and runs far into the land, taking in almoſt the whole length of the city, but is not very broad, nor deep enough for the largeſt veſſels. The city itſelf enjoys at preſent great privileges, and is one of the fineſt in France, ſince it has been enlarged by Lewis XIV, ſo that it's citadels, new ſtreets, public places, ſtately edifices, magnificent churches, monaſteries, colleges, ſeminaries, hoſpitals, courts of judicature, havens, arſenal, gallies, &c. are well worth a ſtranger's particular obſervation.

TOULON is extremely well ſituated, being open to the ſouth, and ſheltered on the north by very high mountains, which render it's port one of the largeſt and ſafeſt in the world. The city is pretty large, but very dirty almoſt every where; it is diſtant about ten leagues eaſt from Marſeilles, twenty-four from Nice to the ſouth-weſt, and thirty from the borders of Dauphiné to the ſouth, and about 125 from Paris. It is a ſtrong city, adorned with ſeveral churches, monaſteries, and other public edifices. King Henry IV. fortified it with ſtrong walls, and built two large moles, each whereof is 700 paces long, incloſing almoſt the whole port; near them is alſo erected an arſenal, furniſhed with all ſorts of naval ſtores, whence the largeſt ſhips of the royal fleet of France are uſually fitted out; and for their ſecurity, the fortifications have been very much increaſed by Lewis XIV. On two ſides of the city, viz. north-eaſt and ſouth-eaſt, at a very ſmall diſtance, lie very ſteep and inacceſſible hills: that of St Anne's, on the north-eaſt, perfectly commands the town, and ſinks with a declivity on that ſide, but on the country ſide it is a perpendicular rock. On the ſea-ſide it is extremely well defended by batteries of cannon flanking all the avenues. In the mouth of the haven lies a ſtockade or boom, between which and a little neck of land, there is a paſs of good deep water; but that is ſecured by a great tower, whereon are mounted 30 guns, which carry 24 pound balls. This tower our fleet, under Sir Cloudeſly Shovel, endeavoured to gain, and had in effect done it, if an unlucky ſhot had not blown up the magazine of gunpowder in fort St Laurence.

The port is one of the fineſt in Europe: you enter firſt into a large and very ſafe road, defended by ſeveral batteries and forts. At one of the extremities of this road lies the port, the entrance of which is ſo narrow, that the ſhips cannot enter it, but one by one, and it is defended by ſeveral batteries well mounted with guns.

The dioceſe of Toulon is of a very ſmall extent, comprehending in all but 25 pariſhes. One of the principal places in this biſhopric, is the city of

HIERES, which was formerly a conſiderable place, being a ſea-port town; but the harbour is at preſent filled up, and the ſea retired above 2000 paces from this place. The ſoil here is very good and fruitful, and produces excellent fruit. This place gives the name to the iſland of Hieres.

FREJUS, or FREJULS. There is here a ſmall harbour, at the mouth of the river Argents, from which this city is a league diſtant; it is 14 leagues from Toulon to the north-eaſt, 10 from Antibes to the north-weſt, and 20 from Aix to the eaſt.

PRUSSIA. This country is divided into Pruſſia Royal and Ducal; extends from 52, 50, to the 56th degree of north latitude, and from 16, 50, to 23, 54 degrees of eaſt longitude. It is bounded by the Baltic Sea on the north, by Lithuania and Samogitia on the eaſt, by Poland Proper and Maſovia on the ſouth, and Pomerania on the weſt. It is about 1250 miles in length, and in breadth above 140 in the weſt part, and in the eaſt part more than 170; though ſome extend it 30 miles more, both in length and breadth. It contains a vaſt number of fine trading towns, beſides many populous villages equal to ſome cities, has the moſt inland navigation of any country in Europe of it's bigneſs, except the Netherlands, and is ſaid to be the richeſt ſoil, and the moſt plentiful in produce.

It abounds with cattle, wild beaſts, and fruits of all ſorts, and is ſaid to be watered with above 2030 rivers and lakes, which ſupply the inhabitants with all kinds of fiſh. It has a conſiderable trade by many convenient ports, towards the Baltic, as well as by the Veiſſel, which falls into the Baltic at Dantzic, after having divided itſelf into ſeveral branches, and made the three iſlands called the Werder: ſo that the inhabitants are richer, and live better than in any other province of Poland. It's woods furniſh plenty of veniſon, and it's ſea-coaſts a great quantity of amber, which is tranſported all over Europe. It flows on the ſea like oil, and after being expoſed to the air, grows hard. The people take it up with hoſe-nets, faſtened to long poles, when the tide flows, and ſometimes catch pieces as big as one's fiſt.

A great deal of glaſs is made in this country, of the aſhes of wood, and largeſt ſort of pebbles: theſe they boil twelve hours, before they will vitrify. When they would have their glaſs clearer than ordinary, they mix a certain earth with the aſhes, of the colour and hardneſs of tartar; which renders the glaſs of different colours, according to the quantity of this earth which is mixed with it. See GLASS.

Though the eaſtern part of this country, which was all along called Ducal, to diſtinguiſh it from the Royal, or Poliſh Pruſſia, is now alſo termed Royal, ſince his preſent Pruſſian Majeſty's grandfather firſt took on him the title of king of Pruſſia, and was recognized as ſuch by the reſt of the powers of Europe; we ſhall, nevertheleſs, treat of it according to the antient diviſion of it, by geographers, into the Royal and Ducal.

The ROYAL, or POLISH PRUSIA, which is the weſt part, and ſubject to the king of Poland, has Ducal Pruſſia on the eaſt, Brandenburgh and Pomerania on the weſt, Poland on the ſouth, and the Baltic on the north, and is 130 miles from

east to weſt, and 110, where broadeſt, from ſouth to north. It is divided into the four palatinates of Pomerellia, or Poliſh Pomerania, Culm, Marienburg, and Pomerania, and the caſtellans of Elbing and Dantzic.

The palatinate of POMERELLIA, or POLISH POMERANIA, has Brandenburg Pomerania on the weſt, the river Veiſſel on the eaſt, the Baltic on the north, and Great Poland on the ſouth.

DANTZIC ſtands on a branch of the Veiſſel, about four miles above where it falls into the Baltic Sea, 24 miles north-weſt of Marienburg, 35 weſt from Elbing, 84 north from Thorn, 175 eaſt from Stetin, and north from Gneſna, 154 north-weſt from Warſaw, and 256 north from Cracow. It is a free imperial city, and one of the Hans-Towns. [See the article HANS-TOWNS.] In the 9th century it was reckoned the chief place in the world for fiſhing up amber.

This city is now the chief ſtaple of Poland for import and export, the greateſt emporium of the Baltic Sea, and perhaps one of the greateſt granaries in Europe; it being ſuch a famous mart, that vaſt fleets of ſhips come hither every year from Holland to fetch corn, there being little elſe uſed, either in the province of Holland or Zealand. In ſhort, if we only except London and Amſterdam, it may be ſaid to equal, if not to excel, any other city in thoſe parts of Europe.

The chief export of the place is in corn brought from Poland: it is computed that 730,000 tons, or 365,000 laſts of wheat are ſhipped from hence one year with another. The citizens have the ſole privilege of buying up the corn, as ſoon as it enters the harbour. The magiſtrates ſet a price upon it, but that the country people, who are the ſellers, may not be impoſed upon, and delayed, the citizens are obliged to buy up the whole quantity which the boats bring in, let it be what it will.

Though this city takes off a great quantity of the woollen manufactures of Great-Britain, yet the Dutch ſending ſo many ſhips for corn to Dantzic, which muſt return empty if they have no goods to carry, the freight thereby coſting them nothing, have the chief trade of courſe. Alſo all the heavy goods of Great-Britain, ſuch as tobacco, ſugar, rice, &c. are ſupplied much cheaper by the Dutch; ſo that, in a word, the Engliſh trade to this city is much leſs profitable than formerly; and yet the Engliſh goods are imported to Dantzic, and ſent up into Poland, as much, and perhaps, more, than ever. Dantzic is the chief market to which the Dutch, and alſo the Scots ſend their pickled herrings; which are ſo good a merchandize in Poland, that, it is ſaid, the Dutch fell at Dantzic, Elbing, and Koningſberg, 14000 tons or laſts of herrings every year, beſides the great quantities which Scotland alſo ſend thither.

The Dutch alſo ſend juniper ſpirits hither, together with ſalt, ſulphur, whale-fins, and train-oil; and would ſend more of the latter, were it not for the great quantities of oil which the Dantzickers raiſe from the ſmaller ſort of ſturgeon, and other fiſh, and from linſeed, rape-ſeed, &c. Beſides corn, of which there is not ſuch quantity exported any where as here, the Dantzickers export pot-aſhes, ſturgeon, Poliſh linen, fail-cloth, and great quantities of ſpruce canvas, which is uſed for ſails for ſmall ſhipping in England, and even in Spain and Italy. See the article CANVAS.

The Dutch, who bring herrings hither, beſides their Eaſt-India goods, fetch great quantities of Poliſh ſheeps-wool from hence, which is the beſt in all the northern world, the Engliſh and Iriſh only excepted, and which they employ in their cloth manufacture. The French alſo bring ſome of it away, and would bring more, if they did not find means to get it upon eaſy terms from England and Ireland. The Poliſh wool is alſo exported to Germany and Sweden.

The Dantzickers have a wine of that ſort they call tockay, but it is no other than the Poliſh wines of the mountains of Cracow and Podolia.

Some of the beſt Eaſt-country plank, as we call it, or oaken plank for building ſhips, is brought from this city, as well as Koningſberg and Stetin, and comes down the Viſtula and Oder, out of the Great Poland. The Dutch cargoes, beſides thoſe already mentioned, generally conſiſt of Engliſh woollen manufactures, and the ſugar and tobacco of the Engliſh colonies, with the French ſilks, wines, and brandy.

The harbour is not deep, ſo that large ſhips can ſcarce come up to the city.

They have no men of war, but abundance of merchant-ſhips, of 300] tons, and 30 or 40 guns a-piece. They have 200 ſoldiers in pay, can eaſily maintain 12,000, and have ſometimes had an army of 60,000 men.

There is an iſland ſea, or bay here, called the Friſchaff, which lies parallel with the Baltic coaſt for 60 miles in length, but is of an uneven breadth, being from 5 to 10 miles over. It begins at the territory of Dantzic, where is a very large inlet from the Dantzic branch of the Viſtula, aud which makes the port of Elbing, juſt oppoſite to the mouth of the river Elbing, ſtanding on another entrance of it, a little farther eaſt. This bay is famous for ſturgeon, a vaſt quantity of which is taken here, cured at Koningſberg and Dantzic, and ſent to all the trading ports of Europe, eſpecially England and Holland.

CULM, the ſecond palatinate of Royal Pruſſia, lies on the eaſt ſide of the Veiſſel, betwixt that river, Great Poland, and Ducal Pruſſia.

The city of this name is 23 miles north of Thorn, 60 ſouth of Dantzic, and 43 north-weſt of Uladiſlaus. It is pleaſantly ſituated on a hill, at the foot of which runs the Veiſſel, and has ſtill the name of a Hanſe-Town, but has loſt it's trade.

THORN, 24 miles ſouth of Culm, 72 from Marienburgh, 84 from Danizic, 20 north-eaſt from Uladiſlaus, 60 north from Lencieia, and 93 north-weſt from Warſaw. It is a Hanſe-Town, divided by the Veiſſel into two parts: it is the fineſt and beſt built in all Royal Pruſſia, the ſtreets being much broader, and the houſes ſtatelier, than at Dantzic. Cluverius ſays it was a famous mart long before Dantzic.

MARIENBUGH, the third palatinate of Poliſh Pruſſia, on the eaſt ſide of the Veiſſel, and north of Thorn. It is bounded on the north partly by the Baltic and the Friſchaff, and on the weſt by the palatinate of Pomerellia. It is a champain level country, like Holland, as fruitful as that province is, and as populous as any part of it, Amſterdam excepted.

MARIENBURGH ſtands on the Nogat, a branch of the Veiſſel, 18 miles ſouth-weſt of Elbing, 25 ſouth-eaſt of Danzic, and near 72 north of Thorn. The adjacent ſoil is fruitful and well cultivated, as is the neighbouring iſland of the ſame name, formed by the river.

ELBING, on a river of the ſame name, that riſes out of the lake Drauſen, and falls here into the Friſchaff, is four or five miles from the Veiſſel, 18 miles to the north-eaſt of Marienburgh, 35 eaſt of Dantzic, 95 north of Uladiſlaus, and 133 north-weſt of Warſaw. It is the metropolis of the palatinate, the chief town of Hockerland, and the only port, except Dantzic, in all Poliſh Pruſſia. It is a fair, neat, rich, ſtrong, well-built, and populous city, in a delightful ſituation, and a place of great trade, the inhabitants being wholly addicted to buſineſs and commerce. It's principal trade is in ſturgeon, butter, cheeſe, mead, and corn.

WARMIA, the fourth palatinate of this country, which joins to that of Marienburgh, and lies north-eaſt from Elbing, being ſurrounded in a manner by the Ducal Pruſſia and the Friſchaff.

The chief town of this palatinate is BRAUNSBERG, or BRAUNSLAW, on the river Paſſar, near the bay of Friſchaff, 25 miles north-eaſt of Elbing, and 50 eaſt of Dantzic. It is a populous place, much frequented and eſteemed, and is noted for a good trade.

The DUCAL PRUSSIA has Poliſh Pruſſia on the weſt; Lithuania on the eaſt; Samogitia, and the bay of Courland, on the north; and the palatinate of Warſaw on the ſouth. It is about 130 miles from north to ſouth, where longeſt, and 120 from eaſt to weſt, where broadeſt; ſo that it is much larger than Poliſh Pruſſia, but not ſo fruitful, nor conſiderable for trade and towns. It is divided into the three following circles, or provinces.

The province of SMALZAND; the capital of which, and indeed of the whole kingdom of Pruſſia, is

KONINGSBERG, at the mouth of the river Pregel, where it falls into the Friſchaff, 55 miles north-eaſt from Elbing, 84 from Dantzic, and 153 from Warſaw. It is a Hanſe-Town, large, well built, and divided into three parts by the river; one part, called Lebenicht, is defended by a ſtrong caſtle, that commands the harbour, and makes it a great emporium of trade, which is chiefly in yellow amber, found on the coaſt, honey and wax, corn, naval ſtores, ſturgeon, train-oil, linen-yarn, cordage, and ſeveral other things, of ſuch univerſal uſe, that this, like Dantzic, is always full of ſhips, from moſt parts of the trading world, even from Spain and Portugal. In ſhort, it is a rich city, and a place of vaſt buſineſs, the exportation here being the ſame as it is upon all this coaſt from Stralſund on the weſt, to Narva on the eaſt.

PILAW, a very ſafe port on the Baltic, at the mouth of the Friſchaff, 30 miles weſt of Koningſberg, is noted for ſturgeon-fiſhing.

Of the EXCHANGES of DANTZIC and KONINGSBERG.

Uſance of Dantzic for Germany is as for Koningſberg, at 15 days ſight; for Amſterdam, at 40 days after date, or a month after ſight; and at Koningſberg 41 days. In both theſe places there are allowed 10 days of grace after the expiration of the time mentioned in the bill of exchange.

They keep their accounts in rixdollars, gros, and fenings; or in florins, gros, and fenings. The rixdollar=3 florins, or 90 gros, the florin=30 gros, the gros=18 fenings.

DANTZIC and KONINGSBERG

Gives	To receive	
72 rixdollars, more or leſs,	in France,	100 crowns d'or ſol.
270 gros Poland,—idem	in Holland,	1 livre gros banco.
100 rixdollars	at Breſlaw,	103 rixdollars, more or leſs.
84 gros Poland, more or leſs,	at Frankfort,	1 rixdollar current.
110 dittos—idem	at Hamburgh,	1 rixdollar banco. [money.
100 rixdollars	at Leipſic,	101 rixdollars, more or leſs, current
56 gros Poland more or leſs,	at Nuremberg,	1 florin current money.

REMARKS

REMARKS on the article PRUSSIA before the laſt war.

The Pruſſian monarch has great forces, large revenues, a genius capable of conducting both, and a moderation that will reſtrain him from attempts ſuperior to theſe. He knows perfectly well, that the grandeur of the ſovereign muſt be eſtabliſhed upon the welfare of the ſubject, and this has excited him to ſhew the ſame regard for the happineſs of his people, as for the extenſion of his own power; or rather has induced him to make the latter always ſubſervient to the former. He is known to have an inclination to become a maritime power, or which is the ſame thing in other words, to enable his ſubjects to encreaſe their wealth by their induſtry, through the channels of foreign trade.

Now though there are many, and, amongſt them, ſome ſtateſmen, who treat this as a chimera, yet we are told the direct contrary, and are inclined to think that this monarch, and his ſucceſſors, will actually carry that point; and we think ſo, becauſe there is no great improbability in ſuppoſing that they may be, ſome time or other, maſters of a ſea-coaſt four or five hundred miles in extent. It would require more time and room than we have at preſent to beſtow, to endeavour the explanation of this, ſo as to bring it within the reach of every capacity: but whoever will conſult the maps, conſider the preſent ſtate of things, and the vaſt improvements in the power of an abſolute monarch to make, who knows what he is doing, and what is to be done, in carrying a favourite point, which is at the ſame time, his people's point, as well as his own: I ſay, whoever will reflect upon theſe things, will not conſider what we have advanced as a viſionary deluſion.

His views might certainly have been altered, his meaſures changed, and his deſigns otherwiſe directed than they have been. But then this did not depend intirely upon him, there muſt have been a concurrence in other powers to have brought this about; for, to manage a wiſe prince, true to his own intereſts, he muſt be ſhewn, that thoſe who deſire to have him for a friend and ally, have no intention to reſtrain, no inclination to defeat, the meaſures he takes for that purpoſe, while they are not deſtructive or dangerous to themſelves.

To manifeſt a diſpoſition contrary to this, is ſufficient to give another biaſs to his councils; and, when we ſee a prince of the king of Pruſſia's turn continue, as it were, always armed at an immenſe expence, we muſt conclude that he has ſome great enterprize in view, which whenever time ſhall diſcloſe, it will alſo diſcover that he took proper meaſures for carrying that point, whatever it is, which thoſe armaments have been intended to compaſs.

The ſituation of his preſent Majeſty's territories is ſuch, as obliges him to have a conſtant eye to the affairs of the North, where no power was ever predominant, but his predeceſſors ſuffered for it, and their dominions and eſtates. With reſpect to the dukes of Courland, they have been, generally ſpeaking, cloſely allied to the houſe of Brandenburgh by marriage, which, as it ſhews the antient connection of their intereſts, diſcovers alſo the reaſon why this prince is ſtill ſo attentive to the choice which the Courlanders may make of a new duke.

The province of Samogitia in Poland, with the duchy of Courland, divide the Ducal Pruſſia from the territories of the Czarina; and, therefore, in the preſent ſtate of things, it is but natural that the king of Pruſſia ſhould deſire to ſee the hands of the Polanders ſtrengthened, and the inhabitants of Courland ſet entirely free; becauſe he might then flatter himſelf, that, in caſe at any time hereafter the troubles of Germany ſhould revive, his territories would be ſafe from any ſudden invaſion by the Ruſſians, with which he was threatened but a few years ago, when his concerns were in a very critical poſture.

It is alſo very likely, that he would be glad to annex what the Swedes ſtill retain in Pomerania, to the reſt of that country which is already in his poſſeſſion, not from any jealouſy of the Swedes, or from a deſire of aggrandizing himſelf at the expence of his neighbours and allies, but on the ſcore of convenience, and the better connection of his eſtates. We may from thence infer, that he will never ſeek to procure this in any other than an amicable way, and with the conſent of the Swedes, in conſideration of ſome kind of equivalent or other. It may be, this acquiſition is ſtill at a great diſtance; and it may be, alſo, that the meaſures which this great monarch has concerted in reference to the affairs of the North, will bring this about ſooner than is generally imagined. But be that as it will, there is no queſtion that, whenever it is effected, the power of Pruſſia will be very much augmented thereby, and the liberties of the Empire will then ſtand in need of no guardian without the limits of Germany.

While theſe deſigns attract the thoughts, and employ the hands of this active prince, he will certainly maintain a good correſpondence with all thoſe powers that are neighbours to him, in reſpect to the reſt of his dominions, which will leave the inhabitants of the United Provinces at full liberty to redreſs their own grievances in their own manner, and to recover the antient ſtrength and vigour of their government, in conſequence of reſtoring that form under which it was firſt conſtituted, and for a long ſeries of years happily flouriſhed.

But whenever thoſe ſtruggles for power which have embarraſſed and diſtracted the potentates of the North, ſhall be by negociation or otherwiſe compoſed, we have very little room to doubt that his Majeſty of Pruſſia will again turn his views towards the countries of Cleves and Guelders, and the principality of EAST FRIESLAND, where he has the very important and commodious port of EMBDEN, to facilitate the ſchemes he may form in favour of the commerce of his ſubjects, to which he ſeems to apply himſelf with equal induſtry and ſpirit, as that he has no reaſon to ſuſpect his neighbours may force him ſuddenly into a war, while his councils are wholly taken up in cultivating the arts of peace and traffic.

He will by that time have ſerved himſelf to the utmoſt, of whatever aſſiſtance France may have found it her intereſt to give them, for more than that ſhe will never give; and his ſenſe of this will engage him not to perſiſt any longer in the proſecution of meaſures acceptable to the court of Verſailles, than they are conducive to the extenſion or eſtabliſhment of his power and influence. He will then ſee that indepency, and being at the HEAD OF THE PROTESTANT INTEREST IN GERMANY, is ſufficient to gratify his utmoſt ambition, and to raiſe him to the higheſt point of authority, by making him courted and reſpected by all his neighbours, and, as occaſions offer, the umpire of all their differences.

Theſe are, indeed but ſuppoſitions, but then they are built upon ſolid and rational foundations; whereas thoſe who fancy that he will, ſome time or other, be ſwallowed up by a confederacy of powerful neighbours, or deſpoiled of a great part of his territories, are not able to offer either facts or arguments to counſel their opinion, ſince hitherto we have never ſeen him attempt beyond his ſtrength; nor has it appeared in all his military regulations, freſh eſtabliſhments, new diſcipline, &c. that the power moſt concerned, or which thinks herſelf moſt concerned to traverſe the deſigns of Pruſſia, has been able to do it with any great effect, even in conjunction with a very uſeful ally, who, after being once ſacrificed, will moſt certainly take care to prevent being involved again in the like quarrel.

REMARKS on our article PRUSIA, ſince the laſt war and peace.

Beſides his Pruſſian majeſty giving all encouragement to trade, uſeful arts, and ſciences, we have recent accounts that his majeſty propoſes to render the DUCHY OF CLEVES, and the other places he poſſeſſes in it's neighbourhood, the flouriſhing receptacles of induſtrious perſons of all nations; in order to which, all the fortifications, except thoſe of WESEL, are to be entirely demoliſhed, no troops are to be quartered in them, the TAXES REDUCED, all the high roads improved, as well as repaired, ſeveral new canals made, and every encouragement given, that may invite manufacturers to ſettle in thoſe countries.

The BUSINESS of the CUSTOMS continued, from the end of LETTER O.

With reſpect to the PLANTATIONS in general.

PLANTATIONS, Britiſh, in Aſia, Africa, or America.

———No goods to be imported into, or exported from thence, in any other but ſhips of the built of Great-Britain, Ireland, or the ſaid plantations, wholly owned by the people thereof, and whereof the maſter, or at leaſt three-fourths of the mariners, are of the ſaid places (except ſhips taken as prize, and legally condemned, navigated by the maſter, and three-fourths of the mariners Britiſh, or of the ſaid plantations, and owned by Britiſh) upon forfeiture of the ſhip and goods, one-third to his majeſty, one-third to the governor, one-third to the ſeizer and informer, 12 Car. II. cap. 18. §. 1. and 7 and 8 Will. III. cap. 22. §. 2, 3.

———— Admirals and other commanders of ſhips of war, are to ſeize as prize all ſhips offending, and to deliver them to the court of Admiralty, 12 Car. II. cap. 18. §. 1.

———— Ships not to be deemed or paſs as of the built of Great-Britain, Ireland, Guernſey, Jerſey, or the Britiſh plantations, ſo as to be qualified to trade, 'till regiſtered by the owners, and proof of the built and property be made upon oath of one or more of them, before the collector and comptroller of the port of Great-Britain or Ireland, to which they then belong,

long, or before the governor and principal officers of the revenue in the plantations, Guernſey or Jerſey, if the ſhip belongs to thoſe places, 7 and 8 Will. III. cap. 22. §. 17.

——— Such oath to be regiſtered by the perſons who adminiſtered it, and atteſted under their hands and ſeals, and then delivered to the maſter, and a duplicate thereof immediately tranſmitted to the commiſſioners of the Cuſtoms, 7 and 8 Will. III. cap. 22. §. 18.

———For want of ſuch proof, ſhips trading thither are liable to forfeiture, as if they were foreign ſhips, 7 and 8 Will. III. cap. 22. §. 18.

——— But prize ſhips legally condemned muſt be ſpecially regiſtered, mentioning the capture and condemnation, inſtead of the time and place of building; with proof upon oath, that the entire property is Britiſh, 7 and 8 Will. III. cap. 22. §. 19.

——— The name of a ſhip changed after regiſtering, or the property transferred to another port, ſuch ſhip to be regiſtered de novo, and the former certificate thereof to be cancelled; and if the property be altered in the ſame port by the ſale of any ſhare, it muſt be acknowleged by indorſement on the certificate of the regiſter before two witneſſes, 7 and 8 Will. III. cap. 22. §. 21.

——— Britiſh, in Aſia, Africa, or America—Ships lading and unlading any goods there, and the maſter and their lading are ſubject to the ſame rules, viſitations, ſearchers, penalties, and forfeitures, as in Great-Britain (except under the regulations in the ſequel) 7 and 8 Will. III. cap. 22. §. 6.

——— Sugar, tobacco, cotton, wool, indigo, ginger, fuſtick or other dying wood, rice (except under the ſebſequent regulations) melaſſes, hemp, copper-ore, beaver-ſkins or other furs, pitch, tar, turpentine, maſts, yards and bowſprits of the growth, production and manufacture of any of the Britiſh plantations in America, Aſia, or Africa, may not be carried from thence, unleſs to ſome other Britiſh plantations, or to the kingdom of Great-Britain only, to be there landed, upon forfeiture of the ſaid goods, or their value, with the ſhip and furniture, 12 Car. II. cap. 18. §. 18. 22 and 23 Car. II. cap. 26. §. 10, 11. 25 Car. II. cap. 7. §. 3. and 3 and 4 Ann. cap. 5. §. 12. and cap. 10. §. 7. and 12 Ann. cap. 9. §. 1. and 8 Geo. I. cap. 15. §. 25. and cap. 18. §. 22. and 11 Geo. I. cap. 29. §. 4. and 2 Geo. II. cap. 28. §. 6. and cap. 35. §. 17. and 3 Geo. II. cap. 28. §. 1.

——— And if upon any pretence whatſoever, any goods of the Britiſh plantations in America be landed in Ireland, without being firſt landed in Great-Britain, and the duties thereof there paid, they are forfeited with the ſhip, three fourths without compoſition to his majeſty, and one fourth to the ſuer; unleſs ſtranded or driven in by leakneſs, &c. in which caſe, the goods muſt be delivered into the cuſtody of the chief officer of the port, there to remain 'till re-ſhipped for Great-Britain, for which good ſecurity muſt be taken, 7 and 8. Will. III. cap. 28. §. 14, 15.

——— N. B. Now to extend only to ſugars, tobacco, cotton-wool, indigo, ginger, ſpeckle-wood, or Jamaica-wood, fuſtick or other dying wood, rice, melaſſes, beaver-ſkins, and other furs, copper-ore, pitch, tar, turpentine, maſts, yards, and bowſprits of the growth product, or manufacture of the ſaid plantations. All other goods of the growth, product, and manufacture of any of the ſaid plantations, may be imported from thence into Ireland (except hops, which are to continue under the regulations of 9 Ann. cap. 12. and 1 Geo. I. cap. 12.) provided it be in Britiſh ſhipping, whereof the maſter and at leaſt three fourths of the mariners are Britiſh, 4 Geo. II. cap. 15. §. 1, 2. and 5 Geo. II. cap. 9. §. 1.

——— But rice may be ſhipped in Carolina, or Georgia in America, by Britiſh ſubjects, on board any ſhip built in Great-Britain, or belonging to Britiſh ſubjects reſiding in Great Britain, and legally navigated, that has cleared outwards, in any port of Great-Britain, for Carolina or Georgia; and may be carried directly to any part of Europe, lying ſouthward of CAPE FINISTERRE, without being firſt carried to any other Britiſh plantations, or to Great-Britain, provided the maſter before clearing takes out a licence, under the hands of the commiſſioners of the cuſtoms, or any three of them, for the loading and carrying of the rice accordingly; which licence muſt be granted upon a certificate of the collector and comptroller of the port, that bond has been given, that none of the other enumerated goods ſhall be taken on board, at any Britiſh plantation, unleſs for the ſhip's uſe, and that the ſhip ſhall proceed directly with the rice according to the licence, and there land it, and then proceed to Great-Britain, before ſhe returns to any Britiſh plantation, 3 Geo. II. cap. 28. §. 1, 2, 6. and 27 Geo. II. cap. 18. §. 3.

——— The maſter, within four months after arrival, not producing a certificate of the regular diſcharge of ſuch rice, under the hand and ſeal of the Britiſh conſul, or of two known Britiſh merchants, the bond muſt be put in ſuit, 3 Geo. II. cap. 18. §. 1, 2, 6. and 27 Geo. II. cap. 18. §. 3.

——— Before rice may be ſhipped in Carolina or Georgia, the licence and certificate of bond being given, muſt be produced to the collector; and before the maſter's departure, he muſt make oath in writing, whether he intends to load any rice, and to what place bound, 3 Geo. II. cap. 28. §. 3. and 27 Geo. II. cap. 18. §. 3.

——— Before rice may be ſhipped in Carolina or Georgia, the exporter muſt make entry thereof with the collector, comptroller, and naval-officer, and take out a cocket, whereon he muſt indorſe, before ſhipping, the true quantity intended to be ſhipped, mentioning the marks, numbers, and contents of each caſk, and deliver the ſame to the ſearcher, 3 Geo. II. cap. 28. §. 4. and 27 Geo. II. cap. 18. §. 3.

——— If upon weighing and examining of the rice by the ſearcher, either before or after the ſhipping, the quantity be found to exceed the indorſement, or the rice be laden before entry, &c. it is forfeited, with treble the value, beſides the veſſel, one third whereof to the king, one third to the governor, and one third to the informer, 3 Geo. II. cap. 28. §. 4. and 27 Geo. II. cap. 18. §. 3.

——— Before the ſhip's departure, the maſter is to receive back the licence, with the marks, numbers, and contents of each caſk, indorſed thereon by the collector, comptroller, and naval-officer, who are to make two copies of ſuch licence and indorſement; which are to be atteſted by the maſter, and left with the officers, 3 Geo. II. cap. 28. §. 4. and 27 Geo. II. cap. 18. §. 3.

——— The maſter, on his return to Great-Britain, muſt produce the licence ſo indorſed, to the officer of the port where bond was given, and likewiſe a certificate of the conſul or of two Britiſh merchants, teſtifying the due landing of the rice, and that they verily believe that no other enumerated goods have been there landed 3 Geo. II. cap. 28. §. 4. and 27 Geo. II. cap. 18. §. 3.

——— Officers in Carolina or Georgia muſt tranſmit one of the copies of the indorſment, to the commiſſioners of the Cuſtoms; and upon receipt thereof, or of the indorſed licence, and the half ſubſidy for the rice ſhipped in Carolina or Georgia, muſt be demanded of the perſon who gave the bond; and in caſe of non-payment within thirty days, the bond muſt be put in ſuit, 3 Geo. II. cap. 28. §. 5. and 27 Geo. II. cap. 18. §. 3.

——— Britiſh, in Aſia, Africa, or America.—For every ſhip bound to the ſaid plantations, ſailing from Great-Britain or Ireland, ſufficient bond muſt be there given, with one ſurety, to the chief officer of the cuſtoms, to the value of 1000l. if under 100 tons, and to 2000l. if above that burthen, that if any of the aforeſaid enumerated goods are taken on board, they ſhall, by the ſaid ſhip, be brought to ſome port in Great-Britain, and there landed: and for all ſhips coming to the ſaid plantations from any other place, before they begin to load any of the ſaid enumerated goods, the like bond muſt be given to the governor, that ſuch goods ſhall be carried to ſome other Britiſh plantation, or to Great-Britain: the condition of ſuch bond to be, to produce a certificate, within eighteen months, of the legal diſcharge of the goods; and the ſurety in ſuch bond named muſt be of known reſidence and ability, 12 Car. II. cap. 18. §. 19. and 22 and 23 Car. II. cap. 26. §. 11. and 7 and 8 Will. III. cap. 22. §. 13.

——— Ships taking in goods, before a certificate of bond being given in Great-Britain, is produced, or bond be given in the plantations, or carrying the goods contrary to the tenor of the bond, are forfeited, 12 Car. II. cap. 18. §. 19. and 22 and 23 Car. II. cap. 26. §. 11. and 7 and 8 Will. III. cap. 22. §. 13.

——— Governors are to return yearly, at leaſt, a liſt of all ſhips, which have taken in any of the aforeſaid goods, and alſo true copies of all the bonds by them taken, to the cheif officers of the Cuſtoms in London, 12 Car. II. cap. 18. §. 19. and 22 and 23 Car. II. cap. 26. §. 12.

——— Britiſh, in Aſia, Africa, or America.—Ships belonging to the ſaid plantations, landing any of the aforeſaid enumerated goods in any place in Europe, except Great-Britain, are forfeited with their furniture, &c. 22 Car. II. cap. 26. §. 12.

——— Such ſhips may be proſecuted by any perſon in any court of admiralty in Great-Britain, 22 Car. II. cap. 26. §. 13.

——— Ships coming to the ſaid plantations to take in any of the following enumerated goods, with intent to carry the ſame to ſome other Britiſh plantation, bond not having been firſt given to bring the ſame to Great-Britain, only there muſt be paid for ſuch goods the following duties, viz.

	l.	s.	d.
Sugar, white, the hundred weight	0	5	0
Sugar, brown, and muſcovadoes, the hundred weight	0	1	6
Tobacco, the pound	0	0	1
Cotton-wool, the pound	0	0	0½
Indigo, the pound	0	0	2
Ginger, the hundred weight	0	1	0
Logwood the hundred weight	5	0	0
Fuſtick and all other dying wood the hundred weight	0	0	6
Cocoanuts, the pound	0	0	1

And ſecurity muſt be taken to carry them to ſuch plantations, or to Great-Britain, 25 Car. II. cap. 7. §. 3. and 7 and 8 Will. and Mary, cap. 22. §. 8. and 1 Geo. I. cap. 12. §. 4.

——— But if the proprietor has not money to pay the ſaid duties, the officers may take ſuch a proportion of the goods as will amount to the value of the duties, 25 Car. II. cap. 7. §. 5.

——— The

——— The aforeſaid duties to be under the management and direction of the commiſſioners of the cuſtoms, 25 Car. II. cap. 7. §. 4.

——— Britiſh, in Aſia, Africa, or America. Proſecutions for the breach or non-performance of the conditions of bonds, to bring the enumerated goods to Great Britain, or to ſome other plantations, not commenced within three years after their date, or judgment not obtained within two years after the commencement of the proſecution, the ſaid bonds are void, and muſt be delivered up to be cancelled, 8 Ann. cap. 13. §. 23, 25.

——— Officers, upon demand, refuſing or neglecting to deliver up ſuch bonds to be cancelled, are to anſwer to the party grieved all his damages, with treble coſts of ſuit, 8 Ann. cap. 13. §. 23, 25.

——— Ships from Ireland may not break bulk, 'till the maſter has ſignified his arrival, and delivered a true inventory or invoice of the lading, to the governor, with a certificate from the chief officer of the port in Ireland, expreſſing the particulars of the ladings, &c. and has made oath that the goods are the ſame which he took on board by virtue of ſuch certificate, and the ſhip be viſited and ſearched by an officer, upon forfeiture thereof, and of all woollen manufactures found on board, not having been laden in Great Britain, and of any linen goods, not laden in Great Britain, nor of the manufacture of Ireland; one-third to his majeſty, one-third to the governor (if they are ſeized, or ſued for, otherwiſe that third alſo to his majeſty) and one-third to the ſuer, 3 and 4 Ann. cap. 8. §. 2, 3. and 3 Geo. I. cap. 21. §. 1.

——— But ſuch ſhips to be ſubject to the ſame rules, ſearchers, penalties, forfeitures, &c. as ſhips coming from Great Britain to the ſaid colonies, 3 and 4 Ann, cap. 8. §. 2, 3. and 3 Geo. I. cap. 21. §. 1.

——— Ships coming to any Britiſh plantations, &c. may not lade or unlade any goods, 'till the maſter has declared his arrival to the governor, with his own and veſſel's names, and has ſhewn him that his veſſel is Britiſh built, or was taken as prize, and is navigated with a Britiſh maſter, and at leaſt three-fourths of the mariners Britiſh men, and has delivered him a true and perfect inventory or invoice of the lading, with the places where taken in, upon forfeiture of the ſhip, &c. and all the European goods that were not laden in Great Britain, 15 Car. II. cap. 7. §. 8. and 7 and 8 Will. III. cap. 22. §. 2.

——— No goods of the product of Europe may be imported there, unleſs ſhipped in Great Britain, and carried directly from thence in Britiſh built ſhipping, or ſhips taken as prize, whereof the maſter, and at leaſt three-fourths of the mariners are Britiſh, upon forfeiture of ſhip and goods; one-third to his majeſty, one-third to the governor (if ſeized or ſued for there, otherwiſe that third alſo to his majeſty), and one-third to the ſeizer or informer, 15 Car. II. cap. 7. §. 6. and 7 and 8 Will. III. cap. 22. §. 2.

Except { Salt from Europe for the fiſheries of New-England, Newfoundland, Penſilvania, and New-York, wines of and from the Madeiras and Azores, and horſes and victuals of and from Ireland, by Britiſh, and in Britiſh ſhips, 15 Car. II. cap. 7. §. 1. and 13 Geo. I. cap. 5. §. 1. and 3 Geo. II. cap. 12. §. 1.

Except { Iriſh linen cloth from Ireland, by Britiſh or Iriſh, ſo long as Britiſh linen is permitted to be imported into Ireland duty free, 3 and 4 Ann. cap. 8. §. 1. and 3 Geo. I. cap. 21. §. 1.

——— Britiſh, in Aſia, Africa, or America. Wool, woolfells, ſhortlings, mortlings, woolflocks, worſted, bays, or woollen yarn, cloth, ſerge, bays, kerſies, ſayes, ſrezes, druggets, cloth, ſerges, ſhalloons, or any other drapery, ſtuffs or woollen manufactures of the product or manufacture of the Britiſh plantations in America, may not be there laden on board any ſhip, nor upon any horſe, &c. with intent to be exported, upon forfeiture of the ſhip and goods, and 500 l. 10 and 11 Will. III. cap. 10. §. 2, 19.

——— The treaſury and the commiſſioners of the cuſtoms, may appoint officers of the cuſtoms in any port of the Britiſh plantations, 7 and 8 Will. III. cap. 22. §. 11.

——— The officers of the revenue there are to have the ſame powers and authorities, and to be ſubject to the ſame penalties and forfeitures, and to have the like aſſiſtance, as the officers of the cuſtoms in Great Britain, 7 and 8 Will. III. cap. 22. §. 6. and cap. 8. §. 3.

——— Naval-officers, within two months after entrance, or as ſoon as conveniently they can, are to give ſufficient ſecurity to the commiſſioners of the cuſtoms, for the faithful performance of their duties, upon pain of diſability to execute their employments, 7 and 8 Will. III. cap. 22. §. 5.

——— Governors there, before entrance upon their governments, or within ſix months after, are to take a ſolemn oath to do their utmoſt, that every thing enjoined by theſe acts ſhall be obſerved, 12 Car. II. cap. 18. 15 Car. II. cap. 7. and 7 and 8 Will. III. cap. 22. and 8 and 9 Will. III. cap. 20. §. 69.

——— Neglecting their duty accordingly, are to be removed, rendered incapable of any other government, and to forfeit 1000 l. 12 Car. II. cap. 18. §. 2. and 15 Car. II. cap. 7. §. 8. and 7 and 8 Will. III. cap. 22. §. 4.

——— Aliens, or perſons not born within his majeſty's allegiance, or naturalized, or made free denizens, may not be merchants, or factors there, upon forfeiture of all their goods and chattels; one-third to the king, one-third to the governor, and one-third to the informer, 12 Car. II. cap. 18. §. 2.

——— Britiſh, in Aſia, Africa, or America. Wharfingers, lightermen, bargemen, watermen, porters, &c. and the boats, veſſels, &c. are ſubject to the ſame pains, penalties, and forfeitures, for any frauds or offences, as in Great Britain, 7 and 8 Will. III. cap. 22. §. 6. and 3 and 4 Ann. cap. 8. §. 3.

——— Laws, by-laws, uſages, or cuſtoms, in force or practice in the plantations, repugnant to the laws of Great-Britain, are null and void, 7 and 8 Will. III. cap. 22. §. 9.

——— Upon actions, ſuits, and informations upon laws concerning his majeſty's duties, or ſhips or goods to be forfeited for unlawful importation, or exportation, the jury to conſiſt only of natives of Great Britain or Ireland, or perſons born in the plantations, 7 and 8 Will. III. cap. 22. §. 11.

——— Penalties and forfeitures by this act, not particularly diſpoſed of, are to be, one-third to the king, one-third to the governor, and one-third to the ſuer, 7 and 8 Will. cap. 22. §. 7.

——— Certificates of having given bond in Great Britain or Ireland, ſuſpected to be falſe or counterfeit, the governor, or officers of the cuſtoms, may take ſufficient ſecurity there, for the due diſcharge of the lading in Great Britain; and if certificates of the diſcharge of any ſuch lading are ſuſpected, the bond there given may not be cancelled, 'till they are informed of the truth of ſuch certificate from the commiſſioners of the cuſtoms, 7 and 8 Will. III. cap. 22. §. 10.

——— Certificates, cockets, returns, or permits counterfeited, razed or falſified, or afterwards knowingly ſo uſed, the offender to forfeit 500 l. 7 and 8 W. III. cap. 22. §. 10.

——— Hats or felts are not to be ſhipped on board any veſſel, or loaded on any horſe, cart, or other carriage, in order to be conveyed out of any of the Britiſh plantations, to any other of the Britiſh plantations, or to any other place whatſoever, upon forfeiture of the hats or felts, and alſo 500 l. by every offender for every ſuch offence, 5 Geo. II. cap. 22. §. 1, 2.

——— Any maſter of a veſſel, mariner, porter, carrier, waggoner, boatman, or other perſon, knowingly aiding and aſſiſting in ſuch offence, forfeits 40 l. 5 Geo. II. cap. 22. §. 1, 2.

——— No commiſſioner, or officer of the cuſtoms, or farmer of the cuſtoms in the Britiſh plantations, is to take any entry outwards, or ſign any cocket, &c. for the exporting any hats or felts, or knowingly permit, or contrive the ſame to be done, upon forfeiture of his office, and alſo 500 l. 5 Geo. II. cap. 22. §. 4.

——— Any perſon may ſeize and convey to his majeſty's next warehouſe all ſuch hats and felts, which he ſhall find in any ſhip or boat, or laid on, or near the ſhore, or in any navigable river, or upon any horſe or carriage, with intent to be exported and conveyed as above, 5 Geo. II. cap. 12. §. 5.

——— Every offence committed againſt this act, may be tried in any place in Great Britain, or the plantations, either where the offence was committed, or the offender or goods are found, 5 Geo. II. cap. 22. §. 5.

——— Britiſh, in Aſia, Africa, or America.—Rum or ſpirits, molaſſes or ſyrups, ſugars or panneles of the product of any plantation in America, not in the poſſeſſion of his majeſty, imported into any Britiſh plantations in America, are to pay the following duties, in money of Great Britain, according to the value of 5 s. 6 d. per ounce in ſilver, viz.

	l.	s.	d.
Rum or ſpirits, the gallon - - -	0	0	9
Molaſſes or ſyrups, the gallon - - -	0	0	6
Sugars and panneles, the hundred weight -	0	5	0

and ſo in proportion for a greater or leſſer quantity, to be paid down in ready money before landing, 6 Geo. II. cap. 13. §. 1, 2.

——— Any of the ſaid goods landed before due entry and payment of the duty, or without warrant from the proper officer, are forfeited, and may be ſeized by the governor, or any perſon authorized by him, or by warrant of a juſtice, or other magiſtrate, or by any cuſtom, impoſt, or exciſe officer, or their aſſiſtants, 6 Geo. II. cap. 13. §. 3.

——— Any perſon aſſiſting in the unlawful landing, or receiving into their cuſtody any of the aforeſaid goods ſo landed, are to forfeit treble the value; and for moleſting the officer in the execution of his duty, 50 l. and to ſuffer three months impriſonment, 6 Geo. II. cap. 13. §. 5, 6.

——— Officers conniving at the ſaid offence are to forfeit 50 l. and be rendered incapable of holding any employment under his majeſty, 6 Geo. II. cap. 13. §. 5, 6.

——— Maſters of ſhips, being his majeſty's ſubjects, receiving on board any of the aforeſaid goods, in order to land the ſame contrary to the true intent of this act, are to forfeit 100 l. 6 Geo. II. cap. 13. §. 7.

——— Such offences and forfeitures may be proſecuted, within two years after the offence, in any court of admiralty, or record, in his majeſty's plantations where the offence was committed;

committed; and the forfeiture is to be divided, one third to his majeſty, which (the expences of proſecution being firſt paid thereout) is to be applied for the ſupport of the government of the colony where it ſhall be recovered) one third to the governor, and one third to the informer, or proſecutor, 6 Geo. II. cap. 13. §. 3, 11, 12.

——— In all ſuch proſecutions for illegal landing the ſaid goods, the onus probandi is to lie on the claimer, or owner thereof, 6 Geo. II. cap. 13. §. 8.

——— Britiſh, in Aſia, Africa, or America. Any of his majeſty's ſubjects in any veſſel built in Great Britain, and belonging to his majeſty's ſubjects, of which the major part reſide in Great Britain, and the reſidue either in Great Britain, or in ſome of his majeſty's ſugar colonies in America, or in any veſſel belonging to his majeſty's ſubjects reſiding in Great Britain, and navigated according to law, that ſhall clear out wards from Great Britain to any of the ſaid colonies, may ſhip ſugars of the growth, produce, or manufacture of the ſaid colonies, to carry to any foreign part of Europe, provided a licence be firſt taken out for that purpoſe, under the hands of three of the commiſſioners of the cuſtoms, ſubject to the regulations, and on the conditions following, viz. 12 Geo. II. cap. 30. §. 2. and 14 Geo. II. cap. 57. §. 7.

——— The maſter or owner of the veſſel muſt give notice in writing to the cuſtomer, or collector and comptroller of the port where the veſſel lies, of his intention to proceed to the ſaid colonies to lade ſugars, for ſome other part of Europe than Great Britain, and enter into bond, with one or more ſufficient ſecurities, in the ſum of 1000l. if the ſhip be of leſs burthen than 100 tons, and 2000l. if ſhe be of that, or a greater burthen, on condition that, if a licence be granted, the ſhip ſhall proceed to the ſaid colonies; that he ſhall deliver the licence to the collector, comptroller, and naval-officer there, if he intends to make uſe of the liberty granted by it, which he ſhall declare in writing to them, before he takes any goods on board; and that no tobacco, molaſſes, ginger, cotton, wool, indigo, fuſtick, or other dying wood; tar, pitch, turpentine, hemp, maſt, yards, bowſprits, copper-ore, beaver-ſkins, or other furs of the growth, production, or manufacture of any of the Britiſh plantations in America, ſhall be taken on board, unleſs for neceſſary proviſions in the voyage; that, before the veſſel proceeds to any foreign part, ſhe ſhall touch at ſome port in Great Britain, and that the maſter ſhall deliver to the cuſtomer, or collector, and comptroller, a true manifeſt, atteſted upon oath, of the whole lading, with the marks, numbers, package, and contents, and produce the licence, with a certificate of the marks, numbers, package, and contents, and ſorts of ſugar on board, that the veſſel ſhall return to Great Britain, within eight months after delivering the lading in any foreign part, and before ſhe returns to any of the plantations in America; and that, if ſhe takes any goods on board before her return to Great Britain, they ſhall be entered and landed as other ſhips are obliged to do by the laws of the cuſtoms. Then a licence is to be granted for that voyage only, to load and carry ſugars of the growth and production of his majeſty's ſugar colonies in America, to any foreign part, according to the purport and intention of this act; provided the maſter makes oath as preſcribed 12 Geo. II. cap. 30. §. 2, 3. and 24 Geo. II. cap. 57. §. 7.

——— Sugars, or other goods put on board any veſſel licenſed by this act, being the property of any other perſon than ſome of his majeſty's ſubjects, and ſuch as ſhall be laden on their proper riſque and account, to be carried to foreign parts, are forfeited, 12 Geo. II. cap. 30. §. 4. and 12 Geo. II. cap. 57. §. 7.

——— Before any ſugars are taken on board, the maſter is to deliver to the collector of the port where the veſſel is to take in her lading, the licence, with a certificate of bond, having been given in Great Britain; and to declare in writing, whether he intends to load ſugars purſuant to the licence, otherwiſe the licence is invalid, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— The exporter of the ſugars, or other goods not enumerated, before they are put on board, is to make an entry of them in writing with the collector, comptroller, and naval-officer, expreſſing the name of the ſhip and maſter, and where ſhe lies, and the place where they are to be laden, or firſt water-born, muſt be ſuch only, where an officer is appointed to attend; or ſuch as is mentioned in the warrant to be taken out for that purpoſe from the collector and comptroller, whereon is to be indorſed by the exporter the marks, numbers, and contents, ſorts, and proper denominations of the ſugars, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— The warrant ſo indorſed is to be delivered to the officer appointed to examine and ſhip the ſame; and the ſugars are to be ſhipped in the preſence of the officer, or at the place mentioned in the warrant, that the officer may attend, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— The officer is to examine the ſame before ſhipped, and if the number of caſks is greater than is indorſed on the warrant, or if there be found any other ſugar than what is indorſed, or any goods before enumerated; or if any enumerated goods, except ſugar, have been put on board, or brought, or put into any lighter or other veſſel in order to be put on board before entry, &c. contrary to the directions of this act, the ſaid ſugars, or other goods, are forfeited, together with the lighter or veſſel, employed in ſhipping or attempting to ſhip the ſaid enumerated goods, and the ſhip or veſſel on which they are laden; and the owner to forfeit double the value, to be recovered in the court of vice-admiralty, or any court of record in the plantations, at the election of the informer or proſecutor; one-third to his majeſty, one-third to the governor of the colony, and one-third to the informer or proſecutor, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— The maſter of the veſſel before he departs, is to receive the ſaid licence from the collector, comptroller, and naval-officer, with a certificate under their ſeals of office, and ſigned by them, containing an account of the marks, numbers, contents, and ſorts of each caſk of ſugar ſo ſhipped. Two copies are to be taken of the ſaid licence and certificate, and atteſted under the hand of the maſter of the veſſel before he receives back his licence, and to be left with the collector, comptroller, and naval-officer, who are to tranſmit one of them to the commiſſioners of the cuſtoms in Great Britain, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— The maſter of the veſſel muſt proceed directly to Great Britain, without putting into any other place, except by ſtreſs of weather (unleſs he is bound to the ſouth of CAPE FINISTERRE), and upon his return, is to deliver his licence, with the certificate, to the commiſſioners of the cuſtoms, or the collector and comptroller of the port, where he arrives, and alſo a manifeſt, atteſted upon oath, of the marks, and numbers, with the tale, and ſorts of caſks, of all his lading, and make an entry of the quantity and ſorts of all the ſugars, which were laden and then remaining on board, and declare upon oath to what foreign part he is bound (the entry to be paſſed by the collector and comptroller without receiving any cuſtom or duty for the ſugars, mentioning in their accounts that it was paſſed by virtue of this act). Then the maſter to proceed, taking with him his licences and a certificate under the ſeals of office, from the collector and comptroller, that he had touched at ſuch a port, and in all reſpects complied with the directions of this act, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— If any ſuch veſſel proceeds to foreign parts without touching at ſome port in Great Britain (except as before) and complying with the directions of this act, and having the ſame certified as above; or if any goods before enumerated, are found on board, or carried to foreign parts, the liberty granted by this licence is void, and the veſſel, maſter, and all others concerned, are liable to the ſame penalties and forfeitures, as if this act had not been made, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

——— If upon information upon oath there is reaſon to ſuſpect, that any enumerated goods, beſides ſugars, are on board, any officer of the cuſtoms, or perſon employed by them, may enter on board and unlade the veſſel, as far as they ſhall judge neceſſary, to enable them to examine any part of her, and the goods on board, and detain her as long as is neceſſary, and open cabbins, lockers, and any concealment, and ſeize all goods found on board not mentioned in the maſter's manifeſt, which are forfeited, 12 Geo. II. cap. 30. §. 6. and 24 Geo. II. cap. 57. §. 7.

——— If no other goods are found on board, the officer is to be at the charge of damage done by landing, unloading, or unpacking, but not for demurrage, or on any other account. But if other goods are found on board (except neceſſary proviſions for the voyage), the maſter is to be at all charge, 12 Geo. II. cap. 30. §. 6. and 24 Geo. II. cap. 57. §. 7.

——— If the owners are deſirous to enter and pay the duty, and land any goods out of ſuch veſſel, they may do it; the maſter firſt making report of his whole lading, as required by law before this act, 12 Geo. II. cap. 30. §. 7. and 24 Geo. II. cap. 57. §. 7.

——— The maſter, upon his return to Great Britain, after landing his ſugars in foreign parts, is to deliver to the commiſſioners, or the collector, or comptroller of the port where he arrives, the licence, with a certificate, from the conſul, or two known Britiſh merchants of good credit, of the place where they are landed, of the landing thereof, with the number of caſks of ſugar there landed, the marks, numbers, and contents of each caſk, with the name of the ſhip, and maſter, and that no tobacco, or other goods before enumerated, except ſugars, have been landed out of her, 12 Geo. II. cap. 30. §. 9. and 24 Geo. II. cap. 57. §. 7.

——— Britiſh, in Aſia, Africa, or America. If a maſter of a veſſel, who has taken out a licence as above, ſhall, upon his arrival in the ſugar colonies, deliver it to the collector, comptroller, and naval-officer, with the certificate of bond having been given in Great Britain; and before he lades any goods, declare in writing upon oath, that the ſugars he intends to load are to be carried to ſome place ſouthward of CAPE FINISTERRE, he may, in caſe he has complied with the directions of this act, proceed thither directly, without touching at Great Britain, taking with him the licence, and oath indorſed thereon, together with an account of the marks, numbers, package, contents, and ſorts of ſugars taken on board,

and

and may there land the ſame, 12 Geo. II. cap. 30. §. 8. and 24 Geo. II. cap. 57. §. 7.

——— In ſuch caſe the maſter, within eight months after landing his ſugars, and before he goes again to the plantations, is to return to Great Britain, and deliver his licence as before directed, with the oath indorſed thereon, and an account of the lading, together with a certificate from the conſul, or two known Britiſh merchants of good credit, of the place where the ſugars were landed, of the landing thereof, with the number of caſks of ſugar landed, and the mark, number, and contents of each caſk, with the name of the ſhip, and maſter; and that they verily believe no tobacco, or other goods before enumerated, have been there landed out of her; and the maſter to make oath of the truth of the certificate, and that none of the goods before enumerated, except ſugars, were taken on board at the colonies, or landed at the place mentioned in the certificate. The maſter alſo is to make an entry with the collector, and comptroller, of all the ſugars taken on board, and landed as above, on forfeiture of 100 l. which entry is to be paſſed by them without receiving any cuſtom, or duty for it, mentioning in there accounts that it was paſſed by virtue of this act, 12 Geo. II. cap. 30. §. 8, 9. and 24 Geo. II. cap. 57. §. 7.

——— Britiſh, in Aſia, Africa, or America. Upon performing the requiſites abovementioned, the bond is to be diſcharged, and delivered up, 12 Geo. II. cap. 30. §. 9. and 24 Geo. II. cap. 57. §. 7.

——— If any ſuch ſhips, after unloading her ſugars, takes on board other goods before her return, all remaining on board at her arrival in Great Britain, are to be entered and landed before her departure from thence, 12 Geo. II. cap. 30. §. 9. and 24 Geo. II. cap. 57. §. 7.

——— This act not to excuſe ſhips being regiſtered according to 7 and 8 Will. III. cap. 22. 12 Geo. II. cap. 30. §. 12. and 24 Geo. II. cap. 57. §. 7.

——— The maſter, or owner of ſuch veſſel, may not advance to the ſeamen, or mariners, while in parts beyond the ſeas, any money or effects, on account of wages, more than one moiety of their wages due from their departure, to their return to Great Britain, on forfeiture of double the money ſo advanced, 12 Geo. II. cap. 30. §. 12. and 24 Geo. II. cap. 57. §. 7.

——— Granting a falſe certificate, or counterfeiting, erazing, or altering any licence, oath, or certificate, made purſuant to this act, the penalty is 500 l. forfeit, and the licence, oath, or certificate, rendered invalid, 12 Geo. II. cap. 30. §. 15. and 24 Geo. II. cap. 57. §. 7.

——— This act not to extend to granting a liberty to carry any ſugars from the ſugar colonies to Ireland, 12 Geo. II. cap. 30. §. 16. and 24 Geo. II. cap. 57. §. 7.

——— No ſhip, required to be regiſtered by 7 and 8 Will. III. cap. 22. may be permitted to trade, or deemed qualified for that purpoſe, within the intent of the ſaid act, until the maſter make oath, before the governor, or collector of the cuſtoms of the plantation where he arrives, as preſcribed by act of parliament, 15 and 16 Geo. II. cap. 31. §. 1.

——— Any ſhip loading, or unloading, any goods in the plantations, before ſuch proof, is forfeited, and may be proſecuted, recovered, and divided in like manner, as if ſhe had not been regiſtered, 15 and 16 Geo. II. cap. 31. §. 2.

——— Britiſh in Aſia, Africa, or America. Any ſhip duly qualified to trade to, from, and in his majeſty's plantations in America, being there, and the certificate of the regiſter loſt or miſlaid, the maſter is to make oath before the governor, or collector of the cuſtoms where ſhe is, as preſcribed by act of parliament, 15 and 16 Geo. II. cap. 31. §. 3.

——— And to give 500 l. ſecurity if the ſhip be 100 tons burthen, or under, and ſo in proportion, if of a greater burthen, with condition, that the ſhip has been duly regiſtered, and that the certificate of the regiſter, if found, ſhall be delivered up to the commiſſioners of the cuſtoms to be cancelled, and no illegal uſe has been, or ſhall be made thereof; and that it has not, nor ſhall be fraudulently diſpoſed of; and that the ſhip does wholly belong to his majeſty's Britiſh ſubjects, and that no foreigner has any ſhare, property, or intereſt therein. And then the governor, and collector of the cuſtoms are to give the maſter a certificate under their hands and ſeals, of his having given ſuch bond, and made ſuch oath; and thereupon the ſhip is to have liberty to trade for that voyage only. The officer, who takes the bond and oath, is to tranſmit an account thereof to the commiſſioners of the cuſtoms, 15 and 16 Geo. II. cap. 31. §. 3.

——— Britiſh, in Aſia, in Africa, or America. The certificate of the regiſter being loſt, the ſhip may be regiſtered de novo, upon the maſter and one of the owners making proof upon oath (before the commiſſioners of the cuſtoms, if any of the owners reſide in Great Britain, Ireland, Guernſey, or Jerſey, or before the governor, and collector of the cuſtoms reſiding in the plantations in America, if ſhe was regiſtered there, and none of the owners reſide as above), of the loſs, and likewiſe of the name, burthen, built, property, and other particulars, required by 7 and 8 Will. III. cap. 22. before the ſame perſons, and in the ſame manner, as required upon original regiſters, and giving 500 l. ſecurity, if the veſſel be of the burthen of 100 tons, and in proportion for ſhips of greater burthen, to the collector of the port to which ſhe belongs, that the certificate has not been, nor ſhall be, fraudulently diſpoſed of, or uſed contrary to law; and that when found, it ſhall be delivered to the commiſſioners of the cuſtoms to be cancelled; and a certificate of the regiſter is to be delivered to the owner by the proper officer, as directed by the ſaid act of 7 and 8 Will. III. mentioning the name by which ſhe was former regiſtered, and that this certificate is granted in purſuance of this act, inſtead of the former certificate, which appears, by ſuch proof as this act requires, to be loſt, 15 and 16 Geo. II. cap. 31. §. 4.

——— A duplicate of the certificate is to be tranſmitted, by the officer who granted it, to the commiſſioners of the cuſtoms, 15 and 16 Geo. II. cap. 31. §. 4.

——— All bonds, commonly called plantation bonds, taken in Great Britain (in purſuance of 7 and 8 Will. III. cap. 22. or any other law), whereby the goods therein enumerated are to be brought to Great Britain, are to be with condition, that within eighteen months from the date (the danger of the ſeas excepted), a certificate ſhall be produced from the collector and comptroller of the port where the goods are delivered, that they have been there landed and diſcharged; otherwiſe the bond to be forfeited, 15 and 16 Geo. II. cap. 31. §. 5.

——— But not to extend to bonds given to ſhips which lade rice at Carolina, or Georgia, purſuant to 3 Geo. II. cap. 28. or which lade ſugars in any of the ſugar colonies in America, purſuant to 12 Geo. II. cap. 30. 15 and 16 Geo. II. cap. 31. §. 5.

——— Britiſh, in Aſia, Africa, or America. --- No mariner or perſon ſerving on board any privateer or trading veſſel, employed in any of the Britiſh ſugar colonies in America, or being on ſhore there, or at ſea in any of thoſe parts, ſhall be liable to be impreſſed by any officer belonging to a man of war (unleſs ſuch mariner ſhall have deſerted from ſuch ſhip of war) under the penalty of 50 l. 29 Geo. II. cap. 30. §. 1.

——— Every maſter of a trading veſſel or privateer in thoſe parts, before he receives any mariners into his ſervice, is to make deligent enquiry, whether ſuch mariner hath deſerted from any of his majeſty's ſhips of war; any maſter receiving a mariner, who hath deſerted, without reaſonable endeavourment to diſcover the ſame, to forfeit 50 l. 29 Geo. II. cap. 30. §. 2.

——— Every maſter of ſuch trading veſſel or privateer before departure from any port in the ſaid ſugar colonies, is to deliver, to the chief officer of the cuſtoms an exact liſt of all his men, containing names, ages, and deſcription of perſons: on neglect thereof; the maſter to forfeit 10 l. for each man ſo omitted; the officer of the cuſtoms to return to the ſaid maſter an atteſted copy of ſuch liſt: on the death or alteration of any ſeaman, ſuch liſt to be immediately altered accordingly, and delivered to the naval-officer or chief officer of the cuſtoms in any port where the ſhip may arrive. All ſuch liſts to be produced and ſhewn to the captains and other officers of his majeſty's navy, 29 Geo. II. cap. 30. §. 3, 4.

Q.

QUACK, a bold and confident pretender to the practice of the art of medicine.

A SHORT ANTIDOTE AGAINST GENERAL QUACKERY.

Every one of common ſenſe will allow, that he who is beſt acquainted with the ſtructure and uſe of any machine, will be beſt able to repair it's diſorders; and that he who ignorantly goes about to rectify any diſorder therein, will make but a contemptible work, in compariſon with one who has made it the buſineſs of his life to be well acquainted with all the parts, and various uſes of it's motions and ſprings: and the more exquiſite this machine is, the greater degree of ſkill will be required for the rectifying it's diſorders. This is plain to the meaneſt apprehenſion. Who, in his right ſenſes, would ſend for a bricklayer to mend a clock?

I. The human body, may be properly conſidered, as a moſt perfect and noble machine, whoſe parts are extremely well configurated, whoſe ſymmetry is moſt beautiful, and whoſe actions reſulting from theſe admirable compages are reciprocally carried on by ſolids and fluids, of which the whole is conſtituted. And as many of it's motions are eaſily demonſtrated by the conſequences of it's ſtructure, ſo it's diſeaſes, are only the irregular motions or diſorders of this complicated machine: nor is the caſe the leaſt altered, by our having a principle within us, not ſubject in itſelf to the laws of motion.

II. It is, therefore, incumbent on every one, who would attain the due knowlege of the art of healing, that he make himſelf very well acquainted with this admirable piece of mechaniſm. That knowing well the part, the natural actions, and ſecretions of the human body, he may be enabled to judge, when and how theſe natural actions are perverted: all the ſymptoms of diſeaſes, being the neceſſary conſequences of the alteration of the animal œconomy; and without the knowlege of the ſecretion, we cannot underſtand the nature of diſeaſes, that principle being the great ſpring of all the animal functions.

III. It is a maxim univerſally received among phyſicians, That medicine ſhould begin where philoſophy ends. It is, undoubtedly, a neceſſary qualification in a phyſician to be knowing in philoſophy; and the natural actions and ſecretions of the human body, is that part of philoſophy, which is more eſpecially conducive to the knowlege of the practice of phyſic, and therefore ought carefully to be ſtudied by every phyſician. And he is a true phyſician, who moreover attends, as much as may be, to all poſſible conſequences, who does not heal one diſeaſe, by procuring a worſe, but reſtores ſuch a life as a man can enjoy.

The human ſpirits and blood, are the principal ſeats of health as well as diſeaſe. As to thoſe parts of the body deſigned for ſtrength and motion, they indeed fall not improperly under a ſurgeon's ſkill. But the humours, ſpirits, and blood, which are the ſeats of life, theſe and the animal ſecretions are peculiarly under the conſideration of phyſicians; but are not yet ſo perfectly underſtood, even by the moſt learned, as we could wiſh; and until they are, there will be one fundamental deficiency in phyſic.

IV. Experience is doubtleſs of great uſe in promoting the art of curing diſeaſes, if directed by a knowlege in the parts of the human body and the animal ſecretions; foraſmuch as it is only by a juſt reaſoning on experience, that we can come at the full knowlege of any phænomenon of nature. So that experience, or the knowlege of the hiſtories of diſeaſes, added to that of the animal œconomy, is what can only make a phyſician; aud, wherever the hiſtory of a diſeaſe is exactly known, if the right method of curing it cannot be deduced, it muſt be, becauſe the knowlege of the parts of the human body, of their uſe, and of the animal ſecretion, are not ſufficiently underſtood: for the ſkill of phyſicians in curing diſeaſes, whoſe hiſtories are exactly known, is, for the moſt part, proportional to their knowlege of the animal œconomy: for in order to find out the ſeat and nature of a diſtemper, and from thence to deduce a right method of cure, it will be abſolutely neceſſary to reaſon on thoſe hiſtories; which we cannot do as we ought, if we are ignorant of the ſtructure, uſe, and diſorders of the machine we are about to rectify.

V. Deſcriptions and diagnoſtic ſigns of diſeaſes, are the proper buſineſs of obſervation and experience; but indications of cure, ariſe from reaſoning upon thoſe obſervations. Diagnoſtics are properly a collection of particular ſymptoms only, but indications are thoſe concluſions, which our knowlege of the parts of the body and their uſe, enables us to make on theſe obſervations and deſcriptions. So that the hiſtories of diſeaſes, and the knowlege of the parts of the body and their uſe, muſt always go hand in hand, in order to the obtaining the due knowlege of the practice of phyſic. He therefore, who is ſufficiently knowing in philoſophy and the animal œconomy, and makes a proper uſe of this knowlege, by reaſoning on REAL FACTS, grounded on repeated experience and obſervation, may juſtly be ſaid to uſe his philoſophy aright; and may then reaſonably hope for ſucceſs, in finding out the genuine indications of cure, in which the practice of phyſic chiefly conſiſts. And without this caution, our reaſonings will certainly be to very little purpoſe; for what is not deduced from genuine appearances, is mere hypotheſis.

VI. The great Hippocrates has this aſſertion, That nature cures diſeaſes. The truth of it phyſicians of this day may experience, if they will carefully keep up to his excellent directions and method; it being his only aim to relieve nature when oppreſſed, in the very way and manner he obſerved her endeavouring to expel diſeaſes. And it was by a conſtant diligence of this kind, joined to his ſuperlative ſagacity, that he arrived to that high degree of perfection in the knowlege of phyſic. Hence he perceived, that nature herſelf judges diſeaſes; and, indeed, does all, being properly aſſiſted; nay, and ſometimes without any aſſiſtance.

VII. Hippocrates alſo informs us, and experience cannot but confirm it, that thoſe people who have fevers, and are left to themſelves, and take no medicines, if they do recover, get rid of their fevers by ſweating, a looſeneſs, an hæmorrhage, diabetes, or the like. Hence Hippocrates, and the ancient practitioners in phyſic, took their firſt intimation to provoke ſweat and the other evacuations. And from their repeated obſervations and ſucceſſes, they have formed a moſt rational method of cure. This affords a very ſtrong confirmation of the neceſſity of a careful and diligent obſervance of the tendencies of nature in all her diſorders, and the method ſhe takes to get rid of diſeaſes, when left to herſelf; and alſo a very good caution, not to be over haſty, or too buſy in the adminiſtration of remedies, leſt we ſhould be found to ruffle and diſturb, rather than aſſiſt nature, with the untimely uſe or multitude of medicines. The ne quid nimis in the practice of phyſic, is a matter of no ſmall conſequence: he therefore is moſt likely to prove the beſt, moſt prudent, and rational phyſician, who moſt diligently obſerves, and conſtantly follows, the motions and dictates of nature herſelf.

VIII. The many accurate and charming deſcriptions of diſtempers, delivered down to us by Hippocrates, in his Hiſtories of Diſeaſes, wherein the phœnomena of each diſtemper, even in it's minuteſt circumſtances, are obſerved, preſent us with an exquiſite delineation of nature: and, if duly attended, will always be found of the greateſt ſervice for advancing the progreſs in the art of healing. Becauſe, from his diagnoſtics in particular, though not excluding others of the Ancients, nor ſuch among the Moderns, who have cloſely copied after his manner, we readily diſcover the nature of the diſeaſe. And as, whenever we arrive at the exact hiſtory of any diſtemper, we may, at all times, by the right application of the method of inveſtigating diſeaſes, moſt likely diſcover the immediate cauſe; ſo may we likewiſe, on thoſe principles, eaſily come at the nature of the diſeaſe; when, having that given, it will be no difficult matter to find out remedies to cure, in all curable caſes, and to adminiſter relief, even in thoſe which are incurable.

IX. This unwearied diligence in obſervation on nature, in the ſagacious Hippocrates, and others of the Ancients, might probably be heightened in them, from the ſcantineſs of their

Materia

Materia Medica, and the exceeding ſeverity of the then known remedies, however much to our benefit; ſince the excellent deſcriptions of diſeaſes they had given us, cannot only never be exceeded, but will always remain invariably true, while human nature continues what ſhe is. And had thoſe of later ages, which have been ſo happily provided with a more copious and ſalutary Materia Medica, and which, it muſt be allowed, have been greatly improved in the knowlege of the animal œconomy: had theſe conſtantly perſevered in the uſe of Hippocrates's great diligence and manner of obſervation, they might, doubtleſs, long ago, have brought the practice of phyſic to a conſiderable degree of perfection, though they had not been bleſſed with his extraordinary ſkill: for that, indeed, is a peculiar happineſs, and the lot of very few; in which particular, we may, perhaps, ſay of the phyſician, as is commonly done of the poet, Naſcitur, non fit.

X. Should we of this age, flushed with our ſuperior knowlege in the animal œconomy, and the variety of our Materia Medica, neglect to make uſe of that prudence and diligence, which are neceſſary in attending the motions of nature, and inſtead of endeavouring to aſſiſt her on theſe principles, when oppreſſed, become too precipitate, in the adminiſtration of medicines; the conſequence will inevitably be, that we ſhall only obſcure the diſeaſe, by multiplying, rather than taking off, the ſymptoms; and this to the perſonal confuſion of phyſicians, the manifeſt injury of their patients, and the great diſrepute of the profeſſion. Whereas, would we conſult the true and proper uſe of the many happy improvements of our own age, it cannot be done more effectually, than by keeping cloſe to that moſt ſkilful leader Hippocrates, together with the other ancient practitioners in phyſic, in their manner of obſerving, and in their method of healing; founded upon the knowlege of the conjunct cauſe of diſtempers, from whence alone, the curative indications are to be taken. And by a careful perſeverance in theſe methods, we may reaſonably hope for the greateſt ſucceſs; and may, perhaps, in a few ages, arrive at the higheſt perfection in the practice of phyſic, that human nature is capable of attaining.

XI. In order to cure any diſeaſe, it is neceſſary to have a thorough knowlege of the diſeaſe itſelf, and of the remedy peculiarly adapted to it; it being impoſſible to cure a diſeaſe according to art, if the nature of the diſeaſe be hid from the artiſt. And for want of this knowlege, the care and pains of many phyſicians have proved ineffectual. Theſe phyſicians, making little other uſe of the diagnoſtic ſymptoms than the mere naming the diſtemper only, have injudiciouſly taken their indications of cure from ſecondary and caſual ſymptoms: whereas the true nature of a diſeaſe is ever beſt found out, from the diagnoſtic ſigns or marks alone; and from thence alſo, the true indications of cure muſt always be drawn, in order to the beſt and moſt effectual method of treating the diſeaſe. And as theſe indications wholly ariſe from our reaſoning upon the obſervations we make of the appearance of nature; therefore, the greater our knowlege of the parts of the body and their uſe is, the better we ſhall be enabled to find out the nature of the diſeaſe. For it is this knowlege which muſt enable us, by reaſoning upon the cauſes, ſigns, and ſymptoms of diſeaſes, to find out their nature, and to deduce true and juſt indications of cure.

XII. Thus far in general. But now more expreſsly, to come at the true method of inveſtigating and finding out the nature of all diſeaſes incident to the human body, and from thence proceed to the moſt effectual methods of treating and curing them, the following particulars are abſolutely requiſite, viz. that we be well acquainted with,

1. The next and ever concomitant cauſe of the diſeaſe.
2. The ſeat and part affected.
3. The ways and paſſages through which the evil takes it's courſe.
4. The inſeparable ſigns of the diſtemper.
5. The ſymptoms which commonly accompany the diſeaſe. And
6. That the ſymptoms of the diſeaſe are rightly diſtinguiſhed.

If the phyſician errs not in theſe eſſential points, he may be judged to be in the right way of arriving to an happy cure of the diſeaſe.

XIII. It is very neceſſary at all times, carefully to diſtinguiſh between the diſeaſe itſelf, and the ſymptom. An inadvertence in this article, has been the ſtumbling-ſtone of ſome, even learned men, in all ages. Since it is to be imputed to the want of this diſtinction, as a principal (if not the only) obſtacle, that phyſicians have been ſo much at a loſs for the true cauſe of the diſeaſe, and have therefore ſo often taken the ſymptom for the diſeaſe itſelf: not rightly diſtinguiſhing the next and immediate conjunct cauſe, from it's ſymptoms or accident; which may not be occaſioned by the next and always accompanying cauſe of the diſeaſe, but by ſome other ſymptom; and what is ſo far from being the mark of the diſeaſe, that it is a ſymptom of a ſymptom only.

XIV. In the common malady of the tooth-ach, for example, when it does not proceed from a caries or rottenneſs, the genuine eſſence of this diſeaſe is, the violent diſtention or ſtretching of the perioſteum, by ſome ſort of humour; by which means this membrane, being forced out of it's natural form and ſituation, excites a moſt exquiſite pain; which pain is not the diſeaſe, but the true mark of the diſeaſe; and the humour occaſioning this pain, the cauſe of the diſeaſe. The inflammation, fever, ſwelled face, &c. which may ſucceed, are none of them the true marks, but proceed from the pain, which is the true diagnoſtic, ſign, or mark of the diſeaſe, each of the above-mentioned being the ſymptom of a ſymptom only.

XV. The true marks or ſigns of a diſeaſe are ſuch, as are preſent from the beginning, and, as it were, born with the diſorder; they grow up therewith to it's height, abate alſo and vaniſh with it. Theſe are the only ſure marks or ſigns. Other ſigns or ſymptoms which do not immediately follow the diſeaſe, nor any proper effects of it, and which do not always appear in the diſeaſe, are therefore deceitful ſigns, and not to be truſted to; though ſuch as have inadvertently miſled ſome ſagacious men.

Theſe deceitful ſigns are not to be reckoned among the proper ſymptoms of the diſeaſe, being only ſuch as proceed from ſome proper ſymptom of the diſeaſe; and are, indeed, ſymptoms of ſymptoms only. For the true and proper diagnoſtic marks or ſigns of the diſeaſe, muſt always begin, grow up, decline, and vaniſh with the diſeaſe itſelf; and from ſuch marks only, we muſt ever draw our indications of cure.

XVI. As to the ſymptoms of any diſeaſe, the firſt buſineſs is to diſtinguiſh the ſymptoms in general from the diſeaſe itſelf, and then to make a diſtinction between the ſymptoms themſelves: that is, the ſymptoms which ariſe and vaniſh with the diſeaſe, are to be diſtinguiſhed from thoſe which are bred, not from the diſeaſe itſelf, but from the ſymptoms of the diſeaſe: and the ſymptoms as we before obſerved, which immediately accompany the diſeaſe, and are born and die with it, are the only ſure marks or ſigns of the diſeaſe.

XVII. To illuſtrate this by our former familiar inſtance of the tooth-ach: here the pain is the chief and moſt grievous ſymptom, but is neither the diſeaſe itſelf, nor the cauſe of the diſeaſe; nor yet is it a ſimple ſymptom only, foraſmuch as it is the cauſe of other ſymptoms which ſucceed; as the fever, inflammation, ſwelled face, &c. eſpecially when the pain is violent. Theſe ſeveral accidents now mentioned, are cauſed only by the raging pain of the tooth-ach (the true mark of the diſeaſe) and are ſymptoms of a ſymptom only. And farther, theſe accidents of fever, inflammation, ſwelled face, &c. are neither in whole nor in part the cauſe of the tooth-ach; neither are they inſeparable companions of the tooth-ach; for the tooth-ach may be, and often is, where theſe never appear: as to the ſwelled face in particular, that neither begins nor ends with the diſeaſe, nor does it always accompany it; nor is it of the ſame nature with the humour occaſioning that violent pain, but is merely a ſymptom of the tooth-ach, being raiſed by the pain, and bred by conſent of parts from an afflux of humours.

XVIII. Thus we ſee plainly the method of finding out the nature and cauſes of a diſeaſe, it's ſeat and part affected, it's diagnoſtic and caſual ſymptoms, and the neceſſity of diſtinguiſhing theſe latter, not only from the diſeaſe itſelf, but alſo from one another: all which will make way to judge the better of a fit remedy to cure the diſeaſe, for we cannot reaſonably hope for a cure, before the diſeaſe be thoroughly underſtood. And in this manner we muſt come at the nature, cauſe, and cure, of all diſeaſes.

XIX. From this method alſo of finding out the diſtemper, is diſcovered, at the ſame time, the only way of making a right and true prognoſtic, which is no more than a declaration of a phyſician's expectation in curing a ſick perſon. And this expectation can no otherwiſe be truly framed, than from the nature of the diſeaſe, the quantity and intenſeneſs of it, the natural ſtrength of the ſick, and the power of medicines conjunctly. The knowlege, therefore, of prognoſtics is not otherwiſe to be acquired, than by rightly inveſtigating the diagnoſtic marks of a diſeaſe, whereby it's nature is diſcovered, with that of the quantity of the diſeaſe, and the ſtrength of the patient, at the ſame time: and as by this method, we are alſo led into the nature and power of medicines themſelves; ſo here again, the very medicine reflects light, and, in ſome meaſure, confirms the knowlege of the diſeaſe: as Hippocrates well obſerves — Medicina indicat morbum.

XX. This then is the method, by which the nature of all diſeaſes, to which human bodies are or may be liable, is diſcovered. And ſhould ever any altogether new and unheard-of diſeaſe, at any time appear amongſt mankind, this will be found the ſure way of coming at it's nature, by only thus carefully recollecting, examining, and diſtinguiſhing it's ſymptoms. This will of conſequence direct to the moſt proper method of curing, the knowlege of a diſeaſe being the firſt ſtep towards it's cure.

'All the difficulty of philoſophy,' ſays the great Sir Iſaac Newton, 'ſeems to conſiſt in this, from the phænomena 'of motions to inveſtigate the forces of nature; and then, 'from theſe forces, to demonſtrate the other phænomena.' Agreeable to which, we obſerve, that the ſymptoms of any diſeaſe being given, it's nature may readily be diſcovered.

XXI. The method of curing diſeaſes, by drawing indications from the evident and conjunct cauſes, has always met with approbation, as from the beſt, ſo from the body of the moſt learned phyſicians in general. And as to the knowlege of theſe cauſes, it is allowed, that can only be attained by a cloſe and aſſiduous obſervation of all the appearances in the ſeveral ſtages of the diſtemper. Whoever, therefore, has obtained an exact knowlege of the hiſtories of diſeaſes, if he has alſo due regard to the diagnoſtics, as by the method directed, may readily inveſtigate their nature.

Natural philoſophy and the hiſtory of diſeaſes, as we obſerved above, muſt always contribute their joint-aſſiſtance in improving the art of healing; it not being poſſible to make any uſe of the latter, without a degree of knowlege in the former: and the greater our knowlege is of the parts of the human body, of their uſe, and of the animal ſecretions, the better the nature of diſeaſes will be known.

XXII. We ſaid before, that the ſymptoms of any diſeaſe being given, it's nature may be diſcovered.

Now the ſymptoms of every diſeaſe are no other than the effects of ſome cauſe, or cauſes, which pervert and overturn the natural actions of one or more parts; for which reaſon, by explaining theſe ſymptoms, we become apprized of the perverted action, or diſcover the diſeaſe: for nothing can be the cauſe of a diſeaſe, that does not produce the ſymptoms, in which the nature of the diſeaſe conſiſts.

XXIII. Wherefore, the ſymptoms of any diſeaſe being given, it's nature may thence be diſcovered; and the nature of a diſeaſe being aſſigned, we have alſo the methods of curing it. Farther, having the nature and cauſes of any diſeaſe, we ſhall be able to determine how far the diſeaſe is curable or incurable; the probabilities of curing any diſtemper, and the methods and medicines proper to be uſed in attempting it.

XXIV. The Ancients, as before obſerved, have moſt accurately deſcribed the diagnoſtic ſigns and marks of diſeaſes, together with their moſt natural and ſimple appearances. Whoever, therefore, is thoroughly acquainted with the hiſtories, as delivered down to us by them, and is well verſed in the ſtructure and nature of the fluids and ſolids of the human body, may, from their diagnoſtic ſigns, be able to diſcover the nature and ſeat of the diſeaſe, and the productive cauſe of it. By the ſame means alſo, he will have it in his power to ſhew in what manner the ſymptoms, attending the diſeaſe, flow from it's nature, thus found out from it's ſymptoms; and likewiſe be capable of perceiving how theſe ſymptoms are cured, by changing the diſtempered condition of the parts affected.

XXV. But, in this examination of the nature of the diſeaſe from it's ſymptoms, we muſt be moſt careful, that every caſual and foreign ſymptom be ſeparated from thoſe which are conſtant and permanent, in the manner the method more at large directs; it being eaſy, by obſerving the rule there laid down, to diſtinguiſh the conſtant and inſeparable ſymptoms from thoſe, which are merely caſual and ſecondary.

XXVI. The principal ſymptoms are, for the moſt part, eaſy to be explained. The falſe ſymptoms are moſt commonly found among the ſecondary ſort, and are the ſymptoms of ſymptoms only; for which reaſon they ought to be rejected from the number of ſymptoms properly belonging to the diſeaſe.

XXVII. Indications of cure muſt be drawn from the nature of the diſeaſe, and not from their precarious ſuppoſed cauſes, nor from their adventitious and caſual ſymptoms: and there muſt run an uninterrupted chain, from the diagnoſtic ſigns of the diſeaſe, through it's nature and cauſes, 'till it ends in a rational method of cure.

XXVIII. Thus we ſee, that in order to cure any diſeaſe, the natural and practical way, is firſt to collect the moſt conſtant ſymptoms and effects of the diſeaſe. But in doing this, we muſt always remember, that our utmoſt diligence will be neceſſary, rightly to diſtinguiſh the ſymptoms: that in our collecting the genuine diagnoſtic ſigns of any diſeaſe, we never ſuffer the ſecondary ſigns or ſymptoms of ſymptoms, to creep into the number of the genuine diagnoſtic ſigns; for if we do, we ſhall certainly render our enquiries into the true nature of the diſeaſe, almoſt fruitleſs and impracticable; whereas, by ſtrictly obſerving this caution, we ſhall readily diſcover the diſeaſe and it's ſymptoms, together with the cauſes of both. And if we can come at the nature of the diſeaſe we are about to cure, there remains no difficulty as to the way of curing, be the appearances of the ſymptoms never ſo complicated.

XXIX. The direct method of cure being thus obvious, the probabilities of ſucceſs muſt be, as the nature of the diſtemper we come to cure, and the efficacy of the medicines we adminiſter, reſpectively. And if we already diſcover by reaſon and practice, the peculiar ways in which the medicines made uſe of will act, we ſhall be thereby inſtructed, when medicines are moſt properly adminiſtered, and why they muſt be continued or laid aſide, which is the ſum and ſubſtance of phyſic.

The application of theſe ſentiments to the public benefit.

XXX. In conſequence of what has been urged by the moſt learned phyſicians, it muſt appear to every man of common ſenſe, to be a ſad miſtake, that has at preſent ſeized on many people, to imagine, That, if they are but well furniſhed with books of recipes, or are poſſeſſed of a powerful medicine, they have every qualification fit for commencing Doctor; becauſe in theſe books and theſe medicines, as they think agreeable to the common ſaying, they are ſure to find a ſalve for every ſore. But, alas! theſe baſe empirical books, recipes, and medicines, the peſt of the preſent age, will greatly deceive them. They are by no means to be confided in, but, on the contrary, are to be looked upon as very injurious, foraſmuch as they only furniſh all ſorts of people with great opportunities of deſtroying each others health.

XXXI. And ſhould any perſon pretend to ſet up to practiſe phyſic on this deceitful foundation, he would ſoon find himſelf miſerably miſled, to the manifeſt injury of himſelf, as well as of his patients. For it is moſt certain, that every medicine, be it never ſo good, muſt always be adminiſtred in the moſt proper doſe, and at the moſt proper times of the diſeaſe, to make it of any advantage to the patient. This knowlege can no otherwiſe be come at, than in the arduous and diligent manner of ſtudying above-mentioned, joined with the method of inveſtigating the nature of diſeaſes. Nor is this the ſole advantage which follows on the doctrine of inveſtigation, ſince it not only leads us into the true nature of the diſeaſe, and the certain method of cure, but alſo, at the ſame time, into the very nature and power of medicines themſelves, if rightly attended to and applied. For the virtue of any medicine, is no other than it's power of eradicating the immediate cauſe of the diſeaſe; which effect is diſcovered, from knowing firſt the nature of the diſeaſe, and the different powers of medicine, are but the degrees of the ſame virtue thus diſcovered: from whence we have conſequently the direct and indirect actions of medicines, with their poſitive and comparative powers. And were it poſſible, even to find out an univerſal remedy for all diſtempers, it muſt ſtill be ſubject to the true doſing and timing: the accurate knowlege of which can no otherwiſe be obtained, than by the manner and method here laid down. And this, indeed, is the only true ARCANUM in the practice of phyſic. All your PANACEAS, NOSTRUMS, SPECIFICS, and the like, without this perfect knowlege of adminiſtering them in the moſt proper doſe, and at the moſt proper times of the diſeaſe, will, for the moſt part, prove very miſchievous. And, indeed, theſe remedies can only, by the greateſt hazard and chance imaginable, ever prove of good effect, in any diſeaſe of conſequence. It is true, that in many caſes, let the medicine given be ever ſo improper in itſelf, or ever ſo unſeaſonably adminiſtered, the ſtrength of nature may ſometimes get the better of both, and the patient by that means luckily eſcape: but this is by no means curing, nor can nature's ſucceſsful effort be any excuſe for ignorance and quackery.

XXXII. From what has been advanced, it is natural to conclude, that it is no eaſy matter to become a ſkilful phyſician. Much reading, much thought and pains, will really be required: many things are neceſſary to be learnt, much diligence in enquiry, and much aſſiduity in obſervation, are to be uſed, before any one can be duly qualified (either with peace of mind to himſelf, or relief to his patients) to undertake a truſt, in which the lives of his fellow-creatures are ſo nearly concerned.

XXXIII. If this be a juſt ſtate of the caſe, what ſhall we ſay of thoſe perſons, who boldly take upon them the practice of phyſic, without the leaſt previous knowlege of the requiſites abſolutely neceſſary for the regular diſcharge of this important office! Certainly, it can be no other than the higheſt preſumption, for thoſe to expect ſucceſs, or hope for a bleſſing on their endeavours, who are altogether ignorant of the province in which they engage. Would ſuch perſons but ſeriouſly conſider the great conſequence of phyſic, in the practical part of it, where life itſelf is ſo immediately at ſtake, if they had any compaſſion for their fellow-creatures, they would not thus raſhly venture to adminiſter medicines, before they had acquired the proper and neceſſary qualifications. But at preſent, by melancholy experience, it is too well known, that this nation ſwarms with remorſeleſs and cruel deſtroyers, who daily delude and impoſe on weak and credulous people, with their never failing remedies, for every body, every caſe, and at all times, alike; to the infinite damage of the PUBLIC HEALTH. And were the ſame art and induſtry uſed to diſcover the real miſchief done by this practice, as are uſed to publiſh an accidental ſucceſs, the ballance, on the whole, would appear formidable. But who can expect, that the crafty ſhould bewray and ruin their own craft? Theſe, indeed, are wiſe in their generation: but, that the ſuffering patients ſhould zealouſly ſupport theſe deceivers, to cover their own folly, is a ſtrange infatuation; yet ſo it is. No wonder, therefore, that a few accidental cures ſhould be ſo much noiſed abroad, when the deceivers and the deceived join in the cry to propagate the fatal deluſion.

XXXIV. In order to qualify the phyſician to collect the ſymptoms of diſeaſes from his patients, in a judicious and uſeful manner, it will be abſolutely neceſſary, beſides an accu-

rate

rate acquaintance with the ſtructure of the human body, that he be alſo well read in the hiſtories of diſeaſes, delivered down to us by the Antients: for the great difficulty of collecting ſigns and ſymptoms from the ſick patients; ſuch, we mean, as ſhall direct to the nature of the diſeaſe; ariſes not barely, either from want of perſonal ſagacity, or ignorance in the animal œconomy; but more eſpecially, from being but ſuperficially acquainted with the learning of the Antients in the particulars above: and, it is greatly to be feared, whenever the phyſician fails in diſtinguiſhing one diſeaſe from another, and the diſeaſe itſelf from their ſymptoms in their patients; it is from their not being ſufficiently acquainted with that moſt perfect knowlege, which reſults from the admirable deſcriptions of antient phyſicians.

XXXV. This method, therefore, of inveſtigating the nature of diſeaſes, taken from the beſt and moſt antient phyſicians, and leading to the moſt ſucceſsful ways of curing all curable diſeaſes, and relieving the incurable, being the moſt natural and certain rule of attaining the above-mentioned extenſive knowlege; we think it may not improperly be eſteemed the very maſter-key to the judicious, and moſt ſucceſsful practice of the art of phyſic. And, if thoroughly underſtood, and properly applied, together with the knowlege of the great improvements made in our own times, with regard to the animal œconomy and Materia Medica, it will ſafely conduct the phyſician from the threſhold of medicine, to it's conſummation; and that with much greater expedition and ſucceſs, than any other hitherto known method. As what has been ſuggeſted on this argument will be of uncommon ſervice to the beginner, ſo likewiſe will it continue to be the moſt uſeful and neceſſary companion we can aſſociate withal, through the whole courſe of medicinal practice, by a right application in all the diſeaſes, and the varieties of them, which may at any time be met with in authors, or obſerved from experience, whereby practitioners may moſt likely come at the cauſe and cure of diſeaſes.

XXXVI. But here it may be objected; why all this pains-taking; why all this great diligence in enquiry, and great aſſiduity in obſervation; when the generality of mankind are ſo weak as to prefer every bold pretender, before the regular phyſician? This, indeed, at firſt view, ſeems very diſcouraging, and ſomewhat aſtoniſhing too! But then, let us conſider, whether the phyſicians be not blameable as well as the people, that QUACKERY is at preſent ſo much in faſhion; for, if the phyſician neglects the neceſſary qualifications, and fails of ſucceſs among his patients, for want of proper knowlege and obſervation, which can only be acquired by the conſtant and diligent pains-taking abovementioned; is it to be wondered at, that his patients ſhould ſeek elſewhere for aſſiſtance, and thereby become a prey to every pretender and noſtrum-monger? Whereas, when due care is taken that the phyſician be properly qualified, a reaſonable ſucceſs will, for the moſt part, attend his practice; and, in that caſe, the patient would be much leſs liable to fall into the hands of impoſtors and quacks. But alas! at preſent it is our great misfortune, through want of proper regulations, to have in this nation many more Doctors than Phyſicians; and which is, indeed, one main reaſon of the great increaſe of quackery amongſt us; for, was the practice of thoſe who called themſelves doctors, attended with any reaſonable ſucceſs, their patients would not ſo readily apply to quacks and pretenders, in preference to the accompliſhed phyſician: in all times, indeed, there has not been wanting a fatal fondneſs, more or leſs, among weak and ignorant perſons, in favour of noſtrums and infallibility; but that diſorder in theſe preſent times is ſo increaſed, that it calls loudly for the utmoſt care and compaſſion of our legiſlature.

XXXVII. Many medicines given as noſtrums, and advertiſed as infallible, we very well know, are taken from the preſcriptions of EMINENT AND LEARNED PHYSICIANS; which the quacks, thoſe deſtroyers of health, in ſome meaſure diſguiſe, and then call them after their own names, in order to deceive the people into an opinion of their ſkill, and to intitle themſelves to patents and rewards. But who ſees not, that theſe remedies, excellent, and of great efficacy in the cure of diſeaſes, if judiciouſly adminiſtered; may yet prove (by a promiſcuous and unſkilful uſe) of the very utmoſt hurt and damage to mankind? Thus are the inſtruments of health wickedly wreſted out of the phyſician's hands: and what was contrived and deſigned by them for the public good, by this great abuſe, becomes a public miſchief, and a falutary remedy is turned into a poiſon, by the random uſe and improper application of it. Now if medicine has ever been, or can be brought to be of real uſe to mankind, it is moſt likely to become ſo, when in the hands of diſcreet and learned phyſicians; and a very little reflection, cannot but convince every man of common ſenſe and humanity, that to ſuffer an unſkilful and promiſcuous uſe of medicines, muſt needs be of dangerous conſequences to the public, and productive of great evil. But againſt this great evil, the prudent phyſician has no other remedy, than the duly qualifying himſelf and others, to the beſt of his power, for that important office, the practice of phyſic; and it is only from the wiſdom of the legiſlature, that an effectual redreſs of ſo pernicious a diſorder, as the quackery now reigning among the weaker ſort of people, muſt be expected; if ſuch a one can be found out. Nor can it be doubted, that the weakeſt among the people have a juſt right to all that protection and preſervation, which the guardians of their lives and properties can equitably procure them: and would the legiſlature, at the ſame time, be pleaſed not to ſuffer any perſon to adminiſter medicines, until they had given proper teſtimonials of their qualifications for that important office, the benefit of his majeſty's ſubjects, from ſuch a regulation, would be unſpeakable.

REMARKS.

QUACKERY having in our days become a branch of traffic in this nation, of as pernicious and dangerous a tendency to the lives of his Majeſty's ſubjects as a general plague; we have thought proper to take notice of it, hoping that ſome effectual remedy may one day be taken by the parliament, to prevent a deſtructive trade, that ſtrikes at the root of all others.

QUARANTINE, i. e. forty, a denying entrance into a healthful place for 40 days, to thoſe perſons that are ſuppoſed to come from any infected place.

The LAWS of ENGLAND relating thereto.

An act to oblige ſhips more effectually to perform their quarantine; and for the better preventing the plague being brought from foreign parts into Great Britain or Ireland, or the iſles of Guernſey, Jerſey, Alderney, Sark, or Man.

Whereas it is neceſſary that ſome proviſion be made by parliament, for obliging ſhips and perſons coming from places infected with, or frequently ſubject to, the plague, to perform quarantine in ſuch manner as hath been, or ſhall be, ordered by his Majeſty, his heirs, or ſucceſſors; and for puniſhing offenders therein, in a more expeditious manner, than can be done by the ordinary methods of law; be it enacted, by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in parliament aſſembled, and by the authority of the ſame, That all ſhips and veſſels arriving, and all perſons, goods, and merchandizes whatſoever, coming, or imported into any port or place within Great Britain or Ireland, or the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, from any place from whence his Majeſty, his heirs, or ſucceſſors, by and with the advice of his or their privy council, ſhall judge it probable that the infection may be brought, ſhall be obliged to make their quarantine in ſuch place and places, for ſuch time, and in ſuch manner, as hath been, or ſhall, from time to time, be directed by his Majeſty, his heirs, or ſucceſſors, by his or their order or orders, made in his or their privy council, and notified by proclamation, or publiſhed in the London Gazette; and that until ſuch ſhips, veſſels, perſons, goods, and merchandizes, ſhall have reſpectively performed, and be diſcharged from ſuch quarantine, no ſuch perſon, goods, or merchandizes, or any of them, ſhall be brought on ſhore, or be put on board any other ſhip or veſſel, in any place within his Majeſty's dominions, unleſs in ſuch manner, and in ſuch caſes, and by ſuch licence, as ſhall be directed or permitted by ſuch order or orders made by his Majeſty, &c. in council as aforeſaid; and that all ſuch ſhips and veſſels, and the perſons or goods imported in, or being put on board the ſame, and all ſhips, veſſels, boats, and perſons, receiving any goods or perſons out of the ſame, ſhall be ſubject to ſuch orders, rules, and directions, concerning quarantine, and the prevention of infection, as have been, or ſhall be made by his Majeſty, &c. in council, and notified by proclamation, or publiſhed in the London Gazette as aforeſaid.

And it is hereby further enacted by the authority aforeſaid, That if the plague ſhall appear on board any ſhip, being to the northward of Cape Finiſterre, the maſter, commander, or other perſon having charge thereof, ſhall immediately proceed to the harbour of New Grimſby in the iſlands of Scilly, where being arrived, he ſhall make known his caſe to ſome officer of the cuſtoms there, who ſhall immediately acquaint ſome cuſtom-houſe officer of ſome near port of England thereof; and the ſaid cuſtom-houſe officer ſhall, with all poſſible ſpeed, ſend up the intelligence thereof to one of his Majeſty's Principal Secretaries of State, that ſuch meaſures may be taken for the comfort and ſupport of the crew of ſuch ſhip ſo infected, and ſuch precautions uſed to prevent the ſpreading of the infection, as the caſe ſhall require; and the ſaid ſhip ſhall remain at the ſaid iſlands of Scilly, 'till his Majeſty's pleaſure be known; nor ſhall any of her crew go on ſhore; but in caſe the ſaid maſter, commander, or other perſon having charge of the ſaid ſhip ſo infected, ſhall not be able to make the ſaid iſlands of Scilly, or ſhall be forced by ſtreſs of weather, or otherwiſe, to go up either of the channels, he ſhall not preſume to enter with ſuch ſhip into any port, but ſhall remain in ſome open road, 'till he receives orders from his Majeſty, or his privy council, and ſhall take care to prevent any of his ſhip's company from going out of his ſhip, and to avoid all intercourſe with other ſhips or perſons;

ſons; and the ſaid maſter, or any other perſon on board ſuch ſhip as aforeſaid, who ſhall be diſobedient herein, ſhall be adjudged guilty of felony, and ſhall ſuffer death as in caſes of felony, without benefit of clergy; and every ſuch offence ſo made felony, ſhall, and may be enquired of, heard, and determined, in the county where the offence ſhall be committed, or elſe in the county where the offender ſhall be apprehended.

And to the end that it may be better known whether any ſhip or veſſel be actually infected with the plague, or whether ſuch ſhip or veſſel, or the mariners or cargo coming and imported in the ſame, are liable to any orders touching quarantine; be it further enacted by the authority aforeſaid, That when any country or place is, or ſhall be, infected with the plague; or when any order or orders is, are, or ſhall be made by his Majeſty, his heirs, or ſucceſſors, concerning quarantine, and the prevention of infection, as aforeſaid, as often as any ſhip or veſſel ſhall attempt to enter into any port or place in Great Britain or Ireland, or of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, the principal officer of his Majeſty's cuſtoms in ſuch port or place, or ſuch perſon as ſhall be authorized to ſee quarantine duly performed, ſhall go off, or cauſe ſome other perſon, to be by him appointed for that purpoſe, to go off to ſuch ſhip or veſſel; and ſuch officer, or other perſon authorized to ſee quarantine performed, as aforeſaid, or the perſon ſo by him appointed for that purpoſe, ſhall, at a convenient diſtance from ſuch ſhip or veſſel, demand of the commander, maſter, or other perſon having charge of ſuch ſhip or veſſel; and ſuch commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, ſhall, upon ſuch demand, give a true account of the following particulars: that is to ſay, the name of ſuch ſhip or veſſel: the name of the commander, or perſon having charge thereof; at what place or places the cargo was taken on board; what place or places the ſhip or veſſel touched at in her voyage; whether ſuch places, or any, and which of them were infected with the plague; how long ſuch ſhip or veſſel had been in her paſſage; how many perſons were on board when the ſaid ſhip or veſſel ſet ſail; whether any, and what perſons, during that voyage on board ſuch ſhip or veſſel, had been, or ſhall be then infected with the plague; how many died in the voyage, and of what diſtemper; what ſhips or veſſels he, or any of his ſhip's company, with his privity, went on board, or had any of their company come on board his ſhip or veſſel in the voyage; and to what place ſuch ſhips or veſſels belonged; and alſo the true contents of his lading, to the beſt of his knowlege: and in caſe it ſhall appear upon ſuch examination, or otherwiſe, that any perſon then on board ſuch ſhip or veſſel ſhall at the time of ſuch examination be actually infected with the plague, or that ſuch ſhip is obliged to perform quarentine, in ſuch caſe it ſhall and may be lawful to and for the officers of any of his Majeſty's ſhips of war, or any of his Majeſty's forts or garriſons, and all other his Majeſty's officers whom it may concern, upon notice thereof given to them, or any of them reſpectively, and to and for any other perſon or perſons whom they ſhall call to their aid and aſſiſtance, and they are hereby required to oblige ſuch ſhip or veſſel to go and repair to ſuch places as has been, or ſhall be appointed for performance of quarantine, and to uſe all neceſſary means for that purpoſe, be it by firing of guns upon ſuch ſhip or veſſel, or any other kind of force or violence whatſoever; and in caſe any ſuch ſhip or veſſel ſhall come from any place viſited with the plague, or have any perſon on board actually infected, and the commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, ſhall conceal the ſame, ſuch commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, ſhall be adjudged guilty of felony, and ſhall ſuffer death as in caſes of felony, without benefit of clergy; and in caſe ſuch commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, ſhall upon ſuch demand made, as aforeſaid, not make a true diſcovery in any other of the particulars aforeſaid, ſuch commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, for every ſuch offence ſhall forfeit the ſum of 200 l. one moiety thereof to the king, and the other to him or them who ſhall ſue for the ſame, by action of debt, bill, plaint, or information, in any of his Majeſty's courts of record at Weſtminſter, Edinburgh, Dublin, or in the proper courts, of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively.

And be it further enacted, That every maſter, commander, or other perſon having charge of any ſhip or veſſel, which ſhall be ordered to perform quarantine as aforeſaid, ſhall, after his arrival at the place appointed for the performance of his quarantine, deliver on demand to the chief officer appointed to ſee quarantine duly performed there, ſuch bill of health, and manifeſt, as he ſhall have received from any Britiſh conſul during his voyage, together with his log-book and journal, under penalty of forfeiting 500 l. one moiety thereof to the king, the other moiety to him or them who ſhall ſue for the ſame, by action of debt, bill, plaint, or information, in any of his Majeſty's courts of record at Weſtminſter, Edinburgh, Dublin, or in the proper courts of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively.

And be it further enacted, That if any commander, maſter, or other perſon having charge of any ſhip or veſſel liable to perform quarantine, having notice thereof, ſhall himſelf quit, or ſhall knowingly permit or ſuffer any ſeamen or paſſenger coming in ſuch ſhip or veſſel, to quit ſuch ſhip or veſſel, by going on ſhore, or by going on board any other ſhip, boat, or veſſel, before ſuch quarantine ſhall be fully performed, unleſs in ſuch caſes, and by ſuch proper licence, as ſhall be directed or permitted by ſuch order or orders made, or to be made, concerning quarantine, and the prevention of infection, as aforeſaid; or in caſe any commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, ſhall not, within convenient time, after due notice given for that purpoſe by the proper officer, cauſe ſuch ſhip or veſſel, and the lading thereof, to be conveyed into the place or places appointed for ſuch ſhip, veſſel, and lading, to perform quarantine reſpectively; then, and in every ſuch caſe, every ſuch commander, maſter, or other perſon having charge of ſuch ſhip or veſſel, for every ſuch offence ſhall forfeit 500 l. one moiety thereof to the king, his heirs, and ſucceſſors, and the other moiety to him or them who will ſue for the ſame; and alſo if any perſon ſhall ſo quit ſuch ſhip or veſſel, by going on ſhore, or by going on board any other ſhip or veſſel, contrary to the true meaning of this act, it ſhall and may be lawful for all perſons whatſoever, by any kind of force and violence, to compel ſuch perſon to return on board ſuch ſhip or veſſel; and every ſuch perſon ſo quitting ſuch ſhip or veſſel ſhall, for every ſuch offence, ſuffer impriſonment for the ſpace of ſix months, and ſhall alſo forfeit the ſum of 200 l. one moiety to the king, his heirs, and ſucceſſors, the other moiety to him or them that will ſue for the ſame; the ſame reſpective penalties and forfeitures to be recovered by action of debt, bill, plaint, or information, in any of his Majeſty's courts of record at Weſtminſter, Edinburgh, Dublin, or in the proper courts of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively.

And be it further enacted, That, whenever his Majeſty, his heirs, and ſucceſſors, by and with the advice and conſent of parliament, ſhall direct houſes or lazarets to be provided for the receiving and entertaining of perſons obliged to perform quarantine, or for the depoſiting, opening, and airing of goods and merchandizes liable to perform quarantine as aforeſaid, it ſhall and may be lawful to erect the ſame, either in any waſte ground or commons, or where ſuch waſte ground or commons are not ſufficient, in the ſeveral grounds of any perſon or perſons whatſoever, not being a houſe, park, garden, orchard, yard, or planted walk, or avenue to a houſe, paying ſuch rate, rent, or conſideration for the ſame, to the perſon intereſted therein reſpectively, according to their ſeveral intereſts in the ſame, as ſhall be agreed on between the perſons ſo intereſted, their guardians or truſtees, and any two perſons to be appointed for that purpoſe by his Majeſty, his heirs, or ſucceſſors, under his or their ſign manual; and in caſe of any difference concerning ſuch rate, rent, or conſideration, between the perſons ſo intereſted, their guardians, or truſtees, and ſuch perſons ſo to be appointed by his Majeſty, his heirs, or ſucceſſors, as aforeſaid; then, and in ſuch caſes, the ſaid perſons ſo to be appointed by his Majeſty, his heirs, and ſucceſſors, may, and are hereby authorized, thirty clear days before any general quarter ſeſſions of the peace to be holden for the reſpective counties or diviſions where ſuch grounds ſhall reſpectively lie, as aforeſaid, to give, or cauſe to be given, to the occupier or occupiers of ſuch ſeveral grounds, or to be left at their laſt places of abode reſpectively, a notice in writing, deſcribing the quantity of ground ſo directed by his Majeſty, his heirs, and ſucceſſors, by and with the advice and conſent of parliament, for the purpoſes aforeſaid, and purporting that the rent or conſideration of ſuch ground will be adjuſted and ſettled by a jury of the ſaid ſeſſions; and the juſtices at their ſaid ſeſſions, upon proof to them made that ſuch notices have been given, ſhall, and are hereby authorized and required to charge the jury which ſhall attend at the ſaid ſeſſions, or ſome other jury of twelve honeſt and ſubſtantial men (to be then and there impannelled and returned by the ſheriff of the county, without fee or reward) and cauſe to be ſworn, well and truly on their oath, to aſſeſs the value of the ground comprized in the ſaid notices, and the rent or conſideration to be given for the ſame to the reſpective owner or owners thereof, according to their reſpective intereſts therein; which oath the ſaid juſtices are hereby required to adminiſter to the ſaid jury, and to which ſaid jury the ſaid perſons to be appointed by his Majeſty, his heirs, and ſucceſſors, and the parties intereſted in ſuch ground, ſhall have their lawful challenges; and the ſaid jury being ſo ſworn and charged as aforeſaid, after proper evidence on oath given to them, ſhall by their verdict aſſeſs the rent or conſideration to be given for ſuch ground to the reſpective owner or owners thereof, according to their reſpective intereſts therein; which verdict of the ſaid jury, and judgment of the ſaid juſtices thereupon, ſhall be concluſive and finally bind all parties; and that from and after ſuch verdict and judgment, his Majeſty, his heirs, and ſucceſſors, ſhall and may hold and enjoy ſuch ground, for and during all ſuch time and terms as his Majeſty, his heirs, and ſucceſſors, ſhall judge neceſſary for

the purpoſes aforeſaid, paying for the ſame ſuch rate, rent, or other conſideration, as ſhall be agreed upon, or aſſeſſed and adjudged, as aforeſaid.

And be it further enacted, by the authority aforeſaid, That the proper officers authorized to put in execution ſuch orders made, or to be made, as aforeſaid, ſhall, and they are hereby empowered and required to cauſe and compel all perſons obliged to perform quarantine, as aforeſaid, and all goods and merchandizes comprized within any ſuch orders made, or to be made, as aforeſaid, reſpectively to repair, or be conveyed to ſome of the ſaid houſes, or lazarets, or to ſuch other places as ſhall be provided for the reception of ſuch perſons, goods, or merchandizes, or for the opening and airing of ſuch goods and merchandizes, according to ſuch order or orders made, or to be made, as aforeſaid.

And be it further enacted, That if any perſon obliged to perform quarantine, as aforeſaid, ſhall wilfully refuſe or neglect to repair, within convenient time after due notice for that purpoſe given to him, her, or them, by the proper officer, to the houſe, lazaret, or other place duly appointed for him, her, or them, or, having been placed in ſuch houſe or lazaret, or other place, ſhall eſcape, or attempt to eſcape out of the ſame, before quarantine be fully performed, it ſhall and may be lawful to and for the watchmen, and other perſons appointed to ſee quarantine performed, by ſuch force as the caſe ſhall require, to compel every ſuch perſon ſo refuſing or neglecting as aforeſaid, and every ſuch perſon ſo eſcaping, or attempting to eſcape, as aforeſaid, to repair or return into ſuch houſe, lazaret, or other place ſo appointed for him or her, as aforeſaid; and every ſuch perſon ſo refuſing or neglecting to repair, within convenient time after ſuch notice, as aforeſaid, into ſuch houſe, lazaret, or other place appointed for him or her, as aforeſaid; and alſo every perſon actually eſcaping, as aforeſaid, ſhall be adjudged guilty of felony, and ſhall ſuffer death as a felon, without benefit of clergy.

And whereas diſobedience, or refractory behaviour in perſons under quarantine, may be attended with great danger and inconvenience, be it further enacted, by the authority aforeſaid, That all perſons liable to perform quarantine, whether in ſhips, lazarets, or elſewhere, ſhall be ſubject, during the ſaid quarantine, to ſuch orders as they ſhall receive from the proper officers authorized to ſee it duly performed; and the ſaid officers are hereby impowered and required to inforce all neceſſary obedience to their ſaid orders, and may, in caſe of neceſſity, call in others to their aſſiſtance, and all perſons ſo called are hereby required to aſſiſt accordingly.

And be it further enacted, That if any perſon, not infected with the plague, nor liable to perform quarantine, ſhall enter any houſe, lazaret, or other place ſo appointed, as aforeſaid, whilſt any perſon or perſons infected with the plague, or being under quarantine, ſhall be therein, and ſhall return, or attempt to return from thence, unleſs in ſuch caſes, and by ſuch licence as ſhall be directed, or permitted by ſuch order or orders, made or to be made, as aforeſaid, it ſhall, and may be lawful to and for the watchmen, or other perſons appointed to guard or ſecure ſuch houſe, lazaret, or other place ſo appointed as aforeſaid, by ſuch force as the caſe ſhall require, to compel ſuch perſon ſo returning, or attempting to return, to repair into ſuch houſe, lazaret, or other place ſo appointed as aforeſaid, there to continue and perform quarantine; and, in caſe ſuch perſon ſhall actually eſcape out of ſuch houſe, lazaret, or other place, where he or ſhe ſhall be ſo placed for performance of quarantine, before he or ſhe ſhall have fully performed the ſame, he or ſhe ſhall be adjudged guilty of felony, and ſhall ſuffer death as a felon, without benefit of clergy.

And it is hereby further enacted, That if any officer or officers of his Majeſty's cuſtoms, or any other officer or officers, perſon or perſons whatſoever, to whom it doth or ſhall appertain to execute any order or orders made, or to be made, concerning quarantine, or the prevention of infection, and notified as aforeſaid, or to ſee the ſame put in execution, ſhall be guilty of any wilful breach or neglect of his or their duty in that behalf, every ſuch officer and perſon ſo offending, ſhall forfeit his office or employment in the cuſtoms, or any other office or employment, and ſhall become from thenceforth incapable to hold or enjoy the ſame, or to take a new grant thereof, and forfeit the ſum of one hundred pounds, one moiety thereof to the king, his heirs, and ſucceſſors, and the other moiety to him or them who ſhall or will ſue for the ſame, by action of debt, bill, plaint, or information, in any of his Majeſty's courts of record at Weſtminſter, Edinburgh, Dublin, or in the proper courts of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively, and if any ſuch officer or perſon ſhall embezzle, or ſhall knowingly and willingly damage any goods performing quarantine under his direction, he ſhall be liable to pay treble damages, and full coſts of ſuit.

And whereas certain ſpecies of goods and merchandizes are more eſpecially liable to retain infection, and may be brought from places infected into other countries, and from thence imported into his Majeſty's dominions in ſhips not obliged to perform quarantine, be it enacted by the authority aforeſaid, That all ſuch goods and merchandizes as are or ſhall be particularly ſpecified for that purpoſe, in any order or orders made or to be made concerning quarantine, and the prevention of infection, as aforeſaid, which ſhall be imported into any of his Majeſty's dominions from any foreign country or place, in any ſhip or veſſel whatſoever, ſhall be ſubject and liable to ſuch order or ordets made or to be made, concerning quarantine, and the prevention of infection as aforeſaid.

And it is hereby further enacted, That, after quaratine ſhall have been duly performed by any ſhip or veſſel, perſon or perſons, obliged to perform quarantine, according to ſuch order or orders made as aforeſaid, and the act, and upon proof to be made upon the oaths of the maſter, or other perſon having charge of ſuch ſhip or veſſel, and of two of the perſons belonging to ſuch ſhip or veſſel, or upon proof to be made by the oaths of two or more credible witneſſes, before the cuſtomer, comptroller, or collector of the port where ſuch quarantine ſhall be performed, or the next port thereunto, or before any of their deputies, or any juſtice of the peace living near to ſuch port, or where ſuch quarantine ſhall have been performed, within any of the ſaid iſles of Guernſey, Jerſey, Alderney, Sark, or Man, before any two jurats or magiſtrates of any of the ſaid iſles reſpectively (which perſons are hereby authoriſed and required to adminiſter ſuch oath) that ſuch ſhip or veſſel, and all and every ſuch perſon and perſons reſpectively, have duly performed quarantine as aforeſaid; and that the ſhip or veſſel, and all and every ſuch perſon and perſons, are free from infection; and after producing a certificate to that purpoſe, ſigned by the chief officer who ſuperintended the quarantine of the ſaid ſhip: then, and in the ſaid reſpective caſes, ſuch cuſtomer, comptroller, or collector, or any of their deputies, together with the ſaid juſtice of the peace, or ſuch jurats or magiſtrates as aforeſaid reſpectively, are hereby required to give a certificate thereof; and thereupon ſuch ſhip or veſſel, and all and every ſuch perſon and perſons, ſo having performed quarantine, ſhall be liable to no further reſtraint or detention upon the ſame account for which ſuch ſhip or veſſel, perſon or perſons, ſhall have performed quarantine as aforeſaid.

And it is hereby further enacted, That the officer before whom ſuch oath ſhall be made, and by whom ſuch certificate ſhall be given, ſhall, for ſuch reſpective oath and certificate, demand or take no fee or reward whatſoever.

Provided nevertheleſs, and it is hereby enacted, That all goods, wares, and merchandizes, liable to quarantine, as aforeſaid, ſhall be opened and aired in ſuch place or places, and for ſuch time, and in ſuch manner, as ſhall be directed by his Majeſty, by ſuch order or orders to be made as aforeſaid; and after ſuch orders ſhall have been duly complied with, and a certificate thereof given by the chief officer appointed to ſuperintend the quarantine and airing of ſuch goods, wares, and merchandizes, and proof ſhall be made thereof, by the oaths of two or more credible witneſſes, before the cuſtomer, comptroller, or collector of the port lying next to ſuch place or places where ſuch goods, wares, or merchandizes, ſhall have been opened and aired as aforeſaid, or any of their deputies, or any juſtice of the peace living near the ſame, or before any two jurats, or magiſtrates of the ſaid iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively (who are hereby authorized and required to adminiſter ſuch oath) upon certificate and return of ſuch proof by ſuch cuſtomer, comptroller, or collector, or any of their deputies, or ſuch two jurats, or magiſtrates, as aforeſaid (who are hereby reſpectively required to make ſuch certificate and return to the commiſſioners appointed for the management of the cuſtoms of Great Britain or Ireland, or to the governor or commander in chief, being upon the place, in the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively) ſuch goods, wares, and merchandizes, ſhall be forthwith diſcharged from any reſtraint or detention upon the ſame account, by order of the ſaid commiſſioners, or any two of them, or of the ſaid governor or commander in chief of any of the ſaid iſles as aforeſaid, reſpectively; for every of which oath, certificate, and order, no fee or reward whatſoever ſhall be demanded or taken.

Provided always, and be it enacted, That if any officer, or other perſon, ſhall demand or take any fee or reward whatſoever for any ſuch oath, order, or certificate, to be adminiſtered or made in purſuance of this act, every perſon ſo offending ſhall forfeit the ſum of one hundred pounds, one moiety whereof to his Majeſty, and the other to him or them who ſhall ſue for the ſame, by action of debt, bill, plaint, or information, in any of his Majeſty's courts of record at Weſtminſter, Edinburgh, Dublin, or in the proper courts of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively; in which caſe treble coſts ſhall be allowed to either party, as in other caſes.

And be it further enacted, &c. That if any officer, or other perſon appointed to ſee quarantine duly performed, or any perſon placed or appointed as a watchman upon any houſe, lazaret, ſhip, or other place for performance of quarantine, in purſuance of this act, ſhall deſert from their duty, when employed on the ſame buſineſs of quarantine, or ſhall knowingly

ſingly and willingly permit or ſuffer any perſon, ſhip, goods, or merchandizes, to depart or be conveyed out of ſuch houſe, lazaret, ſhip, or other place reſpectively appointed for performance of quarantine, unleſs in ſuch caſes, and by ſuch licence, as are or ſhall be directed or permitted, by ſome order or orders made, or to be made, as aforeſaid; or if any perſon, directed as aforeſaid to give a certificate of a ſhip's having duly performed her quarantine, or airing, ſhall knowingly give a falſe certificate, then, and in every of the ſaid caſes, every ſuch officer and perſons ſo offending, ſhall ſuffer death, as in caſes of felony, without benefit of clergy.

And be it further enacted, &c. That if any perſon or perſons ſhall knowingly or wilfully conceal from the officers of quarantine, or ſhall clandeſtinely convey any letters, goods, wares, or merchandize, from any ſhip under quarantine, or liable to perform quarantine, by any ſuch order to be made as aforeſaid, or from any lazaret, or other places where goods ſhall be performing quarantine, every ſuch perſon ſo offending, ſhall ſuffer death, as in caſes of felony, without benefit of clergy.

And whereas it is notorious that, notwithſtanding the many good laws made to prevent the clandeſtine importation of cuſtomable and prohibited goods and merchandizes, a pernicious trade of that kind is ſtill carried on, for the moſt part in open boats or veſſels, of ſmall burthen, which privately, and in the night, put into creeks and ſecret places on the coaſt, thereby eſcaping the obſervation of the officers of the cuſtoms, which practices may prove highly detrimental to the ſafety of theſe kingdoms during a time of infection; for prevention thereof, be it enacted, by the authority aforeſaid, That, when any part of Great Britain, Ireland, or the iſlands of Guernſey, Jerſey, Alderney, Sark, or Man, or France, Spain, Portugal, or the Low-Countries, ſhall be infected with the plague, it ſhall and may be lawful to and for his Majeſty, &c. by his or their proclamation, to prohibit and reſtrain all ſmall boats and veſſels, under the burthen of 20 tons, from ſailing or paſſing out of any port or place of Great Britain or Ireland, or the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, or any of them, until ſecurity be firſt given by the maſter of every ſuch boat or veſſel reſpectively, to the ſatisfaction of the principal officers of the cuſtoms, or the chief magiſtrate of the port or place from whence ſuch boat or veſſel ſhall ſail, by bond taken to the king, his heirs or ſucceſſors, with ſufficient ſureties, in the penalty of 300 l. with condition, that if ſuch boat or veſſel ſhall not go to, or touch at, any country, port, or place, to be mentioned for that purpoſe in ſuch proclamation, and if the maſter, or other perſon having charge of ſuch boat or veſſel, and all and every mariner and mariners, paſſenger and paſſengers, going in ſuch boat or veſſel, ſhall, during the time aforeſaid, not go on board any other ſhip or veſſel at ſea; and if ſuch maſter, or other perſon, having charge of ſuch boat or veſſel, ſhall not permit or ſuffer any perſon or perſons to come on board ſuch boat or veſſel at ſea, from any other ſhip or veſſel, and ſhall not, during the time aforeſaid, receive any goods and merchandizes whatſoever out of any other ſhip or veſſel, then ſuch bond ſhall be void, or to ſuch effect; for the making of which bond, no fee or reward whatſoever ſhall be taken; and in caſe any boat or veſſel for which ſuch ſecurity ſhall be required by ſuch proclamation, ſhall ſet ſail, or paſs out of any port or place of Great Britain or Ireland, or the iſlands of Guernſey, Jerſey, Alderney, Sark, and Man, or any of them reſpectively, before ſuch ſecurity be given as aforeſaid, every ſuch boat or veſſel, ſo ſailing, or paſſing out of any port or place, contrary to the true intent and meaning of this act, together with her tackle, apparel, and furniture, ſhall be forfeited to the king, &c. and ſhall and may be ſeized, ſued for, and recovered in his Majeſty's court of Exchequer at Weſtminſter, Edinburgh, or Dublin, or in the proper courts of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, reſpectively, to the uſe of his Majeſty, &c. and the maſter of, and every mariner ſailing in any ſuch boat or veſſel, being thereof lawfully convicted, upon his or their appearance or default, upon the oath or oaths of one or more credible witneſs or witneſſes, by one or more juſtice or juſtices of the peace, where ſuch offender ſhall be found (which oath ſuch juſtice or juſtices of the peace are hereby impowered and required to adminiſter) ſhall forfeit the ſum of 20 l. one moiety thereof to the informer, and the other moiety to the poor of the pariſh where ſuch offender ſhall be found, the ſame to be levied by diſtreſs and ſale of the offender's goods, by warrant under the hand and ſeal, or the hands and ſeals of ſuch juſtice or juſtices before whom ſuch offender ſhall be convicted, as aforeſaid; and, for want of ſufficient diſtreſs, every ſuch offender ſhall, by ſuch juſtice or juſtices, be committed to priſon, there to remain, without bail or mainprize, for the ſpace of three months; and, in caſe any ſuch offender ſhall be found in any of the ſaid iſles of Guernſey, Jerſey, Alderney, Sark, or Man, and ſhall be lawfully convicted of ſuch offence, in any action or ſuit to be founded on this act, in the proper court of any of the ſaid iſles where he ſhall be ſo found, ſuch offender ſhall forfeit the ſum of 20 l. one moiety thereof to the informer, and the other moiety to the poor of the pariſh or place where ſuch offender ſhall be found; and, in default of paying ſuch penalty, ſhall ſuffer impriſonment, without bail or mainprize, for the ſpace of three months.

And, to the end that all perſons may know how to demean themſelves in the premiſes, be it further enacted, by the authority aforeſaid, That when and as often as his Majeſty, his heirs or ſucceſſors, ſhall make any order or orders concerning quarantine, and the prevention of infection, and notify the ſame by proclamation, or cauſe the ſame to be publiſhed in the London Gazette, as aforeſaid, ſuch proclamation, or order or orders in council, as aforeſaid, ſhall be publickly read upon the next Sunday on which divine ſervice ſhall be performed after the receipt of the ſame, and the firſt Sunday in every month afterwards (during the time ſuch orders ſhall continue in force) immediately after the prayers, in all pariſh churches, and other places ſet apart for divine worſhip, within ſuch counties and places as ſhall be ſpecified for that purpoſe in ſuch proclamation or orders reſpectively.

And be it further enacted, by the authority aforeſaid, That if any action or ſuit ſhall be commenced againſt any perſon or perſons, for any thing done in purſuance of this act, the defendant or defendants in ſuch action or ſuit, may plead the general iſſue, and give this act, and the ſpecial matter in evidence, at any trial to be had thereupon, and that the ſame was done in purſuance, and by the authority of the ſaid act; and if it ſhall appear ſo to have been done, then the jury ſhall find for the defendant or defendants; and if the plaintiff ſhall be nonſuited, or diſcontinue his action, after the defendant or defendants ſhall have appeared, or if judgment ſhall have been given, upon any verdict or demurrer, againſt the plaintiff, the defendant or defendants ſhall and may recover treble coſts, and have the like remedy for the ſame, as the defendant or defendants hath or have in other caſes by law.

Provided always, and it is hereby enacted, That no attainder of felony, by virtue of this act, ſhall extend to work any corruption of blood, or forfeiture of any goods, chattels, lands, tenements, or hereditaments.

And it is hereby further enacted, by the authority aforeſaid, That this act, and the ſeveral clauſes and proviſions therein contained, ſhall commence and take effect from and after the 1ſt day of March, 1754.

QUARRY, a ſubterranean place, from whence are dug free-ſtones marble, ſlate, lime-ſtone, &c. proper for building.

In the digging of quarries of free-ſtone, they firſt open a hole in the manner of a well, but conſiderably bigger in diameter, and the rubbiſh is drawn out with a windlaſs, in baſkets.

As the hole increaſes, and their common ladder becomes too ſhort, they apply a larger for the purpoſe.—When they have got through the rubbiſh, and are arrived at the firſt ſtratum *, they apply their windlaſs and baſkets to diſcharge the ſtones, as faſt as they dig through them.

* Strata, in Natural Hiſtory, are the ſeveral beds, or layers, of different matters, whereof the body of the earth is compoſed. It has been ſuppoſed by ſome, that the ſtrata lie in the earth according to the laws of gravitation; but experience hath proved the contrary, it having been obſerved by Dr Leigh, in his Natural Hiſtory of Lancaſhire, ſpeaking of the coal-pits, that the ſtrata there are firſt a bed of marle, then free ſtone, next iron-ſtone, then coal, or channel mire, then ſome other ſtrata, then coal again, &c.—And Mr Haukſbee was ordered by the Royal Society, to try the ſtrata of a coal-pit, which he did to the depth of 30 ſtrata: the thickneſs and ſpecific gravity of each whereof, he gives us in the Philoſophical Tranſactions; and from the whole makes this inference, that it evidently appears the gravities of the ſeveral ſtrata are in no manner of order, but purely caſual, as if mixed by chance.

They uſually find ſeven of theſe different ſtrata of ſtones, of different heights, and ſerving for different purpoſes, though the number, as well as order wherein they follow, is various.

As to the extracting of the ſtone from the bed wherein it lies, they find that common ſtones, particularly the ſofter kinds, as they lie, have two grains, a cleaving grain, running parellel with the horizon, and a breaking grain, perpendicular thereto.—After clearing the earth from off it, they obſerve by the grain where the ſtone will cleave, and there drive in a number of wedges, 'till they have thus cleft it from the reſt of the rock.

This done, they proceed to break it: in order to which, applying the rules at both ends, 10 or 12 inches apart, according to the uſes for which the ſtone is intended, they ſtrike a line, and by this cut a little channel with their ſtone-ax, and in the channel ſet five or ſix wedges (ſuppoſing the ſtone three or four feet) driving them in very carefully, with gentle blows, and ſtill keeping them equally forward.—Having thus broke the ſtone in length (which they are able to do to half an inch of any ſize) applying a ſquare to the ſtraight ſide, they ſtrike a line, and proceed as before, to break it in breadths.

This method of drawing is found greatly preferable to that of breaking the ſtones at random; but this cleaving grain being generally wanting in the harder ſtones, to break up theſe, they have great heavy ſtone axes, wherewith they work down a deep channel into the ſtone, and into this channel, at top, lay two iron bars, driving their iron wedges between thoſe bars.

Some in drawing of ſtone, eſpecially the very hard kind, make uſe of gun-powder with good effect, in the nature of blaſting in Minerology. In order to which, making a ſmall perforation pretty deep into the body of the rock, ſo as to have that thickneſs of rock over it judged proper to be blown up at once; at the further end of the perforation they diſpoſe a convenient quantity of gun-powder, filling up all the reſt with rubbiſh, ſtrongly rammed in, except a little ſpace for the train.—By this means the rock is blown in ſeveral pieces, moſt of them not too unweildly for a workman to manage.

For free-ſtone, that dug in the peninſula of Portland, and thence called Portland ſtone, is much uſed in buildings, being ſofter and whiter than Purbec ſtone, and is commonly raiſed out of the quarries in bigger blocks than that.

Some alſo call Ryegate, or fire-ſtone, free-ſtone. Mr Boyle obſerves, that a competent knowlege of the nature of the ſap, or juice, found in ſtones uſed in building, is of the laſt importance; the ſame ſtone, dug out of the ſame quarry at one ſeaſon, being found to moulder away in a few winters, which dug out at another ſeaſon, will brave the weather for many ages: and there are others, which, though dug at the proper ſeaſon, yet make but ruinous buildings, if uſed at an improper ſeaſon.

The ſame author adds, that, as there are ſome ſort of ſtones which will decay in a few years, there are others will not have attained their full hardneſs in 30 or 40 years, or even much more.

In regard to quarries of marble, there are a great variety of ſorts of this kind of ſtone, and theſe are uſually denominated either from their colour, their country, their grain, their degree of hardneſs, their weight, or their defects: ſome are of one ſimple colour, as white or black; others ſtreaked, or variegated with ſtains, clouds, waves, veins, &c. but all opake, excepting the white, which, when cut into thin ſlices, becomes tranſparent.

Ancient marbles are thoſe whoſe quarries are judged to be loſt, or inacceſſible, and whereof we have only ſome ſamples remaining.—Modern marbles are thoſe whoſe quarries are ſtill open, and out of which blocks continue to be dug.—African marble is either of a reddiſh brown, ſtreaked with veins of white, or of a carnation, with veins of green.—Engliſh white marble is veined with red.—Derbyſhire marble is diverſified with colours of brown, red, yellow, &c.—Marble of Auvergne in France is of a pale red, mingled with violet, green, and yellow.—Marble of Brabançon, in Hainault, is black, veined with white.—Marble of Breſſe, in Italy, is yellow, with ſpots of white.—Brocatella marble is mingled with little ſhades of Iſabella yellow, pale, and grey; it comes from Tortoſa, in Spain, where it is dug out of an ancient quarry: there is alſo another kind of ancient brocatella, dug near Adrianople.—Marble of Currara, on the coaſts of Genoa, is very white, and the fitteſt of all others for works of ſculpture.—Marble of Champagne reſembles the brocatella, being mixed with blue, in round ſtains like partridges eyes.—Cipollino, or Cipollin marble, is of a ſea-green colour, mixed with large waves, or clouds of white or pale green.—Scamozzi takes this to be the ſame with that which the Ancients called Auguſtum & Tiberium marmor, becauſe diſcovered in Egypt in the times of Auguſtus and Tiberius.—Marble of Dinan, near Liege, is of a pure black, very beautiful, and very common.—Marble of Guachenet, near Dinan, is of a reddiſh brown, with white ſpots and veins.—Marble of Languedoc, is of a vivid red, with large white veins, or ſtains, and is very common; there is ſome, whoſe white borders pretty much upon the blue, but this is of leſs value.—Lumachello marble is ſo called, becauſe mingled with ſpots brown, black, and white, wreathed ſomewhat like periwinkle-ſhells: this is ancient, and it's quarry is loſt.—Marble of Margoſſa, in the Milaneze, has a white ground, with browniſh veins, reſembling the colour of iron ruſt: this is very common, and extremely hard.—Marble of Lavé, in Maine, has a black ground, with little narrow veins of white; there is another kind of it red, with veins of a dirty white.—Marble of Namur is black, like that of Dinan, but leſs beautiful, as inclining a little to the blue, and traverſed with little ſtreaks of grey: this is very common, and is frequently uſed in paving.—Parian marble is antique, and much celebrated in authors; it is of a beautiful white: the greateſt part of the Grecian ſtatues were made of it: Varro calls it lychnites, becauſe the workmen dug it out of the quarry by lamp-light.—Marble of Porta Santa, at Rome called Sama, is mingled with large clouds and veins of red, yellow, and grey.—Portor marble has a black ground, with clouds and veins of yellow: it is dug out of the foot of the Alps, towards Carrara.—Marble of Rance, in Hainault, is of a dirty red, mixed with blue and white clouds and veins: this is pretty common, but is different in degree of beauty.—Marble of Savoy is a deep red, mixed with other colours, each piece whereof ſeems cemented on to the reſt.—Marble of Sicily is a browniſh red, ſtained with oblong ſquares of white and Iſabella, like ſtriped taffety: the ancient has very vivid colours, and the modern comes pretty near it.—Marble of Signam, in the Pyrenees, is ordinarily of a greeniſh brown, with red ſtains, though this is ſomewhat various in it's colours.—Marble of Theu, near Namur in Liege, is a pure black, ſoft, and eaſy to work, and receives a more beautiful poliſh than thoſe of Namur and Dinan.—Marble Bigio Nero, or black-grey, is antique.—White veined marble has large veins, with grey and blue ſtains, on a white ground: it comes from Carrara.—White marble; that dug out of the Pyrenees, on the ſide of Bayonne, is inferior to that of Carrara, it's grain being coarſer, and ſhining like a kind of ſalt; it is ſomething like the ancient white Greek marble, whereof their ſtatues were made, but is not ſo hard or beautiful.—Ancient black and white marble is now very rare, it's quarries being intirely loſt; it is divided between a pure white and a bright black, in laminæ.—Blue Turquin marble is mixed with a dirty kind of white, and comes from the coaſt of Genoa.—Marble Fior di Perſica, comes from Italy, conſiſts of red and white ſtains, ſomewhat yellowiſh.—Yellow marble is a kind of yellow Iſabella, without veins; it is antique, and now very rare.—Black antique marble is of a pure black, without ſtains, and ſofter than the modern black: there was ſome of it brought from Greece, called mamor luculleum, but not ſo much prized as that from Ethiopia.—There are divers other ſorts, needleſs to enumerate.—Porphyry alſo is a precious kind of marble, of a browniſh red colour, often interſperſed with ſtains, brought formerly from Egypt, and exceeding all other kinds of ſtone in hardneſs; yet Dr Huntingdon aſſures us, that there is no quarry or rock of ſuch ſtone in all the lower parts of Egypt, ſo far as the Nile overflows being perfect ſoil.

Remarks.

There are three different ways of petrification that we are acquainted with, which being eaſily obſervable and conceivable by us, may aſſiſt us in making a pretty exact diſcovery how all others are performed.

Of the firſt kind is the ſtalactites, or the cylindrical congelation which is formed in the ſhape of an icicle, in the perpendicular fiſſures of vaults and caverns, out of the ſparry, ſandy, and other matter that is drained out of the ſtrata, by the water paſſing through them into thoſe fiſſures *, and theſe do gradually increaſe, in proportion as they are covered with freſh coats of the ſame matter.

* See Woodward on Foſſils, page 18.

Of the ſecond ſort of petrification are thoſe cruſts of ſtone which the water of certain ſprings leaves ſticking to the pipes it paſſes through, as is obſervable in thoſe which convey the water from Bongis and Arcueil to Paris. Now it is very plain that this petrified matter, of what nature ſoever it be, is impelled by the water towards the ſides of the pipe: the reaſon of it's incruſtating in irregular lumps, or clods, one upon another, is the irregular action of the water upon this ſtony matter, which it caſts ſideways from the center of it's courſe, to force itſelf a free paſſage.

Of the third kind of petrification that we are thoroughly acquainted with, are thoſe pieces of wood, ſhells, and other ſubſtances, which are found petrified under-ground, or in certain fountains, ſtill retaining their natural figure and lineaments. Now the manner in which theſe three different petrifications are performed, we will ſuppoſe to be thus: the firſt by thin leaves or teguments, the ſecond by little lumps, the third by inſertation.

We have no acquaintance with any other elements than thoſe of water, ſalt, oily juices, ſand, loam, and clay. The water itſelf is no ingredient in the compoſition of ſtones, but is only that which brings together and mixes the materials of which they are compoſed. The natural formation of ſtones is performed nearly in the ſame manner with the artificial ſtructure of houſes, in which the water ſerves to unite and fix the materials, after which they harden, and conſolidate as the water diſſipates. Our walls are compoſed of hard maſſes of matter and cement; the cement of itſelf would never form a durable firm wall, and the maſſes, whether of brick or ſtone, laid one upon another, without any mortar between them, would eaſily be ſhaken down, whereas the interpoſition of the cement produces theſe two effects; firſt, by filling up the interſtices between the maſſes, it keeps them fixed in their places; and ſecondly, by inſinuating itſelf into the pores of thoſe maſſes, it incorporates with them, ſo as to conſtitute, when thoroughly dry, one intire compacted body. So likewiſe our three different ways of petrification are performed by little maſſes, and a very fine cement: the maſſes to be joined together are the ſand, the clay, and the loam; the ſtrongeſt cement are the ſalts, and the different ſorts of bitumen: ſometimes the ſalt and clay ſerve as a cement to the ſand, ſometimes either the clay or loam does of itſelf conſtitute the maſs, and, from the different quantities and proportions of theſe matters, differently mixed together, reſults an almoſt infinite variety of productions; but then it is the water that performs all the ſeveral offices of collecting, conveying, and aſſociating all the different particles of matter, which afterwards condenſe into aggregates of a hard durable nature.

Under the firſt kind of petrification may be ranged the talcs, ſlates, the amianthus, and plaſter.

Cryſtal is nothing elſe but an aggregate of ſand, either of a pyramidal or triangular figure, which the water incruſtates ſucceſſively upon one another, by a cement of ſalt and very fine loamy earth: and this appears the more probable, for that, when cryſtal is reſolved by fire into it's conſtituent parts, we can diſcover nothing but a calcined ſand together with a little earth and ſalt. Nor is it at all to be wondered at, that ſuch a beautiful tranſparent maſs ſhould be formed out of ſand, ſeeing the particles of the ſand itſelf, when viewed through a microſcope, appear like ſo many pellucid cryſtals: the reaſon of their not being bright and clear in their natural ſtate, like the diamond, is becauſe of the earth that is mixed with them. See the article STONE.

QUARTATION, a peculiar method of ſeparating gold from ſilver.

Make a mixed maſs of gold and ſilver, and melt it along with three or four times it's own weight of pure ſilver; beat the whole lump, when cold, into a thin plate; put it into a glaſs of proof aqua fortis, and ſet the ſame in warm ſand, whereby the ſilver will ſoon diſſolve, and the gold fall in a black powder to the bottom.

Pour off carefully the ſolution of ſilver, and uſe a ſomewhat ſtronger heat than before, in order to diſſolve any remains of ſilver in the gold powder. Then the aqua fortis [ſee the article AQUA FORTIS] being again decanted, waſh the gold well, in ſeveral parcels of fair water. And put the gold-powder into a little ſay-cup [ſee the article ASSAY] and place it under the muffle in the teſting-furnace, 'till it becomes yellow. You may otherwiſe melt it with borax, which will bring it to it's true colour and form. Weigh the gold, to determine the proportion it bears to the ſilver. Laſtly, Precipitate the ſilver out of the aqua fortis, by ſuſpending a copper-plate therein; then waſh the calx, and reduce it to it's metalline form, in the ſame manner.

OBSERVATION.

The reaſon for adding three or four times the quantity of ſilver, in proportion to the mixed maſs is, for fear the maſs ſhould contain too much gold to be fit for the operation; or to ſpread the gold contained in the maſs, and diffuſe it ſo thinly, that it may not defend the ſilver, as it otherwiſe would do, from the action of the aqua fortis. And upon account of this addition it ſeems to be, that the operation is called QUARTATION.

This method of ſeparating gold and ſilver was unknown to the Ancients, who therefore ſeparated ſilver from gold by calcination, and ſo loſt all the ſilver that was mixed with the gold. And, indeed, the method by quartation is expenſive and laborious, ſo as not to be very advantageouſly practiſed in the large way of buſineſs; though the whole has been divided into ſuch a number of hands, as to make the ſeveral parts come cheap: ſome operators being wholly employed in making the aqua fortis; others in purifying it, or bringing it to proof; others in laminating the ſilver, and diſſolving it; others in ſeparating and reducing the calx of the gold; others in precipitating the ſilver with copper; and others again in ſeparating the copper from the aqua fortis. And hence the whole operation has been found to anſwer the trouble, ſo long as they can recover about a drachm of gold from a pound of ſilver.

But there are certain ingenious workmen, who have the method of ſeparating gold from ſilver to much greater profit, without the uſe of aqua fortis, or aqua regia, and barely by a dextrous application or management of the FIRE, at leaſt without any coſtly additions. This method is kept as a ſecret, but may, perhaps, be no other, than that publiſhed by M. Homberg; which conſiſts in fluxing the mixed maſs of gold and ſilver with equal parts of rough nitre and decrepitated ſalt, placed at the bottom of the melting-pot; whereby the operation in the large way, may be finiſhed in a quarter of an hour; the gold thus falling to the bottom, and leaving the ſilver ſuſpended in the ſalts.

Another way of effecting this ſeparation may depend upon a dextrous uſe of common ſulphur, which has the power of making ſilver melt away from a metalline mixture almoſt as eaſy as lead.

But, to obtain either gold or ſilver in abſolute purity, is no eaſy taſk. For the common uſes, indeed, the methods above delivered may ſerve; but for the more curious chemical and philoſophical purpoſes, better ways than are commonly known and practiſed ſhould be diſcovered.

To refine gold by melting and teſting it with antimony, or glaſs of antimony, is generally, and even by the metallurgical chemiſts, thought a perfect way; but M. Homberg has ſhewn, that even this criterion, as alſo quartation, cupelling with lead, fluxing with borax, &c. may fail, in caſe the gold be mixed with emery, or poſſibly ſome other things.

When gold is eager, as the workmen call it, that is, brittle, they hold it as a ſecret to melt it with mercury ſublimate. But, perhaps, no gold can be proved to be perfectly pure, 'till it has gone through all the trials hitherto known; or even ſome of a more curious nature, particularly melting with crude antimony, and afterwards cupelling the regulus with lead; and, at laſt, fuſing it with borax. Which proceſs we recommend to thoſe who require gold in abſolute purity for any ſtandard, or curious operation.

QUICKSILVER, ſee MERCURY.

Of the BUSINESS of the CUSTOMS, continued.

With regard to the QUAKERS.

QUAKERS. Their affirmation and declaration, allowed by the 7 and 8 Will. III. cap. 34. and 13 and 14 Will. III. cap. 4. to be accepted inſtead of an oath, in all caſes where by law an oath is required, 1 Geo. I. cap. 6. §. 1, and 2. The affirmation or declaration to be in theſe words, I, A. B. do ſolemnly, ſincerely, and truly declare and affirm, That, &c. 8 Geo. I. cap. 6. §. 2. Such ſolemn affirmation or declaration is to be adjudged to be of the ſame force and effect in all caſes, as if an oath had been taken in the uſual form. Convicted of a wilful, falſe, and corrupt affirmation or declaration, are to ſuffer as for wilful and corrupt perjury, 7 and 8 Will. III. cap. 34. §. 3.

QUARANTINE. See that article at large.

R.

RADNORSHIRE, in Wales, is bounded on the eaſt with Shropſhire and Herefordſhire, with Brecknockſhire and Cardiganſhire on the ſouth and weſt, and with Montgomeryſhire on the north. It is, according to ſome, about 29 miles in length and 18 in breadth, and has an area of 385 ſquare miles. Others make it 90 miles in circumference, containing 310,000 acres, four market-towns, ſix hundreds, fifty-two pariſhes, and about 3200 houſes, with 19,000 inhabitants, thirteen rivers, five caſtles, and three foreſts, all in the dioceſes of Hereford and St David's.

The air is ſharp and piercing. The eaſt and ſouth parts are well cultivated, and pretty fruitful in corn; but the ſoil elſewhere, eſpecially in the north and weſt parts, is ſo rocky and mountainous, that it is only fit to feed cattle and ſheep, though it is well ſtored with woods, and watered with rivulets, and in ſome places ſtanding lakes.

The chief commodities are cheeſe and horſes. The river Wye, which divides it from Brecknockſhire, croſſes the weſt angle of the county, and in its rapid courſe through the rocks, forms ſeveral cataracts, and receives the Ithon, Weverly, and other ſtreams. It is parted from Shropſhire by the river Ternd, but the river which it has peculiar to itſelf, is the Ithon, into which run the Dulas, the Clowdock, and the Cameran. It riſes among the hills in the north ſide of the ſhire, and forming its courſe ſouthward, falls into the river Wye, a little below Dyſſart, on the Llanhadem: it winds about ſo ſhort, that it runs near ſix miles in a mile and a half diſtance from that town. In theſe rivers are plenty of ſalmon and other fiſh. It ſends two members to parliament, one for the county, and one for the chief town, viz.

NEW RADNOR, a very ancient borough by preſcription, from whence the county takes its name.

PRESTEIN, or PRESTAIGN, or ST ANDREW's, ſtands on the river Lug, in a rich and pleaſant valley, near its entrance into Herefordſhire, and is the place where the aſſizes and the county gaol are kept, on which account it is pretty populous, and well frequented. Here is a very good market for grain, eſpecially barley, of which they make good ſtore of malt.

KNIGHTON, the only town of note in the hundred of its own name. It ſtands in a valley on the river Teme, over which it has a bridge. It is a well built borough, of good trade and reſort, and its market is well ſerved with cattle, corn, iron ware, hops, ſalt, linnen and woollen cloth, and other commodities.

RAISINS making a conſiderable article in traffic, we muſt not omit it.

They are the fruit of the vine, ſuffered to remain on the tree 'till perfectly ripened, and then dried, either in the ſun, or by the additional heat of an oven. Grapes of every kind preſerved in this manner are called raiſins, and are diſtinguiſhed into ſeveral kinds, according to the ſpecies of grape. What we have at preſent differ, as they are better or worſe dried, and are all called raiſins under different appellations, except the ſmall kind, which are called currants.

The difference between raiſins dried in the ſun, and thoſe dried in ovens, is conſiderable and obvious. The former are ſweet and pleaſant, the others have a whitiſhneſs and a latent acidity with the ſweetneſs, that renders them much leſs agreeable. The raiſins of the ſun, or what we call jar raiſins, from their being imported in earthen jars, are of the former kind, all dried by the ſun's heat only.

The fineſt and beſt raiſins, are thoſe called in ſome places Damaſcus and Jube raiſins; theſe are the fruit of the vitis Damaſcena, and are diſtinguiſhable from the others by their largeneſs and figure; they are flat and wrinkled on the ſurface, ſoft and juicy within, near an inch long, and ſemipellucid when held againſt a good light: they have a ſweet, agreeable, and vinous taſte, and when freſh and growing on the bunch, are of the ſize and ſhape of the large olive.

The common raiſins are the fruit of ſeveral ſpecies of grape, which are better or worſe, according as they have been more or leſs carefully cured.

The common way of drying grapes for raiſins at preſent, is to tie two or three bunches of them firmly together, while yet on the vine, and dip them into a hot lixivium of wood-aſhes with a little oil olive in it. This diſpoſes them to ſhrink and wrinkle, and after this they are left on the vine three or four days, ſeparated on ſticks in an horizontal ſituation, and then dried in the ſun at leiſure, after cut from the tree.

The currants are the fruit of a vine differing from the common kinds, in the ſmallneſs of its grapes, and in the largeneſs of its leaves, which alſo have fewer and ſlighter diviſions than thoſe of any other kind. They are gathered in when ripe, and ſpread thin upon a floor 'till tolerably dried; they are then put up in parcels where their own weight and remaining humidity form them into cakes, that are hardly to be broken without ſome inſtrument. They are not produced now in the place where they originally were, but in the iſlands of Zant and Cephalonia, where the vines that produce them are cultivated in great abundance, and to conſiderable advantage. They are packed up in caſks and trod firmly down, and if the air be kept out, will remain good a long time in them.

All the kinds of raiſins have much the ſame virtues, they are nutritive and balſamic, but they are very ſubject to fermentation with juices of any kind; and hence, when eaten immoderately, they often bring on cholics. They are allowed to be attenuant, and are given in caſes where the humours are too thick and viſcid, and they are ſaid to be very good in nephritic complaints; they are, however, too familiar in our foods, to be much regarded at preſent as a medicine. They are an ingredient, indeed, in our pectoral decoctions, and in ſome other medicines of that intention; in which caſes, as alſo in all others where aſtringency is not required of them, they ſhould have the ſtones carefully taken out. They are uſed in ſome compoſitions, rather with an intent of taking off the nauſeous taſte of other ingredients, than of doing any extraordinary ſervice themſelves.

Of wine made with raiſins.

EXPERIMENT I.

Take a quarter of a hundred of whole or unbruiſed Malaga raiſins, and put to them ſeven gallons of cold ſpring-water, in a wooden veſſel or caſk, which ſet looſely covered in a warm place, that the contents may ferment for ſome weeks. The water you will find ſoaked through the ſkins of the raiſins, and their internal ſweet or ſaccharine ſubſtance diſſolved, and will become impregnated therewith as a menſtruum; the liquor will manifeſt an inward ſtruggle and commotion of its particles, throwing up numerous ſmall bubbles to the ſurface, with a conſiderable hiſſing noiſe: and after the fermentation is finiſhed, the liquor will become an actual new wine; as will appear by the taſte, ſmell, and effects, and depoſit a large quantity of groſs, earthy ſediment, called lees, at the bottom, different from the huſks, or ſkins, and ſtones of the raiſins.

The application of this experiment.

This experiment is univerſal, and ſhews the general manner of making wines, and indeed all other ſpirituous potable liquors, by fermentation. For, with a ſlight change of circumſtances, it is applicable to the brewing of beer from mead or metheglin, and hydromel from honey [ſee the article BEES]; cyder and perry, from apples and pears reſpectively; artificial or made wines, as they are vulgarly called, from cherries, gooſeberries, currants, elder-berries, black-berries, plums, oranges, or other fruit: alſo from the tappings of certain trees, as the birch, the maple, the ſycamore, &c. and more eminently from the juice of the ſugar-cane, treacle, or direct ſugar and water: [ſee the articles SUGAR and WINE.] For any of theſe vegetable juices, being duly fermented and judiciouſly prepared, afford as real and perfect wine, according to their ſeveral natures, as the richeſt grapes of the beſt wine countries.

OBSERVATION.

To bring any of theſe juices into a ſound wine, the rule is, to evaporate them, if they are naturally too thin, 'till they become of equal richneſs with the juice of the grape in wine countries, and good wine years. This may be commodiouſly done, by means of the common water-poiſe *, which ſhews the ſtrength or richneſs of ſolutions to the eye. And in general, any vegetable juice or ſolution, is accounted ſufficiently rich for making a ſtrong wine, when it will ſupport a new-laid egg on its ſurface.

* A water-poiſe is an inſtrument made of ivory, glaſs, &c. hollow-bellied, ſo as to float, higher or lower, in liquids, according as the ſpecific gravity thereof is more or leſs: which inſtrument being graduated or divided by lines on the ſtem, readily ſhews to the eye, the difference betwixt the ſpecific gravities of any liquids propoſed, though not with the utmoſt accuracy.

The wines made in England, lie under a diſrepute; the reaſon whereof ſeems chiefly owing, (1.) To the inartificial manner wherein they are uſually prepared; and (2.) To a certain rumour ſpread about them, as if they were unwholſome, crude, indigeſtible, too luſcious, too tart or griping, and apt to occaſion the head-ach, &c.

Thoſe who have never been in wine-countries, nor otherwiſe made themſelves acquainted with the nature and common preparation of wines, proceed in their judgment of them according to report and popular notion. Thus, for inſtance, red-port wines, to pleaſe the common palate, muſt be bright, deep coloured, rough, rich, and racy, two or three years old, &c. and when this, or any other notion comes once to be eſtabliſhed as the criterion of wine, the cooper is thence directed how to hit the general taſte, and make a ſaleable commodity.

Upon the ſame foundation philoſophical chemiſtry [ſee the article PHILOSOPHICAL CHEMISTRY], inſtructs us to imitate the wine-cooper, and from almoſt any ſweet and tart vegetable juice, to make ſaleable wines; even canaries, mountains, ſherries, or ports: all which, by the way, are uſually mixed liquors, though the baſis of them all is the juice of the grape.

This juice of the grape being chemically examined, proves to be no more than a large proportion of real ſugar diſſolved in water, with an addition only of a certain flavour in the juice of the grape, according to the nature of the vine. Whence we may lay it down as an axiom, and the reſult of a careful enquiry, that a ſaccharine ſubſtance is the baſis of wines. For ſugar is not peculiar to the ſugar-cane, but obtainable, as we have obſerved, alſo from grapes; and accordingly, we often find large grains thereof in dried raiſins; particularly thoſe of Malaga, that have laid for ſome time, and ſweat together, whereby they run into candy, a ſaccharine efflorescence, and actual grains of ſugar. So again, it is cuſtomary in France to evaporate the juice of the grape, 'till it becomes coagulable in the cold, and in this ſtate to uſe it as a moiſt ſugar, under the name of reſiné. The ſame thing is to be underſtood as practicable in malt or wort, and the ſweet juices of all vegetables that afford a wine by fermentation. See the articles BREWING, DISTILLATION, ELÆOSACCHARUM, SUGAR, WINE.

Hence we may derive a ſet of rules, for boiling down, or otherwiſe procuring the eſſential matter of wines in a ſmall bulk, and preſerving it ſound and ſerviceable for many years, in order to the making of all kinds of wines, vinegars, and brandies, even in countries where no vines grow. This diſcovery likewiſe affords great light into the true nature and uſes of vinous and acetous fermentation.

And ſo much for the uſe of the preceding experiment, with regard to trade and œconomy; its philoſophical uſes are no leſs conſiderable [ſee our article PHILOSOPHY EXPERIMENTAL]. And firſt, it ſhews that the proper fermenting matter of every fermentable ſubject is but ſmall, compared with the quantity of wine it affords. Thus, for example, four pounds of raiſins may be diluted and fermented with eight pounds of water, into what is accounted a tolerably ſtrong wine. Yet even raiſins themſelves contain a large proportion of water, beſides their direct ſaccharine ſubſtance, which is reducible to a dry form, as we find in ſugar.

And whoever would thoroughly enquire into the nature, the uſes, and means of improving vinous and acetous fermentation, cannot, perhaps, do better, than to chuſe ſugar for his ſubject; a chemical analyſis whereof, will ſhew the principles neceſſarily required in this operation; which appear to be an acid ſalt, an oil, and earth ſo united together, as to be capable of diſſolving perfectly in water.

This experiment alſo ſhews the cauſe of vegetable matters running into a fermenting ſtate, as raiſins do by the addition of water. Nor do all fermentible bodies require ferments, to begin their motion of fermentation. Raiſins we ſee require none, much leſs does the freſh expreſſed juice of the grape, or other vegetable juices, in the ſummer-ſeaſon, or in a warm air. But all ſweet vegetable juices, that have felt much of the fire, as treacle or wort high boiled, rob of malt, rob of alder, or the like, uſually require a conſiderable proportion of a vinous ferment, to make them work. And, in general, ferments are no more than matters already in the act of fermentation, or that ſoon run into this ſtate: of the firſt kind are the flowers of wine, yeaſt, fermenting beer, or fermenting wine, &c.—Of the ſecond kind are the new expreſſed vegetable juices of ſummer-fruits, &c.

Water, we find, is abſolutely neceſſary to begin and procure a fermentative motion in vegetable ſubſtances: for raiſins or ſugar being kept dry, will never ferment. And this holds univerſally, of all the ſubjects of vinous and acetous fermentation. Whence water is an inſtrument that muſt be neceſſarily employed in theſe kinds of fermentation, whether natural or artificial.

As the water, which naturally and in large quantities perſpires from the ſurface of vegetables, eſpecially in hot climates, does not go off pure, but carries along with it a conſiderable proportion of fermentable matter into the atmoſphere; there may be an actually vinous fermentation, begun and carried on in certain parts of that region, eſpecially where the winds are ſtill, or the air ſtagnant. At Schiedam in Holland, a larger quantity of inflammable ſpirit is ſaid to be obtained from malt, than in any other place where there are fewer malt-diſtillers. This is probably owing to the air of that place being impregnated with the fermenting vapours, that continually exhale from their numerous fermenting bakes and ſtills. The ſame is found to hold proportionably of wines fermented in large vaults or cellars, where many caſks of wine are at once, or ſomewhat ſucceſſively ſet to work. Wherefore it ſhould ſeem, that artificial wines ſet to work in large quantities, is the beſt way to produce them of a good quality, and with greater expedition.

Warmth, with the free admiſſion of the external air, is neceſſary to expedite the action of fermentation; for if our raiſins and water were to ſtand either in a very cold place, or be kept entirely from the acceſs of the common atmoſpherical air, either no fermentation, or a very ſmall and ſlow one would enſue, as has been experienced.

The lees remaining at the bottom of the caſk in our preſent experiment, are, if uſed freſh, a true kind of ferment, and will ſet any leſs fermentable ſubject at work, and determine its fermentation for the vinous kind. They contain a large proportion of eſſential oil, and ſome tartar. Hence we ſee, that vinous fermentation conſiſts, (1.) In an inteſtine ſtruggle, or commotion of the fluid; and (2.) In a ſeparation of a groſſer part, which did not appear in that form before.

EXPERIMENT II.

Take the ſkins of the raiſins, and the ſediment left behind, after a wine is made in the manner of the preceding experiment, and pour three or four times their own quantity of boiling water upon them, ſo as to make a thin aqueous mixture. Then ſet the containing caſk, looſely covered, in a warmer place than was uſed for the wine, and you will, in few weeks time, find the liquor become a clear and ſound vinegar; which being drawn from off its ſediments, and preſerved in another caſk, well ſtopped down, will long continue perfect, and fit for uſe.

OBSERVATIONS.

(1.) This experiment ſhews us a cheap and ready way of making vinegar from refuſe materials; ſuch as the huſks of grapes, decayed raiſins, the lees of wine, grounds of ale, beer, &c. which are frequently thrown away as uſeleſs. Thus in many wine countries, the marc, rape, or dry preſſings of the grapes are thrown in heaps, and ſuffered to putrefy unregarded, though capable of affording as good vinegar as the wine itſelf. In ſome places, they bury copper-plates in theſe huſks, in order to make verdigreaſe, but this practice ſeems chiefly confined to the ſouthern parts of France. Our preſent experiment ſhews us how to convert them to another uſe, and the direction extends to all the matters that have once undergone, or are fit to undergo, a vinous fermentation, for that all ſuch matters will afford vinegar. From the ſame principle, all our ſummer fruits in England, even blackberries, all the refuſe waſhings of a ſugar-houſe, cyder-preſſings, or the like, will make vinegar by means of water, the open air, and warmth. See the article VINEGAR.

(2.) The whole proceſs, whereby this change is effected, deſerves to be attentively conſidered. And firſt, the liquor to be thus changed, being kept warmer than in vinous fermentation, it in a few days begins to grow turbid, and without throwing up bubbles, or making any conſiderable tumult, as happens in vinous fermentation, depoſits a copious ſediment. The effect of this ſeparation begins to appear firſt on the ſurface of the liquor, which gathers a white ſkin, that daily increaſes in thickneſs, 'till at length it becomes like leather; and now, if continued longer in this ſtate, the ſkin turns blue or green, and would at laſt grow ſolid and putrefy: therefore, in keeping down this ſkin as it grows, and thruſting it gently down to the bottom of the veſſel, conſiſts much of the art of vinegar-making, eſpecially from malt.

(3.) It

(3.) It is to be particularly obſerved, that if the wine of our firſt experiment were not bunged down when arrived at its vinous ſtate, but ſuffered ſtill to remain open and expoſed to a warm air, it would ſpontaneouſly become vinegar; and the ſooner, if a ſomewhat greater degree of heat than ſerved for the making of wine, were employed. Whence we might have uſed the wine of our firſt experiment for this purpoſe, as well as have added water to the huſks and ſediment, or lees; but we choſe the latter way, to ſhew that even ſuch refuſe matters will afford vinegar; and again, to intimate how far the art of vinegar-making may be ſtill improved, both in England, where they brew a wort from malt for it, and in ſome wine countries, where they frequently make their beſt wines into vinegars.

(4.) What we would chiefly remark for the preſent is, that acetous fermentation requires a ſtronger heat than the vinous; and that wines having once finiſhed their fermentation, as wines, do not naturally ſtop there, but unleſs prevented by the care of the operator, proceed directly to vinegars; where again they make no ſtop, but unleſs prevented here alſo, ſpontaneouſly go on to vapidity, ropineſs, mouldineſs, and putrefaction. From which larger obſervation we would deduce this axiom, that, to ſpeak philoſophically, The intention or tendency of nature, is to proceed from the very beginning of vinous fermentation, directly, in one continued ſeries, to putrefaction, and thence again to a new generation: which appears to be the GRAND CIRCLE, WHEREIN ALL NATURAL THINGS ARE MOVED, AND ALL THE PHYSICAL, OR RATHER CHEMICAL, PHÆNOMENA OF THE GLOBE PRODUCED.

(5.) Hence we ſee, by the interpoſition of the ſagacity of man, how this general proceſs of the uniform law of nature may be ſtopped at different times, with different views, ſo as to procure to ourſelves wines, vinegars, and, as will appear hereafter in the Experiments VI. and VII. particularly ſalts and oils.

(6.) Another corollary, deducible from the larger obſervation above laid down, is, that the word Fermentation has been uſually applied to ſignify only a ſmall part of this grand operation of nature: thus one limits the word to the production of wines; another, to the production of wines and vinegars; and ſome would diſtinguiſh it from putrefaction: whereas either the term FERMENTATION, or ſome other, ſhould be made general, and denote the GENUS, or UNIVERSAL FERMENTATION, whereof vinification, acetification, and putrefaction, are only SPECIES. At leaſt, we ſhould thus attempt to follow and expreſs nature in the FACTS that are obſerved, and not proceed, in an arbitrary, narrow, or inadequate manner, to impoſe words, and dreſs out nature according to particular hypotheſes and conceits. But the obſervation itſelf, whereon this doctrine is founded, being of moment to the right underſtanding of the whole affair of fermentation and putrefaction, upon which the advancement of many parts of PRACTICAL COMMERCIAL PHILOSOPHY doth depend; we ſhall proceed to illuſtrate and confirm the laſt part of it by an experiment, as the two former parts have been already by Experiments I. and II.

EXPERIMENT III.

That wines and vinegars, or all fermented vegetable juices, have a natural tendency to putrefaction.

(1.) Take a gallon of thick muddy vinegar, produced after the manner of the ſecond experiment; letting it ſtand open, in a hotter place than was required to make it vinegar, it will become, in a few days, a vapid, nauſeous, and putrefied liquor, throwing up a large quantity of a dry powdery ſubſtance to the top, and depoſiting a leſs quantity of a groſſer matter at the bottom; ſoon after which, the body of the liquor will become clear again.

(2.) We might ſhorten the preſent experiment, or ſave the trouble of making either a wine or a vinegar to ſhew it: for, if a quantity of MUST * were ſet in an open veſſel, in a hot ſervice-room, where the air had free acceſs, the work would ſoon be performed, and the putrefied liquor be produced almoſt at once, without ſtopping at the ſtate either of wine or vinegar, according to the larger obſervation delivered above.

* MUST is the unfermented juice of the grape, or any other liquid fermentable ſubſtance, before it enters the act of fermentation; and STUM is MUST clarified by ſtanding and racking, and then put up into matched caſks, that is, caſks impregnated with the fume of burning brimſtone, ſo as to be preſerved ſound in an intermediate ſtate.

OBSERVATIONS.

(1.) This latter experiment has a conſiderable philoſophical uſe; and, (1.) It gives us the phyſical reaſon why wines and vinegars, unleſs made exceeding ſtrong, will not keep, but corrupt and putrefy in hot countries: for the heat being there ſo great, as to keep the lighter feculent parts of thoſe liquors ſuſpended for ſome time in the body of the liquor, corruption (which proceeds from a tumultuary motion of all the different parts of a compound body together) neceſſarily enſues *.

* See §. (1.) of the laſt experiment, and hereafter Experiments VI. and VII.

(2.) Hence we learn alſo the phyſical reaſon why wines and vinegars require to be racked from their lees, in order to preſerve them ſound, or keep them from running into putrefaction, to which we find they are ſtrongly inclined, the tendency of nature being ever conſtant in urging them to that ſtate; and the caſe appears to be much the ſame in animal, and even in mineral ſubſtances, as we ſhall ſee hereafter.

(3.) This experiment, therefore, furniſhes us with a rule for preſerving vegetable liquors from the laſt ſtage of fermentation, that is, putrefaction, or corruption; viz. by firſt clarifying, and afterwards ſecuring and defending them from the open air, and too much heat. Thus, for example, we can preſerve the natural juices of quinces, oranges, lemons, plants, &c. ſound and uncorrupt, by firſt clearing them of their groſſer parts by the filter, or, in ſome caſes, by boiling and common ſtraining, then putting them up in common glaſſes, pouring oil on the top, and ſetting them in a cool place. In the ſame manner we find ſome of the more delicate and curious wines are long preſerved ſound and ſprightly: for, the groſſer feculencies being firſt removed, the oil poured on the top prevents the external air from entering, and, by keeping the glaſſes from the ſun, or day, too much heat does not come at them.

(4.) It is alſo remarkable, what a large quantity of ſolid earthy matter is naturally contained in all fermentable liquors. Thus, though a pellucid ſolution of the fineſt ſugar in water were expoſed to vinous fermentation, it ſoon grows turbid, throws an earthy ſkin to the top, and depoſits much terreſtrial matter at the bottom, in the form of lees. If the wine be now drawn off clear, and expoſed to acetous fermentation, here again it throws off much terreſtrial matter, both in the form of a ſkin at top, and lees at the bottom. Thirdly, If tranſparent vinegar be expoſed to putrefactive fermentation, here again it ſeparates a conſiderable quantity of earth, both at the bottom and top; which ſhews that the ſeparation of a groſs matter is eſſential to theſe ſeveral kinds of fermentation, and that a copious earth may lie concealed in fermentable juices and tranſparent fluids, 'till it finds an occaſion of manifeſting itſelf to the ſenſes.

(5.) The change wrought upon vegetable ſubjects by vinous and acetous fermentation, will appear by comparing MUST, or a bare ſolution of raiſins in water, with the wine and vinegar which the ſame MUST, or raiſins in water, afford, in vinification and acetification; and in this light they may be compared by the direct uſe of the ſenſes: but the internal and eſſential differences will better appear by a chemical analyſis, or diſtillation.

(6.) MUST, or a ſolution of raiſins and water only, which makes a kind of muſt, correſponding to the natural juice of the grape, is a ſweet, clammy, and ſomewhat odorous fluid, which, when committed to diſtillation, affords not the leaſt inflammable ſpirit; but, after having paſſed through the ſtate of vinous fermentation, it acquires ſeveral properties it had not before. For example: it is more tranſparent and thin, loſes of its ſweetneſs, has ſome degree of acidity and roughneſs, proves more odorous, and affords a large proportion of INFLAMMABLE SPIRIT; as appears by the following

EXPERIMENT IV.

That vinous fermentation produces an inflammable ſpirit.

Take three gallons of new wine, procured from raiſins and water, in the manner of the firſt experiment, and commit it to the alembic or ſtill; which being made to work gently, 'till the liquor that comes over being thrown upon the hot ſtill-head will no longer take fire, by applying the flame of a candle to the riſing vapour; you will thus obtain a conſiderable proportion of brandy, and a weaker ſpirit. See the article BRANDY.

OBSERVATIONS.

(1.) This experiment ſhews the common method of making brandies in wine countries, or a ſpirit, from malt, melaſſes, cyder, &c. in others; for the fineſt French and Rheniſh brandies, the rums and the arracs of the Indies, are obtained in the manner of this plain experiment, all of them being uſually diſtilled a ſecond time over, and made up, as they call it, with water, or the weak aqueous liquor of the ſecond running, as in the preſent experiment, to a certain ſtrength, or ſuppoſed ſtandard, termed ſaleable-proof.

(2.) The philoſophical uſe of the experiment is to ſhew, that an inflammable ſpirit is produced, by the action of vinous fermentation, from a vegetable ſubject and water, wherein no ſigns of any ſuch ſpirit before appeared: inſomuch, that this may be juſtly eſteemed the criterion, or inſeparable effect of vinous fermentation.

(3.) This ſpirit being rediſtilled, to deprive it totally of its aqueous parts, is the ſpirit of wine, or alcohol; and this method is the only one that is known of procuring it: for no ſubjects but thoſe of the vegetable kingdom are found to afford it, and that only by means of a previous vinous fermentation.

(4.) It ſhould likewiſe be obſerved, that this alcohol is one of the moſt eſſential parts of wine, ſo that, when abſent, the wine loſes its nature, as we ſee by the remains of the preſent experiment;

experiment: and, when properly uſed, it is a certain remedy for moſt diſeaſes incident to wines, as keeping them ſound, and free from corruption: whence we have another rule for preſerving vegetable and animal ſubſtances from putrefaction; for this liquor proves a kind of balſam to them all, and is accordingly uſed, with ſucceſs, for preſerving even animal ſubſtances, as we ſee in anatomical preparations, &c.

EXPERIMENT V.

That acetous fermentation aboliſhes the inflammable ſpirit produced by vinous fermentation.

Put a quart of ſharp vinegar into a glaſs retort; diſtil in a ſand-heat, with degrees of fire [ſee DISTILLATION] into a glaſs receiver, and you will not find the leaſt inflammable ſpirit come over; there will ariſe only an acid aqueous liquor, commonly called diſtilled vinegar, which, inſtead of burning, quenches fire.

OBSERVATIONS.

(1.) Hence it appears, that acetous fermentation has a very different effect from the vinous, and that the inflammable ſpirit produced in the former is either concealed, altered, exhaled, deſtroyed, or ſome way aboliſhed, in the latter. A part of this ſpirit is unqueſtionably exhaled by the heat employed in acetification, yet part alſo remains behind, under a different modification, ſo as to be recovered by art, in an inflammable form, as we find by diſtilling the ſugar of lead, which is only lead diſſolved in ſpirit of vinegar. See the article LEAD, Vol. II. page 23.

(2.) This experiment affords a criterion of acetous fermentation, as before we had of the vinous: for if an acid uninflammable liquor comes firſt by diſtillation over from a vegetable ſubject, after fermentation, this will determine that fermentation to have been of the acetous kind.

(3.) Thus, therefore, we are plainly led to allow of two very different kinds of fermentation, in the ſame vegetable ſubject; and we conceive that ſome other ſpecies may be found, upon due enquiry.

EXPERIMENT VI.

Take a large quantity of freſh and green cabbage leaves, preſs them hard down with weights in an open tub, bored full of holes on the ſides, and ſet in a warm place. By ſtanding in this ſtate for ſome days, the leaves will conceive a heat in the middle, which will ſpread to the more external parts, 'till, at length, nearly the whole will be converted into a pappy putrefied ſubſtance, whoſe conſiſtence will not well ſuffer it to ſeparate into a thicker and a thinner part.

OBSERVATIONS.

(1.) This experiment is general, and ſucceeds alike in all tender, juicy, vegetable ſubſtances, ſo that both the acid and alkaline tribe of plants, the ſweet and the bitter, the aſtringent and emollient, &c. reſolve into this ſame pappy putrefied ſubſtance: we obſerve it alſo in hay that is ſtacked wet, in horſe-litter thrown in heaps, in the grape-huſks, or apple-pumice, after preſſing for wine or cyder; and the larger the heap, and the greater the weight the matter it ſuſtains, the greater the heat, provided the acceſs of the air be not prevented.

(2.) Hence we ſee the way employed by nature for changing all vegetable into animal ſubſtances, or of reducing the matters of both kingdoms to a ſimilarity, ſo that the one may be uſed for ſeveral purpoſes, inſtead of the other. Thus nature annually makes large quantities of compoſt from the refuſe weeds, leaves, traſh of fields, woods, and gardens; [ſee the article MANURE] for this vegetable matter thus putrefying, and becoming ſoft and pulpy, is eaſily diluted by the falling rains, and thence diſperſed over the face of a field, and carried into the pores of the earth. Thus the chemiſt, from ſuch putrefied vegetable ſubjects, may, by diſtillation, procure volatile ſalts and volatile ſpirits, hardly to be diſtinguiſhed from thoſe of hart's-horn, &c. at leaſt, the volatile ſalt and ſpirit ſo obtained, might ſerve for the making of ſal-armoniac, along with ſea-ſalt: for it appears, that the matter of the fixed ſalt in vegetables is by this operation truly volatilized [ſee the article VEGETABLES]; whence not a grain of fixed ſalt can be procured from the largeſt quantity of this putrefied matter, provided the operation were compleatly performed.

(3.) This experiment has various uſes, not only in trades, but in Natural Philoſophy and Medicine. And firſt, it ſhews an artificial, as well as natural method of converting any, or all of the different ſubjects of the vegetable tribe into the ſame undiſtinguiſhable ſubſtance, thus totally deſtroying all the ſpecific differences which before diſcriminated that great variety. The ſame obſervation reaches alſo to animal bodies, as we ſhall ſee preſently.

(4.) The principle of fermentation leads to an extenſive enquiry into many things of nature, from whence important hints may be derived, for the advancement of uſeful philoſophy; wherefore ſince we are upon that ſubject, we ſhall here juſt take notice only of another experiment, as having an affinity with ſome things that we ſhall have occaſion to refer to, as being no way repugnant to the ſpirit of our ſubject, which is far more extenſive than many have been wont to imagine.

EXPERIMENT VII.

If any large animal body, as that of a horſe or a dog, for example, be expoſed, in a dead ſtate, to the open air and the ſummer's ſun, it, in a few days, begins to ſwell, purge, and emit a nauſeous ſtench: at length the form of the carcaſs is deſtroyed by the commotion, and reſolved into a putrid, fetid, ſtercoraceous matter, a large part, in the mean time, flying off into the air, ſo as to leave but a ſmall proportion of a mucilaginous pappy ſubſtance, which ſoon grows dry, or turns to a kind of earth. But if a quantity of this matter were to be collected before it grows dry, and diſtilled, it is ſaid to afford the burning phoſphorus, as putrefied urine, and many other things, are known to do.

OBSERVATIONS.

(1.) This experiment will be found univerſal, and holds equally in relation to all animal natures. And this putrefied animal matter appears to be in itſelf a kind of poiſon, infecting the air wherein it ſpreads, ſo as to occaſion peſtilential diſeaſes near the places where great battles have been fought: whence this ſeems to be another particular SPECIES of fermentation, and from whence, perhaps, may be derived many more uſeful diſcoveries into the works of nature, than ſeem yet ever to have been duly attended to.

(2.) Whence it ſhould ſeem that there is a proper ſpecies of fermentation peculiar to the animal ſubjects, as there is one peculiar to the vegetables; and if ſo, we ſhould not lay down vegetable fermentation as the teſt and ſtandard of fermentation in general, and judge of all other kinds according as they approach to, or recede from, this ſtandard. But, perhaps, were the enquiry into fermentation proſecuted in its full latitude, and not arbitrarily confined to any ſingle ſpecies, many natural and artificial operations would prove to be actual fermentations, and exhibit ſuch phænomena as few imagine.

EXPERIMENT VIII.

That there may be a kind of fermentation in mineral and metallic bodies.

Take an ounce of lead, and as much biſmuth, and melt them together in an iron ladle; then heating two ounces of quick-ſilver in another ladle, mix the three metallic matters together, as an amalgama; which, when cold, will appear perfectly uniform, or homogeneous, and totally paſs through the pores of leather, in a running form. This mixture being ſuffered to cool, and ſtand quiet for ſome hours, a groſs matter will ſeparate from it by degrees, and float upon the reſt, which will be left ſo thin and fluid, as to paſs through leather, and leave the groſs metallic matter behind.

OBSERVATIONS.

(1.) Hence it ſhould ſeem, that even metallic matters may have their peculiar fermentation, as well as vegetable and animal ſubjects: for, when this experiment comes to be carefully conſidered, it appears to have all the requiſites of fermentation. For here is, (1.) A fluid form. (2.) An uniform matter. (3.) An inteſtine motion; and, (4.) An actual ſeparation of a groſſer matter, leaving a thinner behind. All which particulars we have found to hold in the ſeveral ſpecies of fermentation above conſidered.

(3.) There are many more inſtances of an apparent fermentation in mineral bodies, one or two whereof it may be proper to mention. Thus, if an aqueous ſolution of the common green vitriol be, in ſummer-time, expoſed to the air, and kept ſupplied with freſh water, as the former exhales, the groſſer metallic part of the vitriol will ſubſide, and the reſt gradually ſhoot upwards all round the veſſel, in form of an unctuous cruſty matter, 'till the whole body of the vitriol is thus ſucceſſively altered; ſo as that the part ſhot into the cruſty unctuous form will never become vitriol again, nor corrode any freſh metal; and, in all other reſpects, it appears a different thing from vitriol. Hence ſeem to proceed the complaints of the makers of vitriol, that in rainy, windy, and cloudy weather, their vitriol ſtones, which lie open to the air, will not ſometimes yield a ſolid cryſtalline vitriol, but only an unctuous matter. This may, therefore, appear to be a fermentation in all its forms, as being attended with a ſpontaneous inteſtine motion, a ſpontaneous ſeparation of conſtituent parts, and a remarkable alteration of the ſubject.

It alſo makes to the preſent purpoſe, that ſolid and hard pyrites, [ſee PYRITES] or vitriol-ſtones, being expoſed to the air, and moiſtened with water, will, like a vegetable ſubject *, grow hot, fume, and even take fire, and afterwards afford vitriol, a thing very different from the ſtones themſelves [ſee VITRIOL]: ſo that, upon the whole, we may conclude, that, in a proper ſenſe, there is an actual fermentation exerciſed, not only in the vegetable and animal, but alſo in the mineral kingdom. From what has been obſerved, may be deduced the following principles:

* See above, Experiment VI.

1. All the inſtances being duly conſidered, and a large view of things taken in, we may define fermentation, in general, a ſenſible internal motion of the conſtituent particles of a moiſt, fluid, mixed, or compound body; by the continuance of which motion, theſe particles are gradually removed from their former ſituation, or combination, and, again, after ſome viſible ſeparation is made, joined together, in a different arrangement. And thus the whole proceſs of fermentation conſiſts of two different operations, viz. an analytical one, whereby the particles are reſolved, and a ſynthetical one, whereby they are new ranged and conjoined; and that, whenever theſe two different effects are found to be produced, in direct ſequence, with the circumſtances above deſcribed, we need not ſcruple to call the operation by the name of fermentation *.

* See Experiments I, and VI.

2. That all ſeparable, mixed, or compound bodies, may be the ſubjects of this general operation; but that the eaſier they are ſeparable by means of water, air, and heat, the more readily they ferment. Thus the ſweet or ſaccharine part of malt, more readily diſſolving in warm water, ferments eaſier than unmalted corn, which is more clammy, and will not diſſolve ſo ſoon. And hence the fleſh of animal bodies putrefies ſooner than the bones; and this appears to hold in all inſtances *.

* See Experiments I, VI, and VII.

3. That this general fermentation is diviſible into many diſtinct ſpecies, particularly into vegetable, animal, and mineral: the vegetable kind again into vinous, acetous, and putrefactive; the vinous again into mucilaginous, mouldy, and putrefactive; and ſo of the acetous, &c. Whence we may deduce a rule for adjuſting all the different ſpecies of fermentation; which being once done, might put an end to infinite hypothetical diſputes upon this ſubject, and lead to farther diſcoveries, both in nature and art.

4. That it is in the power of man to prevent, ſtop, and regulate theſe natural operations, at any point of time aſſigned. For it is thus we come by our wines and vinegars; it is thus that men have diſcovered the art of embalming; it is thus we preſerve many vegetable and animal juices in their natural or unfermented ſtate; it is thus we preſerve yeaſt and winelees, ſubjects extremely apt to putrefy; it is thus we can at any time ſtop the courſe of vinous fermentation, and produce a ſweet or half-fermented wine; [ſee the articles WINE and YEAST]; it is thus we cure the frettings or other diſeaſes of wines; and thus that we ſtop mortifications in the body, and caries in the bones: and moſt of the artifices employed for theſe purpoſes depend upon a knowledge and regulation of the phyſical cauſes and inſtruments that produce that change; which cauſes and inſtruments, as we have above diſcovered, are chiefly heat, moiſture, and the external air.

5. That a ſaccharine matter is the baſis of wines, vinegars, and inflammable ſpirits.

6. That a great variety of ſound, perfect, and wholeſome wines may be made, in countries that do not naturally afford grapes, by a prudent uſe of ſugar, or raiſins and water *.

* See Experiment I.

7. That the matters called ferments are of uſe in beginning, regulating, and determining the ſpecies of fermentation *. Thus freſh yeaſt determines the fermentation of wheat-flour, to make our common bread, which would prove of another kind, with the flowers or lees of vinegar: and thus ſpecific or determinate ferments have their correſpondent effects. If ſugar, honey, manna, treacle, or new wine, be added to vinegar, themſelves are ſoon changed into vinegar, without ſtopping to make wine, becauſe the acetous ferment, or vinegar, over-rules them. And ſo vinegar is ſooneſt made in a caſk that has before contained the ſame liquor. And if the beſt wine were put into a caſk that had held putrefied vinegar, the wine would not now make vinegar, but immediately run into corruption: ſo great over-ruling a power have ſpecific ferments; the uſe whereof is therefore evident, and may afford conſiderable rules in chemiſtry, practical philoſophy, and commercial arts.

* See Experiment I.

8. That the degrees of fermentation differ with the degrees of heat employed *. Thus we have ſeen that vinous fermentation requires a leſs degree of heat than the acetous, the acetous a leſs than the putrefactive, which latter may even conſiſt with a degree of ignition †.

* See Experiments I, II, III, IV, and VI.
† See Experiment VI.

9. That a particular kind of fermentation may be carried on in the living bodies of animals and vegetables, which are largely ſupplied with the requiſite inſtruments of fermentation, viz. water, air, and heat; and, in fact, both vegetables and animals appear to have an inteſtine motion in all their circulating fluids, which continually depoſit a groſſer matter in the canals and parts they move through. Whence, by our definition of fermentation, this natural act may be accounted a ſpecies of fermentation, producing a change in the nutrimental matter of vegetables and animals, and converting it into their own ſubſtance.

10. That when vegetables or animals die, there ſoon begins a different kind of fermentation in all their parts, tending not now to the repair, but to the intire deſtruction, of their organical veſſels, the confuſed mixture of their ſolid parts and juices, and a volatilization of their whole ſubſtance *.

* See Experiments V and VI.

11. That dry or ſolid bodies cannot, in that ſtate, undergo a proper fermentation: for though they may, in that ſtate, be ſeparated into minute particles, yet they cannot range themſelves together in any new order, nor depoſit a groſſer part, without being agitated by ſome fluid, or for ſome time ſuſpended therein. And hence, in over-heated mines, the ore is thus analytically deſtroyed, and cannot range itſelf into a metalline, or any other regular order again, for want of the requiſite moiſture or fluidity; whence the matter appears like a heap of rotten earth, or what the miners call dead metal *, of which we have a remarkable inſtance in the over-heated or fired mixture of ſulphur and iron filings.

* See Experiment VIII.

12. And that, in imitation of nature, by a thorough knowledge of the natural agents that produce theſe grand effects, art likewiſe may produce extraordinary changes in bodies.

RASBERRY, a well-known fruit, of a delicate flavour.

Of RASBERRY WINE.

For the method of making, ſee the article RAISINS.

Of the uſefulneſs of this wine.

Of all our made wines, thoſe of ſtrawberries and raſberries are moſt delicious to the taſte; they lightly and pleaſantly ſtimulate the nerves of the mouth and noſe with a moſt agreeable ſmell and taſte, which proceeds from a mixture of their eſſential ſalt and fine oil, for the principles of both thoſe berries are very near the ſame, only raſberries contain more fine oil, and the other more phlegm; therefore we ſhall briefly conſider their qualities promiſcuouſly.

Theſe wines are very proper and reviving in ſyncopes, faintings, or ſwoonings, becauſe they gently and pleaſantly tickle the nerves; their mature and attenuated oil, and eſſential ſalt, being by fermentation reduced to a ſubtile ſpirit, pierce the interſtices of the veſſels, raiſe the ſpirits, afford ſpeedy ſupply of ſome nervous juice, which invigorates their ſprings. In ſcorbutic diſorders, the uſe of theſe purify and ſweeten the blood, dilute or obtund its ſalts, give the fibres a better tenſion to promote a due mixture of the juices.

In nephritic pains, they ſweetly ſtimulate the ſecretory ducts of the renal glands, lightly prick the membranes of the ſmall renal baſons, whereby they being excited and invigorated, ſhake off their ſtagnating, attracting, and cohering load, and free the parts from pain; the phlegm of the wine, at the ſame time, has no ſmall ſhare in diluting and attenuating the ſlime or ſand in the kidneys.

In rawneſs, weakneſs, and indigeſtion of the ſtomach, the agreeable titillation of theſe wines gives its coats a better tenſion, elevates their ſpring, and fortifies it. Their ſlight aſtringency, together with their ſweetly warming ſpirit, make them proper in looſeneſſes, and too great diſcharge of the menſes. They are more cooling and moiſtening than other wine, therefore are they preferable in thirſt. As they are cordial and cooling, they and water mixed make a good reviving draught in ardent fevers; as they cool and moiſten, they are very proper for warm weather, young people, bilious conſtitutions, in too ſharp a ſtate of the blood, or where the animal juices are too much agitated. They have no bad effects, except they be drank to exceſs, which is rarely the caſe in drinking of made wines; but here we would be underſtood as ſpeaking only of ſmall wines of this ſort.

RATEEN, or RATTEN, in commerce, a thick woollen ſtuff, quilled, wove on a loom with four treddles like ſerges and other ſtuffs that have the whale or quilling.—There are ſome prepared like cloths, others left ſimply in the hair, and others where the hair or nap is friſed.

REFINING, the art of purifying a thing, or of rendering it finer and purer.

Refining is chiefly applied in ſpeaking to the art of rendering the more precious metals ſo pure, as to anſwer the purpoſes of traffic and gain made by the refiner. — In relation to the refining metals, we ſhall ſpeak firſt to that of gold. — See the articles GOLD and ASSAY, METALS and METALLURGY, MINERALOGY and ORES.

The refining of gold is chiefly performed three ways; either with antimony [ſee the article ANTIMONY, Vol. I.] with ſublimate [ſee the article MERCURY] or with aqua fortis [ſee the article AQUA FORTIS].

Refining of gold with antimony—To this intent they uſe a wind-furnace, and crucibles of ſizes ſuitable to the quantity

of gold to be refined, obſerving that the gold and antimony together do not above half fill it, when in fuſion.

The gold being melted, the antimony in powder is then gradually thrown in. The proportion of the antimony to gold, is about a pound to eight ounces, if the gold be between 22 and 16 carats fine: if it be under 16 carats fine [ſee CARAT], they uſe about a pound and a quarter to eight ounces of gold of ſuch a degree of fineneſs: the coarſer the gold, the greater the quantity of antimony is requiſite. See ANTIMONY.

So ſoon as the antimony and gold are in the crucible, the crucible is covered with an earthen cover that will ſtand the fire without cracking.—Then the furnace is properly charged with charcoal, and the matter continues in fuſion 'till the crucible is left quite bare: then the cover being taken off, and the crucible left to cool in the furnace, it is taken out and broke to get out the calot, which is a maſs of fine gold remaining at the bottom, with the fæces of the antimony, the ſilver and copper alloy, and ſometimes ſmall particles of gold over it.

Though the gold thus prepared, by a due degree and continuance of fuſion be very fine, yet it is brittle or eager, as workmen term it; and its perfect toughneſs and malleability muſt be reſtored by fuſion, with ſaltpetre and borax. See SALTPETRE and BORAX.

For this operation, the refiner prepares coppels or teſts, made of the earth of crucibles that have long ſuſtained the fire, ground to a powder, and made up for the purpoſe; for theſe will not imbibe ſo much as thoſe made of fern and bone-aſhes mixed, which are uſed by ſome.

Such teſts being ſufficiently nealed, as the workmen call it, in the refining-furnace, they put the brittle gold therein, and cover it with charcoal.—As ſoon as the gold is in fuſion, as it will ſoon be by means of the adheſive antimony, they blow it with bellows to evaporate the antimony, in the manner they do for the refinement of lead for its ſilver. [See the article LEAD.] After which they add a competent quantity of ſaltpetre and borax in powder, which imbibe the remaining impurities, and fix the gold on the teſt: and, to render it quite pure, it is melted afreſh in a crucible, with an addition of ſaltpetre and borax; and as ſoon as it ceaſes to fume, the maſs is caſt into ingots, which upon trial is found to be above 23 carats fine gold. See GOLD.

As to the particles of gold, which may have been left behind with the alloy in the fæces of the antimony, they diſentangle and purify them, with the ſame meltings and ingredients as have been uſed in the former operations.—And when they are aſſured by the aſſay [ſee ASSAY] of the ſhare of gold that matter contains, they refine it to ſeparate the copper, and afterwards make the depart.

With regard to the gold that may adhere to the coppels, teſts, or crucibles, wherein it has been melted, it is got out by pulverizing them and waſhing them in the manner as they manage their ſweeps, which is as follows.

To make one of theſe waſhes, the refiners not only pound at proper times their coppels, teſts, and pots, but alſo collect together the aſhes of their furnaces, the ſweepings of their workhouſes, and the very bricks whereof their furnaces are built, little particles of gold, &c. being found to ſtick to them, by the crackling natural to thoſe metals, when in their laſt degree of fuſion and purification.

Theſe matters being well ground and mixed together, are put in large wooden bowls, wherein they are ſeveral times waſhed, and in ſeveral waters, which run off by inclination into troughs underneath, carrying with them the earths, and the inſenſible particles of the metals, leaving only behind the larger and more conſiderable ones, which are viſible to the eye, and taken out with the hand without much trouble.

To get out the finer particles gone off with the earth, they uſe quickſilver and a waſhing-mill. The mill conſiſts of a large wooden trough, at bottom of which are two metalline parts, ſerving as grind-ſtones; the lower being convex, and the upper, which is in form of a croſs, concave.

At top is a winch, placed horizontally, which turns the upper piece round; and at bottom a bung, to let out the water and earth, when ſufficiently ground. To have a general waſh, the tub is filled with common water; into which they caſt 30 or 40 pounds of quickſilver, and two or three gallons of the matter remaining from the lotion.—Then turning the winch, they give motion to the upper grind-ſtone; which grinding the matter and the quickſilver violently together, the particles of gold and ſilver become the more eaſily amalgamated therewith: this work they continue ſome hours, when opening the bung, the water and earth run out, and a freſh quantity is put in. See the article AMALGAMATION.

The earths are uſually thus paſſed through the mill three times, and the ſame quantity of mercury uſually ſerves all the three times.—When there is nothing left in the mill but the mercury, united with the gold or ſilver which it has amalgamated, they take it out, and waſhing it in divers waters, they put it in a ticken-bag, and lay it in a preſs to ſqueeze out the water and the looſe quickſilver: the remaining quickſilver they evaporate by fire, in a retort or an alembic. The metal which remains is refined with lead, or parted with aqua fortis.

Of the REFINING of GOLD by aqua regia. [See the article AQUA REGIA.]

Ercher, from conſidering that aqua regia does not diſſolve ſilver, is of opinion that gold may be refined to the greateſt perfection, by being diſſolved in that menſtruum. What led him to be of this opinion, was doubtleſs the common perſuaſion, that all the kinds of aqua fortis, howſoever prepared, did ſtill leave ſome ſilver along with the gold; as antimony on the other hand, when uſed in the refining of gold, commonly ſteals away, as is ſuppoſed, a ſmall quantity thereof. And as ſomething of moment ſeems to be concealed in this affair, it deſerves to be carefully examined.

The leading or fundamental queſtions of the enquiry are theſe. (1.) Does the aqua fortis in reality leave any ſilver yet mixed with the gold? (2.) Would it not prove too expenſive, thus to refine gold with aqua regia? (3.) In what ſenſe can antimony be ſaid to ſteal away gold?

The firſt queſtion is reſolved in the affirmative, by Faſchius *, in treating of the ſediment of depart waters; where he ſays, that if gold by quartation be mixed with ſilver [ſee the article QUARTATION], and again ſeparated from it by aqua fortis, it will conſtantly be found to have increaſed its weight. Which increaſe he attributes to the ſilver adhering to the gold: but it ſtill remains for experiment to decide, whether this additional weight be truly owing to the ſilver, or whether it be an increaſe of real gold †.

* See Probier Buchlein, page 64. Ed. 1678.

† It is an old tradition, that the red colour which ſpirit of nitre manifeſts in its diſtillation, proceeds from the ſulphur of nitre; and Becher endeavours to exhibit this ſulphureous ſubſtance to the eye (a), where he treats of the ſoul of nitre. And this ſubſtance Becher ſtill further attempts to render profitable, and to demonſtrate its metallic increment; where he recommends the digeſtion of a ſolution of ſilver, made with ſpirit of nitre, from whence a ſmall portion of the contained ſilver will daily be depoſited, in form of a black calx, or almoſt golden ſubſtance (b). But as a particularly prepared ſpirit of nitre is required for this purpoſe, and alſo a particular purification thereof, it is proper to conſult the ſeveral places of the author, where theſe things are mentioned (c), and what Faſchius ſays in his Treatiſe of Aſſaying.

(a) Phyſic. Subterr. lib. V. cap. 2. §. 118, 119, &c.
(b) See Miner. Arenar. page 877.
(c) See Concord. Chem. page 418, 723, 726, 736, 737, 739, 741.

With regard to the ſecond queſtion, it is to be obſerved, that ſuch a method of refining gold by aqua regia, is ſcarce practicable in the larger work, on account of the great charge that would attend it. Nor is ſo rigorous a proof of gold at any time required, as not to admit of the leaſt particle of ſilver. But in the ſmall work, or the buſineſs of aſſaying, it cannot be admitted for two reaſons, viz. (1.) Becauſe ſo much of the gold is eaſily diſſipated by the aqua regia, or ſo much of the ſubſtance of this menſtruum remains fixed to the calx, even after ignition, as may cauſe errors in both caſes. (2.) Becauſe aqua regia, on account of the great ſharpneſs and violence wherewith it groſsly diſſolves the gold, at the ſame time tears away more particles of the ſilver, than the aqua fortis leaves among the gold. A proper experiment or proof, might, however, after this manner, be made with great care, in order to determine whether the above-mentioned increaſe of weight proceeds from the aqua fortis, or not.

The ſolution of the third queſtion is principally to be derived from an examination of the ſuſed antimony upon its cooling, becauſe it is eaſy for antimony, in its frothy ebullition, to tear away a few grains of the ſubſtance of the gold, whilſt detained in thin fuſion, and lodge them in the form of bubbles.

REFINING of GOLD by means of ſublimate.

The proceſs is begun like that with antimony, i. e. in the ſame furnace, with the ſame coal, the ſame fire, and the ſame crucibles.—The gold being melted, they caſt in the ſublimate unpulverized, and only broken in pieces.—To 8 ounces of gold to be refined, they put from an ounce to two ounces if the gold be 22 carats, 3 ounces if 20 carats, and 4 or 6 ounces if it be only 18 or 20 carats fine. In which latter caſe, they part the ſublimate into two, putting half at a time with the gold into a new crucible, which, when the operation is over, leaves the gold from 18 to 23 carats, according to its fineneſs before.—After this, they raiſe it farther by the fire, as follows:

The broken ſublimate being put into the crucible with the melted gold, the crucible is immediately covered up, to ſmother the mineral: which done, the furnace is filled with charcoal, and the head put on.—A quarter of an hour afterwards they take off the head, lay the crucible bare, and blow off all the aſhes, and other impurities that may be floating on the liquid gold, with a pair of bellows, whoſe nozzle is crooked.

This

This they repeat again and again, 'till all the impurities of the gold being carried off, by virtue of the ſublimate, it be found of a bright glittering colour: after which, the gold is caſt from the crucible into an ingot.

The method of refining by ſublimate, is both more complete, and indeed cheaper than that by antimony or aqua regia; but theyare all dangerous, by reaſon of their ſulphureous and arſenical exhalations.

Refining of Silver.

There are two ways of refining ſilver, the one with lead, the other with ſaltpetre. The beſt and cheapeſt is that with lead; but both the one and the other of theſe methods are tedious and troubleſome, when performed on large quantities. This occaſioned M. Homberg to endeavour to ſhorten the operation, which he effected with good ſucceſs.—His method is, to calcine the ſilver with half its weight of common ſulphur, and after melting the whole together, to caſt a quantity of ſteel filings upon it at ſeveral times: upon this the ſulphur quits the ſilver, and joins itſelf to the iron, and both are converted into ſcoria, which ſwim on the ſilver, and the metal itſelf is found pure at the bottom of the crucible.

The aſſay of ſilver is alſo made by the coppel or ſmall teſt, in the ſame manner as in the refining by lead. See Lead.

When gold and ſilver are mixed together, ſee the article Quartation for their ſeparation and refining.

Aqua fortis, or the ſpirit of nitre, is the menſtruum for ſilver. See Aqua Fortis and Silver.

EXAMPLE.

Take two drachms, we'll ſuppoſe of the fineſt ſilver reduced into filings, and pour upon it twice its weight of proof aqua fortis, then ſet the containing glaſs in a ſoft heat under a chimney, 'till the ſolution is perfectly made.

Note, the aqua fortis for the ſolution of ſilver ſhould be made proof, that is, it ſhould be capable of diſſolving half a grain, or a grain of ſilver immediately, without growing in the leaſt turbid; as it would do, if it contained any ſea-ſalt, in which caſe it is a kind of aqua regia. See thoſe articles.

Refining with ſaltpetre is performed in a wind furnace.—The ſilver to be refined being granulated into the ſize of peaſe, by pouring it, when melted, in a circular motion, pretty briſkly, into a tub of common water, and it is heated over again in a boiler.—After this they put it in a crucible, and along with it, to every eight ounces of metal, two of ſaltpetre.—The crucible being now covered with a lid of earth that will ſtand the fire, in the form of a dome, well luted, which lid muſt have an aperture in the middle.—The crucible being ſecurely placed in the furnace, and covered with charcoal, the operator gradually gives the matter the full force of fire, in order to put the metal into a ſtate of fuſion. This is ſucceſſively repeated, at the interval of about a quarter of an hour.—After the third fire, the furnace is uncovered, and the crucible cools; at length it is broke to get out the ſilver, which is found collected to the bottom, and proves with ſkilful management to be fine ſilver; and the top is mixed with the fæces of the ſaltpetre and the alloy of the ſilver, and generally with particles of fine ſilver.

The bottom being ſeparated from the impurities, is melted in a crucible, and into the diſſolution is thrown charcoal-duſt, and the whole briſkly worked together. Then the crucible being covered again, and the furnace charged with coal, a ſecond fire is given it.—This done, the impurities are blown from the top of the metal, 'till it appear as clear as a looking-glaſs, and then about an ounce of borax in pieces is gradually thrown upon it.—Laſtly, the crucible being covered up again, they give it the laſt fire; after which it is caſt into ingots, which are found with dexterous management, 11 penny-weights and about 16 grains fine.—To recover the ſilver that may be left in the ſcoria, they give the ſame repeated lotion in freſh water, as we have deſcribed before, in relation to the refining of gold.

OBSERVATION.

If the ſilver, employed in the ſolution with aqua fortis, as before deſcribed, were abſolutely pure, the liquor will be pellucid: but if any alloy or copper remain mixed therewith, the ſolution will have a bluiſh or greeniſh caſt. If a ſolution of perfectly pure ſilver be diluted with fair water, it will ſtill remain pellucid, without letting any thing precipitate. But if any ſaline matter be contained in the water, the whole will now turn thick or milky.

The ſolution of fine ſilver has an intolerable bitter taſte, though by the eye it be not diſtinguiſhable from fair water. Whence we have an eminent inſtance how metals may lie concealed from the ſight, or remain lodged in unſuſpected liquors, and thence be introduced inviſibly into other ſubſtances. Whence the greater caution is to be uſed, with all pretenders to the melioration and tranſmutation of metals.

This ſolution of ſilver is the foundation of ſeveral medicinal and chemical preparations, as the vitriol of ſilver, the lunar cauſtic, the ſilver pill, &c.

The ſilver is recoverable from this ſolution, barely by ſuſpending copper-plates therein: for copper being more eaſily diſſolved by aqua fortis than ſilver, the ſilver is therefore precipitated to the bottom, in the form of a powder; and being waſhed and melted, comes into a metalline lump again. And this alſo is to be underſtood of the ſolution of gold.

The methods of obtaining ſilver in purity are various, and differ according to the metal wherewith the ſilver is mixed or allayed. If copper be the allay, the beſt and cheapeſt way to purify the ſilver is, to calcine it with half its weight of common ſulphur, according to the method before preſcribed by M. Homberg.

Thus much for the refining of the ſuperior metals, which is the buſineſs of him who is called the Refiner.

Refining of copper is performed by repeated fuſions, with well-adapted fluxes. See the articles Copper and Flux.

Refining of tin is managed much after the ſame manner as that of copper. See Tin.

Refining of iron begins likewiſe with the fuſion of it into caſt iron from the ore. See Iron.

Steel is only iron refined to a greater degree by heating it, with ſome other ingredients, which cloſe up the pores and ſoften its grain.

Refining of lead. See Lead.

Refining of ſugar. See Sugar.

Refining of ſaltpetre. See Saltpetre.

REGISTER Ships of Spain.

Of the regiſter or entries, loading and delivery of the flota's, and ſhips trading to the Weſt-Indies, and of goods run and ſeizures, in relation to the commerce of Spain.

(1.) As it was requiſite for the ſupport of navigation, according to the Spaniſh polity, that there ſhould be builders of ſhips, and others to take the dimenſions, and gauge them to know their content, either to man them for war, or load them for merchants; and as it was convenient to preſcribe rules for the freight, and to know the bulk of the commodities, ſo it is neceſſary, that the loading may be according to the laws and ordinances, that there be regiſters or entries, with reſpect to theſe particulars. The law of Spain gives this definition of the regiſter, that it is a written memorandum of what paſſes every year; but as to what concerns this book, it is ſo to be underſtood, that the regiſter or entry is a memorial of what is put aboard every fleet, as ſhall be made out. Theſe regiſters, or entries, are carefully preſerved in the office of the contador or comptroller of the India-Houſe [ſee India-House of Spain]; and it is to be obſerved, that every particular man's entry goes under the ſame name, as well as the total that is made of all the goods aboard a ſhip.

(2.) There are two ſorts of regiſters or entries uſed in the trade to the Spaniſh Indies; the one is of all that is carried out of Spain to thoſe provinces and iſlands; the other of all the ſilver, gold, pearls, emeralds, and other commodities, brought from thence. The difference between them is, that thoſe brought from the Indies are authentic copies, of the original inſtruments made there by the maſters of plate, or of ſhips, before the proper notaries, ſpecifying the commodity, quantity, quality, and freight it is to pay, and perſon or perſons to whom to be delivered. But thoſe made at Seville and at Cadiz, when part of the fleet is loaded there, are plain notes, though upon ſealed paper, the content of them being to this effect, That N. made entry that he has put aboard ſuch a ſhip, which is one of ſuch a fleet, commanded by admiral O. whereof P. is maſter, the commodities hereafter ſpecified, naming to whom they are conſigned, where they are to be delivered, upon whoſe account and hazard they go. After this preamble, he underwrites the number of bales, cheſts, or any other ſort of parcel, and places alſo their marks in the margin, and having paid the duty for convoys, cuſtom, and other taxes, payable at the cuſtom-houſe, he delivers in this paper to the proper officer of the contador or comptroller of the India-Houſe, without being ſigned by him that delivers it, or the maſter or owner of the ſhip, or any other perſon whatſoever, but only the officers that received the duty; ſo that it appears, this inſtrument was rather contrived to ſecure the payment of the duties, than for any advantage of the parties concerned; for beſides theſe the maſters ſign bills of lading, upon ſight whereof they are to deliver the goods to the ports they are conſigned for; but, though there were none of theſe bills of lading, the regiſters or entries ought to be a ſufficient authority to demand of the maſters the goods therein contained; for it being requiſite for the getting of cockets in the India-Houſe, that the maſter gives a note under his hand, to anſwer that thoſe commodities he gives the ſame for, ſhall be duly entered, the entries being compared, when made, with thoſe notes, and then tacked to the reſt that belong to the ſhip; this certifies that the maſter had ſigned bills of lading [ſee Bills of Lading]; and all the entries together have the authority of the preſident and commiſſioners, to the end that there ſhould be no doubt but they are legal inſtruments, to oblige the maſters to deliver what they carry, and the factors to pay the freight. See the article Factor.

Of theſe two ſorts of regiſters, one only is in being at preſent, which are thoſe of all that is ſent from Spain to the Indies, but what is brought from thence is free from this incumbrance ever ſince the year 1660: it is neceſſary, however, to ſhew what the practice was, in order to compare it with the other.

The Spaniſh law directs, that all goods ſhipped for the Indies be entered in the India-Houſe, upon forfeiture of the goods, the third part to the informer, and the reſt to the king: the ſame was in practice as to all commodities brought from the Indies.

It being ſo difficult a matter to prove the frauds committed in bringing gold or ſilver that is not entered, or carrying it out of the kingdom, it was therefore ordered, that witneſſes of 14 years of age ſhould be allowed of in this caſe, and the tranſgreſſors to enjoy no privilege they might be entitled to. Afterwards it was added, that the informations of perſons in public employments, that deſerve to be credited, ſhould be ſufficient evidence for the judges upon ſuch trial to convict the perſons accuſed, and ſubject them to the ordinary or extraordinary penalties, according to the evidence and circumſtances relating thereto.

The captain or other officer that brought over any commodity not entered, was to loſe his employment for four years, and if it were any mean perſon that brought goods concealed, to be condemned to the gallies for four years. The owner of commodities not entered forfeited them, and his own goods; if a mean perſon, he was condemned to the gallies for ten years, and if of any quality, baniſhed the Indies, and excluded that trade for ever. Officers and commanders that are concerned therein forfeit their employments; but he that informs, if he be the owner, to be free; if any other, beſides impunity, to be intitled to one third part of the value. The maſter, mate, boatſwain, or purſer, that brings any thing unregiſtered, to be ſent to the gallies for ten years, forfeit all goods, and be excluded for ever ſailing to the Indies; but this is not to be underſtood of ſuch commodities as may ſerve for ballaſt, and lie in the bottom of the hold, which may be put on board with leave from the admiral, vice-admiral, chief pilot, and maſter, all together.

As for the form of making the entries, it is ordered, that the bulk be ſpecified, whether it be bale, cheſt, or any other parcel, as alſo the cuſtom it paid proportionably to the ſaid bulk. Nor may the entry be made at St Lucar, or any other place but at Seville, upon forfeiture of the goods. Gold and ſilver, and all other commodities, are forbid to be entered under any name but the right owners, upon penalty of forfeiting the whole, and four times its value, and being looked upon as a robber of the public. It was alſo ordained, that the merchants, before the general regiſter or entry was made, ſhould give in particulars of their loading to the comptroller, time enough for them to go aboard the fleets, upon forfeiture of the goods; theſe particulars to be ſigned, ſpecifying the ſhip, and to whom the goods are conſigned, and that the comptroller receive and place them to the general entry. That regiſters or entries be perfect and correct, the comptroller of the India-Houſe [ſee INDIA-HOUSE of SPAIN], or ſuch perſon as ſhall have the care of the books of licences for loading at Seville or Cadiz, ſhall caſt up with every merchant what that entry makes, and deliver a copy to the commiſſioners, to be ſent to the Indies, for the officers there to ſee whether the cargo and entry agree. It was enacted alſo, that the admirals ſhould have copies given them of the regiſters, or entries, to the end they might ſeize all goods they found not mentioned in them, which they were to deliver as forfeited, without diſpoſing thereof, to the king's officers at the port they went to, and to charge them with it, and bring certificates that they had ſo done. But this has been out of uſe, it not being practicable for the admiral to ſearch into the hold, and examine what goods were entered, what not. So that now the entries are ſent ſealed, and there is only a copy of the laſt viſit, or ſearch open, for the admiral to compare when he makes his at ſea. Several laws direct, that only the king's officers break open the regiſters or entries, with a prohibition to the governors, admirals, veedores [i. e. overſeer, inſpector, or comptroller] maſters of ſhips, or the court of Panama.

The regiſters or entries of gold, ſilver, or other commodities, were to be made in the ports they came from, and if any were taken not entered, though going but to Callao, to Panama, or from Nombre de Dios to New Spain, it was all forfeited; but afterwards, all that was declared forfeited which was not entered before it came to the Havannah. All the entries of ſhips coming from the Indies, are to be made before the king's officers, and the eſcrivano or notary, whoſe buſineſs it is; and they are charged to be very particular in mentioning the ſeveral commodities and their ſpecies, particularly in cocheneal [ſee COCHENEAL], the value ſet upon that of Meſteca being 41,250 marvadees [ſee the article SPAIN], that of Flaſcala 37,500, and the wild at 8000; and if any that was fine came as wild, it ſhould be forfeited. Every ſhip was ordered to bring two regiſters or entries, that is, its own, and that of another ſhip, to prevent the confuſion that happened when any ſhip was caſt away, or taken by pirates, that the owners might upon theſe regiſters, either come upon the inſurers [ſee the article ASSURANCE], or if any part was ſaved, know whoſe it was, yet this ordinance has not been executed. The regiſters or entries of maſters of plate, are brought into a cheſt with three locks, the admiral to keep one key, the veedor another, and the maſter the third, to prevent falſification.

The kings of Spain have at all times been pretty favourable to their ſubjects in diſpenſing with the rigour of the laws in theſe caſes, forgiving the forfeiture of goods, which for want of being duly entered, were already his Majeſty's right, upon the owners making the diſcovery themſelves; and ſeveral times ſeizures already made have been reſtored, only laying a ſmall mulct on the owners. In 1560, there was a general pardon for all that was brought that year in the fleet not entered, provided the owners came in and declared it, and for all that came before, though it had been ſent to foreign nations, provided it were brought back within the term of four months; but for the future, it was made death and forfeiture of goods, to carry gold, plate, pearls, or precious ſtones, out of the kingdom, or bring them unregiſtered. Yet for ſeveral years after, there were ſtill freſh orders to ſuſpend the rigour of the law, upon the owners diſcovering their goods, 'till in 1618, this repeated goodneſs not availing, it was ordained, that the laws ſhould be ſeverely put in execution; notwithſtanding which, mercy was ſtill exerciſed towards delinquents, either receiving the owner's declarations, or taking off all by indulto's. See the article INDULTO.

To inſtance in the caſe of goods run and ſeizures made, king Philip II. ordered a conſiderable parcel of cocheneal and hides to be reſtored to the owners, upon paying a fourth part over and above the uſual duties, and the ſame in another ſeizure of plate, he being uſed to ſay, That thoſe perſons who had goods ſeized, muſt be treated like robbers of their own. King Philip III. ordered 176 bars of ſilver ſeized, to be reſtored, the owner paying 16,000 pieces of eight penalty above the duty; but for 2578 marks brought over, which had not paid his fifth in the Indies, that he directed to be confiſcated. Another time a ſeizure of 400,000 ducats of plate being made, he ordered the one half to be reſtored, and the other to be forfeited. In 1563, the ſollicitor of the India-Houſe ſearched a boat, in which was the admiral Peter Menendez his equipage, and took out three bars he brought not entered, for which the ſaid admiral was brought priſoner from Madrid to the India-Houſe. In 1585, 519 pipes of wine, beſides a great number of jars of wine, oil, and olives, were taken from aboard the admiral and vice-admiral of the New-Spain fleet. The ſame has been done upon other occaſions. Whoſoever makes the ſeizure of India goods, it belongs to the commiſſioners of the India-Houſe to take cognizance of the matter, and condemn them. In 1648, it was ordered, That when the officers of the India-Houſe made a ſeizure, they ſhould not be obliged to carry it to the India-Houſe, but to ſuch ſtorehouſe as they think fit, paying the cuſtom; and that thoſe made by the officers of the cuſtom-houſe pay the duty for convoys. Hereupon there was an officer created to take care that nothing be exported without paying the ſaid duty, and to take bond of merchants that they will make entry, and pay the ſaid duty.

9. There are ſeveral laws concerning the diſpoſal of ſeizures, one, that they be ſold by public outcry for their full value, which is to be paid in to the king: that the owners be not entruſted with the cuſtody of ſuch goods: that the king's officers be obliged to proſecute in caſe the informers ſhould not: that two-thirds of the forfeiture go to the king, the other between the judge and the informer: that the king's duties be firſt deducted out of ſeizures, before the informer's part: that the king's officers in the Indies acquaint the governors with what ſuits there are depending about ſeizures: that all the ports of the Indies follow the ſame rule that is obſerved at Carthagena: that the ſeizure be not put into the owners hands, though it be upon ſecurity: that the produce of ſeizures in the Indies be put into the hands of the king's officers, and not of treaſurers or truſtees: that when information is made of things of great value, and only notice of them given, the informer's ſhare be retrenched, and what is cut off added to the revenue: that the courts of the Indies do not aſſume to themſelves the deciſion of cauſes depending before the king's officers: that in trials of ſeizures of ſlaves, or other goods made in the ports of the Indies, the governor and king's officers, act jointly, and not apart, though it be upon pretence of having been firſt in the ſeizure; and that the part of the fine the law allows the judges, be equally divided among them all, upon penalty of forfeiting their employments, and being ſubject to other fines, beſides the profit of what they have defrauded.

10. Beſides, in the common ordinances of the India-Houſe, it is expreſſed, That any gold or ſilver wrought, or in bars or ingots, brought from the Indies, that has not the king's mark, be forfeited, and the bringer fined four times the value to the king, the third part to be given to the informer, and that the offender be baniſhed the kingdom for ever. But as for jewels, pearls, or precious ſtones, which cannot be marked,

marked, that he be obliged to bring a certificate from the officers in the Indies, that he entered and paid the fifth, ſpecifying what they were valued at, their ſhape, weight, and marks. Another ordinance directs, That no ſlaves, men or women, be carried over to the Indies, without the king's licence exhibited before the commiſſioners, upon pain of forfeiting ſuch ſlave to the king; and if the ſlave be of the coaſt of Barbary, or of the race of Moors, Jews, or Mulattoes, that he be brought back into Spain, at his expence who carried him over; and he that carries a ſlave of Mooriſh race, be fined 1000 pieces of eight of gold, to be equally divided between the king, the judge, and the informer; or if he be a mean perſon, to receive 100 laſhes. If the commiſſioners of the India Houſe, in the execution of their office, diſcover what is not entered, the fifth part of the forfeiture ſhall be their own. Of what is put aboard after the regiſter, or general entry is ſealed, three fourth parts are for the king, the other for the informer, or if there be none, for the viſitor; or if the commiſſioner of the India-Houſe find it, there is no doubt but the fourth part belongs to him.

11. The laſt order concerning the diſpoſal of ſeizures directs, that the third part be laid aſide for the informer, and the third part of that deducted for the judge, before whom the information is given, ſo he be no commiſſioner or judge of the India-Houſe; the ſame to be done as to the private informers, giving them their due without expoſing their names, or making any further delay than ſecuring the effects. But this does not cut off the commiſſioners of the India-Houſe from their fourth or fifth parts, in the caſes before-mentioned.

12. Paſſengers are alſo to be regiſtered, and their ages and marks ſet down, but they may be admitted after the regiſter or entry of the merchandize is ſealed. If the admiral take up any money of the maſter of plate, his bill ſhall ſtand good to make up the ſum entered upon the regiſter. The commiſſioners of the India-Houſe are directed to diſcharge the king's plate that is upon the regiſters, as private perſons do theirs. The regiſters in the Indies for ſhips that go from the Canaries, or carry ſlaves, are to mention how many they carried, and to certify their being viſited: and if the ſhip be ſold there, he that buys it is obliged to bring back the ſame regiſter the ſhip carried, and the king's officers to ſend a memorandum apart of the men, and an account who it was ſold to. The gold and ſilver ſent to Spain from the South Sea, is to be twice regiſtered, once in that ſea, and the other time at Porto bello, or elſe it is forfeited; and all that is ſent from port to port in the Indies, either in the North or South Sea, is to be regiſtered under the ſame penalty. Among the laws concerning regiſters, there is one that declares ſhips or merchandize, coming to the Indies by the way of Guinea, forfeited. Any goods entered upon the regiſter, though they cannot be found, are to pay the duties, unleſs it be made appear they were thrown overboard in ſtreſs of weather, and of things broken or damaged, only the cuſtom is to be received proportionably to their value, when they come to the ports in the Indies; and of ſuch goods as are carried from St Domingo to other ports, the remaining part of the cuſtom is to be received, which is due in the place they go to, more than is paid at St Domingo.

13. All that remains concerning this ſubject, is of the loading and unloading of ſhips, that nothing be landed without leave, and that all be carried to the cuſtom, or India-Houſe; but this, as has been ſaid, is taken off all things brought from the Indies by the indulto. That no goods be landed in the river Chagre but only at Panama. One of the king's officers at Panama is to receive the Firmland fleet at Portobello. If the New Spain fleet happens to touch at Ocoa, a port in the iſland of Hiſpaniola, one of the king's officers is immediately to repair thither. The ſhips that put into the river of Tabaſco, are forbid landing their goods on its banks, but they are all to be carried from the veſſel directly to the warehouſes. It is a general rule, that the ſhips which are to return to Spain, be unloaded before thoſe that are to remain in the Indies, and the king's officers are commanded to aſſiſt in lading the gold and ſilver aboard the armada's and flota's. To conclude, All that comes from the Indies, conſigned to private perſons, is to be delivered immediately to the owner, he putting his hand to the regiſter; or elſe one of the commiſſioners of the India-Houſe, in the preſence of one of the eſcrivano's or notaries of the ſaid India-Houſe; and if it were requiſite for delivery of any parcel, that the party concerned ſhould give ſecurity, he being a ſtranger in Seville, ſuch as he ſhould give in his own country, with the approbation of the magiſtrates ſhould be admitted, becauſe giving it at Seville, they uſed to leave that money in the ſureties hands, or ſpend a conſiderable part of it to find any.

REMITTANCE, the traffic or return of money from one place to another, by bills of exchange, orders, or the like. See the articles BILLS of EXCHANGE, and EXCHANGE.

A remittance is properly a bill of exchange, ſent to a correſpondent, and the contents thereof to be received by him of ſome other perſon, on whom ſuch bill is drawn.

We ſay that ſuch a merchant has remitted, or made a remittance of ſo many thouſand pounds in bank notes to his correſpondent at London. — I will remit you, or make you a remittance of, 1200 crowns, in three bills of exchange, of 400 crowns each, drawn on A. B. banker in your city, payable at ſight, at 20 days after ſight, or at uſance, &c.

By means of remittances by the circulation of bills of exchange, prodigious ſums of money are returned, not only from one city to another in a trading nation, without danger, and without carriage, but immenſe ſums are thereby perpetually circulating throughout all the European ſtates.

REMARKS.

Remittances of money to diſtant parts, by the means of bills of exchange, neceſſarily imply a correſpondence at thoſe parts, and the authority of drawing upon ſome perſon, by whom ſuch remittance muſt be diſcharged, to the perſon to whom the bill is made payable.

The nature of draughts and remittances, and the manner whereby ſuch kind of negotiations are carried on, cannot be better explained and illuſtrated, than by exhibiting the outlines of the accountantſhip requiſite to be obſerved on ſuch occaſions, by the parties therein concerned. And as money-remittances are either of a domeſtic or of a foreign kind, we ſhall ſtate the caſe familiarly in both lights, with relation to real practical buſineſs.

I. With regard to domeſtic remittances, or ſuch as are carried on through the ſeveral trading towns and cities in the ſame ſtate or empire.

Suppoſe C. D. of London, for example, is a trader, and has dealings with other traders of Briſtol, Liverpool, and Exeter, and that he hath occaſion to remit 200l. to his correſpondent, E. F. of Briſtol.—For this purpoſe he is preſumed to have ſome correſpondent, ſuppoſe G. H. of Briſtol, who is indebted to C. D. of London 500l. in the way of traffic-able, or any other concerns;—and that, by virtue thereof, he, the ſaid C. D. hath the liberty to draw upon G. H. to the amount of 500l. for the diſcharge of the ſaid debts. — Now, if G. H. is indebted to C. D. 500l. G. H. ſtands in his book indebted for the ſaid ſum, to ſome proper account, ſuitable to the occaſion on which the ſaid debt was contracted.—Upon which he (C. D.) draws, in the following manner and form, upon G. H. 200l. payable to C. D.

London, September 1, 1754.

One month after date pay to E. F. or order, the ſum of 200l. and place it per advice to the account of

To Mr G. H. merchant of Briſtol.

Sir, Your humble ſervant,
C. D.

This draught of 200l. thus made by C. D. of London, on his correſpondent G. H. of Briſtol, payable to E. F. of Briſtol, one month after date, is ſent incloſed in a letter to E. F. who ſends it, on receipt thereof, to G. H. of Briſtol, for acceptance; which if he does not refuſe, and duly pays, this draught thus made upon G. H. is a remittance made, at the ſame time, to E. F. in diſcharge of the 200l. due by C. D. of London, to E. F. of Briſtol.

As G. H. ſtood a debtor in the books of C. D. for what he owed him, ſo E. F. was a creditor in the accounts of C. D. for what the latter owed him. Quere, In what manner ought the ſeveral parties herein concerned ſtate this tranſaction in their reſpective books, according to the true principles of accountantſhip, by the Italian method of double entry?

We will ſtate the accounts of C. D. of London, which are ſuppoſed to ſtand thus in his ledger (in regard to this affair) previouſly to the commencement thereof.

LEDGER.

	G. H. of Briſtol - - Dr	l.	s.	d.		Cr	l.	s.	d.
(1)	To caſh, if money lent, &c. -	500	—	—	(3)	By E. F. for draught on E. F. remitted G. H. - - - -	200	—	—
	Cash - - - Dr					Cr			
(2)	To E. F. money borrowed - -	200	—	—	(1)	By G. H. for money lent - -	500	—	—
	E. F. of Briſtol - - Dr					Cr			
(3)	To G. H. for draught remitted him	200	—	—	(2)	By caſh, money borrowed, or otherwiſe, &c. - - - -	200	—	—

EXPLANATION.

The foregoing is the practical ſtate of the caſe in the ledger of C. D.

1. The reader will obſerve, that G. H. ſtands debtor for the 500 l. to CASH, on ſuppoſition it was money lent, and CASH a creditor for the ſame, which exhibits theſe two accounts in their right ſtate: if the money had been due on a legacy, G. H. muſt have been made debtor to CAPITAL STOCK, and CAPITAL STOCK creditor by G. H. in which caſe, alſo, thoſe accounts would appear in their juſt light; but, if the money had been due upon any other occaſion, the credit muſt have been adapted accordingly. See the articles ACCOUNTANTSHIP, BANKING, BOOK-KEEPING, LEDGER, MERCANTILE ACCOUNTANTSHIP.

2. Upon making the draught on G. H. payable to E. F. E. F. is made debtor to G. H. and G. H. creditor by E. F. which debiting the one, and crediting the other, keeps the accounts of C. D. in an equitable ſtate, and ſhews how draughts and remittances are adjuſted, in conformity to the nature of the tranſaction.

II. Let us now take a view of the accounts of G. H.

As G. H. ſtands a debtor in the books of C. D. for what he owes him, ſo muſt C. D. ſtand a creditor for the ſame in the books of G. H. Thus:

L E D G E R.

		l.	s.	d.			l.	s.	d.
	C. D. of London - - Dr					Cr			
(2)	To E. F. for the draught accepted	1200	—	—	(1)	By caſh, money borrowed of him	500	—	—
	CASH - - - - Dr					Cr			
(1)	To C. D. money borrowed -	500	—	—	(3)	By E. F. paid C. D. draught of — day	200	—	—
	E. F. - - - - - Dr					Cr			
(3)	To caſh, paid him C. D's draught of	200	—	—	(2)	By C. D. for draught accepted	200	—	—

EXPLANATION.

1. CASH is debtor, and C. D. creditor by CASH, for what G. H. owes him.—When C. D. draws on him, in order to make a remittance to E. F. then he makes C. D. debtor to E. F. and credits E. F. 'till paid.—When he pays E. F. then E. F. is made debtor to CASH, and CASH creditor by E. F. By which method of charge and diſcharge, according to the way of double-entry accountantſhip, every diſtinct account is preſerved in its true ſtate.

☞ Many who deal any thing conſiderably in draughts and remittances, keep diſtinct INTERMEDIATE ACCOUNTS of DRAUGHTS and REMITTANCES, or a BILL-BOOK, wherein are entered all bills payable and receivable; by the means of which intermediate accounts of BILLS RECEIVABLE, and BILLS PAYABLE, the perſonal accounts of all with whom you have tranſactions by way of draught or remittances, are adjuſted.

III. We ſhall now ſee how the accounts of E. F. will ſtand in regard to this tranſaction.

As E. F. in the books of C. D. ſtands creditor, by CASH, for money C. D. borrowed of him; ſo CASH muſt ſtand debtor, and C. D. creditor, in the books of E. F. for the ſame. Thus:

L E D G E R.

		l.	s.	d.			l.	s.	d.
	CASH - - - - Dr					Cr			
(1)	To C. D. of London, borrowed of him	200	—	—	(3)	By G. H. paid C. D's draught of	200	—	—
	C. D. of London - - Dr					Cr			
(2)	To G. H. a draught payable to G. H. of	200	—	—	(1)	By caſh borrowed of him - -	200	—	—
	G. H. - - - - - Dr					Cr			
(3)	To caſh, paid C. D's draught, when due, of	200	—	—	(2)	By C. D's draught, payable to G. H.	200	—	—

But if C. D. of London had no one at Briſtol that owed him money, in order to conveniently diſcharge his creditor E. F. at that city, E. F. muſt either have drawn upon C. D. of London, or C. D. of London muſt have paid the money in London, and procured a bill, payable to E. F. in Briſtol, and ſent him the ſame, which would have anſwered the end equally as well.—Or, if it had been convenient for E. F. to have the ſaid ſum paid to his order in Exeter, or elſewhere, and it had ſuited C. D. ſo to have returned the ſame, by a draught upon any correſpondent, in this way likewiſe the money may be paid to the order of E. F. Hence we find, that the tranſaction of money-concerns, by the means of draughts and remittances, is infinitely more facilitated than can be by the perpetual ſending of ſpecie backwards and forwards, at a great hazard and expence: and, with regard to bills of Exchange that are not payable at ſight, the robbing of the mail does not, in this reſpect, affect them in the manner that it does bank-bills. There is, indeed, frequently hazard run by taking bills that may be proteſted, and this proves a great diſappointment to the principal parties: this induces many rather to tranſact their inland affairs by the means of bank bills, than by that of bills of exchange.

Nor is the trading intereſt only thus accommodated in their draughts and remittances, by the means of paper circulation, but the landed men alſo; and the public revenue itſelf is commodiouſly remitted to the exchequer, by virtue thereof: whereby this method of drawing and remitting money, proves of no leſs eaſe and advantage to the government, than to the ſubjects in general.

There are many bankers, and others who are not profeſſedly ſo, that make a very handſome income, at $\frac{1}{4}$ per cent, &c. by accommodating people with bills for their returns of monies.

EXPLANATION.

Whoever diſcerns the reaſon of what has been already ſaid, will need no farther explication in relation to the accounts of E. F. which he will obſerve are in conformity with the preceding. The whole of the matter, in a word, lies here: if a merchant of London has owing to him 500 l. by one in Briſtol, and he owes 200 l. alſo to one in Briſtol, he orders his debtor there to pay the ſame to his creditor; which order being executed in the manner before repreſented, is called a DRAUGHT made upon his debtor, and a REMITTANCE to his creditor; and the method of ſtating the accounts by the perſons concerned, ſhews the eſſential points of the accountantſhip neceſſary to be performed by the ſeveral parties therein concerned.

Theſe plain principles being well underſtood, in relation to the nature of domeſtic draughts and remittances, the ſame will be eaſily applied to thoſe in foreign countries, and in foreign monies.

EXAMPLE I.

Suppoſe Meſſ. Cliffords and ſons, merchants of Amſterdam, are indebted to Meſſ. Henry and Peter Muilman, of London, merchants, 5000 guelders, bank money of Amſterdam, and that ſaid Cliffords and ſons remit the ſame to ſaid Muilmans, by a bill of exchange, drawn at uſance, on John Gore, merchant of London, who is indebted to them, exchange at 34 : 6. Quere, how muſt this tranſaction be ſtated in the books of the ſeveral perſons therein concerned, according to the principles of accountantſhip, as practiſed by thoſe eminent traders?

I. With regard to the accounts of CLIFFORD and SONS of AMSTERDAM.

If they are indebted to Meſſ. Muilman a balance of 5000 florins, banco of Amſterdam, Meſſ. Muilman will of courſe have credit in their books for that ſum; and, when they remit the ſame to ſaid Muilmans of London, the tranſaction is managed in the following manner: as Clifford and ſons owe money in London to ſome perſons, ſo we may preſume, in the courſe of their tranſactions, they may have monies due to them from Mr Gore, in the ſame trading city: in which caſe, they make a draught upon their debtor, payable to their creditors, and thereby make the remittance required, and ſtate their accounts by way of debtor and creditor, according to the principles before given in the domeſtic tranſaction: taking care to diſtinguiſh the different monies of the two countries, and what they may gain or loſe by the exchange. Theſe great remitters always have an open account in their ledger of DRAUGHTS and of REMITTANCES, and are extremely accurate in diſtinguiſhing MY ACCOUNT from HIS ACCOUNT, as well as their COMPANY ACCOUNTS from their PROPER ACCOUNTS. See our article LEDGER.

But if it ſo fall out that Clifford and ſons of Amſterdam have no MONIES due to them in London, and yet are obliged to pay the ſaid ſum to Muilman and Co. within a certain time, the affair may be managed in one or the other of the following ways: either Muilman and Co. may draw upon Clifford and Co. or Clifford and Co. muſt purchaſe a bill, or bills of

exchange, on the Bourſe of Amſterdam, of thoſe who may have monies due to them in London, or any other trading city in England; and this bill, or theſe bills of exchange, are ſent over by the packet to the ſaid Muilman and Co.

Suppoſe ſuch bill of exchange be furniſhed to Clifford and Co. by the houſe of PELTZ and SONS of Amſterdam, drawn upon SIR JOSHUA VANECK, BART. and Co. merchants of London, payable at uſance, or two uſance, to Meſſ. Cliffords: in this caſe, Cliffords indorſe the ſaid bill of exchange, and ſend it over to Meſſ. Muilman, who preſent the bill for acceptance, and receive the contents of Sir Joſhua Vaneck and Co. according to the tenor thereof. If the tranſaction be thus conducted, and if Meſſ. Clifford immediately pay for the bill furniſhed them by Meſſ. Peltz, they may make BILLS OF EXCHANGE, or REMITTANCES, debtor to CASH for the money ſo paid; and when they hear of Meſſ. Muilman's receipt of the bill in England, and that it is accepted, they then debit MESS. MUILMAN to REMITTANCES, for the amount thereof. This method of ſtating the accounts in the books of Clifford of Amſterdam, will keep their account of caſh right, as well as their account with Meſſ. Muilman.

What is a remittance to Meſſ. Muilman, is a draught upon Sir Joſhua Vaneck and Co. by Meſſ. Peltz; and, upon the receipt of money by Peltz and Co. of Cliffords, for the ſaid draught of Sir Joſhua Vaneck and Co. the ſaid Peltz debits their account of caſh, and credit Sir Joſhua Vaneck and Co. for the ſaid draught.

And Sir Joſhua Vaneck and Co. in order to keep his accounts in conformity with thoſe of Peltz and Co. do, upon the acceptance of the draught aforeſaid, debit Peltzs and Co. in their proper account, which gave birth to the occaſion, and credit Meſſ. Muilman for their ſaid remittance; for, upon Sir Joſhua and Co's acceptance of the bill, they, from that time, become debtor to Meſſ. Muilman for the ſame: but if Sir Joſhua chuſes ſo to have his books kept, that his intermediate account of DRAUGHTS may manifeſt all draughts that have been made upon him, then he debits Peltzs and ſon to the account of DRAUGHTS, and, when he pays ſuch draught, according to the tenor of the bill, he then debits draught, and credits his account of caſh; which is the method that moſt great remitters practiſe.

In the like manner, with regard to the remittance made to Meſſ. Muilman, he debits the account of REMITTANCES to Meſſ. Clifford, and credits Meſſ. Clifford for the ſame, in conformity: and, when Meſſ. Muilman receive in money the amount of the ſaid bill, of Sir Joſhua Vaneck, he debits his account of caſh, and credits that of remittances; whereby the accounts of Muilman are kept in conformity with thoſe of Cliffords of Amſterdam.

But as our remitters, or merchants of conſideration, keep their caſh either with the bank of England, or with bankers of eminence, the buſineſs of receiving or paying bills is made mighty eaſy to them; for the bills receivable being depoſited either in the bank, or the bankers hands, their runners receive them when due, the merchant having the receipt thereof acknowledged in his bank-book: and, when ſuch merchants have bills to pay, they draw upon the Bank or bankers for the ſame, which ſums are wrote off in their bank-book accordingly.

Upon the whole, the reader will eaſily obſerve, that any bill of exchange whatſoever is properly a DRAUGHT, with regard to the drawer, and to the perſon upon whom the ſame is drawn, and who is to pay the contents; and, at the ſame time, it is properly a REMITTANCE, with regard to the perſon who buys the bill, and pays the value, as well as to the perſon to whom the bill is ſent, or remitted, and who conſequently receives the contents.

In relation to the general laws, cuſtoms, and uſages, which concern bills of exchange, ſee the article BILLS of EXCHANGE; and, with reſpect to the method of ſtating accounts of this nature, ſee the articles BANKING, BOOK-KEEPING, DEBTOR and CREDITOR, LEDGER, and MERCANTILE ACCOUNTANTSHIP; under which ſeveral heads will he find very ample inſtructions whereby to capacitate him for the ſtating of any kind of accounts whatſoever, be they either of a foreign or domeſtic concernment.

Further REMARKS upon this article of REMITTANCES and DRAUGHTS.

As in inland trafficable affairs it may, as we have obſerved, frequently ſuit the convenience of the parties to remit money in one city, payable to the order of a correſpondent who reſides in another at a conſiderable diſtance in the ſame country; ſo it often happens, eſpecially among the general and more ſkilful merchants, that they order a correſpondent of London to draw upon their correſpondent of Paris, who may be debtor to him in Amſterdam, for their account, inſtead of drawing upon him of Amſterdam: and ſo in divers other places. For if A of Amſterdam be indebted to B of London, and C of Paris be alſo indebted to A of Amſterdam; and if A of Amſterdam orders B of London to draw upon C of Paris, inſtead of himſelf of Amſterdam, it may, and often does, not only prove mutually agreeable and convenient, but ſometimes an additional advantage is the motive, either to the one, if not both, ſo to do; and what theſe advantages may be at ſuch conjuncture, is judged of by the courſe of exchange between Amſterdam and London, Amſterdam and Paris, and London and Paris; and the method whereby ſuch buſineſs is tranſacted, by the means of draughts and remittances, with a view to profit to be made by the exchange, is called the arbitration of the foreign exchange. See the article ARBITRATION in matters of the foreign exchange; ſee alſo the articles ENGLAND, HAMBURGH, HOLLAND, and the chief trading cities of Europe, under their reſpective provinces.

REPRIZALS, a right, according to the civil law and that of nations, which princes have to retake from their enemies ſuch things as they unjuſtly detain from them, or other things equivalent thereto. — It is uſed alſo for a permiſſion given by a prince ſometimes to a ſubject, upon a full cognizance of the cauſe, authorizing him to retake, from the firſt perſon he meets with of the adverſe party, as many effects as make an equivalent to what have been violently forced from him, and for which the oppoſite prince has refuſed to do him juſtice.

Theſe permiſſions are alſo called letters of mark, mart, or marque.—Thus we ſay, This merchant has ſeized the effects of the Spaniard Don ———, by way of reprizal, becauſe the Spaniard has ſeized his, and no redreſs could be had at the court of Madrid.

Under the articles MARQUE, [LETTERS of MARQUE], PRIVATEERS, PRIZES, we have given the principal laws relating thereto: as they have ſome affinity with the preſent ſubject, we ſhall here give what may be further neceſſary; according to the laws of England, in particular, to the underſtanding what elſe may have a connection with the preceding ſubjects.

A copy of letters patent for eſpecial reprizals, from the king of Great-Britain (under the great ſeal of England) againſt the States of Holland, and their ſubjects; inrolled in the high court of Chancery, 19 May, 15 Car. II.

Charles the Second, &c. Whereas our loving ſubjects, Sir William Courteen, Knt. deceaſed, and his partners, anno 1643, by the depredation and hoſtile act of one Gailard, commander in chief of two ſhips belonging to the Eaſt-India company of the Netherlands, was, between Goa and Macao, in the ſtreights of Malacca, deprived and moſt injuriouſly ſpoiled of a certain ſhip called the Bona Eſperanza, and of her tackle, apparel, and furniture, and all the goods and lading in her, upon a very hopeful trading voyage to China; which were carried to Batavia, and there all de facto, without due proceſs of law, confiſcated. And alſo in the ſame year, another laden ſhip of our ſaid ſubject, called the Henry Bonadventure, being come on ground near the iſland of Mauritius, was there, both ſhip and goods, ſeized upon by ſome of the officers and miniſters, and others under the command of the ſaid Eaſt-India company, and utterly detained from the right owners. And whereas the ſaid Sir William Courteen, and his aſſigns, in his life-time, uſed all poſſible endeavours to recover the ſaid ſhips and goods, and to procure further juſtice againſt the maleſactors, and yet could obtain no reſtitution or ſatisfaction; whereby they came to be much diſtreſſed, and utterly undone in their eſtate and credit: and thereupon, and upon the moſt humble ſupplication and addreſſes of Francis earl of Shrewſbury, and William Courteen, Eſq; grandſon and heir of the ſaid Sir William, deceaſed, Sir John Ayton, and Sir William Turner, Knts. and George Carew, and Charles Whitaker, Eſqrs. (on the behalf of themſelves, and divers others intereſted in the ſaid two ſhips, Bona Eſperanza, and Henry Bonadventure, and in the eſtates of the ſaid Sir William Courteen, deceaſed) Sir Edward Littleton, Bart. and Sir Paul Pindar, Knt. that we would take their caſe into our princely conſideration: we, out of a juſt ſenſe we then had, and ſtill have, of their unjuſt ſufferings in that buſineſs, both by our own letters, under our ſign manual, to the States General of the United Provinces, and by Sir George Downing, Knt. and Bart. our envoy extraordinary, to whom we gave ſpecial command ſo to do, required ſatisfaction to be made, according to the rules of juſtice, and the amity and good correſpondence which we then deſired to conſerve with them firm and inviolable. And whereas, after ſeveral addreſſes made to the States General by our ſaid envoy, and nothing granted effectual for the relief of our ſaid ſubjects (whom we take ourſelves, in honour and juſtice, concerned to ſee ſatisfied and repaid) we lately commanded the ſaid Sir George Downing to intimate, and ſignify to the ſaid States, that we expected their final anſwer, concerning ſatisfaction to be made for the ſaid ſhips and goods, by a time then prefixed, and ſince elapſed, that we might ſo govern ourſelves thereupon, that our aforeſaid ſubjects might be relieved according to right and juſtice; and yet no ſatisfactory anſwer hath been given; ſo that we cannot but apprehend it to be, not only a fruitleſs endeavour, but a proſtituting of our honour and dignity, to make further application, after ſo many denials and ſlightings. And whereas John Exton, doctor of laws, judge of our high admiralty court of England, upon our command to certify to us the

the value of the loſſes and damages ſuſtained by the ſaid Sir William Courteen, and partners, whoſe intereſt is now veſted in our loving ſubjects Sir Edmund Turner, Knt. and George Carew, Eſq; and partners, hath, upon full examination and proof thereof, made by witneſſes in our high court of admiralty, reported and certified under his hand, that the ſame do amount to the ſum of One hundred fifty-one thouſand, ſix hundred, and twelve pounds.

Now KNOW YE, That for a full reſtitution to be made to them for their ſhips, goods, and merchandizes, of which the ſaid Sir William Courteen, Knt. and partners, were ſo deſpoiled as aforeſaid, with all ſuch coſts and charges as they ſhall be at for the recovery of the ſame: we, by the advice of our privy council, have thought fit, and by theſe preſents do grant licence and authority, under our great ſeal of England, unto our ſaid ſubjects, Sir Edmund Turner and George Carew, their executors, adminiſtrators and aſſigns, for and on the behalf of themſelves and other perſons intereſted, as aforeſaid, to equip, victual, furniſh, and to ſet to ſea, from time to time, ſuch and ſo many ſhips and pinnaces as they ſhall think fit; provided always, that there be an entry made and recorded in the admiralty courts, of the names of all ſhips and veſſels, and of their burthen and ammunition, and for how long time they are victualled, and alſo the names of the commanders thereof, before the ſame or any of them be ſet forth to ſea; and with the ſaid ſhips and pinnaces by force of arms to ſet upon, take, and apprehend any of the ſhips, goods, money, and merchandizes belonging to the States-General, or any of the ſubjects inhabiting within any of their dominions or territories, whereſoever the ſame ſhall be found, and not in any port or harbour in England or Ireland, unleſs it be the ſhips and goods of the parties that did the wrong. And the ſaid ſhips, goods, money and merchandizes, being ſo taken, and brought into ſome port of our realms and dominions, an inventory thereof ſhall be taken, by authority of our court of admiralty, by the judge or judges thereof for the time being, upon proofs made before him or them that the ſaid ſhips, goods, wares, merchandizes, or money, did belong to the States General, or any of their ſubjects, as aforeſaid: that they ſhall be lawful prize to the ſaid Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, as aforeſaid, to retain and keep in their or any of their poſſeſſions, and to make ſale and diſpoſe thereof in open market, or howſoever elſe, to their and every of their beſt advantage and benefit, in as ample manner as at any time heretofore hath been accuſtomed by way of reprizal, and to have and enjoy the ſame as lawful prize, and as their own proper goods: ſo that neither any captain, maſter, nor any of their company, that ſhall ſerve in perſon, or ſhall promote and advance the ſaid enterprize, in manner and form aforeſaid, ſhall in any manner or wiſe be reputed or challenged as an offender againſt any of our laws. And that it ſhall be lawful for all manner of perſons, as well our ſubjects as any others, to buy the ſaid ſhips, goods, and merchandizes, ſo taken and apprehended by the ſaid captains, maſters, and others, and adjudged as aforeſaid, without any damage, loſs, hindrance, trouble, moleſtation, or incumbrance to befal the ſaid buyers, or any of them, in as ample and lawful manner as if the ſhips, goods, wares, and merchandizes, had been come and gotten by lawful traffic of merchants, or of juſt prizes in time of war. Provided always, that all ſhips, goods, and merchandize, taken by virtue of this our commiſſion, ſhall be kept in ſafety; and no part of them waſted, ſpoiled, or diminiſhed, or the bulk thereof broken, until judgment hath firſt paſſed as aforeſaid, that they are the ſhips and merchandize of the States General, or ſome of their ſubjects, as aforeſaid. And if, by colour of this our commiſſion, there ſhall be taken any ſhips, goods, or merchandizes, of any of our loving ſubjects, or the ſubjects of any prince or ſtate in good league or amity with (except the States General, or their ſubjects, as aforeſaid) and the goods therein laden, ſold and embezzled, or diminiſhed, or the bulk thereof broken in any place, before they ſhall be adjudged to belong to the States General, or ſome of their ſubjects, as aforeſaid, that then this commiſſion ſhall not be of ſufficient authority to take the ſaid ſhips, goods, and merchandizes, or to warrant or ſave harmleſs ſuch as ſhall receive, buy, or intermeddle therein; but that both the prizes ſo taken, and the ſaid ſhips of war, ſhall be confiſcated to our uſe.

And further we do hereby declare, That it is our will and pleaſure that this our commiſſion ſhall remain in full force and power to all intents and purpoſes, until the ſaid Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, as aforeſaid, ſhall, by virtue thereof, have by force of arms apprehended, taken, ſeized, recovered, and received from the ſaid States General, or their ſubjects, One hundred fifty-one thouſand, ſix hundred and twelve pounds, according to the appraiſement to be made, by appraiſers upon oath, nominated and authorized in our ſaid court of admiralty, of ſuch ſhips, goods, wares, or merchandizes, as ſhall be taken from the ſaid States General, or any of their ſubjects, by virtue of this commiſſion, or ſhall otherwiſe receive ſatisfaction of the debt aforeſaid, by compoſition to be made between thoſe of the Eaſt-India company of the Netherlands, and the ſaid Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, as aforeſaid: notwithſtanding the preſent difference between us and the ſaid States General, depending upon general reprizes, may be agreed and compoſed, and that, in the interim, a good correſpondence may be renewed between us and the ſaid States General: in which caſe, nevertheleſs, it is our will and pleaſure, that, in the execution of this our commiſſion, no violence ſhall be done to the perſons of the ſaid ſubjects of the ſaid States General, but only in caſe of reſiſtance; and that after in cold blood, the ſubjects of the States General, if hurt or wounded, ſhall be uſed with all convenient offices of humanity and kindneſs, &c.

A proclamation for revoking the foregoing letters of marque and reprizals, publiſhed Auguſt 30, 1680.

Whereas George Carew, Eſq; had formerly granted to him letters of marque againſt the States General of the United Provinces, for ſatisfaction of a certain demand which Sir William Courteen and others had againſt the ſaid States, and to which the ſaid George Carew was intitled, which ſaid demand has ſince, by treaty of peace between his Majeſty and the ſaid States, been totally aboliſhed and extinguiſhed, and all letters of marque and reprizals by the ſame treaty diſcharged accordingly: and whereas his majeſty has ſince recalled and ſuſpended the ſaid letters of marque, to the end that no perſon may be miſled, under pretence of any letters of marque and reprizal heretofore granted to the ſaid George Carew, and thereby incur the danger of the law as pirates, his Majeſty is pleaſed, by this his proclamation to declare, that the ſaid George Carew has now no authority and commiſſion, by virtue of any ſuch letters of marque, to equip or ſet out any veſſel whatſoever; and that all perſons that ſhall preſume to be aiding to him in ſetting forth any ſuch ſhip, or ſerve under him, by colour of any ſuch pretended authority, ſhall be proceeded againſt as pirates, according to the utmoſt ſeverity of the law.

REVENUE, [PUBLIC REVENUE]. REVENUE, in its ordinary acceptation, is the yearly rent, or profits, ariſing to a man from his lands, poſſeſſions, &c. The public revenue of this kingdom is the yearly income, or ſums raiſed, at preſent, by the authority of king, lords, and commons, for the ſupport of the ſtate.

The ſucceſs of a kingdom, ſays a judicious writer, depends upon a wiſe regulation of its REVENUES. When taxes are not levied in the manner they ought to be, they are the ruin of the ſubject, a moth in the treaſury, the univerſal lamentation of a kingdom, and the intereſt and joy of foreigners. But a prudent diſpoſition of them is the ſoul of a ſtate, the life of the people, glory to a prince, grief and diſtreſs to foreigners, and a perpetual fountain of the richeſt bleſſings to human life.

As not only the intereſt of trade, but the maintenance of the liberties of theſe kingdoms, will ever conſiſt in keeping princes dependent on the parliament for the money that ſhall be exacted from the people; it may be uſeful to give a ſhort hiſtory how the public money has been levied, from the Conqueſt to the Revolution in 1688, and from that æra to the preſent time.

KING WILLIAM I.

Having conquered England, his WILL became a law, and he looked upon all the land and treaſure of the nation as his own. He diſtributed the greateſt part of the Engliſh lands among his NORMANS, and others, who helped him in the conqueſt; whereby he ſecured their attachment, and effectually depreſſed the natives.—He alſo divides the lands into baronies and knights fees.—He cauſes an exact ſurvey to be taken of all the lands; by which he knew diſtinctly every acre of arable, meadow, paſture, common, wood, marſh, and every other ſort, and taxed them all to their value.—He rated, in like manner, all towns, cities, boroughs, and villages.—This ſurvey is preſerved in the Exchequer, in the Doomſday-Book.—He eſtabliſhed the duty of Danegeld, on account of pirates, but exempted the church from the payment of it, yet he cauſed all the monaſteries to be plundered of their money.—He brings under military ſervitude all the biſhoprics and abbies that held baronies—Makes inquiry in every county how many acres were ſufficient yearly for one plough, &c.—Cauſes inquiſition to be made what aſſeſſment each city, caſtle, &c. paid yearly——Takes 6s. of each plough-land, or hide, throughout the kingdom, and extorts immenſe ſums from all people promiſcuouſly.

REMARKS.

What all theſe incomes of the Conqueror might amount to is not poſſible to be known, there being no eſtimates extant even of thoſe ſums which he raiſed by way of tax; nor can there be any account of all the other profits he made by the ſeveral ways above mentioned.—He ſtood not in need of parliaments to ſupply his wants, who had it in his power to take all that his ſubjects poſſeſſed.—However arbitrary and lawleſs this abſolute monarch and conqueror was, yet, it has been ſaid, that he did not abſolutely aboliſh the rights, laws, and

cuſtoms of the Engliſh people, but ſubmitted himſelf, in ſome meaſure, to thoſe contained in the Doomſday Book.

After the Saxons were ſettled in England, their ſilver coins were generally all of a ſize, and ill-minted, which they called pennies, worth about three-pence of our money, and alſo half-pennies and farthings, and half-farthings, called ſtica's. After the Norman conqueſt, a pound of gold being divided into 24 carats, and every carat into 4 grains, the old ſterling, as it was afterwards called, or right ſtandard of gold, conſiſted of 23 carats and 3 grains and a half of fine gold, and half a grain of allay of copper or ſilver. Alſo, a pound of ſilver being divided into 12 ounces, and every ounce into 20 pennyweights, and every pennyweight into 24 grains, a pound weight of old ſterling conſiſted then, as it does at preſent, of 11 ounces 2 pennyweights of fine ſilver, and 18 pennyweights of allay.

King William Rufus,

Son and ſucceſſor to the Conqueror, ſpared no manner of rapine or ſimony.—Holds moſt of the church-lands in his own hands, and farms them out to the laity.—Extorts 5000 marks from the cathedral of Lincoln.—Exacts 10s. a man from 20,000 foot.—Seizes all the effects of the archbiſhop and church of Canterbury.——Demands Danegeld of all the barons.—Draws the wealth of the church into his own treaſury.—In ſhort, he flayed the people with taxes and exactions in every ſhape; and having oppreſſed and ruined his ſubjects, he was ſnatched away with a violent death.

REMARKS.

This prince not only governed as his father had done, in a deſpotic manner, as inheriting all that he did, and, conſequently, had the ſame property in all the lands and all his revenues; but he oppreſſed both clergy and laity without mercy, laying the moſt unreaſonable impoſitions on their lands, houſes, and effects of every kind, inſomuch that no man could call any thing his own; and in this manner he reigned, or raged, for the ſpace of near 13 years.—At the time of his death, this king held in his own hands the archbiſhopric of Canterbury, the biſhoprics of Wincheſter and Saliſbury, and 12 abbies, which he was wont to ſell, or let out to farm, or keep them to himſelf: he had all the vices of his father without his virtues.—Ranulph Flambert, a man of oppreſſive principles and mean birth, was his treaſurer, and the projector of moſt of the unjuſtifiable ways practiſed by the king to extort money from his ſubjects.

The two firſt kings after the Conqueſt coined only pennies: they agree, as near as can be judged, in weight and goodneſs, with the pennies of the Saxon kings, their immediate predeceſſors. It is therefore reaſonable to think that king William introduced no new weight into his mints; but that the ſame weight uſed there for ſome ages after, and called the pound of the Tower of London, was the old pound of the Saxon monies before the Conqueſt. This pound was lighter than the Troy pound by three quarters of an ounce Troy, and did not very ſenſibly differ from 12 ounces of the weight ſtill uſed in the money affairs of Germany, and there known by the name of the Colonia weight. And whereas the preſent ſtandard of England, of 11 ounces 2 pennyweights fine, to 18 pennyweights of allay, is called, in the oldeſt accounts of the Mint extant, the old ſtandard, or the ſtandard of the old ſterlings, it is moſt probable that theſe pennies were of that ſtandard, and that the pound of the Tower of ſuch ſtandard ſilver was then cut into 240 of theſe pennies: whence the weight of the penny will be found 22 Troy grains and a half; and the intrinſic value of 20 ſhillings, or of 240 ſuch pennies of full weight, was the ſame as the value 58 Shillings and one-penny half-penny of our preſent coined money.

Of the payment of the king's revenue in thoſe ancient times.

At firſt, the tenants of knights fees anſwered to their lords by military ſervices; and the tenants of ſocage lands and demeſnes, in great meaſure, by work and proviſions: afterwards, the revenue of the crown was anſwered in gold and ſilver, and ſometimes in horſes, dogs, and birds of game, and the like, and ſometimes in both together. When a man paid money into the Exchequer, it was ſaid, in Theſauro liberavit ſo much; and the ſame phraſe continueth to this day. Theſe payments were made Ad ſcalam & ad penſum, and in blank ſilver and numero, by tale. Ad ſcalam was by paying ſix-pence over and above each pound, or 20 ſhillings, which at firſt was thought ſufficient to make good the weight; ad penſum was the perſon's making good the deficiencies of weight, though it was more than ſix-pence per 20 ſhillings. But as the money might be deficient in fineneſs, as well as weight, a third way of payment was by melting down part of the money paid in, and reducing it to plate of a due fineneſs; when the ferm was melted down, it was ſaid to be dealbated, or blanched. As ſuppoſe a ferm of a hundred pounds was paid into the Exchequer, after the melting, as before obſerved, it was ſaid to be a hundred pounds blank: frequently the twentieth part of one ſhilling was accepted in lieu of melting, to ſave trouble and charges. The payment by numero, or tale, needs no explanation. Payments, or at leaſt computations, were made by marks and half marks, ounces and half ounces of gold; and in pounds, marks, half marks, ſhillings, pence, &c. of ſilver. The mark of gold was equal to 120 ſhillings of ſilver; the ounce of gold was equivalent to 15 ſhillings of ſilver; the pound of ſilver by tale was 20 ſhillings; the mark 13 ſhillings and four-pence; and the ſhilling conſiſted of 12 pence; and a penny was the twentieth part of an ounce, equal to our three-pence.

King Henry I.

Succeeds his brother William in the fulneſs of the ſovereign prerogative. The firſt impoſition he laid was three ſhillings on every hide of land, to marry his daughters.—Anno Dom. 1104, he exacted a prodigious ſum of money of this kingdom, and the land lay under grievous and exorbitant oppreſſions, the diſcord being revived between him and his brother Robert, earl of Normandy.—He alſo ſeizes the archbiſhopric of Canterbury into his own hands, and left 100,000l. at his death, beſides plate and jewels.—The charter this prince granted the nation upon his acceſſion to the crown, is one of the moſt remarkable particulars of his reign, during which England enjoyed a prodigious plenty of all things: for a ſhilling, at this time, might be bought as much corn as would ſerve 100 men a day; and for a groat, which was alſo the price of a ſheep, as much hay and oats as 20 horſes could eat in the ſame time. This was owing to the ſcarcity of money.

The coined pennies of this prince, the firſt Henry, were like thoſe of his father and brother, to which, as the hiſtorians very particularly tell us, he added half-pennies alſo.

The manner of paying in and computing the king's money being ſhewn at the end of William Rufus's reign, it may not be amiſs briefly to ſhew here how the royal revenue was levied, and the manner of iſſuing it. (1.) As to the levying, the perſon principally intruſted was the ſheriff of each county, who, in thoſe days, was an officer of great authority; however, there were ſeveral other ſtated collectors and accountants, namely, the eſcheators, the farmers, (or cuſtodes of ſuch towns and burghs as were not within the ſheriff's receipt) the cuſtodes cambii, or cuſtomers, the keepers of the wardrobe, and, in general, all perſons who held bailiwicks from the king, or received any of his treaſure or revenue by impreſt, or otherwiſe, were obliged to render an account thereof, and, in ſucceeding times, the collectors of tallages, diſmes, quinzimes, &c.

But, in caſe theſe officers could not inforce the king's debtors to make payment, the ſheriff was armed with ſufficient power to do it. The moſt ancient proceſs made uſe of was the ſummon of the Exchequer, which iſſued twice a year into all the counties of England, and was returnable againſt the times of holding the Duo ſcaccaria, namely, the Scaccarium Paſchæ, or Exchequer of Eaſter, and the Scaccarium St Michaelis, or Exchequer of Michaelmas, which were the general terms for the ſheriffs and other accountants, to pay in their farms or rents, and other iſſues of their bailiwicks. This was the ordinary proceſs; but, upon urgent occaſions, the king ſometimes iſſued ſpecial writs to the ſheriff, and others concerned in collecting the revenue, commanding them to levy debts, &c. with all ſpeed.

(2.) As to the manner of iſſuing the king's money: this was done ſeveral ways. Whilſt the money remained in the hands of the ſheriffs, farmers, or others, it was uſual for the king, his chief juſtices, great officers of his court, treaſurer, or barons of the Exchequer, to order them by writ to make proviſions and payments out of the money in their hands. This writ was ſometimes called the ſheriff's warrant; for, upon producing it, he had allowance made to him de tanto upon his account. Sometimes the king's money was iſſued by way of preſt, or impreſt, either out of the receipt of Exchequer, the wardrobe, or other the king's treaſuries. Impreſt ſeems to have been of the nature of a concreditum, or accommodatum, and when a man had money impreſſed to him, he became accountable to the crown for the ſame. In the 5th year of king Stephen, an account was rendered at the Exchequer of certain monies impreſſed to the accountant, when the empreſs came into England. Mag. Rot. 5 Steph.

According to ancient uſage, the king's treaſure was to be iſſued, by virtue of a writ or mandate, under the great and privy ſeal, and directed ſometimes to the juſtices and barons of the Exchequer, but commonly to the treaſurers and chamberlain of the receipt; and the writ was founded upon a bill or certificate from the Exchequer, or Wardrobe, or other matter of record. But the uſual writ for iſſuing of the king's money out of the Exchequer was the Liberate (ſo called from that word uſed in it) directed to the treaſurer and chamberlain. This writ was of two ſorts: a liberate for paying a ſum hac vice only, and a liberate current, or dormant, for paying in continuance, or more than once. The reader may ſee inſtances of theſe things in Madox's Hiſtory of the Exchequer, ch. 6, 10.

King Stephen

Impoſes no regular taxes, but raiſes all monies by plundering and robbing.—Seizes on all his predeceſſor's, king Henry's,

treaſure.—Raiſes Danegeld, contrary to his ſolemn promiſe, and ſeizes on the treaſures left by the biſhop of Saliſbury.

REMARKS.

The whole time that Stephen held the crown was one continued ſcene of blood and devaſtation; the government being quite unhinged, and all brought into confuſion, the ſword decided all controverſies, and taxes in general were raiſed by lawleſs oppreſſion.

I. Having ſhewn, in the former reigns, how the money was paid in, and iſſued out of the Exchequer, it may not be amiſs now to repreſent the particular branches of the royal revenue, namely, 1. The demeſns of the crown. 2. Eſcheats. 3. Feudal and other profits, ariſing out of the demeſns and eſcheats. 4. The yearly ſerms of counties and towns. 5. Fines and amerciaments. 6. Aids, ſcutages, tallages and cuſtoms. 7. Caſual profits of divers kinds.

Theſe particulars give great light to ſeveral parts of the Engliſh hiſtory. Firſt, of the ancient demeſn of the crown, it appears, at the time of the Conqueſt, and afterwards, the demeſn lands were conſiderable for extent and income. Doomſday-Book ſhews what they were in the reign of Edward the Confeſſor, and ſerves to diſtinguiſh the king's demeſns from his eſcheats, and other lands, and from the lands of other men.

II. The ſecond branch of the revenue aroſe by eſcheats, under which term are comprehended not only thoſe lands moſt properly ſo called, but thoſe alſo which at ſundry times after the Conqueſt became veſted in the crown, either by devolution, forfeiture, ſeizure, or, perhaps, by ſome other title.

By the revenue-rolls of the Pipe of the reigns of Stephen and Henry II. (which, next to Doomſday, are the moſt ancient rolls of records now extant) and likewiſe by thoſe of the next ſucceeding kings, we find the crown then in poſſeſſion of ſeveral great honours, baronies, and lands, of that ſort which are uſually ſtiled honor, baronia, or terra of ſuch a one, with the addition ſometimes of Quæ eſt in manu regis, without expreſſing by what title they became veſted in the crown. Theſe great eſcheats were anciently committed uſually by the king to certain perſons in ferm, or cuſtody, who anſwered at the Exchequer yearly for the iſſues, or ferm thereof. Beſides the ſe greater fees, the lands of lower perſons, and ſometimes of hereditary offices and ſerjeantries, with the lands appertaining thereto, became forfeited to the crown.

As the king had the full dominion in all theſe eſcheats, after they had been long veſted in the crown, they were hardly to be diſtinguiſhed from the king's ancient demeſn. About the latter end of king Henry the Second's reign, they began to form an eſcheatry, which, in ſubſequent times, was managed by officers called at firſt cuſtodes eſcaetriæ, and afterwards eſcators: however ſome of the ſmaller eſcheats were uſually holden by the ſheriffs. When eſcheats came to the crown, the juſtices itinerant took care, within their ſeveral circuits, to have them ſeized to the crown, and put in charge to the ſheriffs, and other officers, to the king's profit.

III. Some revenues likewiſe accrued to the crown from vacant biſhoprics, and abbies of royal foundation and patronage: for in ancient times, when ſuch biſhop or abbot happened to die, the king uſed to ſeize the temporalities into his hands, and receive the profits till the vacancy was filled.

King Henry II.

Lays a tax called eſcuage, or ſcutage.—Impoſes ſcutage again, in the 5th year of his reign, and again in the 7th inſtant.—Obliges the Jews to pay a tallage or donum.—Lays twopence in the pound upon all arable lands and wines; as alſo upon goods, houſes, and employments, one year.—Lays a penny in the pound for four years after.—Raiſes an aid for marrying his daughter, of one mark for each knight's fee throughout England.—Lays another ſcutage in his 18th year, and another in the 33d year.—Takes of the Jews a fourth part of their chattels, by way of tallage.—Levies a tenth throughout all his dominions.—Levies a tenth of all moveables in his 35th year.—Keeps the biſhopric of Lincoln vacant 17 years, and ſix others for a long time, as well as 12 abbies.—Keeps alſo the archbiſhopric of York vacant 10 years, and leaves behind him 900,000l.

REMARKS.

1. The two firſt branches of the royal revenue being ſpoken of already, namely the demeſns of the crown and eſcheats, the third branch is the feudal, and other profits ariſing from thence, as reliefs; upon the death of his anceſtor, every heir that held his lands by barony, or knights ſervice, was obliged to pay a ſum of money to the king, on his taking poſſeſſion of the inheritance. Theſe reliefs were at firſt uncertain, till Magna Charta, when an earl paid an hundred pounds, a baron one hundred marks, a knight, for one fee, five pounds.

Here it muſt be obſerved, that ſome baronies were much larger than others, and ſo of the knights fees. This difference aroſe from the reſpective charters of the ſeoffment; for, if the king enfeoffed a man of forty knights fees, to hold by barony, or ten knights fees, to hold by barony, the tenure was barony in each caſe. So, alſo, if the king enfeoffed a man of twenty carues of land, to hold by the ſervice of one knight, or forty carues, to hold by the ſervice of one knight, the ſeoffee had, in each caſe, one knight's fee. For this reaſon, at certain times, a diſtinction was made between the baronies and fees of the old, and thoſe of the new feoffment, the old being commonly larger than thoſe of the new; notwithſtanding this difference, the relief of the barony, or fee, whether it was greater or leſſer, was the ſame. But when two baronies came to be veſted in one man, he was charged with a relief for each.

IV. Another feudal profit was wardſhip and marriage. During the nonage of the heirs of the king's tenants in capite, the king could diſpoſe of the cuſtody and marriage of them to whom he pleaſed, which raiſed him a great revenue.

A fourth branch of the revenue, was the yearly ſerms of the counties. From the reign of king William I. the king uſed to let out the ſeveral counties, upon a yearly ferm or rent, or commit them to cuſtody. The fermer, or committee, was uſually ſtiled ſheriff. Moſt, if not all the counties, as appears by the revenue-rolls, were thus lett at ferm in king Stephen's reign. When a county was lett for more than formerly, the improvement was called crementum, the increment; which was ſometimes anſwered in palfreys, hawks, &c. 2. The yearly ſerms of the towns, burghs, and gilds. It is to be remembered, that from the time of the Conqueſt, the cities and towns were inveſted either in the crown, or the clergy, or the baronage. Some of theſe towns the king was poſſeſſed of, as part of the original inheritance of the crown, others by antient eſcheat, juſt as his other lands. When the king was ſeized of a city or town in demeſn, he was lord of the ſoil, viz. of all the land within the ſite and precinct thereof, of all the burgage-houſes, ſheds, ſtalls, and buildings, herbage, profits of fairs and markets, plea and perquiſites of courts; in a word, of all iſſues, profits, and appurtenances, of the city or town, of any kind, that was not alienated by himſelf or anceſtors. For ſometimes the crown thought fit to grant ſome part, or profit, to a private perſon or monaſtery.

Such a city or town was commonly ſtiled civitas regis, villa regis, burgus regis; and the men homines or burgenſes regis. The yearly profit made by the king of his cities and towns, was paid him ſeveral ways. The iſſues of ſome were included in the general ſerms of the county where they lay, and were anſwered by the ſheriff. Sometimes the king committed them to fermers, or cuſtodes, diſtinct from the ſheriffs. In a word, ſometimes the king lett his town to the townſmen, at ferm for years, or in fee-ferm, that is, perpetual ferm for ever: ſince feodum, fee, was uſed in England, to ſignify a perpetual eſtate, it has been uſed to denote perpetuity in office and in rent. Thus inheritable offices have been rendered offices in fee.

When a town was put to fee-ferm, the tenure was burgage, particular burgage, tenements lying in the town, as well as the town itſelf, were ſaid to be ſo holden. In proceſs of time, moſt of the towns and burghs came to be lett to the reſpective townſmen or burgeſſes, at fee-ferm.

To the ſerms of the towns, may be referred the ſerms or yearly payments to the crown, by the gilds and meſteres. The word gild ſignifies a company, ſociety, brotherhood, by which laſt name the religious gilds were called, that were founded for devotion and almſdeeds, as the ſecular gilds were chiefly for trade and almſdeeds. Theſe gilds could not be ſet up without the king's warrant. The gilds of goldſmiths, bochers, and others, were amerced in London to the crown as adulterine, in the reign of Henry II.

There was alſo in former times a ſecular gild, called gilda mercatoria, a merchant gild. From theſe gilds, perhaps, ſprung the practice of gildating or embodying whole towns. In time, the ſeveral gilds of goldſmiths, ſalters, &c. were ſtiled corporations, or companies. All theſe gilds paid a yearly ferm to the king. As for the meſteres, it is to be obſerved that this word has no relation to the word myſtery, as if there was, it is vulgarly ſaid, ſome myſtery in every trade. For though myſtery has been uſed for many years paſt for a craft, or occupation, the true derivation is from the Gallic miſtera, meſtera, or meſtier, ſignifying a trade. Thus we find in Edward III. the miſtere of taylors, armourers, and others. The other three remaining branches of the revenue, will be given in the ſucceeding reign.

The pennies of the ſecond Henry were the ſame in value as the foregoing, and they were alſo of different forms; ſuch a regularity in this particular, as afterwards took place, not being yet eſtabliſhed in the mints.

King Richard I.

Levies a land-tax, in order for his expedition to the Holy Land.—Raiſes money by fining ſeverely thoſe who were convicted of corruption.—Sells the whole county of Durham to the biſhop for an immenſe ſum.—Takes 1000 marks of the ſame biſhop, to make him chief juſtice.—He raiſes a large

ſum

ſum of the citizens of London, which was the price of their liberties, which he granted them at that time.—He makes a new GREAT SEAL, and raiſes money by renewing of old grants.—Impoſes a tax of a fourth part of the revenues of all perſons, both eccleſiaſtical and ſecular, for one year; and likewiſe a fourth part of all their moveables, and 20s. of every knight's fee, beſides all the wools of the Ciſtercians, &c. and abundance of church plate.—He reaſſumes all his grants, and levies a tax of 2 l. on every hide of land.—Raiſes 5 s. on every hide of land.—Takes 2 s. on every carucate of land, and raiſes 1,100,000 marks by his chief-juſtice the archbiſhop of Canterbury, in two years.

REMARKS.

This ſum of 1,100,000 marks is the only poſitive ſum we hear of raiſed in this king's reign, all the others being no where expreſſed. The 1,100,000 marks, amount to 753,333 l. for the two years, that is, 376,666 l. per ann. a ſum then thought very grievous.

The next great branch of the revenue was, V. Fines, oblatas, and amerciaments of many kinds, in civil and criminal caſes, and for the foreſts. It is ſurpriſing to ſee, how numerous the fines and amerciaments, appearing upon the revenue-rolls of the antient times, were. As to fines for the profit, it ſuffices to obſerve, that by the revenue-rolls of Henry II. and Richard I. and king John, an ancient revenue was raiſed, by treſpaſſes, defaults, purpreſtures, &c.

As to the fines in civil and criminal caſes, they may be reduced to theſe three general heads; fines for liberties, fines in law proceedings, and fines of a mixed nature. But firſt, it may be obſerved, after a fine was preferred and accepted, if the party could not have the thing for which he was fined, he was then acquitted of the fine, in ſuch like words, Sed non debet inde ſummoneri quia non habuit rectum nec habere potuit. However, a ſmall fine was ſometimes paid for ſuch acquital. When the party obtained the thing for which he fined, he was wont to have the king's charter made to him. If the party fining failed in payment of his fine, he could not have his charter for the thing deſired.

When a fine was preferred and refuſed, if the party offered an addition, it was called crementum finis. 1. As for fines of the firſt ſort, for grants and confirmations of liberties, franchiſes, and exemptions, there are numberleſs inſtances on the revenue-rolls. 2. The fines in law proceedings were likewiſe very numerous, and brought in a very conſiderable revenue. The ſeveral inſtances may be reduced to theſe heads: fines to have juſtice and right, fines for writs, pleas, trials, and judgments; fines for expedition, or ſpeeding their right; fines for ſtopping, or delay of pleas, trials and judgments.

Sometimes the parties litigant preferred the crown a certain portion out of the debts which they recovered. Moderate fines for having juſtice were conſtantly paid, as well after the great charter as before. 3. Fines of a mixed nature. Many were made to hold or quit certain offices or bailiwicks, for divers licences, eſpecially to marry, &c. Many fines were laid relating to trade or merchandize. Hither refer the fines and diſmes, paid by merchants upon ſeveral occaſions, of which hereafter. Beſides fines for licences, there were others of divers kinds: as for the concord of a duel, for opening a mine, &c.—There were alſo fines for the king's favour, and to remit his diſpleaſure.—For his protection and aid.—To obtain his mediation in his ſubjects affairs.—To have ſeizin or reſtitution of their lands or chattels, and that they might not be diſſeized.—That men might be diſcharged out of priſon, or bailed to the cuſtody of lawful men.—For acquitals in divers caſes.—Concurrent fines were when the parties fined to obtain the ſame thing: counter fines, when they fined, the one for a thing, the other againſt it.—For reſpite of knighthood.

And, as it was uſual to ſet amerciaments for not taking knighthood after ſummons, ſo the king often ſeized the lands of military tenants for the ſame reaſon.—The revenue ariſing from miſericordia's or amerciaments, which in ancient times are ſcarce to be diſtinguiſhed from fines. It is likely, however, there was ſome difference between them. For inſtance, it was called an amerciament, after it was reduced to a certain ſum, and a miſericordia, both before and afterwards. When a miſericordia was reduced to a certain ſum, it was ſaid to be admeaſured or affeered, e. g. Warnius de quedic debet C. Marcas de miſericordia, ſed poſtea ammenſuratus fuit per juſticiarum et baronos ad LX marcas. Mag. Rot. 9 Joh.

By Magna Charta, earls and barons are not to be amerced, unleſs by their peers, and according to their treſpaſs. It was frequent for ſome perſons to be amerced for the defaults of others.—When general amerciaments were ſet upon hundreds, towns, &c. for murders, or the like, ſo much thereof as was charged upon lands, within the ſaid hundred, &c. which the king held in demeſn, was charged of courſe. Lands holden by the queen, and by ſeveral barons and lords of ſeigneuries, were free from common amerciament. Barons of the Exchequer were exempt here from fees for their lands and tenants. Eccleſiaſtical fees were likewiſe exempt from the ſame, and other perſons by virtue of charters. Divers lords of ſeigneuries were, by charter, entitled to have to their own uſe the amerciaments ariſing within their ſeigneury. However, the lords were to claim the ſame at the Exchequer, which is frequently done to this day. See Madox's Hiſtory of the Exchequer, &c.

The next great branch of the revenue was, VI. Aid; ſeutages tallages, and cuſtoms. In former times the payments to the king were called by the names of danegelt, aid, donum, ſcutage, tallage, &c. and in ſucceeding times, ſubſidy, quinzieme, vintiſme, &c. ſeveral of the former then continuing in uſe.—There were three ſorts of aids due to the crown of common right, or by reaſon of ſeigneury.—Aid to make the king's eldeſt ſon a knight, to marry his eldeſt daughter, and to ranſom his perſon when taken in war. Theſe aids were rendered by all perſons, who held of the king in capite.—All the king's tenants were to pay aid, whether they held of the king immediately, by barony, or knight's ſervice, or by ſerjeantry, with knight's ſervice annexed; and by perſons who held of the king immediately, either by rent ſervice, ſocage, or other ſervice, that was not military, whether they lived on the lands that were ancient demeſn, or on honours and lands eſcheated to the king, and on lands of his wardſhips and purchaſes. King William I. took 6s. of each hide through England, king Henry I. 3s. as aid pur fille marier. But, for want of requiſite notices concerning theſe aids, nothing diſtinctly can be learnt of their produce.

The firſt that gives any inſight into theſe matters, is an aid levied by Henry II. for marriage of his daughter Maud, to the duke of Saxony, namely one mark per fee. It was paid by the ſeveral barons and knights, holding in capite, according to the number of their reſpective fees. For the due levying this aid, the barons and tenants in capite were commanded to certify to the king what fees they had, how many of the old, and how many of the new feoffment, and of whom the ſame were holden.—The fees of the new feoffment were ſmall, and paid by 12s. per fee, when thoſe of the old paid 20s. Several eccleſiaſtical perſons, beſides the aid for their fees rendered a farther ſum, under the terms de promiſſione ſuâ. Madox obſerves the ſame was paid alſo by laics, and therefore thinks, when paid by them it was a donum; and when by eccleſiaſtics, donum prelatorum. The vacant biſhoprics and abbeys of royal foundation rendered aid, being reckoned among the eſcheats. It was alſo paid by the towns and manors, or lands, which the king held in demeſn, and was aſſeſſed by the juſtices itinerant, or with their approbation.

King Richard I. levied an aid for the ranſom of his perſon. It was paid by the tenants in capite, under the name of ſcutage, at the rate of 20s. per fee. Another part of this aid was anſwered at the Exchequer, by the name of hidage, or an aid charged on lands holden by other ſervice, than that of the ſhield. The carucage paid for the ſame ranſom, is alſo called an aid. Henry III. had an aid to make his ſon a knight, 40 s. of every knight's fee. This aid was paid by tenants in capite, and to the king's tenants in capite, by ſuch as ſo held of them, by knight's ſervice. When tenants in capite paid aid to the king, he granted that they might receive aid pro rata of their tenants in capite.—The aid to make a ſon a knight, or for marrying a daughter, was not demandable from lands held either in frankalmoigne or ſocage. Beſides theſe three noted aids, there were others. In the 5th of Stephen an aid was paid to the crown by the burghs and towns. This ſeems to have been a yearly payment. An aid of the like kind was rendered at this time alſo, as it ſeems, by the counties, aſſeſſed by the juſtices itinerant. Richard I. took 5 s. out of every carue, or hide of land, through all England. In proceſs of time the word aid came to be uſed in a large indefinite ſenſe, and there came into uſe a new word, ſubſidium, which was rarely uſed in the more ancient times. A ſubſidy was granted to Edward II. for his war with Scotland. It is called a donum. The city of London paid 2000 marks. Beſides the general aids, or thoſe extending through the whole kingdom, there were certain ones impoſed upon the demeſns, eſcheats, &c. of particular counties and places, for certain purpoſes relating thereto. An aid by way of hidage, was laid on Devon and Cornwall, for the ſiege of the iſle of William de Mariſco. Inferior lords of ſeigneuries had their tenants, the three notable aids, to make his ſon a knight, marry his eldeſt daughter, and to ranſom his perſon. They had alſo of their tenants other occaſional aids, as to enable them to pay their relief for ſeizin, or other fine, and alſo to pay their debts. This was done by the king's letters patent, directed to the tenants. But theſe were only letters of requeſt. For it is provided by king John's charter, that the king ſhould not, for the future, grant leave to take an aid of his freemen, ſave in the three caſes above-mentioned.

As king Richard I. reigned almoſt ten years, it can hardly be doubted but he muſt have coined ſome money in that time, and that it was of the ſame ſort and value as that of his predeceſſors, and of his immediate ſucceſſor. It is reaſonable alſo to think, that the king's long abſence out of England, his expedition to the Holy Land, his captivity, and the large

ſums

ſums paid abroad for his ranſom *, together with his wars in France after his releaſe, muſt have occaſioned great ſcarcity of money at home, and ſmall coinages during all the time of his reign.

* King Richard's ranſom to the emperor, was ſettled at 150,000 marks of ſilver, after the Colonia weight; and of theſe 100,000, being all he could then get raiſed, were carried over by the queen-mother in perſon, and at once paid down before he could obtain his liberty. An immenſe ſum for that age, amounting to no leſs than 194,000l. ſterling of our preſent ſilver money.

King John

Takes a ſeventh part of the moveables of all his ſubjects.—Raiſes two marks and a half on every knight's fee.—Seizes on all the temporalities of the clergy.—Tortures the Jews in order to extort money from them.—Takes an eſcuage of two marks per fee.—Has an aid from the prelates.—Fines the city of London in 1000l.—Lays a tallage upon the Jews of Briſtol.—And lays new exactions upon the people every year of his reign, but three.

REMARKS.

Having ſpoken under the preceding reign, of the revenue ariſing from Aids, we proceed to ſcutages and tallages. Eſcuage, or ſcutage, was a ſervice ariſing out of baronies and knights fees. It denoted the ſervice of the ſhield, and was rendered for every knight's fee, the ſervice of one knight; for every half fee, the ſervice of half a knight; and ſo in proportion. Baronies were charged after the like manner, according to the number of knights fees whereby the barony, by its original enfeoffment, did conſiſt. This ſervice of ſcutage was performed either perſonally in the king's army, or by pecuniary commutation.—Theſe eſcuages, pro exercitu, were wont to be paid by the king's tenants in capite, by knights ſervice.—A man might hold of the king in capite, either by barony or by knights ſervice, or by ſerjeantry, ſocage, or fee-farm; conſequently, it is a miſtake made by ſome great men, that a baron and a tenant in capite was all one: for though every baron, properly ſo called, was a tenant in capite, yet every tenant in capite (there being ſome of half, or quarter, or a tenth part of a knight's fee) was not a baron. The firſt ſcutage, ſays Alexander de Swereford, was aſſeſſed 2 Henry II, for the army of Wales, 20 ſhillings for each knight's fee, and only upon thoſe prelates who were bound to military ſervice.—The ſecond ſcutage, ſays he, was for the ſame, 5 Henry II, but aſſeſſed not only upon the prelates, but others, according to the number of their fees: this ſcutage is intitled de dono. He obſerves, that the donum of the prelates makes a ſum anſwerable to the number of fees held of the king in capite, and therefore a real ſcutage: this was two marks per fee.—In the 18th of Henry II, the eſcuage of Ireland came to be put in charge. To this ſeveral are charged under this title, as the eſcuage of knights who did not go into Ireland, nor ſend any knights or money.

As eſcuage was rendered for fees holden of the king in capite by knights ſervice, ut de corona, ſo it was rendered for fees holden of honours, and eſcheats, which were in the king's hands, and for fees holden of the lands purchaſed by the king, and for fees holden of the king's wards: for the tenants holding of the king's wardſhips and eſcheats, were immediate tenants of the king, whilſt they reſted in him. It is to be underſtood, that in general, eſcuage was paid according to the ſum that was aſſeſſed; ſuppoſe at the rate of one, two, or three marks for each fee. Yet it was ſomething doubtful of how many knights fees a man or his anceſtors were enfeoffed, conſequently, what ſum he was to pay for eſcuage.—This frequently happened in the caſe of eccleſiaſtical perſons, by reaſon of the antiquity of their endowments, ſo that the form of their enfeoffment could not be eaſily known in ſucceeding times, and becauſe it was many times doubtful whether they held ſome of their lands by barony and military ſervice, or in frankalmoigne.—In the caſe of other perſons, ſome honours or baronies conſiſted of more knights fees than others did, and ſome fees were larger than others; inſomuch that it was doubtful, whether a man held by barony, or knight's ſervice, whether by the ſervice of one knight's fee, or of more, or of how many knights fees.—On the other hand, ſome knights fees were remarkably ſmall; ſuch were the fees of the honour of Moreton. As eſcuage was paid out of knights fees, ſo there were alſo ſome ſerjeantries paid the ſame. Eſcuage-money was in lieu of perſonal ſervice: but perſonal ſervice was required more ſtrictly, if not ſolely of the tenants holding by knights ſervice in capite ut de corona.

If the barons and knights holding in capite did not go in perſon with the king in his army, they ſometimes ſent knights in their ſtead, and ſometimes made fine with the king. As the lord who held of the king in capite by knights ſervice, paid eſcuage for his knight's fee, ſo the ſervants of ſuch lord who held the ſame fees by knights ſervice, paid eſcuage to their lord, according to the quantity of their tenure. The tenant paid eſcuage to their lord, to enable him to pay eſcuage to the king, or reimburſe him when he paid it.

Having thus given a general idea of eſcuage, we ſhall briefly ſpeak of Danegeld, which was different from either aid, eſcuage, or tallage. It was firſt ſet on foot in the Anglo-Saxon times: however, it continued many years after the Conqueſt. In the reign of Henry I, in the year 1114, it was paid throughout the kingdom. In Stephen's reign it was accounted for in every county, as if it were a ſettled yearly revenue, which, however, is matter of doubt.—The famous author of the Dialogue concerning the Exchequer, ſeems to have thought it a yearly revenue before, but not after the Conqueſt. It may be traced by the rolls to the reign of Henry II, though it does not appear to be paid in the latter part of his reign, nor in thoſe of Richard I. and John.

Tallage and cuſtom we ſhall deſcribe in the ſucceeding reign.

Pennies, half-pennies, and farthings, were coined by king John in Ireland, where it ſhould ſeem his principal mint was.

King Henry III.

Levies 15 ſcutages, and innumerable other taxes.—Takes a fifteenth of all moveables.—Levies a ſcutage of three marks per fee on all baronies, and a fourth of all moveables.—Seizes the treaſure of his late chief-juſtice Hubert.—Levies a thirtieth of all moveables.—Raiſes 20,000 marks of the Jews at one time, and another heavy ranſom ſoon afterwards; inſomuch that, to omit others, Aaron of York alone paid 4 marks of gold, and 4000 marks of ſilver. The king received the gold of every Jew, whether man or woman, with his own hand; the ſilver was received by others.—He alſo extorted gifts from the abbots and priors, in ſuch manner, that, if what they offered did not pleaſe him, he rejected it, and they were obliged to enhance their offering, rather than incur his diſpleaſure.—Anno Dom. 1244, the lords ſpiritual and temporal (for no mention is yet found of any commons) granted to the king, for marrying of his eldeſt daughter, 20 ſhillings ſcutage of all that hold of the king in capite.—Extorts by his own authority, from the Londoners, 15,000 marks.—Fines all that had incroached upon his foreſts.—Again compels the Londoners to pay 1000 marks tallage, and demands further new years gifts of all the wealthy citizens.—He fines Walter Clifford 1000 marks.—He compels the Londoners again to pay 1000 marks.—The clergy grant the king a tenth of all the church revenues for 13 years, for his journey to the Holy Land.—They again grant him 42,000 marks.—He arbitrarily fines the citizens of London.—Impoſes tallages on the Jews, the one of 20,000, another of 60,000 marks, raiſes an aid for maintaining his eldeſt daughter.—Receives divers ſums for their knights fees, of ſeveral biſhops.—Has a vintiſme granted him.—Has an aid to marry his ſiſter.—Likewiſe another to make his ſon a knight.—Levies a ſcutage of two marks upon each knight's fee.—Has two ſhillings on every carucate in England.—Levies a tax of the fifteenth of all moveables and chattels.—Levies the ſame again the enſuing year.—Again extorts from the Jews a third of all they have.—Compels the Jews again to ranſom themſelves at 20,000 marks.—Takes a tenth of all the church revenues for three years.—Takes away forcibly the money depoſited at Durham.—The Londoners again compelled to purchaſe their peace, at the price of 20,000 marks.—A thirtieth penny levied through all England, for the prince's expedition to the Holy Land.

REMARKS.

There were two ſorts of tallage, one paid to the king, the other to a ſubordinate lord. That raiſed to the king was on his demeſns, eſcheats, and wardſhips, and on the burghs and towns of the realm. When it was paid out of knights fees, it was ſcutage; when by towns and burghs, tallage; when out of lands not of military tenure, it ſignified hidage. So that the general word donum ſignified, according as it was applied, either aid, ſcutage, or tallage.

Tallage was called aſſiſſa, as well as donum, the former ſignifying, among other things, an aſſeſſment. Thoſe manors were properly talliable to the king which he had of his own hands. Hence tallages are ſtiled, commonly, Tallagies maneriorum & terrarum regis quæ tunc erant in manu ejus, Tallagi à dominicorum, and the like. Under the terms Quæ erant in manu ejus, were comprehended the king's eſcheats and wardſhips, the king holding them tanquam in dominico. In fact, the king's eſcheats and wardſhips were wont to be tallaged, when tallage was aſſeſſed upon his demeſns. Some ſerjeantries, alſo, of an inferior kind, and ſuch as had no military ſervice annexed to them, were wont to be tallaged with the king's demeſns; but the king's ſerjeantries were not to be tallaged without a ſpecial precept. Thoſe who were not the king's immediate tenants were tallageable, not to the king, but to their immediate lord. When a town was tallaged, the ſame was raiſed upon the men of the town who belonged to the gild, and made merchandize in the town. If the king granted away a demeſn manor or town (that was wont to be tallaged) una cum tallagiis hominum, then ſuch manor or town became tallageable to the grantee.

To the head of tallage (or to that of aid) may be referred the none, diſme, quinzime, vintiſme, trentiſme; which were ſo

called from the quantity or proportion of the payment, as their names import. The form of taxes, and levying the nones, &c. with the oaths taken by the taxers, and the commiſſions of the collectors, are to be ſeen upon the revenue-rolls. In theſecaſes, the goods of the chief taxers were to be taxed by the treaſurer and barons of the Exchequer, and the robes and ſociates of the citizens and burgeſſes were not uſually taxed with their other goods and moveables. Tallage was wont to be aſſeſſed upon the men of the demeſns and towns, ſometimes in groſs, in communi; ſometimes by poll, per capita, or per ſingulos; at other times partly one of thoſe ways, and partly the other. If the aſſeſſors of tallage overrated any man, he uſed to obtain a writ formed upon his caſe, directed to the barons of the Exchequer, who, by virtue thereof, would relieve him, according to equity. Sometimes men were admitted to compound for the tallage impoſed on them, by a fine to the king. As the king had tallage of his demeſn-men, ſo ſome ſubordinate lords had tallage of theirs. Theſe latter tallages were moſt ſeigneurial. — As the king had divers ways of raiſing money upon his demeſn-men, ſo inferior lords dealt with their demeſn-men after the like manner.

We proceed to the revenue ariſing by cuſtoms.—It was anciently called conſuetudo & cuſtuma: the former ſignified regal, epiſcopal, and other eccleſiaſtical dues, or payments, and exactions of many kinds. There was a cuſtom or duty paid to the king for wines, called priſa, and recta priſa: the proportion was one dolium before the maſt, and another behind it. Priſe, indeed, ſometimes ſignified captures taken in war, ſometimes for purveyance, impoſt, or capture of other kinds. In ancient times, the duty for wines called priſa, was received for the king's uſe by divers officers. Beſides the cuſtom paid the king for wines, there were other duties payable to him by merchants, or traders, for their merchandizes imported or exported, and for commodities conveyed along the river Thames. The duties paid by merchants were anciently called diſme, quinzime, &c. the duty paid for trafficking along the Thames, at leaſt one ſort of that duty, was called avalagium Thamiſiæ. In the 6th of king John, William de Wroteham, and others, accounted for the quinzime of merchants at the ſeveral ports of England, except Len. The quinzime of London was 836 l. &c. of Boſton, 780 l. &c. of Len, 651 l. &c. of Southampton, 712 l. &c. Avalage was a ſort of toll. To theſe may be added, the duties paid to the king's chamberlain of London, for his uſe, the duties ariſing at Billingſgate, and by tonnage, &c. The 9th of Henry III, Andrew Buckeral and John Travers had Ripa Reginæ, or Queen-Hithe, in ferm, at 40 l. per annum. In proceſs of time, the king's cuſtoms came to be generally called cuſtuma. The 26th of Edward I, there was payable to the king for cuſtoms, for every ſack of wool exported from Len, half a mark, for every 300 pelles lanutæ half a mark, and for every laſt of leather one mark. Cuſtomers were appointed for Len, and other parts, as Newcaſtle, Kingſton upon Hull, Briſtol, London, &c. If merchants defrauded the king of his cuſtoms, they forfeited their goods uncuſtomed.—The VIIth branch of the royal revenue was the caſual revenue, which accrued to the king ſeveral ways: of this ſort were treaſure-trove, waif, wreck, chattels of fugitives and felons, of outlaws, uſurers, recreants, perſons executed, &c. The king had, in ſome caſes, the lands of perſons condemned, for a year and a day after condemnation. If felons died after the fact, and before conviction, his chattels were not, by the common law, forfeited to the king. By the ancient revenue-rolls it appears, that, in thoſe times, many branches of the king's revenue were charged with alms for pious uſes; to which may be added the decimæ conſtitutæ. Theſe the accountant conſtantly paid out of the revenue. Divers orders of monks had theſe yearly alms, or decimæ. Several penſions alſo were wont to be paid to certain of the king's ſervants, when diſabled by age or ſickneſs, viz. a penny, three halfpence, two pence a day.

When perſons made fine to the king, they paid to the queen, beſides, a duty called aurum reginæ, which her majeſty ſometimes reſpited, or diſcharged the debt, at pleaſure: for every 100 marks paid the king, the queen had one more of gold.

Having thus touched upon the ſeveral branches of the royal revenue, we ſhall conclude this reign with a ſuccinct account of the exchequer of the Jews. The king of England was wont to draw a conſiderable revenue from theſe people reſiding in this realm, by tallage, and fines relating to law-proceedings, by amerciaments for miſdemeanors, and by fines, ranſoms, compoſitions, which they were forced to pay for the king's protection, for licence to trade, for diſcharges, for impriſonment, and the like. He would tallage the whole body at pleaſure, and compel them to anſwer the tallage for one another. The king ſeemed to be abſolute lord of their eſtates and effects, of their perſons, their wives and children. They were a numerous body (being ſettled chiefly in the great towns of the realm) and by traffic, uſury, and mortgages, they became very wealthy, both in money and land; but, as they fleeced the ſubjects, ſo the king fleeced them. The place appointed for the management of the revenue of Judaiſm, was a part of the great Exchequer, where they had their records, wherein the writs and proceedings of the Judaiſm were entered; and ſummonſes were iſſued out of the exchequer of the Jews for the king's debts, like as out of the great Exchequer. There was alſo a wardrobe of the Judaiſm, near the exchequer of the Jews. Certain perſons were aſſigned to be curators of this revenue, who were uſually ſtiled cuſtodes & juſticiari Judæorum. The Jewiſh charters, as thoſe of other men, were called chartæ and chirographa; ſome of which were a kind of releaſes, others obligations to the Jews by others. The chirographers were, in ancient times, commonly Chriſtians and Jews, acting together, though afterwards Chriſtians only, and were planted in towns where there was a conſiderable number of Jews, as at London, Oxford, &c. If a charter made to a Jew was loſt, or could not be found in the cheſt at the Exchequer, it was uſual for the Jew to whom it was made, when he was ſatisfied the money was due upon it, to make an acknowlegement in the Exchequer, by way of releaſe to the party. The having one part of the Jewiſh chirographs depoſited in the king's treaſury, was chiefly to prevent the falſity of the Jews, and to enable the king to recover the eſtates and credits of the Jews, and to get them into his coffers, whenever they ſhould become, as they often did, forfeited, or devolute to the crown.

By the aſſize of the Judaiſm, the Jews might have a moiety of the lands, rents, and chattels of their Chriſtian creditors in execution, 'till they were ſatisfied for the debt due to them. The Jews paid relief for their lands and for their chattels. A Jew's wife might have dower, or thirds, out of her huſband's credits and chattels. In the 37th of Henry III. it was provided, that no Jews ſhould remain in England without doing the king ſome ſervice: that there ſhould be no ſchool for Jews in England, except in places where ſuch ſchools were wont to be in king John's reign: that every Jew ſhould be anſwerable to the rector of his pariſh for all parochial dues chargeable on his houſe: that no Chriſtian ſhould ſuckle the child of a Jew, nor any Chriſtian man or woman ſerve any Jew or Jeweſs, nor eat with them, or abide in their houſe: that no Jew ſhould have ſecret familiarity with a Chriſtian woman, nor any Chriſtian man with a Jeweſs: that no Jew or Jeweſs ſhould eat or buy fiſh in Lent: that every Jew ſhould wear a badge upon his breaſt: that no Jew ſhould enter into any church or chapel, unleſs in paſſing to and fro: that no Jew ſhould hinder another, who was willing to turn Chriſtian: and that no Jew ſhould be ſuffered to abide in any town without the king's licence, except in ſuch where Jews were formerly wont to reſide.—Theſe articles were to be obſerved by the Jews, under pain of forfeiting their goods. Clauſe 77 Hen. III. m. 18.

Though the exchequer of the Jews was, to ſome purpoſes, diſtinct from the great Exchequer, yet both the exchequer of the Jews, and the acts and proceedings of the juſtices and chirographers of the Jews, were ſubject to the controul of the chief juſticiary, and treaſurer and baron of the Exchequer. The debts due from Chriſtians to Jews were ſubject to ſuch orders as the king thought fit to make. Sometimes the king would grant reſpite for the payment of ſuch debts, and ſometimes would diſcharge the debts thereof. In general, the king was wont to uſe the Jews with great ſeverity when refractory, and ſhewed them favour when obedient.

King John, in the ſecond year of his reign, granted a charter of liberties to the Jews of England and Normandy, which the curious reader may ſee in Madox's Hiſtory of the Exchequer, page 74. Henry III, for the ſupport of ſuch Jews as embraced the Chriſtian religion, and were deſtitute of livelihood, founded a houſe at London, called Domus Convenorum, and endowed it with a competent revenue.

Although the Jews were permitted to ſettle in ſeveral populous towns, they were not welcome to the inhabitants. In the year 1290 (18 Edward I.) the growing or renewing revenue of Judaiſm, and the exchequer of the Jews, ceaſed, the Jews being, about that time, expelled out of England; but, by their expulſion, many eſcheats, both of lands and chattels, came into the king's hands.

King Edward I.

Edward, Henry IIId's ſon, ſucceeding to the crown, impoſed the firſt year a tallage per capita, appointing commiſſioners to ſee it levied.—The next he took a tenth from the clergy, exiling all uſurers, under confiſcation of goods, and corporal impriſonment. —Of the Jews he levied for tallage 5000 marks, the year ſucceeding.—In the fourth year he taxed his ſubjects at one fifteenth, and the Jews at 5 d. per head a tallage.—A tallage through Wales he aſſeſſed the ſixth year, and 40 s. ſcutage the next. Communia 7 Edward I, 40 s. he took of every knight's fee.—On the Jews he again impoſed 12,000 marks for redemption of their uſury.—The next year he ſearched all the religious houſes, and took to his uſe the money and plate.—The lords by themſelves, without the commons, aſſeſſed for the king, the 18th year, ſuch a levy as king Henry III. raiſed for marriage of his daughter.—In the 12th the king charges the clergy with a tenth, for ſix

ſucceeding years.—The abbies are again ſearched in the 22d, and the lands of the priors aliens ſeized into the king's hands. —The nobility grant him the fifteenth penny.—The Jews are obliged to pay yearly 3d. poll-money.—A tenth is granted throughout England, for the relief of the Holy Land.—He forces Lewellyn, prince of Wales, to buy his peace at 50,000l. in ſilver, and 1000 marks a year.—Takes 40s. upon each fee ſcutage.—Quits all claim to Normandy for 30 Pariſian livres a year, &c.—A fifteenth of ſpiritual goods are granted to him by the clergy.—He takes up money by way of loan, for his war againſt the Welch.—He takes 50 marks for each knight's ſervice.—Has the thirtieth penny granted by the people, upon all moveables, horſes, armour, treaſure, and apparel excepted.—Seizes on the treaſure granted for relief of the Holy Land.—Takes 40s. ſcutage upon every knight's fee.—Impriſons all the Jews 'till they pay him 12,000l. Seizes on all the money depoſited in monaſteries.—Has an aid granted him for his wars in Gaſcony.—Has a tenth of all ſpiritual profits granted for one year.—The fifteenth penny granted for expelling the Jews.—A fifteenth of all goods granted for the relief of the Holy Land.—The tenth of all the temporals of religious perſons granted by the pope.—The fifteenth of all temporals and ſpirituals granted.—Cauſes all the money in monaſteries to be brought to London, &c. —Seizes into his hands all religious houſes that were ſubordinate to foreign chapters.—Compels all the Engliſh prelates to pay him half of their ſpiritualities and temporalities.—The laity grant him a tenth of all their goods.—The biſhop of Bath and Wells obliged to buy his peace, by paying 2000l. —Receives the ſeventh penny of his boroughs and demeſns, for carrying on his wars.—The common ſort of the laity grant him the twelfth penny of their eſtates, and the burgeſſes the ſeventh penny.—The clergy refuſe him any aid, on pretence of an order from the pope to the contrary.—He ſeizes the temporalities of the clergy.—They grant him a tenth of their ſpiritualities and temporalities the next year. Has the fifteenth penny granted by the laity, for ſealing Magna Charta.—Has the thirtieth penny granted by the clergy and laity.—Has a ſubſidy of a twentieth granted to him. —Has a thirtieth granted by the laity, and a twentieth by the clergy.—Baniſhes the Jews, and ſeizes their effects.—Receives the ninth penny of the people, the tenth of the clergy of the province of Canterbury, and the fifth of thoſe of York, for confirming MAGNA CHARTA and CHARTA FORESTA.—Receives divers advantages from certain ſilver mines found in Devonſhire.

REMARKS.

The reader is to obſerve, that the hiſtory of the royal revenue under the foregoing reigns is all matter of fact, taken from the revenue-rolls, and other records, and confirmed by Mr Madox, in his Hiſtory of the Exchequer, and other good authorities.

The Exchequer was a court greatly concerned in the conſervation of the prerogatives, as well as of the revenue of the crown. The authority and dignity of this court was eſteemed ſo great, that the acts thereof were not to be examined or controuled in any other of the king's ordinary courts of juſtice. The Exchequer was a great repoſitory of the king's records. Edward I. is ſuppoſed to be the firſt of our kings that perfectly fixed the ſtandard of our coin. In the third year of his reign, the matter was thus ordered by Gregory Rockley, then mayor of London, and mint-maſter, That in a pound of money there ſhould be 11 two-pence farthings, pure leaf-ſilver, and only ſeventeen pence half-penny farthing allay; and this pound was to weigh 20 ſhillings and three-pence in account, each ounce two-pence, and every penny 24 grains and a half.

In 28 Edward I. an indented trial-piece, of the goodneſs of old ſterling, was lodged in the Exchequer; and every pound weight Troy of ſuch ſilver was to be ſhorn at 20 ſhillings and three-pence; according to which, the value of the ſilver in the coin was one ſhilling and eight-pence farthing an ounce. The king ſent for foreign mint-maſters, in the 18th year of his reign, to inform him of the manner of making and forging money. For the coining this money, the mint-maſters had 30 furnaces in London, eight at Canterbury (beſides three the archbiſhop had there) 12 at Briſtol, 12 at York, and more in other great towns; in all which places the ſame hammered money of ſilver, ſupplied by the king's changers, who, according to certain rites preſcribed them, took in the clipped, rounded, and counterfeited monies, to be recoined, and bought gold and ſilver of the merchants, to be fabricated into new monies; at the ſame time it was ordained, 'Quod 'proclametur per totum regnum quod nulla fiat tonſura de 'nova moneta ſub periculo vitæ & membrorum, & amiſſi-'onis omnium terrarum & tenementorum, &c.'

This hammered money continued through all the reigns of ſucceeding kings and queens, 'till about the year 1663. There are no indentures with the mint-maſters, by which one can certainly judge of the proportion of the fineneſs and alloy, to be obſerved in the fabrication of the monies 'till the reign of Edward III, as will be ſeen hereafter.

The pennies, half-pennies, and farthings of Edward the 1ſt are pretty common.—In his 7th year he made a great reformation in the money, and ſeveral new regulations, as we have ſeen, for the better trying and preſerving of his coin. It was now made more uniform than it had been, the names of the ſeveral monies were omitted, and only the name of the town or city where coined, preſerved on the reverſe.—In his 28th year, as obſerved, an indented trial-piece, of the goodneſs of the old ſtandard, was lodged in the Exchequer; and every pound weight of the Tower of ſuch ſilver was then to be ſhorn at 20 ſhillings and three-pence; whereby the weight of the penny was to be ſomewhat leſs than 22 Troy grains and a quarter, and 240 ſuch pennies of full weight, making 20 ſhillings, or a pound ſterling in tale, were to contain as much ſilver as, in our preſent coin, is of the value of 57 s. 5 d. nearly. See a table of Engliſh ſilver coins, by Martin Folkes, Eſq; 1745.

KING EDWARD II.

Has two ſubſidies granted him.—Impoſes two ſhillings over and above the ancient cuſtom.—Has a tenth granted him by the pope of church revenues for one year.—Has a great ſubſidy granted him by the temporality, and 5 d. in the mark of the clergy of the province of Canterbury, and 4d. of thoſe of York.

REMARKS.

The further account of the buſineſs of the Exchequer may be diſpoſed under three general heads: 1. Affairs of the revenue. 2. Cauſes. 3. Buſineſs of various kinds. Under the firſt of theſe may be included fines impoſed of divers kinds, and amerciaments. It was the buſineſs of the treaſurer and barons to ſpeed the levying and getting in the king's debts, and manage the crown revenue to the beſt advantage.—Under the ſecond head we take in pleas and cauſes. After the ſeparation of the Common Pleas from the king's court, it was forbidden, by the great charter, and a ſubſequent ordinance, to hold common pleas in the Exchequer: yet ſome were, and the king gave leave ſometimes for particular perſons to bring their ſuits there; in which the king granted preference to one perſon, that he ſhould be paid, in the adjudication, before other creditors. Under the third head, of buſineſs of various kinds, may be placed conventions and recognitions made in the Exchequer, and the admiſſion of officers. See Madox for theſe particulars.

We come now to the accounts of the Exchequer. As the ſheriffs were the moſt conſiderable accountants to the crown, the method of accounts at the Exchequer may be beſt learned from them. The ſheriffs generally accounted from Michaelmas to Michaelmas. Edward I. ordered, that the ſheriffs ſhould be eſcheators in their reſpective counties; the ſtated accounts were rendered regularly in courſe every year. In general, accountants were obliged to come in perſon, to render their accounts; if by attorney, it was by the king's leave, and afterwards by warrant from the treaſurer, chancellor, or barons, or one of them. Accounts were rendered upon oath, or by their faith or allegiance. Where one was indebted to the king, and alſo to another perſon, the former was to be preferred in payment. No debtor to the crown could make a will, to diſpoſe of his chattels to the king's prejudice.—If doubtful whether the deceaſed's effects would ſatisfy the crown debt, the king ſeized the chattels.—If the debtor was unable to ſatisfy the debt, the king betook himſelf to thoſe who were indebted to his debtor. The heir of the king's debtor was not to be diſtrained for the debt, in caſe the chattels of the debtor were ſufficient to anſwer it.—The widow of the king's debtor was not to be diſtrained by her dower, to anſwer the debt, in caſe the heir could anſwer it: neither were ſureties to be diſtrained, ſo long as the principal debtor had wherewithal to anſwer the debt.—By ancient uſage the king's debtors, or accountants, were wont to have writs of aid to recover debts of ſuch as were indebted to them, to enable them to anſwer the king's debts.

If an accountant did not render his accounts, or in due manner, he was puniſhed by ſeizure of land, and amerciament, or committed to the Marſhal or Fleet Priſon, or the Tower of London.—When the Chancery was ſeparated from the Exchequer, and the charters, writs, and precepts of the great ſeal came to be entered by themſelves in the charter-rolls, patent-rolls, &c. about the beginning of king John's reign, then commenced the method of ſending eſtreats from the Chancery to the Exchequer. If theſe eſtreats were not brought in due time, writs were iſſued to the perſons or juſtices before whom they lay, to bring them in.

Tallies were of a great and conſtant uſe in the Exchequer: the word is French, and ſignifies cutting. Theſe tallies were pieces of wood, cut in correſpondency. A ſtick, or rod of hazel, or other wood, well ſeaſoned, was cut ſquare and uniform at each end; and in the ſhaft, the ſum of money which it bore was cut in notches in the wood, by the tally-cutter, and likewiſe written upon two ſides of it. The tally was cleft in the middle by the deputy chamberlains, thro' the ſhaft and the notches: a notch of ſuch a largeneſs ſignified

fied Ml. of another largeneſs Cl. &c. It being thus divided, one part of it was called a tally; the other a counter-tally, or a tally and a foil: however, theſe were in effect one tally, or two parts of one thing: and, if they were genuine, they fitted exactly: their uſe was to prevent fraud: they had a ſuperſcription for what purpoſe given.

Counters were ſometimes uſed at the Exchequer, in the way of computation: in which caſe they were laid in rows upon the ſeveral diſtinctures of the chequered cloth, viz. one row for pounds, another for ſhillings, &c.

The principal officers of the ſuperior Exchequer were, the two remembrancers, the engroſſers of the great roll, the uſher, the conſtable, the marſhal, the auditors, the clerks of the eſtreats. See Madox for a deſcription of their reſpective duties.—We ſhall conclude with a few inſtances only of the allowance made to ſeveral miniſters of the receipt of Exchequer for their liveries and corrodies, and other neceſſaries. In 9 Hen. III. the liveries of the miniſters of the Exchequer for fourſcore days, from the feaſt of St Michael, 'till Monday next after the feaſt of St Lucius, were: to three ſcribes, c *s.* to the two knights of the chamberlains, viii marks; to John de Windeſore, iiii *l.* to John the fuſor, or melter, ii marks and a half; to Simon Druel, ii marks and a half; to the four tellers, iiii *l.* to the vigil, and for light, x *s.* for a hutch to lay up the memoranda, vii *d.* for rods for the tallies, v *s.* for parchment for the uſe of the chamberlains, and the chief-juſtice's clerk, iiii *s.* for ink, during the whole year, iii *s.* for litter for the chamber of the barons, and houſe of receipt, xii *d.* for neceſſaries for the ſaid chambers, xx *d.* for ten dozen of hutches, xx *s.* for wax, ii *s.* for leather for the tallies, ix *d.* for a hutch to put the inquiſitions in, ii *d.* for the marſhal's hutch, xii *d.* for a ſack to put the allowed tallies in, xiiii *d.* for carrying and recarrying the hutches, v *s.* for a tonel to put in the d marks, ſent to the king at Oxford by R. biſhop of Chicheſter, xii *d.* for locks, bolts, and other ſmall expences, iiii *s.* Total, xxiv *l.* xiii *s.* viii *d.* Ex pelle receptæ de anno 9 Hen. III. Rot. ult. indorſo pen. Theſ. & Camer.

King Edward the IId's pennies, halfpennies, and farthings, were the ſame with thoſe of the king his father, and are not with certainty to be diſtinguiſhed from them. The common opinion, which gives thoſe pieces with EDW. to the firſt Edward, and all thoſe with EDWA. or EDWAR. to the ſecond, is at moſt but a probable conjecture; and ſhould it be allowed that all thoſe of the firſt ſort, which are by far the moſt plentiful, were really ſtruck by the firſt king of the name, who certainly coined a great deal more money than his ſon, we ſhould ſtill be at a loſs for arguments to prove, that he did not coin ſome of the others alſo: to which I ſhall only add, that I have ſeen ſome of theſe pennies of the laſt ſort, upon which the letters were braced into one another, much like thoſe on the pennies of king Henry III. and which therefore ſeem to have been minted but little after his time.

King Edward III.

Impoſes tallage through all his domains.—The people grant him the fifteenth penny, and the cities, boroughs, and clergy, one tenth.—Has 40 s. of Engliſh merchants for every ſack of wool, and 60 s. of ſtrangers.—Seizes on all the effects of the merchants of Lombardy, then in London.—The laity grant him one half of their wool.—The lords in parliament grant him the tenth ſheaf of corn of their demeſns, the tenth fleece of wool, and the tenth lamb for two years.—The commons give him 30,000 ſacks of wool.—The parliament grant him the ninth of all grain, of wool, and of lambs.—They again confirm the ſaid grant.—The clergy grant him a diſme for three years.—Two fifteenths given him, and 40 s. of every knight's fee.—The parliament grants three fifteenths, to be paid in three years.—Has the ſubſidy of wool granted for three years.—The ſame granted for ſix years, at 50 s. the ſack.—They grant 26 s. 8 d. for three years on every ſack of wool.—They grant 36 s. 8 d. for two years on every wool-pack.—They grant 43 s. 4 d. for three years, &c.—The king ſeizes the lands of religious aliens.—The clergy grant him 50,000 l. and the laity as much.—Has two fifteenths granted him.—The parliament again grant the ſubſidy of wool for three years.—The lords and commons grant him a poll-tax, of 4 d. per head for every one above 15, beggars excepted.—The king borrows great ſums of the clergy, and of every county in England.

REMARKS.

By a charter-mint to the abbot of Reading, it ſeems that there was not any greater piece of money coined, 'till after the 12th year of Edward III. than a penny. The firſt pennies, halfpennies, and farthings, of king Edward III. were the ſame as thoſe coined by his grandfather and his father; and we know of no alteration that he made in the coin, 'till his 18th year, when 22 s. 2 d. and his 20th year, when 22 s. 6 d. were ordered to be coined out of the pound Tower of old ſterling ſilver; by which laſt regulation the weight of the penny was brought down to 20 Troy grains, and the pound ſterling or 240 ſuch pence of full weight, contained as much ſilver as is now coined into 51 s. and 8 d.

In the 27th year of this king, were firſt coined groſſes or groats, running for four pence each, with half groſſes, and ſterlings or pennies, 75 of thoſe groſſes being coined out of the pound Tower: from whence the weight of the groſſe appears to have been 72 Troy grains; and the ſilver contained in 20 s. or in 60 ſuch groſſes of full weight, was the ſame in quantity, as what is now contained in 46 s. and 6 d. of our preſent money.

King Richard II.

Has two tenths granted him for one year.—Has a mark granted him on every ſack of wool for one year.—Has a ſubſidy granted him to be laid on the great men of the land, that the commons might be ſpared.—Has another ſubſidy granted him,—and another, which occaſions Wat Tyler's rebellion.—Has 2 s. granted him upon every ton of wine.—Has a ſubſidy granted him by the merchants.—Has a moiety of one fifteenth granted him by the temporality, and ſoon after a moiety of a tenth by the clergy.—Has another half of one fifteenth of the laity, and a half of one tenth of the clergy.—Has one tenth of the clergy, and one fifteenth of the laity.—The parliament gives him 40 s. on every ſack of wool.—One half of one tenth, and half of one fifteenth, given to defray the charges of an embaſſy.—The king would borrow 100000 l. of the Londoners, but was refuſed.—Again half of one tenth and half of one fifteenth given to defray the charges of an embaſſy.—The clergy give the king one tenth conditionally.—The clergy again give a tenth, and the laity one fifteenth.—The king obtains half of one tenth of the clergy.—Borrows great ſums of the chief of the clergy, and the laity.—Two fifteenths and two tenths granted him.—A ſubſidy of wools and ſtaple were granted him.—Another ſubſidy granted him.—One fifteenth and a half granted out of cities, &c. and a diſme and a half within.—The ſubſidy of wools and ſtaple wares again granted conditionally.—One fifteenth and one tenth granted by the lords and commons.—The ſame granted by the laity.—Two fifteenths granted conditionally.—Half of one tenth, and half of one fifteenth granted.—A ſubſidy of wool-ſkins, wool-fells, &c. granted.—Subſidies granted for three years conditionally.—A diſme, and half, and one fifteenth and a half, granted conditionally.—A ſubſidy granted for three years, with half a diſme, and half a fifteenth.—The lords and commons grant the king a ſubſidy of all ſtaple ware during life, with one diſme and a half, and one fifteenth and a half.

REMARKS.

In the 18th of Richard II. a pound weight of gold of the old ſtandard was to make by tale 45 nobles, amounting to 15 l. or a proportionable number of half or quarter nobles: and a pound weight of ſilver of the old ſterling, to make by tale 75 groſſes or groats, amounting to 25 s. or 150 half groſſes, or two pence a-piece, or 300 ſterlings at a penny a-piece, or 600 half ſterlings: he coined groſſes, half groſſes, ſterlings, and half ſterlings, together with farthings alſo.

King Henry IV.

Receives an aid of the moiety of all fees, &c.—Receives ſubſidies for kerſies.—The lords and commons grant one diſme, and one fifteenth, &c.—A ſubſidy of wools, &c. granted for three years.—Two diſmes, and two fifteenths, &c. granted conditionally.—One diſme and one fifteenth, &c. granted conditionally.—One diſme and half, with one fifteenth, &c. granted conditionally.—The ſame ſubſidies granted again conditionally.—The king receives a tenth of the clergy.—He receives a ſubſidy of 20 s. on every knight's fee.—Exacts half a mark of every ſtipendiary prieſt and friar mendicant.—Impoſes tonnage and poundage every year of his reign but two.

REMARKS.

Henry the IVth coined groſſes, half groſſes, ſterlings, and half ſterlings, or mailes; the ſame as thoſe of his predeceſſor, as alſo farthings. By an act of parliament in his third year, it was ordered, 'That one third part of the money of 'ſilver that ſhould be brought to the bullion ſhould be made 'into halfpennies and farthings:' and by another act in his 13th year, it was directed, 'That by reaſon of the great 'ſcarcity of money at that time in the realm of England, 'the pound Tower might from the feaſt of Eaſter then next 'following be coined into 30 s. by tale.' By which regulation the weight of the groat was brought down to 60 Troy grains, and the pound ſterling, conſiſting of 60 ſuch groats, was to contain ſo much ſilver only, as in our preſent coined money is of the value of 38 s. and 9 d.

This new money being of the ſame weight as that of the two following reigns, is probably ſo blended amongſt it, as not to be now diſtinguiſhed: nor are we indeed certain, that we rightly know the coins of Henry V. and Henry VI. from each other.

Henry IV. by the indenture of his third year, contracted, That

That a pound weight of gold of the old ſtandard was to make by tale 45 nobles, amounting to 15 l. or a proportionable number of half or quarter nobles: and a pound weight of ſilver of the old ſterling, to make by tale 75 groſſes, or groats, amounting to 25 s. or 150 half groſſes, going for two pence a-piece; or 300 ſterlings, going for pence a-piece; or 600 half ſterlings, or halfpence, called here mailes.

King Henry V.

Receives tonnage and poundage all his life.—Has a ſubſidy granted him.—Has two tenths granted by the clergy.—Has another tenth granted by the clergy, and a fifteenth by the laity.—Has ſix times whole tenths and fifteenths.—Has two tenths from the clergy, and one from the laity.—Pawns his jewels, even thoſe of the crown.

REMARKS.

King Henry V. and VI. coined groſſes, half groſſes, ſterlings, mailes, and farthings; the ſame as the laſt of king Henry IV. the groſſes weighing, as has been before ſaid, 60 Troy grains each.

In the 9th of Henry V. a pound weight of gold of the old ſtandard, was to make by tale 50 nobles, or 100 half nobles, or 200 quarter nobles, amounting to 16 l. 13 s. and 14 d. in tale. And a pound weight of the ſame old ſtandard, was to make by tale, 90 groſſes or groats, or 180 half groats, or 360 ſterlings, or 720 mailes, or 1440 farthings, amounting to 30 s.

King Henry VI.

Receives a ſubſidy of ſtaple ware, with tonnage and poundage, &c.—He again receives tonnage and poundage.—Has one tenth and one fifteenth.—Again, he has one tenth and one fifteenth, and one third part of both.—Has half one tenth, and half of one fifteenth granted.—A ſubſidy of 6 d. in the pound on all lands and offices.—Alſo one tenth and one fifteenth and a half.—One tenth and a half of one fifteenth, excepting 2000 l. to certain poor towns; and the ſame excepting 6000 l. to relieve certain waſted towns.—A ſubſidy of wools granted, 33 s. 4 d. the ſack of denizens, and 53 s. 4 d. of aliens.—Half of one tenth, and half of one fifteenth of the laity, &c.—A ſubſidy of 12 d. in the pound on all freeholds, copyholds, and offices, under 2000 l. and 2 s. for all above the ſum.—One tenth and one fifteenth, with tonnage and poundage, and a ſubſidy of wools, &c. during the king's life.

REMARKS.

In the firſt year of Henry VI. a pound weight of gold of the old ſtandard, was coined into 45 rials of 10 s. or a proportionable number of half rials, and quarters, or farthing rials, at 5 s. and 2 s. 6 d. By the ſame indenture, inſtead of nobles and half nobles, were coined 67½ to the pound, angels, at 6 s. 8 d. or a proportionable number of angelets, at 3 s. 4 d. Conſequently, the pound Troy was coined into 22 l. 10 s. by tale.—By the indenture of the ſame firſt year of Henry VI. the ſilver money was of the old ſtandard, 112 groats to the pound, making in tale 37 s. 6 d. as a proportionable number of half groats, ſterlings, halfpence, and farthings.—They were moſt coined at London, but there were other mints at York, Briſtol, and Dunwich, Dublin, Canterbury, and at York, with the keys.—By indenture, the 4th of this reign, the value of gold was brought down again to 16 l. 13 s. 4 d. and the ſilver to 30 s.—By another indenture of the laſt year of this reign, it was raiſed again to 37 s. 6 d. and ſo continued for near 50 years.

King Edward IV.

Reſumes the grants of former kings.—Gains an immenſe ſum by attainders.—Has an aid of 3700 l. granted out of counties, cities, &c.—Has two tenths and two fifteenths from the laity, except 12,000 l.—Has another tenth and fifteenth, except 6000 l.—Has a tenth and one fifteenth, and 51,117 l. for the pay of archers, &c.—Has a tenth and one fifteenth of the laity, except 6000 l.---Has a yearly ſubſidy upon all ſtrangers, granted by parliament.---Has a benevolence of the clergy, and another of his people.

REMARKS.

By an indenture of the 4th of Edward IV. a pound weight of gold of the old ſtandard, was to make by tale 20 l. 16 s. 8 d. and a pound weight of ſilver old ſterling, was to make 37 s. 6 d. By other indentures of the 5th, 8th, 11th, 16th, and 22d of the ſame king, a pound weight of gold of the old ſtandard, was to make 45 nobles, going for 10 s. a piece, or 90 half nobles, or 180 quarter nobles, or 67½ of the pieces impreſſed with angels, going for 6 s. 8 d. each, and conſequently was coined into 22 l. 10 s. by tale; and the ſilver monies were ſhorn at 37 s. 6 d. the pound weight Troy.

King Edward V.

Has no taxes raiſed in his name.

King Richard III.

Levies but one tax, which was a tenth, granted by the clergy of both provinces.

REMARKS.

That Richard III. coined money, appears by an indenture, whereby he contracts for the coinage both of gold and ſilver, of the ſame value and denomination with the money of the 5th of Edward IV.

King Henry VII.

Reſumes the grants of moſt offices made by Richard III.---Aſſeſſes one aid upon land.---Has the one tenth penny out of goods and lands.---Has three tenths and five fifteenths, beſides one tenth and one fifteenth, ariſing to 120,000 l.---Takes three ſubſidies, whereof the laſt was not above 36,000 l. and one benevolence, the proportion of every alderman being 300 l. and the entire ſum of the city of London 9688 l. 17 s. 4 d.---Has twice the tenth of the clergy, and 25,000 l. by way of ſubſidy, and of them and the commons two loans, the city of London rated at 6000 l. the other not definite in proportion, but ſo aſſeſſed as the commiſſioners and the lenders could agree.—Has two tenths and one fifteenth, and a ſubſidy.---Advances the tonnage to 3 s. and the poundage to 12 d.---Has a voluntary gift * of all his ſubjects in his 7th year, and impoſes an aid at the pope's requeſt.---Raiſes an immenſe ſum, by putting the penal † laws in execution.

* The way of free-gift, or benevolence, we have ſeen practiſed before, and particularly by king Edward IV; and though it appears, as it were, voluntary, yet it always carried with it ſome ſort of compulſion, either through fear of being ill looked upon, and the more ſeverely treated upon any occaſion that ſhould offer, or in hopes of finding favour in preſenſion; for fear and hope are the two prevailing inducements to do thoſe things, which otherwiſe we are not inclined to. Many at this time were very generous in ſupplying the crown at the expence of others, not out of any affection, or becauſe they thought it neceſſary, but becauſe they were, in ſome ſhape, well paid for oppreſſing their neighbours.

† Henry VII. being exceſſively avaritious, his adviſers, Empſom and Dudley, practiſed every art of oppreſſion of this kind to ſatiate his thirſt after money. It appeared that many penal laws and pecuniary ſtatutes, had long lain unregarded and diſuſed, and thought obſolete, though not repealed, and ſtill in the ſame force as they had ever been. When enquiry came to be made into the obſervation of ſuch laws, it appeared that there were very few conſiderable perſons but what had ſome way tranſgreſſed againſt them, and conſequently were liable to the fines and mulcts impoſed by them. When firſt this courſe was taken, it went on ſmooth enough, ſmall penalties being impoſed; which being legal and not too heavy, made little noiſe. Soon after the ſweets hereof appearing, thoſe offences were more narrowly looked into, and more grievouſly fined; by which means, together with the ſale of offices, and diſpenſing with the laws, he raiſed an immenſe ſum to the unſpeakable detriment of his ſubjects.

REMARKS.

King Henry VII. coined the ſame pieces, and of the ſame weight, as thoſe of Edward IV. and Richard III. He firſt placed upon his money the arched or imperial crown, with a globe and croſs on the arch, like that uſed by our princes at this day. This king did alſo, about the 18th and 19th year of his reign, make a great alteration in the form of his coin, upon which his head was now repreſented crowned, but in profile, and with a good reſemblance of his other pictures: whereas the heads of all our former kings had conſtantly been drawn in front upon their money, ever ſince the time of king John.

It appears, by an indenture of the 9th of Henry VII, that a pound weight of gold of the old ſtandard, was coined into as many, and the ſame pieces, as in the 5th of Edward IV. The gold coins of Henry VII. were a ſovereign, half ſovereign, rial, half rial, and quarter rial, angel, and half-angel. His ſilver money was groats, half-groſſes, or two-penny pieces, pennies, halfpennies, and farthings.

King Henry VIII.

Takes, within the compaſs of 34 years, three tenths, four fifteenths, and ſix ſubſidies of the commons, whereof that anno 4 amounted to 160,000 l. and that in anno 7, to 110,000 l.—Tonnage he had, and poundage once for a year, and afterwards for term of life.—Of the clergy he takes ſeven tenths, four tenths by one grant, and three by ſeveral, every of them not leſs than 25,084 l.—Of ſubſidies, he had one of the province of Canterbury, another of both; the ſtipendiary miniſters thereto being taxed according to the rates of their wages.—Anno 22, they granted a moiety of all their goods and lands, payable by equal portions in five years, every part ariſing to 95,000 l.—Adds 150,000 l. a year to the revenues of the crown by the ruin of popiſh monaſteries and charities, &c.—Has divers benevolences and loans from the clergy and commons.—Demands a contribution from his

people, which he calls an annual grant.—He obtains a large revenue by the diſſolution of popiſh monaſteries, abbies, and the alienation of the church-lands, belonging to that ſyſtem of eccleſiaſtical tyranny and oppreſſion; which, 'till this period, made the princes as well as the people too ſubſervient to their dominion. This laid the foundation of Proteſtantiſm, and that liberty, which we at preſent enjoy in this kingdom, and which is the moſt invaluable of all terreſtrial bleſſings, if Britons are but wiſe enough not to abuſe ſo glorious a privilege, which myriads of the human ſpecies are deprived of, by the wiles and artifices of deſigning prieſts, who act in concert with the civil tyrants of the earth to enſlave mankind, and keep them in ignorance of their true ſpiritual as well as their temporal intereſts. The favourers of eccleſiaſtical dominion have thought this coſt the church too dear: but can any price be too great, for what is ineſtimable?

REMARKS.

The firſt ſilver coins of king Henry VIII. were groats and half groats, of the ſame weight and form as the laſt pieces of thoſe denominations coined by the king his father. By indenture of the 1ſt and 23d of Henry VIII. a pound weight of gold of the old ſtandard, was to be coined into 27l. by tale; viz. into 24 ſovereigns, at 22s. 6d. a-piece, or 48 rials at 11s. 3d. a-piece, or 72 angels at 7s. 6d. a piece, or 81 George nobles at 6s. 8d. a-piece, or 162 forty-penny pieces at 3s. 4d. a-piece; and a pound weight of gold, of the fineſt of 22 carats only, was to be coined into 100 crowns and a half of the double roſe, or 201 half-crowns, making by tale 25l. 2s. 6d.; and a pound weight of ſilver of the old ſterling, was coined into 135 groats, or 270 half-groats, or 540 ſterlings (or pence), or 1080 halfpence, or 2160 farthings; ſo that every pound weight of ſterling ſilver was coined into 45s. by tale.—In the 34th of this reign, a pound weight of gold, of 23 carats fine, and one carat allay, was coined into 28l. 16s. by tale; by which indenture there were coined ſovereigns at 20s. a-piece, half ſovereigns at 10s. angels at 8s. and quarter angels at 2s. a-piece; and a pound weight of ſilver of 10 ounces fine, and 2 ounces allay, was coined into 48s. by tale, viz. into teſtoons, which were 12d. a-piece, groats, half groats, pence, halfpence, and farthings.—In the 36th of this reign, a pound weight of gold, of 22 carats fine, and 2 carats allay, was coined into 30l. by tale, viz. into 30 ſovereigns at 20s. a-piece, or 60 half-ſovereigns at 10s. a-piece, or 120 crowns at 5s. or 240 half-crowns: and the king had 2 carats of fine gold for coinage, which yielded him 50s. Silver was coined by the ſame indenture 6 ounces fine and 6 ounces allay, into 48s. by tale. It was coined into teſtoons, groats, half groats, pence, halfpence, and farthings.—In the 37th of this reign, a pound weight of gold of 20 carats fine and 4 carats allay, was coined into 30l. by tale, as in the laſt; and the king had 4 carats, which yielded him 5l. 2s. And a pound weight of ſilver, of 4 ounces fine and eight ounces allay, was coined into 48s. by tale; which raiſed the pound weight of fine gold to 36l. and the pound weight of fine ſilver to 7l. 4s.

The gold coins of Henry VIII. are ſovereigns, rials, half ſovereigns, angels, George nobles, half and quarter angels, 40-penny pieces, crowns, and half-crowns: and the ſilver coins, teſtoons, groats, half groats, ſterlings, halfpence, farthings; to which may be added crown pieces of ſilver, which were coined by this king.

KING EDWARD VI.

Has an aid granted by parliament of 12d. in the pound for three years, on the goods of his natural born ſubjects, and 2s. in the pound of ſtrangers.—Has 3d. granted on every ewe, and 2d. on every wether kept in paſtures, alſo 1d. on every ſheep on the common.—Has 8d. in the pound on all woollen cloth for three years.—Has a ſubſidy and two fifteenths.—Has tonnage and poundage for life.—Has ſix fifteenths of his lay ſubjects, and three ſubſidies of both clergy and laity.

REMARKS.

The tonnage and poundage ſaid above to have been given to this king for life, was thus: of every ton of wine 3s. Of every ton of ſweet wine 3s. over and above the aforeſaid 3s. that is in all 6s. Of every aulne of Rheniſh wine 12d. The poundage was 12d. in the pound of the value of all goods imported or exported; and 12d. in the pound over and above the aforeſaid 12d. to be paid by merchants aliens, for all tin and pewter by them exported: excepting out of this ſubſidy all manner of woollen cloth of Engliſh make to be exported, and all manner of wool, wool fells, and hides, and backs of leather exported, and all manner of wines, freſh fiſh, and cattle imported.

The ſubſidy from wool was 33s. 4d. of every ſack of wool, and for every 240 of wool-fells, 33s. 4d. and for every laſt of hides and backs 3l. 6s. 8d. For every ſack of wool exported by ſtrangers, 3l. 6s. 8d. and for every 240 of wool-fells, 3l. 6s. 8d. and for every laſt of hides and backs, 3l. 13s. 4d.

The ſubſidy granted by the clergy in the ſecond year of this king's reign, was of 6s. in the pound, according to the value of every ſpiritual promotion.

The relief granted by the laity in his third year, to continue for the ſpace of three years, was, of every perſon worth ten pounds or upwards, in money, goods, cattle, &c. 12d. in the pound. And of every alien worth 20s. and under 10l. 12d. for every pound.

Thus it appears, that this king, though he took as much as he could from churches of what his father had left, yet the kingdom ſaved nothing by it, the taxes being laid every year of his reign, and for his life.

By indentures of the 1ſt and 2d of Edward VI. a pound weight of gold of 20 carats fine and 4 carats allay, was coined into 30l. by tale, out of which the king had a great profit; and a pound of ſilver, of four ounces fine and eight ounces allay, was coined into 48s. after which rate, every pound of fine ſilver made in current money 7l. 4s. and the king's profit on every pound weight was 4l. 4s.—In the 3d year of this king, a pound weight of gold 22 carats fine, and two carats allay, was to be coined into 34l. by tale, into ſovereigns 20s. a-piece, half ſovereigns at 10s. a piece, crowns at 5s. and half-crowns at 2s. 6d. a piece: and a pound weight of ſilver, ſix ounces fine and ſix ounces allay, was to be coined into 72s. which were to go for 12d. a-piece by tale; of which the merchant, for every pound weight of fine ſilver, received 3l. 4s. and the king above 4l. gain.—In the 4th year of this reign a pound weight of gold of the old ſtandard, of 32 carats and 3 grains and a half fine, was coined into 28l. 16s. by tale, viz. into ſovereigns at 24s. a-piece, half ſovereigns at 12s. angels at 8s. and half angels at 4s. a-piece.—In the 5th of this reign, a pound weight of ſilver of 3 ounces fine, and 9 ounces allay, was coined into 72s. at 12 a-piece; and the merchant received, for every ounce of fine ſilver which he ſhould bring to the mint, 10s. of ſuch money; by which means, 12 ounces of fine ſilver was exorbitantly raiſed to 14l. 18s.—In the 6th of this reign, a pound weight of gold, of the old ſtandard aforeſaid, was coined into 36l. by tale, viz. 24 ſovereigns at 30s. a-piece, 72 angels at 10s. a-piece, or 144 half angels: and a pound weight of crown gold of 22 carats fine and 2 carats allay, was coined into 33l. by tale, viz. 33 ſovereigns at 20s. a-piece, or 66 half ſovereigns at 10s a-piece, or 132 crowns, or 264 half crowns: and a pound weight of ſilver, conſiſting of 11 ounces one pennyweight fine, and 19 pennyweights allay, was coined into 3l. by tale, viz. 12 crowns, or 24 half-crowns, or 60 ſhillings, or 120 ſixpences, or 240 three-pences, or 720 pence, or 1440 halfpence, or 2880 farthings.

In king Edward the VIth's journal, ſtill preſerved in the Cotton library, written with the king's own hand, and printed at large by biſhop Burnet in his Hiſtory of the Reformation, is the following paſſage. ‘1551, 6 Sept. Deliberation concerning the coin. Memorandum, that there were diverſe ſtandards, nine ounces fine, a few, eight ounces fine, as ill as four, becauſe, although that was fine, yet a ſhilling was reckoned for 2 ſhillings, 6 ounces, very many 4 ounces, many alſo 3 ounces, 130,000l. now of late.’ From which words I collect, that in this reign, beſides the monies of four ounces fine, 6 ounces fine, and 3 ounces fine, which are all that are mentioned in the indentures and commiſſions that we know of; there were alſo ſome others of 8 ounces and 9 ounces fine; and that in the monies of 8 ounces fine in particular, one ſhilling was of no more value than another only of four ounces fine, as being of only half the weight, though it was as fine again. Now as the ſhillings of four ounces fine were, by the table of the weight of 120 grains each, the others of 9 ounces fine and 8 ounces fine, and which were of the ſame value, muſt have weighed 53 grains and one third, and 60 grains reſpectively. If therefore, among the ſhillings we have of the firſt five years of this reign, there are really ſuch found as agree ſufficiently with theſe weights, we may reaſonably conclude, that ſuch ſhillings are of the ſtandards above mentioned, and that they are ſome of the above pieces to which the king alludes in the above-cited paſſage of his journal.

It was found by experience in this reign, that gold and ſilver had, by the common conſent of all people throughout the civilized parts of the world, acquired certain real and proper values: and that in ſuch a nation as this, not deſtitute even then of all commerce with ſtrangers, it was impoſſible that the arbitrary value ſet upon pieces of baſe metal could, for any conſiderable time, ſupply the want of the ſilver that uſed to be contained in the pieces of the ſame denominations.

Whatever names were given to theſe pieces of baſe metal, or by whatever authority their imaginary value was ſupported, the people would either not bring their proviſions at all to the markets to exchange them for ſuch money, or would there ſell them at much higher rates than before; as the nominal ſums they received for their goods would not now purchaſe them the ſame conveniencies elſewhere, as the ſame nominal ſums of better money had formerly done. It was therefore judged abſolutely neceſſary, to reform and amend the coin; the affair was very ſeriouſly conſidered, and the work was undertaken and carried on with ſo much diligence

and vigour, that within a few months a reformation of the money was brought about, truly memorable, and no leſs remarkable than the former abuſes of it had been: for the new pieces that were coined before the end of this year, 1551, were of more than four times the value of thoſe of the ſame denominations, that had been coined in the former months of the ſame.

It is obſervable from the king's journal, that on the 6th of May this year, 'the teſtoon was cried down from 12d. to '9d. &c.' And this ſeems to have been the firſt ſtep that was taken towards the amendment of the evil: by which I ſhould only underſtand, that it was that day reſolved to make ſuch a reduction in the value of preſent money, without either then carrying it into immediate effect, or even fixing the day when that intended reduction ſhould firſt take place. For we find that it was not 'till the 2d of July following, that 'there was a proclamation ſigned for ſhortening of the 'fall of the money to that day; in which it ſhould be pro-'claimed and deviſed, that it ſhould be in all places of the 'realm within one day proclaimed:' and accordingly we read, that there was, on the 9th of the ſame month, 'pro-'clamation made, that a teſtoon ſhould go at 9d. and a groat 'at 3d. in all places of the realm at once.' The ſame particular is alſo recorded by Mr Stowe in his Chronicle, who tells us, 'That on the 9th of July, the baſe monies coined 'in the time of king Henry VIII. and king Edward VI. 'were proclaimed, the ſhilling to go for 9d. the groat for '3d. which took effect immediately after the proclama-'tion made:' which cannot, however, be properly underſtood of all the baſe monies of king Henry VIII. but of thoſe only of his 37th year, and which were of the ſame value as thoſe of the firſt four years of king Edward VI.

Although this reduction of the coin was neceſſary, and that it proved in the end beneficial, yet were very many great ſufferers by it at the time. The people naturally looked upon it as the real loſs of a full fourth part of whatever caſh they had by them *; and, indeed, the price of things to be bought, could not immediately follow the new rate of the money. They were alſo greatly apprehenſive of the further changes that might ſtill be intended, and of the manner in which they might yet further be affected by ſuch changes: inmuch that upon their diſcontents it was thought neceſſary to have, on the 19th of the ſame month of July, 'another pro-'clamation made for puniſhment of them, that would blow 'rumours of abaſing and enhanſing of the coin, to make 'things dear withal.'

* Biſhop Fleetwood, in his Chronicon Precioſum, p. 57. obſerves, that he had then by him, 'an account of that time, 'wherein, by the firſt proclamation, dated July 9, a college 'loſt out of 118l. 6s. 11d. 29l. 11s. 8d. ob. q. And 'by the ſecond proclamation, dated Auguſt 17, immedi-'ately following, out of 45l. 3s. the college loſt 15l. 1s. 'which was a 4th and a 3d part of every one's caſh, in the 'ſpace of two months.'

There was, however, a further reduction of it within a month; for on the 17th of the following Auguſt, 'the teſtoon was 'cried down from 9d. to 6d. the groat from 3d. to 2d. 'the 2d. to 1d. the 1d. to an halfpenny, the halfpenny 'to a farthing:' and this ſecond reduction is alſo taken notice of by Mr Stowe in his Chronicle, where he ſays, that on the ſame 17th of Auguſt, 'the ſhilling which of late 'was called down to 9d. was called down to 6d. the groat 'to 2d. the half groat to one penny, the penny to one 'halfpenny.'

About this time alſo propoſals were made to the king and council concerning the new money to be from henceforward coined: and it ſeems to have been agreed on the 6th of September, that the new pieces ſhould be minted of ſilver ten ounces in the pound weight fine, which it was thought might then be done without any further great loſs, as the teſtoons were already reduced to the value of only ſix pennies each. For it was judged that a pound weight of teſtoons, 6 ounces in the pound fine, added to another pound weight of thoſe four ounces fine, would together furniſh a pound of bullion ten ounces fine: and again, that a pound weight of the teſtoons of 8 ounces fine, together with two ninth parts of a pound weight of thoſe of 9 ounces fine, and which were fewer in number than the others, would, in like manner, without further loſs, furniſh a pound of bullion alſo ten ounces fine. But it was further intended that the new pennies, halfpennies, and farthings, ſhould ſtill be coined of ſilver, only four ounces in the pound fine: and that, as it was apprehended, there would ariſe a conſiderable profit to the king; that profit would ſerve to pay the extraordinary charges of this recoinage, and to make good the loſs that might ariſe from the want of a ſufficient number of the teſtoons of nine ounces fine, as alſo the loſs upon ſuch of the coins, particularly upon many of thoſe of ſix ounces fine, as were ſuppoſed to have been really made baſer than their appointed ſtandards.

We learn alſo from the king's journal, that the lords of the council having had all the ſeveral ſorts of the baſe money aſſayed before them at London, on the 20th of the ſame September, the king himſelf being then at Windſor, they had found that the ſeveral ſorts of teſtoons, which were apprehended to have been coined baſer than even the ſeveral indentures and commiſſions allowed, were really better than was expected, and that they had ſeverally anſwered to their reſpective valuations: and that further, upon taking of the ſeveral pieces mixed together as they run, they had found that 400 pounds in tale, reckoning the teſtoon at ſix pennies, did truly contain as much ſilver as was ſufficient to coin 400l. in tale of new money, as heavy, or heavier, than the laſt, and of the goodneſs of 11 ounces fine in the pound weight *. 'Whereupon they reported the ſame to the king, on the '22d, and then it was concluded that the teſtoon ſhould be '11 ounces fine, the proportion of the pieces according to 'the gold; ſo that 5s. of ſilver ſhould be worth five of 'gold.'

* 'The lords at London having tried all ſorts of ſtamping, 'both of the fineneſs of 9, 8, 6, 4, and 3, proved that, 'without any loſs but ſufferable, the coin might be brought 'to 11 ounces fine: for whereas it was thought before that 'the teſtoon was, through ill officers and miniſters, cor-'rupted, it was tried that it had the valuation, juſt by 'eight ſundry kinds of melting; and 400l. of ſterling mo-'ney, a teſtoon being but 6d. made 400l. 11 ounces fine, 'of money ſterling.' King's Journal of the 20th of September, 1551.

On the 24th of the ſame month it was 'agreed, that the 'ſtamp of the ſhilling and the ſix-pence ſhould be, on one 'ſide, a king painted to the ſhoulder, in parliament robes, 'with the chain of the order. Five ſhillings of ſilver, and 'half five ſhillings, ſhould be a king on horſeback, armed 'with a naked ſword, held to his breaſt. As alſo, that the 'fine monies ſhould be coined at the mints in the Tower, 'and in Southwark; and the ſmall pieces of a baſer ſtandard, 'at Canterbury and York.'

On the 1ſt of the next month of October, 'The commiſſion 'for the making of five ſhillings., half five ſhillings, groats, 'and ſix-pences, 11 ounces fine; and pence, with half-'pence and farthings, four ounces fine, was followed and 'ſigned.' So far the king: and we further learn from Mr Stowe, that the pieces themſelves were accordingly publiſhed and proclaimed on the 30th of the ſame month. But by the indentures made immediately after with the maſters and workers of the ſeveral mints, it appears that theſe finer coins were really 11 oz. 1 dwt. fine, or only 1 dwt. worſe than the old ſtandard; and that the pound weight Troy of ſuch ſilver was then agreed to be cut into three pounds by tale, in crowns, or pieces of 5s. half-crowns, ſhillings, half-ſhillings, quarter-ſhillings, pennies, half-pennies, and farthings: according to which regulation, the crown-piece was to weigh an ounce Troy, and the ſhilling 96 grains: and the pound ſterling, conſiſting of four of theſe crowns, or 20 of theſe ſhillings, was to be intrinſically worth about 6d. $\frac{3}{4}$ more than 20s. of our preſent coin.

In this indenture, fine ſilver is valued at 5s. 5d. the ounce nearly; and whereas, in the gold coin directed by the ſame, fine gold is valued at 3l. the ounce, it follows that what was then thought the true proportion of the value of gold to that of ſilver, was the proportion of 11 to 1. See GOLD.

QUEEN MARY

Has tonnage and poundage for life.—[The ſubſidy of tonnage was thus: of every ton of wine coming, or that ſhall or is come into this your realm by way of merchandize, the ſum of 3s. and ſo after that rate. And of every ton of ſweet wine, as well Malmeſy as other, 3s. over and above the 3s. afore-granted; and of every aulne of Rheniſh wine, 12d. The other ſubſidy, called poundage, was of all manner of goods and merchandizes of every merchant, denizen, and alien carried out of the realm, or brought into the ſame, by way of merchandize, of the value of every 20s. of the ſame goods and merchandizes, 12d. and of every 20s. in value of tin, and pewter veſſels, carried out of the realm by any and every merchant alien, 12d. over and above the 12d. aforeſaid.] ☞ Out of this act of ſubſidy is excepted all woollen cloth made in England, and all wool, wool-fells, and hides and backs of leather, carried out, and all wines, and freſh fiſh and beſtial, coming into the realm.—At the ſame time was granted another ſubſidy, of all manner of wool, wool-fells, and leather, carried out of the realm; that is, of every merchant denizen, for every ſack of wool, 33s. 4d. and for every 240 wool-fells, 33s. 4d. and for every laſt of hides and backs, of every merchant denizen, 3l. 4s. 8d. and alſo of every merchant ſtranger, as well as thoſe already made denizens, or that ſhall be made denizens, for every ſack of wool, 3l. 6s. 8d. and for every 240 wool-fells 3l. 6s. 8d. and alſo for every laſt of hides and backs, 3l. 13s. 4d.—She has alſo a ſubſidy of 6s. in the pound granted by the clergy, in conſideration of what ſhe had given up to the church before. ☞ The univerſities of Oxford and Cambridge were exempted from this ſubſidy.—Has 8d. in the pound granted by the temporalities, with certain exceptions.—Has a ſubſidy of 8s. in the pound, granted by the clergy

clergy of the province of Canterbury, to be levied in four years, that is, at 2s. in the pound every year.—Has 1-fifteenth granted by the temporalities.—Has a ſubſidy granted of 2 s. 8 d. in the pound, on every perſon ſpiritual and temporal, worth 5 l. and 5 s. 4 d. of every alien.—She has likewiſe 4 s. in the pound on the lands and real effects of natives, and 8 s. of aliens.—This bigoted, cruel, and vindictive queen, attempted to undo all that had been done towards the Reformation.

REMARKS.

By an indenture of the firſt of Queen Mary, a pound weight of gold, of the old ſtandard, was coined into 36 l. and a pound weight of ſilver, 11 ounces fine, was coined into 3 l. by tale. The gold coins of this queen are, ſovereigns, at 30 s. half-ſovereigns, at 15 s. angels, at 10 s. and half-angels, at 5 s. a piece.

QUEEN ELIZABETH

Has likewiſe the firſt-fruits and tenths inveſted in the crown.—Has 2 s. 8 d. in the pound granted by parliament on moveable goods, and 4 s. on land.—Seizes on ſeveral religious houſes.—Has tonnage and poundage granted for life.—Has a ſubſidy and two-fifteenths from the temporality.—Has 6 s. in the pound granted by the clergy.—Has a ſubſidy and two-fifteenths from the temporality.—Has a ſubſidy of 4 s. in the pound from the clergy.—Has 1 ſubſidy, 1 fifteenth, and 1 tenth, from the temporality.—Has a ſubſidy of 6 s. in the pound from the clergy.—Has two-fifteenths, and 1 tenth, and a ſubſidy, from the temporality.—Has 6 s. in the pound from the ſpirituality.—Has three-fifteenths and tenths, and one ſubſidy, from the temporality.—Has 6 s. 8 d. in the pound granted by the clergy.—Has another ſubſidy and two-fifteenths from the temporality.—Another ſubſidy of 6 s. in the pound from the temporality.—Two ſubſidies of 6 s. in the pound from the clergy.—Two ſubſidies and four-fifteenths from the temporality.—A tax laid on every pariſh, for the relief of ſick, wounded, and maimed ſoldiers.—Has two ſubſidies of 4 s. in the pound granted by the clergy.—Has three ſubſidies, ſix-fifteenths and tenths from the temporality.—Another tax for the relief of ſoldiers and mariners.—Three ſubſidies granted by the clergy. Three ſubſidies, and ſix-fifteenths and tenths, granted by the temporality.—Another tax for the relief of the poor.—Four ſubſidies of 4 s. in the pound granted by the clergy.—Four intire ſubſidies, eight-fifteenths and tenths, by the temporality.

REMARKS.

By an indenture of the 2d of Elizabeth, a pound weight of gold, of the old ſtandard of 23 carats 3 grains and a half fine, was coined into 36 l. by tale: namely, into 24 ſovereigns, at 30 s. a piece, or 48 rials, at 15 s. or 72 angels, at 10 s. a piece, or 144 half-angels, at 5 s. a piece. And a pound weight of crown gold, of 22 carats fine, and 2 carats allay, was coined into 33 l. by tale: namely, 33 ſovereigns, at 20 s. a piece, or 60 half-ſovereigns, at 10 s. a piece, or 132 crowns, at 5 s. a piece, or 264 half-crowns. And a pound weight of the old ſterling ſilver, viz. 11 oz. 2 dwts. fine, and 18 dwts. allay, was coined into 3 l. by tale, of half-ſhillings, groats, quarter-ſhillings, half-groats, three-half-penny pieces, pence, and farthings.—In the 19th of her reign, a pound weight of gold of the old ſtandard was coined into 72 angels, at 10 s. a piece, 144 half-angels at 5 s. a piece, or 288 quarter-angels, amounting in tale to 36 l. And a pound of old ſterling ſilver into half-ſhillings, three-pences, three-half-penny, or three-farthing pieces, to make 3 l. by tale.—And in the 25th, into 60 s. or into 3 l. by tale.—In the 26th, a pound Troy of old ſtandard gold was coined into 48 nobles, at 15 s. a piece, or 24 double-nobles, at 30 s. a piece, making 36 l.—In the 35th year of this reign, a pound weight of gold, of 22 carats fine and 2 carats allay, was coined into 33 ſovereigns, at 20 s. a piece, or 66 half-ſovereigns, or 132 crowns, or 264 half-crowns, making 33 l. by tale.—In the 43d, the pound weight of old ſtandard gold was coined into 73 angels, at 10 s. a piece, or 146 half-angels, or 292 quarter-angels, making 36 l. 10 s. in tale; and the pound weight of gold, of 22 carats fine, and 2 carats allay, into 33 ſovereigns and an half, at 20 s. a piece, or 67 half-ſovereigns, or 134 crowns, or 268 half-crowns, making 33 l. 10 s. in tale; and the pound weight of old ſtandard ſilver into 3 l. 2 s. by tale; viz. into crowns, half-crowns, ſhillings, ſix-pences, two-pences, pence, and half-pence.

The corruptions which the laſt year of Henry VIII. had brought into the Engliſh money, were not quite rooted out 'till queen Elizabeth's reign; but her firſt buſineſs was to mark all the beſt pieces either with a greyhound, portcullis, lion, harp, roſe, or fleur-de-lis. Her gold coins, as appears from the foregoing indentures, were ſovereigns, half-ſovereigns, or rials, nobles, double-nobles, angels, half-angels, pieces of an angel and a half, and three angels, crowns, and half-crowns.

An account of all the monies of gold and ſilver coined in the time of queen Elizabeth, with the true value thereof in current money.

	l.	s.	d
Coined in ſterling ſilver money in the mint in the tower of London, from the year 1558 to the year 1572, in the time of Tho. Stanley and T. Fleetwood, under-treaſurers, in weight 549,644 lb. 18 dwts. making, at 3 l. the pound weight	1,648,932	2	6
More from 1572 to 1581, in the time of John Loniſor, maſter and worker, in weight 255,338 lb. 2 oz. 8 dwts. 7 grs. making, at the ſame rate -	766,014	12	0¾
More from 1581 to 1601, in the time of Sir Richard Martyn, maſter and worker, in weight 670,331 lb. 2 oz. 10 dwts. making, at the ſame rate -	2,010,993	12	6
More from Septem. 1601, to 31 March, 1603, in the time of the ſame maſters, in weight 63,890 lb. 7 oz. making, at 3 l. 2 s. the pound weight - -	198,060	16	2
Coined in March 3 Eliz. in Iriſh monies, of 11 oz. fine, in weight 2977 lb. making, at 3 l. the pound weight -	8,931	0	0
The whole ſum of ſterling ſilver coined in the queen's time, was in weight 1,542,181 lb. 8 dwts. 7 grs. making, in money - - - -	4,632,932	3	2¾
Coined in baſe Iriſh money, in March 1 Eliz. of 3 oz. fine ſilver, and 9 oz. of allay, in weight 19,828 lb. worth, in ſterling money - - -	15,541	10	3¼

The ſum total of all the crown-gold coined in the queen's time, was in weight 10,730 lb. 2 oz. 7 dwts. 14 grs. and made in current money - -	354,585	19	7
And the true value of all the gold and ſilver money coined in the time of queen Elizabeth, amounted to - -	5,513,717	11	1¼

REMARKS.

Queen Elizabeth is celebrated by our hiſtorians for the reſtoring of the old ſtandard of the coin in her ſilver monies, and no leſs for the aboliſhing and recoining of the baſe monies minted in the times of her father and brother; in which, however, ſhe can only be ſaid, with truth, to have given the laſt finiſhing to a work already brought near its perfection: for king Edward, as we have obſerved, had reduced the baſe money nearly to the intrinſic value, and coined down the greateſt part of it, into money very little inferior in goodneſs, and not at all inferior in weight, to any that has been minted ſince.

We ſhall here give an account of this matter in the words of the old chronicle of Raphael Hollinſhed, with whom Stowe and Camden perfectly agree.

'The queen's majeſty, by advice of her moſt honourable 'council, meaning to aboliſh all corrupt, baſe, and copper 'monies then current in the realm of England, coined in the 'times and reigns of king Henry VIII. and king Edward VI. 'to the great hindrance and decay of the commonwealth of 'this realm, and therewith to reſtore to all her ſubjects fine 'and pure ſterling monies, both of gold and ſilver, to the

'great

'great honour and benefit of the whole realm, publiſhed a 'proclamation on Michaelmas even before noon, that the 'teſtoon, coined for twelve-pence, ſhould new forthwith, 'that of the beſt ſort marked with a port-cullis, be current 'for four-pence half-penny; the ſecond, marked with the 'grey-hound, for two-pence farthing; the third and worſt 'ſort, not marked as afore, not to be current at all, nor re-'ceived for any value: the groat to be current for two-pence, 'the former piece of two-pence for a penny, &c. It was not 'long after this, but that her grace reſtoring to her ſubjects 'fine ſterling money, called all the ſaid baſe and corrupt coins 'into her majeſty's mint, allowing to them therefore, after 'the rate before mentioned, ſo much of the ſaid fine monies 'as they brought in of the ſaid baſe monies.'

The following proclamation alſo ſhews what care was taken of the coin in this reign.

A proclamation iſſued at Richmond, the 12th of October, 29 Eliz. intitled, A proclamation for reforming the deceits in diminiſhing the value of the coins of gold current within the queen's Majeſty's dominions, and for remedying the loſſes that might grow by receiving thereof, being diminiſhed. The former part of which ran as followeth:

'Foraſmuch as great part of our monies of gold of our realm 'of England, and ſuch gold of foreign countries which now 'are current within our ſaid realm, are, by the ſiniſter and 'unlawful doings of wicked perſons, not only carried out of 'our realm to foreign parts, and there, by divers means, di-'miniſhed of their value, and from thence returned hither, 'and paid, in lieu of lawful coin, for the commodities of our 'countries, and ſome other of them embaſed, by clipping, 'ſouthering, or other unlawful practices, of their due fine-'neſs, ſo that both the one ſort and the other, by the means 'aforeſaid, are brought much inferior to their firſt and true 'value and goodneſs: but beſides that, many falſe pieces lie 'counterfeited in foreign parts, of the ſaid coins, whereby 'great and intolerable loſs and diminution of the riches of our 'realm doth daily grow and increaſe: wherefore we minding, 'as neceſſity requireth, the ſpeedy remedy of the premiſſes, 'do ſtraightly forbid, charge, and command, that no man-'ner of perſon or perſons within this our realm of England, 'from and after the proclamation hereof in any county of 'our realm, do take or receive, or deliver in payment, any 'falſe counterfeit pieces of any coin of gold current within 'our ſaid realm, or any piece of the ſame coin being ſouthered, 'or otherwiſe unlawfully embaſed, or lacking of the juſt 'weight thereof, over the remedies and abatements ſeverally 'expreſſed, and to be allowed in that behalf. And if any 'ſuch piece of coin, lacking of its true weight above the re-'medies and abatements hereafter expreſſed: and if any ſuch 'counterfeit piece as is aforeſaid, or any piece of coin of gold 'ſouthered, or unlawfully embaſed, ſhall be offered in pay-'ment: we will that it ſhall be lawful to every perſon and per-'ſons to whom ſuch offer in payment ſhall be made, not only 'to refuſe to take the ſame in payment, but alſo to ſtrike a hole, 'at his pleaſure, in every of the ſaid pieces ſo offered in pay-'ment, which ſhall be ſouthered or unlawfully embaſed, or 'which ſhall lack of their juſt weight above the remedies 'hereafter following, and to cut every of the ſaid counterfeits 'into pieces; rendering thoſe ſo ſtricken through, and the 'pieces of the others ſo cut in ſunder, then preſently after-'wards to the owners thereof again. And if any controverſy 'ſhall happen to ariſe betwixt the parties, or any of their 'friends or favourers then preſent, in or about ſuch ſtriking 'through, or in cutting in pieces any of the premiſſes, that 'then forthwith he that ſhall offer any of the ſaid unlawful 'and forbidden monies in payment, and he that ſhall receive 'the ſame, ſhall peaceably repair together to our next juſtice 'of the peace, mayor, bailiff, or other chief officer of that 'place, who then without delay, taking one other aſſiſtant 'of knowledge unto him, ſhall judge of the monies in con-'troverſy, and ſhall allow of thoſe that are allowable, and, 'on the contrary, ſhall preſently execute that which is here 'above appointed.'

The remaining part of the proclamation contains directions for ballances and weights, to be provided by the warden of the Mint, for the uſe of ſuch as ſhould have occaſion to examine the coins before ſpoken of.

King James I.

The parliament grants him tonnage and poundage for life.—The tonnage is 3 s. for every ton of wine imported, and 3 s. more for every ton of ſweet wines, as well Malmſey as other, imported by aliens; and 12 d. in the pound of the value of all goods imported or exported, excepting woollen cloths, &c. as in the former reigns.—Has four ſubſidies granted by the clergy of 4 s. in the pound each.—The temporality grant three intire ſubſidies, and ſix fifteenths and tenths.—Alſo another ſubſidy of 6 s. in the pound, granted by the clergy.—One intire ſubſidy, and one fifteenth and tenth, by the temporality.—Three intire ſubſidies granted by the ſpirituality, and two by the temporality.—Four intire ſubſidies again granted by the ſpirituality.—Three intire ſubſidies, and three fifteenths and tenths, by the temporality.—The king borrows money of ſome of the wealthieſt citizens of London, and the cuſtoms of all goods imported and exported were raiſed and let out to farm.—Raiſes large ſums of money by fining ſeveral in the Star-Chamber.—Levies an aid for making his eldeſt ſon a knight.—Has a benevolence throughout the realm, which occaſioned a general diſcontent.—Raiſes further ſums, by inſtituting the order of baronets.

REMARKS.

By an indenture of the 1ſt of James I. a pound weight of gold, 22 carats fine and 2 carrats allay, were coined into 44 l. 10 s. by tale; namely, into 10 s. 20 s. 40 s. and 5 l. pieces. And a pound weight of ſilver, of the old ſtandard, into 62 s. by tale; namely, into crowns, half crowns, ſhillings, ſixpences, groats, two-pences, and pence: which ſtandard, both for gold and ſilver, hath continued ever ſince.

The ſcarcity of ſilver, during that reign, was the ſubject of much conſideration and enquiry at the time: ſeveral proclamations were iſſued againſt the exportation of it, and ſeveral ſchemes were propoſed for drawing it into the mint. It was particularly adviſed, that the weight of the money ſhould be leſſened: and this proceeded ſo far, that directions were actually given to the attorney-general, the 21ſt of February 1619, to prepare new indentures of the mint, whereby the pound weight Troy of ſtandard ſilver ſhould be coined into 66 s. But theſe directions were ſoon after recalled, and the deſigned alteration of the ſilver coin was ordered to be ſuſpended for twelve months, upon a report made to the council, the 25th of the following April, by ſeveral eminent merchants, whoſe advice had been deſired in a conſultation with the miniſters on that occaſion. This intended alteration does not appear after this, to have been thought of any more: and, indeed, ſilver about the ſame time began to come again to the mint, in greater plenty than it had done for ſome years * before.

* It does not appear what was the occaſion of this change, but the fact was this; that in the four years from the 1ſt of April, 1617, to the 4th of February, 1620, there was only coined at the Tower in ſilver money to the ſum of 1070 l. 15 s. 4 d. and that in the four following years to the 31ſt of March, 1625, there was coined the ſum of 205,500 l. 16 s. 2 d. This laſt ſum is, however, little more than was coined in the laſt year and a half of queen Elizabeth: during whoſe whole reign, there was coined in ſilver above 100,000 l. a year, one year with another.

There was a good quantity of money coined in this reign, of the ſilver refined from the lead of the mines in the principality of Wales: and all the pieces of this money, of which I have ſeen the crown, the half-crown, and the ſhilling, were ſeverally diſtinguiſhed by the repreſentation of the Welſh feathers, placed over the royal arms on their reſpective reverſes; as thoſe were alſo that were coined of this ſilver, during the firſt twelve years of the following reign before the mint was purpoſely ſet up for the coinage of the ſame †.

† The whole quantity of the money coined in the reign of king James the Iſt, cannot, as Mr. Lowndes has obſerved in his Eſſay, be known directly from the books of the mint; by reaſon that many of the records and papers of that office having been deſtroyed or embezzled during the time of the great rebellion, the memorials of all tranſactions there, older than the reſtoration of king Charles the IId, are now either loſt, or remain in a very imperfect condition. Yet may a tolerable account be collected of this matter, by the aſſiſtance of other materials: and I have accordingly drawn out a memorandum, which will, I hope, be found ſufficiently exact; partly from a paper of archbiſhop Williams, wherein an account is given of the coinage during the firſt 13 years of the king; partly from a certificate delivered to the council the 27th of November, 1618, in which is contained an account of the weight of the gold and ſilver coined in the ſeveral years from his 9th to his 15th; and partly from ſome extracts of the comptroller's accounts of his later years, communicated to me formerly by the late John Conduit, Eſq; then maſter and worker of his Majeſty's mint. By which ſeveral particulars it appears, that there was coined from the 31ſt of May, 1603, to the 31ſt of March, 1625,

	l.	s.	d.
In angel gold, at the ſeveral rates of 36 l. 10 s. 40 l. 10 s. 44 l. 11 s. and 44 l. 10 s. the pound weight, to the value of - - -	32,093	17	9

Martin Folkes, Esq;

King Charles I.

Has three entire subsidies granted him by the spirituality, and two by the temporality, and double from the Roman catholics.—In his third year, five subsidies from the spirituality, and as many from the temporality.—Has tonnage and poundage granted him, as also money for disbanding the armies.—Borrows money by way of loan.—Obliges all who were possessed of a knight's fee, to take upon them the order of knighthood, or to fine for avoiding.—Raises ship-money without the consent of parliament.—Demands aid of the clergy, and of the Roman catholics.—Obliges the several counties to raise an army against the Scots.—Makes void all grants of monopolies.—Again raises ship-money.—Obliges the northern counties to raise a considerable number of forces.—The parliament grant him a poll-tax, and 300,000 l. to pay the Scots.

REMARKS.

By an indenture, in the 2d year of king Charles I. a pound weight of gold of the old standard, of 23 carats, 23 grains and a half fine, and half a grain allay, was coined into 44 l. 10 s. by tale; namely, into rose-rials at 30 s. a-piece, spur-rials at 15 s. a-piece, and angels at 10 s. a-piece. And a pound weight of crown gold, of 22 carats fine, and 2 carats allay, into 41 l. by tale; namely, into unites at 20 s. double crowns at 10 s. or British crowns at 5 s. a-piece. And a pound of silver of the old standard, of 11 ounces 2 dwts. fine, and 18 dwts. allay, into 62 s. by tale; namely, into crowns, half-crowns, shillings, half-shillings, two-pences, pence, and half-pence.

The gold coins of this king (as appears by the indenture above) are, rose-rials, angels, unites, double and British crowns.

By an account which Mr Lowndes has published in his Essay, the silver money coined in the reign of king Charles the 1st, and by which we must only understand the silver money regularly coined in the Tower of London, amounted to the sum of 8,776,544 l. 10 s. 3 d. But of the gold there also coined during the said time, I am not able to give so exact an account. All I can say is, that, by a paper I saw in the hands of the late Mr Conduit, the weight of the angel gold coined from the beginning of the king's reign to the 25th of November 1642, and which was coined into angels only, was that of 284 lb. 5 oz. 9 dwts. 9 gr. which made in money then current, at the rate of 44 l. 10 s. the pound weight, the sum of 12,658 l. 5 s. 9 d. ob. And it appears by the accounts of the pix, that there has been no angel gold coined in England since that time. It also further appeared by the same paper, that there was coined in crown gold from the king's accession to the 31st of March 1641, in weight, 68,832 lb. 11 oz. 11 dwts. 4 gr. and by two other papers purporting to be the accounts of Sir Ralph Freeman and Sir Thomas Aylesbury, from the 1st of August 1641, to the 5th of May 1643, and of Sir Robert Harley, from the 6th of May 1643, to the 31st of March 1646, that there was coined during that time in crown gold, the weight of 7052 lb. 2 oz. 11 dwts. 1 gr. To which last weight, if we add proportionably for the four months elapsed between the 31st of March and the 1st of August 1641, and for the 34 months between the end of these accounts and the 30th of January 1648, we cannot very greatly mistake in supposing the weight of the crown gold, coined from the 1st of April 1641, to the time of the king's death, to have been of about 11,826 lb. Which added to the former quantity, will make, for the whole weight of the crown gold coined in this reign, about 80,659 lb. and which, reduced into money, at the rate of 41 l. to the pound weight, produces of the same 3,307,019 l. To which if we add the value before given of the angel gold, and of the silver coined in the same time, we shall find that the whole sum in gold and silver coined in the Tower of London, during the reign of king Charles the 1st, did not in current money amount to less than about 12,096,220 l. sterling. Folkes.

The Commonwealth of England, Oliver Cromwell, Protector.

The city of London give their money and plate, even to the servant-maids bodkins and thimbles, towards carrying on the good old cause, as some called it.—An account of the several sums of money raised by the long parliament, is as follows, viz.

A general abstract of money raised in England by the Long Parliament, from Nov. 3, 1640, to Nov. 1659.

Total	95,312,095	1	11½

Mr. Walker, no less concerned in the usurpation than those he rails at in his History of Independency, having run through all the rebellion with them, 'till they turned him off, and therefore well acquainted with their methods of raising money, and the amount thereof, sums up the same after this manner:

Nor is it a small artifice to raise money by so many several and confused taxes, whereas one or two ways would have done the work: 1. Royal subsidy of 300,000 l. 2. Poll-money. 3. The free loans and contributions upon the public faith, amounted to a vast incredible sum of money, plate, horses, arms, &c. 4. Irish adventure for the sale of lands, the first and second time. 5. The weekly meal. 6. The city loan after the rate of fifty subsidies. 7. The assessment for bringing in the Scots. 8. The five and twentieth part. 9. The weekly assessment for my lord general's army. 10. The weekly or monthly assessment for Sir Thomas Fairfax's army. 11. The weekly assessment for the Scots army. 12. The weekly assessment for the British army in Ireland. 13. The weekly assessment for my lord of Manchester's army. 14. Free quarter (at least) connived at by the state; because the soldiers having for a time subsistence that way, are the less craving for their pay, whereby their arrears growing stale, will at last either be frustrated by a tedious committee of accounts, or forgotten; in the mean time the grand committee of accounts discount it out of the commander's arrears, whereby the state saves it. 15. The king's revenue. 16. Sequestrations and plunder by committees, which, if well answered to the state, would have carried on the work, which thus I demonstrate: one half of all the goods and chattels, and (at least) one half of all the lands, rents, and revenues of the kingdom have been sequestered; and who can imagine, that one half of the profits and goods of the land will not maintain any forces, that can be kept and fed in England for the defence thereof? 17. Excise upon all things. This alone, if well managed, would maintain the war: the Low-Countries make it almost the only support. 18. Fortification money, &c. By these several ways and taxes, about 40 millions in money and money-worth, have been milked from the people. A vast treasure, and so excessive, as nothing but a long peace could import, and nothing but much fraud and many follies could dissipate; and we ought not to wonder if it be accounted inter arcana novissimi imperii, to be always making, yet never finishing an account thereof.

It is here to be observed, that the 40 millions he here speaks of, were only to the year 1647, so that they had not been above five years raising and expending them. Nor is it less remarkable, that Walker had gone hand in hand in the parliament with the extorters and consumers of all this treasure, being himself as deep concerned as any other in the villainy, and yet never saw into it, 'till the Independents thrust him and his party from having any share in the cheat.

REMARKS.

The parliament, on April 25, 1649, agreed upon a new sort of coin, whereof there were coined, crowns, half-crowns, shillings, six pences, pence and half-pence.

In the year 1656, Oliver Cromwell, who had on the 16th day of December 1653, been invested with the title of Lord Protector of the Commonwealth of England, Scotland, and

Ireland, and who was every day acquiring new powers, adventured to coin money with his own head and ſtyle. But whether the monies of this ſort were, either then or afterwards, ever publiſhed, as true, lawful, and current monies of England, I have not been able to learn. All his 20 s. pieces of gold that I have ſeen are of this date, and ſo are a very few of his ſilver half-crowns, one of which is in the valuable collection of the worthy Robert Bootle, Eſq; one of the directors of the Eaſt-India company: but in general the ſilver coins which we have with the head and ſtyle of the protector, do not bear an earlier date than that of the year 1658. I have alſo been informed, by my very ingenious friend Mr George Vertue, who has examined all the works of Simon, chief engraver to the mint, with the exactneſs of an artiſt; and from whom we may expect an accurate account of the ſame, when he ſhall have leiſure to publiſh the curious collections he has made upon that ſubject, that he has obſerved half-crowns of this ſort, where the laſt figure of the date had been altered from a 6 to an 8 upon the die: which would lead one to conjecture, that thoſe dies, though prepared in 1656, were not really uſed before the year 1658, and after the ſecond ſolemn inauguration of the protector, which was on the 26th of May 1657 *. When it is even probable that the pieces coined, were rather looked upon as proofs, and given away as medals or counters among his friends, than publickly diſperſed as common money throughout the kingdom.

* There was, I find, a trial of the pix, on the 3d of December 1657, which is ſaid, in the books of the mint, to have been of the monies coined in the Tower, from the 9th day of November 1649, to that time: and that the money then tried conſiſted of unites, double crowns and crowns, of new ſtandard gold; and of crowns, half-crowns, ſhillings, half-ſhillings, two-penny pieces, pennies, and half-pennies, of old ſterling ſilver; all marked with the ſun, and agreeable to the indenture made with Aaron Guerdien, M. D. maſter and worker, the 27th of July 1649, whereby it appears, that this trial was of monies of the Commonwealth only. The trial was made before the commiſſioners of the great ſeal, and the commiſſioners of the treaſury, by virtue of a warrant from the lord protector: which warrant I ſhall here tranſcribe a copy of, as the ſame is inſerted in the book from whence I took theſe particulars, and as it was in all probability the only one of the ſort.

OLIVER P.

'Whereas amongſt other weighty affairs of the Commonwealth, the care of the aſſaying and trying of the monies thereof by the ſtandard of England, according to the ancient cuſtom of the realm, is not the leaſt: we judging it neceſſary, that the trial and aſſay of the ſaid money and coin be forthwith made, do therefore hereby ſignify ſuch our will and pleaſure to be; commanding you forthwith to cauſe a trial and aſſay to be made of the pix now being in the mint within the Tower of London, by a jury of goldſmiths of our ſaid city of London, of integrity and experience, to be impannelled and ſworn on a day certain, to be by you in that behalf appointed, in the place accuſtomed within our palace of Weſtminſter: and that the lords commiſſioners of our treaſury, the juſtices of the ſeveral benches, and barons of the Exchequer, or ſome of them, be then there preſent, and counſelling and aſſiſting you in the due execution of this our ſervice.

Given at Whitehall this 9th day of November, 1657.'

To our truſty and well-beloved Nathaniel Fiennes and John Liſle, lords commiſſioners of our great ſeal of England.

The trial of the pix laſt preceding this, was made on the 9th of November 1649, before the lord preſident of the council of ſtate, the commiſſioners of the great ſeal, and others of the council of ſtate, and committee of revenues; by virtue of an act of the 7th of the ſaid month of November 1649, to try the monies coined from the 15th day of February 1646. Theſe monies are ſaid to have been marked with a ſceptre, and were therefore all coined before the king's death. This was conſequently that ſame trial of the pix that is mentioned from Whitlocke, in the 95th page of theſe papers, and that was ordered to be made at the charge of Sir Robert Harley, when he was put out of his place: and Dr Guerdien's pix was therefore not opened, before the above-mentioned 3d of December 1657.

What quantity was coined in all of this money of the Commonwealth, I have never been able to learn. All the papers I have ſeen relating to that ſubject, were only ſome extracts Mr Conduit had of Dr Guerdien's accounts, for about four years and a half elapſed between the 16th day of May 1649, when he entered upon his office, and the 30th day of November 1653. By which it appeared, that there was coined at the Tower during that time, in crown gold, the weight of 1768 lb. 7 oz. 17 dwts. 16 gr. making in tale, at 41 l. the pound weight, the ſum of 72,514 l. 18 s. 8 d. ¼; and in ſterling ſilver, the weight of 123,644 lb. 1 oz. 8 dwts. 12 gr. making in tale, at 3 l. 2 s. the pound weight, the ſum of 383,294 l. 15 s. 4 d. ¼: ſo that the whole coinage, both in gold and ſilver, during the ſaid time, amounted to the value of 455,809 l. 14 s. 0 d. ½. Folkes.

KING CHARLES II.

Has a ſubſidy granted him of tonnage and poundage, &c.—Has poll-money granted to pay off the armies and navy.—Has 140,000 l. more granted for the compleat diſbanding the army.—Has the grant of an exciſe upon beer, ale, &c. during life.—Paſſes an act for erecting and eſtabliſhing a poſt-office.—Has a grant of 1,260,000 l.—Has a grant of chimney-money.—Has four entire ſubſidies granted by the temporality, and as many by the clergy, for carrying on the war againſt the Dutch.—Has 2,477,500 l. granted for the ſame.—Has a ſupply of 1,250,000 l. granted him at Oxford.—Raiſes 1,256,347 l. 13 s. by a poll-tax.—Raiſes 316,000 l. by an exciſe upon wine and other liquors.—Has another impoſition granted upon all wines and vinegar imported for a certain term of years.—Sells his fee-farm rents.—Has a land-tax granted him.—Has a grant of an additional exciſe upon beer, ale, &c.—Paſſes an act for laying impoſitions on proceedings at law.—Paſſes an act for raiſing the ſum of 1,238,750 l.—Paſſes an act for raiſing 584,978 l. 2 s. 2 d. ½, and an act for an additional exciſe on beer, &c. for three years.—Paſſes an act for raiſing money by a poll, &c.—Paſſes an act for a ſupply of 619,380 l. 11 s. 9 d. for diſbanding the army.—Has a grant of a farther ſupply of 260,462 l. 17 s. 3 d. for the ſame uſe.

REMARKS.

By an indenture in the 12th of Charles II. gold and ſilver monies were coined into the ſame pieces, and at the ſame rates, as in the 2d of Charles I. By another indenture in the 22d of king Charles II. crown gold, 22 carats fine and 2 carats allay, was coined into 44 l. 10 s. by tale; namely, into pieces to go for 10 s. 20 s. 40 s. or 5 l. a-piece; and a pound of ſilver of the old ſtandard, into 3 l. 2 s. by tale; namely, into crowns, half-crowns, ſhillings, ſix-pences, groats, three-pences, two-pences, and pence.

The money of king Charles II. was of three ſorts: the hammered, which was the only current coin 'till 1665; the milled upon the ſide; and that with the graining or letters upon the edge.—The firſt money that bore the name of this king, was coined at Pontefract-Caſtle.

By the duplicates and atteſted copies of the controllment-rolls and other books remaining in his majeſty's mint, it appears, that there were coined in the Tower of London, during the reign of king Charles the IId, and after his reſtoration, the ſeveral ſums mentioned in the following account: that is to ſay,

	l.	s.	d.
In crown gold, of 22 carats fine and 2 carats of allay, from the 20th day of July 1660, to the 31ſt day of December 1662, the weight of 918 lb. 8 oz. 3 dwts. the which, being coined into unites, commonly called broad-pieces, double crowns, and Britiſh crowns, and into milled unites of the ſame weight as the others, made in money then current, at the rate of 41 l. the pound weight, the value of	37,665	16	11
In like gold from the 1ſt of January 1662, to the 6th day of February 1684, the weight of 93,024 lb. 8 dwts. 13 gr. the which, being coined into 20 s. pieces, commonly called guineas, pieces of 10 s. 40 s. and 5 l. made in money then and ſtill current, at 44 l. 10 s. the pound weight, the value of	4,139,588	2	6
Tot. of gold in weight, 93,943 lb. 10 oz. 11 dwts. 13 gr. making in money - - -	4,177,253	12	5

Note, That although the warrant for the cutting the pound weight of gold into 44 guineas and a half, was not ſigned until the 24th of December 1663, yet the weight of 27 lb. 8 oz. coined ſome time before, and which was the only gold minted ſince the laſt day of the preceding December, was really coined into guineas; and as ſuch delivered, on the 31ſt of the following December 1663.

	l.	s.	d.
In ſterling ſilver, of 11 oz. 2 dwts. fine, and 18 dwts. of allay, from the 20th day of July 1660, to the 5th day of February 1662, the weight of 175,691 lb. 2 oz. 10 dwts. the which being coined into hammered money, at 3 l. 2 s. the pound weight, made, in the coin then current, the ſum of	544,642	14	11

In

	l.	s.	d.
In like silver, from the 6th of Feb. 1662, to the 6th of Feb. 1684, the weight of 1,025,012 lb. 0 oz. 14 dwts. 14 gr. the which being coined into milled money, at the same rate of 3 l. 2 s. the pound weight, made in the coins, then and still current, the sum of -	3,177,537	7	9¼
Total of the silver in weight 1,200,703 lb. 3 oz. 4 dwts. 14 gr. making in money -	3,722,180	2	8¼
And the total value of all the monies both of gold and silver coined in this reign, according to the foregoing rates, amounted to the sum of - - - - -	7,899,434	2	1¼

It may here be noted, that part of the silver above mentioned was the produce of 1,500,000 French crowns, or 4,500,000 livres Tournois, received for the sale of Dunkirk; which produced in standard silver the weight of 108,636 lb. 9 oz. 3 dwts. 2 gr. and made in coined English money by tale 336,773 l. 3 s. 9 d. ½. As also, that other part of the same silver was the produce of what were called the crown and harp money, which Sir Thomas Vyner, Knt. and Bart. Francis Meynell, Esq; then sheriff of London, and Edward Backwell, Esq; contracted with his Majesty on the 6th of December 1661, to take in by tale, and to coin with all convenient expedition, at their own charge, into English current monies: receiving for the same a consideration of 1 l. 10 s. for every 100 l. in tale, in lieu of want of weight and expence of coinage. Upon which there was accordingly recoined of the said cross and harp monies, the sum of about 500,000 l. in tale.

King James II.

Passes an act for settling the same revenue on himself for life, which was settled on his brother for his life.—Has an imposition granted upon all wines and vinegar imported for a certain term of years.—Has an imposition granted upon all tobacco and sugar imported for a certain term of years.—Has the grant of an imposition on all French and East-India linens, &c.

REMARKS.

By an indenture in the first of James II. a pound weight of gold, 22 carats fine and 2 carats allay, was coined into 44 l. 10 s. by tale, namely, into 10 s. 20 s. 40 s. and 5 l. pieces; and a pound weight of silver of the old standard into 62 s. by tale, namely, into crowns, half-crowns, shillings, sixpences, groats, three-pences, two-pences, and pence; which standard, both for gold and silver, hath continued ever since. There was coined in the Tower of London, during the reign of king James II. that is to say, from the 7th day of February 1684, to the 13th day of February 1688,

	l.	s.	d.
In crown gold, the weight of 47,497 lb. 6 oz. 1 dwt. which being coined into 20 s. pieces called guineas, &c. made at the rate of 44 l. 10 s. the pound weight, the value of - -	2,113,638	18	8½
In sterl. silver, the weight of 167,198 lb. 10 oz. 6 dwts. 20 gr. making in money at the rate of 3 l. 2 s. the pound weight, the sum of - -	518,316	9	5¼
Total value of both the gold and the silver	2,631,955	8	1¾

The king landing with French forces at Kinsale in Ireland on the 12th of the following March, the greatest part of that kingdom submitted to him, and he made his entry into Dublin on the 24th of the same month. He there by proclamation raised, for his present occasions, the value of all the coins both of gold and silver, that were then current in Ireland: but his wants a few months after greatly encreasing, he was reduced to such distress, that he was forced to coin old brass guns and other utensils of base metal into pieces of money, made also current for half-crowns, shillings, and half-shillings, by proclamation of the 18th of June 1689.

General Remarks on this article of the Public Revenue, from the Conquest to the end of the Reign of king James II. in relation as well to the state of the Civil and Religious Liberties of the nation, as to its Trade and Commerce.

I. Of liberty, both civil and religious.

Let men make ever so slight reflections on the manner in which this kingdom has been governed from the Conquest to this day, let them but run through the dynasties of the English kings, and sum up the account of the annals of each reign, and then let any candid and judicious commentator say whether liberty was ever at any former period of time more amply exercised and enjoyed, than at the present hour.

REV

'Till the Restoration there was no such thing as liberty: that after the Restoration was nothing, compared to the strength it gained at the Revolution; and the strength it then acquired, is so far, in my opinion of things, from being now impaired, that it never flourished in such full vigour as in the reign of his present most gracious Majesty, king George II.

From the Restoration let any one cast their eye backward to the Conquest, and they will find whatever changes happened in the government, those changes were nothing more than from one tyrant, or one kind of tyranny, to another. With regard to the persons of tyrants, there were glorious and inglorious, slothful and active, successful and unsuccessful tyrants, but there never was a cessation from one sort or other. With regard to the form of tyranny, there was only the same melancholy vicissitude in the manner of oppressing the people, without any suspension of the thing itself; sometimes it was the regal tyranny of the prince, sometimes the aristocratic tyranny of the barons; sometimes (as in the reigns of Harry the IId and queen Mary the Ist) the ecclesiastical tyranny of the clergy; and sometimes all together, in their different jurisdictions. By which means, between monarchical, oligarchical, or hierarchical oppression, there was no change but from this tyrant to that, or from one to many; and so little appearance of liberty of any kind among the people, that to recur to what I have already said, I never hear any body harangue with enthusiastic encomiums on the liberty of Old England, that I am not either ashamed of my ancestors for deserving those encomiums so little, or of my contemporaries for bestowing them so ignorantly.

As to the liberty of this country during the domination of the Norman line, every body knows it was none; the right of conquest, the apprehensions of the conqueror, and the depression of the conquered, made him eager to secure and fix his title, and the other too much weakened with intestine disputes, not to submit to any thing rather than re-expose themselves to the recent mischiefs of struggling: this disposition of both made tyranny easy to be exercised by the masters, and hard to be resisted by the slaves; their purses, we have seen, were drained, as also their numbers thinned, and their spirits broken: foreign families were called in to lord it over the natives: and whatever was imposed or required, the people were unable to dispute, or afraid to refuse.

From William the Ist to Harry the IId, the crown was worn by three successive kings, who had no other pretence to the crown, than the having a mind to wear it, and finding means to obtain it: during these reigns, it was force only prevailed, and the people enjoyed their right, no more than the lawful prince did his.

It is true, that every one of these three princes did successively promise the people, in order to make them acquiesce under this usurpation, that they would re-establish the Saxon form of government, and restore all those privileges and immunities to the people, which were enjoyed before the Conquest; but as they all three made this promise to facilitate and plan their way to the throne, so they all three broke it when they were seated and fixed there.

During the reign of Henry the IId (the first king of the Plantagenet line) it is true, the crown was less powerful, but the people were not more free; their condition was not better for their king's being worse; ecclesiastical disputes and family quarrels broke and bounded his power, without enlarging his subjects privileges; and whilst he mourned the loss of the one, they still groaned under the privation of the other.

To him that royal Don Quixote, and warlike enthusiast, Richard the Ist succeeded, who exhausted the treasure of his kingdom, to raise his fame upon earth, and spilt the blood of his subjects, to purchase glory in heaven.

In the next reign, a struggle for liberty was again made, but not for the liberty of the people; the struggle lay between a king who had a mind to be sole tyrant, and the barons who had long tyrannized in their particular districts over their inferiors, and now wanted to tyrannize over their superior too.

During the long subsequent reign of Harry the IIId (that is, after the king was of age, and the regency of the earl of Pembroke determined) the contest was the same as in the preceding reign; and though by the conduct of the earl of Leicester, the people afterward seemed to have got some ground, by chusing representatives who were instituted with a pretence of taking care of their rights, yet this was but a seeming acquisition, and no real advantage in present gained; for whilst the pretence of this institution was only the security of the rights, liberties, and privileges of the people, the true reason of their institution was only like the popular affectation of patriotism, that prevailed a few years ago in this kingdom: the great abuse of which, has proved so detrimental to the state, that the attempts of others since, to shew the real spirit of patriotism, have been stifled, misrepresented, or ridiculed; for the people having been so often made the dupes of a party instead of a patriot spirit, it is no wonder they distrust all pretensions of that kind, 'till they have incontestible conviction of uprightness and public spirit. Of this weak and corrupt ministers may make no little advantage to support their power; for if all attempts to manifest a real concern for the public weal are to be laughed at,

at, no one will have reſolution to oppoſe the worſt deſigns; and therefore the abuſe of the ſpirit of liberty will render it of no uſe when we ſtand moſt in need of it. Thus falſe patriots pave the way to ſlavery, under pretext of contending for liberty.

The long reign of Harry the IIId was a ſhifting ſcene of various turns, ſome in favour of an oppreſſive king, others of a turbulent nobility, or one ambitious man; but for the people, whatever ſpoke of this wheel was uppermoſt, their liberties, like the earth, were always beneath its revolutions, and cruſhed by its weight.

To Henry III. ſucceeded Edward I. a great man, and a great king; but though his people grew more conſiderable under him, they became not more free: the conqueſt of Wales, and the progreſs the Engliſh arms made in Scotland, increaſed the conſideration of the Engliſh nation, but it reſtored no privileges to the people; and, though the national boundaries of the Engliſh dominions were ſtretched, the limits of Engliſh freedom were ſtill unenlarged, the gates of liberty were as cloſely ſhut, and as ſtrongly barred as ever; and the only comfort of the people in this reign was, not that the power of the crown was bounded, but that it was not abuſed.

As no body will ſay the reign of his weak and unfortunate ſon, Edward II. was a reign of liberty, and as I mention no reign but with regard to that ſingle point, I ſhall paſs it over without any farther comment.

King Edward III, and his ſon, who never was king, were both of them great and able men, great in action, and able in council; England too was great under them, but not free; and even its grandeur under theſe princes, as well as under Harry the Fourth and Fifth, was a dangerous grandeur, which, though it raiſed the reputation of this country in preſent, would, if it had gone on a little longer, ended in its ruin: for the only difference ultimately between France being conquered by England, or England conquered by France, muſt be, whether an Engliſh or a French king ſhould rule both; ſince, in either caſe, the ſeat of empire would have been in France, and England, conſequently, in either, would have become a province to France, as in two poſſeſſions under the ſame prince, the leſſer muſt always be a province to the greater.

In the beginning of Richard the Second's tyrannical and ſimple reign, one tumultuous mob, indeed, under a raſh intoxicated leader, made a ſhew of ſtruggling for liberty; but the ſubſequent part of his reign was confuſion and oppreſſion, which ended in his depoſition, and the eſtabliſhment of as able a tyrant as ever ſat on this throne.

The gentler diſpoſition of this ſagacious uſurper's great and wiſe ſon, Harry the Fifth, the ſucceſs of his arms abroad, and the calmer ſituation of his ſubjects at home, leſs irritated by domeſtic oppreſſion, and leſs torn by inteſtine diviſions, made the people more happy, but made them in no one particular more free: for, though the expences of his rapid and extenſive conqueſts were defrayed with leſs charge than ſuch atchievements uſually are, yet this was entirely owing to the wiſe frugality of his own œconomy, to the bounds he himſelf ſet to his demands, and not the limits the people preſcribed to his diſburſements, or to their donations.

In the ſubſequent reign began the fatal diſputes between the houſes of York and Lancaſter, which terminated, after four reigns, and about 60 years, in the eſtabliſhment of Harry VII. During all this conteſt, the people were ſo far from enjoying any freedom, that they never ſo much as graſped at it; they fought not for liberty, but for a maſter, and never aimed at ſtriking off one chain, but in order to put on another; as if it were material, in chains of equal weight and ſtrength, whoſe name was engraved on the rivets by which they were faſtened.

Harry VII, a prince not wanting underſtanding, but wanting many good qualities, biaſſed by the utmoſt oppreſſions, and meaneſt cruelties, found a diſpoſition in his people to bear them patiently; he knew they would ſubmit to almoſt any thing he would impoſe upon them, rather than venture, by new reſiſtance, to open thoſe wounds again which were yet hardly ſkinned: and having ſenſe enough to diſcern this to be their caſe, without benevolence or juſtice, he choſe, inſtead of making himſelf ſafe in their affections, to try how far they would ſuffer, and, by a ſeries of rapacious and cruel acts of injuſtice, violence, and treachery, made his reign as uneaſy to himſelf as it was oppreſſive to his ſubjects.

This man, however, by a little dirty cunning ſhewn in ſqueezing the rich, and deceiving every body that truſted him, got the title of the Engliſh Solomon; to have called him the Engliſh David would have been more appoſite, as he died much more like the one, than he lived like the other, by ordering his ſon, on his death-bed, to do by the unfortunate earl of Suffolk as David ordered his ſon to do by Shimei, when after having promiſed to ſpare his life, he commanded it, by an unjuſt and cruel equivocation, to be taken from him by another.

In Harry VIII. centered the two different claims of York and Lancaſter to the crown; and as he had of courſe an indiſputable right, by this union of the two claims, to aſcend the throne; ſo he ſeemed to think he had an equal privilege to do whatever he thought fit, when he was placed there, and that the people in general had no more right to object to any violences his caprice and cruelty put him upon acting as king, than any particular perſon had to object to his being ſo.

As his father and mother conveyed to him the titles both of the York and Lancaſter families, ſo he ſeemed likewiſe to inherit, through them, all the vices of both thoſe houſes; he had all the diſſoluteneſs and luxury of his mother's family, in the early days of his reign, and, in the more advanced part of it, all the rapaciouſneſs and cruelty of his father.

During the reign of this butcher of his wives, this terror of the nobility, this dupe abroad, and tyrant at home, there was in England neither civil nor religious liberty, neither liberty of acting, ſpeaking, or thinking; intimidated ſervile parliaments were often the proxies of his tyranny, but never checks to it; they made and unmade, enacted and abrogated laws backward and forward, juſt as his fluctuating diſpoſition and lawleſs will (under the appearance of law) dictated and ordained.

In religious matters his conduct was not leſs deſultory and tyrannical than in regard to the ſucceſſion; reſentment to the power of Rome produced ſuch medly work in his councils, that notwithſtanding a diſpoſition in the people, through fear, to embrace any opinion which he had a mind to recommend, and profeſs any belief he wiſhed to impoſe upon them; yet his ordinances were often ſo contradictory and unintelligible, that many miſerable wretches were put to death for ſaying they believed, and many for ſaying they diſbelieved the ſame thing, whilſt others were burnt for profeſſing, contrary to his will, what they had only profeſſed becauſe they thought thoſe profeſſions conformable to it.

During the ſhort reign of his ſon Edward VI, the pride and weakneſs of the protector Somerſet, and the ambition and wickedneſs of Dudley duke of Northumberland, ſucceſſively harraſſed the kingdom with all the calamities attending a people ſqueezed by oppreſſive taxes, and forced into civil wars: and though the bad conduct of theſe two aſpiring men ended in their own mutual ruin, yet the ceſſation of their ſway gave not to the people any relief from thoſe miſeries cauſed by their authority whilſt it laſted.

It is true, we owe, in a great meaſure, the benefits we at this day enjoy from the Reformation, to the duke of Somerſet: but that this country ſhould owe ſuch a benefit originally to one of the worſt kings, and, ſecondly, to one of the weakeſt miniſters that ever governed it, is a reflection that makes one wonder at the very beneficial effects ſometimes collaterally produced from very unreſpectable cauſes, but gives us very little reverence for ſuch caſual benefactors.

To Edward VI. ſucceeded his ſiſter Mary, a devout but execrable ſovereign; for the cruel piety of that holy tyrant expoſed this kingdom to as many misfortunes, under a bigoted woman, as it ever felt under the worſt man; her whole authority was conſigned to the hands of eccleſiaſtical governors, who embrued them every day in the blood of her unhappy ſubjects: the uſurpation of the lady Jane Grey, and the ſubſequent rebellion of Wyat, made, perhaps, ſome executions neceſſary to ſecure queen Mary on the throne; but to theſe many more, very unneceſſary, were added, by the inexorable ſpirit of perſecuting Churchmen, who ſacrificed, like the moſt barbarous idolators, whole hetacombs of Proteſtant victims to their edible god, and his infallible ambaſſador.

Chriſtians, profeſſing charity, inflicted on Chriſtians all thoſe cruelties which the early followers of Chriſt complained of receiving at the afflictive hand of the moſt hardened infidels.

In a reign then where abſolute power both in Church and State, urged by revenge and enthuſiaſm, under the maſk of loyalty and devotion, perſecuted and condemned the offenders againſt an injured queen, and what they called an injured God; in ſuch a reign, what privileges and freedom were allowed to the people, even thoſe who are moſt unacquainted with the hiſtory of theſe times may eaſily imagine, from the nature of ſuch circumſtances.

At the concluſion of this bloody melancholy ſcene (which cloſed not 'till the death of the weak bigot that opened it) came queen Elizabeth, a woman as different from her ſiſter and predeceſſor in underſtanding as in religion; and one whoſe great and glorious reign can never be unjuſtly extolled, but when it is called a reign where the people enjoyed the leaſt ſhadow of liberty. Every ſtep ſhe took tended to the public welfare, the honour of the nation, and the intereſt of the collective body of her people; but was taken as abſolutely without their conſent, as the moſt prejudicial meaſures of any of her moſt arbitrary predeceſſors or ſucceſſors.

She often ſent for the ſpeaker of the Houſe of Commons, and told him not only what ſhe would and would not ſuffer to be done, but alſo what ſhe would or would not allow to be ſaid; told him ſhe wanted money, and would have it, and that Yea or Nay ſhould only be uttered when it was propoſed to be given; that the Commons underſtood not ſtate affairs; that ſtate affairs were not their buſineſs; and that it behoved them only to meddle with what was properly within their province. She, by her lord chancellor, told the ſpeaker, and by the ſpeaker told the Commons, that they had no right to judge

of returns in elections, but that her lord chancellor ſhould be the ſole judge, and determine in thoſe caſes.

She impriſoned members of parliament merely by her own authority, forbid ſome bills to be read in the Houſe, others to be debated there, and refuſed the royal aſſent twice to above 30 bills each time, that had paſſed both Houſes.

Never were the reins of prerogative held with a ſtricter hand, or the yoke of ſlavery faſter bound upon the people's necks, than at this period of time; and though the people were driven where they ought to have choſen to go, yet they were ſtill driven; and the ſame power that forced them into foreign glory and domeſtic proſperity, might, in the hands of a leſs ſkilful, or worſe-diſpoſed driver, have forced them into the paths of contempt abroad, and deſtruction at home; the ſame method of government purſued in the ſubſequent reign, and the effects of that method, on different maxims and policy, verify this aſſertion.

All, therefore, that can be ſaid with regard to the liberty enjoyed in the reign of queen Elizabeth, is, that ſhe who allowed her ſubjects none, knew their intereſt ſo well, and purſued it ſo ſteadily, that under her they poſſeſſed every good, but that of being able to make the good they poſſeſſed, the effects of their own election.

To queen Elizabeth ſucceeded the original of that unhappy race of Stuarts, king James I. His reign and his ſon's were one continued ſeries of folly and injuſtice; for theſe princes imagining they had a right to keep up the prerogative at the mark they found it, thought of nothing but their prerogative, and vainly imagined the nation would ſubmit to the ſame ſtretch of the prerogative, when exerciſed to their infamy and ruin, under which it had acquieſced when employed for their glory and proſperity.

In like manner did theſe proud, vain, ambitious, weak kings, endeavour to tread the paths of queen Elizabeth, without either her head to conduct them in ſuch paths, or ſuch miniſters as ſhe made uſe of to aſſiſt them.

I ſhall enter into no particular detail of the oppreſſion and deſpotiſm of theſe two reigns, the notoriety of the facts makes it needleſs; and with regard to the ſtruggle made for liberty, when the people could bear no longer the lawleſs oppreſſive conduct of king Charles I, though that ſtruggle freed them from his tyranny, it was far from procuring them that freedom for which it commenced: their deliverer became their undoer, and an abſolute ſtratocracy was the only exchange they made for an abſolute monarchy. I cannot help here obſerving, that when the patriot reformers of thoſe days, called Levellers, poſted up their declaration at Banbury, three of the four articles of which, according to Whitlocke, that declaration conſiſted, were theſe:

Firſt, Againſt the preſent parliament, and their proceedings.

Secondly, Againſt the council of ſtate.

Thirdly, Againſt the council of the army.

I muſt add too, that this declaration was made juſt after theſe Levellers, in modelling the government, had agreed that no exciſe ſhould ſubſiſt above four months after the commencement of the next parliament.

No public officers of ſalary ſhould be capable of being choſen at the next election.

No members of one repreſentative to be choſen of the next.

The next and future parliament to be annual.

Not to depend longer on the uncertain inclination of parliament.

Tythes not to continue longer than the next repreſentative.

Every pariſh to chuſe their own miniſter, and no pariſh to be forced to pay him.

And no one to be exempted from offices on account of religion.

How little liberty ſuch contenders for liberty procured for this country, is too well known to need animadverſion; we ſhall therefore conclude our remarks on the well-known events of theſe times, by ſaying, that thoſe who pretended at firſt only to reduce and bound the power of the Crown, and to curb him who had abuſed it, became themſelves, after they had deſtroyed the King, ſuch intolerable oppreſſors of the people, that they ſtraightened every chain they pretended to looſe, and doubled every evil they pretended to cure; and thus (according to Rapin) one may with great truth affirm that England was never leſs free than during the long parliament, and the adminiſtration of Cromwell; and how profuſely the public money was exacted at that time, we have ſeen.

Such exceſſes brought the affairs of this country into the utmoſt confuſion, and that confuſion ended in recalling from long baniſhment the Son of that oppreſſor whom theſe patriots had depoſed.

Upon this reſtoration of king Charles II, all the grievances complained of in his father's reign (or at leaſt the ſource of them, which was arbitrary power) were by miracle only prevented from being again eſtabliſhed in this country, and even by law.

For had it not been for that great and upright miniſter, lord Clarendon, that faithful ſervant to an ungrateful Maſter, that true patriot and real benefactor to an unthankful people, the form of this government had been entirely altered, the Engliſh had been, for ſome time at leaſt, as abſolute ſlaves as the Turks or the Perſians; for the King had two millions a year ſettled upon him, to defray all the expences neceſſary for the ſupport of his government; parliaments had been made uſeleſs, and conſequently laid aſide, whilſt the regal authority had been the ſole legiſlative, as well as principal executive power in this country.

That this oppoſition of lord Clarendon to the ſervile ſchemes of the Tory reſtoration men of this æra, was no proof of his love to his Maſter, though it was a great one of his zeal for the public, was the way of reaſoning which the enemies of this great man made uſe of to deſtroy him, and which prevailed at laſt with his unfeeling, blinded, and cruel Maſter, to give him up and diſcard him. But, in truth, this conduct of lord Clarendon was as much for the real intereſt of the King, as the people: he thought, and thought rightly, that it was the intereſt of the King to have his government eſtabliſhed on that foot which the bent of the nation would quickly ſubmit to, and not ſuch as they would be tempted afterwards to reſiſt, from the ſame motives that had before provoked reſiſtance; he imagined, from the examples of Charles I, Richard II, Edward II, and Harry III, who had been ruined by graſping at abſolute power in this country, that it was much more prudent for a king here to content himſelf with a bounded authority, which he might make permanent and ſecure, than to make his whole authority precarious, by trying to extend it beyond its proper limits. which had in all times made the people ſo uneaſy whenever it was attempted, that rebellion and civil wars had generally been the conſequence of ſuch weak and impolitic meaſures.

When the Ephori were eſtabliſhed in Sparta, by the conſent of Theopompus, who then reigned there, his wife aſked him, If he ſhould not be aſhamed to leave the regal authority to his ſons in a worſe condition than he found it! To which he anſwered, He ſhould leave it in a better, as it would be more ſecure, in being more tolerable, and more permanent, from being liable to fewer abuſes. Had lord Clarendon been reproached for ſuffering any boundary to be put to the power of his maſter, I dare ſay he would have returned juſt ſuch an anſwer.

And that this way of arguing in lord Clarendon was ſalutary for the king, as well as becoming a lover of his country, the effect of different reaſonings and meaſures in the next reign plainly ſhewed.

But to return to the account propoſed to be given of the ſtate of liberty, we acknowledge there was, by the upright conduct of lord Clarendon on the Reſtoration, for ſome time, the dawning appearance of liberty, in ſome wiſe and beneficial laws that were then made; but this dawning was ſoon overcaſt, other meaſures were purſued; this witty man and ſilly king was governed by his ſtill more ſilly brother; and not only the liberty, but the religion of the people, were ſtruck at and invaded.

To theſe domeſtic grievances was added the infamous management of our foreign affairs; the parliament grew refractory on account of both; and though, for ſome time, the duke of York and the parliament got the better alternately, yet, at laſt, the duke's ſcale prevailed, and the king, for the three laſt years of his reign, governed without calling any parliament at all.

Had king Charles lived much longer, it is hardly to be doubted, from the circumſtances in which we then were, but that the government, by degrees, had ſunk into the moſt abject ſtate, and, in all probability, into abſolute ſlavery. A vicious court, a corrupt king, a profligate nobility, no Houſe of Commons, the growth of Popery, and the decay of ſpirit among the people, were ſymptoms that ſeemed to preſage the end of all ſort of freedom being near at hand. But his weak, bigotted, impetuous brother, not contented to let our liberties die gradually of that chronical malady under which he found them languiſhing, and by which they muſt at laſt have expired, grew in haſte for their diſſolution, and by endeavouring to precipitate their ruin drew on his own. Nay, had he been ſatisfied with the total ſubverſion of our civil liberties, even that, perhaps, he might have obtained; to that alſo, poſſibly, he might ſubſequently have added the ſubverſion of our religious rights: but nothing would content this hot injudicious man, but doing both at once; and, by aiming at both, he was prevented from accompliſhing either.

And as ſimple people will always do ſimple things, and in a ſimple manner, ſo the recent example of king Charles I. before his eyes proved no warning to deter king James from the like practices: he proceeded to the ſame violences, without dreading the ſame fate, and the incautious ſon ſplit on that very rock by which the father had been ſhipwrecked.

For as king Charles I. had certainly carried all the conteſted points of his prerogative, had it not been for the injudicious ſtep he took with regard to the liturgy in Scotland, which commenced a rebellion there, that ſoon ſpread its contagious nature here: ſo king James, had he ſuffered the change he had a mind to make in our religion to be poſtponed 'till what he contended for in prerogative had been ſettled, I fear, by degrees, he had been able to compleat his whole ſcheme; but, by endeavouring to execute it all at once, he ruined himſelf, and involuntarily ſaved the conſtitution, which he had otherwiſe deſtroyed.

From king James the IId's baniſhment, abdication, depoſition, or whatever people pleaſe to call it, we may date the

birth of real liberty in this kingdom, or at leaſt the eſtabliſhment, if not the commencement, of every valuable privilege we now enjoy. The bill of rights aſcertained all thoſe diſputable points of prerogative and liberty that had hitherto been inſiſted on, either by the crown or the people, juſt as the power of the one or the other, at different æra's, had prevailed.

For notwithſtanding the Great Charter, 'till this explanatory renewal of it, or rather 'till this ſupplemental engraftment on the Great Charter, the bounds of liberty and prerogative were ſo indiſtinctly marked out, and ſo indeterminately known, that the names of liberty and prerogative were made uſe of both by prince and people, juſt as opportunity favoured the arbitrary views of the one, or the licentious diſpoſition of the other.

No body knew the juſt degrees of either; tyranny often wore the plauſible title of the one, and rebellion as often took the ſpecious form of the other, according as occaſion offered, and as the temper and circumſtances of the times gave handle and colour to favour the ſchemes and pretenſions of one or the other of theſe exceſſes.

On the one hand, the prince had called every thing his prerogative that his ambition induced him to wiſh was ſo; every thing that his reſolution made him attempt, or his ſtrength enabled him to acquire; every thing that either the weakneſs of his people was obliged to ſubmit to, or their ſervility was ready to allow.

On the other hand, whatever encroachments were made by the people on the prerogative, went under the denomination of maintaining their liberties; every point they gained on the crown, ſtimulated by their own ſpirit and vigour, or encouraged by the indolence and ſupineneſs of their prince, was only called reviving former rights, and aſſerting ancient privileges: and thus both king and people were ever acting like thoſe two parties deſcribed by Davila, who, jealous of each other, and mutually fearing encroachments might be made upon them, if they continued quiet, were always guilty of injuſtice themſelves, to avoid ſuffering it from others; Come faſſe ſempre neceſſario o offendere o eſſere ofeſſo; as if it was always neceſſary to injure, or be injured.

The prince and people in this country were, by theſe means, formerly juſt in the ſame ſituation in which Livy deſcribes the patricians and plebeians of Rome, who, ſays he, inſtead of being joint ſupports to the commonwealth, thought of nothing but how to impair the ſtrength of one another, 'till their mutual jealouſies of each other, and their immoderate deſire of preſerving their rights, was the cauſe that, when either party was prevalent, it employed its whole power to oppreſs the other.

The greateſt misfortune, therefore, that can happen to a country that is under a mixed government, like ours, is to have the diſtricts of the chief parts of that government ſo indiſtinctly known, that thoſe who ſhould be joint-adminiſtrators of the good of the whole, are more concerned about having the power to adminiſter it, than about the good itſelf, and are ſtriving for the one, when they ſhould be promoting the other.

To ſuch ſort of contention, ſays Machiavel, is owing the ruin of moſt ſtates; Perche fra gli huomine, parte deſidenando havere di piu, parte temendo di perdere Pacquiſtato, ſi viene alle inimicitie, alle contenzione, & alle guerra, della qual naſce la rouina di quella provincia; becauſe one party deſiring to gain, and another fearing to loſe what it has gained, enmities are bred, contention enſues, and then civil war, by which the country is undone.

Upon the whole, it is apparent that, as this nation enjoyed neither civil nor religious liberty 'till the Revolution, to the whole property of the people was either at the mercy of princes or prieſts, or both; the public revenue was raiſed in an arbitrary and oppreſſive manner, and what the civil power could not wreſt from the nation, the eccleſiaſtical did, as we ſhall ſee by the following ſtate of the REVENUES OF THE CHURCH before the Reformation was ſettled.

As far as we can collect, ſays Burnet, the religious houſes in England and Wales are, in all, to the number of 1041; of theſe, only 653 are of known values, while there remain 388 of which we have no eſtimate. The only fair method of computing the value of the latter, will be by conſidering the proportion they bear to the former in number. Common arithmetic will inform us, that, if 653 houſes were eſtimated at 171,314 l. 18 s. 1 d. then 388 houſes may reaſonably amount to the ſum of 101,792 l. 0 s. 2 d. ½, which added together, make 273,106 l. 18 s. 3 d. ½. Now one penny, in thoſe days, was equivalent to a ſhilling at preſent, as doth undoubtedly appear from the obſervations that may be made upon the proportion that labourers wages *, the price of wheat †, and the ſubſidies * granted in parliament then, bear to thoſe of our time. For this reaſon, you ought to multiply the above-mentioned ſum of 273,106 l. 18 s. 3 d. ½, by 12, which will give you the real value at this day, and amounts to the ſum of 3,277,282 l. 19 s. 6 d. Now although this may appear to be almoſt an incredible ſum, yet we are not to imagine that it was the only income of theſe religious houſes: for it was only the reſerved rent of their manors, and the yearly produce of their demeſns, without computing fines, herriots, renewals, deodands, &c. which would have, perhaps, amounted to twice as much. But, to be more exact in our calculations, let us, from this yearly income of the monaſtic houſes, deduct a ſixth part for demeſns, and then the remainder will be merely their reſerved rents: if, therefore, from 3,277,282 l. 19 s. 6 d. you will ſubtract 546,213 l. 6 s. 7 d. there will exactly remain, for their rents, 2,731,069 l. 12 s. 11 d. Now the reſerved rent being, in all church tenures, at leaſt a fifth part of the eſtate, it will follow, that the lands which the monks had out upon lives, in all amounted to the ſum of 13,655,345 l. 4 s. 7 d. and if to this you add their demeſns, we may fairly affirm that the whole land which the monks were lords of, came to 14,101,558 l. 11 s. 2 d. How great a part of our land this muſt be, you may learn from the following calculation. The land-tax is paid ſo unequally, that when it is nominally four ſhillings in the pound, though in the midland counties they are kept up to the rigour, yet in the north and in the weſt, in many diſtricts, only one and a half, in others two, but in almoſt no place above two and a half is paid. We may therefore fairly affirm, that, when the land-tax is aſſeſſed for four, it brings in but full two ſhillings in the pound, or a tenth part of the income of our eſtates, reckoning one place with another. The land-tax is ſuppoſed, one year with another, to bring in two millions, and this may be accounted, when multiplied by 10, to be the value of all the lands in England, which is 20 millions per annum †; of which only 14,101,558 l. 11 s. 2 d. was dependent on our poor and humble clergy; which is, in other words, that the monks were maſters of above fourteen parts out of twenty of the whole kingdom; and out of the ſix parts which were thus kindly left dependent on king, lords, and commons, were the four numerous orders of Mendicants to be maintained, againſt whom no gate could be ſhut, to whom no proviſion could be denied, and from whom no ſecret could be concealed.

If this calculation ſhould appear greater than what our reader can eaſily give credit to, we muſt adviſe him to look into Popiſh countries, where he will diſcover that their clergy are to the full as rich in proportion as ever ours were here. A flagrant inſtance of which we have from a calculation taken by the Great Duke of Tuſcany himſelf, in his own dominions, wherein the prieſthood were found to enjoy ſeventeen parts in twenty of the whole land; which, had it not been for that ſeaſonable ſtatute of mortmain, they would ſoon have poſſeſſed here. See A Summary of all the Religious Houſes in England and Wales, &c. printed in 1717.

* The wages of an hay-maker, in the reign of Henry the VIIth, was ſettled at one penny, and, in the reign of Henry the VIIIth, never exceeded three half pence: whereas twelve-pence now is their loweſt daily hire. Vid. ſtat. 11 Hen. VII. and ſtat. 6 Hen. VIII. concerning artificers.

† We have no direct account of the price of corn in Henry the VIIIth's time, but we may ſuppoſe it the ſame as it was in that of his predeceſſor and ſucceſſor. In the 2d year of Henry the VIIth, wheat was ſold for three ſhillings the quarter; in his ſeventh year, when a terrible dearth happened, it did not riſe to above twenty-pence the buſhel; and in his tenth and fifteenth years, was ſold for four ſhillings the quarter. In the reign of queen Mary, unleſs in time of famine, wheat was commonly ſold for five ſhillings the quarter in London, and for four ſhillings the quarter in the country. So that we may fairly compute the price of wheat, in Henry the VIIIth's time, to have been four ſhillings the quarter; which, multiplied by twelve, amounts to two pounds eight ſhillings, which is but a reaſonable price for wheat at this day. Vid. Baker's Chron. Vit. Hen. VII. and queen Mary I.

* In the 10th year of king Henry the VIIth, 120,000 l. was granted by parliament for the Scotch wars, which was looked upon to be ſo exorbitant a tax, that 16,000 men roſe in rebellion to oppoſe its being levied. This aid (which was granted but 38 years before the diſſolution of the abbies) were we to multiply it by 12, would make but a trifling ſum, compared with the ſubſidies that have been yearly raiſed for the late wars. Vid. lord Verulam's Hiſtory of Hen. VII. page 163, 164.

† Gregory King's calculations, publiſhed by Dr. D'Avenant, compute the whole rents of lands in England to be but 14 millions; and Sir William Petty's calculations, which were much older, do only compute them at eight millions a year. The latter of theſe wrote in the middle of the reign of king Charles the IId. and the former in the reign of king William; and the vaſt difference between them as to the annual value of all the lands and houſes in England, we may chiefly attribute to our trade, the increaſe of which has, in half a century, much more than doubled the rents of our eſtates in this nation.

Of the STATE of the TRADE of ENGLAND, from the CONQUEST, to the time of the REVOLUTION in the reign of king WILLIAM III.

The Engliſh nation remained much in the ſame ſtate reſpecting trade and navigation, from the time of William the Conqueror to the acceſſion of queen Elizabeth to the crown of England, which then conſiſted chiefly in tranſporting tin, lead, wool, ſome leather, iron, and other productions ſufficient to purchaſe what foreign commodities they wanted.

King Edward the IIId was the firſt prince from the Conqueſt to his time, that we find took any notice of trade; for in the parliament held at Weſtminſter, in 1338, the tranſportation of wool out of the kingdom was prohibited; and, for the encouragement of foreign clothworkers and other manufacturers to come and ſettle here, a great many privileges were granted, and an allowance from the king 'till they were fixed in a competent way of living: and it was enacted, That no ſubject ſhould wear any foreign cloth for the future. From his reign to the acceſſion of queen Elizabeth, we do not find any one prince, during that ſpace of time, had much regard for trade, except what was done by Henry the VIIth, which looks rather like policy of ſtate for cruſhing Perkin Warbeck; for though he removed the mart from Antwerp to Calais, yet two years after the prohibition was taken off, and the trade was again opened to Antwerp, as formerly. About ten years after a law was made, prohibiting the importation of manufactures of ſilk wrought by itſelf, or mixed with any other thread. 'This, ſays the lord Bacon, points at a true prin-'ciple, viz. where foreign materials are but ſuperfluities, fo-'reign manufactures ſhould be prohibited, for that will either 'baniſh the ſuperfluity, or gain the manufacture.'

In queen Elizabeth's time, many and great advantages were added to trade. In the year 1579, a Turkey * company was eſtabliſhed: the ſame year Sir Francis Drake returned to England, after three years voyage round the world, and many wonderful adventures and diſcoveries, he arrived at Plymouth, bringing with him a vaſt quantity of gold and ſilver taken from the Spaniards. In her reign, alſo, a treaty was ſettled with the duke of Muſcovy, for a trade to Archangel, in which ſeveral advantages were granted to the Engliſh nation.

* However unneceſſary, and even detrimental to the ſtate, many may judge ſome of our trading companies at preſent; yet we ſhould be wanting in candour and impartiality if we ſhould ſuggeſt that their primary eſtabliſhment was uſeleſs and prejudicial to our general trade; for certainly joint ſtock trading companies were the firſt means of cutting out many of the moſt conſiderable branches of the commerce we at preſent enjoy: notwithſtanding which, it may one day prove as good policy to lay them aſide, as it was firſt to incorporate them. But, methinks, before companies are abſolutely laid aſide and diſſolved, they ſhould be rendered as beneficial to ourſelves as they will admit of; for, if they are regulated upon national principles, ſome may, perhaps, be ſtill made no leſs inſtrumental to advance our preſent trade, than they were, at their firſt inſtitution, to promote and extend it. Therefore we ſhould be certain, before we annihilate companies, to reap all the advantage that we promiſe ourſelves thereby, leſt our policy ſhould irrecoverably turn the channel of ſome trades into the hands of our competitors, inſtead of cutting them deeper in our own favour in general. See our articles COMPANIES, ENGLISH AFRICAN COMPANY, EAST-INDIA COMPANY, and all the principal trading companies of Europe, by the Index, and our other references.

Sir Walter Raleigh, and others in her reign, diſcovered the plantations; and though the firſt planters met with almoſt inſuperable difficulties, and were often forced to quit what they had already ſettled; yet the greatneſs of their ſouls ſurmounted all difficulties, and, though often baffled in their attempts, they renewed them again with indefatigable zeal and induſtry, 'till at laſt tobacco and ſugar came to be planted, a great many ſhips built, and, in a ſhort time, not only ſupplied ourſelves with ſugar and tobacco from America, but with very large quantities to ſend abroad, and ſupplied the Baltic, Germany, Holland, Flanders, and France, with thoſe commodities, which brought in very great riches to us, and, by degrees, beat the Portugueze out of the trade of thoſe parts of Europe.

We do not find that her ſucceſſor, king James the Iſt, concerned himſelf much in trade; yet in imitation of Henry the IVth of France (who was wonderful aſſiduous in promoting all ſorts of manufactures, and, amongſt the reſt, that of planting mulberry-trees, and raiſing ſilk) made ſome eſſays towards ſuch a deſign here; and he and his courtiers ſeemed to be very fond of the undertaking, and letters were writ to Virginia, to promote that manufacture. Some ſmall progreſs was made there, and letters paſſed between the planters and gentlemen here; but, as ſoon as they thought they had engaged the planters to begin upon it, inſtead of promoting it heartily, and ſending ſome able and ſkilful perſons to direct the undertaking, they threw all upon the planters, and that noble deſign came to nothing: whereas that in France ſucceeded, to the immenſe profit of that kingdom.

King Charles the Iſt had too many things upon his hands, to concern himſelf with trade: as he was unacquainted therewith, he was eaſily impoſed on; the conſequences of which make us labour under many inconveniencies at this day; one of which was, his giving leave to the French to fiſh upon the banks of Newfoundland, to ſupply an Engliſh convent in France in time of Lent. See our article BRITISH AMERICA.

Cromwell and the Rump had ſome excellent notions of trade; they ſettled the act of navigation, beat the Dutch, forced them to a treaty, in which they were to deliver up the iſland of Pellarone, and to pay large ſums for the violences exerciſed upon the Engliſh at Amboyna; but, upon the reſtoration of King Charles the IId, the Dutch thought themſelves ſecure enough, and ſince have never made any ſatisfaction. They took Jamaica with vaſt expence, which has been repaid ſince with intereſt. The favour granted by king Charles the Iſt to the French, to fiſh upon the banks of Newfoundland, by length of time, and afterwards by the eaſier temper of king Charles the IId, gave them an opportunity of claiming a right to that part they had ſeized. It is ſaid king James II. ſhewed great uneaſineſs upon that occaſion, but nothing was done, in order to obtain ſatisfaction. The ſhort time he reigned, and his other views for eſtabliſhing the Popiſh religion, did not give him time to do any thing for trade.

In a word, from the time of the Conqueſt to the Revolution under king William III, the public revenue was, in the general, raiſed in an arbitrary and lawleſs manner; and ſcarce any other trade went on, 'till the reign of queen Elizabeth, than that between the church and the civil power, to the end that the one might the more effectually fleece and plunder the people, and get all the lands of the kingdom into their hands, as we have ſeen, and the remaining ſhare of property ſo ſettled upon the crown, that there might be no occaſion for parliaments. Thus was there, in the general, a combination between the regal and eccleſiaſtical power, to become not only abſolute maſters of all the property in the nation, but maſters over the underſtandings and conſciences of the people, that they might be ruled with a rod of iron, forged by the united tyranny of princes and prieſts.

REMARKS in another light.

We have not room, under this head, to trace the ſtate of the public revenue down from the Revolution to the preſent time; we ſhall, therefore, refer the remainder 'till we come to the article TAXES.

Our reaſon for taking notice in every reign of the ſtate and the intrinſic value of the coin, is becauſe this matter has ſo cloſe a connection with the ſums of money levied upon the people, that we can make no right judgment either of the ſtate of trade, or of the public revenue, without them; for the proper application of theſe facts will occaſionally tend to elucidate many difficulties in our reaſoning upon things of this nature. At preſent, I ſhall make a few obſervations relative to this point, the application of which may be made, by the judicious reader, as well prior, as ſubſequent to the PROTESTANT REVOLUTION.

As to the neceſſaries of life, it will be admitted that many of them are greatly advanced in their price ſince former times, even ſince the days of king Charles the IId, but every body knows, who is not wilfully blind, that ſuch additional price is, in a great meaſure, to be attributed to the modern duties of EXCISE AND CUSTOMS [ſee our articles DUTIES, LABOUR]; but ſuch of thoſe things which are the direct and immediate produce of land, and which are exempt from thoſe duties, it is not true that their price is generally enhanced; and if it were true, the neceſſary conſequence of ſuch advance would be, that the lands which produce them would yield a better annual rent; and yet this certainly is not generally the caſe, unleſs the lands have received ſome improvements.

But if by former times we mean thoſe of two hundred or three hundred years ago, every one, who has at all looked into things of this nature, knows, that in the times of Henry the IVth, or about three hundred years ago, a pound of ſilver money in tale was an actual and effective pound of ſilver, wanting a few ſhillings, and allowing a ſmall matter for allay; a ſolid, or ſhilling, or what was ſo denominated in accounts, was a twentieth part of a pound, and a penny a twelfth part of a ſhilling. From hence, without doubt, was introduced the method of reckoning by pounds, ſhillings, and pence; meaning thereby, ſuch quantities of ſilver: and we continue ſtill to make our accounts by pounds, ſhillings, and pence; though it is now merely a fiction, and ſubſiſts no where but in imagination; for a pound in money, as now called, does certainly contain no more than a third part of the ancient pound, which was a pound in weight as well as in tale. It is known too, equally well, that 15 pounds in ſilver, whether in coin or in bullion, they being both the ſame or near it, were equal to one pound weight in gold: and a pound of ſilver in weight being now cut into 3 l. 2 s. or 62 s. fifteen ſuch pounds make now 46 l. 10 s. in ſilver money in tale; and a pound of gold is now cut into 44 guineas and an half, which makes in gold money in tale 46 l. 14 s. 6 d. each guinea reckoned at 1 l. 1 s. So that gold and ſilver in our days bears

the ſame, or very near the ſame proportion to one another, as they did in former days.

How the ſtate of the ſilver coin ſtood about 200 years ago, or in the times of Henry the VIIIth, is not ſo eaſy to fix without diſtinguiſhing the times; however, it may be ſufficient here to ſay in general, that in the beginning of his reign a pound of ſilver made 2 l. 5 s. in tale, and at the latter end 7 l. 4 s. ſo great was the debaſement of the coin then by the mixture of allay: and yet once, in the time of his ſon and ſucceſſor Edward VI. this coin was made much worſe, a pound of ſilver fine making 14 l. 8 s. in tale.

I cannot forbear obſerving here, that many authors, amongſt others biſhop Fleetwood, in his Chronicon Precioſum, takes notice of this debaſement of the coin, and complains of it as a great grievance to the nation, as undoubtedly it was; but aſſerts, that an advancement of money in the denomination [ſee the article COIN], where the ſtandard of which it is made remains the ſame, is no prejudice to the public: nay, ſome carry it ſo far, as to contend it would be of advantage; whereas an advancement and a debaſement, moſt certainly are an equal miſchief, where made in an equal degree.

If the ſilver ſpecies now in being was all called in and recoined, half of ſilver and half of allay, the grievance of this is readily ſeen and admitted; but if a crown-piece were called an angel, and made to go for ten ſhillings, and the reſt of the ſilver pieces in proportion, in this, ſay they, there is no harm, the change is merely nominal.

As to ſales and bargains to be made in future, ſuch change in general is merely nominal; becauſe the parties ſelling or contracting will have regard, not to the denomination ſolely, but to the real quantity of ſilver or gold which is known, or ſuppoſed to be contained in the money in which ſuch contracts are preſumed to be paid and performed; and therefore the owners of goods would then expect to have double the quantity of money in pounds, ſhillings, and pence, for the ſame commodities which they would now ſell for the ſingle quantity: ſo that, in theſe inſtances, there would be neither prejudice nor benefit accruing to either party. But would not the caſe be the ſame, and the change be merely nominal, if the money were debaſed in an equal proportion? Exactly the very ſame, and for the ſame reaſon: for there would be the like right, the like opportunity, and the like method, of perſons helping themſelves, viz. by taking then a double quantity of money, in monies numbered, inſtead of a ſingle one which they now take.

But beſides thoſe tranſactions of buying and ſelling, and contracts in future, there are other money-matters which are to be regarded, and where this exchange will produce an effect which ſhall be more than names and mere words. There are ſuch things as old and unalterable rents, annuities perpetual and certain, debts ſubſiſting, and contracts in being, both of a public and private nature, where the ſums are fixed and determinate, to the value of many millions, perhaps not much ſhort of a moiety of the value of the eſtate of the whole kingdom; the proprietors of all which neceſſarily muſt loſe juſt as much as the money is nominally advanced, for that they will receive juſt ſo much in ſilver leſs, and in gold proportionably, as is equal to the ſuppoſed increaſe in the denomination of the money. With regard therefore to theſe perſons, an increaſe in the nominal value of money, and a decreaſe in the intrinſic value, ſuppoſing them to be in one and the ſame proportion, will have one and the ſame miſchievous effect; that is, the one or the other will ſink a moiety of their ſubſtance. Whether ſuch a project as this might not paſs in a neighbouring kingdom for a reaſonably good way of diſcharging PUBLIC DEBTS, I cannot tell; but I believe he who ſhould adviſe it, and put it in practice in England, in moſt people's opinion, would deſerve an Ax or a HALTER.

And for the advantages which are ſurmiſed would ariſe from hence to the public, viz. that ſuch a ſcheme would make the ſpecies of ſilver more plentiful, and prevent its being melted down and exported, they are both of them vain and groundleſs expectations. If the ſilver coin, ſuppoſing there are now SIX MILLIONS of that ſpecies in the kingdom, were advanced to double the preſent nominal value, we might, indeed, ſay then, that we had TWELVE MILLIONS of that ſpecies: but this ſame ſilver ſpecies, when called twelve millions, will operate in trade, or any buſineſs of the nation, juſt ſo far and no farther, than the ſame ſpecies now does; which is called only ſix millions: for that, after ſuch alteration, there can be no money-tranſactions in which ſilver is made uſe of, let the tranſaction be in a greater or a leſs ſum, but we muſt neceſſarily then make uſe of double the quantity of that money in tale, or the ſame quantity in weight, which we now make uſe of, in any caſe whatever, excepting that of paying OLD DEBTS, and making good PREVIOUS CONTRACTS. To ſay otherwiſe, or that the ſame quantity of ſilver in coin, when called twelve millions, would be of more uſe than when called ſix millions, has no more ſenſe or truth in it, than there would be in ſaying, if a piece of cloth of 5 yards long were cut into ten pieces, and thoſe pieces were called yards, that then it would go farther in making a ſuit of cloaths, than it would do if thoſe pieces were called, as they really are, half yards only. Juſt in the ſame manner, if a pound of ſilver, which is cut into 62 pieces, and which are now called ſhillings, ſhould hereafter be called ſolids, or by any other new name, and made to paſs for two ſhillings; yet a pound of ſilver, whether the 62 pieces of which it is made, are called ſhillings, or ſolids, is one and the ſame thing, and of one and the ſame value; and an old ſhilling will go as far at the market as a new ſolid. On this account, and for the ſame reaſon, any ſuch ſcheme as this, whether it be by increaſing the nominal value of money by giving it a new name, or by decreaſing its real value by debaſing it, will have no ſort of effect tending to the intereſts of trade, or preventing the exportation of our coin, either of gold or ſilver. Traders and merchants, eſpecially thoſe who deal in foreign commodities, will not have regard to the pounds, ſhillings, and pence in tale, to which ſo many pieces of ſilver or gold coin may amount, but to the pounds, ounces, and grains, which thoſe pieces will make in weight at the ſcale; and therefore, for a parcel of goods, the ſame in quantity and quality, they will then expect, and in fact will receive, ſilver or gold in exchange, the ſame in quantity and quality which they now do: and conſequently, may export ſilver or gold, with the ſame eaſe and equal profit, whatever the ſtate of the coin ſhall be: and if they can do it to advantage, I ſuppoſe they will do it; and, perhaps, there is no unanſwerable reaſon why they ſhould be prohibited.

What was the intereſt of money, or of ſilver and gold of which it conſiſted, or the price given for it on loan, two or three hundred years ago, I confeſs I have not been able to diſcover, ſo as to fix it with any certainty. Thus far, however, we may ſafely go, and perhaps that may be ſufficient for our purpoſe, as to affirm, that about two hundred years ago, it was at leaſt as high as 10 per cent. per annum, there being an act of parliament made at the latter end of the reign of Henry the VIIIth, that it ſhould not exceed that rate; ſo that it is a very fair conjecture, that it had been before that time higher: and in the time of Henry IV. poſſibly as high as 15 per cent. And every body knows, that the intereſt or price of it now is no more than 5 per cent. ſetting it at the higheſt rate it can be legally lett at.

From theſe premiſes, I mean from the different ſtates of the ſilver coin, which generally govern that of the gold coin, and from the different rates of intereſt in any periods, and in the preſent periods of time, theſe deductions may be made: that when a pound of money in tale was an effective pound of ſilver in weight, and the intereſt or price of money was at 10 per cent. if we compare the price of commodities in England now, with the price of them at thoſe times, the price now ſhould be in the proportion of 6 to 1; and if the price or intereſt of money was at 15 per cent. and the like compariſon were made, the proportion now ſhould be as 9 to 1. Our notion in this matter is, that the price of things at one time will bear that proportion to the price of them at another time, which the effective ſilver in the nominal pound at one time, bears to the effective ſilver in the nominal pound at another time, and the intereſt or price of ſuch pounds on loan at the different given times, computation being made upon both thoſe heads.

From hence we infer, if in the times of Henry the VIIIth, a pound of ſilver was cut into 40 or 45 s. and now into 60 or 62, that the price of any commodity which then was two, muſt now be three pounds, on the account of that difference only; and if the intereſt or price of money was then 10 per cent. which is now only 5, the price on that account muſt be farther doubled, and in all be 6 l. that is, the preſent price muſt be three times as much as in that reign. In like manner, if in the times of Henry the VIth, a pound of ſilver was cut into 30 and now into 62 ſhillings, from thence only the price of things now muſt be double the price of them then; and if the intereſt of money then was at 15 per cent. as very probably it might, that difference from the intereſt now will make an addition of a treble price, and the whole be as 6 to one. So in the time of Henry the IVth, when a pound of money in tale was a pound of ſilver in weight, and the intereſt was 15 per cent, which is treble the value and treble the price of each now, we muſt treble the price on each account, and the price now will be as 9 to 1.

To ſhow this I will make uſe of a familiar inſtance. A farmer or merchant, in the times when a pound of money in tale was an effective pound of ſilver in weight, and the price of it on loan was 10 per cent. is poſſeſſed of a parcel of ſheep, oxen, wool, corn, or other neceſſaries of life, to the value of 100 l. at the market-price, when he ſells them at that rate, will receive 100 l. in ſilver in weight as well as in tale, or in gold proportionably. A farmer or merchant in theſe times, therefore, muſt have 300 l. in money for a like parcel of goods, or elſe he will not have the ſame quantity of ſilver or gold in weight, though the goods ſold are in quantity and quality the ſame; that is, the preſent owner muſt have three times the price, in money as now told, as the ancient owner had, for the ſame things: that this is the fact in the inſtance of gold, as a commodity, is evident; for that a pound of gold in Henry the IVth's time was ſold for 15 l. or thereabouts, in money in tale, and now it ſells for 45 l.

45 l. and ſomething over, in the like money in tale, that is, at three times the price.

To paſs on to the difference in the rate of intereſt now and formerly. If theſe merchants have not preſent occaſion for theſe ſeveral ſums in their way of trade and buſineſs, or are deſirous to let them out at intereſt; the merchant of old times, on the loan of his 100 l. at the end of the year will receive 10 l. in ſilver, in weight as well as in tale, ſuppoſing intereſt to have been at 10 l. per cent; but the merchant of theſe times for the intereſt of his 300 l. will have no more than 15 l. in tale, which is equal only to 5 l. in weight: therefore, that the one and the other may have equal advantage from the ſame parcel of goods, the modern merchant muſt ſell his goods at 600 l. for no leſs ſum than that will yield him 10 l. of ſilver in weight for intereſt by the end of the year; that is, he muſt ſell them at ſix times the price: or otherwiſe theſe two perſons, at the end of ſuch year, will not be in equal circumſtances, though they were ſo at the beginning, when they were poſſeſſed of their goods.

If theſe merchants ſhould inveſt their money in lands of inheritance, inſtead of putting it out at intereſt, the caſe will ſtill come out the ſame. When money is at 10 per cent. the price of eſtates in fee-ſimple is 10 years value: ſo that 100 l. in old times, would have purchaſed an eſtate of 10 l. per ann. and a rent of 10 l. per ann. was a rent of ſo many pounds weight in ſilver, or near it, and of gold in proportion.

If a man were now to purchaſe an eſtate of equal goodneſs, he muſt pay for it 300 l. even though intereſt were ſuppoſed to be the ſame now as formerly, and there were no advance in the years purchaſe; for no rent leſs than 30 l. per ann. will produce 10 pounds in ſilver in weight, or proportionably in gold. And when we take into the account the difference of intereſt, it is plain, that the fall of intereſt to one half, makes a riſe of land in the purchaſe to a double price: and therefore, now legal intereſt is no more than 5 l. per cent. he muſt and does pay 600 l. for an eſtate of 30 l. per ann. that is, for an eſtate of equal goodneſs, and which ſhall yield an equal quantity of real ſilver or gold, which might have been bought 300 years ago for 100 l. he muſt now pay juſt ſix times as much.

Or take the matter in this light. The ſum of 100 l. in former ages, if laid out in lands, or lett out at intereſt, would, in a year's time, produce to the owner ten pounds weight of ſilver, or a proportionable quantity of gold; the ſum of 200 l. now, if laid out in lands, or lett out at intereſt, would in a year's time produce to the owner 10 pounds in money, as now counted: but 10 pounds in money, as formerly counted, had three times as much ſilver or gold in it, as ten pounds in money, as now counted: therefore, to produce as much ſilver or gold, within the year as formerly, three times 200 l. or 600 l. as money is now counted, muſt be laid out in land, or put out at intereſt; that is, ſix times the money muſt now be employed to produce the ſame quantity of ſilver or gold as was produced formerly by 100 l. only. The conſequence of this is, that the neceſſaries and conveniencies of life, which are the things out of which money is to ariſe, when they come to a market, muſt now be ſold at ſix times the price, or ſix times the pounds, ſhillings, and pence, which they were formerly ſold at; or the very ſame things will not anſwer the ſame purpoſes of life now, which they would have done three hundred years ago.

It will be needleſs to repeat here this reaſoning, and ſhow that it is applicable to the caſe, which I have ſuppoſed poſſible, that the intereſt of money has been in ſome times at 15 per cent. and that the price of goods between thoſe times and theſe ſhould be in the proportion of 9 to 1. It may ſuffice to ſay in general, that it will hold good in that inſtance, and in any other which may be ſuppoſed; ſo that wherever the quantity or real ſilver in a nominal pound, and the current intereſt of money can be known and determined, there the price of things may be known and determined likewiſe. My notion is here, that the real and intrinſic value of the abſolute neceſſaries of life, ſuch as food and raiment, were always, and always will be, much one and the ſame, except where an accidental plenty or ſcarcity makes a temporary variation; but if we compute the value of theſe neceſſaries by a third thing as a common meaſure between them, the price, or nominal value ſo meaſured, muſt vary as ſuch meaſure itſelf varies. If ſilver be made that medium, as for many ages it has been in theſe parts of the world; and if in former times a real pound of ſilver was called a pound, a twentieth part of a pound was called a ſhilling, and the twelfth part of a ſhilling a penny; if in times ſubſequent the meaſure itſelf be varied, and a third part of a pound of ſilver be denominated a pound, and ſhillings and pence in the like proportion, the price or nominal value of the neceſſaries of life will and muſt vary with it. A quarter of wheat or malt, a pound of beef, or a yard of cloth, are now of the ſame real value as heretofore; for they will go as far towards the ſupport of human life now as they did 500 or 1000 years ago, and no farther; but their price or nominal value, as meaſured by the current coin of the kingdom, muſt vary as the coin itſelf varies; and this we muſt admit to be the caſe in ſilver itſelf, or we muſt be forced to ſay, that one third part

of a pound of ſilver, ſuppoſing no more than a third part of a pound of ſilver to be in a preſent nominal pound, is of equal value with a whole pound. For if we conſider ſilver, not as a meaſure of traffic only, but as a neceſſary or convenience of life, and as a merchandizable commodity, as we certainly may and do; one pound of ſilver is of the ſame value as another, and of the ſame value at one time as at another, greater or leſs plenty excepted; but the price or nominal value was formerly one pound only, but now we ſee it is three pounds and above in ſilver, as a meaſure: and we may rightly ſay, that it ceaſes to be one and the ſame meaſure, when it ceaſes to be one and the ſame thing in its weight and value.

From hence we plainly diſcern one reaſon, why money now is not at the ſame value as it was two or three hundred years ago, viz. becauſe the ſilver of which it conſiſts in any given ſum in tale is now only a moiety, or a third part of the quantity, which was formerly in the like ſum in tale; and it being a convenience of life and a ſaleable commodity, the real quantity of ſilver in the money is the true meaſure of its value. But, beſides this decreaſe in the value of money ariſing from the variation in the ſpecies, we find another in the intereſt, or annual premium for it. This, to be ſure, has proceeded from another cauſe; and has ariſen, as I apprehend, from the great increaſe of the moveable and eaſily transferrable eſtate in the kingdom, which for ſome time has been growing upon us, and of late has been ſo vaſtly enlarged by the PUBLIC FUNDS, and not from the INCREASE of gold and ſilver in the kingdom, either in coin or bullion, any otherwiſe than as they conſtitute a part of ſuch moveable eſtates.

For the further application of theſe principles, ſee the article TAXES, and ſuch other heads as we ſhall from thence refer to.

RHODIAN LAWS, OF COMMERCE AND NAVIGATION.

Of the naval laws and ſtatutes of the RHODIANS.

Rhodes is the capital city of a renowned iſland of that name, of about 120 miles in circumference, ſituate in that part of the Mediterranean called the Carpathian Sea, overagainſt Caria, and near the ſouth-weſt point of the Leſſer Aſia, having Cyprus to the eaſt, Egypt to the ſouth, and Candia to the weſt; its longitude being 58 degrees, and latitude 37 degrees and 50 minutes. It was beſieged and taken by the Turkiſh emperor Solyman in the year 1522, and has ever ſince been ſubject to the Ottoman empire. Rhodes, amongſt other things, is famous for the huge ſtatue or image of the ſun, which is ſaid to ſhine there at leaſt once every day in the year; the weather it ſeems never being ſo cloudy as to deprive the inhabitants of that place, for a whole day together, of the glorious appearance of that luminous body: this ſtatue was ſeventy cubits high, and one of the wonders of the world.

Though the maritime dominion of the Rhodians was once very mighty, yet they did not render themſelves ſo famous by their naval ſtrength as by their naval laws; to which even the wiſe and victorious Romans themſelves paid ſo great a deference and reſpect, that, to the immortal glory of their authors, they were honoured with the ſingular approbation of the Roman emperors, as well as of their ſenate, and they being delivered to us by Peckius, in his commentaries De Re Nautica (of maritime affairs) in two different fragments, the firſt of which, he ſays, had obtained the ſanction of the emperors Tiberius, Adrian, Antoninus, and ſeveral others; and the laſt is to be found in the 11th book of the Digeſts of the Roman Laws, where it was inſerted by the emperor Juſtinian, of which the following is a tranſlation.

But, as the cuſtoms of the Rhodian and Roman navigators were different from ours, we have judged it convenient to illuſtrate, with notes and explanations, what might otherwiſe ſeem obſcure to thoſe that are not pretty well acquainted with the naval polity of the Ancients.

SECT. I.

Containing the firſt fragment of the NAVAL LAWS of the Rhodians, as they were ratified by ſeveral of the Roman emperors.

ARTICLE I.

Of the owners of ſhips.

The wages of the owners ſhall be a double portion.

ILLUSTRATION.

Though now the maſters are not frequently the owners of their ſhips, it is probable that they generally were amongſt the Rhodians as well as Romans. For the Latin word exercitor correſponds with Ναύκληρος, which is the original term in the Greek, implies the owner of a hired ſhip, being a term ſynonymous with thoſe of navicularius and naviculator; ſo that probably the owner, being likewiſe the maſter or commander of the ſhip, was to have beſides the hire or freight

for the ſhip itſelf, a double portion for his own wages; that is to ſay, twice as much as was allowed the other mariners: but how much that portion was, is not determined, nor is it of any great importance to us to know it, ſince the wages we now give our ſea-officers and mariners, depend upon events that render that precedent uſeleſs to us.

ARTICLE II.

Of the pilots.

The wages of the pilot ſhall be a portion and a half.

ILLUSTRATION.

The Greek term κυβερνήτης, which is moſt properly anſwered in Latin by the word gubernator (ſignifying governor) is nevertheleſs explained by a circumlocution, viz. Ille qui clavum tenet (he that ſteers the helm, or governs the ſtern of the ſhip) by which it appears, That then it was uſual for the pilot not only to direct the ſhip's courſe, but ſteer her too themſelves, as indeed they are ſtill obliged to do amongſt us, when the ſhip has any dangerous place to paſs through, or is ſo near any ſhore that a more than ordinary ſkill is requiſite to bring her ſafe off; but otherwiſe, ſuch of the other mariners as are moſt capable of that function, are appointed to do it by turns.

ARTICLE III.

Of the boatſwain.

The wages of the boatſwain ſhall be a portion and a half.

ILLUSTRATION.

The words both in the Greek and Latin, implying that officer which rules the prow or fore part of the ſhip, we thought they could not be more naturally rendered, than by the term of the boatſwain, whoſe office is much the ſame amongſt the Engliſh mariners.

ARTICLE IV.

Of the carpenter.

The carpenter's wages ſhall be a portion and a half.

ILLUSTRATION.

The word naupegus, which the Latins have derived from the Grecians, being in effect the ſame with fabricator navium, or navis artifex, does properly ſignify a ſhip-builder, and is the ſame with what the Venetians call, in imitation of the modern Greeks, califatte, which is rendered by the French charpentier, and by us properly called ſhipwright, or ſhip-carpenter.

ARTICLE V.

Of the coxſwain's wages.

The wages of the coxſwain ſhall be one portion.

ILLUSTRATION.

Carabus, by ſeveral of the Ancients, is taken for a ſort of a ſtoreſhip, attending men of war and other great veſſels, ſuch as theſe to which we now give the name of tenders. But the officer here termed carabita, being ſpoken of as one that remains on board of the principal ſhip, it is very probable, that thereby is meant the mariner that has the charge and management of the ſhip's boat, which is all the tender that ſmall merchant-ſhips are provided with; whence we judge, that inferior officer muſt be the ſame, who by the French is called patron de la chaloupe, and by us coxſwain.

ARTICLE VI.

Of the mariners.

The wages of each mariner ſhall be one portion.
This article needs no illuſtration.

ARTICLE VII.

Of the drudge or kitchen boy.

The wages of the kitchen-boy ſhall be half a portion.

ILLUSTRATION.

The word here uſed in the original, implying one that takes care of the fire, or lights it, &c. wanting a proper term in Engliſh to correſpond exactly with Παρασχάριτος, I thought it could not be more aptly rendered, than by the term of a drudge or kitchen-boy, &c. which is uſual enough in England.

ARTICLE VIII.

Of the merchant.

The merchant may have two boys in the ſhip, paying for their paſſage.

ILLUSTRATION.

By this article it is provided, that a merchant freighting any ſhip, and embarking himſelf with his goods, as a ſupercargo, may likewiſe carry along with him two boys or ſervants, he paying a reaſonable allowance for their paſſage.

☞ The ſix following articles treating only of paſſengers and their privileges, and duty aboard of ſhips, after inſerting them in order, we ſhall explain what may ſeem obſcure in any of them together.

ARTICLE IX.

A paſſenger's place ſhall be three cubits in length and one in breadth.

ARTICLE X.

A paſſenger ſhall not himſelf fry fiſh in the ſhip, nor ſhall the maſter allow him to do it.

ARTICLE XI.

No paſſenger ſhall cleave wood on ſhipboard, and the maſter ſhall hinder ſuch as attempt it.

ARTICLE XII.

Paſſengers ſhall receive water on ſhipboard by meaſure.

ARTICLE XIII.

A woman paſſenger ſhall have a place of one cubit aſſigned her, and a boy only one half of a cubit.

ARTICLE XIV.

If any paſſenger carries money aboard of a ſhip, let him depoſit it into the hands of the maſter; which if he fails to do, and afterwards pretends to have loſt either gold or ſilver, his oath ſhall not be valid againſt the maſter, becauſe it was not depoſited in his hands.

ILLUSTRATION of the ſix preceding ARTICLES.

Though the word vector (which we here render paſſenger) be by ſome taken for thoſe that tranſport, as well as for the perſons that are tranſported; and though Porphyrius, in queſtionibus Homericis, makes that term ſignify marine ſoldiers, it is plain by the ſenſe and connection, that by it is here meant paſſengers, or perſons embarking in a ſhip to be tranſported from the port where they embark to ſome other, upon a certain valuable conſideration to be paid by them for ſuch tranſportation, upon their arrival at the aforeſaid port.

And as to the place three cubits long and one cubit broad, mentioned in the ninth article, it is probable to be that in which they were to lie; though it muſt be confeſſed, that the length of three cubits and a half (which is here expreſsly ſpecified, and amounts to no more than four feet and a half of our meaſure) does not ſeem to be ſufficient for a man of good ſize to lie in, or at leaſt, he muſt not pretend to ſtretch out in his bed. But ſince we cannot conceive for what other uſe this room ſhould be aſſigned a paſſenger, we are of opinion that it is for a bed; nor will the ſhortneſs thereof ſurprize ſuch, as conſider the general ſmall burthen of the ancient ſhips, in compariſon with that of thoſe we now uſe; nor are the conveniencies for lodging at this time very great in little doggers, or other ſuch ſhips of 40, 50, or 60 tons; and yet I believe they are a great deal better than they were in ſhips of the like or of greater burthen amongſt the Ancients.

With reſpect to the injunction contained in the 10th article, by which paſſengers are prohibited to fry fiſh on ſhipboard, and the maſter forbid to allow any that liberty, we conceive what might give occaſion to that law, was the conſideration that paſſengers, not being ſuppoſed to be very well acquainted with ſea affairs, ſhould not be allowed to uſe the fire upon any account, which is a good preſervative againſt unlucky accidents.

By the 11th article, paſſengers are in the ſame manner forbid to cleave wood on ſhipboard, and the maſter alſo commanded to deny that privilege (as the former) to ſuch as would attempt it; which law has probably been intended for the preventing of any damage that might otherwiſe occur to the ſhip or goods, by the practice of that violent exerciſe by paſſengers, who poſſibly might do miſchief without knowing it.

The 12th article contains a very ſeaſonable regulation for obliging paſſengers to content themſelves with a moderate quantity of freſh water, which they muſt receive by meaſure whilſt on ſhipboard; for otherwiſe the freſh water, which at ſea is very precious, might be ſquandered away to the great detriment of the paſſengers themſelves, as well as of all the ſhip's company, in caſes of preſſing neceſſity.

By the 13th article it is ordained, That a woman paſſenger ſhall have a place to lie in, of a cubit in breadth; and though the length be not mentioned, we are reaſonably to ſuppoſe it not to have been intended any leſs than allowed to a man. But as for a boy (by which muſt certainly be meant any child, whether male or female) there is only allowed one half of that breadth, a convenient length being naturally ſuppoſed.

The

The 14th article contains a very juſt and reaſonable ſtatute, by which paſſengers are enjoined to depoſit their money in the hands of the maſter of the ſhip; and withal acquaints them, that if they fail in that, they are not to expect any reparation at his hands, in caſe it be ſtolen or otherwiſe loſt.

ARTICLE XV.

Of a mutual oath to be taken by maſters, mariners, and paſſengers.

The maſters, mariners, and paſſengers, that ſail together, ſhall take an evangelical oath.

ILLUSTRATION.

The word evangelical has been added by the Chriſtians to this law; for the ancient Rhodians at the time that their ſea-laws were compiled, were heathens and idolaters. What the nature and intent of this oath was, is not here expreſſed. The word in the Greek is, Ἀναμάξηλον, which Peckius renders in Latin, jusjurandum irrecuſabile; which words imply an oath that is undeniable, or that cannot be refuſed, and may likewiſe ſignify, that cannot be gainſaid, retracted, or recalled, ſo that it is probable, it was a ſort of mutual engagement, or oath of fidelity, which perſons navigating together were obliged to take. But of whatever nature that oath was, it is of no very great importance for us to trouble ourſelves about it.

ARTICLE XVI.

Of the eſtimation of the Rhodian ſhips.

The eſtimation of a ſhip (containing a thouſand meaſures) with all its tackle, ſhall be fifty nobles, and ſo it ſhall come into contribution; and the eſtimation of an old ſhip ſhall be thirty nobles, out of which deducting one third, it ſhall likewiſe come into contribution.

ILLUSTRATION.

This article ſeems difficult to be underſtood, nor ſhall we depend on our own judgment thereon.

As to the meaſure ſpoken of, ſome take it to have been that which is called both in the Greek and Latin amphora, and was a ſquare veſſel containing about nine gallons; ſo that a ſhip carrying a thouſand of them, muſt not have been of a very great burden. And as for the piece of money, which we have rendered in the Engliſh a noble, it is called in the Latin tranſlation ſolidus, and in the annotations upon that aureus, both which I find to come to much the ſame thing in Engliſh; for though by ſolidus be now ordinarily meant a ſhilling, it was formerly taken, as aureus, for an ancient piece of gold of the value of 6s. 8d. or thereabouts, and known to us by the name of a noble.

So that upon the whole, it ſeems probable, That the Rhodian legiſlators did by this article intend to fix the eſtimation of their merchant-ſhips in proportion to their burthen, to the end that according to that eſtimation they might be taxed, in caſes of contribution for damages at ſea, or perhaps in other things, in which ſhips might be liable to pay, in foreign and domeſtic ports, according to their burthen, ſuch as pilotage, anchorage, &c.

ARTICLES XVII, and XVIII.

Of loans and intereſts by ſea and land.

ARTICLE XVII.

The law thus commands that things which are intruſted to ſeafaring perſons upon ſurety, and without riſque of the lender, ſhall not be put into writing; or if a writing be made, according to the Rhodian law, it ſhall not be valid: but ſuch things as are given upon credit to perſons that travel by land, though with a ſurety and without any riſque, ſhall be reduced into writing.

ARTICLE XVIII.

If any perſon taking up money upon uſe, and paying for ſeveral years the lawful intereſt, there befals him, after eight years, any loſs or damage by fire, or by the irruption of the Barbarians, or otherwiſe, the tranſaction concerning the intereſt ſhall be made according to the laws of the Rhodians: but if the former intereſts were not paid, the contents of the firſt agreement ſhall be obſerved according to the inſtrument.

ILLUSTRATION.

For the better underſtanding of what is above, it is fit to know, That amongſt the Romans there was a great difference, not only in the value of the intereſt paid for money lent at ſea, and for money lent at land, but likewiſe in the manner of conditioning and taking ſecurity for ſuch ſums.

There was, it ſeems, no intereſt due for money lent on land, except an inſtrument was produced in due form by the lender, in which all things agreed upon between him and the borrower were plainly and expreſsly ſtipulated; which ſeems to infer, that the intereſt at land was various; perhaps according to the ſecurity given, or the time which the money was to remain in the hands of the borrower, or ſome ſuch circumſtance.

And as to the intereſt of money lent to mariners and other ſea-faring perſons, it is evident that that was of two ſorts: the ordinary intereſt for money lent to mariners upon ſecurity, and without any riſque on the part of the lender, they called ſimply fœnus or uſura; but the extraordinary intereſt agreed to be paid by mariners, together with the principal, upon condition that the lender ſhould run the hazard of the ſea, and that the mariner ſhould make reſtitution only in caſe he performed happily his voyage, and not otherwiſe; that was called by the Ancients fœnus nauticum, or NAVAL INTEREST, importing that the lender took upon himſelf the hazards of the ſea; and that was deſervedly allowed to be much more conſiderable than the ordinary intereſt, for that it was not only lent without ſecurity, but likewiſe in a manner ſo inſured by the lender, that the borrower was in no danger of ſuſtaining any loſs. See BOTTOMRY.

The 18th article is a favourable ſtatute for ſuch as having borrowed money, after punctually paying the intereſt during the ſpace of eight years, ſhould ſuffer any loſs; in which caſe the laws of Rhodes (to which this ſtatute appeals) allow a certain mitigation of the intereſt for the time to come, which is not obſcure enough to want any further illuſtration.

ARTICLES XIX, and XX.

Of maſters and mariners.

ARTICLE XIX.

Maſters ſhall not be anſwerable for the contracts of their mariners, but they may be detained for their crimes.

ARTICLE XX.

Maſters ſhall be obliged to deliver and reſtore whatever they receive, but none can compel them to receive any thing, which they have from the beginning refuſed to receive.

ILLUSTRATION.

As to the 19th article, in which it is ſaid, that maſters may be detained for the faults or crimes of their mariners, but not for their debts; we preſume that the meaning is this, viz. That in caſe a mariner commits a crime, the ſhip may be ſtopped from purſuing her voyage, having the criminal aboard; and, in a word, that the maſter cannot protect ſuch a mariner from juſtice: for it is not to be imagined, that a maſter of a ſhip could be bound to anſwer perſonally for the offence of his mariners, that being againſt all reaſon and law whatſoever. And as to the matter of debts, it is not reaſonable, if people imprudently truſt ſeamen with money or things, that the maſter ſhould be obliged, either to pay the money or ſurrender the debtors; for then his voyage might be obſtructed for want of hands to man his ſhips, and ſo he and the merchants would innocently ſuffer for other people's folly; and therefore by this law it is wiſely provided, that if money or goods are given to ſeamen, the givers muſt look to their own ſecurity themſelves; by which, innumerable inconveniencies that otherwiſe might occur, are prevented.

The 20th article concerns only goods received by, or offered to maſters of ſhips upon freight.

ARTICLE XXI.

Of money taken up by maſters for the uſe of the ſhips, &c.

When maſters of ſhips, that are proprietors of one third of the lading, have taken up money for the voyage, whether for the outward or homeward bound, or both, all tranſactions ſhall paſs according to the writings drawn up between the maſter and the lender, and the latter ſhall put a man on board the ſhip to take care of his loan.

Note. This laſt article is gnawed out in the copy of the Rhodian ſea-laws in the Vatican, and in ſeveral others it is entirely left out.

The ſecond fragment of the NAVAL LAWS of the Rhodians, as extracted out of the 11th book of the Digeſts of the Roman Laws.

ARTICLES I, II, III, and IV.

Of ſtealing anchors and other things.

ARTICLE I.

If a ſhip touching at any port or ſhore, be robbed of her anchors, the thief being taken and convicted, the law condemns him to the torture, and to pay double damages.

ARTICLE II.

If with the conſent of the maſter, the ſeamen of any ſhip rob another ſhip in the port of her anchors, and thence the loſs of the ſhip ſo robbed enſue, that being duly proved, the maſter who permitted the robbery, ſhall make good to a farthing, the damage happened to the loſt ſhip, and to them

that were in it. And if any thing elſe of the ſhip's tackle, ſuch as the cables, ſhip's boat, ſails, canvas, or any other thing of that nature be ſtolen, the thief being taken and convicted, ſhall reſtore double.

ARTICLE III.

If any mariner, by the command of the maſter, ſteal any thing of a merchant, or other paſſenger, and be ſurprized in the fact, the maſter ſhall make good the double to the owners, and the mariner that committed the fact ſhall receive a hundred blows of a cudgel. But if the mariner alone be acceſſary to the theft, he ſhall be grievouſly tortured (eſpecially if it was gold that he ſtole) and ſhall make reſtitution to the owner.

ARTICLE IV.

If a maſter ſteer his courſe through any place obnoxious to pirates, after being informed of the danger thereof by the paſſengers, and thereupon they happen to be ſpoiled, the maſter ſhall make good the loſs. And if the paſſengers carry the ſhip through a dangerous place, after being acquainted with the danger by the maſter, and any miſchief happen, then they ſhall ſuſtain the damage.

The four preceding articles are in themſelves ſo plain, that they need no illuſtration.

ARTICLES V, VI, VII.

Of quarrelling, fighting, and ſtriking.

ARTICLE V.

If the mariners quarrel, let it only be in words, and let them not ſtrike one another. And if any giving another a blow on the head, wound him, or hurt him, in any other manner, he that gave the blow ſhall pay the doctor's fees and all other charges, and ſhall likewiſe pay his hire for the laſt time, and tend the hurt perſon during the cure.

ARTICLE VI.

If the mariners quarrel, and one of them ſtrike another with a ſtone or cudgel, and he returns the blow to him from whom he received it, that ſhall be deemed to have been ſe defendendo [in his own defence]: and though the perſon laſt ſtruck does thereupon die, it being proved by witneſſes that the deceaſed did firſt ſtrike the ſurvivor, either with a ſtone, with a ſtick, or with any iron, he that ſtruck and killed the other, ſhall be free from all danger, for that the deceaſed ſuffered himſelf, only what he would have made another ſuffer.

ARTICLE VII.

If any maſter, merchant, or mariner, ſtrike a man with his fiſt and blind him, or if by kicking him, he burſts his belly, beſides the doctor's fees, he ſhall pay twelve nobles to the perſon for the loſs of the eye, and ten nobles for the cauſing of a rupture; and if the perſon ſo ſtruck die, the aggreſſor ſhall be puniſhed with death.

The three preceding articles are in themſelves ſo clear, that they don't want any further explication.

ARTICLE VIII.

Of maſters and mariners running away with ſhips.

If a maſter to whom a ſhip is intruſted, with the conſent of the mariners, run away with her into a foreign country, all their goods, moveable and immoveable, and whatſoever they poſſeſs in any manner, ſhall be ſeized; and being ſold, if their price does not equal the value of the ſhip, trouble and time, the aforeſaid maſter and mariners ſhall be hired out, 'till they have made ample ſatisfaction for the damage by them cauſed.

ILLUSTRATION.

For the better underſtanding of this article, it is proper to obſerve, that in ſome caſes it was cuſtomary among the Ancients, to adjudge the perſons of offenders to be diſpoſed of, or hired out by maſters, 'till by their labour they ſhould make ſatisfaction for damages by them cauſed, which they were not otherwiſe able to repair; and ſuch it ſeems was, amongſt the Rhodians, the condition of thoſe who, running away with ſhips into foreign countries, had not effects ſufficient to refund the value of the ſhips, with damages and charges; it being by this law provided, That ſuch offenders (returning into their dominions, or being apprehended, and brought within the limits of their juriſdiction) ſhould be hired to work as ſervants or bondſmen, 'till they had made ample ſatisfaction for ſuch offences.

ARTICLE IX.

Of lightening of ſhips in a tempeſt, &c.

If a maſter conſult about lightening of a ſhip, let him enquire of the paſſengers what money they have in the ſhip, and a juſt calculation being made, the money ſhall pay proportionably towards the contribution: and the beds and wearing clothes and inſtruments, ſhall likewiſe be taxed. And if an ejection be made, the maſter ſhall not be rated at more than one pound, the pilot and boatſwain half a pound, and the mariners three ſcruples. And if there be ſervants or any other perſons that are not to part from the ſhip, they ſhall be taxed at three mina's; but if they be to leave the ſhip, at two mina's. And in the ſame manner ſhall they contribute, if they are robbed of money or other things belonging to the mariners in general, by pirates. And if there intervene ſome private articles of partnerſhip concerning profits, a juſt computation being made of the ſhip and every thing in it, the partners ſhall bear their proportion of the contribution to be paid for damages.

ILLUSTRATION.

This article is the moſt important of the whole fragments, and treats of lightening of ſhips in time of a ſtorm, &c. and of the manner in which that is to be done. One may eaſily imagine, that when a ſhip is in diſtreſs and in danger of ſinking, the law of nature will oblige the perſons that are in her to uſe all poſſible means for their own preſervation: and ſhips being frequently loaden ſo full, in hopes of fair weather, that in caſe of a ſtorm, they are not well able to live at ſea, without being diſburthened of a part of their lading; it is in that caſe allowable for the maſter and company to throw overboard as much of the lading as is requiſite for enabling the ſhip to bear out againſt the tempeſt. Nor does that only happen when ſhips are overburthened: for frequently they may by ſtormy weather be reduced to ſuch a paſs, that though their lading be not extravagant, it may be neceſſary to part with ſome of it, in order to preſerve the reſt; and in that caſe, if the owner of the goods be in the ſhip, it is poſitively required, firſt to conſult him; and in his abſence, the conſent of the company is a ſufficient warrant for the maſter to diſburthen the ſhip: but the merchant or his ſupercargo, or any other perſon being preſent for him, it is requiſite that ſuch an ejection ſhould not be undertaken without his conſent. And thence it became cuſtomary, not only amongſt the Rhodians and Romans, but generally amongſt all other navigators, that the owner of the goods being preſent, ſhould, with his own hand, begin to diſburthen a diſtreſſed ſhip, by throwing ſomething overboard himſelf; after which the ſeamen and others were to follow his example, and throw over as much of the lading as might put the ſhip into a condition to reſiſt the ſtorm.

And becauſe it ſeldom happens that the whole lading of a ſhip belongs to one merchant, it is very juſtly provided, that the perſon whoſe goods are caſt overboard ſhall not be the only loſer, but that the owners of ſuch goods as have been ſaved, ſhall contribute towards the loſs of thoſe that were thrown overboard. So that even ſilver, gold, and precious ſtones (though theſe cannot be well ſuppoſed to endanger a ſhip by their burthen) muſt pay proportionably with other goods; and that not according to their bulk, but their value: nor is the owner of the ſhip at all exempted from paying his proportion, according to the value of the ſhip, becauſe the throwing over of the goods contributes to the common ſecurity of the ſhip, and all that is in it: and as every one is obliged to bear his proportion of the loſs, all endeavour to be as careful as poſſible to throw over the goods that are leaſt valuable; for otherwiſe it might happen, that the maſter and mariners, out of ſpite and revenge, might occaſion conſiderable damage to merchants, againſt whom they might have ſome private pique and reſentment.

Nor are in ſome caſes the clothes, beds, and perſonal neceſſaries, nor even the perſons of the maſters, merchants, paſſengers, and mariners themſelves, free from contributing towards the damage ſuſtained by ſuch ejections.

When it happens that goods have been thus thrown overboard to lighten a ſhip, the contribution is made in this manner. In the firſt place an account is given only of the prime coſt of the goods that are loſt, and then eſtimation being made of them that are preſerved, not according to what they coſt, but according to the price they'll probably yield at the port whither the ſhip is bound; they are all charged in proportion to their value, and muſt pay accordingly.

And in the ſame manner it is ordained, to make an equal contribution for damages ſuſtained by rovers and pirates; the good deſign of which law is to excite every individual mariner, and other perſon in the ſhip to his duty, to which the conſideration and apprehenſion of his own particular riſk, will not a little contribute.

This article concludes with a very reaſonable clauſe, obliging all perſons, though not on ſhipboard themſelves, concerned by partnerſhip in any part of the contribution to be paid out of the ſhip's cargo, to allow their ſhare of the contribution to be paid out of the goods that are preſerved, towards the price of thoſe that are loſt; which certainly is very juſt, ſince it is not thoſe who are entitled to any ſhare of the profit, ſhould decline to bear the proportion of the loſs, except by ſome ſeparate agreement the contrary be provided.

ARTICLE X.

Of ſhipwreck and other damages.

If by the negligence of maſter and mariners, any damage or ſhipwreck happen, they ſhall be anſwerable for it. And likewiſe

wiſe, if by the fault of the merchant the ſhip and cargo periſh, he ſhall ſuſtain the loſs. But if a ſhipwreck happen merely by misfortune, without any failure on either ſide, what can be ſaved of the ſhip and lading, ſhall be prized and brought to a contribution.
This article is too plain to need any explication.

ARTICLE XI.

Of old and unſound ſhips.

Let not merchants nor paſſengers put heavy and precious goods in an old ſhip: if they do, and the ſhip ſetting ſail, the goods be ſpoiled or damnified, they muſt blame themſelves. But when merchants hire ſhips, let them diligently enquire of others who have formerly ſailed in them, whether they be well provided with all neceſſary inſtruments, tackle, good ſails, yards, canvas, anchors, ropes, convenient rudders, good boats, and able, ſkilful, and ſufficient mariners, and whether the ſhip's ſides be ſound: and, in fine, to comprehend all in one word, let them enquire about the ſhip's ſufficiency in every thing, and accordingly venture their goods.
This article requires no illuſtration.

ARTICLE XII.

Of a depoſitum or truſt by ſea and land.

If a perſon depoſit any thing either in a ſhip or houſe, though in the hands of a known and reputable man, let it be done in the preſence of three witneſſes. But if the matter be of conſequence, let a writing be drawn up upon it. And if the perſon in whoſe cuſtody it is left, pretend that it is loſt, he muſt ſhow the place where the houſe has been broke, or make it appear how the theft was committed, and make oath, that he is no way acceſſary to it. Which if he cannot do, he muſt make good the thing depoſited as he received it.

ILLUSTRATION.

By this good law, the Rhodians endeavoured to obviate the abuſes, which the avarice and diſhoneſty of men had, by reaſon of the deficiency of former ſtatutes, found means to introduce into trade. And as here a ſufficient remedy is appointed againſt the unjuſt denials and pretences, which in ſuch caſes were ordinarily made uſe of, ſo by the ſubſequent article, for avoiding all occaſions of confuſion and loſs by the mariners, &c. perſons carrying money aboard of ſhips are enjoined to depoſit the ſame in the hands of the maſters, who in that caſe are to be reſponſible for it, and not otherwiſe.

ARTICLE XIII.

Of money, &c. ſtolen at ſea.

If a paſſenger embarking in a ſhip carry money, or any other thing along with him, let him depoſit it in the hands of the maſter. And if (that not being done) he alleges, that he has loſt either gold or ſilver, no notice ſhall be taken of what he ſays, further than this, that the maſter, mariners, and other paſſengers in the ſhip, ſhall be interrogated upon oath about it.

ILLUSTRATION.

This is much the ſame with the 13th article of the preceding ſection, only with this difference, that whereas in the former, no injunction is laid to put the maſter or mariners, &c. of any ſhip upon their oath in caſes of this nature, that deficiency is here ſupplied, and all perſons navigating in a ſhip, where any money or other valuable effects are miſſing, are obliged to declare upon oath, whether they know any thing concerning them.

ARTICLE XIV.

Of depoſitaries denying the receipt of what was left in their hands, and their puniſhment.

If a depoſitary denying upon oath, or by writing, the receipt of what was entruſted to him, be afterwards convicted by witneſſes, or if the thing depoſited be found in his cuſtody, he ſhall reſtore twofold, and, beſides that, ſhall be puniſhed as one guilty of wilful perjury.
This needs no explication.

ARTICLE XV.

If merchants or paſſengers having other men's ſervants aboard a ſhip under their charge, or if the maſter, being entruſted with captives, touch at any city, port, or coaſt, and there, any perſon or perſons going aſhore, the ſhip happening, whilſt they are at land, to be purſued by robbers or pirates, and making the ordinary ſignal puts to ſea, ſo that both the ſhip and the merchants and paſſengers goods are preſerved, all the goods and effects of thoſe that were left aſhore ſhall be reſtored to them. And if any of them afterwards commence a ſuit againſt the maſter, for having left them aſhore in a place infeſted with robbers, they ſhall recover nothing, becauſe the maſter and mariners were obliged to fly from the pirates. But if a merchant or maſter leave another man's ſervant, who was under his charge in any place, he ſhall make reſtitution to his maſter.

ILLUSTRATION.

For the better underſtanding of the ſenſe of this article, it ſeems neceſſary to obſerve, that as in moſt other things, ſo in war, the cuſtoms of the Ancients did very much differ from theſe of the preſent age; and that eſpecially with regard to priſoners taken in war, who for the moſt part were made ſlaves; that is to ſay, remained in perpetual captivity. And though amongſt the more civilized nations, ſome regard was had to their quality and ſtation, thoſe of the common ſort were ſold and diſpoſed of, as are now the negroes, which we purchaſe in Guinea, and carry to the plantations in America. And in this ſenſe is to be underſtood the captives and ſervants here ſpoken of, and ſuppoſed to be committed to the care of maſters, merchants, or paſſengers, who by this law lie under an obligation of looking ſo narrowly after them, that if by any accident they ſhould happen to be left aſhore, the perſons under whoſe conduct they were left, ſhould be anſwerable for them, and liable to make reſtitution either of the perſons or value to the owners.

ARTICLE XVI.

Of money lent for naval intereſt, &c.

If maſters or merchants borrow money for their voyages, the goods, freight, ſhips, and money being free, they ſhall not make uſe of ſuretyſhip, except there be ſome apparent danger, either of the ſea, or of pirates. And for money ſo lent, the borrowers ſhall pay NAVAL INTEREST.

ILLUSTRATION.

By this law, merchants and mariners borrowing money to be laid out in their traffic by ſea, ſeem to be enjoined to pay naval intereſt for it, which (as already obſerved) was much more conſiderable than that which was paid for money borrowed upon ſecurity at land, becauſe the hazard was much greater: for, amongſt the Rhodians, when money was lent upon naval intereſt, the riſk was to the lender, who, in conſideration of that, had a very conſiderable ſhare of the profits ariſing from it: ſo that, upon the main, it was the lenders that traded with their own money, by the intermiſſion of ſuch ſeafaring perſons as thought fit to follow that way of living, and who undoubtedly made a great profit for themſelves with the money ſo borrowed, beſides the ſhare they were obliged to give the lenders for the uſe of their money, and for the dangers to which it was expoſed.

ARTICLE XVII.

Of money lent in partnerſhip.

If money is lent to a ſeafaring perſon by one in partnerſhip with him, for the uſe of the partnerſhip, and articles be drawn, either for one voyage, or for any longer time that the partnerſhip is to laſt, if the perſon receiving the money doth not return it in the time agreed upon to the owner, and it afterwards happens to be loſt, either by fire, robbery, or ſhipwreck, the lender ſhall bear no ſhare in the loſs, but ſhall receive his own in ſafety. But if before the expiration of the time appointed for the partnerſhip, there happens any loſs or damage at ſea, the loſs (as well as the gain) ſhall be divided between them both, according to the agreement made.
This needs no illuſtration.

ARTICLE XVIII.

Of perſons borrowing money upon ſecurity, and afterwards going abroad.

If any perſon borrowing money for a certain term, does afterward go into a foreign country, the time agreed upon being expired, the loan ſhall be paid according to the law of ſuretyſhips. But if there be no way of getting ſatisfaction, and the money ſtill remains in the hands of the borrower, he ſhall pay NAVAL INTEREST for all the time that he was abſent.

ILLUSTRATION.

Some account has already been given of the difference that there was amongſt the Rhodians, between the intereſt paid for money borrowed at land, and to be employed there, and that which was borrowed by ſea-faring people, to be laid out in goods, and tranſported to foreign countries in the way of trade. We have likewiſe taken notice that, in the latter caſe, the lenders were allowed to receive much greater profits than in the former, becauſe their riſk was greater. Now the intent of this article is, only to command the like intereſt to be paid for money borrowed by a perſon, who afterwards retires to a foreign country, during the time that he remains there; becauſe the legiſlators thought it juſt to give the lenders ſome extraordinary allowance for the diſappointment they met with, and the riſk they might run upon ſuch occaſions.

ARTICLE XIX.

Of freighting of ſhips, and giving earneſt.

If any perſon hiring a ſhip, and giving earneſt, ſays afterwards that he has no occaſion for her, he ſhall loſe his earneſt;

neſt; but if the maſter recede from the agreement, he ſhall give the merchant double the earneſt.
This article needs no explication.

ARTICLE XX.

Of charter-parties.

In hiring of ſhips, the charter-parties [ſee CHARTER-PARTY] ſhall not be valid, except they be ſealed; and the penalties may be inſerted, with the conſent of the parties. But if there be no charter-party, and either the maſter or freighter go from their word, as ſuppoſe the merchant ſhould not give the money agreed to, he muſt pay half the freight to the maſter; or, if the latter break his word, he ſhall pay to the merchant the half of the freight; but if the maſter pretend intirely to recede from the bargain, he ſhall pay to the maſter the whole freight; which penalty ſhall be exacted as a puniſhment for breach of promiſe.
This does not want any illuſtration.

ARTICLE XXI.

Of maſters or owners of ſhips in partnerſhip together.

If two maſters of ſhips verbally enter into partnerſhip, acknowledging that they have done ſo in former times, and have mutually obſerved the conditions thereof, and always paid the duty of each lading; in caſe any accident happens to either of the two ſhips, whether being in ballaſt or laden, that which is ſafe ſhall ſuſtain one fourth-part of the damage, though their partnerſhip be commenced without any written inſtrument. But where there are articles in writing, they ſhall be firm and valid, and the things which are ſaved ſhall be liable to a contribution with thoſe that are loſt.

ARTICLE XXII.

Of merchants freighting a whole ſhip.

If a merchant freighting a ſhip agrees to lade it intirely himſelf, the maſter ſhall carry nothing in it but water, proviſions, ropes, &c. and other the ſhip's neceſſary tackle; however, if the maſter will put in other goods in the ſhip, he may, if ſhe can carry them. But if the merchant, in preſence of three witneſſes, proteſt againſt it, and thereupon there happens at ſea to be an ejection, the maſter ſhall ſuffer the damage; but, if the merchant do not forbid it, they ſhall contribute towards the aforeſaid damage.

ARTICLE XXIII.

Of the validity of charter-parties.

If there is a charter party in being between the merchant and the maſter, it ſhall be valid; and, though the merchant does not compleatly lade the ſhip, he ſhall pay the freight, according to the contents of that inſtrument.
This wants no illuſtration.

ARTICLE XXIV.

Of lets and impediments in voyages.

If the maſter having received half of the freight, and ſetting ſail, the merchant will return, notwithſtanding the charter-party, he forfeits the ſum he has paid for that impediment. But if the maſter breaks the articles, he ſhall forfeit the value of the whole freight to the uſe of the merchant.

ILLUSTRATION.

That the reader may not confound this article with the 20th of this fragment, which likewiſe treats of the penalties impoſed upon ſuch as having freighted ſhips, do afterward recede from their contracts, which are different from thoſe mentioned in this article; we ſhall put him in mind, that there the breach of verbal bargains and agreements about freighting of ſhips, is ſpoken of; whereas the penalties here mentioned are for the breach of charter-parties, which are written inſtruments, ſolemnly ſigned and ſealed; and, beſides that, it is more properly the impediments that may happen during the voyage that are here treated of. [See the article CHARTER-PARTY.]

ARTICLE XXV.

Of demurrage, &c.

If a ſhip be detained by the merchant ten days longer than the time appointed by the charter-party to remain in any port, he ſhall find the company in victuals and drink; and, if ten days more paſs, the merchant ſhall pay the freight, and quit the ſhip, except he be willing to add a reaſonable ſum to that before agreed to; upon payment of which he may ſail, as he ſees convenient.

ARTICLE XXVI.

Of maſters or mariners lying aſhore, or being negligent.

If the maſter or any of the mariners lying aſhore, the ſhip happens, during their abſence, to periſh, whether by night or by day, the maſter or mariners ſo lying aſhore ſhall ſuſtain the damage, and thoſe who remain in the ſhip ſhall be free; and whatever damage befals a ſhip by any one's negligence, ſhall be refunded to the owner by the perſons by whoſe fault it happened.
This needs no illuſtration.

ARTICLE XXVII.

Of ſhipwrecks happening by the fault of the maſter or mariners.

If a ſhip puts to ſea with merchants or partners goods, and there happens to be diſabled, or to periſh by the fault of the maſter or mariners, the goods that are ſaved ſhall be ſecured in a certain place, free from any danger. But if it is proved by witneſſes that the ſhipwreck was occaſioned by the tempeſt, as well what remains of the ſhip, as of the goods, ſhall be brought to a contribution; and the maſter ſhall retain half the value of the freight. And if any perſon denying, in ſuch a caſe, his partnerſhip in a voyage, be convicted thereof by three witneſſes, he ſhall pay his proportion of the loſs, and likewiſe undergo the puniſhment of that denial.

ILLUSTRATION.

By this law we ſee, that further proviſion is made for determining ſuch differences as might probably ariſe between the parties concerned, in caſe of ſhip-wreck: it being poſitively ordained, that, in caſe ſuch a diſaſter ſhould in any manner happen by the fault of the mariners, then the lading (if ſaved) ſhould be preſerved for the merchant, free from all contribution towards the damage of the ſhip; leaving the other matters, concerning that which the goods may have ſuſtained, to be decided according to the other preceding ſtatutes relating to ſuch affairs. This article concludes with a very juſt and equitable regulation, concerning perſons who having only verbally taken an intereſt in any ſhip, or in its lading, in caſe of ſuch a diſaſter, ſhould pretend to deny themſelves to be concerned therein, in order to avoid the paying of a ſhare of the loſs proportionable to what they would have claimed in the profit; of which being duly convicted, they were to pay a double ſhare of the loſs, and be further puniſhed for their fraudulent denial, as the law required.

ARTICLES XXVIII, and XXIX.

Of the ſtaying of ſhips in ports, and ſhipwreck, or other damage happening thereupon.

ARTICLE XXVIII.

If a ſhip be detained by a merchant or partner, ſo that ſhe cannot ſail from her port upon the day appointed, and that ſhip happens afterwards to be taken by pirates, or to periſh by fire or ſhipwreck, he that was the cauſe of her being detained ſhall pay the damage.

ARTICLE XXIX.

If a merchant in the port where the charter-party is made, does not, at the day appointed, lade the ſhip, and ſhe afterwards ſuffers any damage by pirates, fire, or ſhipwreck, the merchant ſhall pay all the damage; but if before the day appointed any ſuch accident happens, they ſhall both contribute.
Theſe two articles need no illuſtration.

ARTICLES XXX, and XXXI.

Of ſhips that are loſt, and the merchant's money ſaved.

ARTICLE XXX.

If a merchant lade a ſhip, and, carrying money with him, any accident happens to the ſhip, ſo that ſhe being broken to pieces, the goods are loſt, what can be ſaved of the ſhip or goods ſhall be liable to a contribution; but the merchant paying the tenths, ſhall keep his money: and, if he eſcaped alone, without laying hold of any implement of the ſhip, he ſhall only pay half freight, according to the charty-party; but if he made uſe of any tool belonging to the ſhip, in ſaving of himſelf, he ſhall pay a fifth of the money preſerved.

ARTICLE XXXI.

If a merchant lades a ſhip, and any accident happens, whatever is preſerved on either ſide ſhall be liable to a contribution. If there be money ſaved, it ſhall pay a fifth; and the maſter and mariners ſhall uſe their utmoſt endeavours to ſave it.
This needs no illuſtration.

ARTICLE XXXII.

Of a ſhip going to ſea for a freight, or in partnerſhip, and there ſuffering ſhipwreck.

If a ſhip, being laden by a merchant, puts to ſea, either for a freight, or in partnerſhip, and ſome misfortunes befal her, the merchant ſhall not diſpute the paying of half freight; and what is ſaved of the goods ſhall, together with the ſhip, be

be liable to a contribution. But if the merchant, or partner, has advanced any money beforehand, all things ſhall paſs according to the form of the written agreement made between them.

This article needs no explication.

ARTICLE XXXIII.

Of accidents befalling a ſhip after ſhe is unladed.

If a maſter unlade the goods at the appointed port, and afterwards any accident befals the ſhip, the merchant ſhall pay him the whole freight; and the goods unladed, together with the ſhip, ſhall be ſecure from the paſſengers. But if any thing remains in the ſhip, it ſhall be liable to a contribution with the ſhip.

ILLUSTRATION.

What is here meant by the unladed goods and ſhip's being ſafe from the paſſengers, ſeems a little obſcure: perhaps, in ſuch caſes, the paſſengers were not allowed any reparation of the damage they might ſuſtain in the clothes and perſonal neceſſaries they might have on ſhip-board; becauſe they being only there accidentally, and having no intereſt in the voyage, it was not, probably, thought juſt, that the goods of a merchant who hired the ſhip, and paid the freight, ſhould bear any proportion of the loſs ſuſtained by a paſſenger, by whom he was to expect no profit. Without this interpretation, we do not ſee how the laſt ſentence of this article can be made conſiſtent with the words immediately preceding.

ARTICLE XXXIV.

Of goods ſpoiled in the hold, by leakage or water, &c.

If a ſhip has linen or cloths aboard, the maſter ſhall provide good canvas, leſt the goods ſhould be damnified by the flowing in of the water in the time of a ſtorm. If the pump or ſink too much fills the ſhip, the maſter ſhall forthwith acquaint ſuch as have goods on board, that they may be viewed; and if the ſeamen not informing the maſter thereof, the goods be ſpoiled, the maſter, together with the mariners, ſhall refund the damage: but if it appear that the maſter and mariners declared that the ſink was too full, and that the goods ſhould be laid abroad, and thoſe that laded them neglect it, the maſter and mariners ſhall be no ways liable to the damage.

ILLUSTRATION.

This article contains a very commendable regulation for obliging the maſters and mariners of ſhips to be careful of the lading, and to have continually an eye upon the hold, to ſee that it be clear of water, and that every thing remain in a ſecure ſituation. Nor is there any thing more juſt, than that the damage occaſioned by the negligence and careleſſneſs of maſters and mariners, ſhould be repaired by them, ſince otherwiſe ſome of them would be ſo indifferent in regard to merchants goods, that they would ſcarce be at the pains to ſtow them in places of the hold convenient for them: and, on the other hand, it is no leſs reaſonable that, if the maſters and mariners acquit themſelves of their duty, in acquainting the owners of the goods of the danger that they are in, and they notwithſtanding refuſe to let them be removed, the owners themſelves ſhould ſit down with the loſs, which they would not prevent. However theſe are caſes which very ſeldom happen among us.

ARTICLE XXXV.

Of a ſhip lightening her burthen in diſtreſs.

If a ſhip either having loſt her maſt by accident, or, it being cut, throws over any of her lading in that diſtreſs, all the mariners, merchants, and goods, and what is preſerved of the ſhip, ſhall be liable to a contribution.

This needs no illuſtration.

ARTICLE XXXVI.

Of ſhips running aboard of one another.

If any ſhip under ſail, in the day-time, run aboard of another lying at anchor in an harbour, or that has ſlackened her ſails, all the loſs and damage ſhall fall upon the maſter and paſſengers, and goods of the ſhip under ſail, which ſhall be liable to a contribution. If it be in the night-time, the ſhip that ſlackens her ſails ſhall put out a light, or, wanting that, ſhall endeavour to avoid the danger, by ſhouting and crying; both which being neglected, and the ſhip periſh, it is her own fault; and that being duly proved, no reparation ſhall be made by the other. But if thoſe that have the management of the ſails be negligent, and the commander of the watch be aſleep, the ſhip which has its ſails ſpread ſhall be deemed to be the author of that misfortune, and ſhall refund the damage done to the ſhip ſhe runs aboard of.

ILLUSTRATION.

That ſome particulars of this article ſeem to be a little ſevere, muſt indeed be acknowledged: for though it be highly reaſonable, that if a ſhip under ſail runs aboard of another, which not being in that diſpoſition, cannot avoid the danger with which ſhe is threatened, it is very hard that the goods of the merchant ſhould pay for the fault of the ſeamen, in which he can have no hand; and yet more unaccountable, that an innocent paſſenger (who perhaps is an utter ſtranger to all thoſe matters) ſhould ſuffer for the malice, ignorance, or neglect of an obſtinate crew. However it ſeems that hereby the Rhodian legiſlators intended to ſtir up all perſons whatſoever, by the powerful motives of their own private intereſt, to do their utmoſt endeavour to prevent all ſorts of unhappy accidents; and, indeed, it ſhould be the principal care of all ſeafaring perſons to avoid ſuch dangerous rencounters: but, as it is not poſſible for a ſhip that is either lying at anchor, or has her ſails in ſuch a poſture that ſhe cannot of a ſudden change her courſe, to prevent ſuch meetings, the ſhip that has her ſails in a good diſpoſition, and may ſteer another way, is obnoxious to the law for all the damage that may befal another of whom ſhe runs aboard, than which, nothing is more reaſonable. If the damage is occaſioned by the omiſſion of thoſe that receive it, they muſt e'en take it for their pains; for if, in a dark night, a ſhip lying at anchor in any road, puts out no light and keeps no watch, another ſailing that way may very innocently run aboard of her, without being aware of the danger; and therefore due care ſhould be taken to keep a regular watch there, as well as at ſea, and likewiſe to put out lights, by which it may be diſcovered from afar, and thereby freed from ſuch unhappy accidents.

ARTICLE XXXVII.

Of a ſhip being loſt, and the lading ſaved.

If any accident befal a ſhip, by which ſhe periſhing, the goods of the merchants and paſſengers are notwithſtanding preſerved, the goods preſerved ſhall pay their ſifteenths, but the merchants and paſſengers ſhall not pay the maſter for the ſhip.

ARTICLE XXXVIII.

Of ſhips laden with corn, and ſurprized with a ſtorm.

If a ſhip laden with corn be ſurprized with a tempeſt, the maſter ſhall take care to give good canvas, and the ſeamen to keep the pump clear; which if they neglect, and the corn is thereby wet, the mariners alone ſhall bear the damage: but if the corn be damnified by the ſtorm, without any fault on their part, the damage ſhall be borne by the maſter and mariners, together with the merchant; and the maſters and mariners ſhall have a hundredth part of what is preſerved. And when the ſhip is to be lightened at ſea, the merchant ſhall firſt throw ſomething overboard, and then the mariners muſt follow his example: but, if any of them afterwards ſteal any thing, they ſhall reſtore it double, and loſe all manner of benefit.

ARTICLE XXXIX.

Of laded ſhips being carried out of their courſe and loſt.

If a ſhip ſetting ſail, laden with corn, wine, or oil, be carried by the maſter (without the merchant's conſent) to any ſhore or place out of her courſe, and there happens to be ſhipwrecked, the goods and lading being ſaved, the merchant ſhall ſuffer nothing by the ſhip's misfortune, becauſe he was not for touching at that place. But if (the ſhip being under ſail) the merchant tells the maſter that he muſt of neceſſity touch at any place that is not mentioned in the charter party, and there the ſhip happens to periſh, the lading being ſaved, the merchant ſhall make good that ſhip to the owner: but, if the thing was undertaken by their mutual conſent, they ſhall contribute for the damage.

Theſe articles need no illuſtration.

ARTICLE XL.

Of the ſhipwreck of ſhips, out of which precious goods are ſaved.

If any ſhip ſuffers ſhipwreck, and, nevertheleſs, a part both of the ſhip and goods be ſaved, if the paſſengers have gold, ſilver, velvet, pearls, or precious ſtones about them, the gold that is ſaved ſhall pay the tenths, and the ſilver the fifths: and, if the velvets be not damnified, they ſhall pay the tenths, as gold; but if they be, the damage ſhall be deducted, and the remainder ſhall contribute; and the pearls, as they ſhall be rated, equalling the weight of gold, ſhall compenſate the value of the ſhip.

ILLUSTRATION.

What the reaſon may be that ſilver, which certainly is more burthenſome in a ſhip than gold, ſhould pay one half leſs towards the damage in caſe of ſhipwreck, cannot eaſily be conceived, no more than what ſhould make velvets, which are yet more burthenſome and bulky than ſilver, be taxed twice as much as ſilver. It is certain, that that commodity was much eſteemed among the Ancients, when it was not ſo commonly wore as it is now; but we can hardly believe that it was more precious than ſilver. As to the pearls, of which

which mention is here made, the term in the Greek is μαργαρίτα, which, in the Latin tranſlation, is rendered uno, from unus, ONE, becauſe (ſeveral being found in one ſhell) not one of them is like another; but that term not being uſual in England, we thought it convenient to render it by the common name of pearl.

ARTICLE XLI.

Of ſhips being loſt, and the goods of paſſengers ſaved.

If any ſhip be diſabled or loſt, and there being paſſengers on board, their goods and baggage be ſaved, they ſhall contribute towards the loſs of the ſhip: and if two or three of the paſſengers loſe their money, all the others (according to their ability) together with the ſhip, ſhall contribute towards the loſs of their money.

ARTICLE XLII.

Of a ſhip's being laden with goods, and turning leaky.

If a merchant-ſhip turn leaky, the lading being taking out, it ſhall be in the maſter's choice to put it aboard another ſhip, or aboard the ſame, if once repaired; and that not being repaired, if the maſter offers to carry them in another to the port agreed upon, the merchant ſhall pay the whole freight.

ARTICLE XLIII.

Of ejection and damage in a tempeſt.

If a ſhip be ſurprized with a ſtorm, and an ejection be made, or if the yard-arms, maſts, rudder, anchors, or ſhip boats be broken, all that is preſerved of the ſhip and goods ſhall contribute towards the damage.

ARTICLE XLIV.

Of other damage happening in tempeſts.

If a ſhip has goods on board, and in a tempeſt loſe her maſts, rudder, boats, &c. and, by the violence of the ſtorm, the goods happen to be wet, there ſhall be a contribution; but, if the lading be more damnified by the ſink than by the tempeſt, the maſter ſhall, notwithſtanding, receive his whole freight, but ſhall deliver the goods by the ſame meaſure, and in the ſame condition that he received them.

ILLUSTRATION.

This article contains a ſpecial proviſo for preventing of damage to merchants goods, by the negligence of the mariners, in not taking due care of the hold and the pump, which ſometimes occaſions conſiderable loſs to the owners of the lading; for which, the maſter of a ſhip is very juſtly, by this law, obliged to reſtore the goods (the danger of the ſea only excepted) by the ſame meaſure, and in the ſame condition, in which he received them; and, on the other hand, the merchant is enjoined to pay his full freight. Now, as to this law obliging the maſter to return the ſame meaſure of goods, in the ſame condition he received them, that is, in ſome caſes, impoſſible; for there being goods which, if once wet, can never be reſtored to their primitive goodneſs and luſtre, they cannot, conſequently, be returned in the ſame condition; by which it is plain, that as no law commands impoſſibilities, here muſt only be meant, that if, by the neglect of the maſter and mariners, the goods be damnified in the ſhip, he muſt ſuſtain the damage.

ARTICLE XLV.

Of ſaving any part of a ſhipwreck.

If a ſhip be ſurprized at ſea with whirlwinds, or be ſhipwrecked, any perſon ſaving any thing of the wreck, ſhall have one fifth of what he ſaves.

ARTICLE XLVI.

Of ſeamen periſhing in a ſtorm, and of the ſhip's boat.

If the ropes break, and the boat goes adrift from the ſhip, with mariners in it, and they periſh at ſea, the maſter ſhall pay their heirs one full year's wages; and if any perſon finds the boat, and preſerves it ſafe, he ſhall reſtore every thing as he found it, and receive one fifth part as a reward.

ARTICLE XLVII.

Of ſhipwrecked goods fiſhed up in the ſea.

If gold or ſilver, or any other thing, be taken up out of the ſea eight cubits deep, he that ſo takes the ſame up ſhall have one third; and, if 15 cubits, he ſhall have one half, becauſe of the depth: and if any thing is caſt on ſhore by the tide, and taken up only one cubit deep, the finder ſhall have a tenth part.

ILLUSTRATION.

The three precedent articles determine the rewards due to perſons that find and ſave ſhipwrecked goods, as three of the four ſubſequent do the puniſhments of ſuch as ſteal or embezzle any part of a wreck, or do in any manner aggrieve, or cauſe any detriment to perſons under that misfortune: and as the circumſtances of place, &c. are different, the rewards are always to be proportionable to the danger from which the perſon delivers the goods; it being very reaſonable that a perſon fiſhing up goods in the main ſea have a more conſiderable reward allowed him, than one that finds them caſt aſhore upon the ſea-ſands.

ARTICLE XLVIII.

Of perſons taking ſhipwrecked goods by violence.

Whoever takes any thing from a wreck by violence, ſhall reſtore four-fold.

The above article is taken out of the ſecond title of the eleventh book, and is of itſelf ſo expreſs and rational, that it needs no illuſtration.

ARTICLE XLIX.

Of ſuch as force maſters of ſhips to ſail.

Whoever impoſes a private burthen upon the public, and forces a maſter of a ſhip to ſail, ſhall not only bear the loſs and damage of the ſhipwreck, but be ſeverely puniſhed.

ILLUSTRATION.

This article is taken out of the fifth title of the aforeſaid book, and does not ſeem ſo very plain but that it may admit of a ſhort explication.

We ſhould, indeed, have been at a loſs to gueſs at the meaning of it, if the ſummary prefixed to it had not been plainer than the article itſelf, in which theſe words [to ſail] are only underſtood, but are expreſſed in the ſummary preceding the article; ſo that, comparing both together, we find the meaning of it to be this: that if any merchant, or other perſon, ſhould, upon any occaſion, force a maſter of a ſhip to ſail againſt his own will and inclination, and there ſhould afterwards happen any misfortune or diſaſter to the ſhip, the perſon that forced the maſter to ſail ſhould be anſwerable for all the damages: which, indeed, is highly reaſonable.

We own that it is very oddly expreſſed in the article, which verbatim runs thus: Whoſoever impoſes a private burthen upon the public, and forces a maſter to it, ſhall not only, &c. But conſidering that the word imponere, which we here render impoſe, may likewiſe ſignify to lade, and that onus, which we render burthen, may likewiſe very properly ſignify the burthen or lading of a ſhip, and conſidering alſo the following words of the article which concern ſhipwreck, or damage happening in ſuch a caſe, it is plain enough, that the natural ſenſe of that law can be no other than what we have interpreted it.

As to the words private and public, they ſeem to be properly enough made uſe of on this occaſion, becauſe, when a man pretends to force another perſon, againſt his will, to take an intereſt in his private and particular concerns, it is certainly an impoſition on the public; for though injuries done to particular perſons regard immediately only them to whom they are done, yet they mediately affect the commonwealth in general, which is undoubtedly attacked in every aſſault that is made upon the perſon or privileges of any of its members; which plainly appears from the univerſal practice and conſent of all the kingdoms, ſtates, and civil ſocieties in the world, who agree that the public has a right to puniſh crimes, though committed againſt private perſons, and that without the conſent of the perſons to whom the injuries were done, it not being neceſſary that that ſhould intervene in order to the criminal's puniſhment: and ſo we may obſerve, that in ſuch caſes, beſides the counſel appearing for the plaintiff at the proſecution of the criminal, the ſollicitor, or attorney-general, ordinarily appears for the king, as they likewiſe do in other countries.

ARTICLES L, and LI.

Of perſons violently robbing and preying upon ſhipwrecks.

ARTICLE L.

Whoever violently takes away any of the miſerable remainders of ſhipwrecks, or takes any advantage of that grievous misfortune, ſhall reſtore fourfold to the owners.

ARTICLE LI.

If any man more grievouſly oppreſſes ſhipwrecked perſons, and forcibly carries off any ſhipwrecked goods, after reſtitution made, if he is a freeman, he ſhall be condemned to three years baniſhment; if a man of low degree, he ſhall be employed in the public works during that time; and if a ſlave, he ſhall be put to the moſt ſevere and hardeſt labour.

ILLUSTRATION.

Theſe two laſt articles are extracted out of the 5th title of the LXIId book of the Digeſts, and determine the puniſhments to be inflicted upon perſons robbing, or in any manner oppreſſing ſuch as have had the misfortune to ſuffer ſhipwreck; which puniſhments are proportioned to the circumſtances by which thoſe crimes may either be aggravated or extenuated. Moſt happy would our mariners think themſelves, if ſuch wholeſome conſtitutions could take place throughout all his Britannic Majeſty's dominions, in ſome parts whereof they are extremely wanted, and particularly upon the coaſt of Cornwall and Wales, where, if an unfortunate ſhip does happen to run aſhore upon the ſands or rocks, the inhuman, brutiſh, and uncivilized inhabitants, far from tendering any friendly ſuccour or aſſiſtance to the perſons in diſtreſs, moſt barbarouſly deprive them of the miſerable remains of their ſhipwrecked fortunes, ſtripping them even of their wearing cloaths, and ſometimes cruelly murdering thoſe unhappy people, who would have met with a milder fate amidſt the waves of the ocean, than in the unmerciful hands of thoſe barbarous coaſters. See the article SHIPWRECKS.

REMARKS.

The laws of the Rhodians were ſo much eſteemed amongſt the ancient Romans, that they were unanimouſly received as the rule of all maritime affairs, except in caſes where they were directly oppoſite to the native laws of their country. And as the fraud and diſhoneſty of men had found means to elude the true deſign and intent of the firſt Rhodian legiſlators, the Romans took care to reform ſuch abuſes, by ſome explanatory additions to the aforeſaid laws, which, as long as that monarchy laſted, they always held in great veneration.

The ancient Romans were not aſhamed to take all the helps and aſſiſtances they could have from other nations, to render their own body of laws the more perfect and complete. It was with this view that they ſent perſons into Greece, there to collect the beſt and moſt uſeful laws which they could pick up among the commonwealths of that country, which were afterwards digeſted into twelve tables, and were made the ground-work of the body of the Civil Law. It was likewiſe for the ſame purpoſe that they borrowed of the Rhodians their laws relating to maritime affairs, as being the beſt collection of laws of that kind that were then extant, and inſerted them in the body of their own laws. And at this day the Rhodian laws, the laws of Oleron [ſee OLERON's LAWS], and other maritime laws of other nations [ſee WISBUY LAWS], are received as the general law for deciding all cauſes civil and maritime, in aid of the municipal laws of each country, and without any apprehenſion that the ſaid foreign laws will be an infringement of their own municipal laws, becauſe they are received by virtue of their own authority, and only to ſupply the defects and omiſſions of their own laws, for deciding caſes for which their own laws have made no proviſion.

Theſe laws, as well as the other maritime laws which are interſperſed throughout this work, having a cloſe affinity with, and indeed being incorporated with the civil law, a due knowlege of the latter ſhould ſeem to be indiſpenſibly requiſite to enable us to make a right judgment in the deciſion of maritime controverſies. I ſhall not preſume to take upon me to aſcertain the limits, power, and juriſdiction of the courts of common law, when compared with that of the high court of admiralty: I ſhall only obſerve, that they have for ſome ages been jealous of the power and authority of each, and the courts of common law ſeem to have gained the aſcendancy, and to have drawn all the buſineſs they could from the civil law courts. Whether this has proved more for the eaſe, benefit, and advantage of the ſubjects of this kingdom, I cannot preſume to judge. I hope, however, that I may be permitted to ſay, without offence, that, in whatever court maritime and commercial diſputes and litigations are brought for adjudication, thoſe who are to plead, or to adjudge in ſuch courts, cannot be too well acquainted with the maritime laws of weight and authority that have been promulgated in all wiſe and civilized nations. Now as it is certain, that it is in the body of the civil law we have the moſt complete, if not the only collection, of the rules of natural reaſon and equity, which are to govern the actions of mankind; and therefore it is, that it has been called RATIO SCRIPTA, written reaſon, as containing the moſt perfect rules of reaſon for deciding all differences that may ariſe among men in their intercourſe with one another: and as all maritime and commercial laws ought to be founded on, and conſiſtent with the principles of the civil law, which is the ſame in all countries, it follows that the ſtudy of the civil law ſhould by no means be neglected in a trading empire.

In all other countries where the ſtudy of the civil law is cultivated, they have peculiar laws and cuſtoms of their own, of which they are as tenacious as we can poſſibly be of ours. Yet they are ſo far from baniſhing or diſcouraging the ſtudy of the civil law, under an apprehenſion of its encroaching upon their own municipal laws, that, on the contrary, they give the profeſſors thereof all encouragement; they ſtudy it as a qualification for the better underſtanding of their own laws, and make it ſubſervient to them, by applying the general rules of natural reaſon and equity, which are contained therein, to clear up any difficulties and obſcurities, and to ſupply any defects or omiſſions that may occur in their own municipal laws.

In former times, when the civil law was more univerſally known and ſtudied here in England than it is at preſent, the judges and profeſſors of the common law had frequent recourſe to it, in caſes where the common law was either totally ſilent, or defective. So that the ſages of the law of thoſe days were ſenſible of the good uſe that might be made of the reaſon of the civil law, in aid and ſubſerviency to the common law of the land, as other nations make uſe of it at this day.

And beſides this general advantage that is to be reaped from the ſtudy of the civil law, we are not to look upon it altogether as a foreign commodity in this iſland, ſome of the particular laws thereof having been enacted for deciding controverſies which aroſe here in England, and bearing date from this from the Romans. The greateſt part of this iſland was governed wholly by the civil law for the ſpace of about 360 years, viz. from the reign of the emperor CLAUDIUS to that of HONORIUS; during which time, ſome of the moſt eminent among the Roman lawyers, as PAPINIAN, PAULUS, and ULPIAN, whoſe opinions and deciſions are collected in the body of the civil law, ſat in the ſeat of judgment here in England, and diſtributed juſtice to the inhabitants. But after the declenſion of the Roman empire, the Saxon, Daniſh, and Norman cuſtoms took place in the iſland, according as the ſaid nations became maſters of us, every one being fond of introducing their own cuſtoms.

The law of nations is likewiſe founded on the principles of the civil law; and the law of nations is abſolutely neceſſary to be well underſtood, as well with relation to treaties of commerce, and of peace and friendſhip, and of all kind of alliance between nation and nation, as with regard to all maritime concerns between one ſtate and another. And the neceſſity of the law of nations, and conſequently the civil law thereupon grounded, being well underſtood by the ableſt lawyers in this kingdom, appeared manifeſtly, and beyond contradiction, upon a very recent and very important occaſion: I mean the affair that happened a few years ago, between his late Majeſty and the king of Pruſſia, with reſpect to a memorial, and other papers, delivered by Monſ. Michell, the king of Pruſſia's ſecretary of the embaſſy, to his grace the duke of Newcaſtle, concerning the Sileſia loan. For in the duke of Newcaſtle's letter, by his Majeſty's order, to Monſ. Michell, in anſwer to the ſaid memorial, &c. there is the moſt profound knowlege in the law of nations and the civil law diſplayed by thoſe able civilians and lawyers, who were ordered by his Majeſty to draw up the ſaid anſwer *. See the article SILESIA.

* Theſe gentlemen were, the learned Sir George Lee, judge of the Prerogative Court; Dr. Paul, his Majeſty's advocate-general in the courts of civil law; Sir Dudley Rider, then his Majeſty's attorney-general, afterwards the right honourable lord chief juſtice of the court of King's-Bench; and the honourable William Murray, Eſq; then his Majeſty's ſollicitor general, afterwards his Majeſty's attorney general. The only gentleman now living of the abovementioned, is the latter, who is now the lord chief juſtice of the King-Bench.

There are ſome particular matters in which the civil law hath always been, and ſtill is allowed to be, the only law in England, whereby they are to be decided; and the courts of juſtice which have cognizance of the ſaid matters, do proceed therein according to the rules and forms of the civil law. Thus, in the high court of admiralty, cauſes civil and maritime are here to be decided according to the civil law and the maritime cuſtoms. Thus, in the court of honour, the judges thereof are to proceed according to the civil law. Thus alſo, in the univerſities, and all the eccleſiaſtic courts of this kingdom, they proceed according to the civil law, and the cannon law, which is, in a great meaſure, founded upon the civil law.—But theſe matters are beſide my purpoſe.

Having mentioned the courts where the civil law is allowed to be not only of uſe, but of force and authority here in England, we beg leave to conſider how far the reaſon and equity thereof may be of ſervice in other courts, where it has not the force and authority of law. And we cannot but think, that in all courts of equity, where the rigour of the common law is to be mitigated by the rules of equity, the knowlege of the civil law muſt be of great ſervice, and more eſpecially in concerns of a commercial nature: for it is there, and no where elſe, that we have the fulleſt and moſt perfect collection of the general rules of natural reaſon and equity, applied to the various tranſactions and intercourſes of buſineſs between man and man. If, therefore, one were to judge what is juſt and equitable in a cauſe depending between parties, would it not be a great help towards forming a right judgment therein, to enquire into the general rules of equity touching the ſaid matter, which have been laid down and eſtabliſhed by the moſt eminent lawyers that ever lived in any age, and to ſee how they have applied them in ſimilar caſes? Can it be imagined,

gined, that the reaſonings of thoſe great men upon caſes of the like nature, will not give great light, and contribute very much towards forming an equitable deciſion in matters which are to be determined upon the principles of equity, and not according to the rigour of the law? And will not a knowlege of the ancient and modern maritime laws of other wiſe nations, which are eſteemed of authority, as being grounded on the principles of the civil law, greatly contribute to enable lawyers to conduct their pleadings and adjudications, more conſiſtent with the principles of right reaſon and equity, than can be done if they are unacquainted with theſe laws? How far, therefore, theſe rules of equity, which may be collected from the body of the civil and maritime laws, may be uſeful in the high court of Chancery, and the court of Exchequer, whoſe proceedings are according to equity, is moſt humbly ſubmitted to the great wiſdom and experience of the learned judges, and others who are beſt acquainted with the practice of thoſe courts.

And if this knowlege of the rules of reaſon and equity can be of ſervice in the inferior courts of equity, it cannot be leſs uſeful and neceſſary in the ſupreme court of equity of the kingdom, which is that of the lords aſſembled in parliament. It is to that high tribunal that the ſubjects have recourſe, in order to obtain an equitable redreſs of the grievances which they pretend to have had done them by the inferior courts. And the lords who compoſe that auguſt aſſembly, and who are the ſupreme judges of the property of the ſubject, cannot be ſuppoſed, by reaſon of their high rank and quality, and their frequent avocations upon account of the weightier matters of government, to apply themſelves to that minute ſtudy of the laws which is expected from other judges: and, therefore, ſeeing they have frequent occaſions to act in a judicial capacity, it is the more neceſſary that they ſhould be acquainted at leaſt with the general rules of reaſon and equity, which may help to guide them in the judgments which they give in matters of private property that come before them.

And if we conſider the ſaid body in their legiſlative capacity, as having under their direction the arduous matters of ſtate, and eſpecially ſuch as regard the intercourſe between us and other nations, the knowlege of the law of nations, which is built upon the civil law, is abſolutely neceſſary in deliberations of this kind, that no reſolutions may be taken in ſuch matters, but what are agreeable to the principles of the law of all nations. And it was upon this account that, according to the ancient cuſtom and uſage of parliament, the maſters of Chancery, who formerly were civilians, were ſummoned, with the judges of the realm, to give their aſſiſtance and attendance in the upper houſe of parliament: for as the judges of the realm were to give their counſel and advice, when required, in matters which depended on the laws of the land; ſo the maſters of Chancery, who were ſkilled in the civil law, and the law of nations, were often conſulted in matters which depended on thoſe laws.

There is likewiſe another court, where we humbly conceive that the knowlege of the civil law may be of ſervice, for determining matters that come before it; and that is, the king's privy-council, which is a court of juſtice in ſome reſpects, as it is in others a council with which his Majeſty is graciouſly pleaſed to adviſe and conſult in matters relating to the public. It is a court of juſtice, wherein his Majeſty is pleaſed finally to determine ſome matters of private property, as particularly all matters of prizes taken from an enemy in time of war, in which the appeal lies from the high court of admiralty to the king in council: and thoſe cauſes are to be judged by no other law but the civil and maritime law.

The privy council is likewiſe a court of juſtice, for the final determination of all appeals that come from the Engliſh plantations in America, from the iſles of Jerſey and Guernſey, and other places: in all which cauſes the rules of equity collected in the body of the civil law, muſt be of ſervice to judge of the equity of the ſentences which are complained of, but more eſpecially in the cauſes which come from the iſles of Jerſey and Guernſey, where the proceedings in their courts of judicature have a great conformity with the civil law; and the cuſtoms of Normandy, which are the law by which thoſe iſlands are governed, are not only illuſtrated and explained by the civil law, but many times the aid of the law is there invocated, as a rule for deciding caſes which are not expreſsly regulated by their own cuſtoms, as appears from the commentaries of Rouille, Terrier, and others, on the ſaid cuſtoms.

Having ſeen in what caſes the civil law may be uſeful, if not neceſſary, for determining ſome matters that come before the privy-council as a court of juſtice, we muſt beg leave to conſider how far it may be uſeful in the other matters that come under the deliberation of that auguſt aſſembly, as a council to his Majeſty for the affairs of ſtate. It is by their council and advice that his Majeſty ſteers the helm of government: it is there that all TREATIES OF PEACE AND COMMERCE with foreign ſtates and potentates are examined and conſidered. See TREATIES.

As to what regards the internal policy of the ſtate, for maintaining peace and quiet in the ſociety, for procuring plenty of all things neceſſary to human life, for encouraging manufactures within ourſelves, and promoting a beneficial trade with our neighbours: although all theſe things depend, in a great meaſure, on the frame and conſtitution of our own government, on the ſoil and climate of the country, on its ſituation for trade, and on the natural temper and diſpoſition of the inhabitants: yet, in order to improve theſe to the beſt advantage, we cannot but think that it may be of ſervice to know what laws the Romans, the greateſt and moſt flouriſhing commonwealth that ever was, thought fit to enact for promoting trade and manufactures within themſelves, and for the government of their colonies in foreign parts, to preſerve them in a due ſubjection, and to make them uſeful and ſubſervient to the ſeat of the empire from which they derived their origin, and to which they owed their protection: all which laws are collected in the body of the civil law, and may be uſefully applied by us on many occaſions.

But as to what concerns the outward policy of the ſtate, that is, the intercourſe which it muſt have with other ſtates and princes, we humbly conceive that the knowlege of the civil law muſt be of ſingular uſe in all tranſactions of that kind: for the civil law being in ſo great eſteem and veneration among all other nations, that they make it the rule and ſtandard of equity in all caſes which are not expreſsly provided for by their own particular laws and cuſtoms, what more effectual arguments can be uſed to obtain juſtice from them in an amicable way, than thoſe which are founded on the principles and maxims of the civil law? It is arguing with them upon their own principles, from maxims of their own law, and the law of all nations, which is the moſt effectual way to convince them by reaſon. And it was in conſideration of this that our anceſtors, in their great wiſdom, thought proper to employ generally, in all negociations with foreign courts, and in treaties of peace and commerce, perſons who were well ſkilled in the civil law, and law of nations: and although it was neceſſary on ſome occaſions, and more particularly at ſolemn congreſſes for treating of peace, for the greater luſtre and ſplendor of the embaſſy, to employ perſons of the firſt rank and quality; yet, to eaſe them of the great weight of affairs, they were always accompanied by ſome perſon of an inferior rank, who being verſed in the ſtudy of the civil law, and law of nations, might be aiding and aſſiſting in the conferences which were to be held for ſettling and adjuſting the reſpective intereſts of the ſeveral princes and ſtates concerned. And this we ſee is the conſtant practice of all other nations at this day, who, in their embaſſies for treaties of peace, employ always at leaſt one perſon who has been bred to the law; although this is the leſs neceſſary in foreign countries, where all the nobility, in their ſtudies at the univerſity, go through a regular courſe of the ſtudy of the civil law, and law of nations: by which means they lay ſuch a foundation, as to be able afterwards, from the principles thereof, to aſſert and defend the intereſts of their country, whenever their prince is pleaſed to employ them in affairs of that kind.

In matters of intercourſe between one nation and another, we have no other law to go by but the law of nations; and this law of nations is chiefly grounded on the rules and maxims of equity which are laid down in the civil law, and which have been received by moſt nations, as the rules of juſtice between one nation and another. So that, to underſtand the law of nations thoroughly, and to be able to comprehend the reaſoning of the authors who treat thereof, it is abſolutely neceſſary to have ſome knowlege of the civil law, as one may eaſily perceive by looking into Grotius, Puffendorf, and other authors who have wrote on that ſubject.

And I muſt obſerve here, in relation to the Engliſh colonies upon the continent of America, that there is a very great affinity between them and the colonies of the Spaniards, and other nations, who have made ſettlements among the Indians in thoſe parts: for the grants made by our kings, of tracts of land in that country, for the planting of colonies, and making ſettlements therein, appear to have been made in imitation of the grants made by the kings of Spain to the proprietors of lands in the Spaniſh colonies, upon the very ſame conditions, and in conſideration of the ſame ſervices to be performed by the grantees. So that the government of the Spaniſh colonies, and the rights of the proprietors of lands therein, depending chiefly on the rules of the civil and feudal law, as may be ſeen by the learned treatiſe of Solorganus, De Indiarum Jure, the knowlege of the ſaid laws muſt be of ſervice likewiſe for determining any controverſies that may ariſe touching the duties or forfeitures of the proprietors of lands in our Engliſh colonies.

We have made theſe few remarks only to ſhew in what particulars the civil law is, and may be, of uſe here in England, and how we may reap the ſame advantages from it which other nations do, without any danger to our own municipal laws. Our anceſtors were ſo ſenſible of the great importance thereof, both in private and public affairs, that, beſides the public profeſſors eſtabliſhed in the univerſities for teaching this ſcience, and who have ſalaries allotted them by the beneficence of our princes, many of the private founders of colleges have,

in their endowments, ſet apart particular fellowſhips, as an encouragement to perſons to ſtudy it. And from the principles of the civil law, and the laws of nations bottomed thereupon, we apprehend that not only the commercial and maritime laws of all trading nations may be the better underſtood, but ſuch other laws may be formed and ordained in this kingdom for the univerſal propagation of its trading intereſts.

RHUBARB, is a thick root, of an oblong figure, large at the head, and tapering pretty ſuddenly as it extends in length. It is ſometimes ſingle, but more uſually divided into two or three parts at the lower end. We frequently meet with it in pieces of four, five, or ſix inches long, and three or four in diameter at the top; it is of a tolerably ſmooth and even ſurface, and externally of a faint yellow colour, with a large admixture of brown; it is moderately heavy, but not hard; it cuts through very freely and eaſily with a knife, eſpecially if the blade of it has been rendered a little unctuous, firſt by drawing it over an almond, or any other fatty ſubſtance. When freſh cut, it is found to be of a marbled or variegated appearance; its colours are a pale but bright yellow, and a faint reddiſh; the yellow is the ground colour, and the red is diſpoſed in ſhort irregular veins, much in the manner of the darker colour in the common nutmeg. It is of a ſomewhat lax and ſpungy texture; it has an agreeable and ſomewhat aromatic ſmell, and a bitteriſh, aſtringent, and ſubacid taſte, upon the whole not diſagreeable: it tinges the ſpittle to a fine bright yellow, on being held ſome time in the mouth.

Rhubarb is to be choſen freſh, tolerably hard, and moderately heavy, and ſuch as does not duſt the fingers in handling; ſuch as, infuſed a few minutes in water, gives it a fine yellow, and, when bruiſed in a mortar, has a reddiſh colour with the yellow. Rhubarb is not ſo often adulterated as damaged; care is to be taken that it be not wet or rotten; much of it is ſubject, after keeping too long, to be worm-eaten and full of holes on the ſurface. There are certain traders in this drug who have a way of filling up theſe holes with powder of ſome of the worſt and moſt decayed pieces, but this is eaſily diſcovered, and ſuch rhubarb always to be rejected.

The Ancients were not acquainted with rhubarb; it is an error to ſuppoſe they mean our rhubarb by their rah and rheum; Dioſcorides and Galen evidently deſcribe, under that name, the rhapontic, a root of a different plant, and very different in its virtues from our rhubarb.

Rhubarb is brought to us from Ruſſia and the Eaſt-Indies. It is produced in great plenty on the confines of China and Tartary, and in many parts of Tartary itſelf; the mountains of Tibet abound with it, and a very conſiderable part of what is ſent into Europe grows there.

We are not certain that it grows in any part of Ruſſia, though we receive conſiderable quantities of it from thence; it is poſſible it may be firſt brought thither from China and Tartary, and then ſent to us. The Chineſe are very careful in their manner of drying it: they take up the root only in winter, or early in ſpring, before the leaves begin to appear; they cut it into ſuch pieces as they think proper, and lay it on a table in a ſhady place, turning it once or twice a day, for two or three days; after this they ſtring the pieces on a cord, at a diſtance from one another, and then hang them up in a ſhady place, where they may dry leiſurely. It is by this management that the rhubarb is rendered ſo firm and ſolid as we find it; for if it were hung up to dry at once in a warm airy place, it would become light and ſpungy: they ſay, alſo, that if the root be taken up in the ſummer, it is not only light and of little virtue, but that it has nothing of the reddiſh marbling, that is one of the great characters of its goodneſs with us.

The plant which produces the true rhubarb is of the number of the ennandria-trigynia of Linnæus. It was long before it was known in Europe; but of late it has been ſent from Ruſſia to the gardens at Paris and Chelſea, in both which it thrives extremely well, and ſtands the ſevereſt colds unhurt.

The root of this plant ſhews it to be the genuine rhubarb, and it agrees perfectly with a ſpecimen of the plant which ſome years ſince Dr Amman of Peterſburg had gathered himſelf on the mountains of Tibet.

We have proof ſufficient now that we have the true rhubarb plant among us; and it will be eaſy to propagate a quantity of it, in order to try whether its virtues, when produced with us, will be the ſame with thoſe it poſſeſſes as brought from its native climate.

The root of the rhubarb plant is long, thick, and perennial; its bark, while growing, is of a browniſh red colour, but under this the ſubſtance of the root is of the true colour of the dried rhubarb, only deeper, of the right nutmeg grain, marbled with red and yellow, and has the true ſmell and taſte of rhubarb, eſpecially about the upper part of the root. It has a viſcoſity indeed in the mouth, that rhubarb, as we meet with it in the ſhops, has not; but this may only be the difference of the ſame root freſh and dried. A number of large leaves are produced firſt from this root; they are of a fine green, elegantly undulated at the edges, of an oblong figure, broadeſt at the baſe, and ſomewhat auriculated; they ſtand on very thick and fleſhy pedicles, moderately long, convex in their under part, and flat on the upper; theſe divide each into five large and prominent ribs, running with many diviſions through the whole leaf: in the midſt of theſe leaves riſes a ſtalk, of an angular compreſſed figure, ſtriated, and riſing to about three feet high, which, from the middle to the top, is furniſhed with cluſters of little flowers, ſurrounding it at certain diſtances; they are very ſmall and white, and are ſucceeded each by a ſingle ſeed, of a triangular figure: it flowers in June, and ripens the ſeed in July and Auguſt.

Rhubarb, on a chemical analyſis, is found to be compoſed of a large quantity of ſulphur and fixed ſalt, a ſmall portion of acid ſalt, and a large ſhare of earth. On theſe principles, the whole root muſt be of the gummous kind, and its earthy and gummous parts are very eaſily ſeparated, and that in large quantity: from an ounce of rhubarb there may be prepared, by means of common water alone, ſomewhat more than an ounce of the gummous extract. There is but a very ſmall quantity of reſinous matter in rhubarb, and what there is is blended with a large ſhare of alkaline ſalt: two ounces of rhubarb, ever ſo carefully managed, will not yield more than about three drachms of a reſinous, and that a ſaline extract; the ſalt in this is in ſo large a portion, that it will readily diſſolve in common water: and this ſhews us the reaſon why tincture of rhubarb, made even in rectified ſpirit of wine, does not become milky on being mixed with water, as many of the other tinctures of this kind do.

Rhubarb poſſeſſes the double virtue of a cathartic and aſtringent; it readily evacuates particularly the bilious humours, and afterwards gently aſtringes and ſtrengthens the ſtomach and inteſtines. It is given with great ſucceſs in all obſtructions of the liver, in the jaundice, in diarrhœas, and in the fluor albus and gonorrhœas: it is alſo an excellent remedy againſt worms. It is ſometimes given as a purgative, ſometimes as only an alterant; and which ever way it is taken, it is an excellent medicine, agreeing with almoſt all ages and conſtitutions. The only caſes in which its uſe is to be avoided, are thoſe in which the blood and viſcera are too hot. Fallopius ſays it is never to be given to people who have diſorders of the kidnies or bladder, as it is apt to occaſion an extraordinary heat in thoſe parts; and Simon Pauli tells us of vertigoes brought on by a too free and continued uſe of it.

Rhubarb is given in powder in infuſion, and in its own crude ſolid ſtate, the chewing it being, perhaps, the beſt way of giving it of all others, when it is intended to ſtrengthen the ſtomach and aſſiſt digeſtion; the quantity of 25 grains, or thereabout, ſhould be chewed daily on theſe occaſions, an hour before eating; this is alſo by much the beſt way o taking it againſt the obſtructions of the viſcera. Its doſe in powder is from half a ſcruple to two ſcruples; in infuſion, about a drachm of it will purge gently, but the doſe may be increaſed up to two drachms: it is obſervable, that neither the infuſion nor the decoction, nor even the extract of rhubarb, purge nearly ſo briſkly as the root itſelf in powder.

The preparations of rhubarb in uſe in the ſhops are, 1. The tincture in ſpirit. 2. The tincture in wine. And, 3. The extract; though the laſt is but little uſed.

Tincture of rhubarb in wine.

Take fine rhubarb two ounces; of the ſeeds of the leſſer cardamum, cleared from their huſks, half an ounce; of ſaffron two drachms; bruiſe the rhubarb to a groſs powder, with the cardamums among it; then cut the ſaffron ſmall with a pair of ſciſſars, and put the whole into a matraſs with a quart of white wine; let them ſtand three days together without heat, often ſhaking them; then ſtrain off the tincture, and filtre it for uſe.

Tincture of rhubarb in ſpirit.

Take of fine rhubarb two ounces, of the leſſer cardamum-ſeeds, freed from their huſks, half an ounce, of ſaffron two drachms, proof-ſpirit a quart; make the tincture without heat, in the ſame manner as the former.

Both theſe tinctures are purgative, and ſtrengthen the ſtomach and inteſtines afterwards: they are given in moſt of the caſes in which the root itſelf is proper. Their doſe is from one ounce to two ounces and a half; the latter purges ſomewhat more ſtrongly than the former.

Extract of rhubarb.

Take of fine rhubarb a pound, cut it into thin ſlices, and afterwards bruiſe theſe to a groſs powder in a mortar; put it into a matraſs, and pour on it two quarts of water; ſet the matraſs in a ſand-heat, ſo as to keep the liquor moderately warm, for 10 or 12 hours; then ſtrain off the infuſion, return the remaining maſs into the matraſs, and pour on it rectified ſpirit of wine a quart; ſet it again in the ſand-heat for 24 hours, then ſtrain off the tincture: mix this liquor with the former, and gently evaporate the whole to the conſiſtence of an extract. This is gently purgative; its doſe is from 10 grains to a drachm: but, in truth, the plain powder of the root ſeems to be a much better medicine for all the purpoſes in which this could be given.

The

The tai-haam, or the rhubarb, grows in ſeveral parts of China: the beſt is that of Tſetchanen; but that which grows in the province of Xenſi, and the kingdom of Thibet, is far inferior to it: what grows elſewhere in this part of the world is of ſo little value, that it is not uſed. The ſtalk of the rhubarb is like the ſmall bambooes, or Chineſe canes: it is hollow, and very brittle, three or four feet high, and of a dark violet colour. In the ſecond moon, that is, in the month of March, it ſends forth long and thick leaves, which grow four and four on the ſame tail, looking towards each other, and forming a chalice. The flowers are of a yellow, and ſometimes of a violet colour. In the fifth moon it produces a ſmall black ſeed, as large as millet; in the eighth moon they pull it up, and find the root large and long; that which is heavieſt and moſt marbled in the heart is the beſt and moſt eſteemed. This root is of ſuch a nature as renders it very difficult to be dried.

The Chineſe, after having pulled up and cleaned the roots, cut them in pieces about two inches large, and dry them on plates of ſtone, under which they kindle fires: they turn theſe pieces 'till they are thoroughly dry. If they had ovens like thoſe in Europe, they would not make uſe of theſe plates. As this operation is not ſufficient to draw out all the humidity, they make a hole in each piece, and ſuſpend them in the greateſt heat of the ſun, 'till they are in a condition to be kept without being corrupted.

As to the uſe of rhubarb, the Chineſe are nearly of the ſame opinion with the Europeans: however, they rarely uſe rhubarb crude and in ſubſtance, for they ſay it tears the bowels, and produces gripes; and as the Chineſe generally love better not to be cured, than to be relieved by great pain, they more chearfully take rhubarb by way of decoction, with a great many other ſimples, which they combine according to the rules of their art: but if it is neceſſary to take it in ſubſtance, they prepare it in the following manner:
